THE OUDE PAPERS.

In forming a judgment of political questions, we have much more frequently to lament the deficiency of evidence than to be oppressed by its redundancy. No person, however, who has had the patience and resolution to toil through the ponderous volume of official papers concerning the transactions with the Government of Oude, consisting of more than one thousand folio pages, would sigh for *more* information upon the subject, how reluctant soever he may be, out of regard for the characters of those involved in the transactions, to desire *less*. This mass of documents has been submitted to the Proprietors of East-India Stock to enable them, first, to appreciate a portion of the services of the Marquess of Hastings during his administration of their affairs in India; secondly, to decide upon the claims of his Lordship, asserted in his Summary of the events of his government, to the merit of releasing the Nawaub Vizier of Oude from a state of painful and degrading thralldom; and, lastly, to judge of the propriety of the removal of Col. Baillie from the post of British Resident at Lucknow. The last point is that to which the papers, in their present state, are chiefly applicable.

We should have been extremely glad to be relieved from the ungrateful, as well as arduous, office of discussing the topics of controversy between Lord Hastings and Col. Baillie: the fulfilment of this office, however, we conceive to be imposed upon us, as a duty; we have, therefore, no alternative but to enter upon it with as much and as scrupulous impartiality as possible.

None who have perused these documents can doubt that the task committed to Col. Baillie was of the most difficult, delicate, and perplexing nature. It would be impossible to convey, to those who are absolute strangers to the character of Indian princes, and that of eastern diplomacy in general, an adequate description of the artifices, the baseness, the effrontery, and the tergiversation

tergiversation exhibited at this "corrupt and abominable court." Not only are equivocation and falsehood detected throughout the proceedings of the late Vizier, but that personage avails himself of the peculiarities of the Persian language to justify, in a manner, his recourse to such expedients. He had distinctly promised to the Begum, Shums-oon-Nissa, to give up certain property claimed by her Highness, which promise he subsequently refused to perform, alleging as follows:—"With regard to your Highness's complaint, regarding the house Mutchee Buhwun, it is *very surprising* that your Highness should not have at once understood, that my *promise to give it up to you* was merely a *respectful mode of refusing*. . . Out of respect, I could not flatly refuse your Highness, and, therefore, I was induced to make a promise" (p. 480). Again, which is more germane to the matter before us, when Col. Baillie reminded his Excellency of certain pledges, he replies, "he never made any *positive promises*;" and, with reference to certain articles of agreement, regularly committed to writing, and executed, he says, "that document may be considered like any other *correspondence* between us, which is still subject to discussion, *because* what is written there is still dependent on discussion, and on the *satisfaction of my mind*" (p. 531).

Although the transactions which led eventually to the removal of Col. Baillie occurred during the government of Lord Hastings, and subsequently to the death of the late Nawaub, yet it is impossible to disconnect that act and its immediate causes from antecedent transactions, extending, in fact, throughout the whole period of that gentleman's Residentsip. For example: Lord Hastings specifies, as one ground of dissatisfaction, a failure in the exact degree of respect due from the Resident to the present Nawaub. "I myself have witnessed," observes his Lordship, "in Major Baillie towards the Nawaub Vizier, little points of behaviour which could not but wound his Excellency. When the Resident, who had received checks from me by letter on that very head, could not avoid sliding into the error while I was present, it must be imagined that at other times he has been still less measured in his deportment" (p. 925). One of the complaints alleged by the late Vizier against the Resident was a failure of respect towards his Excellency.

It is matter of notoriety that by a treaty concluded in the year 1801, between the Marquess of Wellesley and the late Nawaub Vizier, the latter ceded a portion of his territories to the Company, in consideration of being absolved from the payment of an annual subsidy for the British troops stationed in Oude, by virtue of the existing subsidiary alliance. The authority of the Nawaub in the territories reserved to him was expressly declared by the treaty, and in the final arrangement in the following year, to be completely established, and to be exercised through his own officers and servants; the British Government engaging to guarantee his authority, and the Vizier engaging to establish, in his reserved dominions, "such a system of administration (to be carried into effect by his own officers) as shall be conducive to the prosperity of his subjects, and be calculated to secure the lives and property of the inhabitants; and his Excellency will always advise with, and act in conformity to, the counsel of the officers of the said Hon. Company."

The expediency and policy of the latter stipulation must be apparent from the consideration that the maintenance of public order and tranquillity in Oude devolved upon the Company's troops, which might be employed as instruments for oppressing the people. And so, in fact, it happened; for the tyrannical system of government in this state, the avaricious disposition of the sovereign, and the shameful ab
 of his subordinate ministers,
 seem

seem to have exacted all the zemindars to open rebellion, and the Company's sepoys were necessarily engaged in the detestable service of overpowering resistance to tyranny. The revenue system of Oude is thus described by the Bengal Government to the Court of Directors (p. 789):

When the lands are let in farm, they are leased on exorbitant terms. The farmer, with a view both to fulfil his engagements and to secure a profit to himself during the limited period of his tenure, naturally exercises rigour and oppression within the limits of his authority. When the lands are held *aumancee*, that is, placed under charge of an officer of the Government appointed to collect the revenue, that officer is rendered responsible for the realization of the imposed jumma, and the excess of the assessment is generally such as cannot be levied without extortion, violence, and injustice. When a compliance with such demands is refused, the farmer, aumil, or officer, represents the zemindar or under-renter to be a defaulter and rebel, and urges the necessity of employing troops for his coercion. Thus the Vizier employs the British troops as the instrument of these wide-extended exactions, while their presence, and the knowledge of the obligations imposed on the British Government to suppress disorders within his Excellency's country, precludes that natural remedy which overstrained and unprotected oppression carries within itself.

The character of "a great majority, if not the whole of the Vizier's Amils," was extremely bad: one of them is represented as refusing to assist the British troops called in at his requisition, and secretly inciting the rebellious zemindar to resistance, that he might reap advantage from the confiscation of his property!

In the territories ceded by the Nawaub to the Company, a settlement of the revenue had been effected, which precluded disputes, and preserved the landholders from oppression; it therefore became an object with our Government to impress upon his Excellency the necessity, with regard to his own interests as well as the Company's, of adopting a settlement in his reserved dominions, conformably to his engagement. As the British Government, by the terms of the treaty, was authorised to offer its advice, Lord Minto and his council, in 1811, proposed a plan of reform in the revenue administration of Oude, which is reducible to four heads, or fundamental principles: first, a just and moderate assessment of the revenue, to be settled with all the landholders; secondly, a settlement for a fixed term not less than three years; thirdly, the conclusion of engagements, in regular gradations, from the government officer to the ryot; fourthly, the guarantee of those engagements by the Government, and the establishment of a mode of obtaining redress in cases of their being violated. These measures it became the duty of the Resident to urge upon the Vizier for adoption.

There was, at first, a decided manifestation of compliance on the Vizier's part, which, however, in the sequel, proved to have been insincere, or to have given way to the representations of his confidential advisers, who were interested in the perpetuation of abuses which the system of reform was designed to remedy. The abrogation of the existing judicial and police system, in which the sole will of the prince was the *suprema lex*, and the establishment of courts of justice for redress of grievances, probably first alarmed the Vizier's jealousy. The changes in the revenue department were recommended by the prospect of an augmented tribute to his treasury; but to be called upon to relinquish his arbitrary controul over the courts, appeared to his greedy and despotic mind, a gratuitous sacrifice of his rights, dignity, and authority.

When the details of the reform came to be discussed, the Vizier's scruples were more and more multiplied. Lord Minto recommended that, instead

of farming districts to Amils, officers of the Government (Ameens, or Tehsildars), should be appointed to ascertain the actual assets and resources of the country, and to conclude Mofussil settlements, on the part of Government, directly with the zemindars or landholders. In the course of the discussions, a distinct claim was advanced by the British Resident to the virtual appointment of the Ameens; and he, moreover, in the draft of purwannah, directing the abolition of the farming system, had assigned, as a motive for the change, the advice and concurrence of the Company's Government, whose interests, the Vizier is made to say, "are identified with my own." Both the claim and the clause were firmly resisted by the Vizier; and the former seems, in our humble judgment, directly at variance with the terms of the treaty, which declares that the reform shall be carried into effect by his Excellency's own officers. In regard to the clause, although the Resident tells the Nawaub that his objection to it is "a cavil, obviously admitting of an inference hostile to his avowed sentiments of friendship to the British Government, as well as desire to conform with its advice" (p. 213); and that its rejection is "injudicious,—unbecoming,—indelicate in the extreme" (p. 199): yet he subsequently acknowledges, in his letter to the Bengal Government (p. 221), that he entertained a doubt "of our positive right to demand the insertion of the words in question in a public proclamation to be issued, under the Vizier's seal, to his subjects."

These, and a variety of other grounds of discussion and disagreement between the Vizier and the Resident, necessarily induced the Bengal Government to deliberate upon the just interpretation to be given to the stipulation in the treaty, which required his Excellency to seek the advice and concurrence of the Company.

It appears evident that the impression upon Col. Baillie's mind led him to consider that the Vizier was bound to comply with every suggestion made on the part of the British Government, at least, with every one from which, after discussion, that Government did not recede. He observes (p. 592), "I have often had occasion to comment on the Vizier's misconstruction of that essential principle of the alliance subsisting between the two states, which prescribes his *universal* consultation with the officers of the British Government in the ordinary exercise of his authority, and his regulating his proceedings by their advice." He observes, in another place (p. 160),

On the general question of a right in the British Government to offer its opinion and advice regarding the selection and appointment of officers to stations of high trust and importance in his Excellency's administration, I observed that this right had been constantly exercised, and had never once been disputed, since the relation now happily subsisting between the two states was established; that it was founded on the very nature of this relation in itself, and was clearly recognized and confirmed by the spirit of the treaty of 1801, and of his Excellency's subsequent engagement with Marquess Wellesley, as well as by recorded instances in practice during the government of the late Nawaub Asuf-ood-Dowlah, and since his Excellency's accession to the musnud; and that if his Excellency's obligation to conform to the counsels of the British Government "in all affairs connected with the ordinary government of his dominions, and with the usual exercise of his authority," did not imply an obligation to consult and to be guided by the counsels of the British Government, in the selection and appointment of officers to accomplish a reform in his administration, it could not, in my judgment, be susceptible of any other interpretation.

This mistake, if such it be, was extremely natural from the indefinite and peculiar nature of the engagement. The Bengal Government, however, saw the

the mischievous consequences with which such a construction was pregnant, involving measures of absolute compulsion; and how inconsistent it was with the spirit of the treaty to interpret its stipulations as "imposing on the Vizier an obligation absolutely and implicitly to accede to whatever plan of reform the British Government might advise, however adverse to his interests or his prejudices, or to require him, in every concern of his Government, to follow, indiscriminately, every counsel, however injurious or repugnant to his feelings, that either wisdom or error might suggest, on the part of the British Government, under the penalty of forfeiting his claim to the fulfilment of our part of the stipulations of the treaty. A construction so literal," it is justly added, "would obviously be incompatible with the existence of that authority, which, by the same instrument, we have solemnly guaranteed" (p. 235).

The stipulation in the treaty, binding the Nawaub to seek and to conform to the advice of the other contracting party, appears to be much of the nature of a bold without a penalty; for even if, in the alternative of the prince's refusal, we were authorized to withdraw the British troops, or withhold their assistance to preserve tranquillity, we ought, at the same time, to restore the ceded territories, which had now become an integral part of the Company's dominions.

The Vizier's objections to the scheme of reform proposed to him (of the expediency of which Lord Hastings subsequently professed to entertain doubts), though generally frivolous, and indicative of a resolution to retain his despotic power over the property of his subjects, are occasionally specious; and it was perfectly competent to him, as an independent prince, to reject measures which it could not be demonstrated to him would entail no loss of revenue or authority. These are the very grounds upon which he objects (p. 531) to the system proposed by the Resident.

The case of Tuhseen Alee Khan seems to us one in which the interference of the British Government was pushed beyond due bounds. This individual had served, in a confidential capacity, the Vizier Asuf-ool-Dowlah, with zeal and fidelity; he had mainly contributed to the establishment of the late Vizier on the musnud; he had served him likewise with great integrity and attachment till his death; he had also manifested extreme fidelity towards the British Government. By his will, he bequeathed his little property to certain dependants; but the Vizier claimed it as an escheat, ungratefully availing himself of the Mohummedan law, which incapacitates *slaves* and *infidels* from disposing of their property by will. The Resident, with the sanction of our Government, tenaciously withheld this property from the Vizier for some time, and it was relinquished, at last, very unwillingly and ungraciously.*

The topics of altercation between the Vizier and the Resident may be supposed to be numerous, when it is declared by Col. Baillie (15th April 1812) that at that period his representations and complaints to his Excellency, on various subjects, "extended to the number of three or four in a week." We are much inclined to doubt whether this accumulation of subjects of discussion, many of which must be of subordinate importance, did not sometimes exasperate the Vizier's mind, and provoke that refractoriness of which the Resident incessantly complains; and we are fortified in that doubt by the following passage,

* The arguments of the Nawaub for enforcing his right, seem entitled to weight: he says that the case would constitute a precedent; and that if public servants of the character of Tuhseen (who was a slave-cunuch and a Hindoo) were considered to be at liberty to bequeath their property, without the control of government, a door would be opened to fraud and peculation amongst those at present without such temptation to be dishonest.

passage, in a letter from the Government to the Resident, dated 22d January 1813 :

It is, indeed, desirable on many grounds of practical expediency, as well as because it is consonant to the general spirit of the treaty, that we should abstain from interposing in cases of inferior importance, as the frequent occurrence of such interposition would be apt, by exciting irritation and discontent, to indispose the Vizier to listen to our remonstrances in affairs of greater magnitude, for which the weight of our authority ought to be reserved. On all these grounds, the Governor-General in Council would have wished that you had not taken up the cause of Hyder Bukhsh so warmly, as your just and natural feeling of compassion for the hardship of his situation, combined with your conviction of his claim to the protection of the British Government, prompted you to do. (p. 348.)

The reader will begin to perceive the difficulties under which Col. Baillie laboured in the management of negociations at this court (and which, from usage, were transacted directly with the prince), without falling short of the instructions and expectations of the British Government, and, at the same time, without violating the respect due to his Excellency, the observance of which is enforced upon the Resident in the "final arrangement" of 1802, in very specific terms :

The Resident must conduct himself towards the Nawaub Vizier, on all occasions, with the utmost degree of respect, conciliation, and attention, and must maintain cordial union and harmony in all transactions, and must endeavour to impart strength and stability to his Excellency's authority.

Whether Col. Baillie did or did not scrupulously fulfil this part of his duty is an essential question, which, as we before observed, links itself with the controversy between that gentleman and Lord Hastings. We have doubts whether it be fair to review this portion of his conduct, since it has received the approbation of the Government of that day; if, however, subsequent events lay it open to re-consideration, still it is extremely difficult for a candid and liberal mind to determine how far the shameful evasions and provoking conduct of the Vizier did or did not justify the severe and pointed expressions which abound in the Resident's communications with that prince. One of the items of the Nawaub Vizier's charge against Col. Baillie (before adverted to) is the adoption of an unauthorized style of address to him; but the Resident not only justified himself from this accusation (as appears from a curious and elaborate report of the Persian Secretary to the Bengal Government), but retorted it upon the Vizier, who was subsequently constrained to exchange his haughty style, for one more respectful. Nevertheless, one of the members of council (Mr. Edmonstone), in a minute recorded upon this report, intimates that "the severity of some occasional passages in the Resident's letters to the Vizier might perhaps have been avoided, without weakening the force and effect of his representations." (P. 376).

The opinion of the Bengal Government, as to the merits of Col. Baillie, is recorded in the following highly encomiastic passage in the despatch of their secretary, 2d July 1813 :

Before I proceed to the immediate subject of this despatch, I am directed by the Governor-General in Council to convey to you the cordial expression of his Lordship in Council's approbation of the ability, judgment, firmness, and perseverance, which have distinguished your conduct in the arduous and important negotiation to which your despatches refer. The peculiar temper and disposition of the Vizier have, on this, as on former occasions, presented obstacles to the accomplishment of the just views of the British Government at the Court of Lucknow, which no exertion of the qualities above

described,

described, without the application of the further direct interference of the Government, could be expected entirely to overcome; while the failure of your utmost efforts, therefore, to obtain his Excellency's concurrence in the whole of the measures which you have been employed in urging him to adopt, has excited regret rather than surprize in the mind of his Lordship in Council, the success which has attended your exertions in accomplishing some objects to which great importance was attached by Government, has afforded his Lordship in Council a high degree of satisfaction; and your conduct, in either case, is considered to have augmented your claim to his distinguished approbation, which has already been so frequently and justly acknowledged.

Before we proceed to consider the other division of Col. Baillie's diplomatic services, there are two other topics necessary to touch upon,—the conduct and character of Hukeem Muhdee, a favourite adviser of the Vizier; and the Resident's warm advocacy of the cause of his own Moonshee, Alee Nuckee Khan, who had suffered from the oppressions of the Amils.

Hukeem Mehdee Alee Khan was originally the Amil of an extensive district (Kyrabad), and we find him, in 1810, praised by Col. Baillie for his zeal and activity (p. 14); as possessed of character and respectability, and as superior in ability to any other servant of the Vizier. (p. 107). The talents of this person seem to have recommended him at court; but no distinct complaint of his influence has appeared to us in the correspondence of the Resident, till the month of December 1813, when he is described as a person "whose disaffection to the British Government, and the general vices of his character, have frequently fallen under his (Col. Baillie's) observation, and have been brought to the notice of Government by his predecessor, as well as by himself;" and whose pernicious counsels, as well as the false reports of intriguing agents employed by the Hukeem, "at the presidency, as well as in the city of Lucknow," induced the Vizier to depart from his promise regarding the measures of reform.

The Moonshee was a landholder in the district of Sandee, and had been unjustly deprived of his rights by the Vizier's officers. The cause of this injured man was taken up by the Bengal Government, who laboured in vain to prevail upon his Excellency to do him justice. The frequency and urgency of Col. Baillie's importunities upon this head would have attracted notice, had the individual been a stranger; as a confidential and highly deserving servant, whose wrongs were more easily appreciable, they cease to be remarkable; but it obviously becomes a question how far it was expedient to make this subject so prominent, which is confessed by the Resident to be "a matter of more immediate and personal interest to himself than any other subject of discussion what had arisen between his Excellency and him during his residence at this court;" and to found upon it such a charge against the Vizier as is implied in the following remark, personally addressed to him: "it was difficult to account for any further delay in the satisfaction of the Moonshee's rights, unless, indeed, it were supposed that the situation of the claimant, as a servant of the British Government, confidentially employed by the Resident, had rendered him obnoxious to his Excellency's displeasure." (P. 416).

The sudden death of the Vizier, Saadut Alee Khan, in July 1814, altered the aspect of affairs at the court of Lucknow. The prompt and judicious measures taken by Col. Baillie * on that occasion, secured the musnud to the rightful successor (Refaut-ood-Dowlah), whose grateful recollections of this service

* The Earl of Moira, then Governor-General, in his letter to the Court of Directors, says (p. 345) that the Resident's conduct "was characterized by the greatest promptitude, vigilance, and prudence, and received his entire approbation."

service might justly be expected to strengthen the influence of the Resident. This event had been preceded, a few months only, by the accession of Lord Hastings (then Earl Moira) to the Government of India, whose principles of administration were of a rather different complexion from those of his predecessor, under whose instructions the Resident had formed and pursued his system of negotiation with the ruler of Oude.

His Lordship, in his copious letter of August 15, 1815, has developed the principles adopted by him for the regulation of his policy with that state as follows:—In construing the engagements between the two parties, the most liberal sense should be given to the articles favourable to the weakest; a conclusion, he observes, agreeable to sound policy as well as to abstract equity. If the extremity of being forced to substitute our own Government for the Nawaub's (a proceeding which would be universally stigmatised) were avoided, much would be gained. The only justifiable ground for seizing the possessions of the Nawaub, would be the discovery that he had plotted, in concert with our enemies, the overthrow of our power; a case which could only occur through desperation produced by a course of indignities and provocations. His situation, therefore, should be rendered tranquil and satisfactory; an object no less incumbent on our policy than dictated by our generous feelings. The right of interference with advice or remonstrance upon subjects which might injuriously affect the British interests, clearly implied that in all other respects the Nawaub was free; and, indeed, the tenor of the treaty proved that the uninterrupted exercise of his authority was assured to him in order to qualify the strong step we had taken. The Nawaub was, consequently, to be treated as an independent prince. The Resident should consider himself as the ambassador from the British Government to an acknowledged sovereign; he should carefully abstain from any ostentation of authority, and forbear to countenance opposition to the Nawaub, on the part of his Excellency's servants, or to recommend persons from his own household for reception in the suite of the Nawaub. The latter should be treated with deferential politeness, which could not deceive the Nawaub into resistance, but must rather promote his flexibility, lest he should forfeit this show of respect. (Pp. 853, 854).

We have condensed this passage in the letter for the sake of brevity; but it deserves perusal in the original terms.

His Lordship, during his tour in the Upper Provinces in 1814, had an interview with the Nawaub Vizier; and soon after this occurrence, those extraordinary transactions developed themselves, which eventually led to the removal of Col. Baillie. The details of these transactions are so multifarious, so contradictory, so embarrassed by the covert intrigues of individuals, whose names and objects are only to be guessed at; and the conduct of the Vizier himself is characterized by such avowed and degrading duplicity, that it is scarcely possible to disentangle the web into which the acts and representations of the various agents have involved them, so as to admit of their being presented in a lucid and impartial narrative. The fairest mode, in our opinion, of exhibiting the transactions themselves, and the points at issue between Lord Hastings and Col. Baillie, will be to dissect the respective statements of both parties, incorporating in our abstract the requisite explanatory matter.

The Governor-General, in his minute of 30th November 1814, states that, on his arrival at Cawnpore (8th October), he had no reason to suspect that the Resident was not in high favour with the Nawaub. At an interview with his Excellency, his Lordship remarked a want of satisfaction in the former, when he was told that the Resident possessed his Lordship's entire confidence; and he

he produced (unexpectedly to Col. Baillie) a paper containing remarks upon the reform proposed for the administration of Oude, and a passage relating to the Resident, of the following equivocal import:—

By your Lordship's kindness, Major Baillie loves me from his heart. Under the influence of this disposition, in consequence of my father's demise, he visits me almost every day; and agreeably to rule, I also have gone to visit him. While Major Baillie may continue to remain here, there is no need for making any representation: after he shall have gone away, it is my wish that the practice of visiting, as observed between the Resident and my father, may be reverted to.

Lord Hastings' secretary having subsequently learned, by means of Mr. Clarke and Capt. McLeod, two English gentlemen in the service of the Nawaub Vizier, that his Excellency was in "absolute despair" at the disappointment of his expectations of being delivered from "the despotism of Col. Baillie," his Lordship sent for them, and learned "that the Nawaub had mentioned many matters of grievance to them; but that his mind was in such subjection to Col. Baillie, that he would never complain of that gentleman in his presence." His Lordship accordingly gave him an opportunity of explaining himself in the absence of the Resident; the Nawaub was "shy of entering into particulars," and promised to send, the following day, a paper containing the subjects of complaint, but which was not forwarded till near a fortnight after, when his Lordship had arrived at Lucknow; and, when sent, contained no reference whatever to Col. Baillie.

Some doubt having fastened itself upon his Lordship's mind, as to his Excellency's preference of Mr. Law, or Mr. Wilson, for his physician, and Col. Baillie having asked the appointment, in the name of the Vizier, for the latter, his Lordship desired Capt. Gilbert, whom the Vizier had invited to breakfast with him, to endeavour to ascertain the real fact. Upon the question being put to the Vizier, he exclaimed, earnestly, that it was Mr. Law, and that the Resident wished to force Mr. Wilson upon him. His Excellency then unfolded a long string of grievances against Col. Baillie, professing, that as long as the latter should remain at Lucknow he (the Nawaub) could never have an hour's comfort.

At a subsequent conference with his Lordship, the Vizier (who had previously confirmed, in the most distinct manner, to Mr. Ricketts, one of the Government-Secretaries, all he had said to Capt. Gilbert) acknowledged he had complaints against the Resident, and presented a paper which he said contained them all. These complaints were, in substance, as follows:—1st, the Resident's absence from the late Vizier's funeral; 2dly, his extorting certain grants from his Excellency for the Moonshee Alee Nuckee Khan; 3dly, his shutting up a high road contiguous to the Residency, and erecting a lofty gate, which overtopped the Vizier's buildings; 4thly, his stationing British guards over the treasuries and jewel rooms; 5thly, his calling one of the late Vizier's ladies into his presence, regardless of his Excellency's late father's honour; 6thly, his bringing with him persons not entitled to sit, and causing them to have chairs; 7thly, his encouragement of complaints from the Vizier's dependants; 8thly, his interference with the concerns of the Vizier's family; 9thly, his placing over the Vizier the sons of Mirza Jāfer, in such a manner, that his Excellency never had a moment's privacy from them; 10thly, his suffering an attack on a horseman in the Vizier's service, which lowered his Excellency in the eyes of the people; 11thly, his perusing the accounts of the country daily, and issuing his own orders, in answer to petitions; nominating Ameens, as if his Excellency had no concern whatever with the Government; assigning

service might justly be expected to strengthen the influence of the Resident. This event had been preceded, a few months only, by the accession of Lord Hastings (then Earl Moira) to the Government of India, whose principles of administration were of a rather different complexion from those of his predecessor, under whose instructions the Resident had formed and pursued his system of negociation with the ruler of Oude.

His Lordship, in his copious letter of August 15, 1815, has developed the principles adopted by him for the regulation of his policy with that state as follows:—In construing the engagements between the two parties, the most liberal sense should be given to the articles favourable to the weakest; a conclusion, he observes, agreeable to sound policy as well as to abstract equity. If the extremity of being forced to substitute our own Government for the Nawaub's (a proceeding which would be universally stigmatised) were avoided, much would be gained. The only justifiable ground for seizing the possessions of the Nawaub, would be the discovery that he had plotted, in concert with our enemies, the overthrow of our power; a case which could only occur through desperation produced by a course of indignities and provocations. His situation, therefore, should be rendered tranquil and satisfactory; an object no less incumbent on our policy than dictated by our generous feelings. The right of interference with advice or remonstrance upon subjects which might injuriously affect the British interests, clearly implied that in all other respects the Nawaub was free; and, indeed, the tenor of the treaty proved that the uninterrupted exercise of his authority was assured to him in order to qualify the strong step we had taken. The Nawaub was, consequently, to be treated as an independent prince. The Resident should consider himself as the ambassador from the British Government to an acknowledged sovereign; he should carefully abstain from any ostentation of authority, and forbear to countenance opposition to the Nawaub, on the part of his Excellency's servants, or to recommend persons from his own household for reception in the suite of the Nawaub. The latter should be treated with deferential politeness, which could not deceive the Nawaub into resistance, but must rather promote his flexibility, lest he should forfeit this show of respect. (Pp. 853, 854).

We have condensed this passage in the letter for the sake of brevity; but it deserves perusal in the original terms.

His Lordship, during his tour in the Upper Provinces in 1814, had an interview with the Nawaub Vizier; and soon after this occurrence, those extraordinary transactions developed themselves, which eventually led to the removal of Col. Baillie. The details of these transactions are so multifarious, so contradictory, so embarrassed by the covert intrigues of individuals, whose names and objects are only to be guessed at; and the conduct of the Vizier himself is characterized by such avowed and degrading duplicity, that it is scarcely possible to disentangle the web into which the acts and representations of the various agents have involved them, so as to admit of their being presented in a lucid and impartial narrative. The fairest mode, in our opinion, of exhibiting the transactions themselves, and the points at issue between Lord Hastings and Col. Baillie, will be to dissect the respective statements of both parties, incorporating in our abstract the requisite explanatory matter.

The Governor-General, in his minute of 30th November 1814, states that, on his arrival at Cawnpore (8th October), he had no reason to suspect that the Resident was not in high favour with the Nawaub. At an interview with his Excellency, his Lordship remarked a want of satisfaction in the former, when he was told that the Resident possessed his Lordship's entire confidence; and he

he produced (unexpectedly to Col. Baillie) a paper containing remarks upon the reform proposed for the administration of Oude, and a passage relating to the Resident, of the following equivocal import:—

By your Lordship's kindness, Major Baillie loves me from his heart. Under the influence of this disposition, in consequence of my father's demise, he visits me almost every day; and agreeably to rule, I also have gone to visit him. While Major Baillie may continue to remain here, there is no need for making any representation: after he shall have gone away, it is my wish that the practice of visiting, as observed between the Resident and my father, may be reverted to.

Lord Hastings' secretary having subsequently learned, by means of Mr. Clarke and Capt. McLeod, two English gentlemen in the service of the Nawaub Vizier, that his Excellency was in "absolute despair" at the disappointment of his expectations of being delivered from "the despotism of Col. Baillie," his Lordship sent for them, and learned "that the Nawaub had mentioned many matters of grievance to them; but that his mind was in such subjection to Col. Baillie, that he would never complain of that gentleman in his presence." His Lordship accordingly gave him an opportunity of explaining himself in the absence of the Resident; the Nawaub was "shy of entering into particulars," and promised to send, the following day, a paper containing the subjects of complaint, but which was not forwarded till near a fortnight after, when his Lordship had arrived at Lucknow; and, when sent, contained no reference whatever to Col. Baillie.

Some doubt having fastened itself upon his Lordship's mind, as to his Excellency's preference of Mr. Law, or Mr. Wilson, for his physician, and Col. Baillie having asked the appointment, in the name of the Vizier, for the latter, his Lordship desired Capt. Gilbert, whom the Vizier had invited to breakfast with him, to endeavour to ascertain the real fact. Upon the question being put to the Vizier, he exclaimed, earnestly, that it was Mr. Law, and that the Resident wished to force Mr. Wilson upon him. His Excellency then unfolded a long string of grievances against Col. Baillie, professing, that as long as the latter should remain at Lucknow he (the Nawaub) could never have an hour's comfort.

At a subsequent conference with his Lordship, the Vizier (who had previously confirmed, in the most distinct manner, to Mr. Ricketts, one of the Government-Secretaries, all he had said to Capt. Gilbert) acknowledged he had complaints against the Resident, and presented a paper which he said contained them all. These complaints were, in substance, as follows:—1st, the Resident's absence from the late Vizier's funeral; 2dly, his extorting certain grants from his Excellency for the Moonshee Alee Nuckee Khan; 3dly, his shutting up a high road contiguous to the Residency, and erecting a lofty gate, which overtopped the Vizier's buildings; 4thly, his stationing British guards over the treasuries and jewel rooms; 5thly, his calling one of the late Vizier's ladies into his presence, regardless of his Excellency's late father's honour; 6thly, his bringing with him persons not entitled to sit, and causing them to have chairs; 7thly, his encouragement of complaints from the Vizier's dependants; 8thly, his interference with the concerns of the Vizier's family; 9thly, his placing over the Vizier the sons of Mirza Jāfer, in such a manner, that his Excellency never had a moment's privacy from them; 10thly, his suffering an attack on a horseman in the Vizier's service, which lowered his Excellency in the eyes of the people; 11thly, his perusing the accounts of the country daily, and issuing his own orders, in answer to petitions; nominating Ameens, as if his Excellency had no concern whatever with the Government; assigning

the Muhal of Sandee, the Chowdree's right of which had been usurped by Moonshee Alee Nuckee Khan, to that person's nephew; directing the ministers to attend him for orders, &c. The Vizier added, verbally, that the *nobus*, or state drum in the gateway of the palace, was not suffered to be beaten, because the sound disturbed the Resident, and asked that it might be beaten as formerly, which his Lordship directed.

Upon his Excellency's wishes being consulted as to his ministers, he desired that Hukeem Mehdee might be paishcar to his son, the nominal minister; and on his Lordship's remarking that the Hukeem had not the confidence of the British Government, the Vizier replied that he had his confidence; but he had enemies, because he would not join with the Resident.

On the following day, an old servant of the Vizier, named Agha Meer, was deputed to invite Messrs. Swinton and Adam, the Government Secretaries (who were present at the interview just mentioned), to breakfast with, and to receive a communication from, his Excellency, who, upon their visit, retracted the complaints against Col. Baillie, and charged Capt. McLeod, Mr. Clarke, Mr. Law, and a Mr. De L'Etang (also in the Vizier's service), with having urged him to make them! The Vizier confirmed this declaration by a letter to the Governor-General, wherein he says that he had understood that an accusation against the Resident would be agreeable to his Lordship, whereas he had no cause of complaint or dissatisfaction against that gentleman; and that he had dismissed Mr. Clarke, and the other contrivers of the "sorcery," from his service.

His Lordship, in these perplexing circumstances, deputed Messrs. Ricketts, Adam, and Swinton, to request of the Vizier an explanation of his contradictory statements; apprising him that the gentlemen charged with instigating the accusation against Col. Baillie desired to attest on oath, that the subject was spontaneously urged upon them by the Vizier; and putting the question, in a solemn manner, to his Excellency's honour, whether (as it had been represented to be his Lordship's wish to hear Col. Baillie criminated) his name had been used to influence his subsequent conduct.

At this conference the Vizier re-asserted, in the most serious and positive manner, his last statement; affirming that he had been deceived by the practices of Mr. Clarke and others, who had influenced his mind by using the Governor-General's name; that, in particular, Mr. Wilson was the physician of his choice, and not Mr. Law; that the declarations of Mr. Clarke and his confederates were false; that Mr. Law first suggested the removal of Major Baillie, whose enemy he was, because he ascribed the preference of Mr. Wilson to his influence. He added, that no person had prompted his retraction: "I passed a sleepless night," he observed, "and the next morning I, of my own free will, determined to dismiss Mr. Clarke and the others from my service, and sent the message by Agha Meer." Three days after, his Excellency nominated Agha Meer his minister.

Each of the gentlemen charged by the Vizier has most distinctly and unequivocally denied the matters imputed to them; and the Governor-General has expressed his unwavering conviction of their entire innocence. Capt. McLeod declares his firm belief that Agha Meer, "acting in the interest of another or others," though in the service of the Nawaub, had betrayed and deceived his master, by intimidating him to make his subsequent declaration.

Lord Hastings intimates his persuasion that the Vizier had "floating dissatisfaction" against the Resident; that he had been irritated by points of behaviour in Col. Baillie, some of which (as before stated) his Lordship had himself

himself witnessed; and that he became apt to the purposes of Hukeem Mehdee, whose representations he might have confounded with the names of the gentlemen referred to. His Lordship considers that the affair was an intrigue of Hukeem Mehdee, overset by some other (a branch of which was the recalling the Vizier to a sense of his obligations to Col. Baillie), the success of which intrigue was reaped by Agha Meer, a low man, who had never yet been mentioned as eligible for the appointment of minister.

The paper of complaint against Col. Baillie having been retracted by the Vizier, that gentleman's exculpation of himself from the charges seemed superfluous; he has, however, either totally denied, or satisfactorily explained, each item; observing (p. 897) that they formed "a tissue of the most glaring falsehoods and absurdities, and that he did not, in his conscience, suspect the Vizier of having, even for one moment, entertained the sentiments, far less of having fabricated the assertions conveyed by them."

When, however, the minute of the Governor-General (before quoted) was communicated to the Resident (26th January 1815), and which contained expressions of slight disapprobation towards that gentleman, though accompanied by a letter commending his zeal, talents, and industry, he addressed (29th April) to the Government-Secretary, a letter containing copious remarks upon the preceding transactions.

Col. Baillie begins by adverting to the introduction of Hukeem Mehdee at the late Vizier's court in 1811, and ascribes to that person the obstruction of the reform, and every untoward occurrence which subsequently took place at Lucknow. One of his first devices was to excite a personal enmity in the Vizier towards the Resident, whom he desired to remove from his post. He endeavoured to intrigue, by means of agents, at Calcutta; and when Capt. McLeod arrived at Lucknow in 1811, Col. Baillie was informed that the Hukeem endeavoured to open an intercourse with him; and as Capt. McLeod was on intimate terms with the Resident, the latter cautioned him against the Hukeem. The Vizier's reconciliation with the Resident took place on the 2d October 1813, when Hukeem Mehdee had been banished from his Excellency's councils, and treated as an enemy and traitor.

It is here necessary to break the connexion of Col. Baillie's narrative, and examine the statement of Capt. McLéod. That officer solemnly declares, that when he proposed to take leave of the late Vizier, and embark for Calcutta; "early in the month of October 1813," his Excellency took him aside, with tears in his eyes, and, apparently in the deepest distress, deplored his degraded situation, through the interference of Col. Baillie in every branch of his Government; entreated of Capt. McLéod to represent to the Governor-General that he was the most wretched of beings, and wished death would put an end to his miseries; that the Resident trampled on his authority, gave encouragement to his disobedient servants, &c.; and that he (the Vizier) had no means of imparting his grievances to the British Government but through the Resident, whose interest it would be to withhold the communication, &c. &c.

Col. Baillie proceeds to state that Hukeem Mehdee was soon recalled to the Vizier's councils (about the end of November), and a more perverse conduct on the part of his Excellency was the result of this event, and of "encouragement received from the presidency," by communications from Capt. McLeod (whose acquaintance with Lady Loudon was frequently talked of), or from some native agents at Calcutta. Col. Baillie concludes it to be apparent that there existed "a diabolical intrigue, the object of which was, to frustrate

the just views of our Government, by removing from the situation of Resident the instrument of the accomplishment of those views."

Col. Baillie intimates a strong suspicion that communications passed at this period between the Vizier and the Government of Bengal, on public subjects, to which he was not privy; and he quotes a paper of intelligence, containing a direct assertion of Hukeem Mehdee that Lord Moira had declared, that the adoption or rejection of the reform was to be totally uncontrolled by the advice of the Resident: he also concludes that the untoward proceedings from this period till the death of the Vizier were connected with the "deputation" of Capt. McLeod and the intrigues of Hukeem Mehdee.

The death of the Vizier again destroyed the Hukeem's influence; and the new Vizier's attachment was demonstrated to be animated and ardent towards the Resident up to the moment of Lord Hastings' arrival.

Col. Baillie then details minutely the circumstances attending the appointment of Mr. Wilson as physician to the Vizier, in which he had no concern, but which drew upon him the enmity of Mr. Law, and of his friend Capt. McLeod. He then makes some remarks upon the connexion of Mr. Clarke with these gentlemen, as tending to develop the designs with which he became a party to their measures. Lastly, he vindicates himself from the supposed offence of obtruding the family of Mirza Jäfer upon the Vizier, which appears, he observes, as the only ground of Lord Hastings' censure of his proceedings. With respect to the general remarks of his Lordship, that "there were other particulars in the Resident's conduct which his Lordship found reason to censure, and some on which he suspected that disapprobation should rest;" and with respect also to the points of misbehaviour towards the Vizier in his Lordship's presence; Col. Baillie solemnly disavows, on his honour, his having "made use of any expression, far less committed any act, that could wound his Excellency's feelings, or detract from the dignity or independence of his station."

Col. Baillie then explains the origin of the charges made, and soon after retracted, by the Vizier, which he traces to an intrigue "more base and more complicated" than the former; conducted by Hukeem Mehdee and the European gentlemen already mentioned.

The grounds of the Hukeem's animosity to the Resident must be obvious: he had opposed his accession to power; he had disappointed his views of proceeding to Lord Hastings at Cawnpore, with treasure, which he designed to embezzle; and he had urged a reform which must prejudice his interests.* These, and other grounds, are assigned, or easily assignable.

A few trifling occurrences, wherein diminished attention was accidentally or unavoidably displayed by the Governor-General towards the Resident, is appealed to by Col. Baillie; he dwells, also, in a pointed manner, upon the circumstance of Capt. McLeod and Mr. Clarke being the vehicles of communication between the Vizier and the Governor-General, without the knowledge of the Resident, in violation of the express orders of Government; and upon the irregular visit of Capt. Gilbert. He observes:—

To this deputation of Capt. Gilbert, and his private conference, assisted by Mr. Clarke, with the Vizier, I ascribe the maturation of the plot: a conspiracy designed by Hukeem Mehdee, most readily entered into by Capt. McLeod and Mr. Clarke, and unintentionally

* Hukeem Mehdee's amilship must have been valuable; the district he farmed yielded a revenue of thirty lacs per annum.

unintentionally encouraged by Lord Moira; the principal objects of which were the subversion of the reform of this Government, my removal from the office of Resident, and the elevation of Hukcem Mehdee Alee Khan to the station of prime minister to the Vizier. Some other subordinate objects, which have a natural tendency to explain, and were necessary, perhaps, to account for, the extraordinary association and views of the subordinate instruments of the intrigue, have been ascribed to it by general report, which the Vizier, as I understand, has authenticated, and which his minister has frequently declared to me to consist with his personal knowledge. Capt. McLeod and Mr. Clarke are reported to have each had a promise from his Excellency of the sum of a lac of rupees, as the reward of their labours in ascertaining the sentiments of the Governor-General with regard to the reform and the Resident; and his Excellency had further engaged to make good such other douceurs, to a very considerable amount, as Capt. McLeod and Mr. Clarke might recommend to be given to their friends who assisted the progress of their inquiries. Mr. Clarke was to be aide-de-camp and major, with the salary annexed to those offices when held in former times by Mr. Ouseley; and Mr. Law was to be appointed to the office of personal surgeon to the Vizier.

The failure of the conspiracy Col. Baillie shortly explains by stating, that Agha Meer, who had been perfectly aware of the intrigue and its authors, revealed it to the Resident's moonshee (Alee Nuckee Khan), who assured him of its exposure when the matter was investigated. Agha Meer, next day (succeeding that in which the charges had been made), attended the Vizier for orders, and found him in a state of agitation and terror, owing to the occurrence of the preceding evening. Agha Meer declares he sounded the Vizier's mind by seeming to encourage his perseverance in the accusations; but finding his contrition cordial, he changed ground, and recommended a message to Col. Baillie. The Vizier concurred, and directed him to adopt the steps which have been already detailed.

With respect to the appointment of Agha Meer (whom Col. Baillie represents as a seyyud, of respectable parentage and connexions), his nomination originated purely with the Vizier; and there was no person of distinction or note at the court of Lucknow who was eligible for the office of principal minister.

Col. Baillie states, that on discovering what had occurred, he waited on the Governor-General, and in the course of this interview, spoke of the encouragement afforded to the base designs of his (the Resident's) enemies by his Lordship's ignorance of the native character, and declared he must consider Capt. McLeod and Mr. Clarke as authorized spies on his conduct.

In the postscript to his letter, which explains the reasons of its delay (it not being sent till September 29th), Col. Baillie refers to subsequent intrigues, which, "supported by native emissaries, as formerly, in the suite of the Governor-General," had ruined Agha Meer, and impressed the Vizier with a belief that this minister was disliked by his Lordship, and that certain measures, suggested by the Resident, were disapproved by the Governor-General, though prescribed by the Government.

Upon receipt of this communication, the Governor-General declared in council, that his feelings could never allow him to hold confidential intercourse with Col. Baillie; and, from the general tone of the paper, he considered him to be wholly unfit to be continued as his Lordship's representative at the court of Oude. The other members of council concurred in the propriety of his removal.

In a subsequent minute of 3d February 1816, Lord Hastings has entered at great length into a vindication of his own conduct, with respect to Col.

Baillie,

Baillie, and an exposure of that gentleman's "perversions." But as the latter has had no opportunity of putting upon official record a counter-statement, and as the minute contains no new facts, but merely reasonings (ingenious and powerful, it must be acknowledged) upon those already detailed, we think it inexpedient to extend this article by examining its contents.

The foregoing details are not sufficient to qualify the reader to decide upon the merits of the respective cases. A careful and dispassionate examination of the documents has led us to form this conclusion; namely, that under all the peculiar circumstances, neither party could have acted otherwise than he did. That suspicions should have been engendered on both sides was hardly to be avoided. The circumstances of Col. Baillie were by far the most difficult and embarrassing of the two, and therefore his case demands the most indulgence. The mere act of removal may be left out of the question; for we apprehend, when Col. Baillie penned his letter of April 29th, he must have contemplated that result. How far the impression which seems to have taken hold of Lord Hastings' mind, that the Resident's demeanour towards the late and present Vizier was characterized by a just degree of respect, is a question which must be left to inference and conjecture. It constitutes the only ground of doubt in our mind; and we have endeavoured, for that reason, to describe the nature of the negociations which the Resident had to manage, the character of those with whom he conducted them, the view which he entertained of their obligations, and the language he employed in his intercourse, as the only materials which can help us to a conclusion. It is observable that Col. Baillie admits (p. 527) his "immediate control" over the late Vizier's actions, "through the operation of *fear* on his mind."

The subject of the loan we must despatch briefly: the contradictions in this matter appear very unaccountable. The statement in Lord Hastings' "Summary" gives us distinctly to understand that the loan from the Vizier was a spontaneous act of gratitude for being liberated from the state of thralldom in which he had been held by the British Resident: in his Lordship's letter to the Court of Directors, he describes the first loan of one crore as tendered to him by the Vizier as a proof of his friendship, and the cordial interest he felt in the Company's prosperity. The fact, however, appears to be, that Col. Baillie was instructed by his Lordship's secretary, Mr. Ricketts, to open a negotiation with the Vizier for the first loan, "to appear as a voluntary offer to Lord Moira:" and with respect to the second, the suggestion came from the Governor-General (as appears from Mr. Rickett's letter, p. 1031), and it was proposed to the Vizier by the Resident, who procured it with infinite difficulty, and when obtained, the loan was tagged with a most ungracious request from the Vizier, "that he might be exempted from future demands, and have assurances to that effect from his Lordship, that his Excellency's mind might be at rest."

Our readers are doubtless aware that three Directors questioned the propriety of publishing *some* of these papers. One ground of their dissent is important:—

5th. Because Col. Baillie, professing to have in his possession original letters written to him by order of the Governor-General, &c., the Court, in lending themselves to the publication of copies of such letters, seem to sanction what to us appears a most questionable proceeding; namely, the abstraction, by any public functionary, on quitting office, of original documents connected with important negociations, and liable on future occasions to be referred to, and which, belonging to the station, not to the man, ought to have been left in the archives of the office.

THE ISLAND OF HAINAN.*

THE island of Hai-nan (correctly *Hai-lam*, or the western country) lies between the eighteenth and twentieth degrees of north latitude; it is about 165 miles in extreme length, and 75 in extreme breadth. Its surface is composed of high primitive mountains, sandy plains, or savannas, intersected here and there by rocky ridges, and a few fertile vallies. The eastern coast is commonly steep and rocky; and to the south it is indented by some fine bays, affording ample shelter in the north-east monsoon, but none in the south-western. The north-western shore, forming the eastern boundary of the Gulf of Tonquin, is, on other hand, low, with shoals and sand-banks running into the sea. The soil of Hai-nan, according to the report of the late visitors† to it, is thin and sterile, with the exception of a few fertile vallies. The island forms a portion of the government of Canton, the governor being only a lieutenant of the viceroy of that province. Notwithstanding its sterility, it is populous, and contains many walled towns, not less, it is said, than fourteen. The vallies, wherever there is soil and water enough, are cultivated with rice; but the most frequent object of husbandry is the hardy and productive *batata*, or sweet potatoe (*convolvulus batatas*), which appears to afford the principal means of subsistence to the poor and swarming inhabitants; so that it would appear that Ireland is not the only great island in the world with what has been emphatically termed a *potatoe population*.

The Chinese of Hai-nan, although assimilated in manners, habits, and appearance with the other inhabitants of the Chinese empire, speak a distinct language from that of the continental portion of the province of Canton, and appear to have been a distinct race, gradually subdued in the progress of conquest and civilization. Of the primitive unmixed inhabitants, a very considerable number are still said to exist in the mountains unsubdued and untamed.

The recent British visitors found the manners and dispositions of the inhabitants extremely inoffensive. During their residence, they made frequent excursions of fifty and sixty miles into the interior of the island without encountering any obstruction whatever, and indeed without annoyance, save what was occasioned by a little inordinate curiosity. The circumstances which most forcibly attracted the attention of our countrymen were, the sandy barrenness of the soil; the poverty of the peasantry; the timidity of the men; the numbers of women (many of them with small feet) performing field-labour; the multitude of children and of dogs; and the want of all defence against invasion, especially evinced by the mouldering and neglected condition of the ivy-covered walls of the fortified towns, which had all the appearance of antiquity and inutility. The chief city of Hai-nan is Kiun-tcheou-tou, situated within the Gulf of Tonquin. From the port of this place, and of several others on the same side of the island, a considerable foreign traffic is carried on with Macao, Tonquin, Cochin China, Siam, and, since last season, with Singapore. With Tonquin, and some of the northern ports of Cochin China, voyages are performed at all seasons of the year; but with all countries south of Hai-nan, only by favour of the monsoons. The junks which visit Siam annually are seldom fewer than forty in number; those which visit Lower Cochin China amount to about twenty-five, and those which frequent Tonquin
and

* From the *Singapore Chronicle*, March 3, 1825.

† Two British vessels have been recently wrecked on the island.

and the northern ports of Cochin China are ordinarily about fifty. Their size is commonly from 100 to 150 tons, being the smallest, the poorest, but the most numerous, of all descriptions of Chinese junks carrying on foreign trade.

We ought not to close this brief notice without adverting to the great dearth of all sensible, rational, and intelligent details on the subject of Chinese geography and statistics. Du Halde and Grosier have servilely copied Chinese writers, apparently extracting the most fabulous, the most injudicious, or the most puerile of their details; and, with their absurd taste for the marvellous, throwing an air of extravagance and incredibility upon every thing which they attempt to describe. We shall beg leave to quote two or three examples from Grosier, himself a most vituperative ecclesiastic, who charges every one who differs from him with calumny, falsehood, want of truth, and want of decency, to use his own expressions. Speaking of Hai-nan, he informs us that its capital stands on a promontory; but on what promontory of a coast of 480 miles in extent he does not condescend to inform us; and, in short, all he says about the said capital amounts to this, that it is situated upon a nameless promontory, and that "ships often anchor near its walls." On the subject of its natural history we have the following edifying information: "There are also found here starlings, which have a small crescent on their bills; *black birds*, of a deep *blue* colour, with yellow ears rising half an inch; and a multitude of other birds remarkable for their colour or song."* The meaning of this in plain English, is, that Hai-nan, in common with most other countries of tropical Asia, produces the common minar (*coracias Indica*), and the hill minar (*gracula religiosa*). Instead of representing Hai-nan as a poor country, as it is too well known to be, he praises it for its mines of gold and *lapis lazuli*, the abundance of its curious woods, and its general wealth!

By the recent notices of new works from England, we perceive that we are promised an extensive statistical work on the Chinese empire, which, it is to be hoped, will be composed in a style different from that of the Jesuits. On the subject of Chinese law we have had a good deal which is of some use; on the subject of philology a great deal which is of very little, at least until applied to useful purposes; on the subject of the wars and history of China a vast deal which is of little or none at all, resembling too much the wars of the Saxon heptarchy, which Milton and Hume thought of equal dignity with the quarrels of the kites and cranes of the same period; and on the subject of Chinese ethics, folio upon folio, which savours at least of inconsistency and supererogation, since the Chinese are admitted, on all hands, to have less religion and worse morals than any people on earth. It is full time, therefore, that our writers should begin to treat of facts and things, instead of words; that we should at length have something of the natural history of China, of the practical details of its agriculture, of its commerce, of its population, and of its geography.

* The text of the French author will not support the *Hibernianism* imputed to him by the writer of this article; it is as follows:—

"Parmi les animaux que l'isle produit, on distingue une espèce curieuse de grands singes noirs, qui ont les traits et la figure de l'homme; on prétend qu'ils sont très-amoureux des femmes. On y trouve aussi des corbeaux ornés de cravates blanches; des étourneaux qui portent sur le bec une petite lunette; des merles d'un bleu foncé avec deux oreilles jaunes, élevées d'un demi-pouce, et une foule d'autres oiseaux remarquables par leurs couleurs et leur chant." *Descr. Gén. de la Chine, tom. 1, p. 122.—Ed.*

PROGRESS OF THE BURMESE WAR.

IN resuming our historical narrative* of the transactions in Ava, the object of which is, to furnish a clear and connected detail of the military events of the war, we are desirous of premising a few remarks upon the policy to be adopted towards the Burmese court, should success continue to attend our arms.

The mischiefs resulting from an encroaching and aggrandizing system, on the part of a government constituted as that of British India, and remote from the seat of empire, are obvious; and the Parliament of England has accordingly imposed the utmost practicable restraint upon the indulgence of a spirit of ambition, either in the East-India Company, or their representatives in the East. The precautions taken by the British Legislature relate necessarily to the origin and commencement of warfare in India. Although extension of territory in our eastern possessions be, under all circumstances, always a subject of regret, it is regarded by the Legislature, and must be so viewed by all men of sober reason, as pernicious only when it is the object and motive of war. Self-defence must render hostilities sometimes inevitable; and the mere display of power to repel aggression, affords no sufficient protection against reiterated injury and insult, especially when the aggressor be, as in India, half-civilized, and incapable of justly appreciating the grounds of forbearance: he must be convinced by loss of power and curtailment of territory (and the rulers of surrounding states by his example) of the impolicy of violence and injustice.

It is plain, therefore, that if war be sometimes unavoidable in India, increase of territory, or of political influence, must be equally so. The first object of the Government should be, as it notoriously is, to abstain as much as possible from measures which may lead to disputes with our neighbours, and to shun every temptation to enlarge our present possessions. But when all endeavours to maintain peace are fruitless, and war can be averted only by sacrifices incompatible with our safety in a country where our footing is by no means secure, it behoves a sound politician to extract from the evil as much practical good as he is able, by such a judicious and temperate application of the enemy's forfeited power as shall strengthen and consolidate our own.

We make these observations in order to anticipate the objections which will probably be made to what follows; namely, our urgent recommendation that, if the despot of Ava should be humbled by the British arms, no weak scruples and stale arguments against the increase of our territory in the East, should prevail upon us to reject advantages we may justly retain, and which will be highly beneficial to our eastern possessions, and to the interests of British commerce.

It requires no parade of ratiocination to prove that the eastern frontier of Bengal is naturally almost defenceless: the fact is apparent enough. At the commencement of the present war, the consternation which prevailed at Calcutta when a report was raised that the enemy had invaded Chittagong, though groundless, was by no means absurd; for if the Burmese troops and their commander had possessed sufficient resolution, they might perhaps have approached within gun-shot of Fort-William: the British force in that quarter was comparatively small, and a panic might have seized the sepoys, as at Ramoo.

The

* Continued from vol. xix, p. 763.

The several states, formerly independent, and subsequently absorbed by the Burman empire, forming its northern and north-western frontiers, are calculated to supply a strong geographical boundary between the British and Burmese territories. To detach these states from their connexion with Ava, would be attended with less violence than any of the territorial arrangements consequent upon our successes in Hindostan. The inhabitants are discriminated from the proper Burmese by language and character, as well as by hostile sentiments; and the court of Ava could feel least of all the loss of possessions which it holds by a *de facto* title only; the *right* vesting in the original possessors. These petty states might be erected into independent principalities; or, which would perhaps be more advantageous for the natives, annexed at once to the presidency of Fort William.

In respect to commerce in general, its interests would be materially promoted by the Burmese being deprived of the sea-coasts of ancient Pegu (in which the port of Rangoon is included), Martaban, and Tenasserim; all of which have been wrested, by the insatiable ambition of the rulers of Ava, either from Siam (as in the case of the latter province), or from independent princes. The anti-mercantile policy of the Burmese government demands some check. Not content with the bare possession of Martaban, which was once the capital of a kingdom, and a place of considerable trade, the barbarian conquerors destroyed its port by sinking vessels filled with stones at the mouth of the harbour, so that large vessels cannot enter. The ports of Tavoy and Mergui* have also seriously declined since their conquest by the Burmese. The judicious and politic appropriation of the conquered territory on the eastern coast of the bay of Bengal would strengthen our own power, restrain the ambition of the Burmese, conciliate friendly states, and benefit the general interests of commerce.

These speculations may be by some pronounced extravagant and premature; our object, in introducing the remarks which led to them, was, to vindicate the principle of retaining or appropriating a portion of the territory conquered from the enemy by the British arms, the progress of which we now proceed to detail.

Our last article closed with the desperate attacks of Bundoolah, and the total defeat of the enemy at Corkain (or Cambah), on the 15th December 1824. From this period till the month of February, the only operation of the Rangoon army was the assault and capture of the stockade and pagoda of Syriam, by Lieut. Col. Elrington, on the 11th January. The Lieut. Colonel, with 200 men of H.M.'s 47th Regt., and a detachment of seamen and marines in the King's and Company's services, carried the fort, which was strong, by storm.

Meanwhile, the operations in Assam were closed by the surrender of Rungpore, the capital, and the evacuation of the province by the Burmese troops, by convention with Lieut. Col. Richards, the commander of the British force. This event was preceded by sundry actions between detachments of the army and the Burmese, in which the latter were invariably defeated. Capt. Martin, on the 10th January, captured the stockade of Deorgong; and that of Moora Mookh was taken by surprise, on the 13th, by Lieut. Walden. On the 27th, the advanced position of Col. Richards' force, under Capt. Macleod, at Namdong Nullah, was attacked by the enemy in considerable numbers: Col. Richards, on joining the detachment, directed the enemy's position to be charged; the

* This port is accessible at all seasons, and is said to be the only safe and convenient harbour on the whole eastern coast of the bay of Bengal.

the Burmese fled after the first fire, but were overtaken, and lost 100 men killed, besides three phokuns or chiefs: our loss was trifling. On the 29th, Col. Richards advanced across a jungly country towards Rungpore; on the road he was obstructed by a strong stockade, in which the enemy was entrenched, whose first discharge brought down more than half of the leading division, which created a momentary check. The stockade was, however, assaulted in the most gallant style by Capt. Macleod, with detachments from the 57th and 46th regiments; and the Burmese fled as soon as the troops began to scale. The enemy this day suffered a loss of 100 men.

Preparations were now made for the attack of the fort of Rungpore, which was strong and extensive, containing 300 pieces of ordnance, and garrisoned by 10,000 men; but on the 30th, a flag of truce was brought to the camp by a native of Ceylon (a raj gooroo, or Burmese chief-priest), deputed by the phokuns in the city to negotiate with the British commander. An armistice took place, and, after a short intercourse between the parties, a treaty was agreed upon, by which the fort was delivered up, with the arms and warlike stores of all descriptions; and the Burmese troops evacuated the territory of Assam.

An unsuccessful attempt was made on the 29th January upon the island of Ramree, by part of the force under the command of Lieut. Col. Hampton at Cheduba, aided by the marine force under Capt. Hardy, of the H.C.'s frigate *Hastings*. The attempt failed through the treachery of the guides employed to lead the column of attack. Our loss was six killed and twenty-two wounded.

To repair the disasters sustained in the neighbourhood of Rangoon, the court of Ava re-assembled another powerful army, under its generalissimo, Maha Bundoolah; who announced the fact indirectly to Sir A. Campbell, in a letter addressed to certain residents at Rangoon, the ostensible object of which was, to inquire the reason why the Burmese territories were invaded by the British troops!

Previous to the commencement of the campaign, Lieut. Col. Godwin was sent with a body of troops to take possession of the enemy's works at Tantabain, or Quàngalle. He reached them on the 6th February. The enemy's position was imposing; situated upon a peninsula, strongly stockaded and abatised down to the bank of the river, but open in the rear. The broadside of the *Satellite* armed vessel, and the rockets thrown by the Bengal corps from on board the steam-vessel employed to tow her, created surprise and consternation amongst the Burmese; and in ten minutes after the signal of attack was made, the place was stormed and taken, together with thirty-four pieces of cannon. The enemy suffered severely; our loss was comparatively nothing.

A few days after this affair the army advanced from Rangoon in several columns, a proclamation having been previously issued by the commander of the forces, addressed "to the inhabitants of the Burmese empire," explaining the causes of the invasion of their country (of which the Bundoolah professed be ignorant), and promising to spare and to protect the peaceable natives. The land force, under Sir A. Campbell's immediate command, proceeded in the direction of Prome; the marine column, under Brig. Gen. Cotton, advanced towards Panlang and Donabew. The latter portion of the force embarked on the 16th February, and, after destroying some stockades on the river, reached Panlang on the 18th. Upon reconnoitring next day, it was found, that besides the principal stockade, which was very extensive and well-

built, subordinate works had been constructed at Youtheet and Mighee, on each side of the river. Preparations were accordingly made for a very serious resistance; but the enemy (whose numbers were between 4,000 and 5,000 men) deserted all the works successively, as soon as the troops advanced to storm. On the 25th the flotilla proceeded up a branch of the Irrawaddy towards Donabew. The enemy was first encountered on the 28th at Youngyoun, on the left bank of the river; this appeared to be an outpost of Donabew. Several skirmishes took place between the flotilla and the Burmese war-boats; owing to which, and to the difficulty of getting the heavy vessels over the shallows and bar, the British troops did not reach their position before Donabew till the 6th of March. Its defences consisted of a succession of formidable stockades, commencing at a pagoda some distance from the principal fort, and increasing in strength until completed by the main work, which was seated upon a commanding site, surrounded by deep abbatis, with all the customary defences. The artillery was numerous; the garrison was estimated at from 12,000 to 15,000 men (of whom 10,000 were musqueteers), commanded by Bundoolah in person.

A summons to surrender was refused in civil terms; and at sunrise on the 7th an attack was made on the pagoda stockade, by two columns of 250 men each, under Lieut. Col. O'Donaghue and Major Basden. The enemy, whose fire was heavy and well-directed, behaved with great spirit; the stockade, however, was carried; the Burmese lost 450 men, of which number 280 were prisoners; our loss was about twenty killed and wounded. A force of 200 men, under Capt. Rose, then advanced, in two parties, to storm the second stockade, about 500 yards from the first; but the destructive fire from the face of the work caused the columns to diverge from the point of attack, and get into a ditch filled with spikes, and exposed to the enemy's fire, whereby Capt. Rose and Cannon were killed, and a heavy loss was sustained. The storming party retired; and as Gen. Cotton deemed it imprudent to renew his attacks upon a place of such unlooked-for strength, with his small force (only 600 bayonets), he re-embarked on the 8th without any description of loss, and waited at Youngyoun for a reinforcement from Gen. Campbell.

Sir Archibald had, in the mean time, prosecuted his march, without interruption, to Sarrawah, where he heard the cannonade at Donabew, which he concluded had fallen, and continued his advance to U-andeet, twenty-six miles farther, where he arrived on the 16th, with every prospect of speedily reaching Prome. Learning, however, the state of affairs at Donabew, he determined immediately to retrograde, and assist in the reduction of that place, the key of his future operations, and commanding the river by which his supplies were received. The passage of the Irrawaddy, and the march from its west bank to Donabew, were attended with great toil and difficulty; and sixteen days elapsed before the two corps were in communication.

Whilst employed in preparations for reducing Donabew, the army was joined by the detachment under Major Sale, which had succeeded in expelling the enemy from Bassein, the only maritime possession remaining to the Burmese from Cape Negrais to Tenasserim. The enemy set fire to the town and destroyed it.

Gen. Campbell, judging it advisable to attack the fort systematically, had begun (April 2d) to open his batteries of heavy guns and mortars, when the enemy evacuated the place, leaving behind dépôts of grain sufficient for several months' consumption, besides 140 pieces of ordnance, and 269 jingals. During the siege several bold and desperate sallies were made from the fort, though uniformly repulsed; in one of which seventeen elephants, each carry-

ing

ing a complement of armed men, and supported by a column of infantry, were charged by the body-guard, under Capt. Sneyd, and driven back into the fort, with great loss. A more important event attending this siege, and to which may be ascribed its sudden and unexpected termination, was the death of Bundoolah, who was killed by a rocket or shell from the British batteries on the 1st April.

After the reduction of Donabew, Sir A. Campbell resumed his march to Prome. He arrived on the 24th within eight miles of the city, when the enemy retired in the greatest confusion, and the British troops took possession of it without firing a shot. They found there about 100 pieces of artillery, and extensive well-filled granaries, which had probably been devoted to destruction, as the town was on fire when the British entered, and much grain was, in fact, consumed in one quarter, which was reduced to ashes.

The place was well adapted for defence. The stockade was complete, and surpassed, in materials as well as workmanship, all which had been hitherto seen in the country. Most of the surrounding hills were fortified to the very summits, commanding the approach, and presenting a position naturally strong, and of so formidable a character, that 10,000 steady soldiers could have defended it against an attack by ten times their number.

Whilst these important transactions were taking place in the principal seat of operations, the south-eastern division of the invading army, under Brig. Gen. Morrison, had made a conquest of Arracan. On the 24th March, this officer advanced from the camp on the Ooratung river, and, upon entering the passes of this difficult country, encountered the enemy on the 26th, who occupied the hills in force. The Burmese troops were speedily driven into the jungles, from whence they fled for shelter to their works on the Mahattee, abandoning the stockades they had constructed at Chamballa. These works were attacked on the ensuing day. The enemy's position was well-chosen; it was situated on a peninsula, protected by a broad river, fordable only at nearly low-water, the banks steep and covered with sharp stakes. The defences consisted of deep intrenchments along the margin; in the rear, high conical hills, surrounded by entrenched pagodas, served as citadels. Strong as these works were, the enemy, after sustaining a short cannonade, deserted them as soon as the British troops began to cross the river. On the 29th, the troops, joined by Brig. Gen. M'Bean's brigade, moved forward towards Arracan, and approached the position taken up by the enemy for the defence of that capital. It occupied a range of connected hills, strong by nature, further strengthened by art, with only one pass to the city; these heights were defended by artillery, and by about 9,000 Burmese.

The advance under Brig. Gen. M'Bean attempted the steep and nearly perpendicular heights in the first range; and although many (amongst others Lieut. Clarke) gained the summit, they were unable to preserve their footing: large stones were rolled on them, and, in spite of their efforts, which lasted till every officer was wounded, the assailants were precipitated to the bottom. The troops and guns were withdrawn without loss; and it being now ascertained that the right of the enemy's defences was the key of his position, and, being naturally strong, was less guarded by men, this point was selected as the object of attack. Brig. Gen. Richards was directed to storm those heights on the evening of the 31st, which he carried without the loss of a man killed, though the enemy's fire was heavy. Amongst the first who entered the stockade on the summit was Summer Sing, a havildar of the 26th regiment of Native

Native Infantry, one of the corps concerned in the unhappy affair at Barrackpore.*

Arrangements were made next day to storm the work at the pass, and the defences on the intervening heights. The enemy's troops were, however, panic-struck; as soon as the British moved forward to the assault, the heights were all abandoned, opposition ceased, and the city of Arracan was gained.

The obstacles with which this division of the army had to contend, besides the resistance of the enemy, render the acquisition of Arracan one of the most striking features of the war. No less than 150 miles of road were to be made over hills and across innumerable nullahs, through forests, jungles, and morasses.

Brig. Gen. Morrison, upon the occupation of Arracan, despatched a force, under Brig. Gen. M'Bean, to expel the Burmese from the island of Ramree, before the commencement of the rains. That officer reached Ramree Creek on the 21st April, and the following morning the troops were disembarked, and took possession of the town of Ramree without opposition. Gen. M'Bean and Commodore Hayes then proceeded to clear the banks of the Sandowey river of the Burmese troops, who retreated from their works.

The rainy season soon after suspended operations at all points.

* This individual is described by Brig. Gen. Richards as setting an example of great coolness to his followers. The Brig. General takes occasion in his despatch to remark, that the conduct of this regiment, ever since its employment in the arduous operations in Arracan, has been most exemplary; with respect to gallantry, discipline, steadiness in the field, and patient endurance of privations. The Bengal Government has evinced its sense of this conduct by restoring to the regiment the King's colour, which had been carried over to the mutineers in the affair referred to.

TO —

WHEN savage wolves forget to prey;
 When misers lavish hoarded gold;
 When lambs with lions sport and play;
 When every grain of sand is told;

 When ocean's mighty bed is dry,
 And flocks and herds find pasture there;
 When feathered tribes forsake the sky,
 And fishes flutter in the air;

 When the pale moon shall rule the day,
 And suns shall wax and wane at night;
 When summers shall their snow display,
 And winters boast their warmth and light;

 When flattery's just; when fools are wise;
 When envy's mute, and worth caress'd;
 When peace from Virtue's bosom flies,
 To nestle in a murderer's breast;

 Then, not till then, my heart shall glow
 With gentler flame, dear maid, for thee;
 And look, or word, or action show,
 I love not with sincerity.

E. R.

TRAVELS OF A POUND OF COTTON.

BY A. MOREAU DE JONNES.

WE are far remote from the period when men lived and died, like plants, in the spot where destiny had produced them. During the last half-century especially, the human race has been possessed with the mania of travelling. A resident of Calcutta, born on the banks of the Thames, tormented by the jungle-fever, or by the *ennui* attendant upon wealth, is now accustomed every year to proceed, for change of air, to the Cape of Good Hope, without feeling the smallest uneasiness either concerning the Giant Adamastor, or the storms which terrified Vasco de Gama. The King of the Sandwich Islands pays a visit to Covent Garden Theatre: Russians cross the continents of Europe and Asia to hunt otters in America: highwaymen, escaped from the soil of Botany Bay, become chamberlains to the petty monarchs of Polynesia: Hungarian soldiers mount sentry on the rocks of Sylla and Charybdis: merchants of London occupy the throne and sway the sceptre of Aurungzebe: we have even beheld the savages of Upper Asia rub their hair with the bark of the trees in the Champs Elysées. English ladies'-maids, moreover, with rose-coloured spencer and umbrella in hand, walk amidst the ruins of Thebes, and trample under foot the wrecks of the magnificence of Pharaoh.*

But of all the travels originating in curiosity, ambition, or the love of lucre, not one can be compared in the importance of its results, its extent, or the influence which it has exerted, to the mere transport of the produce of a weak shrub,—to the travels which industry has imposed upon the wool of a cotton-tree, the metamorphoses of which are as innumerable as our wants and desires. A complete volume would scarcely suffice to contain the whole history: let us then endeavour to sketch, in a few lines only, a brief itinerary. Before we thus compress our subject, however, let us consider its real extent.†

From a thousand divers points in the two hemispheres, are conveyed to the British isles and to France, every year, two hundred and eight millions of pounds weight of cotton-wool. England received, in 1823, 167,935,000 lbs.‡ and France, 40,755,000. The value of the aggregate importation amounts to ten millions and a half sterling. It supposes a forest of 1,664 millions of cotton-trees, covering a space of 422 square leagues, 25 to a degree. The 806,000 bales which it composes, after being submitted to the strongest power of compression, give at a minimum 161,000 tons of bulk, the freightage of which requires a fleet of 1,600 vessels, and which, if arranged in a single line, would occupy a space of fifty-five leagues.—Let us restrict our researches to the *two-hundred-and-eight-millionth*-part of this immense mass, and accompany it in its various journeys, from its origin to its final destination.

In the ninety-five millions of pounds of cotton-wool received into the warehouses of Calcutta, one pound, amongst others of that species termed *long-silky*, came from certain new plantations in the province of Delhi. The shrub which produced it flourished, at length, and for the first time, in a soil condemned

* This refers to an incident mentioned by Count Forbin, who states that he saw the maid-servant of Lady Belmour, in a rose-coloured spencer, with an umbrella in her hand, tranquilly sauntering amongst the ruins of Thebes.—Ed.

† It will be readily perceived, that the calculations in the subsequent part of this article are by no means exact.—Ed.

‡ The quantity of cotton-wool imported into the United Kingdom in 1823, from all parts, was 180,233,796 lbs.—Ed.

demned for a century back to frightful aridity, but now fertilized by means of an admirable and laboriously constructed canal, more than sixty leagues in length.* The husbandman who gathered it was one of those Bheels who were renowned a few years since for the audacity of their incursions and the ferocity of their character, but are now reckoned amongst the most intelligent and hospitable of Indian labourers :† a double example of the benefits which a statesman can confer, who, like the Marquess of Hastings, is able to conceive great things, and to find talents to execute them.

Descending the stream of the Jumna to that of the Ganges, and arriving at the rich metropolis of British India, our cargo might receive four very different destinations. Carried to China, it might have entered into the hundred millions of pounds of cotton which England annually sells in the market of Canton, and which, in addition to her manufactures, obtains for her twenty-five millions of pounds weight of tea, purchased at ninepence [eighteen-pence] per pound, and sold for five shillings to consumers on the European continent. Embarked on board American ships, it would have composed a part of those re-exported foreign products which supply the United States with an annual commerce to the amount of six millions and a quarter sterling, over and above the value of their own indigenous exports. Conveyed to Europe, it might perhaps have been converted, in French manufactories, into a fabric worthy, from its elegance and novelty, to obtain the rewards of the Louvre. It took, however, the road to England, and formed a part of the two hundred millions of pounds of cotton which are annually transported thither from Calcutta and Bombay alone, in order to be subsequently distributed throughout all the countries of the world tributary to British commerce.

The single pound which is the subject of our present inquiry, having been landed at London, was sent into the county of Lancaster, to Manchester, in order to be spun by one of the 300 steam-engines in that rich and populous town. The perfection of the means employed in this operation is so great, that there were drawn from this pound of cotton 380 skeins of thread, each 900 yards, which gives a total length of more than 340,000 yards, or upwards of 190 miles. After this metamorphosis, it was sent to Paisley, in Scotland, to a manufactory, from whence issues every week 88,000 ells of cloth. The stuff made of it there was carried into the county of Ayr, there to undergo some preparation; then it was reconveyed to Paisley, to be striped by means of complicated, but prompt and ingenious processes. To be embroidered it was obliged to be sent to the artisans in the county of Dumbarton, whose skill is unrivalled in this kind of work. It was forced to make another journey to Renfrew, for the purpose of being bleached, whence it took its departure for Paisley again, to acquire a new shape: it at length proceeded to Glasgow, where it was completed for sale. From this port it was despatched to London, and became one of the atoms of which the colossus of British commerce is compounded.

Four years had now passed away, from the moment when the Indian husbandman gathered the material from his cotton-tree, to the period when, transformed by the joint agency of mechanism, chemistry, and design, into a fabric of the utmost beauty, this vegetable product was able to repass the seas with a value infinitely enhanced. Without the aid of the arts it might have merely

* The restoration of the great canal of Delhi was undertaken, by the direction of Lord Hastings, in 1817, and completed in 1820. Its length is 180 miles.—*Ed.*

† See Sir John Malcolm's *Central India*, vol. ii. p. 179.—*Ed.*

merely served, in the shape of a clumsy wick, to assist some scholar in his fruitless nocturnal studies. But by a series of ingenious contrivances, it may now adorn the favourite of the seraglio, please the monarchs of Asia, and captivate the republicans of South America by the charms of European luxury. To acquire it, India herself, which produced it, will give a thousand times the price which she formerly obtained for it; China will suspend its prohibitory laws, hitherto as immutable as its manners; and the mines of Mexico and Potosi will expand their treasures. By what strange concurrence of circumstances have these marvellous effects been produced? It was necessary that the product of a little tree should travel 300 leagues over the plains of Hindostan to arrive at Calcutta; that it should then navigate 4,000 leagues of ocean to reach the British isles; that it should there traverse, by means of canals, iron rail-roads and accelerated vehicles, a distance of 310 leagues; employing, from its transport till its transformation, more than 150 persons, who derived their subsistence from it. For this object it was necessary that industry, availing itself of the prodigies of philosophy, should satisfy its wants by the agency of fire, and render docile the most intractable and most destructive element; that navigation should bring closer to each other the banks of the Ganges and the Thames; that the Mogul empire should become the inheritance of a company of merchants; and that its provinces should be restored to fertility, and its people to civilization, by conquerors, who were but barbarians twenty centuries after the countries of Asia, which they now teach, possessed all the advantages of science, arts, and industry!

THE CHOHANS OF DELHI.*

HONOUR to Prithwiraja's name!
 To Raina-si eternal fame,
 Who for his sinking country fell!
 Let deathless verse their glory tell,
 In strains that with their martial fire
 May every mortal breast inspire,
 Instruct the dullest, rudest boor,
 Make misers scorn their hoarded store,
 The dumb gesticulate delight,
 And cowards rush into the fight:
 Such strains as soothe immortal ears,
 And Uma's self enraptured hears.

What can ensure such sweet reward
 As eulogy from tongue of bard?
 It cures all ills, subdues all foes,
 Wealth and posterity bestows;
 And though death's sting it cannot heal,
 Makes others wish the sting to feel.

* Imitated from the concluding verses of a poem of Chand, the bard of Prithwiraja, the Chohan sovereign of Hindustan. They are by the son and successor of Chand; and refer to the sack of Delhi, and the death of prince Raina-si, the son of Prithwiraja. See Capt. Tod's *Comments on a Sanscrit Inscription*, &c. Trans. of Roy. As. Soc., part 1., p. 153.

THE SOUTH COAST OF CRIMEA.

(From the Journal of a Russian Officer.)

SEVASTOPOL, the first town of Crimea, and the most beautifully situated in all Russia, was not in existence at the conquest of the country in 1783. An insignificant village lay on the right shore of the bay, in the midst of a thick forest; and on this spot Sevastopol was built, which now contains above 20,000 inhabitants, mostly soldiers and sailors. The town is seated on the declivity of a hill, forming a promontory between two bays. The houses are chiefly of one story, white, covered with red tiles, and surrounded with fruit-trees. The principal street (the houses of which are two stories) runs along the foot of the hill.

Its advantages as a sea-port are perhaps unequalled. The roads are formed by a bay about a werst and a half wide, by seven wersts long, and from seven to ten fathoms deep. The anchorage is excellent, and vessels are protected against every wind, except from the west, on entering. From the southern entrance, it comprehends four capacious bays, *viz.* Artillery-bay, South-bay, Ship's-bay, and the careening-bay. The 2d and 3d are by nature so secure, that a ship may sail with all her canvass into the roads. In Ship's-bay, vessels of a hundred guns with full cargo lie close in-shore. Each vessel has a store-house cut out of the rock, where all her stores are deposited, except the artillery, which remains on board. The admiralty is on the west side of South-bay, and separated by a wall from the town.

One of the greatest advantages of this place, as a military harbour, is that, except in stormy weather, the wind blows from morning till noon from the east, out of the harbour; and then, shifting, blows from the west into the harbour. The entrance of the roads on that side is not above 400 fathoms; and the fortifications, carrying nearly 600 pieces of artillery, would suffice, with two or three vessels, to keep off any hostile force. The situation of Sevastopol is such, that with an army of 20,000 men it would be impregnable. Proper docks are, however, wanted for building and repairing ships, especially as the sea is full of wood-worms. The ships brought here from Cherson lose much in the carriage, and have often to be repaired on their arrival. Moreover, there is no fresh water in the place, and it must be brought from a considerable distance.

The town is rapidly extending, and promises to become the first in southern Russia, on account of its situation, so favourable to commerce, and the fertility of the surrounding provinces. The woods in the vicinity have entirely disappeared, the land having been granted to officers of the fleet, on condition of their inclosing and cultivating it. A spot without the town, called the Balka (valley) of Ushakow, adorned with pleasure-houses and swings, is set apart for public amusement.

At the extremity of the roads is the site of the ancient town of Ingerman, of which nothing remains but a few caverns in a neighbouring hill, one of which had evidently served as a church. There are many such caverns about Crimea, which seem to have been made for places of refuge. Ruins of the ancient fortress of Dori are found on the top of the hill.

Of the ruins of Cherson or Chersonesus, whence the Christian religion was originally introduced into Russia, little now remains besides a dilapidated tower, a decayed aqueduct, and the foundations of houses; the greater part of the stones of this ancient city having been employed in building Sevastopol. The ruins are but two wersts from this place; but the harbour bears no comparison

parison with that of the new town, being exposed to the prevailing north winds. Greek, Roman, Bosphoric, and Chersonese coins are still found amongst the rubbish of the place. A light-house, forty-two fathoms high, has been built on Cape Chersonese.

Ten wersts from Sevastopol begins the south coast of Crimea. Here is the site of an ancient temple of Diana, the ruins of which, now mere heaps of stones, and used by the inhabitants as building materials, cover a small hill. Having ascended the steep rocks on the sea-shore, the traveller beholds a mean edifice built against the side of the rock. This is the convent of Georgiewski. The monks see nothing from their cells but sky and water; a narrow gallery cut in the rock leads to their church, the most ancient in these parts—having been cut out of the rock nearly ten centuries ago. It is consecrated to St. George; and a piece of wood, representing a miraculous image of this saint, draws annually, on the 23d of April, a great many pilgrims to this place, whose donations support the monks. A new and handsome church is now building here by subscription. The old one is poorly ornamented, and its paintings are very indifferent: the spot is one of the most lonely imaginable. The gallery abovementioned is placed perpendicularly over the sea, to which there is a descent by steps cut in the solid rock.

Balaklawa is a new town, built by Albanian refugees from Cyprus. Its situation is singular. Imagine a narrow bay, formed between two steep wild rocks, piercing the clouds; against one of these rocks is built a row of stone houses, and opposite to them another, low and very plain, making one street, which is the whole town. Each family has sufficient land to grow vegetables and corn for their consumption; and some carry on a pretty lucrative trade in fish, which they carry in small boats to Sevastopol, Koslow, and Odessa. The men form a battalion, and, with the Cossacs, perform the quarantine duty of the peninsula, and are occasionally employed on the fleet. They are armed in the Greek fashion; with a long Turkish gun, a sword, a yatagan or short dagger, and a pair of pistols, provided at their own expense. They receive pay only when on actual service. They are excellent marksmen, and have distinguished themselves on many occasions against the Turks and Tartars. Balaklawa is built on the site of the ancient Symbolan. The old fortress is so far preserved, that its square shape is discernible; and two of its towers are still so perfect, that one is used for a light-house. It is situated on a very high steep rock, at one of the extremities of the bay; and, before the introduction of gun-powder, must have been impregnable. We found many petrified shells, the mountains on the coast of Crimea being chiefly formed of slanting strata of that kind of fossil. The prospect from the light-house was truly sublime, and strongly reminded me of the wild scenery described in *Ossian*.

On leaving this town we proceeded for twenty-five wersts on a road made for Catherine II. when she visited Baidary. It is falling into decay, and we had to proceed on our horses one by one, over a succession of hills, one towering above the other, mostly covered with forests, in some of which we found ripe cherries. We reached, at last, the valley of Baidary, which equals, in my opinion, the poetical description of *Tempe*. It has no vines; but produces plenty of corn and various fruits and vegetables. The greater part of it belongs to Admiral Mordwinow, and the rest to a few Tartar villages, which pay a tithe of their produce. We alighted at the house of the chief of one of those villages, who received us with the utmost hospitality. The place is delightfully situated, and the mosque is embosomed in a grove of high

poplar-trees. The Tartar-houses are low and badly built of stone, with flat roofs: but, on entering, you find a large clean apartment, with a hearth against one of the walls, and a chimney over it, the fire supplying both heat and light. The windows have no glass, and merely consist of lattice-work. The whole furniture consists of carpets spread along the opposite wall, and used instead of divans.

A müllah (priest) gave us a dish of trout; wishing to have them dressed, I went in search of the kitchen, and entered, inadvertently, into the barem. There were several pretty young women, who, on seeing me, screamed, and, dropping their work from their hands, threw themselves on the floor, and endeavoured to conceal their bare arms, faces and necks. I retreated a step; their noise ceased, and I stopped: pleased, perhaps, at my expression of agreeable surprise, they raised their heads and smiled. I advanced a step; no more screaming; the alarm had ceased—I put down the fish, requesting, by signs, to have them dressed. One laughed; another got up, put on a shawl, and approached me: they then began to whisper together, and in a few minutes all crowded round me. One took a peep at my order, another examined my bright buttons, a third admired my watch-chain, took my watch, put it to her ear, showed it to another, and then returned it to me. All this inspired me with confidence in my turn. I admired the belt of one, examined another's rings and bracelets, and was in ecstasy with the neat shoe and pretty foot of the third. Nor was there the least backwardness on their part to gratify my curiosity; and we began to be much pleased with each other, when the door suddenly opened: they all screamed, and threw themselves on the floor. An old woman entered with dishevelled hair, painted red. I made a hasty retreat, leaving the trout behind. When the general (with whom I was travelling) was informed of this adventure, he reprimanded me for my imprudence.

We left this village; and, after about an hour's ride, reached the end of the valley; and again ascended a steep hill, called Mount Aii. We were now in the higher regions, the Tshatur-dag alone, with his cloud-capped summit, being a little above us. I sat on a projecting mossy stone. A long chain of hills runs like a wall from east to west, protecting the southern coast against the chilling north winds. Close to me, the tops of trees rose from a deep abyss; below them I discovered large heaps of stone; farther down, the habitations of men; and, quite below, the Black Sea, with its tranquil waves reaching to a vast extent, and ships, like black spots, scattered over it. The silence prevailing around was occasionally interrupted by a sudden northern blast, which bent down the tops of the trees, and then all was still again.

After a short rest, we remounted our horses; but when our guide began to descend the steep declivity of the hill, and I cast a glance into the deep that lay before us, my blood curdled in my veins. A narrow rugged pass, covered with large stones, wound itself in steep paths along the side of the rocks, surrounded on every side by precipices. Being a bad horseman, I wished to alight; but was assured that my horse would carry me down more safely than I could walk. It is wonderful, indeed, to see with what sagacity these animals perform their perilous task. They are often obliged to squat on their haunches; often to rear completely; then again press with their whole weight close against the rock, first to the right, then to the left, treading cautiously the giddy precipice. The farther we descended, the steeper the path. At times it seemed lost; and I then felt as if suspended over the mouth of Tartarus. My horse, regardless of my checks, proceeded rapidly, to avoid rolling

rolling headlong; and, in order to preserve myself from falling, I let go the reins, and held fast by the animal's neck. We rested half-way. I never beheld a more desolate and dreary spot; large black fragments of stone, and trees fallen from the top of the hill, on all sides; impending rocks above, and unfathomable abysses below,—no trace of life, no tree, not even a blade of grass—a horrid image of death and desolation! The sun was just setting; and the universal gloom and silence were only interrupted by the faint dashing of the sea. Yet this is the only means of communication between the valley of Baidary and the southern coast.

We slept at the village of Michalatka, twenty wersts from Baidary. It is small and insignificant, and inhabited by Tartars, some of whom were sitting on the terraces before their cottages cross-legged, smoking their pipes, without being disturbed by our arrival. The country around has a bleak and deserted aspect; and this village, surrounded by gardens and fruit-trees, seems like a delightful oasis in the midst of it.

We proceeded towards Kutshuk-koi, on a path even more dangerous than the preceding. At about four wersts from the village, we were shown the spot where it formerly stood, and whence it was swept away in the year 1786: nothing but fallen rocks, chasms and precipices, are now visible in a place so lately occupied by houses and gardens. The soil consists of a kind of aluminous slate and decayed trap, which is often carried down to the sea in large masses by the rain; and thus the mountain is rendered more precipitous, and the path constantly approaches its summit. At present it is so narrow that the horses had scarcely any footing. We at last reached the spot considered most dangerous, which extends for about a werst. We made a short halt, during which our guide examined the saddles and tightened the girths. He then led, and we followed one by one: we edged a precipice of above 200 fathoms. The manœuvres of the horses were amazing; still I cannot conceive how they contrived to proceed without losing their balance. Once I struck my shoulder against a projection of the rock, by which I lost my balance, and should have been precipitated into eternity, had not a dexterous turn of my horse saved me from falling. A shower of rain in this spot is inevitable ruin.

The path led us to a mass of clay, which, rising like a column from a deep chasm, leaned on one side against the rock, leaving, however, a space of about five feet, which our horses had to leap. Many a traveller had been carried off from this clay column in high wind; it was indeed a dreary spot: wherever I turned my eyes, I saw nothing but deep chasms filled with water, and enormous fallen stones and lumps of clay. The path now suddenly turned to the left, and led slanting down the hill. I was told that all danger was over; but still large fragments of earth constantly gave way under us, and fell with a loud noise into the deep.

The path again ascended, and many clumps of trees became visible at a distance. Proceeding still higher, we came to the village of Kikeneiss, where nature again smiles in all her beauty. In this place is a walnut-tree which is considered the largest in the Crimea; in good years it is said to bear from 80,000 to 120,000 walnuts, valued at from 480 to 720 paper-roubles.

Alupka, our next station, is a Tartar village of about forty houses and a mosque: its situation is retired, picturesque, and delightful. It forms an amphitheatre, facing the sea, and the small buildings are scattered between large fragments of rocks which have fallen from the overhanging mountains, and embosomed amidst large trees, fig, olive, pomegranate, peach, cypress, &c., the produce of a southern climate, intermixed with roses, jasmines, lilies,

&c.

&c. The hill above is crowned with a forest of laurels. Clear springs rise in every direction, fertilize the fields and gardens, and flow in united streams round the houses; falling, at last, in foaming cataracts into the sea. The fertility of this charming spot, justly called the *Ornament of Crimea*, is extraordinary, it being completely sheltered against the northerly winds, and fully exposed to the genial breezes of the south, so that the blasts of winter are never known.

Its inhabitants are said to have been originally Greeks, who, having remained in the country after the Tartar conquest, and having adopted the religion and manners of their conquerors, have lost every recollection of their parentage; but still retain the beautiful forms and features peculiar to the Greek race.

Near Yalta, the hills form a picturesque semicircle towards the sea. On their summit is an extensive and fertile table-land, on which the Tartars keep cattle during the summer season. We rode in sight of the sea through a kind of natural garden: wild vines, ivy, and other creeping plants had overrun the trees in such a manner as rendered the forests sometimes impenetrable, and in many places the majestic oaks formed natural arches over the road. Many fountains, built by pious Musulmans, and numerous springs, relieved the stern character of the landscape. The settlements of Autkas, Mussekho, Kureiss, and Gaspra, lie in the midst of the woods and meadows of this delightful country. Yalta, now an insignificant village, was anciently called Jalita, and was famous for its extensive commerce. On a steep hill behind it are the ruins of a fort, destroyed by an earthquake in the fifteenth century; and this is all that now remains of a once splendid city: this village is, however, the centre of the traffic of these parts. There is no merchant or artizan on the whole southern coast, owing to its dangerous navigation. Occasionally some of the natives freight a bark with small wood, wild currants, onions, garlic, and excellent flax. These articles are sent to Feodosia; and wheat, Turkey silks, salt, and other manufactures of domestic use are brought back in return. There are few places along the southern coast where the anchorage is safe; but that at Yalta is one of the worst: nevertheless, no boat is allowed to land at Feodosia without first obtaining pratique from the quarantine establishment: a measure which the fatalism of our Mohammedan subjects may render necessary, but which cannot but be injurious to the trade of the country.

Passing over Cape Kikeneiss, we saw the beautiful cataract called by the Tartars *Akar-woo* (White Water), which falls from the steep rocks into the sea, from a height of ten fathoms. The water originates from several springs near the summit of the hill. During the dry season, it may be crossed on any point without danger, but in rainy weather it has the appearance of a mighty column of snow. Amongst the most inaccessible parts of the surrounding cliffs, the strawberry-tree is occasionally found.

Thirty wersts from Yalta we reached the imperial garden of Nikitin; it is a nursery for trees and plants, and was raised out of a wilderness, under the auspices of the Duc de Richelieu, at whose representation the emperor granted 10,000 roubles per annum for its maintenance. There are already 80,000 young trees ready for delivery at an extremely low rate; but the Tartars seem little inclined to purchase.

The road to Gursuf is very difficult, and in many places we were obliged to ride over necks of land covered by the sea, the spray of which, although the weather was tolerably calm, wetted us to the skin. The village of Gursuf (called,

(called, during the dominion of the Greeks, *Eristhena, the powerful*) consists of a number of cottages scattered over a narrow valley between two mountains, separated by a rivulet, the sides of which, to the very summits, are covered with fruit trees. The Duc de Richelieu is building himself a seat here. One of these mountains, called *Aiidag*, stands apart from the others close to the sea-shore, and is the site of an ancient castle and church; and among their ruins are several columns, which, by some antiquaries, are thought to have belonged to the Parthenon at Athens. The remaining walls and loop-holes rest against the steep rocks, from whence the cruel ruler of Tauris used to hurl into the sea all strangers who fell into his hands.

On the other side of the *Aiidag* is the delightful village of *Parthenit*, which has still preserved its Greek name. A high cape near it, which projects far into the sea, forms nearly a perfect cone, and consists of a hard kind of lava, called *peperino*, and which is susceptible of polish. On the other side of *Parthenit* we saw ripe wheat, being of the first crop, which ripens in June; the second crop attains maturity in September; but it is seldom the lazy Tartars sow more than once.

The country about *Kutchuk-Lambat* is beautiful. The mountains rise in regular gradation from the sea; the tops of the farthest ranges are covered with firs and junipers, others are clothed with fruit-trees. The valleys consist of meadows and corn-fields; Tartar villages and gentlemen's houses adorn the hills, enlivening the scene by their brilliant white walls and red roofs.

The road from *Lambat* led over hills subsiding gradually into an extensive valley, out of which, at the distance of about five wersts from the sea, *Tchaturdag*, the colossus of the Crimea, raises its isolated head to the height of 1,250 fathoms above the level of the sea; its base extends above twenty wersts in every direction. The top of this mountain, the first landmark for the mariner who approaches the peninsula, has the appearance of an open tent: hence its name. It lies in the centre of Crimea, and all the great rivers of the country flow from its base in an easterly direction. The east and west sides are steep, the others are sloping: these are covered with forests towards the sea, but are naked towards the summit, near which are three open spots covered with a rich soil, which produces alpine plants. Some hollows, inaccessible to the rays of the sun, are filled with perpetual snow. The pasturage has ever been the common property of the surrounding inhabitants, and their cattle are annually brought here and left to graze during the summer, without any care, each owner having a particular mark by which he distinguishes his property at the approach of winter, when the flocks and herds are taken home. The Merino sheep thrive here remarkably well.

The road beyond *Tchaturdag* became again very difficult, and even dangerous. We attempted to cross *Mount Kostel*, which the sea is gradually washing away; but the ground was so loose that our horses would not proceed on it, and we were compelled to ride under it, along the sea-shore, in perpetual danger of being buried under its falling masses.

The whole of the southern coast is, during the winter months, subject to sudden inundations, caused by heavy rains among the mountains. The poor inhabitants, after losing their all in the general destruction, are often shut up in their dwellings for a fortnight, all communication with their neighbours being cut off by the depth of the mud, and new ravines.

The first village we reached after passing the above dangerous spot was *Alushta*, where the free communication with the interior again begins, and is carried on by means of country waggons, called *arbas*. The mountains behind this

this village are again high, naked, and bearing a few stunted juniper-trees. Every object is cold and melancholy; but the scenery is grand and majestic.

At Kutchuk-Usen we visited a gentleman who had made a successful attempt to introduce the silk-worm. The mulberry-trees grow here very quickly, and without much attention, and the proprietor already derives a considerable income from the silk. This village is situated at the foot of naked hills of red-stone; but is surrounded on all sides by gardens, vineyards, and mulberry-plantations. The wine produced here is tolerably good.

The road led again over sterile mountains, without a single tree. This melancholy aspect continued till we had ascended the last range, when we suddenly beheld, on the other declivity, the cheerful village of Tuwak, inclosed with fruit-trees. A colony of Germans has settled here, and the whole has the appearance of a Swiss valley. The mountain we had just passed is nearly as high as the Tchatur-dag, and has a very particular appearance; a great number of towers, pyramids, and columns of clay, as if made by human hands, covering its summit.

In this mountainous desert I was left behind, with two others, by the guides and the rest of our party, in the midst of towering rocks and frightful precipices. The only living beings we saw were a few mountain-eagles, which, unacquainted with danger in this solitude, fearlessly hovered round our heads. At last we were fortunate enough to fall in with a Tartar goatherd, who pointed out a path which brought us to the sea-side, whence, after doubling a far-projecting cape, we saw the poplars of the village of Yusskut, where we found our party, as tired as ourselves, having also missed their road. We travelled that day at least ninety wersts.

Yusskut is the richest and most populous settlement on the southern coast, cultivation extending several wersts from the village, which is distributed over an amphitheatre of three stages. The common Tartar cottages are interspersed amongst houses of two stories; in the midst is a mosque, with a beautiful minaret, bearing a gilt crescent: the burying-ground, with its marble tombs, surmounted with turbans and shapeless masks, forms a picturesque object. The inhabitants trade with Constantinople, and, owing to their frequent intercourse with strangers, are civil and polite; even the women are not concealed. Upon asking my host for a pipe of tobacco, he gave me a pouch-full, of excellent quality, with three Turkish pipes, called *stambulki*. On my offering payment, the Tartar placed his hand on his breast, and said, with an expressive smile, "We do not receive payment from our guests; I beg you will accept these trifles as a present from me." These people acknowledged themselves very grateful to the Russian Government: for they not only enjoy the fullest protection of the law, but have all the privileges of noble proprietors, and are exempt from personal service to the crown; they are, however, worthy of this lenity, and in the memorable year of 1812, the Tartars of Crimea mounted 4,000 horsemen at their own expense, and placed all their young men at the disposal of Government. This was so great a sacrifice, that the Emperor returned them public thanks, and accepted scarcely the fourth part of their offer.

The mountains separate here, and the road to Karass-Basar leads through the valley formed by their separation, the entrance to which is indicated by two high conical rocks standing on both sides. The road is rather hilly, and little wooded; yet all the villages through which we came were shaded by an abundance of trees. It is surprising with what skill the Asiatics avail themselves of every fill of water to improve their soil. The mills, too, in this country,

country, are remarkable. A small rill of water falls on a wheel, which sets in motion the mill-stones, simply supported by poles fixed in the ground: no flood can destroy these mills, since they are secured by merely taking the wheel with its axis out of the frame, which is done in a minute.

About ten wersts from Yusskut are the ruins of a fortress on a lofty cape; the Tartars now call it Tchaban-Kale (herdsmen's fortress), because the herdsmen take refuge there in stormy weather. Twenty wersts farther, nature again assumes a rich and romantic appearance; shady fruit-trees line the road, which is wide enough for vehicles of every description.

Ssudak lies in a valley extending for ten wersts from north to south, and entirely planted with vines, interspersed with neat stone cottages and long wine-vaults above ground. The wine made in this valley is not good, owing to the practice which prevails almost universally throughout the Crimea, of watering the vineyards several times in the year, till the soil in which they stand resembles a marsh: another bad practice here is that, during the vintage, ripe and unripe grapes are mixed together. Carefully cultivated, the soil yields excellent wine, both white and red, as we found from experience at the house of the Dutch director of the imperial gardens.

Ssudak is entirely inhabited by Greeks, who, by their greediness after gain, formed a striking contrast with the frank hospitality of the Tartars, who, content with voluntary poverty, seem never happier than when they receive a stranger under their humble roof. This place, under the dominion of the Genoese, was a considerable city, then named Soldaja; its trade was flourishing; but now the vineyards cover the site of the city. The only remains of it are the ruins of a fortress, standing on a pointed rock which rises 150 fathoms perpendicularly from the sea, and is only accessible on one side by means of a flight of steps cut in the rock. Another rock of a similar description, but exceeding all the others in height, is seen at some distance from it, and is remarkable for a number of large pillars of indurated clay on its brow.

The harbour is tolerably safe, except in being exposed to the southern gales. Nevertheless, by a perverse arrangement, the wine of this place, instead of being shipped direct for Cherson, is sent overland to Charkow at an enormous expense. The population does not exceed a hundred, mostly old soldiers; but in spring and autumn, about 2,000 labourers from the neighbourhood are employed in the vineyards.

Y. Z.

THE SUICIDE.

A MARTYR, not a murderer, art thou!
 Black perfidy provoked thy frantic mind
 To plot against thy life: thou, ever kind
 To others, could'st not be thy proper foe.
 O, who can ample store of vengeance find
 To blast the wretch that laid such beauty low!
 Nor beauty only fell; but sense combined
 With gentleness, with meekness, with a glow
 Of charity, that seemed of heavenly birth.
 Severe thy doom!—yet shall weak mortal eyes
 Presume to scan heaven's deepest mysteries?—
 Since this world has no equal to thy worth,
 Why weep we thy translation to the skies,
 Where goodness meets its like, and never dies!

No. IX.

COMMODORE JOSEPH NOURSE, C.B.

LATE IN COMMAND OF THE NAVAL STATION AT THE CAPE OF GOOD HOPE.

WE are happy to communicate to our readers the following brief memoir of this valuable officer, from the pen of one who intimately knew him.

Commodore Nourse began his naval career in 1793, under the command and auspices of Admiral Sir Alexander Hood, afterwards Lord Bridport, in the *Royal George*. With the intention of enabling him to see more service, the Admiral placed him on board the *Audacious*, under the command of his nephew. After a time, he returned to the *Royal George*; and, in 1795, was in the battle off Port L'Orient, with Lord Bridport. The writer of this has frequently heard his deceased friend describe his feelings in that short, but sanguinary battle. The *Royal George* had two ships engaged with her at the same time, one of eighty, and one of ninety guns. The havoc and carnage must have been dreadful, and certainly not the most gentle introduction: the Admiral's Captain, now at or near the summit of the service, gave such an example of coolness and intrepidity, as in a moment to inspire every officer and man; he took out his watch, and informed them that he allowed twenty minutes for the unrigging of those two ships. The orders were received with cheers, and were *very punctually obeyed*. The appalling nature of my young friend's duty on board one of the prizes, immediately after such a work of death and destruction, may be easily conceived.

In 1796, or the beginning of 1797, he was acting lieutenant on board the *Alcmene*, Capt. Henry Browne. They took a small prize, on board of which he was sent with a few men; and, as soon as the prize had parted company, the prisoners reported that Capt. Browne would never again see his officers or men, as there was an enemy on board who would rise up and devour them. The fact was, they had bored holes in the bottom of the ship, and it was with the greatest difficulty, pumping day and night, and almost starved, that the captors reached Lough Swilly, not their destined port—Capt. Browne having given up all hopes of their safety.

Before being confirmed as a lieutenant, he was for a time under the command of Lord St. Vincent, and then with Capt. Hood, in the *Zealous*; he was with him in the engagement off Algeziras Bay. He also formed a part of the detachment from the fleet at Vigo Bay, on the expedition under Sir James Pulteney. He returned to England, and remained till the year 1802, when he had the command of the *Advice* brig, one of the tenders to Sir Samuel Hood, as naval commissioner at Trinidad, where he acted on shore as one of Sir Samuel's aides-de-camp. He was soon afterwards appointed to the *Cyane*, and was so active and successful in clearing those of French privateers, that the merchants of Barbadoes, having purchased the *Brave*, formerly a French privateer, presented her to Government, soliciting that Capt. Nourse might be appointed to her, as an acknowledgment and reward of his important services. This was confirmed by Sir Samuel Hood, then commodore on the West India station, and afterwards by the Admiralty. The vessel was called the *Barbadoes*, and he was made post captain into her.

The opinion which Sir Samuel Hood entertained of Capt. Nourse (and the opinion of such an officer must be a pledge of merit), may be collected from the

various

various opportunities he sought of attaching him to his service, whether at sea or on shore. He was also one of Sir Samuel's esquires when invested with the Order of the Bath at Barbadoes; and previously to his having the command of the *Brave*, above referred to, he wrote to Capt. Nourse in the following terms:—

“ *Centaur*, February 18, 1804.

“ My Dear Sir: You will have my letter of approbation of your conduct. I have a hint that the merchants of Barbadoes mean to ask for your appointment to the *Brave*. I do not know one I should give her to with such satisfaction as to you; and I shall be glad if you will give me your ideas of her wants,” &c.

He continued in that service till 1805 or 1806, when he returned to England in ill-health. In 1808 he was appointed to the *Fredericstein*; but, not being sufficiently recovered to join her, Capt. Searle had the temporary command: Capt. Nourse afterwards joined, and proceeded to the Mediterranean. He was appointed to the *Severn* in 1812 or 1813, and signalized himself in America, under Sir George Cockburn, from whose report of Capt. Nourse's conduct, in his public despatches, he had the honour, on his return to England, of being made a Companion of the Bath.

The peace with America was succeeded by the peace with all Europe; and it is no inconsiderable testimony to the professional character of Capt. Nourse, that, among so many distinguished officers, he should (in 1821) be appointed to the *Andromache*, in the naval command of the Cape of Good Hope station.

In March, 1822, he sailed with the rank of commodore; and, on his arrival at the Cape, he appears to have discharged the duties which devolved upon him with great spirit and judgment. They partook of a civil, as well as naval character; and required that degree, as well as quality of talent, for which Capt. Nourse was eminent:—promptitude, without precipitation; decision, founded on reflection; and a consequent determination of conduct, though altogether remote from obstinacy.

As the period of Capt. Nourse's command was that of profound peace, his private instructions, no doubt, directed his attention to the cultivation of such connexions and relations with the settlements within the limits of his command, as might lay the foundation of respect and confidence towards the nation he represented: and, without meaning to insinuate a doubt, that very many brave and accomplished officers of the British navy would have discharged the duty as well, there is much reason to believe that few, if any, could better have represented the dignity and power with which England would protect her own rights; the respect she would always shew towards those of other nations, as well as her disposition to adjust and settle, by her friendly interference, the differences which might, and, in fact, did, exist between the various governments and people inhabiting the islands in those seas.

In the several cruizes which Capt. Nourse made, those were among the principal objects of his visits; it is, perhaps, not too much to say, that he probably fell a victim to the climate, and to the inconveniencies to which he was exposed. The following extract of a letter, from one who was witness to almost all that passed during those latter visits, cannot but be interesting:—

“ You would have heard from —— of the sailing of our lamented friend, with the *Andromache* and *Espiegle*, on the 5th of July, in prosecution of his intended cruize. I followed in the *Wizard*, commanded by Lieut. Maynard, his nephew, on the 15th, and joined him in Bembatook Bay, Madagascar, on the 24th, with his whole squadron, having arrived on the 20th, all well, and

continued prosecuting the object of his visit there ;—gratified with the favourable impression he had created with Radama the king, pleased with his personal intercourse with him, and satisfied of the importance of his proceedings in a public point of view. Here he exposed himself to much exertion, both of body and mind, receiving on board, and visiting in his camp up the country, about forty miles, going up the river and remaining absent about five days ; but no ill effects were perceptible, beyond fatigue, either to him or any other of the party, except the German botanist, Mr. Boyer, who accompanied him : he was attacked with fever, to which his employment, and more than ordinary zeal and exertion, particularly exposed him ; but he recovered in a few days. He left Madagascar on the 6th of August, and proceeded to Zanzibar, where we arrived on the 12th ; here we staid some days—the Commodore, as usual, pursuing his object with an anxious zeal ; his mind occupied and harassed to form a clear view and judgment of men, and circumstances of this place, as a basis of public representation in furtherance of the objects of his expedition, of which this island appeared minutely deserving. He was daily engaged on shore, holding conferences with the Governor, and in travelling the town and vicinity, occasionally riding out, having landed the horses he brought with him here. On one occasion a party was made to visit the country residence of the Governor, and the Arab Sallia, whom the Commodore on his former visit had nominated British agent, and who has introduced the growth of cloves here, and had ten thousand fine flourishing trees then in bearing, extraordinarily productive. This party consisted of the following persons :—the lamented Commodore ; Mr. Lewis, of the engineers ; Mr. Weatherall, of the artillery ; Mr. Boyer, the botanist ; Lieut. Grant, of the *Espiegle* ; Mr. Stretbury, the Commodore's secretary ; myself, and Scrofton, the steward ; and a servant to the botanist. These places are situated about nine or ten miles towards the centre of the island ; and we were surprised at the extreme fertility and beauty of the country. The party dined at the Governor's, and were served separately with a variety of Arab mixtures, in their taste of the best—the Governor and his party dining on mats on the ground, according to their custom, close by : under the same overhanging palm leaves of the building we passed the evening, and all slept there, some inside the house, and some out. The next morning was employed in reconnoitring the country, and we all returned to the town, and on board, more or less fatigued. I have so far mentioned these particulars, because circumstances have caused some observations and feelings, which I cannot think well founded, however this expedition may have had its contributory effects. We left Zanzibar on the 19th of August, and on the morning of the 21st anchored at Pemba. The Commodore had here to undergo the same fatigue of receiving chiefs, arranging disputed claims, and settling mutual relations of intercourse for the people of Mombas (from whom this island had been recently taken by the Imaum of Muscat), for their government, pending the determination and arrangements of the government at home, with respect to them and it. Anxious to get away, and always moving with alacrity himself ; limited to time, and punctual to his determination ; regardless of the climate for himself, but anxious for every one under his command, to the meanest—he harassed himself to get the boats of the squadron off, evidently heated and uneasy. We arrived at Mombas on the 25th ; here some important and decided arrangements became necessary, in consequence of the cession of this island, and its dependencies, to Capt. Owen, of his Majesty's ship *Severn*, on behalf of his Majesty. He held conferences with the chiefs. A clear and substantial arrangement and understanding with this class of persons

(Moors

(Moors and Arabs), whose language was not understood, required months instead of days; and the period of his promised return, with a long beating passage to the Mauritius, was fast approaching. He was harassed by this: to fail in any point of duty he could not bear; and having given such instructions as he thought expedient for the guidance of those left in command, pending the receipt of advices from home, he announced his determination to the chiefs on the 29th, and decided on his immediate departure. Here I parted from him. He was uneasy before I left him about his steward, Scrofton; and the botanist and Lieut. Grant were also ill: he was anxious for every one. I now believe that he entertained some apprehensions respecting himself, but would not allow that to interfere with the arrangements made. On the 31st, when at sea, he began a letter of instructions relative to the squadron, in the event of his demise, but which he never concluded. On the 1st of September he gave up the charge of the ship, and retired within himself:—when approached he would hold up his hands to negative an advance. To his officers his ideas of service would not, perhaps, permit him to express his feelings, and show weakness to those he commanded; but, calm and dignified, he submitted to what might be his fate with resignation. At half-past three P.M. on the 4th of September, he resigned his last breath, so calmly, so quietly, that those about him were for a time unconscious of it."

On the 24th of September the *Andromache* arrived at the Mauritius with his body on board; and on the 1st of October the funeral took place. The customary honours were of course paid to his rank, but the more gratifying and consolatory expression of regard and regret arose from the spontaneous effusions of those sentiments through all the gradations of society there, from the Governor to every subordinate officer; and by all, of every rank, who had been, in any degree, acquainted with him. It need scarcely be added, that the officers and ship's company of the *Andromache* manifested those feelings in a pre-eminent degree.

To whatever secondary causes his removal may be attributed, the event cannot have failed to produce very sincere and poignant regret. In all the relations of friendship, and the still nearer endearments by which he was connected, the writer of this paper can safely affirm, that it has inflicted a deep wound, and left a very important chasm. His professional character and talents are best shewn in the very honourable testimony which has always been borne to his conduct in the several gradations through which he passed. Since the earlier period of his professional life, he had not been much in action; but the ardour of his attachment to the service, his deeply-rooted love of his country, and jealousy of every point connected with her honour and rank among nations, forbid any doubt of his devotedness to her cause, and to his own duty. No apology is offered by the writer for adverting to an instance which occurred at his own residence in the country, where Commodore Nourse was paying, as it unhappily proved, his last visit of friendship.

They were reading together the despatch from Admiral Collingwood, of the battle of Trafalgar; and, at that part which referred particularly to the death of Lord Nelson, the writer of this paper had made a quotation from Tacitus' Life of Agricola:—"Thou hast been happy indeed, not only in the brilliancy of thy life, but even in the occasion of thy death:"—"Tu verò felix non tantum vitæ claritate, sed etiam opportunitate mortis." He will not soon forget (for subsequent circumstances have given it additional force) the delight with which Commodore Nourse entered into the sentiment, and with what feeling he expressed the difficulty of such a life, and the glory of such a death.

It is to truth, not insensible to, though not carried away by friendship—it is to the memory of an honourable man, and one of this country's most meritorious officers, but of whom, with gratitude be it acknowledged, a numerous and noble band still remain;—that the writer of this brief and imperfect memoir offers the tribute of respect and regard. May his example stimulate others—may his early fate be averted from them—and may his friends and relatives, near and dear, be consoled in the recollection of his excellent qualities!

G.

DESCRIPTIVE SKETCHES FROM THE GOLDEN EMPIRE.

[*For the Asiatic Journal.*]

ARRACAN.

THE existing accounts of Arracan are entirely destitute of truth. The geographical details are strikingly defective and inaccurate; and the particulars heretofore given of the people are little to be relied on. The farther we proceed in this country, the more are we assured of the fact, that many writers have been deceived by intentional misrepresentations; the errors can hardly be accounted for upon any other supposition. For example, the Mayo, represented as an insignificant stream, has been found to be a large river, three or four miles wide at its embouchure: the people have been described as effeminate and cowardly; but, although the Mugs differ somewhat in character in different parts of the country, in the vicinity of the capital they are of a robust make, and far from timorous in disposition. The features of the country have been variously delineated: in fact, beyond the hills, the land exhibits every symptom of fertility and luxuriance; groves of trees, and tanks or reservoirs of water, are intermixed with villages, which, though deserted and dull at this period of war and invasion, in a time of peace would doubtless display all the cheerful attributes of rural felicity. The number of villages in Arracan proper is about eighty; and their evident prosperity, under a government so despotic as that of Ava, is a sure proof that the soil is highly fertile and productive; the climate healthy (as indeed we find it to be) and propitious to cultivation. The crops of grain appear to be abundant; one evidence of which may be inferred from the quantity accumulated in the stores of the capital: about half a million maunds of paddy were deposited in the fort of Arracan, at the period of its capture by the British troops.

The city of Arracan exhibits a very peculiar appearance. It is built upon a plain, or it may be called a valley, about four miles in circumference, of a quadrangular form, and entirely surrounded by hills, some of which are 500 feet high. The plain itself is hard and rocky; it is intersected by divers nullahs and streams, which occasionally join each other and fall into the river; some of them rush with violence through chasms and fissures in the rock, and one flows directly through the city, which is thus divided into two parts, connected by means of strong but clumsy wooden bridges. This stream ebbs and flows with the tide, and at high-water boats are able to navigate it. These nullahs are off-shoots, as it were, of a stream which separates from the great river at Muhatti, and traverses the plain in which the city stands.

As the site of the city is thus pervaded by water, it is overflowed during the rains; consequently the houses are raised upon piles, or strong posts of timber. These houses, or rather huts, are miserable structures, little more than

than four feet from the ground, composed of bamboos or timber, thatched with straw or mats, and only one story high. They are ranged with considerable regularity in streets; the principal street is on either side of the stream which runs through the city. The number of houses is nearly 19,000: reckoning five persons to a house, the number of inhabitants in Arracan, before its capture by our troops, must have been about 95,000; and this estimate is said to be below the truth. Many of the houses (perhaps nearly half) are now unroofed or damaged, and some are burnt. A considerable space was obliged to be cleared to allow of commodious buildings for the accommodation of our troops during the wet season. Although many of the inhabitants have returned, the native population of the city does not now exceed 20,000, a large proportion of whom are priests, who were almost the only residents when our army entered the place; which presented a singular spectacle, from its marks of recent populousness, and its then stillness, and aspect of desolation.

The most curious object within the city is the ancient fort (the only building of durable materials in the place), which is surrounded by three quadrangular concentric walls, each about twenty feet high, and of considerable thickness. They are formed of large stones, put together with great labour, and are evidently of some antiquity. Those parts which are decayed have been repaired by pieces of timber being inserted in the interstices. The outer wall is partly natural, and of considerable extent. The inner space is the citadel, and here resided the governor, the public officers, &c.; and here also were situated the public granaries. The distance between the walls varies in different places; sometimes being about 100 feet, and sometimes not half so much. Upon the whole, this remnant of the power of the ancient kingdom of Arracan is highly deserving of attention, and will probably induce some one, more competent to the task than I am, to furnish a fuller and better account of its character and history.

The heights which surround the city are covered with pagodas, the gilt spires of which, shooting up from every pinnacle around, and glittering in the sun, contribute greatly to the singular and picturesque appearance of the place. Upwards of sixty of these temples, the shapes of which are various, can be counted at once; each contains an image of Gaudama. Many of these buildings disclose subterranean passages, which our fellow-soldiers are busy in exploring.* The architecture of the temples in this country is curious; although the style has no pretensions to real taste, it is not unsightly, and some of the porticos of the better sort of pagodas are handsome. There is a profusion of gilding and painting in most of them; even marble is often covered with gold leaf. Sometimes a deception is practised, as in English architecture, where humble stucco assumes the character of a more costly material: wooden pillars are occasionally coated with a sort of composition, or cement, which gives them the appearance of dark marble. Independently of the fort, the temples are the only stone or pukka buildings about Arracan; and without them, this capital of an extensive province, once an independent state, would only deserve the name of a large but very beggarly village.

* See an article in our last volume, p. 696.

THE CHINESE DRAMA.

DRAMATIC composition is affirmed to be of very early date in China; anterior, perhaps, to the period of its invention in Greece. Like all the other arts of that peculiar nation, however, it seems to have become stationary at a certain point, far distant from that of perfection.

Theatrical amusements are highly relished by all classes of the Chinese: they not only compose a part of their entertainments at public festivals, but individuals of opulence are accustomed to employ players for the amusement of their guests, and convenient halls are commonly provided in their houses for that purpose. Taverns, likewise, have accommodations for dramatic exhibitions, as was once the practice in England.* It is even asserted by Des Guignes, that *temples* in China are not unfrequently the scene of theatrical performances.

Works adapted for the stage are therefore numerous in that country, and large collections of plays exist in print. Nevertheless, Europeans, ignorant of the language of China, are probably less acquainted with this than with any other department of its literature; for of the multitude of dramatic pieces extant there, two only, we believe, have hitherto been translated into any European tongue, and but one of them has acquired an English dress. The collection of the Jesuit missionary Du Halde, contains a French translation, by Prémare, a fellow-missionary, of the *Tchao-chi-cou-ell*, or "Little Orphan of the House of Tchao," the chief incidents of which have constituted the ground-work of Voltaire's "*Orphelin de la Chine*," and of Arthur Murphy's "Orphan of China." Neither of these two pieces affords the least idea of the original, or of the state and character of the Chinese drama. The remarks upon the original work, as exhibited by Du Halde, and upon the Chinese theatre, which the French author has prefixed to his tragedy, are as loose, vague, and inaccurate, as can well be conceived.

Mr. Davis, of Canton, performed a very grateful service to literature in translating a Chinese comedy (from the large collection in which the preceding piece is found), entitled *Laou-seng-urh*, "An Heir in his Old Age," which was published in England in 1817. From these two specimens we may derive some knowledge of the condition of the stage in China. If we compare these pieces, which were composed, at the latest, towards the beginning of the fourteenth century, with the productions of European writers at the same period, the comparison will be highly to the advantage of the former; but assuming that they are the best which the Chinese stage can now furnish, it would be preposterous to institute a parallel betwixt the European and the Chinese drama at the present day.

The comedy introduced to our knowledge by Mr. Davis is much inferior to the piece in Du Halde. The former is a tale related in dialogue, with very little dramatic effect. The "Orphan of Tchao," on the contrary, exhibits passages wherein the dialogue is really dramatic: we detect in it, moreover, something like strong conception and discrimination of character. Voltaire remarks that it discovers no eloquence, no passion (though the strong emotions of the speakers are invariably expressed, according to the practice of the Chinese stage, in verses, which the translator has omitted); yet he confesses

* The balconies to be seen in the yards of old inns were the boxes, pit, and gallery, and the area was the stage, upon those occasions.

fesses that it is highly interesting. The contempt which the Chinese author has manifested towards the sacred laws of the *unities* was amply sufficient to arouse the keen indignation of Voltaire, who observes, with characteristic severity, "the action of the Chinese piece lasts for twenty-five years, like the monstrous farces of Shakspeare and Lopez de Vega, which are miscalled tragedies."

The Editor of Mr. Davis's piece has indeed alleged, that the translation of *Prémare* (which Du Halde describes as exact,—*exactement trduit,*) is garbled. This allegation may be correct, but it is not stated upon what authority it is made; neither is it clear whether more is meant than that the translator has excluded the poetical passages in the dialogue, which the same editor declares to be "the very best parts of the play."

We are induced to think that the publication of the Chinese tragedy in English, from Du Halde's work, which is not very accessible, will please the readers of this Journal, who will probably derive from the perusal of it more than the mere gratification which curiosity receives from such an uncommon object as a CHINESE TRAGEDY.

The only passages retrenched in the following translation are the introductory addresses of the various speakers, who begin by telling the audience their names, their characters, and their business; a practice which must greatly impair the effect of dramatic deception, but which is, perhaps, indispensable in the present circumstances of the Chinese stage.

THE ORPHAN OF THE HOUSE OF TCHAO;

A Chinese Tragedy.

DRAMATIS PERSONÆ.

TOU-NGAN-COU, *prime minister (of war) to the King of Tsin.*

TCHING-ING, *a physician of the household of Tchao-so, son of Tchao-tun, the late minister of the civil department.*

HAN-QUA, *military officer of rank, under Tou-ngan-cou.*

KONG-LUN, *an old courtier, friend of Tchao-tun.*

TCHING-ROEI, *the orphan, son of Tchao-so, but supposing himself the son of Tching-ing.*

WAI-FONG, *great officer of the court.*

The daughter of the King, widow of Tchao-so.

[The prologue (*sia-tsee*), which is opened by Tou-ngan-cou, relates the transactions antecedent to the drama, and furnishes a clue to the fable. At the court of Ling-Kong, king of Tsin, the direction of affairs was in the hands of two mandarins, one belonging to the civil order, named Tchao-tun; the other the above-named Tou-ngan-cou, who was of the military class, and minister of war. Jealousies arose betwixt them, and the latter took measures to destroy his adversary. He employed an assassin to scale the walls of Tchao-tun's palace, and stab him; but the attempt failed. It happened that a "king of the West" had presented to Ling-Kong a large dog, named Ching-gao, which his Majesty gave to Tou-ngan-cou, who made use of the animal as an instrument for his purpose. He adopted an expedient similar to that practised by the romantic hero, Saint George of Cappadocia, in training his dogs to contend with the dragon: he made a figure of the height and bulk of Tchao, and dressed exactly in his manner, placing sheep's entrails in the body of the figure, which he instructed the dog, who was kept fasting, to attack. Entering the royal presence, Tou-ngan-cou declared to his Majesty that there was a traitor in the court, and that the dog which the King had

given him would point out the individual. The dog was produced, by desire of his Majesty; and the ravenous animal, seeing Tchao-tun by the King's side, leaped upon him, and would have torn him in pieces; but the intended victim escaped, and entered his carriage in order to retire from the palace. His treacherous rival had, however, to make assurance doubly sure, damaged one of the wheels, so that it broke down; but a passenger on the road supported the vehicle on his shoulder, and stopped the horses: this individual proved to be a man whom Tchao had formerly relieved when perishing with want. Tou-ngan-cou made the King believe that the utter destruction of Tchao-tun was essential to his safety, and procured his family and domestics, to the number of 300 persons, to be massacred. The only relics of the family were Tchao-so (the son of Tchao-tun) and his wife, a daughter of the King, whose destruction he was obliged to compass by fraud: he accordingly forged an order from the King, and sent to Tchao-so a rope, some poisoned wine, and a dagger, with the customary compliment of allowing him to choose his mode of death. Tchao-so stabbed himself; the princess, his wife, was confined to her own house, where, soon afterwards, she was delivered of a son.—At this period of time the piece opens.]

ACT I.

SCENE I.—*The palace of Tou-ngan-cou.*TOU-NGAN-*COU*, attended.

Tou. I fear the wife of Tchao-so may bring a son into the world; if so, when he attains mature age, he will be a formidable enemy to me; I therefore keep her in confinement. Night approaches; what can occasion the delay of my messenger?

Enter a Soldier.

Sold. The princess is delivered of a son, who is called *the Orphan of the house of Tchao*.

Tou. Can it be so? What! this abortion called the Orphan of the house of Tchao? A month's delay will do no harm; I shall still have time to rid myself of this little orphan—go and command Han-qua to guard well the entrance of the palace where dwells the widow of Tchao; desire him in particular to examine every one who leaves it: should any one be bold enough to conceal this infant of Tchao, he and his whole race shall die. Publish this order every where; let the inferior mandarins be acquainted with it: if any one presume to contravene it, he shall suffer the punishment. [*Exeunt.*]

SCENE II.—*The palace of the Princess.**Enter the Princess.*

Prin. All the woes of mankind seem congregated in my heart. The traitor Tou-ngan-cou has exterminated our family. None is left me but this poor orphan, whom I carry in my arms. His father, my husband, ere he died, left as a legacy to me these words: "My Princess," he said, "if you have a son, name it *the Orphan of the house of Tchao*; preserve him with great care, so that, when he reaches maturity, he may revenge his family."—By what means shall I withdraw my child from this prison?—A thought occurs to me: I have no parent, no friend, but Tching-ing; he belonged to my husband's household, and his name was happily not found upon the sanguinary list. I will confide to him my secret.

Enter TCHING-ING, with his box of medicines.

Tching. You desired me, madam, to be called; what is your pleasure with me?

Prin.

Prin. Alas! the cruel destruction of our house!—Tching-ing, I indeed sent for you, and this is the cause: the father of this infant, ere he died, gave him the name of *the Orphan of the house of Tchao*.—Tching-ing, you belonged to our household; we have always treated you with kindness:—are there no means of withdrawing my child from hence, that he may one day avenge his family?

Tching. I perceive, madam, you are not yet fully aware of your situation. The traitor Tou-ngan-cou knows you have a son, and has placarded all the gates with an order to the effect, that if any one dare to conceal this little orphan, he and all his family shall be put to death. Now, pray, how is he to be concealed or withdrawn from the palace?

Prin. Tching-ing, it is a common saying, when we want speedy relief we resort to our parents; when we are in danger we have recourse to our friends: if you save my son, our house will in him possess an heir. [*She falls on her knees.*] Tching-ing, have compassion upon me; the three hundred persons massacred by Tou-ngan-cou are centered in this orphan.

Tching. Rise, madam, I entreat you.—If I conceal my young master, and the traitor should happen to know it, he will ask you where your son is; you will say, I gave him to Tching-ing: then I and all my family will be put to death; and how will that preserve your son?

Prin. Then all is over: go, Tching-ing; be under no apprehension: observe me—behold my tears:—his father died beneath the knife; his mother now follows. [*She strangles herself with her girdle.*]

Tching. I could not have supposed that the princess would strangle herself as she has done. I dare not stay here an instant. Let me open my medicine-box, and put the young prince into it, and cover him with packets of medicinal herbs. O heaven! have pity upon us; the house of Tchao has perished: this poor orphan alone remains. If I save him, it will yield me happiness, and I shall acquire no little merit. But if I am discovered! then I and all mine must die!—Reflect a little in thine own mind, Tching-ing: if thou desirest to save this orphan, thou must contrive to get out of the clutches of Tou-ngan-cou; and to hope to accomplish that, is to hope to get beyond heaven and earth. [*Exit.*]

SCENE III.—*The exterior of the palace of the Princess.*

Enter HAN-QUA, attended by soldiers.

Han. Tou-ngan-cou has ordered me to guard this palace: and for what reason? because the princess has had a son, and he fears it may be carried off. He desires me to take especial care; and if any one attempts to withdraw the child, he and his family are to lose their heads. Well, Tou-ngan-cou, you devote to death, according to your pleasure, the best subjects of the realm; those especially who are the most meritorious.—[*To his soldiers.*] Be upon your guard, and if any one leaves the palace, let me know it.

Enter TCHING-ING, from the palace.

Han. Seize that fellow with the box of medicines:—who are you?

Tching. I am a poor physician, named Tching-ing.

Han. Whence come you? whither are you going?

Tching. I come from the princess; I have been taking some physic to her.

Han. What physic have you been giving her?

Tching. Such as is usually given to ladies in her condition.

Han. What have you got in that box?

Tching. It is full of various medicines.

Han. What medicines?

Tching. Common medicines.

Han. Is there nothing in it besides?

Tching. No; there is nothing besides.

Han. If that be the case, go your way; begone!—[*He calls him back.*]

Tching-ing! come back!—what have you really got in your box?

Tching. Medicines.

Han. And nothing besides?

Tching. Nothing at all.

Han. Away, then!—[*He calls him back again.*] There is certainly something concealed in that box: when I say, begone! you fly; but when I desire you to return, you do not advance a step without infinite reluctance. Do you fancy, *Tching-ing*, that I am deceived? You are of the house of *Tchao*; I am under the orders of *Tou-ngan-cou*; it must be that you are carrying away the child. O, *Tching-ing!* how will you be able to leave this tiger's den? Am I not the second general next to *Tou-ngan-cou*? Ought I to allow you to pass without interrogation? *Tching-ing*, I know you are under great obligations to the family of *Tchao*.

Tching. I avow it: I am sensible of them, and wish to repay them.

Han. You say you wish to repay the benefits you have received; but I fear you will not be able to save yourself.—[*To his attendants.*] Retire; you need not approach till I call you.

Han. [*Opening the box.*] O, *Tching-ing!* you said here was only medicine; but behold a little man!

Tching. [*Falling on his knees in terror.*] Great sir, do not be angry; let me reveal to you the real state of the case: *Tchao-tun* was one of the most faithful subjects of the King; *Tou-ngan-cou* was jealous of him; he wished to destroy him by means of a dog; *Tchao-tun* escaped, and fled from the palace; his carriage would not proceed; the brave *Ling-tcha* remembered his obligations to *Tchao-tun*, and bore him to the mountains; no one knows what has become of him. The King believed the calumnies of *Tou-ngan-cou*; the son of *Tchao* was ordered to kill himself; the princess was confined to her palace: she had a son, whom she called the Orphan; mother and child were succourless; the princess confided her offspring to me; I have fallen in with you, sir, and persuaded myself that you would not blame me.—Can you prevail upon yourself to tear away this poor tender sprout, and extinguish his family for ever?

Han. *Tching-ing*, you cannot but be sensible that if I carried this child to its enemy, the wealth and honours I should obtain would be unlimited; but *Han-qu* has too much virtue to commit such an act.—*Tching-ing*, carefully cover up this dear orphan; if *Tou-ngan-cou* inquires of me where it is, I will answer for you.

Tching. Great sir, I am extremely obliged to you. [*He covers up the child, goes, and returns, falling upon his knees.*]

Han. *Tching-ing*, when I desired you to go, it was not my design to betray you; go away quickly.

Tching. A thousand thanks to you, great sir. [*Goes, and again returns.*]

Han. Why do you retrace your steps so often? You fear I shall deceive you. O, *Tching-ing*, if you have not the courage to expose your life, why attempt to save that of the orphan? Who imposes the office upon you?—Know that a faithful subject dreads not death; he that fears to die is no faithful subject.

Tching.

Tching. Great sir, if I leave the palace, I shall be pursued and taken, and this poor orphan will be put to death: let me be arrested at once: go, sir, receive your reward; all I wish is to die with the orphan of the house of Tchao.

Han. Tching-ing, you may easily save yourself and the orphan too: but you have no resolution. [*Stabs himself.*]

Tching. What do I see? Han-qua slain by his own hand! If any of his soldiers should advertise Tou-ngan-cou of this affair, what will become of me and the child? Let me retreat with expedition; I will bend my course, without manifesting alarm, towards the village of Tai-ping, and there consider what further steps are to be taken. [*Exit.*]

ACT II.

SCENE I.—*Palace of Tou-ngan-cou.*

Enter TOU-NGAN-COU, attended by soldiers.

Tou. To ensure our success in an undertaking, we should not be too eager. When I learned that the princess had a son, named the Orphan of Tchao, I sent Han-qua to guard the avenues of the palace, and published an order, that if any person concealed or carried off the orphan, the offender and his whole family should die: this miserable abortion cannot surely escape beyond the sky.—Yet I receive no intelligence, which disturbs me.—Let some one inquire without.—

Sold. Sir, there is very bad news.

Tou. Whence, and of what kind?

Sold. The princess has strangled herself with her girdle, and Han-qua has killed himself with a dagger.

Tou. Han-qua destroyed himself! The orphan has surely been carried off! What intelligence is this!—What is to be done!—The only expedient I can think of is, to forge an order of the King, and command that all the children throughout the kingdom, under the age of six months, be brought to my palace, and I will stab them with my own hand.* The orphan will doubtless be of the number, and I shall then be sure of being rid of it.—[*To his attendants.*] See my will obeyed! Let an order be fixed up, that all those who have sons under six months old, do bring them to me at my palace; and that if any one presume to disobey, he and all his family shall be put to death.—I will destroy all the children in the kingdom of Tsin; the orphan will die, and he shall have no sepulture: though he be made of gold and precious stones, he cannot escape the edge of my sword. [*Exeunt.*]

SCENE II.—*The village of Tai-ping.*

Enter TCHING-ING, with his box upon his back.

Tching. Tching-ing, what hast thou to fear?—My little master, how dear art thou to me!—Tou-ngan-cou, how I abhor thee!—Scarcely had I got this little victim beyond the walls, when I learned that Tou-ngan-cou had heard of its escape, and that he has ordered all children under half a year old to be brought to him; and then, without inquiring whether the orphan is amongst them or not, he will dismember them, and cut them into pieces. Where can I conceal it?—This is the village of Tai-ping, the retreat of Kong-lun: this old gentleman was one of the friends of Tchao-tun; he has quitted the court, and passes his life calmly in this retreat; he is a man of honour and sincerity; I will lodge my treasure with him. I will go to him directly: I will hang my

box

* Tou-ngan-cou here literally out-Herods Herod.

box beneath these banyan-trees:—my dear little master, wait here a moment for me; as soon as I have seen Kong-lun, I will return to you. [*Exit.*]

SCENE III.—*Kong-lun's house.*

Enter KONG-LUN and TCHING-ING.

Kong. Tching-ing, what business brings you here?

Tching. Finding that you had secured yourself in this retreat, I have come to pay my respects to you.

Kong. Have all the great officers of the court been well since my retirement from thence?

Tching. Ah! matters are not as when you were in office; Tou-ngan-cou is master, and all is greatly changed.

Kong. The King should be informed then.

Tching. My lord, you well know that villains have always existed: were there not four wicked men in the reigns of Yao and Tchun? [*Kong-lun here intimates that he knows what has happened to Tchao-tun.*] Heaven, my lord, has good eye-sight:—the house of Tchao is not without an heir.

Kong. All his family, to the number of three hundred persons, has perished; his son has stabbed himself; the princess, his daughter-in-law, has strangled herself;—where is the heir you speak of?

Tching. My lord, since you know so well what has happened, I shall say no more; yet, I will tell you what, perhaps, you do not know; that the princess, whilst a prisoner in her own palace, brought a son into the world, whom she named the *Orphan of the house of Tchao*;—now are you ignorant of the heir of whom I speak?—All I fear is, that Tou-ngan-cou should come to know it, and should seize it; for if it once falls into his gripe, he will put it to a cruel death; and then the house of Tchao will be indeed without an heir.

Kong. Has any one saved the poor little orphan?—where is it?

Tching. My lord, you manifest so much compassion for this family, that I can hide nothing from you.—The princess, before her death, entrusted her son to me, conjuring me to take care of him till he was of a proper age to wreak vengeance on the enemy of his house. When I left the palace, with the precious deposit, I found Han-qua at the door; he suffered me to come out, and killed himself in my presence. I fled with the little orphan, and can discover no safer retreat for it than your house. I know, my lord, that you were the intimate friend of Tchao-tun; and I doubt not you will have pity upon his poor grandson, and save his innocent life.

Kong. Where have you left the dear child?

Tching. Beneath the banyan-trees without.

Kong. Fear not; go and bring him in.

Tching. Blessed be heaven and earth!—The little prince was asleep. [*Exit.*]

Kong. Tching-ing says that all the hopes of the family of Tchao are vested in this child; I am of opinion, however, that he is the cause of all his house's misfortunes.

TCHING-ING returns.

Tching. My lord, you know not that Tou-ngan-cou, finding the orphan had escaped, wishes to destroy all the children of his age; I thought of concealing the infant with you; thereby I shall acquit myself of my obligations towards his parents, and I shall save the lives of all the little innocents in the kingdom by the following expedient: I am in my forty-fifth year; I have a son of the age of our dear orphan; it shall pass for the little Tchao; you shall go and give information to Tou-ngan-cou, and accuse me of harbouring the orphan, which

which he will search for. I and my son will die : you shall raise up the heir of your friend until he is of an age to avenge his parents. What say you to this plan ?—Do you not approve of it ?

Kong. What is your age, do you say ?

Tching. Forty-five.

Kong. Twenty years must elapse before this orphan can avenge the wrongs of his family. You will then be sixty-five ; but I shall be ninety. How could I assist him at that age ? O, Tching-ing, since you have the resolution to sacrifice your son, bring him hither, and accuse me to Tou-ngan-cou ; tell him that I conceal in my house the orphan he seeks. He will surround the village with troops ; I shall die along with your son, and you will rear the orphan of Tchao till he can avenge his whole family. This project is surer than yours : what say you ?

Tching. The plan is good enough ; but it will cost you too dear. Let my child have the dress of little Tchao ; impeach me to the tyrant, and let my son and me die together.

Kong. What I have proposed I resolve on : do not attempt to oppose it. Twenty years hence we shall be revenged. Could I expect to live so long ?

Tching. My lord, you are vigorous.

Kong. I am not what I have been ; but I will do what I can : Tching-ing, follow my advice.

Tching. You lived in tranquillity here, and I have thoughtlessly obtruded this mischief upon you : how I repent it !

Kong. What do you tell me ?—A man of seventy, like me, must expect death shortly ; of what consequence is it to go a day or two earlier ?

Tching. My lord, you have proposed this plan ; take heed how you retract : observe well your promise.

Kong. Of what use are promises if they cannot be depended upon.

Tching. If you save the orphan, you will obtain immortal glory. But, my lord, if Tou-ngan-cou arrest you, how will you answer his interrogatories, and endure the torture ? You will disclose my name ; my son and I are sure to die ; I only regret that the heir of Tchao cannot thereby be preserved, and that it is I who have inveigled you into this distressing affair.

Kong. I know that the two houses were irreconcilable. When Tou-ngan-cou shall arrest me, he will offer me numberless insults : “old rascal, old wretch,” will he say, “although you knew my orders, you concealed my enemy expressly to effect my ruin.”—However, fear nothing, Tching-ing ; when the hour arrives I will not fail : do you take care of the orphan : it is of little consequence what becomes of an old man like me.

Tching. Such being the case, then, there is no time to lose : I will soon bring hither my son ; it is with joy I substitute him for the orphan : on my side it is a species of justice ; the sacrifice of the magnanimous Kong-lun is an act of generosity. [*Exeunt.*]

[*To be concluded next month.*]

You give a patient drugs, he gives a fee,
And thus each cures the other's malady.

LAND

LAND TENURES OF INDIA.

MALABAR.*

IN this province the exclusive right to the hereditary possession and usufruct of the soil belonged to the ryot, or farmer, and was termed *jennm*, or birthright. It originally vested in the Namboories, or Brahmins of the western coast, and in the Nairs, who, though Sudras, were the chief landed proprietors and military tribe of Malabar. Latterly the Mapellas, or Moplas (Musulmans of Arabian descent), possessed themselves by degrees of much of the *jennm* property in this province. Till the conquest of Malabar by the Mohammedan princes of Mysore, the *jennmkars* seem to have paid no dues to the government: a land revenue appears till then to have been unknown, though Sir Thos. Munro thinks that, at least, contributions from landholders were occasionally exacted by the raja. The province was divided into petty principalities, and the revenue of the prince consisted (besides the *jennm* of his hereditary lands) of various fines, escheats, offerings, and dues unconnected with landed property, unless the tax on the estates of deceased Moplas may be considered as a land-tax.†

The *jennmkars*, holding their lands on the tenure of the sword, yet entitled to subsistence-money when called into active service, and exempt from all tax on the land, were independent owners. They held by right of birth, not of the prince, but in common with him; so that they possessed a property in the soil more absolute than even that of the European landlord.

The Namboories, however, as well as the rajahs, Mopla merchants, and some other *jennmkars*, being precluded by their several avocations from farming occupations, leased their lands and *slaves* ‡ for a limited period to an inferior class of ryots, termed *patomkars*, who, in consideration of a fixed rent, in kind or money paid by them to the *jennmkar*, acquired, during the period of the lease, all his rights, except the disposal of the *jennm*. Though many *jennmkars* thus rented out their lands to tenants, many also cultivated their own estates. All were remarkably tenacious of their *jennm*, with which they parted only through the most urgent necessity. This strong attachment to their hereditary property seems to have given rise to another class; namely, the *kanumkars*, or holders of the *kanum*, a species of land-mortgage prevalent in this province, the peculiarity of which consists in its never admitting of foreclosure, and in its containing, within itself, an inherent principle of self-redemption. When in distress, the *jennmkar* borrowed money on his land, which he pledged for the interest on the debt; and by a series of deeds, he could gradually raise nearly the full price of his estate on this kind of mortgage.

The

* As the subject of property in land amongst the natives of India is highly curious and interesting, we propose to lay before our readers, in this and succeeding numbers, a succinct account of the original tenures in the provinces subject to the Madras Government, compiled from the official papers selected and printed from the Records at the East-India House, and chiefly from a Minute of the Madras Board of Revenue, dated 5th January 1818.

† See our last volume, p. 270. Some slight discrepancy will be perceived between the former article and the present: in the former (extracted from Sir Thos. Munro's statement) the subject of tenures was touched incidentally only.

‡ In Malabar and Canara, the inferior labourer is generally the personal slave of the proprietor, and is sold and mortgaged by him, independently of his lands. These slaves, belonging to the most degraded class of Hindoos, generally outcasts, usually reside in the outskirts of the villages, receiving from their employers little more than food, with a scanty supply of raiment. In some provinces (as in the Tamil country) these domestic slaves are *ascripti globæ*, and may even claim *merchs*, or hereditary private property, in the incidents of their villeinage; but, in Malabar and Canara, though it is not the landlord's interest to sell the slaves who cultivate their lands, yet they dispose of the increasing stock; and their power to dispose of all their slaves, independently of their lands, seems undisputed.

The debt became fastened, as it were, to the soil, from which it never could be separated: if the jemmkar transferred his land, the incumbrance went with it.

So long as the interest on the debt was paid, the mortgagee had no control over the soil; but on failure of payment of the interest, the kanumkar was entitled to possession, and might then rent out the land to new patomkars, or cultivate it himself: but he was obliged to pay the jemmkar all excess of rent or produce beyond the interest on the debt: and though the latter might, in consideration of a further advance from the mortgagee, transfer to him the jenn, and thereby make him landlord; the kanumkar, as such, could never foreclose or dispose of the jenn to satisfy his debt; he must wait the convenience of the jemmkar, or sell or mortgage his own kanum.

Where the debt was light, the jemmkar still retained so valuable a property in the soil, that he seldom lost possession; but where the debt became heavy, so that the interest absorbed the chief part of the landlord's rent, the mortgagee often acquired possession, and the jemmkar's property in the land was frequently reduced to a handful of grain, or some nominal surplus, paid merely to mark the nature of the tenure. The jemmkar might, however, always redeem the kanum by paying off the principal; but if the kanumkar had obtained possession of the land, the jemmkar was bound to pay him also the value of any permanent improvements.

This species of redeemable mortgage is known in other provinces; but in Malabar alone it possesses the peculiarity of an inherent principle of self-redemption or extinction. All kanum-deeds were to be renewed after the lapse of a certain number of years, or on the death of the jemmkar; and when the new deeds were issued, thirteen per cent. was deducted from the original principal. In the course of time, therefore, the land became released from the mortgage, and reverted to the heirs of the mortgager free of incumbrance. This rule is not now strictly observed, owing to its not appearing in the written instruments, and perhaps to our courts deeming it inequitable to the mortgagee.

Such was the nature of landed tenures in Malabar when Hyder Ali invaded the province in the year 1766. The conqueror immediately levied a land-tax, which he at first declared should be half the produce of the soil; but which was afterwards altered to a fixed portion of the jemmkar's rent.

The absence of all accounts and materials for assessing this tax (in a country where no revenue was derived from the soil), and the interested misrepresentations of the people, created much confusion and inequality in the assessment. When the province came into British possession, though the principle of the assessment was known, the actual rate of taxation was found to be different in every district.

The land-tax introduced by Hyder was an assessment of so much money upon each *paramba* (garden, or plantation), and so much upon each *batty* (seed or paddy field), which averaged about eighty per cent. of the jemmkar's patom, or rent, in the southern talooks, and about fifty in the northern. Accordingly, there still remained to the landlord, after payment of this tax, a surplus, which he could dispose of as formerly; but at this period the greatest portion of the estates in Malabar were pledged in kanum, and many were, under the circumstances explained, in possession of the kanumkars. The jemmkar, being entitled to all the surplus beyond the kanum interest, had hitherto enjoyed a landlord's profit even from those estates; but this was now almost universally absorbed by the public dues: the deficiencies fell upon the kanumkars.

This assessment, therefore, by destroying or reducing the income derived by the jenmkar from the land, dissolved, or materially loosened the ties which bound him to the soil: but it acted contrariwise with respect to the kanumkar; for in proportion as it affected his immediate interests, the more strongly did it connect him with the land, since, by encroaching on that portion of the landlord's rent appropriated to the payment of the interest on the kanum, it necessarily protracted the period of its discharge. Many jenmkars, in consequence, who had hitherto retained possession of their lands, though pledged, being unable to discharge the interest of their debt in addition to the public assessment, relinquished their estates to the kanumkars, with little prospect of their ever being able to redeem them.

This transfer of the landlord's rights to the kanumkars was further promoted and accelerated by the extraordinary edict of Tippoo Saib, Hyder's son, for the compulsory conversion of the Hindoo population of Malabar to the Musulman faith. Alarmed at a mandate which threatened loss of caste (for even forcible circumcision excludes a Hindoo from his tribe), the jenmkars fled from the country, previously granting, in consideration of small sums of money to supply their immediate necessities, large kanum assignments of their lands to Moplas; who, being Mohammedans, had no ground for alarm, and dexterously availed themselves of the consternation of their Hindoo neighbours to apply advantageously their accumulated wealth.

In the year 1818 the number of jenms, or estates, in Malabar, was 44,378; and the land-assessment being about Star Pags. 4,50,000, each estate, consequently, averaged little more than ten pagodas per annum. Few of the jenmkars, however, were then in possession of their lands. Many of the Namboory or Brahmin landlords never returned from Travancore, whither they fled on the first promulgation of Tippoo's edict, leaving their lands in the possession either of their mortgagees or their tenants; and, although many of them have agents in Malabar, who collect and remit to them any surplus rent or produce, others have never settled with their kanumkars for years.

It is computed that about three-fourths of the landlord's rent in Malabar has become vested intrinsically in the kanumkars and patomkars. The rights of each, however, though altered in value, are not in their nature changed. The privileges attached to the patom, the kanum, and the jenm, remain as heretofore; and notwithstanding the latter has lost much of its value, such is still the attachment of the people to rights transmitted from their ancestors, that, although a great number of Hindoo jenmkars, who emigrated from Malabar in consequence of the edict of Tippoo, were forced to pledge their lands almost irrecoverably in kanum, there is not a single instance in which the jenm has been disposed of.

CANARA.

The landed tenures of this province resemble those of Malabar, though they are not precisely the same. What is termed *jenm* in the latter, is denominated *wurgha* (separate independent property) in Canara. It seems to have been originally vested in the Nairs, once the exclusive *mulees* or landlords in this province. They had under them a great number of inferior ryots, termed *guenies*, or tenants, either permanent or temporary. The *mul-guenies*, or permanent tenants, were those who had a grant, in writing, from the mulee of a certain portion of land, to be held by them and their heirs for ever, on condition of paying a specified invariable rent; this right could be mortgaged, though not sold, by the *mul-guenies*. The rent was either in money or grain, as mutually agreed upon; but never a share of the produce. The land, thus alienated,

alienated, never lapsed to the mulee (so long as the stipulated rent was paid) unless through failure of heirs to the mul-guenies. The temporary tenants, or *chalie-guenies*, rented farms at a fixed rent, in money or grain, for a limited period, either from the original landlords, or the mul-guenies; they corresponded precisely with the *patomkars* of Malabar.

On the conquest of Canara by the Pandian princes of Madura, in early times, the Nair landlords were mostly extirpated, and were replaced by the Hullahs and other castes now in possession of the mulee-rights. The descendants of the original permanent tenants are now termed *Nair mul-guenies*, to distinguish them from the *Shud mul-guenies*, whose permanent tenures are of a less ancient origin.

Besides the mulees, mul-guenies, and *chalie-guenies*, there are possessors of land on a perpetually redeemable mortgage, differing from the *kanum* of Malabar only in the absence of the obligation to renew the deed (which involved the ultimate extinction of the debt); and also in its having two denominations; namely, *tooradhoo* (pledge shewn), where the mortgagee is without possession of the land; and *bogyadhi* (positive enjoyment), when, in default of payment of interest on the debt, the mortgagee assumes possession.

An essential difference, however, existed between the *jennkars* of Malabar and the mulees of Canara, in that the former enjoyed their hereditary rights free from assessment; whereas, the landlords of Canara held their tenures under the express condition of a payment to government, which seems to have existed from time immemorial, and was originally one-sixth of the produce. On the conquest of Canara before-mentioned, the assessment was increased to about one-tenth of the produce, and so continued till the province was annexed to the new empire of Bijnagur, about the beginning of the fourteenth century.

Hurryhur Roy, one of the first kings of that dynasty, is said to have remodelled the land-assessment of Canara; raising it to nearly one-fourth of the produce, by levying a fixed sum of *money* on each estate, and apparently each field: one pagoda was required from so much land as required two and a half *kautees* of rice (the staple grain) to sow it. The seed is calculated to bear to the produce the proportion of one to twelve.

This assessment, called the *rekha*, or standard tax of Canara, continued fixed for upwards of two centuries, till, under the Bednore government, it was increased about ten per cent. But when the province fell under the baneful administration of the Musulman princes of Mysore, the extra-assessments, as in Malabar, nearly annihilated private property in the soil; so that, at its acquisition by the British, many of the landlords had sunk to the condition of mere labourers on their own estates.

The first British collector in Canara was Colonel (now Sir Thomas) Munro, under whose judicious arrangements the assessment was reduced to about thirty-four per cent. on the ancient *rekha*; in consequence of which relief, prosperity began immediately to re-appear in the province, and innumerable claims arose to land, which resumed its former value. The destructive effects of the Mysore system had so confused the rights of property, that it became difficult to distinguish between mulees, mortgagees, and *guenies*, more especially as the absolute transfer of the landlord's rights was more common in Canara than in Malabar. Private property in land, however, is still highly valuable. The sale price of estates differs according to circumstances; but the result of a calculation founded on actual sales, in the different talooks of this province, gave, in 1818, on an average, eleven years' purchase.

The provinces of Malabar and Canara seem originally to have constituted one distinct Hindoo state. Language and other peculiarities discriminate three of these states in the territories subject to the presidency of Fort St. George. The five northern circars of Ganjam, Vizagapatam, Rajahmundry, Masulipatam, and Guntoor, together with the districts of Bellary, Cuddapah, Palnaud, and Nellore, or wherever the *Telinga* is the language of the people, may be considered one of these; the second may be said to include the district of Chingleput, the two divisions of the Arcot Subah, Salem, Baramahl, Coimbatore, Madura, Dindigul, Trichinopoly, Tanjore, and Tinnevely, or wherever the Tamil language is spoken; and the third comprises the provinces of Malabar and Canara, where the Malayalim and Tulavoo are the vernacular dialects.

THE BURRAMPOOTER, OR BRAHMAPUTRA.

We extract the following observations upon the source and course of this important river from the *Calcutta Government Gazette* of May 9.

“ The late operations to the eastward have already added materially to our knowledge of the countries in that direction, and will lead to the most important improvements in their geography. Among the objects of the first interest is the real source of the Burrampooter, which, there is reason to think, will require a correction very analogous to that made in the origin of the Ganges, and which, by cutting off several hundred miles of a singularly and improbably devious course, will be found much nearer to the plains through which it flows, than has hitherto been imagined. The Burrampooter has been identified with the San-po, which the Chinese geographers traced through Great Tibet, running from west to east. They lost it on its turn to the south; but the Jesuit missionaries very justly concluded that it must pour its waters into the Bay of Bengal. In conformity with this notion, M. D’Anville was disposed to think it the same with the river of Ava, or Irrawuddy; he was probably in the right. Major Rennell, however, connected the San-po at its bend with the Burrampooter, in consequence of his tracing its course, in 1765, from the east, and not, as before represented, from the north. The inquiries to which this discovery led, furnished him with an account of its general course to within 100 miles of the place where Du Halde left the San-po; on which he adds, ‘ I could no longer doubt that the Burrampooter and the San-po were one and the same river;’ and to this were added the positive assurances of the Assamese, that their river came from the north-west, through the Bootan mountains. The Ava River, Major Rennell identifies with the Now Kian River of Yunan.

“ The connexion of the San-po and Burrampooter is, however, upon Major Rennell’s own showing, entirely conjectural; and it does not follow that, because the streams were traced to within 100 miles of each other, they were the same. At any rate, if the same, we must conclude that the Burrampooter, after flowing many hundred miles, must be a deep, broad, and stately stream, unless we can imagine any such diversion of its waters as would amount, indeed, to the different direction of the main river, whilst the Burrampooter was only an inconsiderable branch. The San-po, where left by the Chinese, is called a very large river, and the name itself, San-po, is said to imply *The River*, κατ’ ἐξοχην. How happens it, then, upon entering Assam, to have lost all claim to such a character, and to be little more than a hill torrent, with only three or four feet of water in its greatest depth? Such, at least, appears to be

be the case, by the following communication from Lieut. Burlton :*—The width is rather considerable, it is true, but not sufficient to authorize the idea that the stream has travelled some six or seven hundred miles.

"Lieut. Burlton's letter is dated 'on the River Burrampooter, N. lat. 27° 54', E. long. 95° 24', March 31st, 1825.' He reports that he had that day got as high up the river as it was navigable: the bed of the river was a complete mass of rocks, with only a depth of three or four feet of water in the deepest part; the rapidity of the current was also so great that no boat could track against it, putting the danger of striking on the rocks out of the question. He considers it as about the size of the Kullung River (150 yards across), and the extreme banks as being not more than 600 yards apart. Lieut. Burlton regrets that he could not proceed farther either by land or water. It was represented to be at least ten days' journey to the Brahma Koond, and he had but a few days' provisions left. What he had learned respecting the course of the river above was, 'that it runs easterly till it reaches the lowest range of mountains (Lieutenant Burlton could see this range, and supposed it to be about fifty miles distant), where it falls from a perpendicular height of about 120 feet, and forms a large bottomless bay, which is called the Brahma Koond.' Above the low range are some high mountains, which are covered with snow; and, from the narrowness of the water, he imagined that the source of the Burrampooter must be there, as it seemed very improbable such a small body of water could run the distance it is represented or supposed to do.

"From what the natives said respecting the Seeree Serhit, or Irrawuddy, Lieutenant Burlton was inclined to think that that river rises at the same place."

The same paper, of June 30, contains the ensuing additional particulars:—

"By means of some Khangtis, originally from the Bor Khangti country, Lieut. Neufville† has been able to give some more intelligence respecting the rivers. The Bor Khangti territory lies on the other side of the high snowy hills of the Brahma Koond. These ranges he now finds extend back to a far greater depth than he had at first supposed, and, he is assured, to a far higher altitude than any of those now visible. The Burrampooter, of Luhit, accessible only as far as the reservoir of the Brahma Koond (unless, perhaps, to the hill Meeshmees), takes its original rise very considerably to the eastward, issuing from the snow at one of the loftiest of the ranges; thence it falls, a mere mountain rivulet, to the basin of the Brahma Koond, which receives also the tribute of three streams from the Meeshmee hills, called Juhjung, Tisseek, and Digaroo. From the opposite side of the same mountains, which give the primal rise to the Burrampooter, the Khangtis state that the Irrawuddy takes its source, running south, intersecting their country, and flowing to the Ava empire. This theory of the sources of the streams is thought by far the most probable; and it agrees more with the general accounts and the geographical features of the country.

"A little to the northward of east (the opening of the Brahma Koond) is another less defined dip in the lofty line of the Meeshmee hills, through which Lieut. Neufville has received a route, accessible to mountaineers, of twenty days to the country of the Lama.

"There is said also to exist a passage somewhere through the Abor hills to Nipal; but he could find no one able to give him satisfactory intelligence on that head."

* This officer has been employed upon a survey of this river in Assam.—*Ed.*

† Also employed to survey.—*Ed.*

MAGNETIC VARIATION.

To the Editor of the Asiatic Journal.

SIR: An event of material importance to science is now in progress, and calls for the aid of your excellent publication, with a view of promoting a requisite co-operation in India. The celebrated Professor Hansteen, under royal patronage, proceeds to Siberia, in confident expectation of discovering there a north-east magnetic pole.* He is to be accompanied by an eminent French philosopher, Monsieur Coupter. This cannot be the magnetic pole imagined by Dr. Halley, who situated his north-east pole at the intersection of the meridian of 38° east longitude, by the parallel of $76^{\circ} 30'$ north latitude. Halley situated his north-west pole in Baffin's Bay. Three other writers, as stated in Encyclopædiæ, placed their poles in both hemispheres, where recent observations cannot sanction either their position or existence. As formerly stated, by three series of approximations deduced from the observations of Captains Parry and Francklin, and by taking one-third part of the amount of three approximations to the latitude and longitude of the north-west magnetic pole, we cannot be far from the truth in placing it at the intersection of the meridian of 100° west longitude, and the parallel of 70° north latitude. According to the theory of variation which I have been establishing, there can be no variation of the magnetic needle, in the northern hemisphere, in all places under the meridian of the north-west pole, with a small modification to be adverted to. From the time when the variation was nothing in London; till in 1817, the west began to decrease, 160 years passed; and therefore the time of a revolution must be 720 years, and not 1096, according to Churchman. Observations do not admit of assigning fractions of time. The pole appears to be moving *eastward*, at the rate of half a degree of reduced longitude annually; and this occasions the variation on the surface of the earth; and it will be increasing or diminishing according as the moving pole is advancing to, or receding from, the meridian of any place. At present, accordingly, the variation is diminishing. In 200 years from 1817, there will be no variation at London, because the magnetic pole will be under its meridian. An east-variation will go on during 160 years, when again there will be a decreasing variation, because the moving pole will be advancing to the meridian of London, on the other side of the north pole of the earth, which has no magnetic attraction whatever, but is a requisite point from which the reckoning is made for nautical purposes. After that, a west-variation will commence, as in 1657; to cease, as lately, when the pole has attained its maximum of westing. The different cases are applicable, *cæteris paribus*, to all places in our hemisphere; and, *vice versâ*, in the southern, where the south-east pole moves in a *contrary direction*, or *westward*. It is now generally admitted, on scriptural and philosophical grounds, that the earth is not solid, but "void;" and that it moves in its orbit in the ether of Sir Isaac Newton, on a similar principle to that by which a balloon floats in the atmosphere. Infinite Power gave the orbicular motion, and that round the axis necessarily followed. The physical cause of the movement of the two magnetic poles within the earth is unknown. These poles are manifestly possessed of the contrary polarity, and, consequently, they must, on known magnetic principles, have a strong mutual attraction:

* We learn that the journey of Professor Hansteen has been postponed. He is in the meantime providing himself with every instrument requisite for his purposes.—Ed.

attraction; while it may be rationally supposed, that the Deity, for wise purposes, gave them an orbicular motion. The dipping-needle will stand perpendicular on the oblate spheroid of the globe, where the two magnetic poles are situated. If the line of the needle on each pole is supposed to be produced to an intersection of the earth's axis, probably not more than a third part of that axis will remain intercepted between the points of intersection; and a compressed gaseous fluid may prevent a nearer approach, in addition to the action of the orbicular force. Be this as it may, evidently these poles move in contrary directions within the earth, and obviously cause the variation, increasing and decreasing, as stated. The irregularity in the progress of the variation may be naturally accounted for, by the action of magnetic masses found in various places in the shell of the earth. It is manifest, that where such strata lie in the variation-line, some degree of irregular movement must arise till the greater power of the moving pole draws the needle away from such temporary influence. Having necessarily premised thus much, I may presume to think, that the two profound philosophers mentioned will not find a magnetic pole in Siberia. This matter cannot be mistaken, as a pole will throw the dipping-needle into a perpendicular attitude. The dip at Tobolsk will be found nearly similar to what it is in London; and when the investigating men of science proceed as far east as the meridian of 80° , they will find themselves on the north-east line of no variation. In moving north on this line, the dip of the needle will increase, though not, probably, to more than 75° , as far north as the land will carry them. It will be of great service, however, to lay off a meridian on the line of no variation, in order, at a future period, to find how much, annually, a commencing west-variation, on such line, may amount to; for it is by observing such increase and decrease, in various places, by means of true meridians, that the true rate of movement of the pole, and the occasional irregularities, will be nearly ascertained.

I come now, sir, to the wished-for co-operation in India. If a line, passing through the north-west and south-east magnetic poles, be drawn all round the earth, the needle, on any part of that line, will point to both poles; but in every other situation, the nearest extremity of the needle will be attracted by the pole of the same name, in the inverse ratio of the square of the distance; and experiments with magnets tend to confirm this. On whatever meridian a little to the east of 80° east longitude the two philosophers find the north-east line of no variation, to ascertain it *truly*, a proportional allowance must be made for the attraction eastward of the south end of the needle, and this will be *more*, on the *same* meridian, near Nagpore and Madras, than in the north of Russia. A comparison of the increasing west-variation on such meridian, for a series of years, will prove the fact; and with this view, it is hoped that, in those places in India under the meridian of the line of no variation to the east of Tobolsk, meridians will be *truly* laid off in India, in order to compare the quantum of variation in *different places* under it, and at *different periods*, in time to come.

There is a passage through Behring's Straits, for tides, currents, and fish; but for commercial purposes it would be useless, because it could not be reached without extreme danger, were even a passage to these straits discovered. The discovery of the *precise site* of the north-west pole becomes, however, an object of the utmost importance to navigation and commerce; and now the completion of it can be effected with safety and facility. The approximated position of the pole, in 70° north latitude, and 100° west longitude

tude, is contiguous to Coppermine River, and can be ascertained from thence. Capt. Parry will next year, probably, pass through Regent's Channel, in which case the position of the pole will be directly in his course. If he should not find an open sea in this channel, he will attempt to pass into the Polar Basin, where he may find an open sea, and be enabled to lay down the geography of these unknown regions.

If we cannot say in what line or curve the pole moves, we certainly can indicate that in which it does not revolve. It was laid down by Churchman, that it moved under a parallel of latitude. The gentlemen in habits of observing the variation at Somerset House and Greenwich, differed as to the fact of the commencing decrease of the west-variation. All agree now as to the decrease from 1817; and, from my inquiries, the observers at Paris confirm the case. Now, if the pole moved under a parallel of latitude, the angle of variation would continue to *increase* for above seventy years more, or till the pole arrived at the part of the parallel of 70° touched by a tangent drawn from London; but, instead of this, the angle is decidedly *diminishing*. The pole cannot be moving in the plane of any certain meridian, as, in that case, we should have what is not fact, that is, no variation under such meridian in our hemisphere. Again, it is not moving under any line not immediately under the pole of the earth, as all places under such line would *always* have the *same variation*, excepting when the pole was directly under any place on the line. This case, however, has never occurred. The question, then, is narrowed to the movement in some eccentric elliptical curve, or in some other irregular curve, whose conjugate diameter is nearly under the meridian of London, and must be short, while the transverse must lie between 100° west and 80° east longitude. For above half a century to come, the site of the pole may be visited from the hyperborean coast of America; and thus, the latitude and longitude of many polar sites being made out, a line drawn through them will furnish a near approximation to the nature of the polar tract: and here, at present, a question must rest, that cannot be solved by any calculation.

By a concentration of several variations taken by Capt. Cook, the south-east magnetic pole must be not far from 75° south latitude; and probably under the meridian of 117° east, if it has moved at the rate of the other pole from its line of no variation, situated above fifty years ago, according to the same able navigator, nearly under the meridian of 144° east longitude. As we do not know the place of the present south-east line of no variation, no calculation of the time of a revolution can be made. An enterprising naval commander has lately found a clear, open sea, not far from this pole, and this may induce the Admiralty to send out ships to make a discovery, which foreign nations will otherwise accomplish, as their ships are now constantly out, making useful researches. For instance, two of them lately have confirmed my observations of the *diurnal variation* at Bencoolen and St. Helena, as published in the Philosophical Transactions of 1796 and 1797. This description of variation I ascribe to the action of solar heat and light on the needle, and of the former on the nearest pole. It moves in a contrary direction to that observed in London, and is much less. If, however, it had been observed as far south, as London is north, from the magnetic equator, I have reason to think that little or no difference in quantum would have been found. My idea of the much-disputed subject of a magnetic equator is, that if a line can be supposed drawn round the earth, through all the points where the magnetic needle

needle would rest horizontal, because acted on equally by both poles, such line must be the magnetic equator, which is constantly shifting, because both poles are perpetually moving.

It must always be recollected, that the magnetic needle, excepting on one circumference mentioned, cannot, in general, point exactly to either of the magnetic poles. To elucidate this, let it be supposed that there is no south-east pole, and that a needle is situated on the present north-west line of no variation, under nearly the meridian of the city of Mexico, where there would be no variation. Suppose, in this state of things, that the south-east pole were suddenly replaced, by a *fiat* of the Almighty, this pole, according to its present situation, would be above a hundred degrees to the west of the meridian of Mexico, and the consequence would be, what it actually is, that the south end of the needle would be drawn *westward*, occasioning an inclination of its north end *eastward* into an *east-variation*. From the same cause, there is a great west-variation under the meridian of 80° east in the southern hemisphere, though the exploring foreign philosophers will, in the northern hemisphere, find a line of no variation nearly under this meridian. It is on this account, also, that the west-variation increases so rapidly between the Straits of Sunda and the Cape of Good Hope: for as the south-east line of no variation is departed from, the south extremity of the needle is strongly attracted eastward by the nearest pole, which inclines the north end into a great west-variation, aided by the attraction of the north-west pole in the same direction, both poles acting in the inverse ratio of the square of relative distance.

It may be remarked here, that the south-east pole cannot be situated as given by four eminent encyclopædists of olden times, because Capt. Cook, and other navigators, in visiting the ascribed sites nearly, found no symptoms of the existence of the imagined poles.

An officer on board the *Hecla* was furnished with my calculations of the movement of the north-west pole in the course of five years, in case there might be an opportunity of trying the supposed fact in former situations, if by chance repaired to. These calculations, though not so exact as could be wished, would shew whether or not the magnetic *dip* increased on the east, and diminished on the west, side of the pole. I also adverted to a relative difference which would arise in the variation, on the supposition of the polar movement. I have not heard that any opportunity of verifying these suppositions occurred. One or both of these facts would go far to prove the actuality of the movement of the north-west pole in an eastern direction.

Yours, &c.

Summerlands, Nov. 4, 1825.

JOHN MACDONALD.

THE BEE INCLOSED IN AMBER.

From MARTIAL, *Lib. II, Ep. 53.*

BURIED yet seen within this lucid tomb,
 The insect could desire no brighter doom,
 Than (since nor bees nor men death's flood can stem)
 To die in honey hardened to a gem.

MAUSOLEUM AND SHRINE OF IMAUM REZA, IN PERSIA.

IMAUM REZA was a priest of the sect of Ali, in such high repute for sanctity throughout Persia, that his popularity occasioned considerable uneasiness to Mamoun-al-Raschid, son and successor of the celebrated Caliph Haroun-al-Raschid. The Imaum, in consequence of his increasing political influence, seems to have experienced, by the contrivance of the caliph, a fate similar to that of our Thomas à Becket; although some Mohammedan historians aver that he died a natural death, in the year of the Hejira 203. About 300 years after his death, the odour of his sanctity still remained amongst the followers of Ali; and Sultan Sanjer, moved, it is pretended, by a well-authenticated report of a miracle performed upon the spot where the Imaum was interred, erected a superb mausoleum over his tomb, of the most durable materials; the cement (said to be composed of Armenian bole, jelly of grape-juice, and goats' hair) is of so hard a substance, that it is extremely difficult to break it. Successive princes added to the splendour of this edifice; especially Nadir Shah, who bestowed many costly gifts to adorn the mausoleum, and enriched the shrine with jewels and other expensive decorations. The city of Meshid, the present capital of Khorasan, was gradually built around it.

This celebrated structure consists of a magnificent cluster of domes and minarets, situated in the centre of the city. A noble quadrangle, called the Sahn, about one hundred and sixty yards long by seventy-five broad, is the first object which attracts the eye. It is built in the form of a caravanserai, with two stories of apartments all round, opening into an arcaded gallery. In the centre of each side and end is a superb and lofty gateway, the whole completely incrustated with Mosaic work, composed of painted tiles in tasteful patterns. In the midst of the area stands a building called the Succah-khaneh, or water-house, which is gilt, and surrounded with small aqueducts for the purposes of ablution. The gateways exhibit exquisite specimens of Eastern ornamental architecture; the beauty of the style vying with the costliness of the materials. That on the south-west admits into the mausoleum; the corresponding gate is built merely for uniformity; though its ornaments are different.

The dome of the mausoleum is covered with a coating of gilt tiles; and bands of azure, with Arabic inscriptions, surround the neck. Two minarets, of a beautiful model, are very striking objects; one springs from a part of the mausoleum, the other from behind the opposite gateway.

The mausoleum itself is to the south-west of the square; the space it occupies is about equal to the area of the Sahn, but it is encompassed by wretched mud fabrics, which partly conceal it. The centre, or chief apartment, beneath the gilt cupola, is entered by a silver gate, the gift of Nadir Shah, which opens into the passage leading thereto. This apartment is of magnificent dimensions, rising into a dome, and branching, below, into the form of a cross; tiles of the richest colours, intermixed with azure and gold, are tastefully disposed into garlands and devices, mingled with texts from the Koran. A candlestick of solid silver hangs in the centre.

The holy shrine, where are deposited the remains of Imaum Reza, and of the Caliph Haroun-al-Raschid (the father of the prince alleged to have been the Imaum's murderer), occupies an octagonal room, as richly ornamented as the preceding, entered by a doorway in the arch to the north-west. Opposite to the shrine is a door covered with gold and jewels.

From

From the archway to the south-west, in the great central chamber, a broad passage leads through the mausoleum to the court of a mosque, which is described as one of the most beautiful and magnificent in Persia. Both sides of the area are formed of buildings like those of the Sahn, having two stories of niches, or compartments; in the centre is a small tank to supply water for ablution. The whole court is adorned with mosaic work of coloured tiles.

A door in one of the arched niches, on the north-eastern side of the Sahn, leads to the Madrissa (or college) of Meerza Jaffier. This building consists of an oblong quadrangle, about sixty yards long by forty wide, surrounded, like the Sahn, with a range of buildings, containing a succession of chambers in two stories, each opening into arcaded balconies, which look out upon the area and upon a little garden in the centre of it.

This splendid collection of edifices continues to receive fresh augmentations: the present Shah of Persia is building another square, surrounded also with a two-storied range of apartments, on the south side of the Sahn.

Mr. Fraser, in travelling through Khorasan, obtained admission, with great difficulty and risk, into the interior of this sacred place, and thus describes what he saw :*

“ We entered the magnificent gilded archway; and being admitted through Nadir’s silver gate, where we left our slippers in charge of the porter, we proceeded to the lofty central apartment, than which I have seldom seen a more happy union of the beautiful and grand; it is difficult to say which was most to be admired, the great size and elegant proportions of this noble hall, or the richness and beauty of its ornaments, seen, as they were, by a mellow and uncertain light, which veiled every thing that might have been harsh or glaring.

“ After viewing this apartment for a while, we approached that which contains the shrine itself; pausing on its threshold, my guide, bowing himself until his head touched the ground, said a long prayer in Arabic, motioning me to follow him in action, as well as word, which I did implicitly, but, of course, without understanding one word. We then entered, and repeated forms of prayer at each of the four sides of the tomb, bowing every time very low; after which we examined the apartment, and went through the rest of the place.

“ Although the Meerza had assured me that this was the most private hour of the day, there was, nevertheless, no inconsiderable crowd about the tomb: a number of pilgrims were paying their devotions at the shrine, and performing, under the tuition of the khadunis (officers or servants attached to the shrine), the same ceremonies I had myself gone through. Many were seated in corners in the ante-rooms reading the Koran, and a multitude of gowned and turbaned figures flitted about through the lofty mysterious rooms: all was silent and death-like, except the low hum of prayer, or the subdued and measured intonations of those who recited the Koran; sounds producing an effect even more striking than total silence. I should gladly have enjoyed for a longer time the impressive scene before me; but I could not forget that I was in a place where a Christian, if discovered, would assuredly meet a violent death. I was sensible of the intrusion which I had committed, and felt as if many of the eyes that were around were suspiciously glancing at me. It was fortunate that the uncertain light aided my disguise, as the awkwardness of my move-

ments,

* Journey into Khorasan, p. 447.

ments, in performing the ceremonies of the place, and the uncommon gestures that accompany their religious observances, would unavoidably have betrayed me, had any attention been paid to our party. I saw that the khadum himself was uneasy, and hurried me rapidly from place to place; and I cannot but confess that I felt relieved when, after having seen every thing that is shewn of the place, and gone through all its ceremonies, we repassed the silver gate, crossed the Sahn, and retired from view into one of the cells of the Madrissa Meerza Jaffier."

THE VISIONARY.

WHILST wrapt in reverie I sate,
 Intent upon—a blazing grate,
 Fantastic objects seemed to rise
 Within it, to my charmed eyes:—
 A castle on a flaming hill—
 A bird with vast expanded bill—
 Beasts of all shapes, both small and big—
 A red-hot face in cinder-wig—
 A warrior's bust with laurel crown—
 A scull—a waggon broken down:
 Forms more grotesque my fancy drew,
 Than Buddh's or Brahma's temples shew.
 At length, the aliment was spent
 That fed the flame—and out it went.
 Then fancy's reign was over,—then
 Vanished at once the fairy scene:
 Castle, and hill, and laurelled bust,
 All sunk, and crumbled into dust.

Restored to reason's sober sway,
 The dream, that melted thus away,
 Reflection led me to compare
 With such as form men's daily care:
 Ambition, avarice, pleasure, pride,
 Fame, and a thousand more beside,
 Charm with their art our mental eyes,
 And make fantastic objects rise,
 Whose varying forms our minds seduce
 With visions of as little use.
 We people airy vacancy;
 We brood on what will never be;
 And, as the fires of life decay,
 So pass our mouldering hopes away.

VARIETIES;

VARIETIES;

PHILOSOPHICAL, SCIENTIFIC, AND LITERARY.

ASIATIC SOCIETY OF PARIS.

Meeting of October 3d. The following persons were admitted members:—Mr. Henry Calthorpe, of Corpus Christi College, Cambridge; M. Marcel, late director of the Royal Printing-Office; the Baron de Rayneval, ambassador from France to the Helvetic confederation.

A translation of a letter in the Armenian language from M. Aslan Athabakian, Petersburg, was communicated, which contained an offer of sending to the council a work, composed by the writer, in Armenian, relative to the Asiatic Inscriptions in Armenia, which he proposes to publish. This work, which is divided into 185 chapters, contains a selection of Armenian inscriptions from stone crosses, tombs, and ruins of monasteries in Eastern Armenia, as well as histories of Armenian princes and chronological documents extracted from ancient manuscripts; particularly those found in 1797 in a subterranean chamber at the monastery of Sannabin. It likewise contains a considerable number of letters and official documents in the Armenian tongue, written by the sovereigns of Armenia, with an explanation of difficult terms, or such as belong to other languages, of which there is a great number. Full details are also given respecting the genealogy of the royal families of Armenia and Georgia, as well as concerning the history of the latter country. In order to ensure the accuracy of his researches, and the fidelity of the copies made by him from the ancient monuments, which he proposes to publish, the author undertook two journeys into Armenia, in 1808 and 1823.

M. Saint Martin was commissioned to thank M. Athabakian for his communication, and to request him to allow M. Saint Martin to inspect the work, in order to enable him to furnish the Society with a more exact account of it.

M. Amédée Jaubert communicated a letter from M. Desbassayns de Richemont, dated Tabriz, relating particularly to the state of instruction in the countries which he has visited, and also two letters, written in Persian, by Prince Abbas Mirza, one of which, addressed to Mr. Wolf, is as follows:—

“ Since the very exalted, very learned, and very virtuous, the chosen of Christian scholars, Mr. Joseph Wolf, of England, has been admitted into our august presence, and has presented to us, in the name of the very noble lord, the model of

the great ones of Christianity, the honourable Henry Drummond, a request tending to obtain the institution of a college in the royal residence of Tabriz, where English professors may fix their residence in order to instruct and give lessons to children: and whereas the moral dispositions of persons high in rank ought always to be favourable to what is good and useful; and whereas there exists between this power (Persia)—the duration of which may God prolong!—and that of England, no difference of views or interests, this request has been agreeable to us. We have, therefore, permitted the aforesaid person to establish the said school: we direct that a house be appropriated to this object, and this present has emanated to show our consent.

“ If it please God, the establishment, which is the object of this person's solicitude, shall attain all the perfection desired; and English scholars may devote themselves to the exercise of instruction, under the shadow of our favour and protection. Whatever is necessary to them shall be granted.”

M. Schulz has informed the council that the printing of his memoir on the Persian translation of the *Mahabharata*,* which he had submitted to their notice, appearing to require more time than he could possibly pass in Paris at present, he was obliged to postpone it.

M. Klaproth proposed to the council the printing of a Japanese dictionary. This proposition, which was seconded by M. Abel-Rémusat, was referred to the consideration of a committee composed of M. M. Klaproth, Abel-Rémusat, and Amédée Jaubert.

M. Eugène Coquebert de Montbret communicated the conclusion of his extracts from Ibn Khaldoun.

M. Abel-Rémusat read a biographical article on the Mongol General Souboutai.

Amongst the donations were twenty volumes of the Holy Scriptures translated into various tongues, from the British and Foreign Bible Society.

DEFINITION OF FO OR BUDDHA.

“ What is Fo?” said an Indian king to a disciple of a saint of Hindostan, named Tamo. This disciple, whose name was Poloti, replied: “ Fo is nothing else than the perfect knowledge of nature—intelligent nature.”—“ Where is this nature to be found?” rejoined the king. “ In the knowledge

* See our last volume, p. 632.

knowledge of Fo," answered the disciple; "that is, in the understanding which comprehends intelligent nature." The king reiterated the question, "where does it reside, then?" The disciple replied: "in use and knowledge."—"What is this use?" said the king, "for I do not comprehend it." Poloti replied: "in that you speak, you use this nature; but," added he, "you do not perceive it on account of your blindness."—"What," said the king, "does this nature reside in me?" The disciple replied: "if you knew how to make use of it, you would find it throughout you; since you do not use it, you cannot discern it."—"But in how many places does it reveal itself to those who use it?" inquired the king. "In eight," replied the disciple, adding as follows:—"Seeing, hearing, smelling, tasting, touching, speaking, and walking, are our corporeal faculties; but there is yet another faculty in us, and throughout us, which includes in itself the three worlds, and comprehends all things in the small space of our bodies. This faculty is called *nature* by wise men, and *soul* by fools."—The king then became converted; and having sent for Tamo, by the advice of Poloti, embraced the religion of Fo, whose mysteries were fully explained to him by the saint.

IMAGE OF GAUDAMA.

Extract of a letter from Arracan:—"A very remarkable image, of Phra Phra (a name of Gaudma, or Buddha), was discovered a few days ago in a sequestered part of the jungles, in the vicinity of this encamping ground, by Col. Smith, of the 49th N.I. Through the politeness of that gentleman, I had an opportunity of examining, yesterday, this idolatrous bauble, for such in part it is, consisting of a wooden figure, in the usual attitude which distinguishes the Burmah Gaudma, placed on a hollow pedestal, richly ornamented with coloured glass, and slips of looking-glasses arranged into the figures of snakes, and ferocious representations of their object of worship, apparently in the act of destroying their invaders. Similar images, cast in brass, were common amongst the Nepaulese during the Goorkah war, and, I have no doubt, the figure discovered by Col. Smith was made with the view of rendering a propitiatory offering to Phra Phra, invoking his assistance for the destruction of the British army. The whole has a tinsel gaudy effect; but the workmanship, although profusely decorated with gilding, is extremely coarse."

THE STEAM-GUN.

A trial of Mr. Perkins' steam-gun took place December 6, at his manufactory near the Regent's Park, in the presence of the

Duke of Wellington (master-general of the ordnance) and his staff; the Marquess of Salisbury, Mr. Peel, Sir H. Hardinge, Lord Fitzroy Somerset, the Judge Advocate-General, and many military officers of the highest rank, together with a committee of engineer and artillery officers.

The discharges of steam were almost incessant for two hours, during which its force and rapidity in discharging balls excited amazement in all present. At first the balls were discharged at short intervals, in imitation of artillery firing, against an iron target, at the distance of thirty-five yards. Such was the force with which they were driven, that they were completely shattered to atoms. In the next experiment the balls were discharged at a frame of wood, and they passed through eleven one-inch planks of the hardest deal, placed at a distance of an inch from each other. Afterwards they were propelled against an iron plate one-fourth of an inch thick, and at the very first trial the ball passed through it. This was declared to be the utmost force that gunpowder could exert. This plate had been brought specially from Woolwich, for the purpose of ascertaining the comparative force of steam and gunpowder.

The pressure of steam employed to effect this wonderful force did not at first exceed 65 atmospheres, or 900 lbs. to the square inch; and it was repeatedly stated by Mr. Perkins that the pressure might be carried even to 200 atmospheres with perfect safety.

Mr. Perkins then proceeded to demonstrate the rapidity with which musket-balls might be projected by steam. To effect this he screwed on to the gun-barrel a tube filled with balls, which, falling down by their own gravity into the barrel, were projected, one by one, with such extraordinary velocity as to demonstrate that, by means of a succession of tubes, filled with balls, fixed in a wheel (a model of which was exhibited), nearly one thousand balls per minute might be discharged. In subsequent discharges or volleys, the barrel, to which is attached a moveable joint, was given a lateral direction, and the balls perforated a plank nearly twelve feet in length. Thus, if opposed to a regiment in line, the steam-gun might be made to act from one of its extremities to the other. A similar plank was afterwards placed in a perpendicular position, and, in like manner, there was a stream of shot-holes from the top to the bottom. It is thus proved that the steam-gun has not only the force of gunpowder, but also admits of any direction being given to it.

Most surprise was created by the effects of a volley of balls discharged against the brick wall by the side of the target. They absolutely dug a hole of considerable dimensions in the wall, and penetrated almost one-

one-half through its thickness. Several officers declared their belief, that, had the balls been of iron instead of lead, they would have made a breach through it: the wall was eighteen inches thick.

SURVEY OF THE ARABIAN SHORE IN THE PERSIAN GULF.

From the mouth of the Euphrates, where the survey commenced, nothing was seen worthy of note until the arrival of the vessels at Grane, which, as a place of trade, is of much importance. The inhabitants are Arabs, and have been long famed for their enterprising commercial spirit. Trading from the gulf to the Red Sea, Scind, and Guzerat, and most parts of the western side of India, they employ a large number of vessels, and import grain, coffee, and Indian produce for the supply of the interior. The town itself contains nothing remarkable; the country in the vicinity is low and partially cultivated, affording nothing worthy of notice. The harbour is large, well sheltered, and has sufficient water for the large ships. Off the entrance is a low island, called Pheleche, eighteen miles in circumference, that protects the haven from heavy seas. It contains a few small towns, subject to the Sheik of Grane. From this island a series of triangles was carried to the southward and eastward, in order to connect the coast; an operation, it would appear, of some difficulty, the shore being generally low, and indented by small bays, with many reefs off it. No remarkable feature, nor any thing meriting a description, was observed until the arrival of the vessels off Katiff, a large town, situated in a bay of the same name, but not approachable by large vessels: less information was gained concerning this place than could have been wished, from the natives having thrown obstacles in the way. The island of Tirhoot, off the entrance of the bay, is flat, covered with date trees, and appears well inhabited. From this bay, contrary to the old charts, the coast takes a southerly direction as far as latitude $26^{\circ} 10'$, where it terminates in a deep bight, called Dooat Es Elva, immediately south of Bahrein, which has water sufficient for large vessels within; but from Katiff to the entrance of this inlet, and easterly to Bahrein, is a continued chain of reefs, which are unapproachable for vessels drawing more than 12 feet water. Ayndar, the port to the late Wahabee capital of Deriah, is situated within this bight; but nothing else remarkable was seen, the land being sterile and thinly inhabited. From this place the coast turns rather abruptly to the northward, as far as Ras Reccan, a little to the southward of which the survey of last season terminated.

The island of Bahrein, spoken of, from the earliest times, as a place of importance,

is situated at the entrance of Dooat Es Elva, and is still of consequence from the share its inhabitants have in the pearl-fishery. The Portuguese established settlements on it about the time Ormuz fell into their hands, and monopolized the greater portion of the profits of the pearl-fishery. They were expelled by the Persians soon after the capture of Ormuz by Shah Abbas; and the island, after changing masters several times, the Persians and Arabs having successively conquered and reconquered it, was finally brought under the power of the latter in 1790. It is about eighty miles in circumference, but is not of the importance hitherto supposed, in itself, as only about one-fifth of its surface is cultivated: the part under tillage is described as being very luxuriant, well watered, and thickly inhabited. The population was variously stated, but supposed to amount to 40,000; the dependencies are estimated to contain about 20,000 more; the total may be considered underrated, as the port sends to the pearl-fishery, during the season, 2,400 boats, each containing from eight to twenty men. The trade of this port employs upwards of 140 vessels of different sizes, and produces a considerable revenue; but the importance of the island chiefly rests on the pearl-fishery, the annual product of which is between sixteen and twenty lacs of dollars. The principal town on Bahrein is Manama, which is the seaport, and where the merchants reside, for the accommodation of whom caravanserais are erected. Within the walls there is said to be nothing worthy of remark; but the vicinity is agreeable. Wheat and barley, dates, and most of the fruits met with on the verge of the tropics, are here found in great perfection; the parts admitting of cultivation are stated to be much neglected, the soil appearing capable of being turned to agricultural purposes, through the greater part of its extent, there being, also, water sufficient to irrigate the whole island, springs of which are found in several parts. Next to Manama, the town of Ruffin is of the most consequence; it is situated on a hill, seven miles inland. Like most Arab towns, it consists of a ghurrie, surrounded by inconsiderable houses, and contains nothing worthy of remark, save a few ruins of a former town, on the foundations of which the present one is built. On the eastern side of the island are the ruins of a large town, formerly the residence of the Sheik; but from the want of a sheltered port, it was abandoned about twenty-five years ago. There are several other places scattered about the cultivated parts of the island, which are stated to be unworthy of any particular notice. A search was made for remains of antiquity, said to be in existence; but, after a minute examination, nothing of interest was found of an earlier date

date than the period of the Portuguese being in possession of the place. The ruins of the fort built by them, a lighthouse on an isolated rock in the harbour, and one or two inferior buildings, are all that remain of this people. The reservoirs near the spring, from whence water is conveyed in the common aqueduct of India over the island, are worthy of notice, as well as a mosque, which appears ancient. It is situated a short distance within the date grove, and is a handsome structure; the form is quadrangular, and at each side is a minaret of an elegant and airy form; the doorways have Moorish arches, without ornament, and the exterior of the building is quite plain: there are no other architectural remains worthy of note. On several of the reefs off the harbour, and even in from two to five fathoms in the sea, is exhibited the singular phenomenon of fresh-water springs, which are perennial, and from which the natives contiguous procure their supply of water; this is done by diving, and holding a mus-sick near the aperture, and holding a water from which is so strong as to prevent the salt from mixing with it. The harbour, which has plenty of water for large vessels, is formed between an extensive assemblage of reefs to the westward and northward, and the islands of Arad and Mahrag to the eastward. These latter contain two or three towns, and about seven thousand inhabitants: they are very close to Bahrein, and contain nothing remarkable. To the eastward of Bahrein, on the main, are the ruins of a large town, called Zabarra; they cover a space of ground several miles in extent, and evince the place to have been the port whence Al Ahsa, and other places in the interior of Arabia, were supplied with the produce of India and Persia.

We understand the survey has been carried on very minutely through the whole extent of the Arabian side of the Persian Gulf, which is now completely explored. It was commenced by Capt. Maughan, of the Marine, in 1820 and 1821; continued by Lieuts. Guy and Brucks through the years 1822, 1823, and 1824, and completed by Lieuts. Brucks and Rogers this season; the two former officers having quitted it from ill-health.—[*Bom. Gaz.*]

METEOROLOGICAL PHENOMENON.

A very extraordinary circumstance took place on the 3d of November in the forest of Calonghven, in the arrondissement de Thionville. A carrier, returning from Sierck to Filstroff, was going through the forest between six and seven in the evening; he had arrived within three-quarters of a league of Laumesfeld, when, in the midst of a violent hurricane, mingled with thunder, the forest suddenly appeared all

on fire, and preserved that appearance for the space of a quarter of an hour. The horses became alarmed, and fell down; one of them broke from the harness, and fled as far as the village; some of the inhabitants recognized the animal, and suspected some accident had happened to the driver. They immediately went towards the forest: as they drew near, they perceived an inflamed cloud traversing the horizon from north to south. The most complete darkness succeeded this appearance. The carrier, when he heard them calling, answered them; and when they came up with him, they found him so overcome with fright, that it was only by the greatest care he recovered to give an account of what had happened to him.—[*Journal de Moselle.*]

ANTI-VENOMOUS PLANTS.

A writer in the *India Gazette* states as follows:—

“In 1810, Lieut. Col. S. Palmer quitted his cantonment at Pertaubghur with a respectable field force, to reduce to obedience certain refractory Zumeendars of the Nawab Vizier's country, and generally to settle the rents in conjunction with a Decoon from Lucknow, named Mirza Jannee, a respectable man, and of some distinction at his Highness's durbar. One morning in camp, I and some other officers went to breakfast with Col. Palmer, our commanding officer, and Mirza Jannee, as it happened, came there also. After breakfast he told the Colonel that he brought the root he had formerly mentioned, as that which the Munghoose (*Ichneumon*) runs to when bit by a snake, and his hurrarus were in attendance to exhibit its powers. These men were accordingly called in, and they produced some root in fibres about the thickness and colour of the largest end of common khus-khus. They had no serpents, but had supplied themselves with a number of scorpions, with which experiments were made, to the satisfaction of all present, as to the point, that while in contact or connexion with the root, the scorpion was helpless and innocuous. A lively scorpion, having a piece of the fibre alluded to laid on his back, presently became torpid. The people having a piece of the root on the palm of the hand, readily handled the scorpions, and allowed them to lie on their fingers. All this speaks only to prevention, not as to cure; yet, as the natives dared not to touch the scorpions without this root in hand, and as it was stated by them that the Munghoose, when bit by a snake, instantaneously ran to it, a presumption may be drawn from analogy.”

The following extract from Stevenson's *Travels in America* confirms previous accounts of the shrub *huncu* or *guaco*: “The safest

safest remedy known among the natives is the leaves of a creeper called *huaco*, which grows in the woods. The leaves are bruised to the consistency of paste, which is made into small cakes, each about the size of a half-crown, and then dried in the shade. When a person is bitten, he puts one of these small cakes in his mouth, and chews it till the bitter taste is gone, at the same time swallowing his saliva; he is then bathed, the chewed herb is taken from his mouth and bound over the wound, and he recovers. The visible effects are a copious perspiration. The leaves of the *huaco* are about two and a half inches long, and half an inch broad; the upper surface is of a dark green, with purple veins running along it, of a glossy appearance and solid texture; the under side is of an obscure purple hue; the leaves grow singly, two being placed opposite to each other on the stem, which is slender, hard, and ribbed, and of a bluish colour. I never saw the flower, and when I asked the natives concerning it, they told me that they had never observed any flowers on the plant.

"Fortunately a bird at Guayaquil, called *quiriquinqui* at Esmeraldas, and on the coast of Choco *huaco*, and at Quito *beleado de oro*,—is a great enemy to the snakes, and other venomous reptiles and insects on which it feeds. It is a species of vulture, about the size of a hen, and is easily domesticated; its colour is a bright brown, variegated with stains of pale yellow. It flies about the woods, or runs along the savannas in quest of its food, and attacks the snakes, opposing its wing to them as a shield; when the animal is somewhat exhausted by striking at the bird, it seizes the reptile near the head, and biting it, rises on its wings, and afterwards alights and observes if it be dead; if not, it again bites it, and sometimes soaring aloft with it lets it fall, and immediately drops down after it: when dead the bird devours it. The natives affirm, that to this bird they owe the discovery of the herb which they call *huaco*; they observed that the bird, after fighting with a snake, would sometimes search for the herb and eat it—hence they supposed it to be an antidote for the poison, which experience has proved to be correct."

MAPS OF ASIA.

M. Klaproth, in the last number of the *Journal Asiatique*, subjoins to a description of the Japanese islands Mou-nin-Sims, translated by him from a Japanese work, the following severe—perhaps too severe—remarks on the existing maps of Asia:—

"Arrowsmith, the most ignorant of all those who are employed in constructing maps, has borrowed the fac-simile (of the rroneous Japanese map) published by M. *Asiatic Journ.* Vol. XXI. No. 121.

Abel Régnusat, and has copied it, just as it was, into his map of Asia, in four large sheets, finished in 1818, and revised in 1822. Hence these islands appear there three times larger than they really are. The evil would not be great if this inaccuracy was confined to Arrowsmith's map alone; but, as pretended geographers, in France and Germany, content themselves with copying those of the *poultry map-maker* of London (a very happy expression in the *Quarterly Review*), this, and twenty other mistakes are repeated in all our maps of Asia, and circulate throughout the continent.

"It is much to be desired that the few persons who make geography a scientific study, and who are capable of judging of the horrible productions daily offered to us under the denomination of maps, would give themselves the trouble to examine and criticize them severely. They ought to publish the opinions they have formed of them, in pointing out the most serious mistakes they contain. It is the only method of informing the public, in order that they should be upon their guard, and not place confidence in works which possess no other merit besides the beauty of the engraving."

LOCUSTS.

A letter in the *India Gazette*, dated "near Juanpore, July 2d," states:—

"I have been in this part of the country for eighteen years, but never witnessed such a sight as I did yesterday. The weather was uncommonly sultry (thermometer, in the shade, 98°), and I had every reason to believe it the precursor of a fine shower of rain.

About 3 P. M. I observed what I considered to be heavy masses of clouds, indicating rain; shortly after, I could clearly distinguish immense flights of locusts proceeding in a south-easterly direction—at this time I was at one of my out-factories. I returned to my house immediately, hoping that my cultivation at this place had escaped the destructive ravages occasioned by this, 'one of the plagues of Egypt.' Imagine my surprise and grief at finding that a good deal of my best new plant had been totally destroyed; a plant I had seen the day before in a state of high luxuriance. I have often witnessed the flights of locusts, but never like what I saw yesterday—the atmosphere was literally darkened. I have not heard how far the devastation has extended."

CURE FOR THE CHOLERA MORBUS.

A writer in a Calcutta paper states, that cajeputa oil, rubbed on the stomach of a person seized with cholera morbus, and a small quantity, diluted with spring-water, given

given at the same time to drink, effected, in two instances under his observation, a speedy cure.

LARGE MOTH.

An esteemed friend at Arracan informs us that he has caught a moth, which, from his description, may be considered a natural curiosity. It measures ten inches from the tip of one wing to the tip of the other. Both wings are beautifully variegated with the brightest colours. Unless we are mistaken, this is the largest moth upon record—exceeding in dimensions even the largest in the British Museum, which, if we remember right, measures about nine inches between the wing tips. Our friend adds, that he will endeavour to have it carefully packed up and forwarded to us. We need scarcely add, that we shall be most happy to receive it, and to place it in some museum, worthy of receiving any curious specimen of natural history.—[*Ind. Gaz.*, July 11.]

NATURAL PHENOMENA OBSERVED IN CRABS.

A Hanoverian periodical work contains the following observations upon crabs, by Dr. Heinemann, of Schwerin:—"Take a fresh-caught crab between the fingers of the left hand, so that one finger holds the head, and two others press the breast a little. Then pass the end of one of the fingers of the right hand upon the back of the animal, and it will be seen, after a few rubs, to make much resistance; by degrees its agitation will diminish, and cease altogether in about a minute. Remove the hands gently, and the animal will remain motionless, and without sign of life. This absence of motion continues, however, rarely beyond a quarter of an hour; when the animal first moves its eyes and antennæ, then its feet, which it stretches as a waking man stretches his limbs; presently it recovers its former vivacity. If the friction be performed upon a crab whilst it walks, instead of holding it between the fingers, its walk grows gradually weaker, and the animal becomes stupefied for some minutes. The operation is longer in water than in air, and the stupefaction ceases sooner."

EGYPTIAN ANTIQUITIES.

A collection of Egyptian antiquities, belonging to a Milanese gentleman named Castiglione, who has passed nearly seven years in Egypt, has arrived at St. Petersburg: it consists of more than 1,200 different articles, amongst which are three

statues, in a beautiful Egyptian style, one of them of the size of nature; twenty-five historical *stelæ*; three mummies, one of which, in a double case, is so well preserved, that the rich and brilliant painting seems as if recently done; twelve large Canopic vases of alabaster; three manuscripts on papyrus (one of them more than twelve feet long) in the demotic and hieratic characters; a fine collection of sarcophagi; many utensils in bronze and stone; a vast quantity of idols and bas-reliefs of different sizes. All the articles are in very fine preservation.—[*St. Petersburg Zeitsch.*]

THE SILK-WORM IN PRUSSIA.

Sig. Bolzani, an Italian at Berlin, has undertaken to revive the culture of silk-worms in Prussia, where it has been abandoned since the reign of Frederic II. The king has allotted to him some chambers in the Hôtel des Invalides; and he has been allowed, on payment of a small rent, the use of the mulberry trees in the garden belonging to that establishment. Sig. Bolzani has procured winders from India, and has reason to be well pleased with this year's result.—[*Revue Encyclopédique.*]

LUSUS NATURÆ.

We have been allowed the inspection of a Brahminee bull belonging to Baboo Nundo Comar Tagore: the animal is certainly as singular a *lusus naturæ* as can be well conceived. He is from Benares, about six years old, of a middling size, and of a dark colour; a little below the line of its two horns, which are of the usual size, a third projects from the forehead, about four and a half inches from the base, and of the same colour and consistency as those placed laterally; a little below this central horn there is an eye, which, although small, appears to have its pupil and *tunica conjunctiva*.

The eye being situated lengthways, between the nose and the horn, it is difficult to determine which is upper or lower eyelid; and it would appear that there is no difference in their structure. The *orbicularis palpebrarum* muscle is large and powerful; and from there being no *cilia*, or eye-lashes, is in a state of frequent contraction. The eye appears acutely sensible; but whether endowed with the power of vision, could not be, at the time, ascertained. The lachrymal parts of the eye must exist to a certain degree, as the flow of tears was evident.—[*Cal. John Bull*, April 16.]

PROCEEDINGS OF THE ROYAL ASIATIC SOCIETY OF
GREAT BRITAIN AND IRELAND.

November 5, 1825.—The Society resumed its meetings this day, at 3 o'clock P.M., H. T. Colebrooke, Esq., Director, in the chair.

The minutes of the last meeting were read and confirmed.

The following donations were presented, *viz.*

For the Library.

From Major Charles Stewart, Original Persian Letters, dedicated to the Royal Asiatic Society.

From César Moreau, Esq., his East-India Records.

From James Baillie Fraser, Esq., his Tour in the Himálá Mountains.

From Lord Viscount Kingsborough; 1, Dictionnaire Tartare Mantchou Français (M. Langlés' own copy, with his MS. notes); 2, the Manuscript of the above, by P. Amyot, missionary at Pekin.

From Sir Thomas Strange, his Elements of Hindu Law.

From James Ross, Esq., his Translation of the Gulistan of Sádi.

From the Rev. Dr. Bryce, Nos. 2, 3, 4, of the Quarterly Oriental Magazine.

From the Rev. Dr. Morrison, his Chinese Miscellany and English Grammar for the use of the Anglo-Chinese College.

From Wm. Marsden, Esq., his Numismata Orientalia Illustrata.

From Mr. Wm. Huttman, Account of the Rosetta Stone; Address to the Public concerning the Anglo-Chinese College; Reply to the Strictures of the Edinburgh Review on the Marquess Wellesley's Administration in India.

From Thos. Myers, Esq., his Essay on the Chinese Language.

From Dr. Granville, his Essay on Egyptian Mummies.

From Mr. P. P. Thoms, Chinese Courtship.

From the Baptist Missionary Society, twenty-eight volumes of Oriental Literature.

From the Royal Society of Literature, their Prospectus, List of Members, &c.

From the Yorkshire Philosophical Society, their Annual Report.

From Lieut. Thos. Brooke, two Burmese Manuscripts, and a Translation of the Route of the Burmese Army from Aineerapoorá to Rangoon in 1820.

From Professor Gesenius, his Dissertation De Inscriptiōne Phœnicio-Græcâ in Cyrenaicâ.

From the Asiatic Society of Paris, their Annual Reports from 1822 to 1825; the Journal Asiatique from the commencement.

From M. Dondey Dupré, Dictionnaire Français Wolof et Français Bambare, suivi du Dictionnaire Wolof Français, par M. J. Dard.

From M. Abel Rémusat, his Mélanges Asiatiques.

From M. Klaproth, Elémens de la Grammaire Japonaise publiée par la Société Asiatique.

From M. Stanislaus Julien; 1, l'Enlèvement de Héléne; 2, Meng Tsen; 3, Shang Meng Tsen.

For the Museum.

From Lieut. Col. C. J. Doyle, ninety-five articles, principally arms.

From David Colvin, in the name of Mrs. Alexander Colvin, of Calcutta, a Burmese harp, four bronze images, and a temple; a MS. written on Palmyra Leaves; a coat of mail, formed of silk and lackered beads; and a sample of Peat, from the mountains of Kumaon.

From Mr. Wm. Huttman, a pair of Chinese men's shoes; six Chinese gilt tunic buttons.

César Moreau, Esq. was admitted a member of the Society.

A paper, by Mr. Colebrooke, on the Valley of the Setláj river, in the Himalaya mountains, from the Journal of Capt. A. Gerard, with remarks, was begun. The journal is very interesting; it describes several attempts to penetrate into Chinese Tartary, which were unsuccessful, as the travellers were not able to prevail upon the Tartars to allow of their further progress in that direction.

November 19.—The Society met this day at the usual hour, H. T. Cole-

brooke, Esq. in the chair. The minutes of the last meeting were read and confirmed.

A donation was presented from the Abbé Dubois, being his publication entitled "Exposé de quelques-uns des principaux Articles de la Théogonie des Brahmes."

Dr. James Hare, jun., M.D., and Wm. Holmes, Esq., were elected members of the Society. The reading of Mr. Colebrooke's paper on the Himalaya mountains was continued.

December 3.—The Society met this day at 3 o'clock P.M., the Right Hon. Charles W. Williams Wynn, President, in the chair.

The President communicated a letter to the meeting, addressed to him by H. R. H. the Duke of Orleans, expressing his Royal Highness's satisfaction at having been chosen an Honorary Member of the Society. The minutes of the last meeting were read and confirmed.

The following donations were presented:—

From Mr. P. P. Thoms, a Chinese celestial Planisphere.

From Sir Alexander Johnston, the following six works: 1, Caabi ben Sohair; Edidit G. W. Freytag. 2, Regnum Saahd Aldantae; G. W. Freytag. 3, Locmani Fabulae; Edidit G. W. Freytag. 4, Commentatio de Motenabbio, auctore Petro a Bohlen. 5, Amrukkeesi Moallakah; Edidit Era. Guil. Hengstenberg. 6, Carmen Amul Taijib Ahmed ben Alhosain Almotenabbii; Edidit Ant. Horst.

From the Société Géographique de Paris, Questions proposées à tous les Voyageurs.

From Lieut. Thos. Brooke, 1, an Arabic Dagger and Knife, silver-mounted; 2, three MS. volumes of the Koran, in Arabic; 3, two papers, by Capt. J. A. Hodgson: one being a Register of Barometrical Observations in the year 1819; the other, the height of some places in Hindustan determined by the Barometer.

From Sir G. T. Staunton, Bart., twenty-four articles for the Museum, together with some bundles of spears and arrows.

Sir William Betham; Robert Montgomery Moore, Esq.; George Parkhouse, Esq.; and Charles Woodmass, Esq.; were elected members of the Society.

Dr. Wm. Gesenius, Professor of Oriental Literature at Halle, and M. Stanislaus Julien, were elected Foreign Members of the Society.

Mr. Colebrooke's paper on the Himalaya Mountains was concluded; and the reading of a paper by J. F. Davis, Esq., being Extracts from the Peking Gazettes for 1824, was begun. This paper is a selection of the most interesting and characteristic circumstances published in the Peking Gazettes.

December 17.—The Society met this day at the usual hour; H. T. Colebrooke, Esq., Director, in the chair.

A donation was presented from James Annesley, Esq., being his Sketches of Diseases in India.

Also from G. C. Haughton, Esq., the Manava Dherma Sastra, Sanscrit and English.

From Col. C. J. Doyle, an Egyptian Papyrus Roll, from Thebes.

From John Frost, Esq., an Oration delivered by him before the Medico-Botanical Society of London.

From Lieut. Col. Robert Birks Pitman, his Essay on the practicability of uniting the Atlantic and Pacific Oceans.

From John Disney, Esq., a copy of an inscription on what is supposed to be Adam's tomb, in Ceylon.

The reading of Mr. Davis's Translations from the Peking Gazettes for 1824 was continued.

General Meetings of the Society for the year 1826 are as follow:—January 7, 21; February 4, 18; March 4, 18; April 8, 22; May 6, 20; June 3, 17; November 4, 18; December 2, 16.

*** The name of Lieut. Col. John Monckton Coombs was omitted in our list of persons elected members on the 4th June last.

College Examinations.

EAST-INDIA COLLEGE AT HAILEYBURY.

EXAMINATION, December 2, 1825.

ON Friday, the 2d December, a Deputation of the Court of Directors proceeded to the East-India College for the purpose of receiving the Report of the result of the Examination of the Students at the close of the term.

The Deputation, upon their arrival at the College, were received by the Principal and the Professors, and the Oriental Visitor.

Soon afterwards, they proceeded to the Hall, the Students being previously assembled, when the following proceedings took place :—

A list of the Students who had obtained prizes, and other honourable distinctions, was read; also, a list of the best Persian and Deva-Nagari writers.

Mr. Brinsley Fitzgerald delivered an English essay, "*The Effects of a Spirit exclusively Military, or exclusively Commercial, upon the Character and Welfare of a Nation.*"

The Students read and translated in the several Oriental languages.

Prizes were then delivered by the Chairman according to the following report :

Report of Medals, Prizes of Books, and other honourable Distinctions obtained at the Public Examination, December 1825.

List of Students who obtained Medals, Prizes of Books, and other honourable Distinctions, at the Public Examination, December 1825.

Students in their Fourth Term.

C. E. Trevelyan, medal in classics, medal in Sanscrit, and with great credit in other departments.

C. G. Mansel, medal in political economy, medal in Persian, and with great credit in other departments.

W. U. Arbuthnot, medal in law, prize in Bengali, and with great credit in other departments.

C. C. Jackson, medal in mathematics, and highly distinguished in other departments.

R. Cathcart, prize in Hindustani, and highly distinguished in other departments.

B. Fitzgerald, prize in Arabic, prize for an English essay, and with great credit in other departments.

T. L. Blane, prize in Deva-Nagari writing, and highly distinguished in other departments.

Students in their Third Term.

C. M. Caldecott, prize in Bengali, prize in Persian, prize in Hindustani, and with great credit in other departments.

F. Cardew, prize in mathematics, prize in political economy, and highly distinguished in other departments.

E. C. Wilmot, prize in law, and highly distinguished in other departments.

G. M. Bird, prize in classics, and with great credit in other departments.

J. C. Grant, prize in Sanscrit, and with great credit in other departments.

M. Read, prize in Arabic, and highly distinguished in other departments.

W. Cooke, prize in Drawing.

Students in their Second Term.

C. Merivale, prize in classics, prize in law, prize in Hindustani, and with great credit in other departments.

R. Grote, prize in Persian, prize in Bengali, and highly distinguished in other departments.

P. Scott, prize in Sanscrit, and highly distinguished in other departments.

G. M. Batten, prize in history, and highly distinguished in other departments.

A. Fraser, prize in mathematics, and with great credit in other departments.

R. C. Chambers, prize in Arabic, and highly distinguished in other departments, Students in their First Term.

C. Allen, prize in mathematics, and with great credit in other departments.

E. F. Barlow, prize in Persian.

E. V. Irwin, prize in Bengali.

J. H. Bainbridge, prize in classics.

Hon. R. Forbes, prize in English composition.

R. J. M. Muapratt, prize in Persian writing, and highly distinguished in other departments.

R. R. Sturt, prize in drawing, and highly distinguished in other departments.

The following Students were highly distinguished in the several departments :

4th Term. Mr. Reade,

— Brownlow.

3d Term. — Ravenscroft,

— Strange,

— Tulloh,

— Loughnan.

2d Term. — Bracken,

— Hare,

— Mytton,

— Udny,

— Coles.

And the following passed with great credit:

4th Term. Mr. Ogilvy.

3d Term. — Oswell.

2d Term. — T. C. Scott,

— F. E. Read,

— Bell,

— Woodcock,

Mr.

- 2d Term. Mr. Martin,
— Halkett,
1st Term. — Home,
— Trafford,
— M^cMahon,
— Cornish.

The rank of the Students finally leaving College was then read, being as follows :

Rank of Students leaving College, as settled by the College Council, according to which they will take precedence in the Hon. Company's Service in India.

BENGAL.

- 1st Class.—1. Mr. Trevelyan,
2. — Mansel.
2d Class.—3. — Jackson,
4. — Reade,
5. — Fitzgerald,
6. — Brownlow,
7. — Dick.
3d Class.—8. — Alexander,
9. — Currie.

MADRAS.

- 1st Class.—1. Mr. Cathcart,
2. — Arbuthnot.
2d Class.—3. — Blane,
4. — Ogilvy,
5. — Macdonald.
3d Class.—6. — Bruere,
7. — Lockhart.

It was then announced to the Students that the certificates of the College Council were granted, not only with reference to industry and proficiency, but also to conduct ; and that this latter consideration had

always a decided effect in determining the order of rank.

It was also announced that such rank would only take effect in the event of the Students proceeding to India within six months after they are so ranked, or by any one of the regular ships that may be despatched for the presidency to which the Student is appointed, between the expiration of the said six months and the 1st day of August then next following ; and that should any one delay so to proceed, he would only take rank among the Students classed at the Examination previous to his departure for India, and would be placed at the end of that class in which rank was originally assigned to him.

Notice was then given that the next Term would commence on Thursday the 19th January, and that the Students would be required to return to the College within the first four days of it, unless a statutable reason, satisfactory to the College Council, could be assigned for the delay ; otherwise, the Term would be forfeited.

The Chairman then addressed the Students, expressing his approbation of the literary exertions and good conduct which had distinguished the general body of the students during the past term ; and the business of the day concluded.

Wednesday the 11th, and Wednesday the 18th January, are the days appointed for receiving Petitions, at the East-India House, from Candidates for the College for the Term, which will commence on Thursday the 19th January.

COLLEGE OF FORT ST. GEORGE.

The Governor in Council has great satisfaction in publishing, for general information, the following extracts of the report of the Board of Superintendence for the College of Fort St. George, on the last public examination held there.

“ Of the number of students examined, a greater proportion have stood prominent in merit, on the present, than on any former occasion ; for, of twelve gentlemen who appeared before us, no less than five are qualified for the discharge of public duty in two languages, and have entitled themselves, by the high standard of their attainments, to the honorary reward granted only to eminent proficiency. This is a result on which we cannot but offer our respectful congratulations to the Government to whose service those talents will henceforth be devoted, which have proved so competent to excel in all that has hitherto been put before them.

“ Mr. Walker's translation of a very difficult Tamil paper is entirely correct, and is, at once, close and elegant. The exercise which he rendered into Tamil was in a style peculiarly difficult of transla-

tion into a language of which the idioms differ so entirely from the English. It had been observed of Mr. Walker's former versions into Tamil, that, though clever and idiomatic, they did not always conform so closely to the original as was desirable in exercises, which are the test of progress in the acquirement of a language. The adherence to the original, in the exercises now performed, evinces a most intimate acquaintance with the language in its structure and diction, and shews that Mr. Walker has a command of style which enables him to be fluent or close, as his judgment and taste may direct. Mr. Walker read with ease, and construed with entire correctness, a catcherry petition. In speaking, though not rapid, he was always accurate and idiomatic, and perfectly understood whatever was addressed to him on a variety of topics, in a conversation of considerable length.

“ Mr. Walker is second in the first class of Telugu students, and the exercises he performed were of the same difficulty as those executed by the gentleman above him ; though not quite so perfect as Mr. Onslow's,

low's, they are extremely well done. He reads with much readiness, and understands, generally, the official cutcherry papers which are given at our examinations, and his attainments in this, his second language, are highly satisfactory.

“ Mr. Oakes has translated, from Tamil, a paper of equal difficulty with that executed by Mr. Walker, and his version has only three trivial blemishes; the omission of one word, and the imperfect rendering of two others: but these imperfections do not affect the estimate of his acquaintance with the structure and idiom of the language, which is formed on a review of all his exercises; and these shew him to have a very thorough knowledge of both, as well as a very extensive choice and vocabulary at his command, and justly entitle him to the praise of being an excellent scholar in this difficult language. His version into Tamil, of a paper, not so difficult as Mr. Walker's, is in a pure and flowing style, not acquired without much industry, judiciously applied to the cultivation of excellent talents. Mr. Oakes is particularly fluent in speaking, and quick in understanding whatever is addressed to him; his pronunciation is excellent.

“ Mr. Oakes's exercise from Hindoostanee may be said to be perfect, for of the only two words with the meaning of which he was unacquainted, one is seldom met with in books, and never used in conversation in this part of India. The same may be asserted of his exercise into Hindoostanee, for the only words which he did not know were technical terms, and, in other respects, his version is without a fault; the style is easy, and the language good. Mr. Oakes conversed with fluency, and translated, off-hand, a paper of considerable difficulty; with perfect correctness.

“ Mr. Brown translated papers of somewhat less difficulty than those given to the two gentlemen before named; but the almost faultless execution of the version into Tamil, and the very correct translation of the paper from that language into English, exhibit so thorough a knowledge of its construction, and so great a facility and readiness in the practical application of that knowledge, as to place Mr. Brown among Tamil scholars of the highest order. Mr. Brown read and construed, with ease and accuracy, the cutcherry position given to the other gentlemen, and conversed with more than ordinary fluency and correctness of language and of pronunciation. That these high attainments have been acquired in less than three months, is a result to which there is nothing parallel on the records of the college; it can only have been produced by applying to talents of an extraordinary nature, industry the most indefatigable and well-directed.

“ Of Mr. Brown's attainments in Persian, we made a very favourable report on his

admission into this college. He has cultivated the knowledge of it as his second language since that time, and on the present occasion he translated, with perfect correctness, a Persian paper of considerable difficulty.

“ His version of an English exercise into Persian shews a very extensive knowledge of words, and a perfect familiarity with the idiom of the language.

“ Mr. Brown converses in Persian with ease and fluency, and his pronunciation is particularly good; and we have no hesitation in saying that his acquirements in this second language are such as we should have deemed highly creditable to him had it been his first and principal language of study.

“ Mr. Onslow has prosecuted his studies under the serious disadvantage of repeated and protracted impediments from bad health; he has, however, attained the first place in the Telugu class. His translation of a difficult paper into English is entirely correct, with the exception of a single gerund, which has been translated actively, in place of causally: his translation into Telugu is a very creditable performance. Mr. Onslow has attained to considerable facility in reading and construing cutcherry papers: he speaks the language with ease, and his pronunciation, as remarked at a former examination, is particularly good.

“ Mr. Onslow's progress in Persian; since the last examination, has been great; he translated the same exercises as were performed by Mr. Brown.

“ His translation of the Persian paper was executed very nearly as well as that of Mr. Brown; and his version of the English paper into Persian, though not free from error, was, on the whole, very well performed.

“ He speaks the language fluently, and understands whatever is said to him.

“ Mr. Cherry's absence, on leave, from the last examination having left us uninformed of his progress, a Tamil paper was assigned to him for translation, of less difficulty than our present appreciation of his attainments would have led us to give. His excellent performance of the translation, however, and his selection of a long and difficult task for the exercise of translating into Tamil, which he has performed in a style of great perspicuity and general correctness, though not entirely faultless, enable us to do justice to his merits, and to place him in the first class of Tamil scholars.

“ He read, and very correctly rendered the cutcherry petition; and in conversation he is ready and fluent, forming his sentences idiomatically, and uttering them with excellent pronunciation.

“ Mr. Cherry's acquirements in Hindoostanee are of the highest order. The exercises he performed were of nearly the

same difficulty as those given to Mr. Oakes, and, with the exception of a misapprehension of part of one passage of the Hindoostanee paper, and one trifling error in his version into English, they are perfectly executed. He read and translated, at sight, the paper given to Mr. Oakes to read. The fluency and elegance of his language in conversation, and the excellence of his pronunciation, attracted the particular notice of the learned native who attended the examination, and entitle Mr. Cherry to marked commendation.

“ Mr. Walker selected for study the two most difficult of the vernacular languages, both unknown to him when he arrived in India, and in both he has attained to excellence. Mr. Oakes, by diligent application in the latter period of his studies, has most honourably retrieved the character of ability and talent, of which he gave an early earnest, but which he allowed, for a time, to be obscured. Mr. Brown's progress so far exceeds, in rapidity, any thing that was ever witnessed in this college, that it cannot be measured by any other standard, and will probably continue unrivalled—we may safely say unsurpassed. Mr. Onslow, in attaining the highest rank in the language selected as his first for study, has surmounted difficulties the most serious, for he has had to contend against severe illness, brought on, we believe, originally, by too severe application; and Mr. Cherry has attained an honourable eminence in two languages, both new to him, in the space of nine months from his entering the college.

“ We accordingly recommend that Mr. Brown and Mr. Cherry may receive the highest rate of college allowances from the 15th ult., and that Messrs. Walker, Oakes, Brown, Onslow, and Cherry, may further receive the honorary reward of 3,500 rupees each, and be permitted to enter on the duties of the public service.”

(True extracts).

G. J. CASAMAJOR, Act. Sec. to Gov.

On Monday the 11th July, the hon. the Governor visited the college. He was received in the usual form, by the Board of Superintendence, and conducted to the hall, where he thus addressed the students who were assembled on the occasion.

“ Gentlemen of the College :

“ Every one knows how necessary is a knowledge of the country languages to the management of business, and how much better qualified for official duty a man possessing this knowledge is, than one of equal talents without it. But a knowledge of the languages has other advantages besides the mere dispatch of business; for it leads to a better acquaintance with the natives, and to a more kindly feeling towards them, which cannot fail of proving beneficial to the country. And when we find that these languages are copious, regular,

polished, and abounding in scientific terms, we look back, in imagination, to a remoter age, when science was more cultivated; and we take a deeper interest in the natives, not only on account of what they are, but on account of what they have been: and when we see that they have declined from the high state of intellectual improvement to which they must have attained, when language was carried to its present degree of refinement, we cannot but lament the change, and anxiously wish to see them restored to their former high station.

“ There can be no doubt but that, however high a nation may once have stood in civilization, it may be again raised to the same, and even to a greater height, for it is by good or bad government that the characters of nations are elevated or depressed; and if the people of India shall not be raised higher than they ever yet have been, the fault must lie in the measures of our Government. But however desirous Government may be of accomplishing such an object, it can make but little progress, unless it have the aid of able instruments in its public servants: it looks to the civil service, and to the college which prepares the junior servants for public affairs, as its chief auxiliaries in this great work; and it trusts that every student will, at all times, keep in view the important duties he is one day destined to discharge.

“ The result of the late examination affords, I think, a fair ground for believing that the college will not disappoint the expectations of Government; for the late examination has equalled, if not surpassed every former one in the number and attainments of the young men whom it has sent forth to the public service. Of twelve students, five have merited the highest rewards which the college can bestow. Among these, Mr. Brown is, perhaps, the most remarkable instance ever known of rapid progress, for though he has not been quite three months in the college, he stands first in Persian, and third in Tamil; and Mr. Cherry, though not first in any one language, has entitled himself to the reward, because, in ordinary circumstances, he would have been first in Hindoostanee, and is second in that language only in consequence of the unusual proficiency of Mr. Oakes, who stands first. It is highly honourable to Mr. Oakes, that after having lost some time in the early part of his studies, he has now not only regained it, but done more.

“ The manner in which Mr. Walker, who has the honour of standing at the head of the list, and Messrs. Oakes, Brown, Onslow, and Cherry, have passed through their examination, reflects great credit, both on them and on the college, and is, I trust, a pledge of the advantages which the public is hereafter to derive from their services.”

ASIATIC INTELLIGENCE.

Calcutta.**GOVERNMENT GENERAL ORDERS.****ESTATES OF DECEASED OFFICERS.**

Fort William, May 13, 1825.—It is hereby directed, that no property connected with the estates of deceased officers, &c. of the hon. Company's service shall be disposed of by *private sale*, without special permission obtained for the purpose through the military department, when no will has been found, or from the executor, when there is one, to the estate. In the latter case, the amount proceeds are still answerable for regimental debts, and are not to be paid over till all such are satisfied.

VACANCIES IN THE SENIOR LIST.

Fort William, June 10, 1825.—The right hon. the Governor General in Council has much satisfaction in publishing, for the information of the armies of India, the following paragraph of a separate letter, from the hon. the Court of Directors in the military department, bearing date the 2d Feb. last.

Para. 1. "Having taken into our consideration the situation in which certain officers in our service will be placed, by the stop put to promotion consequent on casualties on the senior lists, as directed in our military letter of the 25th Nov. 1822. (Para. 112), we have resolved to allow all vacancies which shall occur on those lists at the several presidencies, in the first two years after the introduction of the new arrangements, to be filled up as formerly, so that instead of barring promotion from casualties occurring on those lists after the 1st of May 1824, such bar shall not operate until the 1st May 1826. We desire it, however, to be distinctly understood, that the indulgence which we have now authorized, shall on no account be allowed to extend beyond the period we have specified."

ADDITIONAL PAY TO ASSIST. SURGEONS.

Fort William, June 10, 1825.—The right hon. the Governor General in Council is pleased, under instructions from the hon. the Court of Directors, to direct, that all assistant surgeons on the Bengal establishment, nominated for 1822 and previous seasons, shall receive the additional pay of one rupee a day as heretofore. Those appointed after the season 1822, will draw pay and allowances agreeably to the table published in G. O. of 12th Aug. last.

Asiatic Journ. Vol. XXI. No. 121.

Fort William, June 24, 1825.—With advertence to the allowance of one rupee a day additional pay granted to the assistant surgeons on the Bengal establishment, nominated for 1822 and previous seasons, as published in G. O. of 10th inst., the Governor General in Council is pleased to direct, that all assistant surgeons in H. M.'s regiments who arrived in Bengal on or before the 31st Dec. 1823, be considered entitled to a similar indulgence.

NEW ARRANGEMENT OF THE ARTILLERY.

Fort William, June 24, 1825.—With a view to place the artillery, as far as is practicable at present, on the establishment prescribed by the hon. the Court of Directors, as published to the army in G. O. of 6th May 1824, the Governor General in Council is pleased to direct, that the following arrangements shall have effect from the 1st proximo.

The Horse Artillery will be formed into three brigades, as follows:

1st Brigade, Head-Quarters, Cawnpore.

1st Troop, the present 1st troop (European), now at Rangoon.

2d Troop, the (8th) or newly-formed troop (European), now at Cawnpore.

3d Troop (European) to be raised hereafter.

4th Troop (Native), the 4th troop, now at Neemuch.

2d Brigade, Head-Quarters, Meerut.

1st Troop, the present 2d troop (European), now at Meerut.

2d Troop, the present 7th troop (European), half at Meerut, and half at Rangoon.

3d Troop (European) to be raised hereafter.

4th Troop, the present 5th (native) troop.

3d Brigade, Head-Quarters, Meerut.

1st Troop, the present 3d troop (European), at Meerut.

2d Troop { to be raised } (European).
3d Troop { hereafter }

4th Troop, the present 6th (native) troop, at Meerut.

The European Foot Artillery is to be formed into five battalions, as follows:—

1st Battalion, Head-Quarters, Agra.

1st Company, the present 1st company 1st battalion, at Nusserabad.

2d Company, the present 2d company 1st battalion, at Agra.

3d Company, the present 8th company 1st battalion, at Agra.

4th Company, the present 2d company 3d battalion, at Kurnaul.

L

2d Bat-

date than the period of the Portuguese being in possession of the place. The ruins of the fort built by them, a light-house on an isolated rock in the harbour, and one or two inferior buildings, are all that remain of this people. The reservoirs near the spring, from whence water is conveyed in the common aqueduct of India over the island, are worthy of notice, as well as a mosque, which appears ancient. It is situated a short distance within the date grove, and is a handsome structure; the form is quadrangular, and at each side is a minaret of an elegant and airy form; the doorways have Moorish arches, without ornament, and the exterior of the building is quite plain: there are no other architectural remains worthy of note. On several of the reefs off the harbour, and even in from two to five fathoms in the sea, is exhibited the singular phenomenon of fresh-water springs, which are perennial, and from which the natives contiguous procure their supply of water; this is done by diving, and holding a mus-sick near the aperture, the flow of water from which is so strong as to prevent the salt from mixing with it. The harbour, which has plenty of water for large vessels, is formed between an extensive assemblage of reefs to the westward and northward, and the islands of Arad and Mahrag to the eastward. These latter contain two or three towns, and about seven thousand inhabitants: they are very close to Bahrein, and contain nothing remarkable. To the eastward of Bahrein, on the main, are the ruins of a large town, called Zabarra; they cover a space of ground several miles in extent, and evince the place to have been the port whence Al Ahsa, and other places in the interior of Arabia, were supplied with the produce of India and Persia.

We understand the survey has been carried on very minutely through the whole extent of the Arabian side of the Persian Gulf, which is now completely explored. It was commenced by Capt. Maughan, of the Marine, in 1820 and 1821; continued by Lieuts. Guy and Brucks through the years 1822, 1823, and 1824, and completed by Lieuts. Brucks and Rogers this season; the two former officers having quitted it from ill-health.—[*Bom. Gaz.*]

METEOROLOGICAL PHENOMENON.

A very extraordinary circumstance took place on the 3d of November in the forest of Calontaven, in the arrondissement de Thionville. A carrier, returning from Sierck to Filstroff, was going through the forest between six and seven in the evening; he had arrived within three-quarters of a league of Laumesfeld, when, in the midst of a violent hurricane, mingled with thunder, the forest suddenly appeared all

on fire, and preserved that appearance for the space of a quarter of an hour. The horses became alarmed, and fell down; one of them broke from the harness, and fled as far as the village; some of the inhabitants recognized the animal, and suspected some accident had happened to the driver. They immediately went towards the forest: as they drew near, they perceived an inflamed cloud traversing the horizon from north to south. The most complete darkness succeeded this appearance. The carrier, when he heard them calling, answered them; and when they came up with him, they found him so overcome with fright, that it was only by the greatest care he recovered to give an account of what had happened to him.—[*Journal de Moselle.*]

ANTI-VENOMOUS PLANTS.

A writer in the *India Gazette* states as follows:—

"In 1810, Lieut. Col. S. Palmer quitted his cantonment at Pertaughur with a respectable field force, to reduce to obedience certain refractory Zumeendars of the Nawaub Vizier's country, and generally to settle the rents in conjunction with a Decon from Lucknow, named Mirza Jannee, a respectable man, and of some distinction at his Highness's durbar. One morning in camp, I and some other officers went to breakfast with Col. Palmer, our commanding officer, and Mirza Jannee, as it happened, came there also. After breakfast he told the Colonel that he brought the root he had formerly mentioned, as that which the Munghoose (*Chneumon*) runs to when bit by a snake, and his hurkarus were in attendance to exhibit its powers. These men were accordingly called in, and they produced some root in fibres about the thickness and colour of the largest end of common khus-khus. They had no serpents, but had supplied themselves with a number of scorpions, with which experiments were made, to the satisfaction of all present, as to the point, that while in contact or connexion with the root, the scorpion was helpless and innoxious. A lively scorpion, having a piece of the fibre alluded to laid on his back, presently became torpid. The people having a piece of the root on the palm of the hand, readily handled the scorpions, and allowed them to lie on their fingers. All this speaks only to prevention, not as to cure; yet, as the natives dared not to touch the scorpions without this root in hand, and as it was stated by them that the Munghoose, when bit by a snake, instantaneously ran to it, a presumption may be drawn from analogy."

The following extract from Stevenson's *Travels in America* confirms previous accounts of the shrub *huaco* or *guaco*: "The safest

safest remedy known among the natives is the leaves of a creeper called *huaco*, which grows in the woods. The leaves are bruised to the consistency of paste, which is made into small cakes, each about the size of a half-crown, and then dried in the shade. When a person is bitten, he puts one of these small cakes in his mouth, and chews it till the bitter taste is gone, at the same time swallowing his saliva; he is then bathed, the chewed herb is taken from his mouth and bound over the wound, and he recovers. The visible effects are a copious perspiration. The leaves of the *huaco* are about two and a half inches long, and half an inch broad; the upper surface is of a dark green, with purple veins running along it, of a glossy appearance and solid texture; the under side is of an obscure purple hue; the leaves grow singly, two being placed opposite to each other on the stem, which is slender, hard, and ribbed, and of a bluish colour. I never saw the flower, and when I asked the natives concerning it, they told me that they had never observed any flowers on the plant.

"Fortunately a bird at Guayaquil, called *quiriquinqui* at Esmeraldas, and on the coast of Choco *huaco*, and at Quito *beleado de oro*,—is a great enemy to the snakes, and other venomous reptiles and insects on which it feeds. It is a species of vulture, about the size of a hen, and is easily domesticated; its colour is a bright brown, variegated with stains of pale yellow. It flies about the woods, or ruts along the savannas in quest of its food, and attacks the snakes, opposing its wing to them as a shield; when the animal is somewhat exhausted by striking at the bird, it seizes the reptile near the head, and biting it, rises on its wings, and afterwards alights and observes if it be dead; if not, it again bites it, and sometimes soaring aloft with it lets it fall, and immediately drops down after it: when dead the bird devours it. The natives affirm, that to this bird they owe the discovery of the herb which they call *huaco*; they observed that the bird, after fighting with a snake, would sometimes search for the herb and eat it—hence they supposed it to be an antidote for the poison, which experience has proved to be correct."

MAPS OF ASIA.

M. Klaproth, in the last number of the *Journal Asiatique*, subjoins to a description of the Japanese islands *Mou-nin-Sims*, translated by him from a Japanese work, the following severe—perhaps too severe—remarks on the existing maps of Asia:—

"Arrowsmith, the most ignorant of all those who are employed in constructing maps, has borrowed the fac-simile (of the erroneous Japanese map) published by M. *Asiatic Journ.* Vol. XXI. No. 121.

Abel Rémusat, and has copied it, just as it was, into his map of Asia, in four large sheets, finished in 1818, and revised in 1822. Hence these islands appear there three times larger than they really are. The evil would not be great if this inaccuracy was confined to Arrowsmith's map alone; but, as pretended geographers, in France and Germany, content themselves with copying those of the *poultry map-maker* of London (a very happy expression in the *Quarterly Review*), this, and twenty other mistakes are repeated in all our maps of Asia, and circulate throughout the continent.

"It is much to be desired that the few persons who make geography a scientific study, and who are capable of judging of the horrible productions daily offered to us under the denomination of maps, would give themselves the trouble to examine and criticize them severely. They ought to publish the opinions they have formed of them, in pointing out the most serious mistakes they contain. It is the only method of informing the public, in order that they should be upon their guard, and not place confidence in works which possess no other merit besides the beauty of the engraving."

LOCUSTS.

A letter in the *India Gazette*, dated "near Juanpore, July 2d," states:—

"I have been in this part of the country for eighteen years, but never witnessed such a sight as I did yesterday. The weather was uncommonly sultry (thermometer, in the shade, 98°), and I had every reason to believe it the precursor of a fine shower of rain.

About 3 P. M. I observed what I considered to be heavy masses of clouds, indicating rain; shortly after, I could clearly distinguish immense flights of locusts proceeding in a south-easterly direction—at this time I was at one of my out-factories. I returned to my house immediately, hoping that my cultivation at this place had escaped the destructive ravages occasioned by this, 'one of the plagues of Egypt.' Imagine my surprise and grief at finding that a good deal of my best new plant had been totally destroyed; a plant I had seen the day before in a state of high luxuriance. I have often witnessed the flights of locusts, but never like what I saw yesterday—the atmosphere was literally darkened. I have not heard how far the devastation has extended."

CURE FOR THE CHOLERA MORBUS.

A writer in a Calcutta paper states, that cajeputa oil, rubbed on the stomach of a person seized with cholera morbus, and a small quantity, diluted with spring-water, given

given at the same time to drink, effected, in two instances under his observation, a speedy cure.

LARGE MOTH.

An esteemed friend at Arracan informs us that he has caught a moth, which, from his description, may be considered a natural curiosity. It measures ten inches from the tip of one wing to the tip of the other. Both wings are beautifully variegated with the brightest colours. Unless we are mistaken, this is the largest moth upon record—exceeding in dimensions even the largest in the British Museum, which, if we remember right, measures about nine inches between the wing tips. Our friend adds, that he will endeavour to have it carefully packed up and forwarded to us. We need scarcely add, that we shall be most happy to receive it, and to place it in some museum, worthy of receiving any curious specimen of natural history.—[*Frd. Gaz.*, July 11.

NATURAL PHENOMENA OBSERVED IN CRABS.

A Hanoverian periodical work contains the following observations upon crabs, by Dr. Heinemann, of Schwerin:—"Take a fresh-caught crab between the fingers of the left hand, so that one finger holds the head, and two others press the breast a little. Then pass the end of one of the fingers of the right hand upon the back of the animal, and it will be seen, after a few rubs, to make much resistance; by degrees its agitation will diminish, and cease altogether in about a minute. Remove the hands gently, and the animal will remain motionless, and without sign of life. This absence of motion continues, however, rarely beyond a quarter of an hour; when the animal first moves its eyes and antennæ, then its feet, which it stretches as a waking man stretches his limbs; presently it recovers its former vivacity. If the friction be performed upon a crab whilst it walks, instead of holding it between the fingers, its walk grows gradually weaker, and the animal becomes stupefied for some minutes. The operation is longer in water than in air, and the stupefaction ceases sooner."

EGYPTIAN ANTIQUITIES.

A collection of Egyptian antiquities, belonging to a Milanese gentleman named Castiglione, who has passed nearly seven years in Egypt, has arrived at St. Petersburg: it consists of more than 1,200 different articles, amongst which are three

statues, in a beautiful Egyptian style, one of them of the size of nature; twenty-five historical *stelæ*; three mummies, one of which, in a double case, is so well preserved, that the rich and brilliant painting seems as if recently done; twelve large Canopic vases of alabaster; three manuscripts on papyrus (one of them more than twelve feet long) in the demotic and hieratic characters; a fine collection of scarabæi; many utensils in bronze and stone; a vast quantity of idols and bas-reliefs of different sizes. All the articles are in very fine preservation.—[*St. Petersburg Zeitsch.*

THE SILK-WORM IN PRUSSIA.

Sig. Bolzani, an Italian at Berlin, has undertaken to revive the culture of silkworms in Prussia, where it has been abandoned since the reign of Frédéric II. The king has allotted to him some chambers in the Hôtel des Invalides; and he has been allowed, on payment of a small rent, the use of the mulberry trees in the garden belonging to that establishment. Sig. Bolzani has procured winders from India, and has reason to be well pleased with this year's result.—[*Revue Encyclopédique.*

LUSUS NATURÆ.

We have been allowed the inspection of a Brahminæ bull belonging to Baboo Nundo Comar Tagore: the animal is certainly as singular a *lusus naturæ* as can be well conceived. He is from Benares, about six years old, of a middling size, and of a dark colour; a little below the line of its two horns, which are of the usual size, a third projects from the forehead, about four and a half inches from the base, and of the same colour and consistence as those placed laterally; a little below this central horn there is an eye, which, although small, appears to have its pupil and *tunica conjunctiva*.

The eye being situated lengthways, between the nose and the horn, it is difficult to determine which is upper or lower eyelid; and it would appear that there is no difference in their structure. The *orbicularis palpebrarum* muscle is large and powerful; and from there being no *cilia*, or eye-lashes, is in a state of frequent contraction. The eye appears acutely sensible; but whether endowed with the power of vision, could not be, at the time, ascertained. The lachrymal parts of the eye must exist to a certain degree, as the flow of tears was evident.—[*Cal. John Bull*, April 16.

PROCEEDINGS OF THE ROYAL ASIATIC SOCIETY OF
GREAT BRITAIN AND IRELAND.

November 5, 1825.—The Society resumed its meetings this day, at 3 o'clock P.M., H. T. Colebrooke, Esq., Director, in the chair.

The minutes of the last meeting were read and confirmed.

The following donations were presented, *viz.*

For the Library.

From Major Charles Stewart, Original Persian Letters, dedicated to the Royal Asiatic Society.

From César Moreau, Esq., his East-India Records.

From James Baillie Fraser, Esq., his Tour in the Himálá Mountains.

From Lord Viscount Kingsborough; 1, Dictionnaire Tartare Mantchou Français (M. Langlés' own copy, with his MS. notes); 2, the Manuscript of the above, by P. Amyot, missionary at Pekin.

From Sir Thomas Strange, his Elements of Hindu Law.

From James Ross, Esq., his Translation of the Gulistan of Sádi.

From the Rev. Dr. Bryce, Nos. 2, 3, 4, of the Quarterly Oriental Magazine.

From the Rev. Dr. Morrison, his Chinese Miscellany and English Grammar for the use of the Anglo-Chinese College.

From Wm. Marsden, Esq., his Numismata Orientalia Illustrata.

From Mr. Wm. Huttman, Account of the Rosetta Stone; Address to the Public concerning the Anglo-Chinese College; Reply to the Strictures of the Edinburgh Review on the Marquess Wellesley's Administration in India.

From Thos. Myers, Esq., his Essay on the Chinese Language.

From Dr. Granville, his Essay on Egyptian Mummies.

From Mr. P. P. Thoms, Chinese Courtship.

From the Baptist Missionary Society, twenty-eight volumes of Oriental Literature.

From the Royal Society of Literature, their Prospectus, List of Members, &c.

From the Yorkshire Philosophical Society, their Annual Report.

From Lieut. Thos. Brooke, two Burmese Manuscripts, and a Translation of the Route of the Burmese Army from Aneerapoorá to Rangoon in 1820.

From Professor Gesenius, his Dissertation De Inscriptione Phœnicio-Græcâ in Cyrenaicâ.

From the Asiatic Society of Paris, their Annual Reports from 1822 to 1825; the Journal Asiatique from the commencement.

From M. Dondéy Dupré, Dictionnaire Français Wolof et Français Bambaré, suivi du Dictionnaire Wolof Français, par M. J. Dard.

From M. Abel Rémusat, his Mélanges Asiatiques.

From M. Klaproth, Elémens de la Grammaire Japonaise publiée par la Société Asiatique.

From M. Stanislaus Julien; 1, l'Enlèvement de Héléne; 2, Meng Tsên; 3, Shang Meng Tsên.

For the Museum.

From Lieut. Col. C. J. Doyle, ninety-five articles, principally arms.

From David Colvin, in the name of Mrs. Alexander Colvin, of Calcutta, a Burmese harp, four bronze images, and a temple; a MS. written on Palmyra Leaves; a coat of mail, formed of silk and lackered beads; and a sample of Peat, from the mountains of Kumaon.

From Mr. Wm. Huttman, a pair of Chinese men's shoes; six Chinese gilt tunic buttons.

César Moreau, Esq. was admitted a member of the Society.

A paper, by Mr. Colebrooke, on the Valley of the Setlêj river, in the Himalaya mountains, from the Journal of Capt. A. Gerard, with remarks, was begun. The journal is very interesting; it describes several attempts to penetrate into Chinese Tartary, which were unsuccessful, as the travellers were not able to prevail upon the Tartars to allow of their further progress in that direction.

November 19.—The Society met this day at the usual hour, H. T. Cole-

brooke, Esq. in the chair. The minutes of the last meeting were read and confirmed.

A donation was presented from the Abbé Dubois, being his publication entitled "Exposé de quelques-uns des principaux Articles de la Théogonie des Brahmes."

Dr. James Hare, jun., M.D., and Wm. Holmes, Esq., were elected members of the Society. The reading of Mr. Colebrooke's paper on the Himalaya mountains was continued.

December 3.—The Society met this day at 3 o'clock P.M., the Right Hon. Charles W. Williams Wynn, President, in the chair.

The President communicated a letter to the meeting, addressed to him by H. R. H. the Duke of Orleans, expressing his Royal Highness's satisfaction at having been chosen an Honorary Member of the Society. The minutes of the last meeting were read and confirmed.

The following donations were presented:—

From Mr. P. P. Thoms, a Chinese celestial Planisphere.

From Sir Alexander Johnston, the following six works: 1, Caabi ben Sohair; Edidit G. W. Freytag. 2, Regnum Saahd Aldantae; G. W. Freytag. 3, Locmani Fabulæ; Edidit G. W. Freytag. 4, Commentatio de Motenabbio, auctore Petro a Bohlen. 5, Amrukkeesi Moallakah; Edidit Era. Guil. Hengstenberg. 6, Carmen Amul Taijib Ahmed ben Alhosain Almotenabbii; Edidit Ant. Horst.

From the Société Géographique de Paris, Questions proposées à tous les Voyageurs.

From Lieut. Thos. Brooke, 1, an Arabic Dagger and Knife, silver-mounted; 2, three MS. volumes of the Koran, in Arabic; 3, two papers, by Capt. J. A. Hodgson: one being a Register of Barometrical Observations in the year 1819; the other, the height of some places in Hindustan determined by the Barometer.

From Sir G. T. Staunton, Bart., twenty-four articles for the Museum, together with some bundles of spears and arrows.

Sir William Betham; Robert Montgomery Moore, Esq.; George Parkhouse, Esq.; and Charles Woodmass, Esq.; were elected members of the Society.

Dr. Wm. Gesenius, Professor of Oriental Literature at Halle, and M. Stanislaus Julien, were elected Foreign Members of the Society.

Mr. Colebrooke's paper on the Himalaya Mountains was concluded; and the reading of a paper by J. F. Davis, Esq., being Extracts from the Peking Gazettes for 1824, was begun. This paper is a selection of the most interesting and characteristic circumstances published in the Peking Gazettes.

December 17.—The Society met this day at the usual hour; H. T. Colebrooke, Esq., Director, in the chair.

A donation was presented from James Annesley, Esq., being his Sketches of Diseases in India.

Also from G. C. Haughton, Esq., the Manava Dherma Sastra, Sanscrit and English.

From Col. C. J. Doyle, an Egyptian Papyrus Roll, from Thebes.

From John Frost, Esq., an Oration delivered by him before the Medico-Botanical Society of London.

From Lieut. Col. Robert Birks Pittman, his Essay on the practicability of uniting the Atlantic and Pacific Oceans.

From John Disney, Esq., a copy of an inscription on what is supposed to be Adam's tomb, in Ceylon.

The reading of Mr. Davis's Translations from the Peking Gazettes for 1824 was continued.

General Meetings of the Society for the year 1826 are as follow:—January 7, 21; February 4, 18; March 4, 18; April 8, 22; May 6, 20; June 3, 17; November 4, 18; December 2, 16.

*** The name of Lieut. Col. John Monckton Coombs was omitted in our list of persons elected members on the 4th June last.

College Examinations.

EAST-INDIA COLLEGE AT HAILEYBURY.

EXAMINATION, December 2, 1825.

On Friday, the 2d December, a Deputation of the Court of Directors proceeded to the East-India College for the purpose of receiving the Report of the result of the Examination of the Students at the close of the term.

The Deputation, upon their arrival at the College, were received by the Principal and the Professors, and the Oriental Visitor.

Soon afterwards, they proceeded to the Hall, the Students being previously assembled, when the following proceedings took place :—

A list of the Students who had obtained prizes, and other honourable distinctions, was read ; also, a list of the best Persian and Deva-Nagari writers.

Mr. Brinsley Fitzgerald delivered an English essay, "*The Effects of a Spirit exclusively Military, or exclusively Commercial, upon the Character and Welfare of a Nation.*"

The Students read and translated in the several Oriental languages.

Prizes were then delivered by the Chairman according to the following report :

Report of Medals, Prizes of Books, and other honourable Distinctions obtained at the Public Examination, December 1825.

List of Students who obtained Medals, Prizes of Books, and other honourable Distinctions, at the Public Examination, December 1825.

Students in their Fourth Term.

C. E. Trevelyan, medal in classics, medal in Sanscrit, and with great credit in other departments.

C. G. Mansel, medal in political economy, medal in Persian, and with great credit in other departments.

W. U. Arbuthnot, medal in law, prize in Bengali, and with great credit in other departments.

C. C. Jackson, medal in mathematics, and highly distinguished in other departments.

R. Cathcart, prize in Hindustani, and highly distinguished in other departments.

B. Fitzgerald, prize in Arabic, prize for an English essay, and with great credit in other departments.

T. L. Blane, prize in Deva-Nagari writing, and highly distinguished in other departments.

Students in their Third Term.

C. M. Caldecott, prize in Bengali, prize in Persian, prize in Hindustani, and with great credit in other departments.

F. Cardew, prize in mathematics, prize in political economy, and highly distinguished in other departments.

E. C. Wilmot, prize in law, and highly distinguished in other departments.

G. M. Bird, prize in classics, and with great credit in other departments.

J. C. Grant, prize in Sanscrit, and with great credit in other departments.

M. Read, prize in Arabic, and highly distinguished in other departments.

W. Cooke, prize in Drawing.

Students in their Second Term.

C. Merivale, prize in classics, prize in law, prize in Hindustani, and with great credit in other departments.

R. Grote, prize in Persian, prize in Bengali, and highly distinguished in other departments.

P. Scott, prize in Sanscrit, and highly distinguished in other departments.

G. M. Batten, prize in history, and highly distinguished in other departments.

A. Fraser, prize in mathematics, and with great credit in other departments.

R. C. Chambers, prize in Arabic, and highly distinguished in other departments.

Students in their First Term.

C. Allen, prize in mathematics, and with great credit in other departments.

E. F. Barlow, prize in Persian.

E. V. Irwin, prize in Bengali.

J. H. Bainbridge, prize in classics.

Hon. R. Forbes, prize in English composition.

R. J. M. Muapratt, prize in Persian writing, and highly distinguished in other departments.

R. B. Sturt, prize in drawing, and highly distinguished in other departments.

The following Students were highly distinguished in the several departments :

4th Term. Mr. Reade,

— Brownlow.

3d Term. — Ravenscroft,

— Strange,

— Tulloh,

— Loughnan.

2d Term. — Bracken,

— Hare,

— Mytton,

— Udny,

— Coles.

And the following passed with great credit:

4th Term. Mr. Ogilvy.

3d Term. — Oswell.

2d Term. — T. C. Scott,

— F. E. Read,

— Bell,

— Woodcock,

Mr.

- 2d Term. Mr. Martin,
— Halkett,
1st Term. — Home,
— Trafford,
— M'Mahon,
— Cornish.

The rank of the Students finally leaving College was then read, being as follows :

Rank of Students leaving College, as settled by the College Council, according to which they will take precedence in the Hon. Company's Service in India.

BENGAL.

- 1st Class.—1. Mr. Trevelyan,
2. — Mansel.
2d Class.—3. — Jackson,
4. — Reade,
5. — Fitzgerald,
6. — Brownlow,
7. — Dick.
3d Class.—8. — Alexander,
9. — Currie.

MADRAS.

- 1st Class.—1. Mr. Cathcart,
2. — Arbuthnot.
2d Class.—3. — Blane,
4. — Ogilvy,
5. — Macdonald.
3d Class.—6. — Bruere,
7. — Lockhart.

It was then announced to the Students that the certificates of the College Council were granted, not only with reference to industry and proficiency, but also to conduct ; and that this latter consideration had

always a decided effect in determining the order of rank.

It was also announced that such rank would only take effect in the event of the Students proceeding to India within six months after they are so ranked, or by any one of the regular ships that may be despatched for the presidency to which the Student is appointed, between the expiration of the said six months and the 1st day of August then next following ; and that should any one delay so to proceed, he would only take rank among the Students classed at the Examination previous to his departure for India, and would be placed at the end of that class in which rank was originally assigned to him.

Notice was then given that the next Term would commence on Thursday the 19th January, and that the Students would be required to return to the College within the first four days of it, unless a statutory reason, satisfactory to the College Council, could be assigned for the delay ; otherwise, the Term would be forfeited.

The Chairman then addressed the Students, expressing his approbation of the literary exertions and good conduct which had distinguished the general body of the students during the past term ; and the business of the day concluded.

Wednesday the 11th, and Wednesday the 18th January, are the days appointed for receiving Petitions, at the East-India House, from Candidates for the College for the Term, which will commence on Thursday the 19th January.

COLLEGE OF FORT ST. GEORGE.

The Governor in Council has great satisfaction in publishing, for general information, the following extracts of the report of the Board of Superintendence for the College of Fort St. George, on the last public examination held there.

“ Of the number of students examined, a greater proportion have stood prominent in merit, on the present, than on any former occasion ; for, of twelve gentlemen who appeared before us, no less than five are qualified for the discharge of public duty in two languages, and have entitled themselves, by the high standard of their attainments, to the honorary reward granted only to eminent proficiency. This is a result on which we cannot but offer our respectful congratulations to the Government to whose service those talents will henceforth be devoted, which have proved so competent to excel in all that has hitherto been put before them.

“ Mr. Walker's translation of a very difficult Tamil paper is entirely correct, and is, at once, close and elegant. The exercise which he rendered into Tamil was in a style peculiarly difficult of transla-

tion into a language of which the idioms differ so entirely from the English. It had been observed of Mr. Walker's former versions into Tamil, that, though clever and idiomatic, they did not always conform so closely to the original as was desirable in exercises, which are the test of progress in the acquirement of a language. The adherence to the original, in the exercises now performed, evinces a most intimate acquaintance with the language in its structure and diction, and shews that Mr. Walker has a command of style which enables him to be fluent or close, as his judgment and taste may direct. Mr. Walker read with ease, and construed with entire correctness, a cutcherry petition. In speaking, though not rapid, he was always accurate and idiomatic, and perfectly understood whatever was addressed to him on a variety of topics, in a conversation of considerable length.

“ Mr. Walker is second in the first class of Telugu students, and the exercises he performed were of the same difficulty as those executed by the gentleman above him ; though not quite so perfect as Mr. Onslow's,

low's, they are extremely well done. He reads with much readiness, and understands, generally, the official cutcherry papers which are given at our examinations, and his attainments in this, his second language, are highly satisfactory.

“ Mr. Oakes has translated, from Tamil, a paper of equal difficulty with that executed by Mr. Walker, and his version has only three trivial blemishes; the omission of one word, and the imperfect rendering of two others: but these imperfections do not affect the estimate of his acquaintance with the structure and idiom of the language, which is formed on a review of all his exercises; and these shew him to have a very thorough knowledge of both, as well as a very extensive choice and vocabulary at his command, and justly entitle him to the praise of being an excellent scholar in this difficult language. His version into Tamil, of a paper, not so difficult as Mr. Walker's, is in a pure and flowing style, not acquired without much industry, judiciously applied to the cultivation of excellent talents. Mr. Oakes is particularly fluent in speaking, and quick in understanding whatever is addressed to him; his pronunciation is excellent.

“ Mr. Oakes's exercise from Hindoostanee may be said to be perfect, for of the only two words with the meaning of which he was unacquainted, one is seldom met with in books, and never used in conversation in this part of India. The same may be asserted of his exercise into Hindoostanee, for the only words which he did not know were technical terms, and, in other respects, his version is without a fault; the style is easy, and the language good. Mr. Oakes conversed with fluency, and translated, off-hand, a paper of considerable difficulty, with perfect correctness.

“ Mr. Brown translated papers of somewhat less difficulty than those given to the two gentlemen before named; but the almost faultless execution of the version into Tamil, and the very correct translation of the paper from that language into English, exhibit so thorough a knowledge of its construction, and so great a facility and readiness in the practical application of that knowledge, as to place Mr. Brown among Tamil scholars of the highest order. Mr. Brown read and construed, with ease and accuracy, the cutcherry position given to the other gentlemen, and conversed with more than ordinary fluency and correctness of language and of pronunciation. That these high attainments have been acquired in less than three months, is a result to which there is nothing parallel on the records of the college; it can only have been produced by applying to talents of an extraordinary nature, industry the most indefatigable and well-directed.

“ Of Mr. Brown's attainments in Persian, we made a very favourable report on his

admission into this college. He has cultivated the knowledge of it as his second language since that time, and on the present occasion he translated, with perfect correctness, a Persian paper of considerable difficulty.

“ His version of an English exercise into Persian shews a very extensive knowledge of words, and a perfect familiarity with the idiom of the language.

“ Mr. Brown converses in Persian with ease and fluency, and his pronunciation is particularly good; and we have no hesitation in saying that his acquirements in this second language are such as we should have deemed highly creditable to him had it been his first and principal language of study.

“ Mr. Onslow has prosecuted his studies under the serious disadvantage of repeated and protracted impediments from bad health; he has, however, attained the first place in the Telugu class. His translation of a difficult paper into English is entirely correct, with the exception of a single gerund, which has been translated actively, in place of causally: his translation into Telugu is a very creditable performance. Mr. Onslow has attained to considerable facility in reading and construing cutcherry papers: he speaks the language with ease, and his pronunciation, as remarked at a former examination, is particularly good.

“ Mr. Onslow's progress in Persian, since the last examination, has been great; he translated the same exercises as were performed by Mr. Brown.

“ His translation of the Persian paper was executed very nearly as well as that of Mr. Brown; and his version of the English paper into Persian, though not free from error, was, on the whole, very well performed.

“ He speaks the language fluently, and understands whatever is said to him.

“ Mr. Cherry's absence, on leave, from the last examination having left us uninformed of his progress, a Tamil paper was assigned to him for translation, of less difficulty than our present appreciation of his attainments would have led us to give. His excellent performance of the translation, however, and his selection of a long and difficult task for the exercise of translating into Tamil, which he has performed in a style of great perspicuity and general correctness, though not entirely faultless, enable us to do justice to his merits, and to place him in the first class of Tamil scholars.

“ He read, and very correctly rendered the cutcherry petition; and in conversation he is ready and fluent, forming his sentences idiomatically, and uttering them with excellent pronunciation.

“ Mr. Cherry's acquirements in Hindoostanee are of the highest order. The exercises he performed were of nearly the

same

same difficulty as those given to Mr. Oakes, and, with the exception of a misapprehension of part of one passage of the Hindoostanee paper, and one trifling error in his version into English, they are perfectly executed. He read and translated, at sight, the paper given to Mr. Oakes to read. The fluency and elegance of his language in conversation, and the excellence of his pronunciation, attracted the particular notice of the learned native who attended the examination, and entitle Mr. Cherry to marked commendation.

“ Mr. Walker selected for study the two most difficult of the vernacular languages, both unknown to him when he arrived in India, and in both he has attained to excellence. Mr. Oakes, by diligent application in the latter period of his studies, has most honourably retrieved the character of ability and talent, of which he gave an early earnest, but which he allowed, for a time, to be obscured. Mr. Brown's progress so far exceeds, in rapidity, any thing that was ever witnessed in this college, that it cannot be measured by any other standard, and will probably continue unrivalled—we may safely say unsurpassed. Mr. Onslow, in attaining the highest rank in the language selected as his first for study, has surmounted difficulties the most serious, for he has had to contend against severe illness, brought on, we believe, originally, by too severe application; and Mr. Cherry has attained an honourable eminence in two languages, both new to him, in the space of nine months from his entering the college.

“ We accordingly recommend that Mr. Brown and Mr. Cherry may receive the highest rate of college allowances from the 15th ult., and that Messrs. Walker, Oakes, Brown, Onslow, and Cherry, may further receive the honorary reward of 3,500 rupees each, and be permitted to enter on the duties of the public service.”

(True extracts).

G. J. CASAMAJOR, Act. Sec. to Gov.

On Monday the 11th July, the hon. the Governor visited the college. He was received in the usual form, by the Board of Superintendence, and conducted to the hall, where he thus addressed the students who were assembled on the occasion.

“ Gentlemen of the College :

“ Every one knows how necessary is a knowledge of the country languages to the management of business, and how much better qualified for official duty a man possessing this knowledge is, than one of equal talents without it. But a knowledge of the languages has other advantages besides the mere dispatch of business; for it leads to a better acquaintance with the natives, and to a more kindly feeling towards them, which cannot fail of proving beneficial to the country. And when we find that these languages are copious, regular,

polished, and abounding in scientific terms, we look back, in imagination, to a remoter age, when science was more cultivated; and we take a deeper interest in the natives, not only on account of what they are, but on account of what they have been: and when we see that they have declined from the high state of intellectual improvement to which they must have attained, when language was carried to its present degree of refinement, we cannot but lament the change, and anxiously wish to see them restored to their former high station.

“ There can be no doubt but that, however high a nation may once have stood in civilization, it may be again raised to the same, and even to a greater height, for it is by good or bad government that the characters of nations are elevated or depressed; and if the people of India shall not be raised higher than they ever yet have been, the fault must lie in the measures of our Government. But however desirous Government may be of accomplishing such an object, it can make but little progress, unless it have the aid of able instruments in its public servants: it looks to the civil service, and to the college which prepares the junior servants for public affairs, as its chief auxiliaries in this great work; and it trusts that every student will, at all times, keep in view the important duties he is one day destined to discharge.

“ The result of the late examination affords, I think, a fair ground for believing that the college will not disappoint the expectations of Government; for the late examination has equalled, if not surpassed every former one in the number and attainments of the young men whom it has sent forth to the public service. Of twelve students, five have merited the highest rewards which the college can bestow. Among these, Mr. Brown is, perhaps, the most remarkable instance ever known of rapid progress, for though he has not been quite three months in the college, he stands first in Persian, and third in Tamil; and Mr. Cherry, though not first in any one language, has entitled himself to the reward, because, in ordinary circumstances, he would have been first in Hindoostanee, and is second in that language only in consequence of the unusual proficiency of Mr. Oakes, who stands first. It is highly honourable to Mr. Oakes, that after having lost some time in the early part of his studies, he has now not only regained it, but done more.

“ The manner in which Mr. Walker, who has the honour of standing at the head of the list, and Messrs. Oakes, Brown, Onslow, and Cherry, have passed through their examination, reflects great credit, both on them and on the college, and is, I trust, a pledge of the advantages which the public is hereafter to derive from their services.”

ASIATIC INTELLIGENCE.

Calcutta.

GOVERNMENT GENERAL ORDERS.

ESTATES OF DECEASED OFFICERS.

Fort William, May 13, 1825.—It is hereby directed, that no property connected with the estates of deceased officers, &c. of the hon. Company's service shall be disposed of by *private sale*, without special permission obtained for the purpose through the military department, when no will has been found, or from the executor, when there is one, to the estate. In the latter case, the amount proceeds are still answerable for regimental debts, and are not to be paid over till all such are satisfied.

VACANCIES IN THE SENIOR LIST.

Fort William, June 10, 1825.—The right hon. the Governor General in Council has much satisfaction in publishing, for the information of the armies of India, the following paragraph of a separate letter, from the hon. the Court of Directors in the military department, bearing date the 2d Feb. last.

Para. 1. "Having taken into our consideration the situation in which certain officers in our service will be placed, by the stop put to promotion consequent on casualties on the senior lists, as directed in our military letter of the 25th Nov. 1822. (Para. 112), we have resolved to allow all vacancies which shall occur on those lists at the several presidencies, in the first two years after the introduction of the new arrangements, to be filled up as formerly, so that instead of barring promotion from casualties occurring on those lists after the 1st of May 1824, such bar shall not operate until the 1st May 1826. We desire it, however, to be distinctly understood, that the indulgence which we have now authorized, shall on no account be allowed to extend beyond the period we have specified."

ADDITIONAL PAY TO ASSIST. SURGEONS.

Fort William, June 10, 1825.—The right hon. the Governor General in Council is pleased, under instructions from the hon. the Court of Directors, to direct, that all assistant surgeons on the Bengal establishment, nominated for 1822 and previous seasons, shall receive the additional pay of one rupee a day as heretofore. Those appointed after the season 1822, will draw pay and allowances agreeably to the table published in G. O. of 12th Aug. last.

Asiatic Journ. Vol. XXI. No. 121.

Fort William, June 24, 1825.—With advertence to the allowance of one rupee a day additional pay granted to the assistant surgeons on the Bengal establishment, nominated for 1822 and previous seasons, as published in G. O. of 10th inst., the Governor General in Council is pleased to direct, that all assistant surgeons in H. M.'s regiments who arrived in Bengal on or before the 31st Dec. 1823, be considered entitled to a similar indulgence.

NEW ARRANGEMENT OF THE ARTILLERY.

Fort William, June 24, 1825.—With a view to place the artillery, as far as is practicable at present, on the establishment prescribed by the hon. the Court of Directors, as published to the army in G. O. of 6th May 1824, the Governor General in Council is pleased to direct, that the following arrangements shall have effect from the 1st proximo.

The Horse Artillery will be formed into three brigades, as follows:

1st Brigade, Head-Quarters, Cawnpore.

- 1st Troop, the present 1st troop (European), now at Rangoon.
- 2d Troop, the (8th) or newly-formed troop (European), now at Cawnpore.
- 3d Troop (European) to be raised hereafter.
- 4th Troop (Native), the 4th troop, now at Neemuch.

2d Brigade, Head-Quarters, Meerut.

- 1st Troop, the present 2d troop (European), now at Meerut.
- 2d Troop, the present 7th troop (European), half at Meerut, and half at Rangoon.
- 3d Troop (European) to be raised hereafter.
- 4th Troop, the present 5th (native) troop.

3d Brigade, Head-Quarters, Meerut.

- 1st Troop, the present 3d troop (European), at Meerut.
- 2d Troop } to be raised } (European).
- 3d Troop } hereafter }
- 4th Troop, the present 6th (native) troop, at Meerut.

The European Foot Artillery is to be formed into five battalions, as follows:—

1st Battalion, Head-Quarters, Agra.

- 1st Company, the present 1st company 1st battalion, at Nussurabad.
- 2d Company, the present 2d company 1st battalion, at Agra.
- 3d Company, the present 8th company 1st battalion, at Agra.
- 4th Company, the present 2d company 3d battalion, at Kurnaul.

L

2d Bat-

2d Battalion, Head-Quarters, Dum-Dum.

1st Company, the present 1st company
2d battalion, at Dum-Dum.

2d Company, the present 5th company
2d battalion, at Dum-Dum.

3d Company, the present 6th company
2d battalion, at Arracan.

4th Company, the present 7th company
2d battalion, at Arracan.

3d Battalion, Head-Quarters, Cawnpore.

1st Company, the present 1st company 3d
battalion, at Cawnpore.

2d Company, the present 5th company
3d battalion, at Cawnpore.

3d Company, the present 6th company
1st battalion, at Saugor.

4th Company, the present 7th company
1st battalion, at Cawnpore.

4th Battalion, Head-Quarters, Benares.

1st Company, the present 3d company
1st battalion, at Dinapore.

2d Company, the present 5th company
1st battalion, at Allahabad.

3d Company, the present 3d company
3d battalion, at Benares.

4th Company, the present 4th company
1st battalion, at Dum-Dum.

5th Battalion, Head-Quarters, Dum-Dum.

1st Company, the present 4th company
3d battalion, at Dum-Dum.

2d Company, the present 6th company
3d battalion, at Dum-Dum.

3d Company, the present 7th company
3d battalion, in Ava.

4th Company, the present 8th company
3d battalion, in Ava.

The 2d, 3d, 4th, and 8th companies of the (present) 2d battalion of artillery are to be reduced, and the non-commissioned officers and privates transferred to complete the remaining twenty companies, under instructions which will be issued by the Commander-in-Chief.

The term brigade is to be adopted in the horse artillery for each division of four troops, and the term battalion is to be continued in the foot artillery for each division of four European companies.

Two subadar majors are allowed to the native artillery, horse and foot, to be appointed from the subadars of both branches, indiscriminately, at the recommendation of the commandant of artillery, but to do duty in that branch to which they belong.

The promotion to native officers in the lascars is to take place from the general rota of havildars, whether attached to the horse or foot, at the recommendation of the commandant of artillery; but they are to be attached, upon promotion, to the foot artillery.

The following revised staff is fixed for the brigades of horse, and battalions of foot artillery:—

For a Brigade of Horse Artillery.

1 Adjutant and quarter-master (non-effective), 1 surgeon, 1 assistant surgeon (with an additional assistant surgeon for each detached troop), 1 riding master (warrant officer), 1 sub-assistant veterinary surgeon (ditto).—1 serjeant-major, 1 quarter-master serjeant, 1 drill serjeant, 1 drill corporal; 1 rough-rider serjeant, 1 school-master serjeant, 1 hospital serjeant, 1 trumpet major, and 1 farrier major, effective.

And for each Troop of Europeans.

1 staff serjeant, 2 rough-riders, and 2 farriers, effective.—1 saddler, and 1 pay-serjeant, non-effective.—1 native doctor, 1 native farrier, and 1 mochie, effective.

For each Native Troop.

1 staff serjeant.

N.B. The present quarter-master serj. allowed to the native troops of horse artillery is to be discontinued.

1 farrier serjeant, 2 rough-riders, 2 farriers, 1 native doctor, and 1 mochie, effective.—1 staff havildar, and 1 pay havildar, non-effective.

Note.—The staff serjeants to receive the same pay as the present troop serjeant-majors, and the farrier serjeants the same pay as the present troop quarter-master serjeants.

Independently of the riding-schools above provided for each brigade of horse artillery, a dépôt or regimental riding-school for the general instruction of the officers of artillery, and for the recruits intended for the horse artillery branch of the corps, will be established at Dum-Dum on the following scale:

1 European commissioned officer of the artillery regiment as riding-master, on a staff allowance of — per mensem, 1 (assistant) riding-master (warrant), 2 serjeants, rough-riders; 8 corporals, do. do.; 30 horses, with usual proportion of syles and grass-cutters; 2 bildars, 1 puckalee, and 1 sweeper, for the preservation and cleanliness of the riding-school grounds, &c. &c.

For each European Battalion of the Foot Artillery.

1 adjutant and quarter-master (non-effective), 1 surgeon, 1 assistant surgeon, 1 serjeant-major, 1 quarter-master serjeant, 1 drill serjeant, 1 drill corporal, 1 hospital serjeant, 1 school-master serjeant, 1 drum-major, 1 fife-major.

With the following staff to each company:—1 staff serjeant (effective), 1 pay serjeant (non-effective).

And also when the batteries are drawn by horses:—1 European farrier (non-effective), 1 mochie, and 1 native farrier (effective).

The Commander-in-chief will be pleased to give orders for the reduction of the four

four companies of foot artillery, and for the four new troops of horse artillery being formed, when circumstances will admit to these changes being effected.

His Exc. will be pleased also to issue any subsidiary orders which may be necessary to give complete effect to the foregoing arrangements.

FORMATION OF AN 8TH TROOP OF HORSE ARTILLERY.

Head-Quarters, Calcutta, June 24, 1825.

—With the sanction of Government, a troop of (European) horse artillery, to be denominated the 8th troop, is to be formed immediately at Cawnpore.

2. The details noted in the margin,* which were selected from the horse artillery at Meerut, under instructions from head-quarters, and detached to Cawnpore on the 1st of March last, are to be struck off the troops to which they formerly belonged from that date, from which they are to be considered as forming a separate troop. The promotions of sergeants and corporals in their room are to have effect from the same date.

3. Capt. R. Roberts, 1st-Lieuts. Mackay and Ewart, are posted to the new troop of horse artillery from the 1st March.

4. The 8th troop is to be completed to the established strength, and the men drafted from the troops at Meerut are to be replaced, under instructions which will be sent to the general officers commanding the Cawnpore and Meerut divisions of the army.

5. Maj. Gen. Sir G. Martindell will direct the necessary indents to be made out for guns, waggons, saddles, harness, and all other equipments required to complete the 8th troop; and orders will be given hereafter for the established proportion of gun lascars being transferred and sent to Cawnpore.

THE ADDITIONAL TROOPS OF HORSE ARTILLERY.

Head-Quarters, Calcutta, June 24, 1825.

—With a view to the early formation of the additional troops of horse artillery required to complete that corps to the establishment fixed in G. O. by Gov. of 6th May 1824, the commandant of artillery is directed to select from the artillery at Dum-Dum, 300 men fit for that branch of the service, to be sent immediately to the upper provinces, under the command of Major Whish.

The following officers will accompany the detachment, for which an adjutant will be allowed, until its arrival at Cawnpore:—Capt. J. Scott, Capt. Blake, 1st-Lieut. R. S. Morland, 1st-Lieut. Hughes, 2d-

* 6 Sergeants, 6 corporals, 40 gunners, 152 horses, with the regular proportion of syces and grass-cutters.

Lieut. Shakespear, 2d-Lieut. G. D. Scott, 2d-Lieut. Duncan, 2d-Lieut. Sage.

Lieut. Hughes is appointed adj. to the detachment.

Assist. Surg. H. Taylor (now at Dum-Dum) is directed to do duty with the detachment, and afterwards to join the horse artillery at Meerut.

CIVIL APPOINTMENTS.

Territorial Department.

June 2. Mr. J. J. Harvey, assistant to collector of Hidgelee.

Mr. E. L. Campbell, assistant to secretary to Board of Revenue in central provinces.

Political Department.

May 27. Lieut. J. Frederick, 67th regt. N.I., assistant to resident at Lucknow.

MILITARY APPOINTMENTS, PROMOTIONS, &c.

Fort William, May 31, 1825.—29th Regt. N.I. Ens. J. Bracken to be lieut., from 25th Feb., v. Schalch dec.

Med. Depart. Assist.surg. D. Harding to be surg., in suc. to Gillman retired, with rank from 8th March, v. A. Russell resigned.

Late 17th Regt. N.I. Ens. E. J. Milner to be lieut. from 25th Jan., v. Wiggins prom.

34th Regt. N.I. Lieut. R. Low to be capt. of a comp., and Ens. S. A. Lyons to be lieut., from 18th Feb., in suc. to Montgomerie transf. to pension estab.

Mr. B. Y. Reilly admitted to engineers, and prom. to 2d-lieut.—Messrs. H. C. Gilmore, W. Buller, W. Jervis, W. H. W. Midford, A. B. Oglby, A. B. Nesbitt, T. Plumbe, and E. A. Monroe, admitted to inf., and prom. to ensign.

Ens. R. S. Trevor, 32d N.I., transf. to cavalry, and prom. to cornet.

June 3.—Messrs. J. Graham, J. Wemyss, J. T. Gordon, and S. R. Wallace, admitted to inf., and prom. to ensign.

Lieut. C. Chester, 23d N.I., supernum., brought on effective strength of depart., as a sub-assist. com. gen., in suc. to Frederick.—Capt. G. W. Moseley, 38th N.I., to be a supernum. sub-assist. com. gen., v. Chester.

Brev. Capt. D. Thomas, 10th N.I., to be superintending officer of cadets in Fort William, v. Chesney proceeding to Europe.

Ens. G. P. Lloyd, 41st N.I., transf. to cavalry.

Mr. G. Evans, surg., to do duty (temporarily) as an assist.surg. on estab.

Head-Quarters, May 30.—Lieut. and Act. Quart. Mast. Mercer to act as station staff at Meerut, as a temp. arrangement; date 16th April.

Lieut. Col. T. P. Smith appointed to 2d Europ. regt. at Dinapore.

June 1.—Assist.surg. Stenhouse to proceed to Keltah, and do duty with 38th N.I., as a temp. arrangement; date 16th May.

June 3.—Ensigns Monro, Jervis, Plumbe, Nesbitt, Buller, Oglby, and Midford (lately prom.), appointed to do duty with 2d Europ. regt. at Dinapore.—Assist.surg. Hewett to proceed in med. charge of detachment.

Assist.surg. J. A. Lawrie posted to 29th N.I.

Lieut. E. M. Blair to officiate as interp. and quart.mast. to 5th L.C., as a temp. arrangement; date 23d May.

Lieut. Col. George appointed to 37th N.I. Ens. Showers to do duty with 32d N.I. at Allahabad in place of 16th N.I., as formerly directed.

June 4.—Ensigns Gilmore and J. Fisher (lately prom.) appointed to do duty with 28th N.I. at Berhampore.

June 7.—Removals and postings in Artillery. Capt. E. B. Gowan (new prom.) to 5th comp. 4th bat.,

bat., v. Macalister resigned.—1st-Lieuts. G. S. Lawrenson to 13th comp. 4th bat. instead of 2d comp. 2d bat. as formerly ordered, and G. Twemlow to 2d comp. 2d bat., v. Lawrenson. W. Symons from 7th comp. 4th bat. to 1st comp. 1st bat., v. Watts. J. Edwards (new prom.) to 2d comp. 3d bat. E. R. Watts to 7th comp. 3d bat., v. Blake. E. Blake to 1st troop horse artil., v. Thomson dec.—2d-Lieuts. F. A. Miles (late arrival) to 4th comp. 1st bat. J. Trower (ditto) to 2d comp. 2d bat. C. S. Reid (ditto) to 3d comp. 2d bat.

June 10.—Assist.surg. A. Scott posted to 60th N.I., and Assist.surg. H. Palsgrave to 53d N.I.

Lieut. G. H. Dalby, 68th N.I., to officiate as dep. judge adv. gen. of presidency div. until arrival of Capt. Stuart.

Cadets appointed to do duty. 2d-Lieuts. Goodwyn and Reilly with sappers and miners at Cawnpore.—Cornet Peard with 6th L. C. at Sultanpore.—Ensigns Ramsay and Wemyss with 66th N.I. at Cawnpore. Ens. Spry with 26th N.I. at Berhampore. Ensigns Dawes, Seals, W. C. Campbell, Vardon, and Gordon, with 9d Europ. regt. at Dinapore.

Assist.surg. Webster directed to place himself under orders of superintend. surg. at Benares.

June 11.—Lieut. H. Timings to be adj. and quart.mast. to detachm. of Bengal horse artil. serving in Ava, v. Thomson dec.; date 12th May.

Assist.surg. B. Bell to do duty with artil. at Dum-Dum.

Cornets G. P. Lloyd and R. S. Trevor to do duty with 1st extra L.C. at Cawnpore.

Capt. Jeffreys, fort adj. at Chunar, to have charge of 2d bat. nat. inval., in room of Maj. Wilson app. to com. 11th extra N.I.

Capt. C. Frye, 13th N.L. and dep. assist. adj. gen. Benares div., to command 12th extra N.I. to be raised at Buxar.

Lieut. E. Blair, 5th L.C., to act as maj. of brigade to troops in Bundelkund.

Fort William, June 17.—Regt. of Artil. 2d-Lieut. J. Hotham to be 1st-lieut. from 11th May, v. Thomson dec.

Infantry. Lieut. Col. R. Pitman to be lieut. col. com. from 12th Jan., v. J. Garner dec. Maj. S. P. Bishop to be lieut. col. in suc. to Garner, with rank from 22d April, v. Swinton invalidated.

3d Regt. N.I. Capt. H. Sinnock to be maj., Lieut. R. Bayldon to be capt. of a comp., and Ens. J. R. Bigge to be lieut., from 22d April, in suc. to Bishop prom.

35th Regt. N.I. Ens. A. G. F. J. Younghusband to be lieut. from 20th April, v. Dalzell dec.

To be Brigade Majors. Capt. J. Home, 60th N.I.; Capt. D. D. Anderson, 29th ditto; Capt. A. Shuldham, 30th ditto; Lieut. H. Hay, 2d L.C.

Lieut. G. R. Crommelin, 1st L.C., to command escort of resident at Lucknow, in room of Capt. R. Home resigned.

Mr. H. De W. Cockburn admitted to artil., and prom. to 2d-lieut.—Messrs. W. C. Hicks, J. L. Taylor, W. E. Andrews, W. Frederick, J. King, J. Wood, H. W. Leacock, G. Timins, J. C. Macleod, H. H. Hill, A. Mackenzie, and F. Seaton, admitted to inf., and prom. to ensign.

Capt. H. Ross, 42d N.I., to officiate as fort adj. of Arracan; date 2d May.

*Fort William, June 17.—*The Right Hon. the Governor-General in Council, in pursuance of orders of Government under date 13th May, directing two extra regiments of light cavalry to be added to establishments, is pleased to make the following promotions, transfers, and postings of European officers. The officers now promoted are to rank from 13th May 1825.

Light Cavalry. Sen. Lieut. Cols. A. Cumming and A. Watson to be lieut. cols. com. for augmentation. Majors W. Dickson, J. Kennedy, S. Reid, and W. Harper to be lieut. cols.

6th Extra Regt. Major J. Duncan, from 22d regt.—Capt. C. C. Smith, from 1st. E. R. W. Stirling, from 45th regt. C. A. Munro, from 13th. J. Johnston, from 48th. J. R. Stock, from 61st.—Lieuts. A. Farquharson, from 6th. James Bunyon, from 1st. H. Mackenzie, from 17th. A. Spens, from 5th. J. White, from 49th. N. J. Cumberlege, from 69th. A. Charlton, from 48th. H. N. Worsley, from 14th. W. D. Kennedy, from 25th. G. W. A. Nares, from 19th.—Ensigns M. Huish, from 67th (4 vacant).

(For formation of 7th, 8th, 9th, 10th, 11th, and 12th Extra Regiments, see our last number, p. 700).

N.B. By augmentation of two regts. of L.C. and six of N.I. to estab., the following officers become entitled to benefits of off-reckoning Fund:—

Cavalry. Lieut. Col. Com. J. Nuthall and M. Fitzgerald.

Infantry. Lieut. Col. Com. P. Littlejohn, J. Shapland, W. Casement, M. White, W. Croxton, and J. R. Lumley.

Lieut. J. Heaver, 16th N.I., transf. to invalid estab., and Capt. W. Bayley, 34th ditto, to pension estab.

Head-Quarters, June 28.—Brev. Capt. and Lieut. Jones to be adj. to left wing of 5th regt., in room of Lieut. Spens, app. adj. to 7th extra N.I.

34th Regt. N.I. Lieut. J. T. Croft to be adj., v. Cowley rem. to 35th regt. Lieut. R. Angelo to be interp. and quart. mast., v. Marshall rem. to ditto.

35th Regt. Lieut. C. W. Cowley to be adj., v. Croft rem. to 34th regt.

36th Regt. Lieut. J. R. Troup to be adj., v. Barstow rem. to 37th regt.

37th Regt. Lieut. J. A. Barstow to be adj., v. Lloyd rem. to 36th regt. Lieut. C. R. Bellew to

be interp. and quart. mast., v. Troup rem. to 36th regt.

1st L.I. Bat. Ens. R. Nelson, 36th N.I., to be adj., v. Steele prom.

Sappers and Miners. Lieut. J. Thomson to be adj.

Pioneers. Capt. J. Wilkie, 8th N.I., to be commandant, v. Swinton.

8th Local Horse. Loc. Lieut. J. M. Turnbull to be adj., v. Comyn who resigns situation.

Assist.surg. Stenhouse, attached to 38th N.I., to repair to Lohargong and afford medical aid to troops at that post during absence of Assist.surg. Smith.

June 29.—Assist.surg. J. Smith, at Chunar, to do duty with 8th extra N.I. at Asimgurh.

Fort-William, July 5.—Messrs. J. C. Hannington, R. Ramsay, C. Corfield, F. Streatfield, W. D. Nash, R. S. T. Cunningham, F. W. Burroughs, A. H. Shepherd, and W. B. Holmes, admitted to inf., and prom. to ensign.

July 8.—*16th Regt. N.I.* Ens. J. M. McGregor to be lieut. from 1st July, v. Heaver transf. to inv. estab.

34th Regt. Lieut. J. T. Croft to be capt. of a comp. from 1st July, v. Bayley transf. to pension estab.

Capt. Shuldham, 30th N.I., to be a dep. assist. adj. gen. on estab., v. Frye app. to com. of 12th extra regt.

Brev. Capt. W. Ramsey, 41st N.I., to be fort adj. of Delhi, v. Anderson app. a brig. maj. on estab.

Maj. F. Walker, 65th N.I., to command 12th or Rampoorah local bat., v. Hamilton prom.

Assist.surg. R. Shaw to perform med. duties of civil station of Shahabad, v. Simms.

Assist.surg. W. W. Hewett to be 2d assist. gar. surg. of Fort William, v. Shaw.

Ens. W. H. Campbell doing duty with 28th N.I., permitted to resign service of Hon. Comp.

Capt. D. McLeod, corps of engineers, to be superintend. of Nizamut buildings at Moorshehabad, v. Buxton dec.

Corps of Engineers. Lieut. J. F. Paton to be capt., v. Smyth retired.

Head-Quarters, July 2.—*Removals and postings in Artillery.* Capt. H. J. Wood from 2d comp. 1st bat. to 1st troop of 3d horse brigade, v. Roberts. Capt. C. H. Campbell from 10th comp. (6th or) Golundaz bat. to 2d comp. 1st bat., v. Wood. 1st-Lieut. T. B. Bingley, from 4th troop 3d horse brigade to 1st troop 2d horse brigade. 2d-Lieut. H. De Waal Cockburn (lately arrived) to 1st comp. 5th bat.

Lieut. Bradford to act as adj. to 1st L.C. during absence of Lieut. and Adj. Thornton, proceeding on duty to Cawnpore.

7th Regt. L.C. Lieut. F. Angelo to be adj., v. Hunter removed to 1st extra regt.

Assist.surg. B. Bell appointed to med. charge of 62d regt.

2d-Lieut. Boileau, of eng., appointed to corps of sappers and miners at Cawnpore.

July 4.—Capt. Hemming, H.M. 44th regt., to be dep. judge adv. gen. to eastern div. of arkly; date 11th March.

July 5.—Assist.surg. Toke posted to 11th extra regt. at Ghazepore.

Assist.surg. Stenhouse posted to 4th extra regt.

July 6.—Capt. G. B. Bell, 68th N.I., to act as maj. of brigade to station of Barrackpore, as a temp. arrangement.

FURLOUGHS.

To Europe.—June 3. Capt. C. C. Chesney,artil., for health.—13. Capt. Eyre, royal regt., for health.—17. Quart. Mast. Coates, 54th foot, for health.—July 1. Ens. R. K. Meares, doing duty with 2d Europ. regt., for health.—July 8. Lieut. R. P. Fulcher, 67th N.I., for health.

To China.—June 17. 1st-Lieut. A. Campbell, artil., for twelve months, for health.—24. Lieut. J.

J. Whiteford, 65th N.I., for eight months, for health (via Singapore).

To Penang.—July 8. Capt. H. Davidson, 30th N.I., for twelve months, for health (also to visit Malacca and Singapore).

FROM HIS MAJESTY'S FORCES.

To Europe.—May 30. Lieut. Stewart, 47th foot, on private affairs.—June 6. Lieut. Berham, 45th foot, for health.—24. Assist.-surg. Campbell, 11th lt. drags., for health.—Capt. Heatley, 47th foot, for health.—July 4. Ens. Furlong, 20th foot, for health.—7. Capt. Anderson, 45th foot, for health.

To Ceylon.—May 30. Capt. Hilton, 45th regt., for two months, on private affairs.

MISCELLANEOUS.

GAIETIES.

Boitacannah Performance.—The theatre at Boitacannah afforded a great treat on Friday evening last, in Cumberland's Comedy of "The Jew," and the ballet of "The Spanish Wedding." In the representative of the Jew we had an amateur who has frequently strutted his hour upon the stage; this character seems to be his peculiar forte, and we question if his performance of *Sheva* can be excelled, even by the great talent of our Indian Drury. The accent, the dialect, and appearance, accorded so much with the character of an Israelite, that it appeared doubtful to the mind that the person was any other than a rich money-searching son of Judah. Though the thirst for lucre was the ruling principle of his mind, he had the consolation, in the evening of his days, to reflect, that he had hoarded up, for the son of his protector and friend, *Don Carlos*. There is something so peculiarly characteristic, in the Jew which Cumberland has drawn, of the national traits, and yet of the honesty and uprightness of the land in which he lived, that we cannot but admire it throughout. The representative was successful in every scene, and drew forth reiterated bursts of applause from the audience. *Sir Stephen Bertram*, though much out of the line of the amateur who presented it, was supported in a creditable manner. *Frederic* seems improving; his last night's performance was pretty tolerable, considering the nature of the character. *Charles Radcliffe* appeared not in good spirits; but in saying this we do not mean to attach censure to his representation. *Saunders'* droll figure excited much mirth; and, with regard to *Jabal*, we think he monopolizes all the applause of the audience the moment he enters. As to the female part of the performers, *Mrs. Radcliffe*, was pretty respectable; every thing considered, *Eliza Radcliffe* did justice to the character, only now and then we thought her rather cool for the young and winning lover. *Mrs. Goodison* looked rather too young for the personification of an old widow, and rather too sprightly; but, now-a-days, one would rather appear young than old. *Dorcas*, whom we

had almost forgot, was maintained, in appearance and manner, respectably.

To the foregoing piece succeeded the ballet, in which was introduced the dance in wooden shoes, which went off with general eclat, as did the fancy dance. "The Spanish Wedding" went off with its usual success.

We are glad to find that the managers have attended to the hint thrown out on a former occasion, and have introduced a punkah, which was a great desideratum; if it be practicable, and another can be hung, it would, we think, contribute the more to the comfort of the audience.—[*Hurk.*, May 17.

Chowringhee Theatre.—The frequent successful representation in England of the comedy of "Pride shall have a Fall," attached a good deal of interest to it among our play-goers here, and, it is possible, attracted a much larger audience to the theatre on Friday night than any other comedy would have done. But, unfortunately, the heat of the weather, or some other cause, threw a damp upon the amateurs and the audience; the latter consequently were, in a great measure, disappointed, of which disappointment, the great cause, no doubt, was the heat of the weather.

Count Ventoso, half noble and half merchant, fretful, old, bustling, and complaining, was in the hands of an amateur well known under the appellation of the "Father of the Calcutta stage," and he was irresistibly comic, forming a strong contrast to the general dulness of the play. In the scene, particularly where he attempts, urged on by his wife, to address the supposed prince, he kept the house in a roar, and many of his jokes and puns were given in that dry humour which cannot fail to please. *Lorenzo* was by the amateur who performed *Brutus*, *Octavian*, &c. and was done in his usual excellent style. The *Colonel Pistrucci* was pretty good. *Major O'Shannon* had but little to do, and *Cornet Carmine* rather overacted his part. Few characters have been performed better than that of *Toronto*, the radical orator of the gaol, and afterwards the impostor prince. His matchless impudence, his unabashed effrontery when detected and exposed, were depicted with much skill, and reflect much credit upon the judgment of the amateur, who in no case "o'erstepped the modesty of nature." The *Gaoler* was very well performed, and the subordinate characters did as usual, except *Laxaro*; the part of the *Countess*, a line of character new to the performer, was one in which she acquitted herself very well. *Victoria* was what she always is; and the remaining female performer, on this occasion, was not only remarkable for her good-natured smiles, but also for the excellent manner in which she acted. Though last, the serenaders ought

not

not to be forgotten. Great credit was due to them as to the other amateurs, whose exertion, it is to be hoped, will not have again to contend against the effects of such a warm night as that of Friday last, which could not fail to have a paralyzing effect both on them and their audience.—[*Cal. John Bull*, May 30.

CIVIL SERVICE ANNUITY FUND.*

We have much satisfaction in stating, upon unquestionable authority, that of 361 civil servants in the country, 311 have desired to subscribe to the Civil Service Annuity Fund. Only eight have declined to contribute, and the answers of forty-two (of whom eighteen are at the Cape) have not been received. Our readers will bear in mind, that the Civil Service Annuity Fund was to be established, provided two-thirds of the service consented to contribute to it. That the terms prescribed have been agreed to by so large a proportion of the service, affords incontestable proof that the liberality of the hon. the Court of Directors on the occasion is properly appreciated.—[*Ind. Gaz.*, July 11.

FEMALE EDUCATION.

The fourth report of the female department of the Bengal Christian School Society exhibits a very gratifying picture of the proceedings of this truly benevolent institution. The increase of schools from six to twenty, and of scholars from one hundred and fifty to between three and four hundred, is the best proof of the success of its exertions, and the best claim it can urge to a continuance of public support and patronage, of which we cannot doubt that it will receive a liberal share, while the labours of Christian philanthropy are respected amongst us.—[*Cal. John Bull*, July 5.

TAME LIONS.

We understand that a gentleman, a passenger in the ship *Lady Campbell*, has brought with him a pair of young lions from the Cape of Good Hope. They are so tame as to admit the familiarities of strangers without evincing the least sign of ferocity. They are intended, we believe, to be presented to the Governor-General, and will, no doubt, eventually be placed in the menagerie at Barrackpore, where they will, we presume, be visible to those who wish to see them. These animals are of the twenty-fifth litter of the pair possessed by M^r. Valette, of the Cape; a circumstance which would appear to be against the correctness of the belief inculcated by some naturalists, of the infelicity of some of the feline race.—[*Ind. Gaz.*, July 11.

* See vol. XX. p. 250.

ORIENTAL LITERARY SOCIETY.

Among the new institutions rising around us is a Literary Society among the class of Indo-Britons: its existence, however, has only been announced to the world by some of its members complaining, through the press, that a resolution had passed, forbidding the proceedings at its establishment from being published. We are not a little surprised, we confess, at this resolution; as, of all subjects, the institution of a Literary Society seems a most legitimate object of publicity; and it is certainly unfortunate, for the fair fame of the literary association, that its labours should commence in controversial discussion on such a point. But while we regret this circumstance, we are not among the number of those disposed to ridicule the attempt of this class of British subjects to attain among each other the means of enlarging their knowledge of literary and scientific subjects. We see this attempt with pleasure; and are willing to hope, that although the first step appears to have been at variance with that liberality and openness which ought to distinguish all literary undertakings, the further progress of the "Oriental Literary Society" will be creditable to its projectors, and calculated to promote the important objects which it has, no doubt, in view.—[*Cal. John Bull*, May 30.

[This Society has been adverted to in a tone of ridicule in the *India Gazette*, which has led to some discussion, of rather an angry nature, in the Calcutta prints.]

A BHEESTEE'S PETITION.

The Humble Petition of Sadoo, Dirwan, your humble Servant and Bheestee.

Humbly Sheweth,—That your petitioner did work, with bag upon shoulder, for to bring water for your worthy worship at your house, for washing every thing, and putting water in gamlah and all jars; and your worship's Sircar not paying to your servant and humble petitioner his wages for one month and for eighteen days, which your worship will please to order the Sircar to discharge poor petitioner's salt for the amount due to him for the above period, and your petitioner, as in duty bound, will ever pray for your health, long life, and prosperity for ever.—[*Ben. Hurk*.

CABUL.

Surdar Yaar Mahomed Khan is at Cabool, who, having placed Hubeboolla Khan under arrest, has taken measures for the permanency of his own authority. Shah Mahomood has invested himself with the dress of a Durveah, and lives in retirement from the world at Herat. Kaman is in possession of Herat, and is said to have intimated to the Afghan Chief that

he had no view beyond that territory, with which he was well satisfied.—[*Dehli Ukkhar*, June 27.

THE SHAKSPEARIAN MONT ROULANT MILITAIRE.

Whatever doubts may have existed as to the stability of this experimental bridge, they must yield to the test this extraordinary fabric was put to on Tuesday night, during the great severity and long duration of the North-wester, which has otherwise done much mischief to every thing within its reach, and even less exposed to its fury than the rope bridge, standing, as it does, quite unprotected in the middle of the race-course; and, what is still more surprising, as we have before stated, is, that all the frame-work is superficial, no part entering the ground, with the exception of half a dozen guy pins at the greatest extremity of either end; that is, forming a radius of two hundred and fifty feet each way, from the centre of the bridge, or covering a total span of five hundred feet;* the main guys being only of four inches circumference, the others three and a half, similar to the strands of the road-way, which stands perfectly horizontal, rather indeed rising in the centre.

After the storm, numbers went to gratify their curiosity, but none could discover that the slightest alteration or movement had taken place in any part of the machinery. Can there be a stronger proof of the justness of the principles acted upon? though these are opposed by some as contrary to the received maxims of theory.

It is pleasant to see that the bridge is all the lounge, daily gaining on the confidence of the public mind, and that many now sport their steeds across who hitherto thought it dangerous so to do, considering that it is only four feet wide, that the height from the water (which is about seventeen feet, and visible through the bamboo road-way) might alarm their horses. But it is remarkable with how much unconcern and steady sagacity the generality of horses pass over.—[*Gov. Gaz.* April 21.

By one of those expert manœuvres that have ceased to excite our surprise, this novel portable structure, seen in full play at the close of Friday evening, was in the course of that night, notwithstanding the occurrence of a squall and a heavy fall of rain, taken down, and removed from its position over the basin, on the race-ground, where it had been viewed, and tried in

* The guys of the Caranussa Bridge cover 640 feet: the road-way is 320 feet, by 8 $\frac{1}{2}$ wide, the rope-work somewhat stronger.

The span of the Bar Bridge over the Tweed, between the extreme points of suspension, is 470 feet—the road-way 367. Now, if the angles were equal, and the action perpendicular, the span would be 734 feet.

every way during the two past months, and during that time had also been exposed to several very severe gales, which tore up large trees, and levelled many a dwelling, yet not the least impression was made on the rope bridge, even in its exposed situation; although of 250 feet span, and the framing altogether superficial. In England the scheme of this experimental military structure is yet unknown; but we have heard that the original Shakspearian, of which a model was sent home, has already, at Chatham and Woolwich, been considered of great importance as applicable to the military art. The curious foot-bridge, constructed entirely of cane, or ground rattan, of 100 feet span by five and a half, is still standing at Allipore.—[*Ibid.* June 9.

THE SHAKSPEARIAN RUSTIC IN THE LOWER RANGE OF THE HIMALAYA MOUNTAINS.

We learn from a correspondent in these distant regions, that Capt. C. P. Kennedy, assistant political agent, stationed at Subathoo, completed in March last the first of these useful structures, so situated, which, in the opinion of a committee of officers purposely assembled, has been officially pronounced as admirably adapted for mountain torrents, and as, therefore, promising to be of great general benefit to the country at large.

The situation of the one in question is not very distant from Subathoo, and is placed in a most picturesque situation over the river Gumber, running between lofty mountains, hitherto impassable for more than six months in the year.

The dimensions are about 120 feet span by six feet broad. The timber used is cedar and oak; the rope is of a fibre called moongea. These, and good iron, are almost every-where procurable at a cheap rate, and are admirably adapted to the purpose.

The superintendent-general had sent up by land a large-sized model, and some full-sized pattern-pieces, which, together with the plans and drawings, gave every facility to the execution of the work—completed, it is said, at a very trifling expense, yet in the most satisfactory manner, to the great admiration of the chiefs of the protected states and of the inhabitants, who hail it as a boon bestowed by the English Government; and which, from its beautiful simplicity and economy, will disseminate itself in all directions, to the great convenience and safety of the people, and the promotion of commerce, even to the frontier of China.—[*Cal. Gov. Gaz.*, May 5.

SUTTEE.

“I have just witnessed one of those terrific scenes so frequent in, and so peculiar

liar to, this country; I mean that of a Suttee, which took place at Seebpore at eight o'clock this morning: the present case was distinguished by the circumstance that two out of three wives devoted themselves; and that the body had been kept for four days, while the Vedas direct the burning to take place within two days; the delay arose, in some measure, in consequence of the magistrate having yesterday given permission for only one wife to be burnt; but this morning the fatal permission for two arrived amidst the exultations of numberless Brahmins, who, but for the interference of some humane European gentleman, would have proceeded in their work of death on the two preceding evenings, without the magistrate's permission. In this instance one of the women, on the second day of attending the body of the deceased, had endeavoured to escape, but was prevented by the Brahmins, and last evening swooned away from exhaustion, nor did she recover until restoratives had been administered for a considerable time. This morning, upon being led to the funeral pile, one of the women seemed to be completely exhausted, staggering as though some strong drugs had been administered, and would have fallen but for the support of her relatives and Brahmins; the other went through her awful task boldly, reciting some verses, and afterwards almost dragged the weaker and younger one round the pile, which she had previously ignited: they both were hurried round by the attendant Brahmins and assisted to mount the pile; one immediately fell down, embracing the body of the deceased, while the other deliberately placed her garments about her and then lay down. At the remonstrance of a gentleman present, no bamboos were used for fastening them down; they were first covered with light combustibles, afterwards heavy logs of wood were thrown on, so that any attempt to rise must have been fruitless. It appears upon enquiry that the women had been instigated to the dreadful act by the brother of the deceased, who, by taking the remaining widow under his protection, succeeds to the whole of the property. Surely these things call loudly for amendment; nor would it have been difficult, in my opinion, for a magistrate, had there been one near the spot, to have ordered the corpse to be immediately burnt or thrown into the river, instead of putrifying the air for three days: in which case, perhaps, the lives of two fellow-creatures might have been saved."

—[*Beng. Hurk.*, April 30.

PAGETS.

That species of pipe well known here by the name of a paget, appears to be getting more and more fashionable. Among

the exports of the week to Madras, we observe two boxes of pagets, which would imply that our brothers, the Mulls, are increasing in fondness for fumigenous refreshment. To such of our Mofussul readers as may never have seen a paget, it may be proper to explain that it is a commodious kind of cigar pipe. It consists of a silver bowl, tapering to a kind of small apertured funnel, into which the lighted cigar is inserted. The bowl of the pipe may be filled with common water or rose water, through which the smoke is inhaled; which passing through the water is divested of its acridity, and, thus ascending through the tube or pipe connected with the silver bowl, finally enters the scientific jaws of the erudite smoker, where it produces those indescribable and ecstatic sensations which tobacco-smokers only know!—[*Ind. Gaz.*, June 20.

PRICES OF COMMODITIES AT ARRACAW.

June 17, 1825.

Salmon.....	Rs. 10 per keg.
Green Tea.....	8 per lb.

THE WEATHER.—SICKNESS.

Perhaps there never was a season in which the weather has been experienced to be hotter or more oppressive than the present one. This has been peculiarly the case at night, when most people, we have

reason.

reason to suppose, have been deprived of their natural rest by the extreme heat.

Within the last fortnight sickness has prevailed to a greater degree than formerly, and several cases have been observed, we believe, exactly resembling the epidemic that prevailed in June and July last year throughout Calcutta and its environs. Prickly heat, too, is much complained of, as excessively troublesome.

We regret extremely to state, that among the sufferers by sickness are the Governor General, and his Exc. the Commander-in-chief; but we have reason to believe that they are both considerably better, and may, ere long, be expected to be restored to their usual good health.

We hear that the Governor General is about to take a short cruise on the river for the benefit of change of air: his lordship's family and staff will bear him company. The trip, we trust, will be attended with those beneficial results to his lordship's health which are expected from it.—[*Ind. Gaz.*, June 20.

MR. MOORCROFT.

Extract from the Delhi Ukbar, of the 27th June 1825—

“At the present time, a person of the name of Mahomed Ali has come to Delhi for the transaction of some business on the part of his Majesty Shah Shooja-ool-moolk. From him it has been learnt, that Mr. Wm. Moorcroft, Saheb, had arrived at Bokhara, and having visited Meer Hyder, the king of that country, presents had been mutually interchanged. That gentleman remained forty days at Bokhara, but could not obtain such horses as he wished; however, he purchased ten or twelve very fine horses, and then took leave:—and that a person had lately arrived from Cabool who stated, that it was reported from Cabool that the aforesaid Saheb had arrived at Khoollum, and most likely by the present time he must have arrived in Cabool.

DEATH OF SIR DAVID OCHTERLONY.

It is with regret we have to record the death of Sir David Ochterlony, which melancholy event occurred at Meerut, on the 14th July. The *Bombay Gazette*, speaking of him, justly says, “As a public character, we are not aware of his parallel in the annals of British India. During a most active service of forty-seven years, in the double capacity of statesman and soldier, his unremitting exertions and unerring judgment contributed largely to the stability of Government and the prosperity of the country.”

[A memoir of this gallant officer will appear in our next number.]

SHIPPING.

Arrivals in the River.

June 30. *Glimore*, Laws, from London.—July 6. *Coromandel*, Boyes, from London.—7. *Crown*, Pinder, from Liverpool.—10. *Marquis of Lansdown*, Heathorn, from San Blas and Batavia.—14. *Lord Suffield*, Dipnal, from London.—*Madras*, Fayer, from London.

BIRTHS, MARRIAGES, AND DEATHS.

BIRTHS.

May 25. At Sultanpore (Benares), the lady of Lieut. E. M. Blair, 5th L.C., of a son.
 June 15. At Chowringhee, the lady of John McKensie, Esq., of a daughter.
 19. At Muttra, the lady of Lieut. H. Grastin, 10th N. Cav., of a son.
 20. At Moxodary factory, Jessore, the lady of Chas. Omon, Esq., Indigo planter, of a son.
 27. In the Durrumtollah, Mrs. M. Meyers, of a son.
 — At Ballygunge, the lady of Lieut. G. S. Lawson, artillery, of a daughter.
 29. At the new mint, the lady of Capt. McLeod, of engineers, of a son.
 July 1. The wife of Lieut. J. W. J. Ouseley, Arabic professor in the college of Fort William, of a daughter.
 — Mrs. E. Bull, widow of the late Mr. J. Bull, clock and watch maker, of a daughter.
 2. At Entally, Mrs. Grigg, of a son.
 — Mrs. J. Cunningham, of a son.
 4. The lady of Lieut. C. Fowle, 65th N.I., of a son.
 6. At Garden Reach, the lady of J. R. Best, Esq., civil service, of a daughter.
 12. The lady of Capt. Goate, H.M.'s 87th regt., of a son.
 13. Mrs. M. A. Paul, of a son.
 16. Mrs. Crichton, of a daughter.
 17. The lady of F. P. Strong, Esq., of a daughter.
 Lately. At Purneah, the lady of Lieut. and Adj. Graham, of a son.

MARRIAGES.

June 4. At Saharunpore, Lieut. John Fisher, 23d N.I., and Adj. of the Serampore Bat., to Miss L. Vincent, third daughter of the late Rev. J. Vincent, chaplain on the Bengal establishment.
 25. Mr. J. Biddall to Miss M. Han, only daughter of the late T. Han, Esq., of Cossim Bazar.
 July 2. At St. Jehn's Cathedral, C. R. Barwell, Esq., of the civil service, to Ellen, second daughter of the late R. Fulcher, Esq.
 4. At Midnapore, J. I. Harvey, Esq., of the civil service, to Elizabeth Eleazar, eldest daughter of W. Wiggan, Esq.
 9. At St. John's Cathedral, Mr. J. Jones to Miss T. De Souza.
 16. Mr. Joakim de Sants, 2d inters. of the court of requests, to Ann, second daughter of the late T. Andrews, Esq., Chitpore Road.
 — At the Cathedral, Capt. J. R. Stock, of the 6th Extra regt. N.I., to Miss Susan Chilcot.

DEATHS.

April 1. At Pan Lang, Capt. P. Forbes, H.M.'s 47th regt.
 15. At Rangoon, Lieut. Williamson, H.M.'s Royal regt.
 May 15. At Rangoon, Lieut. E. Codd, H.M.'s 47th regt.

 — At Arracan, Assist.-surg. Jasper Wilson, attached to Bengal artillery, and doing duty with H. M.'s 54th foot.

3. "We have derived the most sincere satisfaction from the foregoing communications. We consider Sir Thos. Munro to have evinced the same high public spirit and ardent zeal to promote the interests committed to his charge on the present, as on all past occasions throughout his long and honourable course of public service. As no arrangement has yet been made for the appointment of a successor to the Governor of Madras, we are happy to signify to you our unanimous desire to avail ourselves of an extension of Sir Thomas Munro's services in that high station, at a period when his distinguished talents and peculiar qualifications cannot fail of being eminently beneficial to the country under your government, as well as to our interests; and we have accordingly unanimously resolved to abstain from nominating any successor to Sir Thomas Munro, until we shall have received from you an acknowledgment of this communication and an intimation of his wishes in consequence.

4. "With the view of making known to the service and to the public the sentiments which we entertain regarding Sir Thomas Munro, we direct that this despatch be published in the Government Gazette. We are, &c."

London, 10th Dec. 1824.

LAW.

SUPREME COURT, JULY 6.

The sessions commenced this day. The new chief justice delivered his first charge to the grand jury; in the course of which he passed many encomiums upon his learned predecessors, and expressed his hope and prayer that, by following their example, the Supreme Court might continue to enjoy the respect and confidence of all its suitors. His lordship added—

"With respect to the latter object, in the novel and unprecedented situation in which I now find myself, an almost entire stranger to the country, its inhabitants, its manners, and its usages; wholly dependent upon my own judgment, and without the benefit of the assistance or co-operation of either of my colleagues, I cannot help feeling, at present, more than ordinarily anxious. I am well assured, however, that as far as regards the usage and practice of the court, I may, and I do, therefore, with perfect confidence, rely upon the candour and liberality of the members of the profession, with whom I shall have the happiness to be here connected; not merely that no undue or unfair advantage will ever be taken, the bare suspicion of which, I can assure them, never once entered into my thoughts; but that I shall derive from them every aid and assistance which, consistently with their duty to their clients, their local experience will enable them to afford.

Madras.

GOVERNMENT GENERAL ORDER.

SIR THOMAS MUNRO.

Fort St. George, May 10, 1825. — In obedience to the commands of the hon. the Court of Directors, the hon. the Governor in Council is pleased to publish the following despatch received from the hon. Court.

Our Governor in Council at Fort St. George.

Par. 1. "Our last letter to you in this department was dated the 8th inst.

2. "Our chairman has acquainted us that he has received from the Governor of Fort St. George, two communications under dates the 3d March and 19th July last, in both of which Sir Thos. Munro states the reasons which would have induced him to have withheld the intimation of his wish to be relieved from the office of Governor of Madras, made known to us in his address of September 1823, and expresses his intention to remain till the arrival of his successor. The right hon. the President of the Board of Commissioners has likewise made known to our Chairman, a letter to the same effect, which he received from your president, under date the 8th July last.

afford. In what I am now saying, let me not for one moment be supposed as wishing, in the slightest degree, to restrict the utmost freedom of speech or argument, in the discussion of the cases which may now come before us, beyond those rules of practice which, in order to ensure regularity of proceeding, must be adopted and adhered to by every court of justice: well satisfied, as I am, and ever have been, that a bold and enlightened advocate is not merely one of the best safeguards to the purity of justice, but the best friend and most valuable assistant to those who have to administer it. Whatever, therefore, may be thought conducive to the interests of the client, or as tending to correct any supposed erroneous impression of the bench, and that can be urged, consistently with the established rules and order of proceeding, I trust will ever be so with the utmost freedom, and without the slightest reserve. For myself, I am sure, and from the personal knowledge which I have of my colleagues, I think I may with equal certainty for them say, that every argument so urged will always receive the consideration and attention it is entitled to; and if, after all, the court should come to different, and perhaps an erroneous conclusion, (for who amongst us is free from error?) it will, at least, never be for the want of an anxious and earnest endeavour, on our parts, to arrive at the real truth and justice of the case.

“Mutual forbearance, and mutual indulgence, at times, we shall all of us require, and, I have no doubt, readily give to each other.”

The calendar contained only two cases; one a native accused of uttering counterfeit money; the other a European soldier charged with homicide. The learned judge remarked that the latter prisoner should have been tried by a court-martial on the spot (120 miles from the presidency), agreeably to the Act 4, Geo. IV. c. 81.

SHIPPING.

Arrivals.

July 27. *Windsor*, Heavside, from London and Bombay.—Aug. 11. *Atlas*, Hine, from London.

Departures.

July 19. *Madras*, Fayer, for Calcutta.—22. H.M. *Larne*, Kingcombe, for Penang and N. S. Wales.—30. *General Palmer*, Truscott, for London.

Bombay.

GOVERNMENT GENERAL ORDERS.

LATE CHIEF ENGINEER.

Bombay Castle, April 7, 1825.—The Hon. the Governor in Council is pleased to permit Lieut. Col. Com. William Brooks, chief engineer, to return to Europe under the existing regulations, retaining the office of chief engineer until the period of his embarkation.

The services of Lieut. Col. Brooks have been acknowledged with approbation by this Government in General Orders bearing date the 29th Nov. 1811, and again on the 13th Oct. 1817, when Lieut. Col. Brooks vacated the office of military auditor general, on his succession to the situation of chief engineer; and in reviewing the conduct of this officer in that important department, as well as during his whole services of forty-two years, the Governor in Council cannot employ more honourable and appropriate terms of praise than those of a former order, which points him out as having served the Hon. Company with assiduity, zeal, ability, and unimpeached integrity.

ALLOWANCES TO BRIGADIERS.

Bombay Castle, July 16, 1825.—The Hon. the Governor in Council is pleased to authorise the whole of the brigadiers on this establishment to draw, from the first of March last, the scale of allowances sanctioned by the Court of Directors for brigadiers of the first class.

DUTY OF PAYMASTERS.

Bombay Castle, July 21, 1825.—The Hon. the Governor in Council is pleased to resolve that the duty of paymasters in native

native regiments shall be conducted from the first of next month by the quartermaster of each corps instead of the adjutant as heretofore.

CIVIL APPOINTMENTS AND PROMOTIONS.

Territorial Department.

Aug. 11. Mr. A. N. Shaw, deputy collector of sea-customs in the Concan.

MARINE PROMOTIONS.

July 7.—Capt. Lawrence to be commodore on Surat station for ensuing season, in succession to Capt. Tanner.

30. Sen. Midsh. H. Warry to be a 2d-lieut., v. T. B. Davis dec.; date 15th July.

FURLOUGHS.

To Europe.—July 1. Corn. T. B. Hamilton, 1st L.C., for health.

To Sea.—July 14. Lieut. N. Strong, 1st Europ. regt., commanding Resident's escort in Persian Gulf, for six months, for health.—2d. Ens. A. D. Malcolm, 3d N.I., for six months, for health.—Aug. 10. Lieut. J. Liddell, 23d N.I., for six months, for health.—Assist. surg. W. Taylor, dep. med. storekeeper, north div. Guzerat, for six months, for health.

LAW.

BOMBAY SESSIONS.

The sessions commenced on 25th July before Sir E. West and Sir C. Chambers.

Not more than thirteen or fourteen cases came

came before the court, of which only three were of importance. A conductor, named Stoop, was tried on an indictment for the murder of his wife, found guilty, and sentenced to be executed.

An artilleryman, for the murder of his child; but a verdict of manslaughter was returned in consequence of the blow, by which the child died, having been intended for its mother. He was sentenced to imprisonment for one year, and to pay a fine of one rupee.

The third was a constable, for assaulting and confining a female named Maria Antonia. His sentence was imprisonment for two years, and a fine of 500 rupees.—[*Bom. Gaz.*]

MISCELLANEOUS.

THE BISHOP OF CALCUTTA.

The Bishop of Calcutta, accompanied by Archdeacon Barnes, left this presidency for Poona on Monday, the 27th June, and returned here again on Friday, the 8th July. On the 2d his Lordship held a confirmation at Poona, and on Sunday, the 3d, he consecrated the new church of St. Mary; on which occasion, this zealous prelate preached a most impressive and appropriate sermon to a very numerous congregation. The Bishop was prevented, by a slight indisposition, from participating in the hospitality of the station, which also precluded him from seeing much of the late capital of the Peishwah, or of the surrounding country. On this day the Bishop will proceed to Tannah, in order to consecrate the church there on Sunday, the 17th. It is his Lordship's intention, we understand, if circumstances permit, to proceed to Ceylon early in the ensuing month, and from thence to return to Calcutta. It is now more than twelve months since the Bishop left Calcutta, and though he has since been constantly engaged in personally visiting the principal stations under that presidency and Bombay, he can scarcely be said to have as yet visited half of his immense diocese; for, in addition to the Company's territories, we learn that the archdeaconry of New South Wales, and twenty-five chaplains, in that increasing colony, have lately been placed under his superintendence as Bishop.—[*Bom. Cour., July 16.*]

LIEUT. DAVIS, OF THE COMPANY'S MARINE.

On the night of Thursday, the 14th inst., about half-past ten o'clock, as Lieut. J. B. Davis, of the Hon. Company's cruiser, *Nautilus*, was proceeding towards his vessel from the Apollo pier, in consequence of some difficulty in setting the sails, the tiller of the boat broke in his hand, when he was precipitated backwards from the washboard, on which he was

seated, never to rise again. Every possible search has been made for the body, but without success.

All the ships in the harbour presented a funeral display of their colours during the whole of the following day, as a mournful indication of the melancholy event which has deprived the service of an esteemed and amiable young officer, whose untimely fate must ever be sincerely deplored by his comrades and friends.—[*Ibid., July 23.*]

AFFAIRS TO THE NORTHWARD.

We have received letters during last week from the northern frontier, which describe every thing as quiet at present in that quarter. It was reported, however, that the Scindians were collecting a large force, which, it was rumoured, was destined for Cutch. This we cannot believe. The Government of Scind, from the peculiarity of its structure, and the character of those over whom it rules, is, perhaps, one of the weakest in Asia, and we do not think it would risk a quarrel with any of its neighbours. The power of the state, divided among the different Ameers, must want consolidation, strength, and unity of action, while the only troops they can bring into the field are composed of the feudal and unruly tribes of Beloochistan, whom it would be impossible to keep together for any time, and who are said not to have any great liking for their present niggardly rulers, whose only object, since their accession to power, has been to amass money, in the pursuit of which, we believe, they have been remarkably successful. The Ameers must also feel not a little suspicious of their powerful neighbour Runjeet Sing, who has been making encroachments on their northern frontier, and who is said to cast a longing look to the immense treasures they have amassed during the last thirty years. We may, therefore, safely predict that no more laurels will be reaped for the present by our troops to the northward.

The letters we have alluded to are full of sad complaints on a subject of no small importance to those who are stationed on the borders of the thirsty desert, themselves apparently as thirsty. There is nothing but murmurings and sorrowful anticipations from the banks of the Indus to the mouths of the Banass. There had been a long-continued and universal drought along the whole line of our northern frontier; and at the date of our letters there appeared to be no hope of relief. There had not only been a deficiency of that simple element which is more particularly necessary for the support and nourishment of the vegetable world, but also a great scarcity of some other fluids which exposure to hot winds and

and a vertical sun render essential for the purpose of sustaining the strength and reviving the drooping spirits of the sojourners of the arid and isolated stations on the borders of Scind. In fact, the usual supply of that beverage which will immortalize the name of Hodgson, had not been received, while the unfavourable accounts which had arrived relative to the state of the Bombay godowns, had sickened every heart and saddened every countenance. This was certainly a miserable state of things; but we sincerely trust that an abundant fall of rain, and a copious supply of pale ale, with other good things to boot, have, ere this, dispelled the gloom which appears to have invaded the northern boundaries of our rising establishment.—[*Bom. Cour.*, June 18.

Native accounts from the northward mention that the Scindians had collected a large force at Hymaka-bazar, which is on the north side of the Bunny, or Runn, and about thirty miles distant from Loony, on the Cutch frontier. Parties of freebooters, supposed to be from this force, had again made their appearance in Cutch, and plundered two villages, the parcels of which they carried off. By the last accounts, rain had fallen at Mandavee, so that we may suppose there has been a general fall all over the northern districts.—[*Ibid.*, July 9.

On the 23d ultimo, accounts were received at Booj of a party, consisting of about 200 Meyannas, having crossed the Runn into that province. On the same evening, Capt. Sandwith, with a troop of the 1st light cavalry, and the grenadier company of the 18th regt., under Capt. Worthy, marched in pursuit of them. On the following morning, certain intelligence being obtained of their being near the town of Nurra, Capt. S. determined to proceed in advance with the cavalry, and completely succeeded in surprising the marauders, killing thirty of them, and wounding a number more. Our loss was, one havildar and two troopers wounded; and one horse killed, and three wounded. The cavalry on this occasion marched sixty-two miles in less than twenty-four hours, without a man falling in the rear; but, on the contrary, the detachment, on coming up with the Meyannas, was in a high state of efficiency. The infantry marched the same distance in thirty-six hours, leaving only two men behind, though a considerable part of the road was through heavy sand. These are feats, in the way of marching, which, we believe, have seldom been outdone.—[*Bom. Cour.*, July 23.

INDIAN APPOINTMENTS.

The following remarks, signed "A Company's Servant," appear in the *Bombay Courier*, addressed to the editor:
Asiatic Journ. VOL. XXI. No. 121.

"In your last you made some allusion to the apparent determination of H.M.'s ministers, that no Company's servant should henceforth be appointed to any of the Indian Governments. I call the determination *apparent*, for it is impossible to believe that any class of men, however elated with power and popularity, and however fond of patronage, could be so blind or callous to the interests of the country, or so cruelly unjust to a large body of individuals, as actually to adopt the resolution alluded to.

"There is a large portion of wisdom and good sense, and certainly a more than ordinary share of liberality, among those who are at present at the head of affairs, which makes me think that, though perhaps obstinate in a particular instance, they could never intend to adopt a general rule, in all times to come, that no Company's servant, however long and eminent his services, however splendid his talents, however extensive his information, in fact, however well qualified for the appointment, should be allowed to rise to the situation of Governor.

"If ever such a rule be adopted, we may bid farewell to the progressive improvement of India. Exertion will never exist without an appropriate stimulus; and there ought to be no bounds set to the rewards due to high talent and honourable exertion, in whatever class of men these qualities may be found. Should a rule be adopted to exclude all Company's servants from the governments of India, the Roman Catholics at home will have less reason to complain, as they will see a large body of their Protestant fellow-subjects liable to similar disabilities, and precluded from rising to certain situations, not from any suspicions of their possessing opinions and power dangerous to the state, nor from a belief of their want of sufficient talent, integrity, and experience; but that the patronage of the Crown, which is rather cramped in these times of peace, may be bestowed on one of its own servants.

"But I again repeat, I do not believe it was ever the intention of the administration at home henceforth to exclude Company's servants from the Indian governments. Mr. Canning, certainly, on one occasion, gave a kind of pledge to that effect; but the measure of exclusion is so contrary to the liberality which distinguishes his character, and, I may add, to the spirit of the present administration, that when its injustice and baneful consequences are taken into consideration, I am convinced that, if proposed, it will not receive the support of any party in the state."

LAUNCH.

On Monday last, the launch of the Amherst, an eighteen-gun sloop of war, for

for the Company's service, took place at the dock-yard. She is reckoned as fine a specimen as has yet been seen of the class of vessels to which she belongs.—[*Bom. Cour.*, July 23.

CHOLERA MORBUS.

We have received letters from the southern Mahratta country. The monsoon had set in with some violence at Belgaum. The cholera had been raging all over the country, and still continued, though in a diminished degree. At Colapore twelve hundred people were carried off by it in the short period of four days, and its ravages had not entirely ceased. The force at present at Belgaum, which is described as very effective, consists of the 4th Madras light cavalry, a M. G. troop of native horse artillery, a company of Goolandauze, the 1st Bombay European regt., the 23d or Walajabad light infantry, and the 49th regt. Madras N.I. It is stated that the Rajah of Colapore was so sincerely rejoiced on hearing of our successes at Donabew, that he ordered a royal salute to be fired.—[*Bom. Cour.*, June 18.

The cholera has been raging for some time past in most of the districts subject to this presidency, and, in some instances, in a very bad form. H.M.'s Queen's Royals, and 6th regt., lately arrived, have both suffered from it; and within the last few days it has made its appearance among the natives here; but, as yet, the casualties have been but few.—[*Ibid.*, July 9.

We understand that the rains set in at Mhow on the 28th June, on which day there was a very heavy fall, and that there had been subsequently a sufficient supply for the immediate wants of the country. The cholera had also, we are glad to say, greatly subsided.—[*Ibid.*, July 16.

NEW CHURCH AT TANNAB.

On Sunday last, the Bishop of Calcutta consecrated the church at Tannab. His Lordship arrived at Mr. Baillie's house on Saturday evening, and in the morning the compliment of a salute from the fort was paid him. At the usual hour for divine service, the Bishop was met at the door of the church by the principal inhabitants of the place, who presented a petition for the consecration. The petition having been read, his Lordship signified his assent, and congratulated the gentlemen present on their possessing a building for divine worship so singularly elegant and appropriate. The usual consecration service was then performed, and an excellent and very suitable sermon preached by the Archdeacon.

This church, now St. James's Church, at Tannab, was founded on the 1st of March 1824, by the Venerable Archdeacon Barnes, and it is impossible to speak

too highly of the assiduity with which the work has been carried on. The design is purely Grecian, with the addition of an elegant spire; and we believe we speak the sentiments of the most skilful persons who have seen it, when we say, that, as a work of art, this church does the greatest credit to the taste and science of Capt. Tate, the engineer. Situated on the esplanade, it comes in, from whatever point the view is taken, as an additional ornament to a spot, which possesses great natural advantages, and gives a character to the scene eminently adapted to the feelings and associations of Englishmen. We are extremely happy to understand that there is every prospect of this work, undertaken by Government from such creditable motives, being completed at the expense originally estimated, and for a sum by no means calculated to discourage the sanction of similar tokens of the honour which an English Government is desirous of paying to religion.—[*Bom. Cour.*, July 23.

REGULATIONS FOR THE PRESS.

A Bombay Courier Extraordinary of June 9th contains a "Rule, Ordinance, and Regulation, for preventing the Mischief arising from the printing and publishing Newspapers, and Periodical and other Books and Papers, by Persons unknown." It consists of twenty articles. The rule was passed by the Governor in Council of Bombay, on the 2d March 1825, and registered in the Honourable the Supreme Court of Judicature, under date the 11th March.

GAIETIES.

On the 3d Aug. a splendid entertainment was given at Lowjee Castle by Hormuzjee Bomanjee to the mercantile community and all gentlemen in the shipping interest at this settlement. A number of gentlemen of the civil, military, and marine service were likewise present, together with many of the most respectable Parsee merchants; and with the aid of a good band of music, some excellent speeches and appropriate toasts, the whole entertainment passed off with great éclat.

On the same evening, the officers of H.M.'s 2d or Queen's Royal regt. of foot entertained the hon. the Governor and suite, with the principal officers of the staff, at the Mess-Room of the cantonment on Colabah.—[*Bom. Chron.*

SHIPPING.

Arrivals.

July 21. *Lady East*, Talbot, from New South Wales.—Aug. 6. *Asia*, Pope, from ditto.—7. *Ganges*, Mitford, from Liverpool.

Departures.

July 15. *Windsor*, Heaviside, for Madras and China.—26. *Royal George*, Ellerby, for London.

—99. *Inglis, Serle*, for China.—Aug. 11. *Vansittart, Dalrymple*, for China.—13. *Lady Rost, Talbot*, for China.—14. *Farquharson, Cruickshank*, for China.

BIRTHS, MARRIAGES, AND DEATHS.

BIRTHS.

- May 22. At Dharwar, the lady of Lieut. T. Harris, Comg. Sebudoos, of a daughter.
 July 2. At Government House, the lady of Capt. Burrowes, H.M.'s 20th regt., of a daughter.
 15. Mrs. S. J. Cross, of a son.
 19. At Jaulna, the lady of Capt. Gibbings, of a son.
 24. At Ahmedabad, the lady of W. A. Jones, Esq., civil service, of a daughter.

MARRIAGES.

- June 27. At Cochin, Lieut. F. Haleman, 15th N.I., to Miss E. Rodgers.
 July 12. Alex. J. Kerr, Esq., of Penang, son of the late Lieut. Gen. Kerr, of this establishment, to Louisa, second daughter of Lieut. Col. Hough, military auditor general.
 Aug. 1. At St. Thomas's Church, Dr. H. Smith, Bengal medical establishment, to Mary, second daughter of John Moore, Esq., Liverpool.

DEATHS.

- June 14. At Baroda, Caroline Eliza, infant daughter of J. P. Willoughby, Esq.
 21. Washington James, son of James Morley, Esq., aged one year.
 July 3. At Poonah, of the spasmodic cholera, Mrs. E. Aikin, wife of Mr. James Aiken, assist. surg., and only daughter of the late Col. S. Irton of the Madras establishment.
 6. At Bhowdy, on his way to Bombay, for the recovery of his health, Lieut. James Paul, 11th regt. N.I.
 21. Caroline Jane, youngest child of W. C. Bruce, Esq., aged 13 months.
 25. At Surat, Arthur Grant, fifth son of James Taylor, Esq., civil service, aged nine months.
 26. At Poonah, Matilda Frances, infant daughter of C. Ducat, Esq., M.D.
 22. After a short illness, Lieut. Col. Com. T. A. Cowper, chief engineer, on this establishment, aged 45.
 29. At Magazon, the infant son of Mr. J. F. de Jesus.
 31. At Bycullah, Henry John, son of the late Rev. J. Nichols, aged 19 months.
 Aug. 7. James Cooper, midshipman of the H. C. ship *Vansittart*, aged 14.
 — Of fever. Mr. J. M. De Souza, aged 36.

Ceylon.

MR. MOON, OF THE BOTANIC INSTITUTION.

The following tribute to the memory of the late Alexander Moon, superintendent of the botanic garden in Ceylon, appears in the *Ceylon Gazette* of May 7.

Mr. Moon was a striking proof of the efficacy of industry and good sense in overcoming the difficulties of a scanty or neglected education. He was a native of Scotland, and possessed the patient assiduity, and plain, but strong understanding, which are rarely wanting in his countrymen. He had been, in early life, employed as a working-gardener in the extensive establishment at Kew, where he had attracted the attention of those able botanists, the Aitons, who took a pleasure in encouraging his love for botanical science. Your readers are aware that most

of the books in that science are written in Latin, and it became necessary for Mr. Moon, in pursuing that science amidst his labours as a gardener, to acquire some knowledge of that language; he persevered and succeeded, and became so well skilled in his beloved science, that he was recommended by Mr. Aiton to Sir Joseph Banks, when a person was required to succeed the late Mr. Kerr, in this island.

In Ceylon, Mr. Moon found and cultivated a rich field of botany. The beautiful plantations at Slave Island, until they were given up on the change of the establishment, exhibited his taste and industry in their full power; and, on his removal to Kandi, he laid out the garden of Peradenin, which every one who has seen it has admired as a most beautiful specimen of the lovely art of gardening.

But it is to his botanical work on the plants of Ceylon that his name will owe its celebrity amongst men of science. He has, in that work, displayed such a vast quantity of botanical information respecting the plants of the island, as would appear to have required the labours of a long life to accumulate; yet he had not been above five or six years in Ceylon when it was committed to the press.

Stored as he was with information, he was liberal in imparting it; and, conscious as he must have been of his skill, it was impossible for any human creature to be more unassuming, anxious to oblige, and delighting to communicate improvement, he was particularly calculated to disseminate agricultural knowledge amongst the inhabitants of Ceylon, and, in many instances, his instructions have been received and followed by the intelligent natives.

The private character of Mr. Moon may be collected from what has been said of his public department. Modest, unaffected, and unobtrusive, he was, nevertheless, able, from his stores of information, to support his fair proportion of conversation with honourable and independent feelings; he was humble and courteous in his behaviour to his superiors, and kind and equal tempered to all; he was particularly regarded by those who best knew him, and in acts of good-nature and charity was ever ready and forward.

But it is to botanical science that the loss will be most severe; his collections of unclassed genera, and his other additions to the botany of Ceylon are, it is to be feared, not sufficiently matured for publication, and his place will not easily be supplied.

Penang.

COCHIN CHINA MARINE.

We were gratified on Friday evening last, the 13th inst., with a very novel spectacle,

tacle, by the arrival, in our harbour, of his Cochin Chinese Majesty's frigate, *Toy Lang*, mounting thirty-two guns, commanded by *Woyang Wanfang*. On Sunday came in also, his Cochin Chinese Majesty's brig *Bucluang*, *Huong Kongton* commander. These vessels touched at Singapore, where they remained a few days. They were lately built under the superintendence of a Frenchman. The ship is a neat model of a vessel, measuring, we believe, about 350 tons. The hull, masts, &c. are painted in a very fantastic manner.

Our contemporary of Singapore states that the commanders gave it out that trade was not their object, and that they have been sent out by their government to gain nautical and geographical experience, and a knowledge of naval tactics; but it appears they have each a cargo of Tonquin lead and sugar, raw silk, rice, &c.

We are happy to recognize, in the head mandarin, the same person who visited this settlement last year in quality of a supercargo, and who found so ready a sale for the cargoes of four large junks, that he has been induced to return to our port in the expectation of meeting with similar success this season. We trust that the encouragement they will receive by the disposal of their cargoes upon advantageous terms, may be the means of creating a further extension of trade between the ports of Cochin China and this island.

A large Cochin China junk, with a valuable cargo, also came in on Saturday last. This vessel was bound, we understand, for Batavia; but encountering bad weather, or missing her intended port, she made for the straits of Malacca.—[*Penang Gaz.*, May 18.]

COCHIN CHINA.

In our last number we announced the arrival of three vessels belonging to the king of Cochin China. The three mandarines and the commanders paid a visit of ceremony to the hon. the governor, at Suffolk, on Wednesday last, and were received with every mark of attention.

It does not appear they have brought any letters for our government from his Cochin Chinese Majesty; but they are furnished with a commission. They report that several trading junks may be expected here during the present season.

We have no doubt our mercantile readers will be gratified to learn that, in compliment to the king of Cochin China, on the first occasion of his sending two square-rigged armed vessels to this port, and with the view of encouraging and promoting the commercial intercourse between this island and Cochin China, the Government has been pleased liberally to grant a remission of duties upon such articles of

merchandise on board the three vessels lately arrived, as might be liable to duty under existing regulations.

So handsome a compliment will, we trust, have its due effect of increasing the confidence of his Cochin Chinese Majesty, and inducing a reciprocal accommodation to any vessels of our nation visiting the ports of his kingdom for commercial purposes.

The man-of-war junk which proceeded to Tavoy last year, and remained several months in this harbour, had arrived at Singapore. Several of her guns and other warlike stores which had been landed at Tavoy, prior to the arrival of the British force which captured it, were detained, and, we are informed, our Government offered them a handsome supply here in return, which the mandarines did not feel themselves at liberty to accept, and politely declined, with many acknowledgments for the attention to their wants evinced by Government, in supplying them with a pilot, anchors, cables, &c. when the junk proceeded to Tavoy to return the Burman ambassadors.

The mandarines complained much of the ingratitude of the Burmans, and their shabby treatment of them upon their arrival at Tavoy. They expressed a hope that his golden-footed majesty of Ava would not trouble them with any more missions, and added, that any future envoys from him would, in all probability, meet with a rough reception.—[*Ibid.* May 21.]

PROVINCE WELLESLEY.

We have seldom taken notice in our columns of the great improvements going forward in Province Wellesley; but we congratulate our readers, and the community in general, on the benefit likely to accrue from the liberality of Government and the active exertions of the superintendent. We understand that the whole face of that formerly uninteresting, and, indeed, almost unknown district, is entirely changed; that whole tracts of jungle are converted into fertile paddy fields; that with great labour and persevering exertions roads have been cut along the ridges, which run parallel to the sea, at intervals, to a great distance inland, which have been connected by others, formed with much difficulty, through the low marshy ground, so favourable to the growth of paddy. The number of inhabitants, from the disturbances at Quedah, has amazingly increased, and all seem happy and contented under their mild and equitable government. There is no doubt, that in the course of a few years we shall be relieved, by the cultivations of Province Wellesley, from our present dependence on Bengal and the countries that surround us, for our

supplies of rice, &c. and that we shall obtain that indispensable article at a much cheaper rate.—[*Ibid.*, May 25.

MILITARY STORES.

In the Singapore Chronicle of the 14th April, we observe the arrival of the Schooner *Conch*, which touched here. Her cargo consists of warlike stores, destined, no doubt, for Bangkok; to which place very large supplies of arms and ammunition have lately been sent.

The *Harriett*, free-trader, which had touched at Batavia, and was not permitted to land the gunpowder on board, had arrived also at Singapore. We are informed that vessel has brought out 1,600 barrels of gunpowder, which, it is reported, is destined for Siam. So much for the advantages of free trade!

We do not feel ourselves at liberty to make any comments on the above information. We may remark, however, that we have been informed by pretty good authority, that vessels bringing out arms and warlike stores at Singapore from Rotterdam, are furnished with two sets of papers. We cannot perceive any necessity for this, if there is no statute prohibiting the export and import of warlike stores.—[*Ibid.*, May 31.

RAJAH OF QUEDA.

Apprehensions of an invasion from the Quedah shore appear to have subsided at Penang at the date of our latest intelligence. We hear that Capt. Burney had been sent by the Government of Prince of Wales' Island, to ascertain, if possible, the extent of the preparations, and the real views of the rajah in collecting this force; and that he had returned unable to discover the vast navy of prows, said to have been collected and put into commission in his Highness' sea-ports!—[*Cal. John Bull*, June 28.

BUILDINGS IN GEORGE TOWN.

While our harbour continues to be the resort of shipping from all quarters, we are happy in having it in our power to announce many improvements which have lately been effected in our town, for affording facility in landing and shipping merchandise.

Under the able management of the Committee of Assessors, three very substantial and commodious ghauts, faced with hewn granite, have been constructed, directly opposite the three principal streets leading into Beach Street.

A very handsome and convenient jetty, projecting well out, has also, with the aid of liberal contribution from government, been erected under the superintendance of the same zealous and useful association. The new jetty, which is situated between

the fort and master attendant's house, has a broad flight of hewn granite steps at the extremity, along the whole extent of the sea face, upon which persons from on board ship may land at all hours, and goods may be landed or shipped at all times, during the flood or ebb tide.

Many handsome dwelling houses and shops are daily erecting in different parts of the town, especially Beach Street, by Armenian and native merchants. The sons and nephews of the late wealthy merchant, Syed Hussain, whose immense treasures were divided amongst them, have built several elegant houses for their own residence in town, and several extensive ranges of shops and godowns for the accommodation of the Arabs and other foreign native merchants resorting to this settlement at different seasons of the year, also to rent to Chinese and other shopkeepers.—[*Penang Gaz.*, May 31.

Singapore.

BORNEO PROPER.

Several prahus have come in from this quarter already, bringing their usual cargoes, rice, sago, pepper, tortoiseshell, sea slug, camphor, birds'-nests, and seed pearls. The first prahu stated that the Sultan of Borneo and his son, who was joined with him in the administration of the country, were both dead. The mournful news was communicated by the commander, by the expression that "the sun and moon of Borneo had sunk." The commanders of the next two prahus which arrived, stated the facts in a manner less disconsolate and less figurative, reporting that the old sultan had died a natural death; that his son, who succeeded him, had turned out an arch tyrant, making free, to an insupportable degree, with the lives and property of his subjects; that his misconduct had occasioned an insurrection, and, finally, that the Pangerans or hereditary chiefs had seized upon the legitimate culprit, and put him to death by the bowstring. In his room, these king-makers, for so it appears they have always been, had set up his nephew as sultan, to commence a new score of despotism, according to the immemorial usage of the stationary and incorrigible east.—[*Sing. Chron.*, May 12.

SINGAPORE INSTITUTION.

The reputation of the Singapore Institution, and of its learned and zealous supporter, Dr. Morrison, has, within the last fortnight, brought to this place a student all the way from the United States of America, a young gentleman of the name of Hunter, of a highly respectable and opulent family of New York. The object of Mr. Hunter's parents, as we are given to

to understand, is to obtain for him a thorough knowledge of the Chinese language, as subservient to his future mercantile pursuits. We wish every success to this very liberal and enterprising scheme, which becomes the enlightened spirit of the American people, and the magnitude of their commercial relations with the Chinese empire.—[*Ibid.*]

NAVAL INTELLIGENCE.

On the 29th ult. the *signal station* was removed, the flag being hoisted on the easternmost St. John's Island; it is, however, scarce 200 yards from its original position, and now commands a complete view, east and west, of the entrances of the Singapore Straits. The bearings given in the Calcutta directory for entering the roads, will not be interfered with.—[*Ibid.*]

SHIP BUILDING.

We are happy to be able to report that a commencement has been made at this settlement in this important branch of colonial industry. Mr. Swinton and Mr. Temperton, two ingenious and respectable artists, have, within the last twelve months, made some progress in forming establishments for building and repairing ships. Mr. Swinton has a schooner of 40 tons nearly ready to launch, and Mr. Temperton has advanced considerably with a ship of 200 tons. It is probable that a great deal of the abundant timber of this and the neighbouring islands is fit for building vessels, equal in value and durability to fir-built ships; and when our intercourse with Siam is matured, we shall have no difficulty in obtaining plenty of teak timber for the construction of vessels of a higher class. The banks of the river, at the same time, will allow, every where, of the construction of vessels of at least 500 tons burthen.—[*Ibid.*]

INCREASE OF CULTIVATION.

The Chinese are pushing their operations across the island to the straits which separate it from the main, for the culture of gambier, and their track is marked by the tall columns of thick smoke every where to be seen in the interior. The rapid increase of this branch of culture is easily accounted for by the great profits made by the gambier manufactories; but we are a little more surprised to find, contrary to our calculation of the capacities of the island, that the Malays, Bugis, and others, have lately commenced, with a good deal of animation, and with much eagerness of competition for the best lands, the culture of rice.—[*Ibid.*]

DEATHS.

April 20. At the hospital, Mr. R. Brown, chief

officer of the free trader *Aguilar*, of the *Batavia fever*.

21. Lieut. W. Dalzell, 34th regt. B.N.I., aged 24 years, after a lingering illness.

Netherlands India.

The following reflections upon the treaty with the Dutch, and upon their commercial system in the East, we extract from the *Singapore Chronicle*.

“By recent accounts from Java and England, we are sorry to observe that there is very little prospect of the speedy abrogation of those oppressive restraints upon the commerce of Great Britain with the Netherland possessions which have chiefly grown out of the decree of the 3d February, 1824. In Java no favourable change whatever has been effected, in consequence of the new treaty; and it appears to be the opinion in England that the Dutch authorities have still the power of imposing what duties they please, even to the extent of prohibitory ones. In reference to the similar arrangement made for the trade of the two nations in Europe, an English ministerial journal is compelled to make the following extraordinary admission: “we do not mean to disguise from our readers the fact that a general law or tariff may be so constructed as completely to annul the benefit held out to this country by the complaisant language of the agreement.” If this be really true, the commercial arrangements of the late conventions are no better than so much waste paper. They are indeed worse, for they tend to encourage delusive expectations and to distract and perplex all commercial speculation.

“Whatever be the wording of the late treaty, there can be no question but its practical operation is very different at the respective ports of the two nations in India. The import duties chargeable in Calcutta, for example, instead of being raised on Dutch bottoms, will almost invariably be reduced. On Netherland woollens and cottons, the extension of the market for which appears to be so much an object at heart with the Dutch Government, the duties will only be 6 per cent. Even in the case of hollands, the most important article of Dutch trade to India, in whatever direction imported, and although an exciseable commodity, the whole duties will only be 20 per cent. At *Batavia*, on the other hand, the duties on the staple articles of British cottons and woollens have been raised, and virtually since the conclusion of the treaty, from 12 to 25 per cent. in one case, and from 12 to 35 in another. At the same time the duties on the staple article of exportation—coffee, have been greatly enhanced. The effect of these impolitic restraints is exhibited in the manner the most palpable and

and most likely to bring final conviction—the defalcation of the public revenue, which has been their result. In 1817, the first complete year of re-occupation, the custom-house duties of the port of Batavia were 432,109 guilders. In 1818 they had risen to 966,556—in 1819 to 1,365,231—in 1820 to 1,672,265—in 1821 to 1,920,284—in 1822 to 2,100,164, and in 1823 to 2,622,441. The new tariff and enhanced duties having been adopted towards the beginning of 1824, the receipts of the Custom House for that year exhibit, not an increase but a defalcation of 222,498 guilders. Had they increased in the medium proportion of former years, and there was nothing but the excessive duties to prevent it, the revenue of 1824, instead of being only 2,399,943, ought to have been no less than 2,987,396,—so that the loss sustained by the Dutch government by its new system of commercial policy is in reality considerably more than half a million of guilders a year at the port of Batavia alone. It may, perhaps, be imagined, that the defalcation of revenue now referred to may have originated in the depreciation of Colonial produce which is ascertained to have taken place in 1824; but it is evident that such depreciation could not materially have affected the receipts, as the impost levied on the commodities in question is not an *ad valorem* duty, but a duty levied on the quantity, and as we find the export of coffee during the season 1824 not less than 237,869, or only between twenty and thirty thousand piculs less than that of the previous year, while the duty levied was higher by 25 per cent. The difference of the rates of duties charged on colonial produce at the Dutch and British ports is very striking. At Calcutta the duty on cotton, on indigo, on lac dye, will not exceed, at the utmost, 10 per cent. on Dutch bottoms. At Batavia the present duties on coffee are at least twice this amount on British vessels. We conceive also that the manner in which the provisions of the treaty have been executed, is more congenial to its true spirit under the British than under the Netherland government. Thus an order has been sent out from England to reduce the foreign duties, so that they shall not exceed double the British import. In Java, on the other hand, the duty has been raised on Dutch vessels, so that it may not be reduced on British.

“The avowed spirit and object of the treaty is reciprocity of duties and charges and the freedom of trade; but it must be confessed that there are so many qualifications, reservations and loopholes to escape by, that the treaty, except supported by the best dispositions on both sides, may be wholly evaded or rendered utterly nugatory. The first article, for example, stipulates—contracting parties are to admit the

subjects of each other to trade upon the footing of the most favoured nation. If this were strictly enforced, the manufactures and commodities of Great Britain ought to be admitted into the ports of Java upon the same terms and conditions as those of China, Japan, or Siam, otherwise the high contracting parties will be compelled to admit, that neither the Chinese, the Japanese, or the Siamese are nations, and be reduced to the necessity of finding some new term by which to designate these great groups of human beings.

“In the treaty, indeed, there is a very comprehensive and sweeping clause as follows. “Their respective subjects conforming themselves to the local regulations of each settlement” This may mean any thing or nothing in particular. It may mean that the subjects in question shall behave generally in a peaceable and orderly manner wherever they sojourn, or it may mean that they are to pay whatever duties, charges, or impositions they may be commanded to pay at any particular port which they shall frequent without asking any question.

“The second article of the treaty stipulates that the foreigner shall pay no more than double the duty imposed upon the native merchant. This may be evaded in a great variety of ways: such as creating government monopolies and government prohibitions, and by taxing exorbitantly the staple commodities of the foreign merchant, the commodities being at the same time such as the native merchant seldom deals in at all. This has been, in fact, done in the case of British cottons and woollens; and it seems to us clear that the same principle which admits of raising the duty to 25 or 35 per cent. would equally authorize raising it 250 or 350 per cent. on any other amount, which would annihilate the trade altogether. It was clearly the object of the negotiators, however, not to raise the duty beyond 12 per cent., as may be gathered from the context of the last clause of the article in question, which stipulates that, where no duty is charged to the native merchant, that charged to the stranger shall not exceed 6 per cent. This was clearly founded on the tariff, which the negotiators supposed to be in existence in Java at the time, and was intended for the protection of the Dutch merchant in the ports of British India, where it was known that certain of our manufactures were admitted duty free. The Dutch merchant at the time paid in Java 6 per cent. when the British merchant paid 12. Where the native merchant, therefore, paid no duty, it was considered reasonable that the foreign merchant should be assessed no higher than the lowest ascertained duty at the time, or 6 per cent.

“The third article of the convention en-

gages "that no treaty hereafter made by either, with any native power in the Eastern seas, shall contain any article tending, either expressly, or by the imposition of unequal duties, to exclude the trade of the other party from the ports of such native power: and that if, in any treaty now existing on either part, any article to that effect has been admitted, such article shall be abrogated upon the conclusion of the present treaty." This condition cannot, indeed, be so cleverly or plausibly evaded as the other two, but still its difficulties may be dexterously got over also. For example, at all the ports of Sumatra, Borneo, and Celebes, where Dutch controul is operative, the same imposts are levied on the staple manufactures of Great Britain as at Batavia. According to the spirit and letter of the treaty, the duties at all these places ought, in our opinion, to be reduced to the same level as under the native governments when trade was flourishing; and that they should not be unequal as contemplated in the treaty, they should be made exactly the same to Dutch and English. This article can refer only to such places as Palembang, Sambas, Pontianak, &c. where Dutch military posts are established, and for this good reason, that where Dutch treaties with the native states are not backed by this species of ratification, they are to all intents and purposes a dead letter, and of no more efficacy than if they had never been framed; a matter which is corroborated by the best of all proofs, that in every one situation where Dutch influence is not paramount, British manufactures and commodities are introduced with all the freedom that could be desired, while the market for them continues every year to be extended.

"The manner in which the treaty may be evaded where Dutch treaties are operative, will be as follows:—The places in question will be declared to be Dutch Settlements, albeit a treaty exists with an acknowledged sovereign—albeit this sovereign be present in person and administers native law through his own officers, and albeit neither the Dutch civil or military establishments be of sufficient strength and efficiency to preserve the country from insurrection for six months together, or to secure respect beyond the range of their cannon. We shall give one example of the effects of this system, which it is impossible to contemplate without pain and regret. In the year 1812, Pontianak, then an independent port, consumed British and Indian goods imported in British shipping to the value of 311,275 dollars, upon which the duties were little more than Spanish dollars 9,000. This was exclusive of the trade with Java and other islands, and the trade with China. As soon as the place received a Dutch garrison, many

of the articles in question were prohibited altogether—on some the duty was raised to 12 per cent., and on others to 35, by which means the trade of course became extinct, so that for the last two years Pontianak has only been visited by two vessels under the British flag, and one of them met with such a reception that the experiment is not very likely to be repeated.

"In making these observations, we are far from objecting to the extension of Dutch authority within the Archipelago. On the contrary, we deem all extension of European influence to be a benefit, and when legitimately exercised, equivalent to the extension of security and protection, and the augmentation of commerce, prosperity, and comfort. On the other hand, when exercised on narrow and erroneous views of national advantage, however laudable the motive or patriotic the intention, we are clear in thinking that nothing can be expected to result but disappointment to one party and injury to every other.

"No European settlement or colony can ever be expected to flourish within this Archipelago without a large share of commercial freedom and commercial equality. We may be quite sure that there are no other sources of real prosperity, and that all the advantages of favourable situation, safe harbours, rich mines, and valuable products, can come to no good, except when fostered by their protection. By the last accounts from Batavia, there was not one British or American ship in the roads, a circumstance which had not been known for eight years before; and it is impossible not to connect this calamity with the system of prohibitions and restraints which has been recently established. There is another hint which we will venture to throw out at the risk of being considered national, and it is this; that no commercial settlement in the Indies can be expected, in the existing circumstances of the world, to flourish, that shall be denied the free access of British capital and enterprise. India is full of proofs of this truth. British capital and enterprise raised Calcutta in the short space of half a century to be the wealthiest and finest city the East ever saw. They raised Madras amidst the sands of the Carnatic in the same period to the second rank. They converted the barren island of Bombay into the second commercial city in Asia.² They have rendered Canton superior in wealth and population to the imperial city. In six years they collected 12,000 industrious inhabitants in the hitherto desert and barren island of Singapore, who, instead of committing depredations upon trade, like its quondam inhabitants, export and import jointly to the value of more than fourteen millions of dollars annually. The same British capital and enterprise, let it be added,

added, regenerated Batavia itself—are still its main supports, and converted five millions of Javanese, strangers for two centuries to the productions of European industry, extensive consumers of British manufactures. It is clear to us, that the agency which is capable of producing such effects, may be safely recommended to the respect and consideration of every prudent and enlightened government.

—
SUMATRA.

Bencoolen.—The following letter from this settlement, dated May 11, appears in the India Gazette :

This settlement and all its dependencies were formally ceded to the Netherlands authorities on the 6th April, so that we have been living under Dutch sway for more than a month. Great unanimity has apparently prevailed between the agents of the two governments, which is a fortunate circumstance for us Anglo-Dutchmen, who must have been the sufferers by any contests between the parties. Indeed the terms of the treaty are so explicit, that no delicate points were left for discussion or litigation. The Dutch continue to hold out the prospect that no material alteration will take place in the administration of the ceded countries—for the present at least; and they are desirous of giving every assurance to this effect to the natives. The several chieftains in and about Marlborough say little of their new rulers, and maintain a sullen but expressive reserve. How long things will continue to wear their present fair and tranquil appearance, it is impossible to say; for an occurrence took place the other day, which, as far as an uninterested observer can judge, is rather ominous of the future acts of the present government. The case is as follows:—The licence for the retail vend of opium is farmed out here by the year, for which the farmer pays government a monthly rent. A Chinese became the purchaser for the year which expired on the 30th of April last. The terms of the licence ensure to the farmer the retail vend of opium in the town and suburbs of Marlborough, and in certain of the out-stations. The steps it became necessary for government to pursue, in consequence of the transfer of the settlement, required the Company's agents and establishments at those stations to be withdrawn on the 1st of March, having two months of the seven, for which the farm was purchased, unexpired. After the stations were withdrawn, government could not of course any longer ensure to the farmer the sole retail vend of opium in the districts, according to the terms of the farmer's engagements, which were mutually binding. The farmer naturally petitioned government on the sub-

Asiatic Journ. Vol. XXI. No. 121.

ject, requesting to give up the farm, as the sale of the drug by him had become much diminished, in consequence of the out-stations being withdrawn. The justice of the case appeared so obvious, that we understand the resident remitted 1000 rupees per month of the rent, for the two remaining months, March and April. On the Dutch assuming the government of the country, the licence was transferred for the unexpired term, viz. from the 6th to the 30th, the rent for those days becoming due to the Netherlands government. When the time of payment arrived at the end of the month, Poorkei tendered the reduced rent for the 25 days, little dreaming it was possible he could be required to pay the original sum as when the farm was entire, a thousand rupees of which the good faith of the British government had remitted. The act of that government, founded as it was upon such palpable justice, he considered must be respected, however little the Dutch might feel inclined to consider him or his property. But no, the bait is too alluring, the full sum is peremptorily demanded. He appeals to the British resident; the latter remonstrates, but all in vain—the full amount is rigidly and rapaciously exacted. An act of such unexampled rapacity and injustice, particularly at such a time, astonished every one, and it has occasioned a great sensation among the native population in the bazars. All the kees cry out against it. They say they have seen something, and heard more, of mandarine squeezing, but this exceeds every thing they have seen or heard of. What measures have been taken to insure redress to the oppressed individual, so as to satisfy the authority which has been so grossly violated, is not known. When will the principle “honesty is the best policy” be universally acknowledged and acted upon?

—
JAVA.

Macassar Expedition.—Extract from the *Batavian Gazette* of July 26:—

We have received news these two days past by native boats, that the expedition against Soupa, in Macassar, has returned, after making itself master of that place. We are happy to communicate to our readers the particulars of this event, which, in the present state of affairs in Celebes, is of great importance, by the insertion of the reports of Major General Van Geen, commander of the troops.

General Van Geen, in a letter of the 9th July, announces his intention of sending back part of his force to Java as soon as possible, and to embark himself for Batavia, with his highness the Panambahan, of Samanaj, of

O

whose

whose support on this campaign the General speaks in the highest terms. The Netherland troops did not lose a single man on this occasion, but the enemy had a great many killed.

Price of Commodities. By an arrival from Batavia, we have an account of the government sale on the 30th July of the different articles specified as under:—Coffee 10,000 peculas, 14 to 43 dollars; Tin, 450 ditto, 24 to 20 ditto; Mace, (first quality) 200 ditto, 104 to 50; Ditto (second quality) 800 ditto, 71 to 22; Ditto (third quality) 100 ditto, 36 to 50; Cloves 400 ditto, 75 to 98. Price of Coffee in the market, 14 to 15½ dollars, and in demand.

The Insurgents. The letters and papers from Batavia state, that an escort with treasure, consisting of 40 soldiers, and with 200,000 silver rupees (about 20,000*l.*), proceeding from Batavia to Souraba, had been attacked by the Raja of Soloo. Every man was killed, and the treasure seized by the insurgents.

Advices from Batavia to the 4th September state that the insurrections against the Dutch authorities have assumed a very serious appearance; martial law had been proclaimed, and all Europeans capable of bearing arms, from sixteen to forty-five, were ordered to perform military duty in protecting the towns and villages. The communication between the capital and Samarang, by land, had been cut off by the insurgents, but very recent intelligence had been sent by sea. General De Kock, who was at Samarang, states that every thing was tranquil in the town; the native princes were in force at about twenty miles distance. He had offered rewards for the heads of the principal conspirators, but he appears in some fear for his own person, as the princes had circulated notices that a great reward would be given to the person who should bring in the head of the Dutch commandant. No action had taken place. All business at Batavia was completely suspended.

Syria.

A letter from Aleppo says—"Abdallah Pacha wishing, in every respect, to imitate his patron Mehermed Aly, Pacha of Egypt, has declared, by his acts, that he wishes to be the only merchant in his States. He has filled the trade of Beyrout with consternation, by prohibiting the exportation of silk, and by establishing a delegate, to whom applications must be made for the purchase of all articles for exportation which he chooses to permit. The most profound misery reigns in Mount Lebanon. The death

of the virtuous prelate, vicar of his holiness, M. Gandolfi, has filled the Christian population of these countries with sorrow and mourning.

"There has been some fermentation at Aleppo. The Janissaries conduct themselves with wisdom and with moderation. Misery is at its height in this unfortunate country; that which completes the desolation of the land is the irruption of the Bedouin Arabs, who inundate the environs of Aleppo, of Damascus, of Hems, and of Humma, the intermediate cities. They have cut off all communications; the Liban and the Antiliban are the only barriers which arrest their course. The shores of the Euphrates are ravaged by the successive spoliations of the Anases Arabs and of the Bonaks, who burn all which they cannot consume. As a crisis of this calamity, the magistrates buy up the provisions, which they sell at a maximum. The inevitable consequences of these misfortunes produce more than alarm."—*French Paper.*

Australia.

We have received a file of the *Australians* to August 4. The bush-rangers, it appears, increase in number and audacity. A gang of fifty is stated to be at no great distance from Sydney. In the neighbourhood of Newcastle their outrages are frequent, and many individuals, of desperate character, have absconded from their employers, with a view of joining the gangs. The district of Bathurst has been the scene of serious outrages. The inhabitants of Peterson's Plains have adopted all the means in their power to secure the apprehension of the runaways; but great complaints are made in the *Australian* of the want of magistrates and of their inactivity. The minor predepredators evince their usual skill. A mill and steam-engine, called "the Darling Mills," being intended to be erected at Paramatta, a number of coins were, as customary, deposited in the foundation stone, which was laid with due solemnity. A few days afterwards it was discovered that the coins had been abstracted. The state of the colony seems, in most respects, prosperous: salt-works are about to be established at Newcastle; and such is the rapid advance which production is making, that it is expected the colony will soon possess a plentiful resource for every article of domestic comfort. The average market prices on July 28 were as follow:—Wheat 1*l.* 11½*d.* per bushel, maize 4*s.* 9*d.*, barley 4*s.* 6*d.*, Flour 45*s.* per cwt. Potatoes 4*s.* 6*d.* Bread 9*d.* per loaf.

The following account is given of the Penal settlement at Norfolk Island:

Considerable

Considerable progress has already been made in arable cultivation. Six acres of wheat are in the ground, and three acres and a half of maize. Potatoes, cabbages, peas, and other varieties of vegetables, are planted, and every thing bears a very promising appearance. The surface of the whole island was overspread with grass, four, five, and six feet high. Guava trees are in great abundance, as also orange and lemon trees. The coffee plants flourish most luxuriantly: some of them are seen bearing not less than four or five bushels of coffee. Pine-trees, of a very fine size, are numerous. The various animals have increased to a wonderful extent; such as pigs, fowls, pigeons, &c.: the pigs are very large.

Several of the prisoners, who are of the worst and most incorrigible class of offenders, were, at first, particularly refractory. Capt. Turton, however, ordered out the triangles as the most effectual recipe for the disorders, and after having had a few dozens administered, found his prescription operate tolerably well: he keeps the men hard at work from sunrise to sunset. A great many of the buildings, the walls of which were in a pretty good state, have been roofed in and repaired. Public stores, and barracks for the men, have been put into an efficient and habitable state. Huts also for the prisoners have been erected. The old lime-kiln has been rekindled; it was not, in the least degree, dilapidated. The old road from Cascade to Sydney, now called, by Capt. Turton, Kingston, is put into good travelling order. In short, the effects of industry and hard labour have, within the short period that has elapsed since the landing of the company and the prisoners, re-adorned that garden of Eden, "still where many a garden flower grows wild," and which many persons now resident here abandoned with regret and an aching heart.

The finest sperm whales are found in the greatest numbers. An immense num-

ber of fish of all kinds are found around the island. The weather was experienced comfortably warm.

SHIPPING.

Arrivals.

June 30. *Ann*, Grimes, from Isle of France.—*L'Espérance* (French corvette), Du Campe.—*Thétis* (French frigate), Bougainville, both from Sourabaya, on discovery.—July 2. *Lalla Rookh*, Stewart, from Liverpool.—10. *Mariner*, Fotherby, from Cork (with 112 female prisoners).—17. *Harriet*, Anderson, from the sperm whale fishery (with 1600 barrels of oil).—*Samuel*, Drysdale, from New Zealand.—Aug. 3. *William Shand*, Kean, from London.

Departures.

July 7. *Phoenix*, Dixon, for London (met with a gale, and put into Pinch Gut Island, on the 22d, damaged).—29. *Lalla Rookh*, Stewart, for Batavia and England.

BIRTHS.

July 2. The lady of the Rev. G. A. Middleton, chaplain of Newcastle, of a son.
14. At Sydney, Mrs. Morris, of a son.
Aug. 7. At Cecil Park, Sydney, the lady of John Wyld, Esq., of a son.

MARRIAGE.

Aug. 2. At St. James's Church, Sydney, Mr. John Grimes, son of Chas. Grimes, Esq., formerly surveyor general of the colony, to Miss Mary Ann Atkinson.

Cape of Good Hope.

Cape of Good Hope papers to the 26th September mention that coal has been found in a rich tract of land between the rivers Gamtoor and Kromme. There is a proclamation in these papers (inserted by orders of the Governor) by Radama, king of Madagascar, in which his Majesty states the great respect he entertains for the English nation; and intimates he will allow a trade with the town of Mazingay, and the bay and harbours of Boantock, on the most favourable terms, and holds our every inducement to settlers in his dominions.

Postscript to Asiatic Intelligence.

THE Calcutta *Government Gazette* contains an official report of the occupation of Munnipoor, by Gumber Sing, accompanied by Lieut. Pemberton, mentioned in our last number; the report, which includes some geographical details, is as follows :

Munnipoor, June 14th, 1825.

To Col. R. Stevenson, Quart. Mast. Gen. of the Army.

Sir:—Lieut. Brown's letter of the 12th ult. will have apprized you of my having volunteered to attempt reaching Munnipoor, accompanied by Gumber Sing, and a detachment from his levy.

I have now the honour to inform you, for the information of His Excellency the Commander-in-chief, that the Brig. Gen. commanding the eastern division, having sanctioned the proposal, I left Sylhet on the 17th ult., accompanied by Gumber Sing, expecting to reach Banskandy by the direct route of Goobabgung, Byragie Bazar, &c.; but on arriving at the former village the road was found impracticable from the heavy rain that had fallen for several preceding days, and it became necessary to adhere to the left bank of the Barak river, by which circuitous route we reached Banskandy on the 23d. The following day was employed in making the necessary preparation for the march, and on the 25th, the force, consisting of 500 muskets under the personal command of Gumber Sing, crossed the Cheree Nullah, passed the low swampy ground in the vicinity of Luckpoor, and after traversing a range of hills, north of the Barak, encamped on the borders of the forest, west of the Jerce Nullah.

From this nullah commences the ascent of the numerous and irregular ranges of hills, extending without a single interval of level ground for eighty miles, to the Valley of Munnipoor. I have the pleasure to annex a list of the few Naga villages in this route, all of which are situated on or near the most lofty points of the different ranges, and the various places at which we halted.

	M.	F.	Ys.
From Banskandy to Tookmu Nullah	11	5	89
Jerce Nullah	6	7	204
Mockroo ditto	11	4	0

Village of Awang Kool	3	2	183
Eyee Nullah	3	6	0
Village of Noonie	3	5	148
Left Bank of Eyee	5	0	163
Valley of Munnipoor	10	2	197
Town and Stockade	11	0	5

Total perambulator distance 96 0 11

Our progress had been considerably retarded by rain, and on reaching the village of Moonjiron-do on the 1st instant, we were compelled from the same cause to halt for three days, in which time the provisions became exhausted, and from that period to the day we entered Munnipoor the men had but a scanty and precarious supply of bad rice obtained at most exorbitant rates from the Nagas of the different villages through which we passed. To these deprivations Gumber Sing's men, composed entirely of Munnipooreans, submitted without the slightest appearance of dissatisfaction, and cheerfully continued to advance, though constant rain had so swollen the nullahs that it was necessary to throw bridges over the three principal ones, the Euring, Eyee, and Toobut, the timber for which was in each instance cut immediately after marches, rendered peculiarly harassing from the mountainous nature of the country traversed.

On the 10th instant, the force marched from the left bank of the Eyee Nullah, and commenced the ascent of the hills forming a western boundary to the valley of Munnipoor; parties had been pre-

viously detached to take possession of two Naga villages, one on either flank, in which the Burmahs had stationed pickets, twelve miles in advance of the town. At 3 P. M. the village of Koongakool on the left was reached by one of the parties, and a few of the Burmahs captured: the other party was equally successful at Mlangkeenow, where a large portion of the enemy was killed and some taken; the men were so much exhausted by the day's march, and want of food, that it was necessary to halt, although at such a crisis rapidity of advance was most advisable.

At two o'clock, P. M., on the 11th, while attempts were making to obtain a small supply of rice for the men, from a few neighbouring villages, information was received that the Burmahs had evacuated the stockade in the town, and we took possession of it the following day: every thing of value had been carried off, and nothing was found in the stockade but a few muskets, two iron guns, and about 120 maunds of rice in husk; the enemy consisting of 600 fighting men, and as many followers, retreated in a southerly direction; and information being yesterday given that they had stockaded themselves at a village called Undro, about ten miles distant, Gumber Sing and myself, with 200 men, went in pursuit of them. On reaching the Erie Nullah, six miles distant, we found that the enemy had again retreated, and subsequent intelligence proving that they had altogether left the district, I returned to Munnipoor, and Gumber Sing proceeded to the Towban Pergunnah to make such arrangements for procuring supplies for his men as the exhausted state of this once fertile district will permit.

As the principal objects contemplated in attempting this advance were, the obtaining some accurate information regarding the different passes into the country, its resources, and the strength of the enemy, my attention is now wholly directed to their accomplishment; and I hope in a few days after my return to Sylhet to have the pleasure of transmitting plans of the town, stockade, and surrounding country, together with a map of the route from Banskandy, and such information as may eventually prove useful.

The favourable mention of Gumber Sing's name will not, I trust, be considered presumptuous. To his energy, perseverance, and skill, is the success of the undertaking principally attributable, and should his co-operation in any subsequent advance be required, it will, I doubt not, be such as to reflect equal credit upon himself and men.

I have, &c.
R. B. PEMBERTON, Lieut.
Off. D. A. Q. M. GL.

Our intelligence from the different British quarters in the Burmese territory continue to be, in some respects, contradictory. Private letters from Calcutta represent the aspect of affairs in that country in the least favourable light; but we are inclined to place less reliance upon their statements than upon those furnished in letters from the country itself, which are published in the several newspapers of Calcutta. We shall present to our readers the substance of such intelligence as seems most interesting and most worthy of credit.

PROME.—Operations will not be resumed in this quarter till towards the close of the year, when the country becomes passable. The India papers, as well as private letters, state that the army was in excellent condition; that the rains had set in gently; that the inhabitants of the town and adjacent villages had returned to their habitations, bringing such

such articles as the country produces, and evincing the utmost satisfaction at the change in their fate. Some private communications (which have appeared in the London papers), on the other hand, assert that the troops were so sickly that nearly one-third were in the hospitals; that nearly the whole country between Rangoon and Prome was deserted by the inhabitants, and that the provisions were obliged to be conveyed from the former to the latter place by a flotilla of gun-boats.

Of the real intentions of the Burmese Court nothing is known with certainty. It is again rumoured that the king has abdicated in favour of his son, a minor, whose *fortunes* are supposed to be of a prosperous character; but it is believed at Prome that the king is kept in total ignorance of the events of the war. It is also reported that, in the event of the British reaching Amerapoora, the Court will retire to a succession of strong positions in the interior. A chief, named Mung-cra-ro, is appointed generalissimo in lieu of Bundoola; he is at about ten days' journey from Prome. The force opposed to Gen. Campbell's advance was not estimated at more than 10,000 men: the Government find it almost impossible to collect more troops, the men who are *caught* one day, desert the next. "The great moral lessons which have been read to them," says a letter from Prome, "have had due effect upon their minds. The spirit and pride of the nation have been broken, and the Government is already, comparatively speaking, void of authority, and disorganized." The depositions of two persons at Prome (one a native of the city, the other a British sepoy, who had been taken prisoner by the Burmese, and made his escape), recently from the capital, concur in describing the consternation and anarchy which reigned there; the Government could not control the people, parties of banditti were forming, the troops were daily diminishing by extensive desertions, and such of the chiefs as presumed to advise pacific measures were put in irons. The sepoy left the capital about the beginning of May, following the course of the river to Prome: he describes the country as presenting few difficulties to travellers. The English prisoners at the capital are treated with great rigour; they are in irons, kept apart from each other, their subsistence only a little rice, besides what the charity of the people bestows.

It has excited surprize that, under existing circumstances, the Burmese Court should be averse to making overtures for peace: a letter from Rangoon solves the difficulty by stating that his majesty had intimated his willingness to treat with the King of England, but not with the East-India Company.

This is extremely probable: it is, perhaps, not generally known that the chief obstacles encountered by Mr. Crawford, in his mission to Siam and Cochin China in 1822, arose from the repugnance of those Courts to treat upon political subjects with an ambassador from the Governor-General of India. Mr. Crawford was repeatedly told that if he had been deputed by the King of England he would have been received without difficulty.

The statements respecting the confederacy of the Siamese with the Burmese, which has been so confidently asserted, prove to have originated from misapprehension of a report by a native of Arracan, who stated that a small body of *Shaumese* (certain tributaries of Ava, in the north) had joined the enemy's troops; these contemptible auxiliaries had been mistaken for *Siamese*. Our notions of the true policy of the latter are entirely repugnant to the supposition that they could be induced to assist their dangerous neighbour.

Early in May, Sir A. Campbell sent a detachment of his army to explore the interior. This part of the country was found to be less cultivated than the banks of the Irrawuddy; the villages scanty, and of the most wretched appearance; and agriculture evidently in a very degraded state. The metallic productions, according to appearance, were rich and numerous; but the people were forbidden to dig for metals without express permission from the Court. Wherever the British column advanced (except where a Burmese force had preceded it) the natives were found quietly and contentedly engaged in their occupations, either in the field or at the loom, weaving coarse striped stuffs, worn about the loins. In the route by which Prince Surrawuddy retired, language, it is observed, could not describe the effects of his desolating system. Neither man nor beast had escaped; and heaps of ashes alone indicated where villages had once stood. The miserable remnant of the people had sought refuge in the deepest forests.

Since the advance to Prome, our people have seen more of the Burmese character, and better acquaintance displays it in a more favourable light. Their vices, —idleness, dissimulation, and cruelty,— which are most conspicuous in persons in authority, are the natural effects of the despotism they are subjected to; but the inferior men are described as open-hearted, cheerful, and good-tempered to a surprising degree: quarrels and abuse are unknown amongst them. The women are unrestrained; they rove about, paying and receiving visits; enter freely into conversation with strangers; but an immodest gait, gesture, or look, is never observed on their part.

Some very important discoveries seem to have been made, or appear likely to be made, in respect to the water communication with the interior. Commodore Hayes, having reason to suspect that branches of the Irrawaddy fall into the Bay of Bengal a good deal to the northward of Cape Negrais, despatched some boats to ascertain the fact; and, by the latest reports of their progress, the result was likely to realize his conjecture. If so, vessels, it is said, need only to run sixty miles to the southward of Cheduba to reach Prome in less time than is now required to get to Rangoon. This part of the country, it appears, is a *Sunderbund*, far more generally intersected by streams than has been hitherto imagined. A statement is given in one of the Calcutta papers of a flotilla of gun-boats having actually reached Prome, which entered the Irrawaddy by the Bassein branch.

ARRACAN.—The fact that an overland communication has been opened between this place and Prome is now certain. Previous to the recommencement of hostilities, it is intended to occupy Talek, Aeng, and Sandowee. The road from Arracan to Aeng is described as difficult; but from thence to the Irrawaddy the road has been pronounced, by the surveying officer, to be excellent. There is a great

deficiency of population in this part of the empire.

Sickness, to a considerable extent, has prevailed amongst our troops in this quarter, owing, it is stated, to the unusual heat of the weather, and the irregularity of the season. Three of the medical staff, besides several military officers, had already fallen victims to the fever. A reconnoitering party, under Major Bucke, who had proceeded beyond Talek towards Ava, had returned to Arracan greatly thinned by sickness and fatigue.

ASSAM.—By letters from Ramroopara, dated June 22, it appears that a detachment of 200 men of the 57th regt., under Lieut. Kerr, had defeated about 300 Burmese, under the raja of Mogaon, by which the valley of Assam was entirely cleared of the enemy, and some thousands of Assamese were released, who had been carried into slavery by the Singphos.

A trifling but brilliant affair has also taken place between a detachment under Lieut. Neufville and a party of the enemy, near Nowa Deng Mook, in which the Burmese were defeated.

Money continues so scarce at Calcutta, that the subscriptions to the new five per cent. loan were extremely slow. Treasury notes have been issued, bearing an interest of six and a half per cent.

Burmese War.

London Gazette, Dec. 13.

Admiralty-Office, Dec. 13.

A letter has been received at this office from Capt. Coe, of H. M.'s ship *Liffey*, lately senior officer of his Majesty's ships in the East-Indies, addressed to J. W. Croker, Esq., and dated at sea, the 17th June 1825, of which the following is an extract:—

"I have the honour of enclosing, for the information of the Lords Commissioners of the Admiralty, various despatches from Capt. Alexander, of H. M.'s ship *Alligator*, in command of the naval forces co-operating with the army under Brig. Gen. Sir A. Campbell, in their advance against Ava, the capital of the Burmese dominions; to whom I am particularly indebted for the very able and gallant manner in which he has conducted, and is still conducting, this difficult and extremely harassing service; this officer is too well known to their Lordships to need any comment of mine on his worth and ability; he speaks in the highest terms of Capt. Chads, of H. M.'s sloop *Arachne*, and particularly of Mr. W. Smith, his own first lieutenant; they are officers who have distinguished themselves on all occasions; and the highest encomiums are passed by Capt. Alexander on the conduct of the officers of the squadron named in the margin;* as well as of the seamen and marines.

Light Division.—Men-of-War's Boats.

* *Alligator*.—Pinnace—Lieut. Smith; Cutter—Acting Lieut. Hall; First ditto—Lieut. Thornton; Second ditto—Mr. Duthy; Gig—Mr. Hand.
Arachne.—Pinnace—Lieut. Keele, Mr. Pickey; First Cutter—Lieut. Kellet, Mr. Reed, master's mate; Second Cutter—Mr. Lett; Gig—Mr. Coyde.
Sophie.—Pinnace—Lieut. Bazely, Mr. Murray; thirty row gun-boats; four gun-vessels; two mortar vessels; steam-vessel and *Satellite*; about fifty

"Mr. James Wilkinson, senior Lieutenant of H. M.'s ship under my command, latterly in command of the light division of boats, has been spoken of in the highest terms by Capt. Alexander, as well as those serving under him. I have known this officer since 1821; and while serving with me in H. M.'s ship *Tees*, and since in the *Liffey*, I have had frequent opportunities of observing his zeal and abilities; he was severely wounded last year, at the first attack of the stockades. Mr. George Winsor, late Admiralty Midshipman of H. M.'s sloop *Sophie*, now of H. M.'s ship *Alligator*, has been again spoken of in a handsome way by Capt. Alexander, for the very judicious manner in which he has conducted the steam-boat under his charge.

"I have also the honour to enclose despatches from Capt. Chads, and one through Capt. Alexander, detailing various operations against the enemy, which reflect the greatest credit upon that officer, and all employed under him. He speaks in the strongest terms of Lieut. Keele, and also of Acting Lieuts. Hall and Goldfinch, Mr. W. Watt, surgeon, and Mr. Robert Atherton, acting purser, with the assistance he received from Lieut. Dobson and Mr. George Winsor, Admiralty Midshipman, as well as of the persons named in the margin†.

"I

flats, launches, canoes, &c. for troops, provisions, and stores.

† *Arachne*.—First Pinnace—Lieut. Keele, Mr. Pickey, Admiralty midshipman; Second ditto—Lieut. Kellet, Mr. Reed, Admiralty midshipman; Cutter—Mr. Lett, master's mate; Gig—Mr. Coyde.

Larnee.—Pinnace—Lieut. Fraser.
Sophie.—Pinnace—Acting Lieut. Goldfinch, Mr. Scott, midshipman; Seamen in gun-boats—Mr. Tomlinson, midshipman of *Arachne*; Transport *Satellite*

" I likewise transmit despatches from Capt. Marryat, of H. M.'s sloop *Larne*, detailing various successful operations against the enemy at Negrais and at Bassein; and speaking in the highest praise of Lieut. Fraser, Mr. Hodder, the master, Mr. Robert Atherton, acting purser, and Messrs. Downes and Norcock, midshipmen.

" The various successes that have attended the exertions of every officer, seaman, and marine that have been employed on this service, merit the highest encomiums, and must be attributed to the discipline and well-laid plans of the officers con-

ducting them, and the zeal, promptitude, and perseverance with which they were carried into effect; and where so many have rendered themselves conspicuous, I feel it difficult to do justice to their individual merit."

N.B. The affairs in which his Majesty's vessels and their boats were engaged in co-operation with the land forces, as mentioned in the despatches transmitted with the preceding letter from Captain Coe, took place between the 11th January and 29th April, 1825; and the total loss sustained by his Majesty's vessels on those occasions amounted to five killed and fifteen wounded.

The following return is the only one in which the names of the parties are given, viz.

At Syriam, the 11th and 12th January, 1825.

Wounded.

Larne.—Mr. Robert Atherton, purser, slightly; John Grant, severely; John Giles, slightly.

Arachne.—George Webster, severely.

Satellite.—Lieut. Dobson, Mr. Norcock, midshipman, and twenty-eight seamen of H. M.'s ship *Larne*; Steam-vessel—Mr. Winsor, Admiralty midshipman of *Sophie*.

Alligator.—Pinnace—Acting Lieut. Hall, Mr. Wyk, midshipman; Cutter—Mr. Biffen, Admiralty midshipman.

HOME INTELLIGENCE.

LAW.

COURT OF KING'S BENCH.

Nov. 25. Mellish v. Richardson. This was a writ of error from the court of Common Pleas. The defendant had resigned the command of an East-Indiaman under a contract with the plaintiff, to have the command of another vessel, in the event of certain contingencies, which happened; but the plaintiff refused to appoint him. Mr. Richardson obtained a verdict with £7500 damages for the breach of contract. Mr. Mellish brought the case by writ of error before this court, (having failed to procure a rule for a new trial) alleging that no consideration had been given; and if there had, the contract was void by the statute against the sale of public offices.

The court reversed the judgment of the court below, and ordered a new venire to issue.

Dec. 16. Buckingham v. Bankes. Upon this case being called, the Attorney-General rose, and said that his client would not occupy much of the time of the court. He, the defendant, originally put a justification on the record, which he had now withdrawn, and was willing to submit to a verdict for the plaintiff with nominal damages, which he understood the other side would accede to.

Mr. Brougham, for the plaintiff, replied, that as his client's only object was the vindication of his character, and that having already been fully effected by the former trial, he had no objection to the proposal of the defendant, he having undertaken to pay all the costs as between attorney and client.

The Lord Chief Justice expressed his satisfaction that this matter had so terminated.

MISCELLANEOUS.

THE DECCAN PRIZE-MONEY.

On the 6th December the Lords of the Treasury received the counsel for the par-

ties interested in the booty, namely, Mr. Adam, Drs. Lushington and Dodson, for the Marquess of Hastings, and Dr. Jenner, Mr. Harrison and Mr. Talford for the army of the Deccan, to hear arguments respecting the report made to their Lordships by the trustees, the Duke of Wellington and Mr. Arbuthnot.

Lord Liverpool stated to the counsel for the army that it appeared that the object of the hearing had been mistaken. It had been supposed that it was intended to open the whole question already discussed and settled by the minute of the Treasury, confirmed by his Majesty. This was a mistake; their Lordships considered their minute as valid and binding. But a question had arisen as to the booty distributable under the minute and warrant, on which they wished to receive information from the parties interested in the result. The minute assumed that booty was captured at three places, "Poonah, Mahidpoor, and Nagpore;" the trustees reported that this assumption was not correct; that no booty had been captured at Nagpore; that none had been realized at Mahidpoor; and that certain portions claimed as booty fell into the hands of the servants of the East India Company after the army of the Deccan was broken up. Now, the Lords of the Treasury wished, on this view of the case, to hear the parties interested; and as the Marquess of Hastings and the army under his command might be affected, they had given to him notice of the inquiry.

Mr. Harrison said it was very satisfactory to know that their Lordships entirely recognised the principle of the minute and warrant. With respect to the booty at Nagpore, he felt confident that he should be able to show that it had been rightly considered as prize; and as to the booty of which possession was taken after the army of the Deccan was broken up, he considered that as actually captured by

the previous operations in which complete dominion was obtained over it.

Lord Liverpool thought Mr. Harrison had formerly confined himself to the booty actually taken by the army.

Mr. Harrison assured the noble Lord that, on reference to the short-hand writer's notes, the contrary would appear.

Lord Bexley referred to the printed papers, from which it appeared that Mr. Harrison, when asked whether his separate claim was confined to the masses of booty taken at Mahidpoor, Poonah, and Nagpore, replied, "Certainly, with this qualification,—when I say what was taken at Mahidpoor, Poonah, and Nagpore, that would include, of course, all that arose out of those captures; for part was taken in forts afterwards."

Lord Liverpool then asked the counsel for the Marquess of Hastings, if they had any observations to make?

Mr. Adam replied, that, if he understood distinctly that their Lordships proposed to adhere to their former minute, he did not think he could fairly add anything to the observations he had previously made. But if the facts now disclosed tended at all to alter the opinion formed on that principle, then he should wish to be heard.

Lord Liverpool said they certainly adhered to the minute, but still the state of facts might alter the situation of the Marquess of Hastings.

Mr. Adam.—The principle of the minute is that of actual capture; and if I am required to show that Lord Hastings is an actual captor, as distinguished from a constructive captor, I am unable to do so.

The Chancellor of the Exchequer.—"No; it is not exactly so. The warrant determines that the principle of actual capture shall be adhered to as far as possible; that is decided; but then a question arises, what booty was actually captured? Now, it seems that part of the booty claimed was never seized, that is, reduced into possession, until after the army of the Deccan was broken up: and it may be made a question whether this was actually captured by the army of the Deccan? If it was so captured, then it belongs to them; if not, it will come within the other part of the minute, "that if the principle of actual capture be not adopted in this case as the rule of distribution, no other correct or equitable rule could have been adopted than that of a general distribution among all the forces of the Presidencies engaged in the combined operations of the campaign." In that case the Marquess of Hastings might be entitled to share."

After some further conversation it was distinctly understood, that the main question to be discussed was, whether the booty

arising out of the operations of the Deccan, though not manually seized till after that army was broken up, was probably considered as actually captured by that army? As to the booty claimed at Nagpore, their Lordships seemed to think it could not be the subject of discussion.

Mr. Harrison expressed an earnest hope that, as he firmly believed it to be booty, according to all the laws of prize, either their Lordships would hear it discussed, or would send it to some proper tribunal, and would not preclude the army without hearing them.

It was then arranged that Monday the 9th January should be fixed for the discussion of the question then raised, and that the argument should proceed until it was closed. This arrangement being made, the meeting broke up.

DEATH OF THE EMPEROR OF RUSSIA.

His imperial Majesty the Emperor Alexander died on the 1st of December, at Taganrog, in Crimean Tartary, after a short illness. The fatal disorder is said to be a species of inflammation, but of what nature it cannot yet be stated with certainty, owing to the contradictory statements.* Although the Archduke Nicholas, his Majesty's youngest brother, had recently been declared heir to the throne, to the exclusion of the Archduke Constantine, who, it was considered, was disqualified from succession by an unequal marriage, the latter has nevertheless been proclaimed Emperor of all the Russias.

The late Emperor was born December 24, 1777, and he married in 1793 a daughter of the hereditary Prince of Baden.

THE ENTERPRISE STEAM VESSEL.

This vessel arrived at the Cape of Good Hope on the 13th October, after a long passage of 56 days from Falmouth. The cause of delay was the prevalence of unfavourable winds, which occasioned the coals to run short, and obliged Capt. Johnson to stretch out to the S. W. in order to find wind. The vessel sails remarkably well, and no doubt seems entertained of her reaching her ultimate destination.

THE ARMY IN INDIA.

It is understood to be the intention of Government, to propose to Parliament an augmentation of the military force in India. All the infantry regiments are to have second battalions added to them.

* A morning paper has published an extravagant statement which alleges that the emperor was assassinated.

DEBATE AT THE EAST-INDIA HOUSE.

East-India House, Dec. 21.

A quarterly General Court of Proprietors of East-India Stock was this day held at the Company's House in Leadenhall-street.

The usual routine business having been gone through—

The *Chairman* (C. Marjoribanks, Esq.) acquainted the court, that, in conformity with the fifth section of the first chapter of the By-Laws, a general statement, per computation, of the Company's affairs—for India, to the 1st May 1824, and for England, to the 1st of May 1825—was laid before the proprietors. There was also submitted to the court a statement of the expenses incurred for the support of the Royal East-India Corps of Volunteers, for the year ending the 1st of August 1825, together with an estimate of the probable expense for the ensuing year.

The clerk then read the statement and estimate, from which it appeared that the Royal East-India Corps of Volunteers had, during the last year, occasioned a charge of £3,602. 19s. 8½d., and that the estimate of the expense for the year ending the 1st of August 1826, was £3,741.

Mr. *Hume* wished to know what was the number of men of which the corps was composed, and whether they were or were not regularly disciplined?

The *Chairman* answered, that the corps consisted of seven hundred men, and there were plenty of recruits to keep up the corps.

Mr. *Hume*.—"I have no doubt that there are recruits enough; but I wish to know whether the men are so disciplined as to warrant such an expense?"

The *Chairman*.—"Certainly; I have no hesitation in saying, that they are properly disciplined: such is my belief."

Mr. *Hume*.—"I wish to know how many days in the year they are called out to exercise? Other corps are exercised during a certain number of days in each year."

The *Chairman* said, if the hon proprietor was anxious for information on this point off-hand, he could not exactly state it; he could not, without reference, give that detailed information which the hon. proprietor demanded. He understood, however, that there were thirteen drills of the whole regiment and five field-days in the year.

Mr. *Hume* observed, that there were several officers within the bar who were no doubt competent to state the fact.

The *Chairman* said, if it were the wish of the court, Colonel Astell, who was not

at that moment in his place, should be sent for; he could enter into those details, which did not come within his (the *Chairman's*) observation.

General *Thornton* observed, that it would answer the purpose of his hon. friend, if any gentleman would declare whether the corps was in a proper state of discipline.

The *Chairman* said, he had no doubt of it. He believed the corps was properly disciplined; he believed the corps was perfectly capable of performing the necessary duties.

HALF-YEAR'S DIVIDEND.

The *Chairman*.—"It is appointed at this court to consider of a dividend on the capital stock of the Company, for the half year commencing on the 5th July last, and ending on the 5th of January next. On this subject the Court of Directors have come to a resolution, which shall now be read.

The clerk then read the resolution of the Court of Directors of the 20th inst., recommending the declaration of a dividend of 5½ per cent. on the Company's capital stock, for the half year commencing on the 5th of July last, and ending on the 5th of January next.

Mr. *Hume* inquired, whether this dividend was derived from the commercial profits of the Company? and whether the Company had any account of the financial situation of India? In the present enslaved state of the press in that country, which continued to maintain a sullen silence, they were left in total ignorance of what was going forward. He thought, and he should ever think, that those who had placed such fetters over the press deserved the greatest blame and censure. From what he could hear, he was led to believe that the present expenses of India absorbed every shilling which the revenue produced; and he wished to have some certain account of the state of their financial affairs in that country. It was evident that he must be an improvident man who would propose, or accede to, a dividend for which there was no just foundation. Now he should like to know what was the amount of the gross revenue last year, or whether there was any; and also, what was the amount of the unfunded debt, and whether any thing would remain in the Company's treasury after it was paid off. To these questions he expected a plain answer: and he should also be glad to know, whether, in a financial point of view, the affairs of India were in as prosperous

perous a state as they had been left by the late Governor-General.

The *Chairman* said, the hon. proprietor had asked several questions which there was no difficulty in answering. He first demanded from what source the dividend was derived? the answer to which must be well known to the proprietors as an intelligent body of men. The dividend was derived from the home commercial profits of the Company. The hon. proprietor himself must know that, and he must also be able himself to answer the other questions, because a statement of the Company's accounts was laid before Parliament once a year.

Mr. *Hume* said, that the statement which had been made before Parliament was the statement of the former year: a year had gone by relative to which they had no information. He was desirous of learning what accounts had been brought by the last arrivals, and whether the Company had not been at the expense of several millions in carrying on a war, of the origin or progress of which they knew little?

The *Chairman* answered, that there was a good deal to be done between the receiving of despatches, and so digesting them as to enable him to state accurately in that court the matters which they contained.

Mr. *Hume* said, he really thought that the observation of the hon. Chairman was no answer at all to what he had asked. He wished to know whether the usual balance sheet, which ought to be made up by the Indian government, had been received. He knew that, in other years, other governments had sent it home before this. When they saw what mischief want of confidence had of late created in London, and when they knew the great want of confidence in India—when they found that want of confidence pervaded the highest and the lowest in every class, civil and military, it was proper that they should be acquainted with the state of things in that country. It was fit that they should know whether their financial concerns were going on well. The Court of Directors might, of course, give an answer or not as they pleased; but he was sure that the means of giving that answer were in their power. He again demanded, had the accounts been sent home or not? If they had been sent home, it was easy to state their result; and if they had not, then the Indian government was guilty of a culpable neglect.

The *Chairman* said, he held in his hand the account which had been made up, and presented to this court in due course; but if the hon. proprietor required him in this manner to go into an investigation of every item of it, it was a task which he could not be expected to perform; and it appeared to him that the hon. proprietor

demanded that which was very unreasonable.

Mr. *R. Jackson* said, he thought the hon. Chairman had rather misunderstood the object of his hon. friend. His hon. friend merely asked, whether or not the usual papers had been sent home. The hon. Chairman much misapprehended him, if he supposed that his hon. friend called on the hon. Chairman, who must of necessity have ten thousand weighty matters continually pressing on his mind, to enter into the minutæ of these accounts. His hon. friend merely wished to learn, aye or no, whether the usual papers had been transmitted.

Mr. *Hume* said, it was customary to make up an account of the total disbursements and receipts for each year up to the 30th of April, together with a probable estimate of expenses and revenue of the ensuing year, which ought to be immediately sent home; and he desired to know whether the usual papers had been so sent home.

The *Deputy Chairman* (Sir G. A. Robinson) said, so far as he was competent to answer the hon. proprietor, he should state, that the Court of Directors were in possession of the latest accounts of the Indian finances which the Bengal government could have transmitted to them; except, indeed, there should be any farther accounts in the ship *Larkins*. They knew that she had a great part of the despatches of the season on board; but she had been obliged to put back, from stress of weather, in May or June last. So far, however, as the Bengal government could put the Court of Directors in possession of the state of the revenue, he believed they had done so.

Mr. *Hume*.—To what date?

The *Deputy Chairman* answered, that the account now presented was made up to the 1st May 1824; and it must be pretty clear to all gentlemen, that it was not practicable to bring them down to the 1st of May 1825. The formation of accounts, and other matters connected with them, necessarily occupied a good deal of time. Probably there might be additional papers in the *Larkins*; but there was no ground whatever to blame the Bengal government for the non-transmission of the accounts. Such was his firm belief.

The *Chairman* then moved, that the court do agree upon a dividend of 5½ per cent., as recommended in the resolution of the Court of Directors, which being seconded by the Deputy Chairman, was carried unanimously.

GRANT TO MR. S. ARNOTT.

The *Chairman* acquainted the court, that it had been made special, for the purpose of submitting for confirmation the resolution of the General Court of the 28th September

September last, approving the resolution of the Court of Directors of the 14th of the same month, granting to Mr. Sandford Arnott the sum of £1,500, upon the grounds therein stated. He then moved, that the court do confirm the resolution of the Court of Proprietors of the 28th of September last.

Mr. R. Jackson said, that when this subject was before the last General Court. there happened to be a great pressure of business, and therefore the motion passed *sub silentio*. He did not now rise to oppose this grant, but to state his cordial approbation of it; and he viewed with great pleasure the terms in which the resolution was drawn up. It was so worded as not to commit either the Court of Directors or the Court of Proprietors in any given proposition as to the freedom of the press, or the conduct of the Bengal government. The grant was founded on the unlooked-for misfortunes which had befallen the individual; who had been banished, shipwrecked, and ruined. The Court of Directors, very wisely, in his opinion, had been pleased to forego all discussion on the merits of the case; but, listening to the misfortunes of the individual; they had granted this aid from sympathy to his case, and on that ground alone founded their resolution. No man could estimate more highly than he did the liberty of the press: not to estimate the benefits which it conferred on the world, and on this country in particular, would be to say that he was no Englishman. (*Hear!*) Every blessing was derived from that source; by it, education was extended and moral feelings improved. But in proportion as he prized the liberty of the press he would endeavour to preserve it: he would preserve it to its fullest extent here, and he would allow it in the colonies so far as was compatible with their situation and government. To them he would grant it so far as it comported with the safety of those to whom the blessing was meant to be conveyed. This course he ever had and ever would support. With respect to the grant immediately before them, he should always feel sympathy for those who might have suffered beyond what had been wished or intended; and therefore he was glad that compassion had been extended to the case of Mr. Arnott, by granting the relief which was contained in the resolution.

The hon. D. Kinnaird said, it had never been his fate to hear a studied, elaborate, and finished eulogium pronounced on the liberty of the press, without finding it coupled in the end with some particular instance in which that liberty was pointed out as being of no use. (*Hear, hear!*) When his learned friend commenced his panegyric, he understood what was to fol-

low as well as if he (Mr. D. Kinnaird) had himself composed the passage. If his hon. friend had not thought fit to state the grounds on which this grant—he would say this becoming grant—had been recommended by the Court of Directors to the proprietors at large, he (Mr. D. Kinnaird) would not have felt it necessary to make those observations which he should now offer to the court. He would briefly state the grounds on which he felt himself called on partly to object to this resolution, and partly to agree to it. It might be proper to observe, that the liberty of the press was a question entirely distinct from the case of Mr. Arnott; because, situated as Mr. Arnott was, the Bengal government might have sent him away, whether for an offence perpetrated through the medium of the press, or otherwise. Mr. Arnott's connection with the press ceased when he was desired, as an unlicensed person, to quit the country. The reason, therefore, that this grant should be conferred on him was, because he had been cruelly, unnecessarily cruelly treated. If any one gentleman behind the bar could say, that there was a necessity for thus treating Mr. Arnott, in order more perfectly to enslave the press in India—in that country, where they were told a despotism prevailed, and must always exist—if it could be shewn, that the unnecessary cruelty practised towards Mr. Arnott, was instrumental in enchaining the press of that country (an object which many persons seemed to have at heart), then he would admit that there was some ground for the Court of Directors to say, that the grant was given from motives of compassion, and not from a feeling that oppression had been committed. The latter, however, struck him as being the fact. They could not refuse the reparation, because they could not deny the oppression. Now, when an act of injustice was committed by the agent or servant of an individual, or by an individual himself, and it was determined to make reparation for that injustice, he thought that that reparation was not complete, unless it was accompanied with a true representation of the matter. This had not been done in the present instance; and though he would vote for the money being granted to Mr. Arnott, yet he would not vote for it on the mere grounds contained in the resolution. He repeated, that this individual case was unconnected with the press in India; because, if Mr. Arnott had committed any offence whatever, Lord Amherst's government had the power of transmitting him to this country. He admitted that Lord Amherst did possess that power, and he contended that he had used it wantonly, outrageously, and, he would say, illegally. It had been assumed by the hon. Chairman's predecessor, that be-

cause the government of Bengal could do acts which appeared to him to be illegal, that therefore it was a legalized despotism. But they were told that there was a remedy. A man, if aggrieved, had, forsooth, an appeal to the Privy Council. The law allowed this: but they knew that it was a mere farce, because the individual complaining must prove malicious motives as well as injustice. If he could not prove malice, the want of judgment, or the error in judgment of those by whom he might have been oppressed, went for nothing. The persons thus erring were shielded from all responsibility. Mr. Arnott was sent home from India in an unnecessary way. He was in a round-about manner transmitted to this country; and he thought it would not be contended that the law allowed any such thing. This gentleman had been a very severe sufferer, and very narrowly escaped destruction, and those who had thus treated him, had he been so destroyed, would morally have been guilty of murder. Had Mr. Arnott perished in the ship *Fame*, he having been wantonly and unnecessarily forced to proceed round by Bencoolen instead of coming directly home, it would have been a case of moral murder. It was therefore extremely wrong to blink the conduct of the Bengal government on this occasion. The moment the Court of Directors gave notice that the sufferings of Mr. Arnott had been taken into consideration, and that reparation was to be made to that individual, he (Mr. D. Kinnaid) determined to abstain from making any observations on the Bengal government. And why? Because he thought that there would be an indirect, but severe censure on the conduct of that government. He thought the Directors would at least have said, "we will not again appeal to the pockets of the proprietors at home, in consequence of any misconduct of our governors abroad." This they had not done. And as they had thought proper to bring in the proprietors at large, as concurring in the ground on which they had voted this grant to Mr. Arnott, he must oppose it—and call upon the public for a direct dissent from that grant, so far as it proceeded on the reasons stated by the Directors, who had shielded the Bengal government from that censure with which they ought to be visited. But, while he disapproved of the grounds laid down by the Directors, he certainly approved of the grant itself; and God forbid that any comment which he had made should lead any individual to oppose it. He undoubtedly would vote for the proposition; begging, however, distinctly to be understood as not agreeing, in any manner whatever, to the grounds to which the Court of Directors had, as he thought improperly, confined this grant.

Dr. Gilchrist said, he had not, he believed, at present a right to vote in that court, although he had the privilege to speak in it. Tardy justice being better than none at all, he felt a certain degree of respect for what the Court of Directors had done in the case of Mr. Arnott; but he thought, if that individual had been fortunate enough to have had a Scotch cousin in the court, the grant might have been doubled, and he would have got at least £3,000 instead of £1,500. He trusted he would now be permitted to quote a few words from a Persian author, named Sadi, and for the benefit of his occidental hearers, he would subjoin a free literal English translation. The original lines were these:—

Ugur khwahee us nek bukhtee nishan
Duri zoom bundee bur uhle juhan
Ria yut diregh uz rueyabandur
Niioradi dili dad khahan burar.

He would now, for the occidental gentlemen, read the passage in English. It was, it should be observed, an address from a poet born under a despotic government, but nevertheless imbued with the strongest principles of justice; and thus he spoke—

"Should'st thou desire a monument, my son,
Of fortune's smile on earth, injustice shun!
With patience hear the poorest who complain,
Lest those oppress'd invoke thy name in vain.
Proud tyrants here man's judge supreme will try
And spurn them, too, when suppliants, from the
sky!"

Mr. Hume was extremely sorry to dissent from what had fallen from his learned friend. His intention originally was, to have suffered this vote to pass in silence, as on a former occasion; not because he thought the grant was sufficient, but because he felt that even partial justice to an injured individual was better than no justice at all. His learned friend had introduced the subject of the liberty of the press, a subject which was never out of his (Mr. Hume's) recollection: he had always, and ever would, so long as he had life, until that great object was obtained, hold up his hand and raise his voice in favour of the liberty of the press—(Hear!) He would confidently maintain, that if any act would be more decidedly mischievous to India than another, it was the keeping down and enslaving the press. By that means their governments abroad might, in safety and secrecy, inflict injuries on millions of miserable and unoffending individuals who were placed under the Company's sway—(Hear!) He was sure, even in England, if an opportunity was not given by which the misdeeds of power might be detected and exposed, that the worst consequences would follow—that the strong would inflict improper and unjust sufferings on the weak. If it were not for the press,

press, we should be slaves in this country—(*Hear!*) When that was the fact, could he believe they were acting as became them when they refused to others that which they themselves prized as the greatest benefit and blessing? Was it fit or fair to take from their subjects abroad, that which they themselves loved as a benefit of the first importance? He would now shew that Mr. Arnott was the victim of oppression—of ruthless and relentless oppression: he had been persecuted, almost to death, but certainly to ruin. In the first place, he had been arrested in an illegal manner; and he hoped and trusted the day was not far distant, when the proceedings of the Court of Directors on this subject would be laid before the public, to enable them to judge whether the executive body, the representative of the Company, and the virtual governors of their East-India possessions, had sanctioned, or could sanction, the military despotism of Lord Amherst—(*Hear!*) The memorial of Mr. Arnott, which was before the Court of Directors, stated this important fact, that when he was seized and ordered to England, on account of the press, he said, “I am not the editor of the paper; I am not responsible; but I will give it under my hand to renounce all connection with that paper, not to write a line in it, if I am suffered to remain. There will be still sufficient means of subsistence for me in this country. I came here, as many hundreds of my countrymen have done, to push my fortune; I thought my talents would not only be useful to myself but to my country, in the line which I selected: I am sorry that, as deputy-editor, I have happened to give offence.” And what was the offence? why a few jocose remarks on improper acts which had been done by persons in authority. Because Mr. Arnott published Colonel Sinet’s pamphlet, which had run the round of England and of Europe, he was ordered home. It was published, paragraph by paragraph, in continuation; and in the end, the government pounced on him and sent him away. Lord Amherst said peremptorily, “You shall not remain.” “Pray,” entreated Mr. Arnott, “suffer me to stay. I owe 3,000 rupees; and if I am driven out of India I shall be ruined, and my creditors must be deeply injured.” Lord Amherst was however inexorable; but if the feelings of humanity could have touched any man, they ought to have influenced Lord Amherst on that occasion. But no; this civil government marched Mr. Arnott under a military guard, and lodged him securely in the fort; and there he remained, until he was brought up by *habeas corpus*, when Mr. Justice Macnaghten and Mr. Justice Buller declared that his arrest was illegal, and he

was liberated. Lord Amherst was here greatly to blame, and he ought to be punished for his misconduct. Why did not the Court of Directors act as the Government had done some time ago, when they passed a heavy censure on the government of Ceylon for seizing the person of Mr. Rossier? By and by, when the appeal was made to the proprietors of East-India stock, he hoped that Lord Amherst would be visited by their severest censure. Was it proper that millions should be placed under a sway which allowed injustice and oppression to run riot? Mr. Arnott, on his liberation, repaired to a foreign settlement. He had renounced the press—he had renounced his country: but that was not sufficient—Lord Amherst still persecuted, still oppressed him. He sent to the military governor of the settlement where Mr. Arnott sought refuge, caused him to be seized, and had him sent down to the ship *Fame*. Surely such an act as this—an act which was as disgraceful to the military governor as to Lord Amherst—could not be recognized by law. It was, he repeated, a most disgraceful act on the part of the military governor who gave him up. Never was a clearer case of persecution made out; and the court was bound in justice and in honour to repair the injury. (*Hear!*) What followed? The law expressly said, that the Governor-General may send home any person, under the circumstances therein mentioned, in any of the Company’s ships proceeding to Europe. Now Mr. Arnott stated that there were, at the time, twenty-five ships lying in Calcutta river, nine of which were proceeding direct to England, and ready to sail. The captains of all those vessels were willing to give Mr. Arnott a free passage. “Allow me, then,” said he, “to proceed in one of those ships direct to England. Do not send me to Bencoolen—a place to which convicts are transmitted, and where, as the vessel is to wait for Sir Stamford Raffles, she must remain for some time on the coast.” They all knew the unwholesomeness of that climate, and they could easily conceive how injurious it must be to an European constitution, to be confined on ship-board for three or four months before sailing. Sending Mr. Arnott unnecessarily to this place, shewed that Lord Amherst wished him never to proceed beyond it. Here were nine captains ready to take Mr. Arnott direct to England, and that, too, without pay, but it would not be allowed. He should like to know whether the Directors had inquired of Lord Amherst why he preferred paying 800 rupees a month, instead of allowing Mr. Arnott to proceed direct to England for nothing? Why did he insist on Mr. Arnott’s proceeding by Bencoolen

coolen (which was a circuitous route) at so great an expense, when he might have gone direct to England without any charge on the government? Since the period of the administration of Warren Hastings, no act he had ever heard of was equal to this for cruelty and despotism. And this was not the only act of Lord Amherst's which called for reprehension; it was only one out of many, at which every proprietor ought to express his indignation, and against which the unanimous voice of the court ought to be raised. He wondered that so many honest men, collectively—being, in their individual capacities, excellent and feeling men—could approve of such a system. On the grounds he had stated, namely, the sufferings of Mr. Arnott, he thought the vote a proper one; and he felt it necessary to state his reasons for supporting it, as they were entirely unconnected with the question of the press.

Mr. Lowndes thought that the circumstance of sending Mr. Arnott home by Bencoolen ought to be sifted into; they ought to know why and wherefore this had been done, or, as the lawyers said, a rule to shew cause ought to be moved for on that point. He should like to know who was the captain of the vessel which was hired at Bencoolen, and who received the 800 rupees. He would beg leave to ask what his name was, and whether he was a relation to any of the Directors, or to any of the persons in power abroad? because it really appeared as if he had been employed for the purpose of putting money into his pocket. This part of the transaction seemed to him to stink of corruption. (*Hear!*) He admired liberty, but it could not be enjoyed every where in its full extent. It was with liberty as with plants: in some soils it would flourish, but it was totally unfit for others. Now if they extended the same degree of liberty to India which was enjoyed here, it would come to this—that the Company would be kicked out of India very soon: he therefore would only allow a moderate degree of liberty in that hot and inflammable climate. He had this day heard a great many philippics against the Directors; but they passed over his head "like the idle wind which he regarded not;" and indeed he felt so warm in the court, that he wished a little wind would pass over his head. (*Hear!*) As part of this transaction looked very like corruption, he thought it ought not to be discussed in a corrupt, but in a pure atmosphere. Gentlemen talked of freedom, and yet they were unwilling to open the windows, and let a little free air into the court; although they were now consuming many gallons of air every minute. (*Order!*) What had happened in this

country within the last twelve months, clearly shewed the corruption of the press. Within that period we had become a nation of Jews—a nation of money scribes. If he might believe Mr. Cobbett—a man whose abilities he admired, though he detested his principles—the persons who wrote for the press were chiefly to blame for the various speculations which lately inundated the country. Nay, he accused almost all of them of receiving shares for puffing off those ruinous speculations. He must say, that, if Mr. Cobbett would keep within bounds, he would be a very useful man, because he exposed villany. (*Order, order!*) He contended that he was in order; but chaos, that was disorder, had come amongst us, through the evil influence of those companies. When he saw a humbug Quaker come forward with what he called an equitable loan company, he could not repress his indignation. What right had he to interfere with a number of men, who were content with eighteen or twenty per cent. for their money, while he, by his scheme, meant to pocket one hundred per cent.? (*Order!*) Surely he had a right to shew what the liberty of the press had effected in this country, and thus to put gentlemen on their guard against extending the principle to India. It was the press that raised the delusion which ended so calamitously; and the press attempted to increase the embarrassments of the country at the present moment, instead of endeavouring to lessen them. If the free press, in this cool climate, and under our most excellent constitution, could be made an engine of oppression, cruelty, and ruin, was it not ten times more likely to produce calamitous effects in India? The press required a much stricter limit there than in England; and he was sure that the wise men who spoke this day, would not, in their calm and dispassionate moments, allow that the liberty of the press was calculated for India. A hundred years ago, a delusion of a similar nature with that which recently prevailed, existed. There was then, however, but one bubble, the South Sea bubble; but the delusion of the present day was a hydra, a many-headed monster—and illustrated too well the classic story; for, as soon as one head was cut off, another sprung up in its room: it appeared, therefore, that those city people had received, what their forefathers had not, a classic education. With regard to the sum of money voted to Mr. Arnott, he hoped the Directors had been actuated by a sense of justice. He thought the grant was sufficient, and he conceived that they would not have acted fairly if they had not given it. As to Mr. Arnott's residing in India, and not writing, he thought it was out of the question. How could a man like him make his bread there

there except by writing; privately or publicly? A man of his talents would have nothing to do with the drudgery of a merchant's office. He knew what the *cacoe-thes scribendi* was—and he was perfectly convinced, that a clever man, who once commenced author, could not avoid writing. With respect to the captains who offered to give Mr. Arnott a free passage, he supposed they belonged to free traders. He knew that it was a great point with those gentlemen to bring the Company's government into contempt, and therefore they would willingly take out or bring home any person who had pursued the same object. The men in the city whom the press had injured were those, he might be allowed to observe, who had saved the country from despotism—who had saved it from the power of Bonaparte. (*Order, order!*) Aye, whenever he mentioned Bonaparte, the friends of freedom became offended. They would argue, of course, that his was a very wild despotism. He was himself an old Whig, in the true sense of the word; (*Laughter*) but he separated from those who called themselves Whigs, because he could not, in the same breath, drink the principles which placed the House of Brunswick on the throne of these realms, and also the principles which seated Bonaparte on the throne of France. Many persons talked of liberty, who did not seem to understand what true liberty was; but, after they had for years advocated the principles of such a man as Bonaparte, who was as great a tyrant as ever lived, could any one place the least confidence in their opinions? He was afraid, if the liberty of the press were granted, that it would introduce a Bonaparte, quite as dangerous to India as the original had been to Europe. He called on the Directors, as they wished for the salvation of that country—as they wished for the salvation of their servants there and here—as they wished for the salvation of the whole body of proprietors—to act in such a way as would prevent the liberty of the press, and its unavoidable consequences, an Indian Bonaparte, being introduced into their Eastern dominions.

Capt. *Mayfield* observed, that the hon. proprietor who had just sat down had adverted to the delusion which the press had practised on the public mind, with respect to joint-stock companies in this country. Now he begged leave to say, that their Indian press, fettered as it was in every other respect, had put forth the prospectus of a joint-stock company in India, which it highly praised. It was, it appeared, under the direction of (we understood) Mr. Trotter, and received the support and approbation of the government abroad. He should like to know whether it was also sanctioned by the Court of Directors?

Mr. *Lowndes* knew of no other joint-stock company in India except the India Company.

Mr. *Gahagan* hoped the Chairman would not answer the question which had just been put to him, and which was equally out of time and place. What, he asked, had joint stock companies to do with Mr. Arnott? As to the propriety of granting compensation to Mr. Arnott, he concurred entirely in the observation of his hon. friend (Mr. Hume); Mr. Arnott had been most cruelly treated. The wretched executioner at Newgate, brute as he was, let the poor sufferer depart from this world with as little pain as possible; but here they found a noble Lord persecuting this unfortunate gentleman, and inflicting the severest vengeance on him. Good God! Surely, if it were deemed necessary to send him away, it ought to have been done in the most humane manner; but instead of that, he was seized and put on board a ship which was to proceed, not directly to Europe, but was, in the first instance, to stop at Bencoolen. This was the treatment he received; and therefore he (Mr. G.) would grant this remuneration without any reference to the question of the press. He was very sorry that his learned friend (Mr. Jackson) had introduced that topic at all, since it had led to that loose conversation, in the course of which, and the hon. proprietor (Mr. Lowndes) would pardon him for saying so, he had spoken a great deal of nonsense. (*Hear!*)

Mr. *Lowndes* said it was impossible for him to speak sense, when he was alluding to a parcel of nonsensical companies. (*Spoke, spoke!*) He did not care whom it displeased—he would always expose villany; he had a right to express his astonishment at the conduct of the person to whom he had alluded, when he saw him endeavouring to crush the pawnbrokers. That man had the outward and visible sign of humanity, without the internal and spiritual feeling.

Mr. *R. Jackson* said, the documents to which his hon. friends had alluded were not before the court; but if the tale of distress and misfortune which they had related were correct, it was still open to the proprietors, when the papers were produced, to investigate it, and, if necessary, to punish. Still, however, he looked upon the resolution, as framed by the Directors, to be a very proper one. They had the papers before them, and in their report they said that, “in the month of December 1823, Mr. Arnott was sent on board the *Fame*, at Calcutta, which was proceeding to England *via* Bencoolen. On the 2d of February the vessel was destroyed by fire, and he lost the whole of his property by that disaster. He was obliged to return, in consequence, to Calcutta,

cutta, which entailed on him a considerable additional expense. Under these circumstances, and in consideration of his severe losses by the destruction of the ship *Faine*, the court recommend it to the Court of Proprietors to compensate him, for the present, with a grant of £1,500." Here it was allowed that investigation might yet take place, at the same time that compensation was provided for the misfortune which Mr. Arnott had encountered; and it was still open to the Court of Proprietors to canvass the whole matter, when the papers were before them. Inasmuch as there was no question connected with the resolution but the limited one of compensation for losses sustained under peculiar circumstances, he had strictly confined himself to that, without attempting to inculcate any person.

Mr. Hume said, some of the documents which were open to view, shewed that Mr. Arnott had been most harshly treated. In one of these he exclaimed, in the agony of his heart, "Gracious God! what have I done that all this vengeance should be poured on me!"

The *Chairman*.—After what had been said, it became necessary for him to offer a few words. It appeared that an unlicensed person had been removed from India by the Governor-General, under the power which he possessed by law; and it came to be considered whether that removal was effected in the most convenient manner. It was felt that it might have been effected in a manner more convenient. Mr. Arnott, it seemed, was put on board the vessel commanded by Capt. Young (he gave the name, as the hon. proprietor, Mr. Lowndes, had demanded it), who sailed for Behoolen; that vessel was burned—a contingency to which all vessels were liable, and for which Lord Amherst could in no way be deemed answerable. In consequence of the losses and sufferings of Mr. Arnott, the Court of Directors, feeling deeply for his situation, came to the resolution of recommending that a compensation should be granted to him. He was not acquainted with that individual, but he took very great pains to inquire into the circumstances of his case, and he thought it was one that was worthy of relief. The Court of Directors had, in his opinion, acted very properly, in coming to the resolution of bestowing on him this sum as a compensation for the inconvenience, suffering, and distress which he had endured. He, for one, agreed to the grant with all his heart.

The motion for confirming the resolution of the General Court of the 28th of September, approving of the grant of £1,500 to Mr. Arnott, was then agreed to unanimously.

INSTRUCTION IN HINDOOSTANNEE.

The *Chairman* said, that at the last General Court an hon. proprietor (General Thornton) had given notice that he would this day move a resolution relative to the propriety of granting instruction in the Hindoostannee language to persons proceeding to India in certain capacities, since which a letter had been addressed to the Court of Directors, signed by two proprietors, requesting that the court should be made special for the purpose of taking the same subject into consideration. Perhaps it would save the time of the court if the two motions were merged into one, and thus debated.

Mr. Hume said, he wished the two motions to be kept separate.

The *Chairman* had no objection. He only threw out the suggestion to save time, as the two questions were so nearly alike.

General Thornton wished, as the new notice had been given by two proprietors who had been in India, who were therefore better judges of the subject, and could bring the question forward more advantageously than he could,—to withdraw the notice which he had previously given —(*Hear!*)

The *Chairman* heartily concurred in what had fallen from the hon. proprietor, and felt obliged to him for saving the time of the court.

THE COMPANY'S SHIPPING.

The *Chairman* said, another hon. proprietor (Captain Maxfield) had, at the last General Court, given notice that he would on this day submit a motion for papers relative to the rates of tonnage for the Company's chartered and unchartered ships to India and China, together with the mode of auditing and keeping the accounts. The Court was now prepared to entertain the motion.

Capt. Maxfield said, the motion of which he originally gave notice embraced two objects, the rates of tonnage of the ships employed by the Company, and the mode of auditing and keeping the accounts; but he would, for the sake of brevity and distinctness, confine himself to the shipping question only. In addressing the court on a subject of such deep importance, embracing so many great interests, he regretted that the task had not fallen to the lot of some other person more able than he was to expose the defects of the present system, and better calculated to introduce a plan more useful and beneficial to the public and the Company; and, by that means, to avoid, on the renewal of the Company's charter, the opposition of those individuals who felt themselves injured by the system as it now stood. He was induced to agitate this subject, that other gentlemen might be led to aid him in this important

important inquiry, and that, by their joint efforts, they might produce those advantages which were so much to be desired. It had been so much the custom to laud the Company's servants, that he scarcely expected a patient hearing, if he in the slightest degree expressed a doubt of their capacity. The interest of many, and the indolence of more, tended to operate against an investigation of this nature, from the feeling that nothing could be done, connected with this subject, that would at all increase their dividends: therefore, no operation had taken place for the purpose of ascertaining what really could be effected. If he had but one vote in that court, he might be thought presumptuous in bringing forward so momentous a question; but he had long been a proprietor possessing three votes, and a short time since he had sufficient stock to entitle him to a fourth. He stated this to shew that his interests were deeply concerned, and closely identified with those of the proprietors at large. He had nothing to do with the shipping interest, and most probably never would, but still he felt a strong concern for the shipping interest of the Company; and he would, if possible, so ameliorate the system as to render it highly beneficial. They were, at present, engaged in an unprofitable war, and he knew not how it would pay them. If that war were to terminate at the present hour, the expense already incurred was such as to render it imperiously necessary to retrench in every possible way, without impairing those establishments which were of essential importance to the Company. He might be told that economy had always been adopted: he believed so—but it was sometimes pursued where it was least useful; where it could not be carried on without impairing the efficiency of important establishments: he meant particularly in the army. He did not intend to illustrate this position by an invidious comparison of the scale of pay and pension for the civil and military service; but, at a future time, he would perhaps call the attention of the court to that point. At present, he offered himself to assist the court in the laudable object of economising in those departments where it could be done with safety. The absurd attempts made by some of the governments abroad, to economize improperly, either from the orders of the Court of Directors, or through the officiousness of servants, had often produced mischievous effects. For instance, their most respectable superintendent of marine at Bombay had allowed the Company's cruisers to be let out, which produced the enormous sum of 150 rupees. This did not occur under their present amiable, able, and intelligent governor; but it really did happen in the time of Sir Evan Nepean. One of their cruisers,

the *Vestal*, was so stuffed with bales, by an Armenian merchant, that she had scarcely room for provisions and stores; for the use of that vessel the Bombay Government received the sum of 150 rupees. The only two cruisers in the Company's service which were employed in making an impression on the pirates in the Persian Gulf had been disposed of. And what was the consequence? It cost 150 lacs of rupees, or £1,800,000 to check the growth of those pirates. The interest of that sum, if properly applied, was enough effectually to have put down hands of much greater magnitude. In the infancy of the Company's concerns, the Dutch, the Portuguese, and other freebooters, opposed and attacked their trade, but the Company armed their trading vessels and protected themselves. Those ships, while they maintained only the respectable character of merchants, answered every purpose. A great change had since taken place, and they now appeared in the more elevated character of sovereigns. It was generally believed, that they carried on a losing trade with India. He could not substantiate that position, with reference to one year—but if a series of years were taken, they would afford sufficient evidence to prove the fact. As a company of merchants, expressly incorporated for commercial purposes, they must either carry on their trade as merchants would do, or lose the mercantile character in the character of rulers. No individual merchant could prosecute the India trade as the Company did, with high freights and bad bargains; and the Company themselves could not carry it on, if it were not bolstered up by the profitable trade to China. He admitted that the import trade to China was one of high profit—but he was convinced that it might be made much more so, and at the same time a great benefit be conferred on the public, by enabling them to purchase tea at a moderate price. If this were done, it would form a very good reason for the renewal of the Company's charter, and for their retaining the exclusive trade to China; because it would shew, that the Company considered the public interests as much as their own. But to effect this, they must not conduct themselves as they had done heretofore. Let their ships go forth as merchantmen, and as merchantmen alone. He entertained the highest opinion of the ability and talent of the officers on board the Company's ships—and the ships themselves were of a fine class—but he did not think they were so suitable for commercial purposes. The guns, which were occasionally used in time of war, greatly increased the expense of outfit; and, where those vessels carried forty guns, it was quite clear that the number of men bore no proportion to the number

number of guns. He had been induced to attribute the loss of many of the Company's ships solely to the number of guns they had on board. The hon. proprietor proceeded to exemplify his position, by adverting to ships belonging to the Company which had been lost in severe gales, which the country vessels had safely weathered: since there were several country ships in those gales which proved so disastrous to the Company's vessels, but not to the others, he came to this clear conclusion, that the guns were the great cause of mischief. The *Devonshire* Indiaman was lost some years ago solely by having those guns on board. At the time he described her, he was lying above her in one of those miserable pattan schooners. The gale was a regular north-wester, and gave notice of its approach an hour before it burst out. The vessel in which he was rode out the gale in safety, and they saw the stately *Devonshire*, with her guns and lofty masts, sink to the bottom. This was sufficient to shew him the mischief of carrying a large number of guns on board those vessels. Then came the question, "what degree of advantage do you derive from this system, in a commercial point of view, by securing a more moderate rate of insurance?" An answer to that query would be found by inspecting the rates of insurance at Lloyd's. If they examined those rates, they would find that goods imported in well-built British ships, of class A, were insured for as little as those carried on board the Company's large ships. The argument, then, made directly against those who were in favour of the latter. The useless expense of outfit in the Company's ships was bad, both for the Company and the British public—because it prevented the Company from selling East-India produce at a moderate price; and of course the Americans and other traders were able to beat them in the foreign market. During war, some of the Company's ships were taken up at the exorbitant rate of £44. per ton; and yet the Court must be aware, that, in coming from Bombay, they were not more than one-third laden; the rest of the freight became a vast source of emolument to the commanders. He understood, however, that this system did not now prevail. At one time, when anti-commercial notions were prevalent at Bombay, the Company received a large consignment of cottons. Was it not to be supposed that part of that consignment would be sold to the Chinese for tea? Instead of that, however, it was sold to the commanders of certain ships, to be paid for at China. The commanders carried the commodity thither on board the Company's ships, and absolutely undersold them in the market. Even at that time, when this error was committed, vessels were carrying

out despatches, ordering retrenchment and economy in the military department. Since the peace, the rate of freight had been considerably reduced; but it was clear to him that a still greater reduction might be effected, and that the commerce of the Company might be carried on like the commerce of any other body of commercial people. He saw no advantage that was derived from the mode in which their marine affairs were at present conducted. It was quite evident, from what he had said, that he did not entertain the best idea of the principles on which their marine and commercial affairs proceeded—and twenty-four years' service in their marine had given him a sufficient opportunity to understand these subjects. The excellence of the Company's army in India was owing to the praiseworthy zeal of some of the hon. Chairman's colleagues, to the fostering care of the late Lord Melville, and the judicious conduct of the Duke of York. The army deserved to be noticed with approbation; but he must say, that a part of the Company's service was so mismanaged, as to render it a useless burden to the state, and a disgrace to those who should supervise it: he alluded particularly to the Bombay marine. He might be told that it was too insignificant to require notice; but when he saw a superintendant receiving upwards of a lac of rupees per annum, a salary larger than that given to a first lord of the admiralty, he thought it was a subject worthy of notice. The navy ought to be cherished in every part of the British dominion; it was the dread of our enemies, the bulwark of the country, and the admiration of the world. He well recollected that it was said, at the period of the renewal of the charter, that this insignificant corps, the Bombay marine, was every way sufficient for guarding the coast; and that therefore the Company should not be charged for the service of any of the king's vessels in those seas. Such was the inconsistency of those who would not exert themselves to reform the system. The customs, the revenue, and the judicial branches of their service loudly demanded revision. When the errors in these were considered, astonishment would cease at the bad system on which their marine affairs and commercial transactions were conducted. The observations to which he had called the attention of the court, were, he conceived, of the utmost importance; and, however sanguine he might be deemed, he thought that, by retrenching the lavish expenditure at China, a saving, not of 150 rupees, but of three or £400,000 per annum, might be effected. He should detain the court no farther, but would at once submit the following motion:

"That there be laid before this court a statement, exhibiting the name, number, and

and tonnage, of all ships now chartered by this company; with the rates of tonnage, the number of voyages for which they are engaged, the names of the owners, and the time when engaged:—also a list of ships of the Company purchased for India and China, stating the time when purchased, the price paid for them, and the expense of repairs, &c."

Mr. *Hume* rose to second the motion. He was proud to say, that the father of his hon. friend near him, and his learned friend (Mr. R. Jackson), had exerted themselves in the same cause, and had reformed the shipping system, though it was still defective, and made it what it was. He too had exerted himself in endeavouring to alter the ruinous system which had so long prevailed. He had not, at that time, the honour of a seat in parliament; but, in conjunction with others, he petitioned the legislature on the subject. In that petition they stated reasons for a reform, which he looked upon to be quite unanswerable. Their petition was however unsuccessful. He did not think that parliament, on that occasion, acted either for the interest of the East-India Company or of the empire at large, which were closely connected with each other. He conceived, that, when the country was called on to pay a large tax on tea, for the purpose of keeping up useless extravagance, all those proprietors who supported such a system were to blame. If the hon. proprietor had been in the court in 1813, 1816, and 1817, when he (Mr. *Hume*) wished to check the amount proposed to be paid to owners of ships who complained of having made losing contracts, he would have seen the strong necessity which existed for remodelling the shipping system. Parliament was at that time applied to, and they gave leave to the Company to pay the increased rates that were demanded. Instead of contending that owners should go on making contracts that were likely to lead to their utter ruin, he said, "Reduce your equipments—and then they can proceed with profit to themselves and benefit to the Company." His advice was however overruled; and if the hon. proprietor had been in the court at that time, he would have found the majority to be either ship-owners or ship-builders. He made the best exertion he could, with a few friends who surrounded him, to expose the evil, but his effort was not attended with success. If any thing could rise up in judgment against the Company, it was their lavish expenditure in freight. They were paying enormous sums for freight, when it could ordinarily be procured for 10, 11, or £12 per ton. In 1813 he stood up in that court and said, "If we have peace, the rate of freight will fall to £12 per ton." He was, in consequence, considered as an enthu-

siast, as a man almost beside himself: yet, strange to say, that which he had prophesied had been perfectly fulfilled. As the hon. Proprietor had said, the Company took to themselves a great deal of credit for good management; but where was the good management in taking up ships at the rate of £26. 5s. per ton; not for three voyages, but for five or six voyages, which was equal to ten years? And yet this had occurred at no very remote period. What did the Company do last year? He had not the minutes to refer to—but he believed they had hired vessels in London, sent them to China, and loaded them with tea, which was carried out to North America, at the rate of £11 per ton, while they were actually paying £26. 5s. per ton, under some of their other contracts. He had formerly shewn that, in the course of the war, no less than £50 and £55 per ton had been paid. This was partly on account of demurrage, which indeed was sometimes unavoidable, in consequence of the system pursued.

Mr. *Walker* wished to set the hon. Proprietor right upon one point. In the year 1819, which was six years ago, none of the Company's ships were taken up at so high a rate as £26. 5s. In 1823, there was one at £21; another at £21. 8s; and a third at £21. 7s. 6d.

Mr. *Hume* was glad to find that there was an improvement even of a few pounds. But still he could not help remarking that last year ships could be procured at the rate of £9. 10s. per ton, while the Company were paying £21.

The *Chairman* said, the hon. proprietor, in submitting this motion, had gone over a great space of ground, over which he would not attempt to follow him. This was a subject which had been much considered. If any subject had been more discussed than another in the Court of Proprietors, that subject was the present: and he believed it would be found, looking to the East-India Company as acting in their double capacity, that the description of ships alluded to by the hon. proprietor, and disapproved of by him, was the most applicable to their peculiar service. As, however, he was anxious that the proprietors should have the fullest information on this subject, he would not resist the motion. (*Hear!*) He would only observe, that there was much and very important employment for the officers in that house, from which they would be taken while making out the accounts required. It was of little importance to him whether he was occupied in that, or any other room of the India-House; but he felt it his duty to state, that the production of those papers would withdraw many officers from the execution of very important business. Nevertheless he would agree to the motion.

Mr. *Hume* said, that the object of the

court, which was to procure information on the subject, would not be obtained, unless an addition was made in order that the rate of freightage for single vessels might be known.

Mr. *Lowndes* hoped he might be allowed to say a few words on the subject. They should bear in mind that there was always a larger assortment of vessels in time of war than in peace, and he considered that the builders of ships should be allowed time to wear them out. He professed liberality, and he was confident that would always be found to be the best policy. Though the speech of the gallant captain was very excellent, yet he thought he could point out a little error in it. He was well aware that Indiamen were often turned into men of war during the late hostilities, and he was proud to say, that they had made a glorious stand against the French men of war. He would suggest to his hon. friend, that it was not at all times convenient to agitate questions of economy. When his hon. friend had brought forward his propositions with respect to the army and navy, he (Mr. *Lowndes*) had always resisted them; and he was of opinion, that the difficulties now existing were owing to the want of a due degree of gratitude being exercised towards them. The character of the British nation was stained by a course of conduct towards her officers.

The hon. *D. Kinaird* interrupted the hon. proprietor, and begged to remind him there was no question before the court to which his remarks could in any way apply.

Mr. *Lowndes* asked why he should not be allowed to deviate from the question, as well as the hon. proprietor himself. He was not surprised that the hon. proprietor should interrupt him in his praises of the army. Though he respected the good sense of the hon. proprietor, he knew that party feelings would carry him great lengths. [Here the noise in the court was so great, that we were not able to make out the conclusion of Mr. *Lowndes*' remarks.]

The *Chairman* inquired of Mr. *Hume*, whether he had any addition to make to the motion?

Mr. *Hume* then moved that the following words be added to his motion; "also a statement of the rate of freight paid for one or more vessel or vessels hired since 1813 and not now employed, with the number of tons, names of the owners, and the destination and voyage of each ship; and likewise whether they were hired by public or private contract, and with the date of such contract." The motion, with the addition, was then put and carried.

GOVERNMENT OF LORD AMHERST.

The *Chairman* informed the court that it was made special for the purpose of considering the following proposition:—

"That there be laid before this court copies of all correspondence between the Court of Directors and Mr. J. S. Buckingham, late proprietor of the *Calcutta Journal*, respecting his claims for reparation of the injury sustained by him in his property in Calcutta, in consequence of the measures of the Bengal government.

"Also copies of all proceedings of the Bengal government, referred to in the correspondence before annexed."

Mr. *Hume* thought it necessary to make a few observations upon a subject of great importance; and he would do so before he noticed the subject that had just been introduced. He had signed three requisitions, which he had laid before the Court of Directors, with an intention of bringing three distinct topics under the notice of the proprietors. One of the requisitions had just been stated to them; another related to cadets proceeding to India without having previously acquired a knowledge of the native languages; and the third was a requisition, that the court might be made special for the purpose of taking into consideration the present state of affairs in India, and of recommending to the Court of Directors the propriety of recalling Lord Amherst. By act of Parliament, four special quarterly courts must take place every year; and at such meetings any subject which any proprietor should think of importance might be brought forward and discussed. The same act likewise obliged the Court of Directors to call a general court at any time upon receiving a requisition signed by at least nine proprietors, for the purpose of discussing any subject which they might deem important. So long as he had attended this court, it had been the custom for hon. gentlemen to notice any subject they chose, but as an act of courtesy it had been considered proper to give notice of such motions as were thought to be interesting to the proprietors. In such a case, two proprietors signed a requisition to the Court of Directors, praying the Quarterly Court might be made special for the purpose of considering such a motion; and he never till now knew of any attempt of the Court of Directors to prevent the proprietors from exercising this privilege. Every one who at all attended to the subject, must see that it was of importance to the great body of proprietors to know what subject was intended to be discussed at a Quarterly Court. Now if the Court of Directors have it in their power to publish what notices they choose, and at the same time keep back others, they assume to themselves to point out some subject as deserving attention, and withhold that distinction from others. The same practice which had been followed by this court, was observed in the House of Commons. Any member who might catch the

Speaker's

Speaker's eye, was entitled to bring what motion he chose before the House; but still it had always been the practice to give notice of any question of importance, as well for the conveniency of business, as for the information of those persons who would probably take part in the discussion. It was now nearly eighteen years since he had become a member, and no small actor in that court; and during the whole of that time, he never once knew an instance of a refusal on the part of the Court of Directors of a similar nature to that he was about to mention. He had at several Quarterly Courts introduced topics of considerable importance, and of which he had not time to give notice. On two occasions he had on the sudden called the attention of the court to the present state of India, and had blamed the measures of Lord Amherst's administration: on each occasion the Chairman had asked him if he would prosecute his motion without due consideration, for he thought that it would be an act of high injustice in him (Mr. H.) to bring forward a motion of such vast importance without first giving notice. Such was the appeal that had been made to him, and to which he yielded. Two courts had now passed since he had given notice of his intention of bringing forward a motion for the removal of Lord Amherst from the head of the government of India. Such a notice, he thought, would have warranted him, without giving any further notice in bringing forward his motion on the present occasion; how, then, could he account for the way in which the Court of Directors had behaved throughout this transaction? On the 8th inst. he had sent a requisition to the Court of Directors, praying them to make this Quarterly Court special, "for the purpose of taking into consideration the following proposition;—that the Court of Proprietors, duly considering the present situation of affairs in India, recommend to the consideration of the Court of Directors the propriety and necessity of immediately recalling Lord Amherst." Of the importance of this subject the Court of Proprietors were the best judges; but he thought that it was a question that above all others required the giving notice to the proprietors. But what did the Court of Directors do upon the occasion? On the 14th inst. a letter was sent from the Court of Directors to him, stating that they did not think it necessary to make the court special for the purpose he had desired, and at the same time mentioned, that as the court was a general quarterly meeting, any subject might be introduced without notice. Now he appealed to the hon. proprietors, whether any thing could expedite business so well as the practice of giving due notice of every important question which was about to be brought forward in

this court, in order that the hon. gentlemen might come prepared to discuss it. What would be the consequence if the Court of Directors were only to give notice of motions that were of minor interest? The motion respecting Mr. Buckingham was no doubt of vast importance to himself—but in comparison with one where the general interests of India were touched upon, was of inferior importance. What would be the consequence, he asked, if the Court of Directors were to refuse to give notice, when the question was one of the greatest interest? Was it proper that the proprietors should remain ignorant of the intention of introducing such a question as he had described? The Chairman ought, before he proceeded, to state the reasons on which the Court of Directors acted, when they departed, on the present occasion, from that courtesy and practice which they had formerly followed up.

The Chairman understood that the hon. proprietor wished to be informed of the reason which had made a distinction in the different notices of motions which he had sent in to the Court of Directors. The practice of advertising notices of motions was entirely optional with the Court of Directors, and in which they always wish to oblige hon. proprietors; but in reference to the notice alluded to by the hon. gentleman, the Court of Directors considered that, as it related to the high and important office of Governor-General of India, and that it might, if published, arrive in India before the debate took place, it might produce; whilst a war was being carried on, an effect prejudicial to the Company's affairs; they therefore took it upon them to say, that they did not think it necessary to advertise it. The Court of Directors had taken this responsibility upon them, and it was for this court to say if they had acted wisely and judiciously. (*Hear, hear!*)

Sir Charles Forbes wished to make one observation on the subject.

The Chairman begged of him to desist, as there was then no question before the court.

Mr. Hume contended that every proprietor had a right to address the court on a question respecting the form of proceeding. Were it necessary to raise a question, he could effect that object in an instant, by moving a vote of censure be passed on the Court of Directors.

The Chairman declared it to be impossible to permit such conversation to be persisted in; neither should he be deterred on any occasion, by the threat held out of proposing a vote of censure, from following such a course as he deemed to be most advantageous for the welfare of India, and for the interests of the public and the Company. He would challenge the hon. gentleman to persevere in his threat, upon which

which the Court of Directors were prepared to take the sense of the Court of Proprietors, whose decision would show what importance was to be attached to such a proceeding.

The hon. *D. Kinnaird* said that his hon. friend meant nothing offensive to the Court of Directors; his intention was to shew that he had it in his power to raise a question, upon which a debate might take place, in a moment. The object of his hon. friend in introducing this subject, was to ascertain whether it would be in the power of the Court of Directors hereafter to withhold notices of particular questions. He thought that the hon. Baronet had a right to speak on the subject, particularly when he might possibly have a motion to make.

The *Chairman* said, his only purpose in interrupting the worthy Baronet was to save the time of the court. There was no question before them, and the subject alluded to was wholly in the discretion of the Court of Directors.

Sir C. Forbes said, that understanding a requisition had been laid before the Court of Directors of the import stated by his hon. friend, he had come from Scotland to be present. He thought that the publication of the requisition could be in no wise detrimental; on the contrary, he thought it would have been attended with beneficial results.

Mr. Lewndes observed, judging of what was said of the tyranny of the government of India, he thought it lucky for *Mr. Buckingham* that he was not now in that country; for without doubt he would be saluted with "Off with his head—so much for Buckingham!"

The conversation then dropped.

CASE OF EX-LIEUTENANT G. STRACHAN.

Mr. Strachan hoped he did not break through the regulation of the court in rising to address them; he should be sorry to infringe on the forms of proceeding. He held the rank of Lieut. Colonel in the Company's service, and was not unknown to *Mr. Astell*, to whom he had stated his case sixteen years since, when he was Chairman of the Company. Since then he had had no opportunity of making known his wrongs until this day, when the tyrannical conduct of the government of India has been made the subject of consideration.

The *Chairman* said, the hon. proprietor (*Mr. Hume*) was in possession of the court.

Mr. Hume said he would very willingly give up his right.

Mr. Strachan exclaimed that he threw himself on the indulgence of the court, and if he was in error, let him be put down.

Mr. Wigram rose to order. He would appeal to the court whether the hon. pro-

prietor's proceeding was not irregular? Would not vast inconvenience arise, if hon. gentlemen were permitted to detail their grievances without submitting a specific motion to the court? The hon. proprietor was at liberty to address the Court of Directors, if he had any grievance to state; but if he pursued his present course, much disorder and inconvenience would be the result.

Mr. Strachan replied, that he had a motion to submit, and it was, "That Lieut. Col., late Lieut. Strachan, of the Bombay military establishment, be restored to his rank and arrears of pay up to the present time; and that all papers and correspondence with the Court of Directors, together with all correspondence with the constituted authorities in India, be forthwith laid on the table of this court." He would, if he were allowed, state his case to the court. He had set out to India in 1799 in the capacity of a cadet, and landed there in 1800; he had served three years after his arrival on the coast of Malabar, where he lost his health, and in consequence returned home on a sick certificate. His health was no sooner re-established than he proceeded to India a second time. The captain who took him out wished to extort from him eighty guineas for his passage above the sum prescribed by the Court of Directors. He resisted this extortion, as he would the demands of a highwayman; and for this conduct he was persecuted while on board by the captain, and afterwards was tried on a charge of a most disgraceful description, preferred by the captain, which he would forbear mentioning, lest he should offend the ears of the court: of this malicious charge he had been honourably acquitted. The commander-in-chief refused to detain this enormous freebooter, until he and some others were enabled to make out their charge against him. Here he might date the commencement of his misfortunes, which had ruined his prospects in life. He had for years struggled against perjury, and had no other means of support than that which he derived from his ten fingers: he had, it was true, rich relations, but they would not condescend to assist him. He had commanded for a space of nine years a regiment of native infantry, and had besides held many important commands. At the head of 900 troops, he had been appointed to command the province of Ahmednugger, together with the fortress. His conduct during this period had given satisfaction to his commanding-officer, General Lawrence; but still he was consigned to persecution: he had been marked out for persecution, for daring to resist the unjust demand of the captain of the ship for eighty guineas. He spent five years more performing actual service in the field, when he found his health

health impaired; he could no longer hold up against his fatiguing duty. Had time not obliterated the certificates of his illness, they would at this moment have been lying on the table of the Court of Directors; indeed, at the time he was then addressing them, he could scarcely say he was recovered. On the departure of his regiment from Poonah to Surat, he was put under arrest for neglect of orders in not attending parade, when at the very time his commanding-officer had in his possession a certificate of his illness. His indisposition was so severe that he could not walk, and was obliged to be carried by coolies a distance of fifteen miles. He was brought to a court-martial by his commanding-officer, in conjunction with Major-General Jones. It might be seen on the face of them, that these charges were arbitrary and oppressive; and with oppression he charged his commanding-officer in bringing forward this charge, when he knew he was confined by severe indisposition. His charge was not listened to, and he was cashiered and sent home. The parades he was required to attend were not parades of exercise in an enemy's country; it was evidently a mere scheme formed to ruin him. His enemies dared not to attack him while he was well, but ventured to do so when he was confined by sickness. He brought a charge of conspiracy against his persecutors, but it was not listened to; and he was sent on board a ship from Bombay, and treated like a felon: he was compelled to sleep on deck, and was never suffered to go below. When arrived at the Cape, he went on board of a French prize, to the captain of which he was indebted for his passage home, and for many kind offices; for which he had never had it in his power to make compensation. Immediately on landing in England, he stated his case to Mr. Astell, who informed him, that if he would acknowledge he had disobeyed orders, he should be restored to his rank. He indignantly refused to make any such acknowledgment, and was so shocked at the proposition of that gentleman, that he could never prevail on himself to see him again. He now threw himself on the generosity of the court, and hoped they would make an inquiry into his case. Many of his brother officers, now in England, could bear testimony to the spirit of persecution arrayed against him. He could detain them with details on this subject till twelve o'clock at night, but he would not so far trespass on their kindness. He claimed the rank of a field-officer in the Company's service. He had often been in want of even the necessities of life, in consequence of his rights being withheld from him; his relations had refused to advance him a small sum to enable him to get his case printed. He

would say no more; he was already overwhelmed by their kindness in granting him this hearing. (*Cries of hear!*)

Colonel *Lushington* observed, that though he was totally unacquainted with a single circumstance of the gentleman's case, he had detailed a fact which should induce them to abstain from going at all into the business: it was, that he had been tried by a court-martial. Now if that court were to be made a court of appeal from courts' martial, where would their labours end? He would therefore recommend the hon. gentleman to lay his case before the Directors, as this court could not discuss its merits.

Mr. *Astell* thought the court would naturally expect a few words from him, circumstanced as he was; he would not, however, enter into the case which had just been stated to them. It was now fourteen years since he was first brought before the court; he had then the honour of filling the office of chairman, and he hoped he discharged the duties of that situation as he wished to discharge all other duties, with impartiality. He did not recollect the name, and still less the person of the gentleman who had addressed them; but he thought that gentleman had committed himself on one point. He had stated that he had been tried by a court martial; that he had described his case to him (Mr. Astell), and that being unwilling to accept the indulgence offered, he had left him and never favoured him with his presence again. If this court were to agitate cases of appeal from courts' martial, there would be no end to their labours. No doubt every fact which that gentleman had detailed to them that day was stated at the court-martial, and he considered they had heard enough from the gentleman himself to induce them to decline interfering in his case.

Mr. *Hume* thought that the court should be a place of appeal against any authority: they received appeals from civil courts, and why not from military? He hoped never to see the day when they should bow down their necks to military despotism. It was to be inferred, from the language made use of by the hon. gentleman who had just sat down, that the decisions of courts' martial were to be considered final; but let the Chairmen turn over the Company's records, and they would see how many cases there were of officers who had been committed by courts' martial and afterwards restored to their rank. The court would not surely be led away by the idea, that because an individual has suffered the conviction of a court-martial that the gates of mercy were therefore to be closed upon him. Why, the ink was hardly dry, with which the Court of Directors had signed the pardon of sixty-five soldiers condemned to be hanged by a court-martial; then why not hear that gentleman's case?

case? He hoped the court would array itself on the side of a suffering individual, and, as far as is consistent with the good of the service, lean to the side of mercy.

Sir *G. A. Robinson* was not aware that it had been said that the hon. gentleman's case ought not to be considered. The hon. proprietor on the other side had only stated that that court was not a fit place to discuss an appeal from a court-martial, and had suggested that the Court of Directors was the proper authority to take cognizance of the affair. No one had proposed, as the hon. proprietor (Mr. Hume) would appear to think, that the doors of the court should be shut against any one complaining of injustice.

Mr. *Hume* begged to observe, that that court had the power of recommending any individual case to the Court of Directors; if they had not such a power, it was extraordinary they should have the power of recommending the dismissal of a Governor-general.

Mr. *Lowndes* exclaimed, that he was averse to a military despotism.

The *Chairman* said, he had understood that the hon. proprietor (Mr. Strachan) was prepared to submit a motion to the court.

Mr. *Lowndes* observed, that a friend of his had been refused the command of a vessel, and therefore he (Mr. Lowndes) sympathized with Mr. Strachan.

Mr. *Hume* did not know the intention of the hon. gentleman with respect to his motion, but he considered it best to take the subject out of his hands. He hoped a British audience, such as that he was then addressing, would not act in a way derogatory from its honour. He trusted no man who had heard the hon. gentleman's appeal, would refuse to unite with him in recommending the Court of Directors to take his case into consideration: by this proceeding, they would not pledge themselves to any opinion as to the guilt or innocence of the party. He therefore moved, "that this court do recommend that the case of Mr. Strachan, late Lieutenant in the Company's service, be taken into consideration by the Court of Directors."

Mr. *Gahagan* wished to ask the hon. gentleman (Mr. Strachan) a question, which he hoped he would answer by way of courtesy. He had said he brought a charge of subornation against his officer; he should like to be informed what became of that charge.

Mr. *Strachan* replied, that the court would not entertain it.

The *Chairman* requested the hon. gentleman to favour him with his name.

Mr. *Strachan*.—"My name is George Strachan."

The *Chairman* asked if he was a proprietor?

Mr. *Strachan* replied he was virtually one.

The *Chairman*.—"What stock do you hold?"

Mr. *Strachan*.—"None: but the Company owe me—"

The *Chairman*, addressing the court, observed how irregular their proceedings had been. He requested Mr. Strachan to retire.

Mr. *Strachan* then retired to the back of the court.

Mr. *Hume* said, it was not his duty to stop the hon. gentleman; if blame were to rest any where, he trusted the *Chairman* would take it to himself—(Laughter).

A *Proprietor* observed, that some gentlemen were always very ready to take up a subject, let it come from what quarter it might.

Mr. *Hume* wished that hon. proprietor would shew himself qualified to take up any subject whatever—(a laugh). He (Mr. Hume) would persist in his motion.

Dr. *Gitchrist* seconded the motion. He could not help expressing his surprise at some of the doctrines broached in that court. Were they to be kept in ignorance of what was going on in India? They might, at least, be permitted to hear, if they might not execute. He had no idea of being thus cowed.

Mr. *Lowndes*.—"John Bull will never submit to be cowed—(roars of laughter)."

Sir *G. A. Robinson* was most anxious that any thing coming from the Court of Proprietors in the shape of a recommendation, should carry with it that weight and consequence which should induce the Court of Directors to give it their ready attention; he therefore rose to state his reasons for thinking it would be inexpedient to comply with the course proposed by the hon. mover. The case of that officer (Mr. Strachan) for whose sufferings he felt as much sympathy as any of those gentlemen who professed to have such abundance of it, might have had a claim to recommendation, if it had never been under the consideration of the Court of Directors; but he could inform them that this case had been five times under the consideration of the Directors, and that there had been five decisions upon it, and that, too, under different directions; and he therefore asked them, was it proper to encourage this species of interference with the executive body, the Court of Directors?—(Hear, hear!) He could only say that if such a course were persisted in, the business of the Company would be put a stop to. Of all situations in the world, he could affirm that of a Director would be the least to be desired; and he could only say, that if such interference with their duties were established, he should quickly leave the direction. He would repeat, that from the year 1810 to 1820, five distinct applications had been received by the Court of Directors from the individual who had professed himself

to be a proprietor, under the idea that he was so qualified by some compensation he conceived to be due to him. From that gentleman's statement, it would be supposed that he was a lieutenant-colonel; whereas, when the sentence of the court-martial was passed on him, he was only a lieutenant.

Mr. Twining said, that the worthy Deputy-Chairman had anticipated much of what he was about to say. His only object in rising was to request the court to pause before they recommended that case to the consideration of the Court of Directors, on the grounds which had been laid before them; it was the duty of the Court of Proprietors to know more of the facts of a case before they ventured to recommend it to the consideration of the Court of Directors, more than they could possibly collect from the statement which had been submitted to their notice. He would not for the world say any thing to injure the gentleman, but he (Mr. T.) did not conceive that he had adopted a right method of proceeding. He would have done as well to have made an application to the Court of Directors himself.

The Hon. D. Kinnaird declared, that in his opinion the statement made by the Deputy-Chairman would convince his Hon. friend (Mr. Hume) that there was now no necessity for any recommendation to the Court of Directors, such as had been proposed. His hon. friend had erred in consequence of what had fallen from him.

Mr. Astell said that the case had only come before him once whilst he was Chairman; and, as he had soon after quitted the direction by rotation, he was not aware of any subsequent proceedings upon the subject.

Mr. Hume begged that, after what had taken place, his motion might be withdrawn.

The motion was accordingly withdrawn.

LORD AMHERST.—STATE OF INDIA.

Mr. Hume said, that he now intended to bring forward his motion respecting the conduct of Lord Amherst, as the Court of Directors had advised, without having first given due notice. He disliked irregularity in any shape, but he held an advantage which he would not give up; namely, the liberty of entering into a discussion on a topic he might think of importance at the general quarterly courts, without the necessity of giving notice first.

The Chairman asked whether the hon. proprietor was about to speak on the motion relating to Mr. Buckingham?

Mr. Hume said he was in possession of the court, and he would not be directed as to the order he was to pursue.

The Chairman said, that Mr. Buckingham's case was the only one before them.

Asiatic Journ. Vol. XXI. No. 121.

The hon. proprietor was in possession of the court only to bring forward that discussion.

Mr. Hume had been informed by the Court of Directors, that he might make his motion without giving notice.

The Chairman held the same opinion; but he did not think it proper to do so, until the other business was concluded.

Mr. Hume contended that the Court of Directors had no power to controul him as to the course of proceeding.

The Chairman said his intention was merely to direct the hon. proprietor's attention to the regular mode of proceeding, which required the discussion of Mr. Buckingham's case first; but he really had not the least objection to hear the hon. proprietor, if he wished to bring forward the motion as to Lord Amherst.

Mr. Hume did not think, that with any sense of justice or impartiality towards Lord Amherst, the present court could rise without having first come to some conclusion respecting him. Were there any person who had better information on this subject than he had, he hoped that that person would come forward and convince him of the errors under which he laboured. If his opinion were wrong he should be glad to change it; and then all the doubts that he had about the conduct of Lord Amherst would then be dissipated. His Lordship's conduct would be properly estimated by comparing the state of India at the time when he was placed at the head of the government of India, and as it now stood: His Lordship was not so much to be censured as were those persons who had sent him to India. He never thought his Lordship competent to be placed at the head of affairs in a country, composed of 80,000,000 souls, which was distracted by discord; though the conduct of Lord Amherst was extremely culpable; it was apparently innocent, compared with the conduct of the government in recommending his appointment; and in the Court of Directors in sanctioning it. Every body knew that Lord Amherst was not equal to the situation he filled; he was not capable of acting with any degree of credit to himself or utility to the country. If he were the only person that blamed his Lordship, he would be very glad of it. He would be happy if any one could say that noble Lord was a proper person to be in the situation he was, if any one act of his was indicative of either ability or talent. He was sorry to say that he never knew any person who could say so much. Lord Amherst was universally censured by those persons who were most likely to form a correct opinion. In 1823 the Noble Lord arrived in India, and took into his hands the reins of government over a people, of whose numbers no person who merely formed his ideas

from looking at European states, could form any judgment. The amount of the population under the controul of the Company, was nearly 83,000,000 souls, while the number that was included in the Company's territories amounted to 123,000,000. Never, since India had been under the controul of the British, was unanimity more striking, through the immense extent of that country, than at the time when Lord Amherst succeeded to the Government. He had not been long in India before he commenced a war, which no person who knew the respective situation of the states in India, could imagine would be attended with any thing but disasters. He had never heard, since the first time this war was spoken of, any person say that the Company could ever derive profit from it. He had often heard the assertion, that many Governors-General had undertaken wars, not so much from a sense of justice to the people which they reduced to their government, as on account of the advantage with which they would be attended; but could any person suppose, for one moment, that the war against the Burmese could be attended with any thing like advantage? One need only look to the territory of the Burmese, to be filled with astonishment and wonder that ever a war against them should have been begun. The country of Arracan is situated on the south-east of the Chittagong frontier, between which a chain of mountains forms a natural boundary extending from the sea as far as China. The lowest of these mountains was 5,000 feet in height, and many were as high as 5,800 feet. These could only be passed by small openings, and they were utterly impassable to an army. Our knowledge of these countries was very defective at present, though we shall have an opportunity of becoming better acquainted with them, as a new map was about to be published by Mr. Faden, executed by the surveyors of the Bombay establishment. In his (Mr. H.'s) opinion, a great deal of blame rested with the government, for keeping unknown the different situations of countries in India, by which individuals were often obliged to hold their tongue on questions connected with local considerations. Would any one suppose that the existence of the natural boundary was unknown to Lord Amherst? And if it were not unknown to him, what could induce him to break through it, and enter into an enterprize as dangerous as it was uncalled for and unprovoked? Our brave men were placed entirely at the mercy of Lord Amherst, and thousands and tens of thousands met an untimely end; he did not speak of those brave men whom disease and pestilence had preyed upon, and whose bodies fattened the soil of the enemy's country. That government, it appeared, had laid before

them all the information they could. Mr. C. Wynne had said, "there is all the information which I can give you: it is sufficient to enable you to discuss the merits or demerits of this proceeding." Lord Amherst had entered on the present war in the face of an act of parliament, declaring it a misdemeanour for any person to commence or extend a war in India, without having obtained the sanction of the Court of Directors and the Government at home. But so anxious was Lord Amherst to enter into the country of the Burmese, that he could not wait for the arrival of the commander-in-chief, who was at the north-west of India, in order to advise with him how to conduct hostilities. He understood that there was a letter from Lord Paget in town upon this subject. But it was impossible for a public man to speak upon documents, which had been intentionally kept back, and which it was not in his power to procure. The government in India had effectually hindered the public from knowing any facts connected with the war which might alarm them, by restraining the newspapers from publishing them; but they had had directions given them to insert every thing of a cheering nature. Just in the same manner, Lord Amherst ordered a *feu-de-joie* to be fired upon every frivolous occasion. This was the baby play with which his Lordship amused himself; but it was not child's play to our unfortunate countrymen, who had perished for his Lordship's frolic. The army entered the enemy's country at the most unfavourable season of the year that could have been chosen for such a purpose. The troops landed in March, and a detachment of great force proceeded forward, which would have overcome every obstacle the Burmese could oppose to its advance, if they had not had to contend with an enemy still more dangerous. At Rangoon they were stopped by the rains. No person that had not been in India could form an idea of the sickness which resulted from a rainy season. Seventeen thousand British soldiers perished by it; not by an honourable death, in the face of their enemy, but by disease, to which they were exposed by Lord Amherst's imbecility. Where was the wisdom and justice in allowing such a person to continue at the head of affairs, who had commenced his career in such a disastrous way? Eight months had been consumed in endeavours to escape from Rangoon, during which one-half of the army perished, and the other became dispirited, when it was discovered that Rangoon was an island, and there were no means of the troops returning but by a flotilla of boats. They were afterwards shut up in the fortress of Promé, as they were compelled to wait for supplies. He (Mr. Hume) knew the distresses to which armies were exposed. but

but he never heard of any army which had been subjected to such extreme misery as that he was speaking of. It could excite no surprise that the progress of the army should be stopped for want of supplies, when those supplies had to be transmitted through a hostile country. With these facts before their eyes, he asked them, would they allow their troops to march to their graves, by the present conduct of the imbecile government of India? (*Hear, hear!*) The British arms had been disgraced, not by the soldiers, but by the commanders. They had now for years been engaged in endeavouring to conquer the country; and the result was, that they had not succeeded in obtaining a spot to stand upon. Not one of the natives had deserted their government, though it was declared by Lord Amherst to be odious to them. And now there appeared no prospect of ever reaching the capital. From Rangoon to Ummerapoorah the capital, a distance of 428 miles, the troops were to be conveyed in boats. But they had only got as yet as far as Prome, which is only 150 miles from Rangoon. They found Prome entirely deserted, and they entered it without any fighting. The supplies were all conveyed by sea, under the convoy of a man of war, and the difficulty of obtaining supplies every day increased, and the troops advanced surrounded by a hostile population. He was afraid that no other event would result from such a state of things, than what happened in former times in the capital of Candia. There was no remedy but to have recourse to wiser councils. The voice of the people of India was calling for the talent that had lately directed their councils; the natives were wishing the Marquess of Hastings back again. To form a true idea of the state of India at the present moment, was almost impossible. If they were to credit the accounts they received, the expense of prosecuting the war was incalculable. Treble the price is paid for every ton of shipping, that was formerly done. One ship which cost when she left England £10,000, had been taken up by the government at £2,000 per month. Now if such a state of things as that existed, when their troops had only advanced 150 miles in the country, what was to be expected when they should proceed further? More ships would be required to keep the communication free: in fact, it appeared on the face of it to be impossible to carry on the rash enterprise engaged upon, without an appalling expense of money. And why was that disastrous war commenced? Were he to read the declaration of Sir Alexander Campbell, which set forth the grievous offences the Burmese had done to the country, the court, he was sure, could not refrain from laughter, though the subject was a serious one. It seemed there was a

small island called Sharpaurci, which had never been known to be inhabited, and was entirely uncultivated. The Burmese claimed this island as their property, but the Company declared that it belonged to them. That important place, coupled with the fact of one of the Company's subjects being plundered by a Burmese robber, whom the Arracan government promised to hang, if they (the Company) could catch him, were the primary causes of the war. When they reflected on such a trifling cause of war, and on the manner of prosecuting it, were they to sit still and do nothing, because forsooth, Mr. Canning, who had sent out Lord Amherst, did not choose to stultify himself by recalling him? Mr. Canning had said, that as long as India was at peace he considered Lord Amherst a fit person to govern it: now this was an admission that he, Mr. Canning, did not consider him competent to govern it during war. These were the circumstances under which he (Lord Amherst) had received his appointment, and it therefore behoved the executive to take measures for his recall. The Court of Proprietors possessed no longer the power of recalling Governors-General, and could only recommend their Court of Directors to do so. If any civilian could aver that he had confidence in Lord Amherst, let him speak. Would any military man say—would any commercial man—would any man behind that bar say, that they had such confidence in him as to entrust the affairs of India in his hand? Let the Chairman candidly state the tone of his Lordship's despatches during the last eighteen months. Had the Court of Directors given their approval to any one of his acts? Have they not, on the contrary, entirely disapproved of every thing he had done? He asked, was there any act of his Lordship's that could bear approval, or that did not deserve unqualified censure? Did not all his proceedings bear the stamp of little-mindedness and imbecility? Let the court for a moment reflect on the results that would flow from such a system. It was indispensable that some talented man should be immediately set at the head of affairs in India. It was of no consequence whether every act of the Government originated with him, for he well knew that every act must be confirmed by him. If any person who was here had been placed in the situation of the noble Lord, he would ask him if he would have entered on a war on his own responsibility? Would he not first consider the nature of the enemy's territory, and be provided with the means of carrying on the war?—How had Lord Amherst behaved in the affair at Barrackpore? He wished to be corrected by those who had better means of information, if he stated any thing incorrect. He declared that it was the imbecility of

his Lordship solely that had caused the mutiny, in opposing the prejudices of the native troops, and by inattention to the representations they had sent in as long as ten days before the fatal 2d of December, when such a number of brave men were put to death. He thought the native troops deserved the epithet of brave, for better soldiers than they were he had never seen. They were cut down by a masked battery, when they were wholly unsuspecting of danger. It was a stain on the character of Lord Amherst, and would remain on it for ever. Had, then, the Court of Directors taken any measure for the deposition of Lord Amherst?—(Hear!) A great difference of opinion existed between the Court of Directors and Lord Amherst; for they had sent out an order to India, in order to diminish the effects of rage and resentment which had condemned several persons to be hanged who were perfectly innocent; but, instead of their being hanged, they were sent to labour on the public roads. To such a degrading punishment as that the natives would a thousand times have preferred death: that circumstance was sufficient to produce a commotion in India. Death would never have had such terrors as that: even the officers who had left their men had been punished by dismissal from the service. Lord Amherst had behaved detrimental to the interests of India, and his government was greatly disliked. He was unanimously condemned in all the private letters which he had seen. He would read an extract from one of them:—"At every petty triumph Lord Amherst fires a *feu-de-joie* and salute! He rides up and down the course as the lady in the simple hygrometer comes out in fine weather." The letter then went on to say how much the return of Lord Hastings was desired by every one. In conclusion, he called on the court, and asked them whether, after this uncontradicted statement—after the uncontradicted hints and rumours and expression of the state of opinion in India, as to the want of confidence in the head of the government there—after the effects of want of confidence which they had witnessed in London within the last three weeks—they could allow things to remain as they were, or rather to grow worse, as they must, unless some steps were taken to restore that confidence in the executive government, so necessary at the present moment? If he was right in concluding, from the facts he had mentioned, that this want of confidence existed in almost every department in India, particularly in those connected with the military operation—after the conduct of the government there to General Ochterlony (and that one act was sufficient to enable them to form a judgment of the weakness of the government)—after these facts were known and

suffered to circulate uncontradicted, was it, he repeated, fit that such a man as Lord Amherst should continue at the head of our India affairs? (Hear, hear!) Were they prepared to submit to have their best troops destroyed in thousands and tens of thousands by the diseases of an unhealthy climate? And here he would mention one fact to shew the mortality among our best troops engaged in the Burmese war, that a letter, recently received in London, from a gentleman who had the best means of knowing the fact he communicated, mentioned that one of the Company's native regiments, which went, not long back, to the seat of war a thousand strong, had been able to muster, at the date of the last accounts, only seventeen effective men. This loss was not, as he had before observed, occasioned by actual contact with the enemy, but the more slow, but more destructive operation of disease, brought on by fatigue and the unhealthiness of the country in which they were quartered. Could the court remain indifferent to those facts? Could they remain indifferent to the fate of their countrymen in India, and leave them exposed to certain ruin, under the present state of mismanagement? Our brave countrymen, exposed to all the perils of an ill-advised and ill-conducted war, in an enemy's country, did not deserve to be neglected by their fellow subjects at home. In their name, then, he called upon the court to adopt the resolution which he should conclude by moving.—The hon. gentleman then briefly recapitulated the leading points of his argument, and contended that they were sufficient to warrant him in coming to the conclusion which his motion embraced. He then moved—

"That this court, duly considering the present state of affairs in India, do earnestly recommend to the consideration of the Court of Directors, the propriety and necessity of immediately recalling Lord Amherst, their present Governor-General."

The motion was handed in and read.

The Hon. *D. Kinnaid* rose to second it; he began by observing, that the paramount importance of this subject was the reason why it had been brought forward, rather than the other matters which stood for discussion, and which now must be postponed to a future day. He could not conceive any question of greater interest than that which involved, not merely the honour of our arms or the security of our conquests, but, he might say, the absolute existence of our power in India. It could not be unknown to that court, that the recall of Lord Amherst had of late become the subject of very general conversation and very anxious inquiry amongst our countrymen. Amongst those who felt some compassion for the situation in

which so many thousands of their fellow subjects were placed in India—those who lamented the profusion with which English blood was poured out; and the prodigality with which human life was allowed to be wasted in an unfortunate war in India—amongst those he had expected that, long before the present moment, some decisive step would have been taken, in order to avert, if possible, the full effects of the present mismanaged state of affairs in that country. He had hoped that, not merely among the India proprietors, but among the great body of our countrymen, there would, before now, have been several public meetings for the purpose of calling for some explanation of the conduct of Lord Amherst, or of those who, after the general opinion, founded on uncontradicted statements of the imbecility of that unfortunate man, had allowed him to continue at the head of our Indian government. (*Hear, hear!*) He had waited till the last moment, in the confident expectation that the Court of Directors themselves would do something in this affair; for he thought that, without any reference whatever to the security or prosperity of our Indian affairs, if they had in view only the character of Lord Amherst himself, it was a gross act of injustice towards that nobleman, after the statements which had gone forth, and after the expression of public opinion founded upon those statements, to continue him in his office of Governor-General, unless they were prepared boldly to come forward and deny what was admitted in India and in England, and disgracefully known all over Europe; if they were prepared to deny those statements, and to maintain that Lord Amherst was a fit and proper person to continue at the head of the government of India, in God's name let it be done, and let the falsehood of the reports in circulation with respect to him be demonstrated: justice to our countrymen in India—justice to Lord Amherst himself, required that this should be done, if there were means of doing it; or, if there were not, that the truth of the statements should be acted upon, and this nobleman removed from his office. This subject was one which, to those at all interested in Indian affairs, met them at every turn: a man could hardly look his acquaintance in the face, without being asked, "Well, what's the news from India? Is Lord Amherst to be recalled, and how soon? You, as an individual, may not be able to know what is going forward; but, in God's name, what is your Court of Proprietors about? Can they not call for papers and information as to what is now going forward in India? In justice to themselves—in justice to Lord Amherst, they are bound, either to endeavour to remove him

from his situation, or to rescue him from the charge of imbecility, so generally made against him." This was the language of almost every man with whom he conversed on the subject of our affairs in India. It was upon the general notoriety of the facts to which he should call the attention of the court—upon the uncontradicted accounts which every day reached us from India, as to the utter incapacity of Lord Amherst for his situation, that he now came forward to second the motion before the court. He could assure the court, that he did not wish to become a public accuser; there was no duty more repugnant to his personal feelings, than that of being obliged to stand forward as the accuser of any man, but particularly one in the high station which Lord Amherst held. Against that noble lord he declared he had no sort of personal feeling whatever; in his private character he might be, and he had no doubt he was, a very amiable individual. What Mr. Canning had said of him might be very true: that he might want the energy of a tiger, and nevertheless be a very excellent man and a good Governor-General. No doubt Mr. Canning thought as he spoke. He believed that, in time of peace, Lord Amherst might make a good Governor; but he did not, and could not calculate at the time on a period of war. He might be all that was thought of him, excellent and amiable; but still he might be imbecile; and deeds of the greatest wickedness were, as was well known, often the result of great imbecility in public men, because that imbecility rendered it easy for abler, but bad men, to turn them to their own purposes. Let them look at the whole of the acts of Lord Amherst's administration taken together, or any one of them separately, and they would find them marked with utter incapacity. Where was one of his acts which shewed firmness or wisdom as a statesman or soldier? Or, if there were any such, why not proclaim them to the world, as a ground for restoring confidence in their Governor-General? If this was not done—if some step were not taken, and that speedily, to restore confidence to our several departments in India, particularly to our military force, he would foretel that a crisis would soon be brought about, from which the talents of Mr. Canning, or even those of Lord Hastings, could not save them—that nobleman, who, as a soldier or a statesman, was the greatest administrator of Indian affairs which the Company had ever employed; he had achieved more in India than any man who had ever presided over that country, or, he feared, than any man who ever should be its governor; and his achievements were the greater, because he acted without the confidence of the Court of Directors at home, or without

the co-operation of those members of the Indian government who should have supported him. If the great talents of Lord Hastings found it difficult to succeed without entire confidence at home and active co-operation abroad, what must be the situation of Lord Amherst? Again he asked the Directors, could they—did they repose full confidence in Lord Amherst? If they did, in his name he called upon them to come forward to state that fact, and save the noble lord from the future disgrace of having lost India by a want of confidence on their part by whom he was employed. Were the court ignorant of the general feeling in India, as to Lord Amherst's government? He would not say what might be the contents of the official communications addressed to the Directors—but any man who had an opportunity of seeing the private correspondence from India must be aware that there was in that country but one feeling on the subject, and that a conviction of its utter imbecility. Let the court look at the correspondence from India, and see whether he was borne out in his assertion. He did not expect that he should succeed that day in his motion, but he nevertheless did not think it would be without its use; it would have an effect, though perhaps at a late period. He had submitted several motions in that court, which were rejected at the moment, as he anticipated, but which, in the course of a few years, operated in bringing the Court of Directors round to his opinion. Some five or six years ago he submitted a motion on the subject of Haileybury College—it was lost at the time, but just now the Court of Directors were beginning to act upon it. He hoped, however, that his motion on the present occasion would have a more immediate effect. He was led to entertain this hope from the fact which had been unwittingly let out by the hon. Chairman himself, which shewed that they had both the same belief as to the state of public opinion in India on the subject of Lord Amherst's government. The hon. Chairman had stated, that the reason why the motion now before them was not advertised in the usual way was, that it would be dangerous to allow such a firebrand as this motion to go out to India, unaccompanied with the decision of the court upon it. He wished that the bane and antidote should go together, as the mere mention that such a question was agitated in the court, unaccompanied with the vote upon it, would be extremely injurious to the public service in India; but by sending the motion and the decision by the same conveyance, India would be quiet, and Lord Amherst safe. Was not this an admission, on the part of the Directors, of the state

of opinion in India, when they heard that the mere mention of the Governor's recal, would remove the little confidence which remained in his administration? But how would the sending out an account of the rejection of this motion, along with that of its discussion, tend to uphold or restore public confidence in India? He would tell them it would do no such thing, unless the Directors came forward and stated, as a reason for rejecting it, that Lord Amherst possessed the entire confidence of the Court. If they made such a declaration, and expressed their belief that he had abilities sufficient to extricate them from the present dangerous situation, then their decision might be of some value in India; but unless they did this, he would tell them that their vote on the present occasion would be worse than nugatory. He maintained then, that in defence of Lord Amherst himself, in support of his character as a public officer, the Court were bound to declare, and that in the most public and unqualified manner, that he was worthy of the confidence which they placed in him. If, however, from a consideration of all that had occurred since the beginning of his administration, and from a knowledge of the general opinion in India on that subject, they thought that that confidence was misplaced in the first instance, and that it was now unmerited, then he (the Hon. D. Kinnaird) was their best friend in giving them this opportunity of letting the public know, that the continuance of such a man at the head of their affairs was not their act, but was the fault of Mr. Wynne and the Board of Control. (*Hear, hear!*) Let the fault, then, lie with those who really deserved blame; but if the Court of Directors did their duty manfully, it would no longer rest with them. The course before them was the most plain and simple imaginable: it was pointed out by the answer to one or two plain questions. Did the Directors believe that Lord Amherst was capable of managing their government in India in its present state?—if they did, then let them boldly state their belief to the world: if they did not, let them recommend his recal; and if their recommendation were not complied with, the kind of interest by which he was upheld would be manifest to the public, and the Court of Directors completely exonerated. He wished to be understood that, in making this charge of incapacity against Lord Amherst, he did not come there and say that he would lay his finger on some five or six acts of his lordship's public conduct, and urge them as the grounds of his recal. Such a course was not necessary on his part. He did not mean to try his lordship's administration by the test of a few isolated acts; but, looking at it as a whole,

from its commencement to the present time, he would ask any man to point him out any one act from which his Lordship could lay claim to the confidence of that court or the country? (*Hear, hear!*) Would any Proprietor or Director get up in his place and declare, that any part of his Lordship's administration was such as to entitle him to confidence? He would admit, that, at the head of their Indian affairs, he might be a wise man in many respects—he might be eminent as a warrior or a statesman—he might even conciliate the good opinion of the Directors, but still be unfortunate in his adoption of some particular measures, or unhappy in his mode of carrying them into effect. He might be driven into the necessity of declaring war, and be unskilful in his manner of conducting it. He might have many of his public acts worthy of praise, though some others might deserve censure: but, in the instance before the court, that was not the case; there was no part of their Governor-General's public conduct which could be approved of.—If any person present knew of such, let him declare it. In every one act he had the misfortune to be mistaken. He found him undertaking a war without consulting the commander-in-chief of the army, and going on with that war, without considering whether he possessed the materials by which it could be carried on with advantage: these were some of the first acts of his administration. He next found him a civil governor, who should be without passion, whose inclination as well as duty one would suppose to be a desire to moderate the rigour of military discipline, or of softening down as much as possible, consistently with the public service, the punishment of those, who he involved in a violation of that discipline. Instead of this, however, he found him acting a part towards a multitude of troops who had been guilty not of a violent outrage, but of a disobedience of orders, under circumstances of severe hardship on their side, which part, if one could suppose it to have been deliberately planned, or if it could not be looked on as the sudden and unconsidered, and mistaken decision of the moment, would mark Lord Amherst and his advisers on the occasion as the greatest monsters that were ever cursed with the possession of power, or that had ever afflicted mankind by its abuse. Would it be believed, that when informed of the disobedience of the unfortunate but mistaken troops, who were involved in what was called the mutiny, instead of bringing up a force which would be sufficient to terrify them into submission, his Lordship ordered that they should be exposed to the fire of a masked battery, which they never saw until it commenced the work of destruction upon them? The unfortunate men

could not have been prepared for such an attack, for they themselves meditated no violent measures; not a man of them had his musket loaded, and while in this, he might well say defenceless state, they were mowed down in hundreds, and the rest of that day spent in pursuing those who escaped the first fire, and shooting them wherever they were overtaken, as if they were wild beasts—and for what? for not doing that which was impossible! The men declared that they could not march, unless some adequate means were found for conveying their baggage. They had an allowance from government for the purchase of cattle for that purpose, but it proved wholly insufficient, because the government itself became their competitors in the market for those very cattle; the consequence was, the price of the cattle was raised, and their allowance was wholly insufficient to procure them. The government were thus guilty, at one and the same time, of embezzlement and cruelty towards those unhappy troops. Was this the conduct of a wise or politic government? Was that a course which ought to have been pursued in the outset of a war, in which the utmost energy, arising from the most devoted attachment, was necessary among the troops in our pay? To what could such disastrous events be attributed, but to the fact of placing a man without the capacity of judging of the most important measures at the head of affairs? There were other acts of the Indian government which, if he could look on them as the acts of Lord Amherst, would render his character pitiful and contemptible in the lowest degree; he alluded particularly to the outrage upon the property of Mr. Buckingham, than which a more outrageous or scandalous violation of the rights of a private individual could not be well imagined; but if he were to look on the other side of the picture, what, he would ask, were the redeeming qualities of the noble Lord? He could find none, except that respectability of private character could be said in any degree to atone for the greatest imbecility in a public situation; coming into office as the successor of Lord Hastings, whose splendid talents shed such a lustre on the situation he held, and who did more to extend and secure British dominion in India than any other who had ever ruled there, he admitted, it would require no ordinary abilities in Lord Amherst to appear even moderately qualified for the office; but when, instead of talent, his whole career had evinced only great imbecility, the contrast must necessarily appear the more striking: he did not wish to depreciate Lord Amherst's character, in mentioning the disastrous events which had marked his career hitherto, but he thought it would be unfair not to attribute those events to their true cause.

What,

What, he repeated, was the having appointed to a high and most important situation, a man who, during the whole course of his previous conduct, had given no promise of any one talent to qualify him for the discharge of the duties of that station? Let those who believed that he had any talents fit for his office come forward and state that fact, and let them do justice to those by whom Lord Amherst's appointment had been procured and sanctioned. He (Mr. D. Kinnaird) did not believe that the Court of Directors had, in reality, any confidence in Lord Amherst; he believed that the appointment of that nobleman was the result of the personal favour of one of the ministers, and that it was owing to the tricks and intrigues in the English cabinet that some more able person had not been already called to supply his place: for he had heard, and he believed it was very well understood in the country, that the appointment of a new Governor-General would have long ago been made, except for the difficulty experienced amongst the members of the cabinet as to who that successor should be. The bestowing of this high and important trust was canvassed amongst ministers, and made the subject of bargain and agreement, as if it were that of a supercargo. (*Hear! hear!*) Let the Directors rescue themselves from the imputation of being in any way a party to those intrigues; let them, by declaring the truth—that they had no confidence in Lord Amherst's administration—shew to the country that they were not to blame if an inefficient person was kept in the situation of Governor-General. It was well known that there were in this country many men who had given promise and proof of great talent. Let the Directors say that they had no confidence in the present Governor, and a successor must be appointed to him, and India might yet be saved by his timely recall. (*Hear! hear!*)

Mr. R. Jackson said, that he had listened with deep attention to the speeches of the hon. mover and seconder of this motion. He was by no means incredulous as to many of the facts stated—he had heard them with heartfelt sorrow; but he thought, that in a question of such awful moment to the character of the nobleman referred to, the Court should proceed only upon grounds consistent with the importance and magnitude of the charge. No such grounds had, in his opinion, been submitted to them, but they were required to be content with the assurance, that the two hon. gentlemen themselves were convinced of the truth of what they asserted, as arising from their private correspondence with India, aided by facts of broad notoriety. Were statements like these, he would ask, sufficient data on which to assent to so serious a proposition as that now submitted to them?

Were they to decide upon a subject of this magnitude, because one hon. gentleman read an extract from a private letter, and another repeated to them some reports that had reached his ears, and which he entirely believed? He called upon the Court to examine their records, and see if there were among them an instance of their ever having so acted. If those records gave even one instance of, the Court having attacked the character of the head of their executive Government in India upon such materials, he would give up the point, but he was satisfied that no such instance could be found. The thing was in itself too unjust to be justified by any precedent; he should therefore oppose the motion of the hon. gentleman. In taking this course he was doing no more for Lord Amherst, than he had on former occasions done for Lord Wellesley and the Marquis of Hastings, when motions affecting the public conduct of those noblemen were submitted to the Court. On each of those occasions he had contended, that it would be unjust to the noble individuals then concerned to proceed to any decision, without being in possession of the fullest information on the subject; and in both those instances papers were laid before the Proprietors. The result was, in each case, that a candid and impartial examination of those papers ended in the complete justification of those noblemen; one of whom had since conferred such important benefits on his country, by his happy and skilful administration of our Indian affairs; he alluded to Lord Hastings (*hear, hear!*)—and if he had one wish or prayer more earnest than another, for the benefit of England and the safety and happiness of India, it would be, that the noble Marquis might be induced once more to set his foot in the latter country as Governor-General. (*Loud cries of hear, hear!*) He said this earnestly, because he believed most sincerely that such an event would be the salvation of that country, and rescue it, if within the reach of preservation, from the peril with which it was now beset. (*Hear, hear!*) He hoped that no false pride would stand in the way of such an application; he could not imagine to himself an act of more glorious magnanimity, than the Directors making it, and thus preferring their country to all other considerations. Such an invitation was not without precedent: an instance of the kind had occurred in the case of Lord Cornwallis, whom he was in the habit of designating as the Good Cornwallis, when affairs in India was in such a state as to excite great alarm; when mutiny was supposed to be fast engendering, and an experienced Governor-General was loudly called for; the then Chairman and Deputy-Chairman put themselves into a post-chaise, and lost no time in repairing to that nobleman's residence

in the country. As soon as he understood that the Court again desired his services, under urgent and critical circumstances, he said, with that ingenuousness which had ever marked his character, "if the Company think my services important to their interests, and that my King approves of it, I have no objection again to accept the Government; allow me forty-eight hours for consideration." His answer was in the affirmative, and in a very few days he was ready to embark. (*Hear, hear!*) He mentioned this circumstance to show, that if such a blessing could be obtained for India as the return of Lord Hastings, and the Directors should be in the mind to propose it, that such an instance of mutual and patriotic concession would not be without a precedent in their annals. But to return to the subject more immediately before them, whether the papers, for which he intended at the close of his speech to move, would have a similar effect in the case of Lord Amherst, as those had which were laid before the Court in the cases of Lords Wellesley and Hastings, he would not pretend to say; but let what might be the issue, it was, he contended, only fair that they should be put in possession of them, as the means of forming a sound and impartial judgment. By such means, the question would be set in its true light: he knew that, disapproving of this motion in its present shape, he might, if he pleased, get rid of it by moving "the previous question," and thus put it out of that Court; but he preferred a course which, while it secured a dignified and impartial adjudication, preserved to the Proprietors the free exercise of their high calling, to pronounce on the conduct of their public servants. The Court were not, he thought, in a situation to come to any present conclusion, and he thought it would be more satisfactory, and more honourable to all parties, to let their decision be the result of more deliberate consideration. The affair of Barrackpore had been mentioned. Now he would ask, were the court, without more information as to the particulars of that melancholy event, prepared to pronounce Lord Amherst and his coadjutors murderers? He was certain that they would not adopt a course so obviously unjust. Let them do in the present case as in those which he had mentioned, namely, proceed but upon full and authentic information. He did not say that the effect of the papers in Lord Amherst's case would be the same as in those of the noble Lords alluded to; all he requested was, that they should not be called upon to record an opinion without having the facts before them, and the causes in which those facts originated. Were they, he would ask, now in a situation to judge of the merits of the Burmese war? He meant, had they docu-

ments before them on which they could rely in forming their opinion as to the propriety of entering into it, and as to the mode in which it was conducted? Need he remind British Citizens, that a war might be wisely begun, and wisely conducted, allowing for all new and trying circumstances, and yet be unfortunate in its issue? Two years had now elapsed since that war commenced, and as yet no documents had been laid before them to shew why it had been begun, or why it had been continued? They had heard the present Governor-General attacked for want of judgment in having begun the war, and for want of skill in the conducting of it: were they in a condition to judge of either of those propositions? Let them wait for proper information, and if, after having obtained it, they should be of opinion, all circumstances considered, that the charges were well founded, let them then submit a motion for the noble Lord's removal. In the mean time, let them confide in the discretion of the Directors for supplying the information which they required by the motion with which he should conclude (by way of amendment to that already before them); he would leave it to the discretion of the Court of Directors to withhold whatever they might judge to be of a secret nature. Great indeed was the responsibility of the Directors; he would not believe, if they had been of opinion either that the war should be discontinued, or take a direction less prodigal of human life and less devouring of their funds, but that they had had the courage to assert and maintain their opinion. For a considerable period, therefore, Lord Amherst must be presumed to have shaped his conduct agreeably to the commands of his superiors, and time would show, when the whole correspondence should be published, whose war it now was. Such a course would be worthy of the Court of Proprietors and rescue them from the charge of pronouncing a censure of the most severe nature upon their highest functionary in India, without having before them the means for a rational opinion. Common justice required that they should not thus prematurely cast a stigma so highly injurious to the character of this nobleman, and so extremely painful to the feelings of his family and friends, who might yet give a very different history of the Burmese war, as far as it respected his lordship. The learned gentleman concluded by moving, "that all the words of the original motion after the word 'that be omitted, and that the following be substituted:—'There be laid before the court copies of all despatches from the Governor-General in Council and other authorities, relative to the commencement and

and conduct of the Burmese war, and also relative to the mutiny at Barrackpore, such papers not being of a secret nature."

On the motion being read,

Mr. Poynder rose to second it, but expressed a wish that the latter part should be read again, as he did not distinctly catch the words.

Mr. R. Jackson again read his motion.

Mr. Hume suggested, that there should be added to the words "all despatches from the Governor-General in Council and other authorities relative to," &c. these words, "and all answers of the Court of Directors to those despatches." By these means the court would be put more fully in possession of the whole of the case, and also learn to form a better judgment of Lord Amherst's conduct, by ascertaining how far he had complied with instructions sent out to him.

Mr. R. Jackson said, that the information to which the hon. gentleman alluded was not necessary at present; any such information had not been sought for in the motion on the Nepal war. All he sought by his motion, was sufficient documents to enable the court to form an opinion on the conduct of Lord Amherst. The time might come, and that at no distant day, when the information contained in the answers of the Directors to the despatches of Lord Amherst might be necessary, when the court might be called upon to pronounce its judgment on the conduct of their executive at home; but, at present, he was disposed to confide in the discretion of the Directors, and leave it altogether to them to say what papers were necessary, in order to put the proprietors in possession of the facts as far as the conduct of the Governor-General was concerned.

The motion and amendment were again put from the chair, and

Mr. Poynder again addressed the court. He rose, he said, to second the amendment, not because he approved of any of the arguments of the gentleman who had preceded him, but to exercise his right as a proprietor, and give his opinion against the original motion. He thought that no grounds whatever had been stated why the court should assent to so serious a charge against one of its highest functionaries. He had every respect for the mover and seconder of the original motion, but the court had only their speeches; and these too, he must say, without meaning the slightest personal disrespect to those gentlemen—only very light ones for so very grave a subject; but, such as they were, the court had only those speeches in support of a proposition by which they were called upon, not to enquire into—or examine any particular act or acts of the noble Lord at the head of our Indian affairs, but without any such enquiry, or giving him any opportunity of offering any thing in explanation of his conduct,

to dismiss him at once from his high employment—(Hear, hear!) Such a course would, he thought, be very little to the credit of any public body, professing to make due deliberation the basis of its decisions. Much stress was laid on the assumption, that nothing had been or could be advanced in favour of the noble Lord, who was thus at once accused and condemned. Such an assumption was by no means fair: it did not follow that, because nothing had been said in answer to the charges brought against our Governor-General, that nothing could be said, if the subject were properly ripe for discussion. If any proprietor had come forward to reply to the charges made, it would very probably be said that he was paid for bestowing his praise, and the court would have a good deal said about interested votes. But why, he asked, should any answer or explanation be given by any friend of Lord Amherst's? there was no accusation in such a shape as to call for an answer or explanation. There was an old observation of the French which might be applied here—" *Qui s'excuse s'accuse.*" The court should bear in mind, that to answer any charge before it was regularly made, would be, in some degree, to admit that it was not made without foundation. Insinuations were thrown out that the Burmese war had been unwisely commenced, and was badly conducted; but this was made before it was almost known what was the nature of that war, or its progress, or what would be its probable termination. Suppose some enemy of the Duke of Wellington had, in the commencement of any of his campaigns, attempted to condemn his mode of proceeding, would it not be considered premature? and would it not, in the absence of better information, be thought absurd to make such a charge the subject of serious discussion? He thought an opinion as to the policy or mode of conducting the Burmese war, was in the present case equally premature. The hon. member who introduced the original motion had talked of the natural boundaries, and of mountains so many thousand feet high being regarded as the natural limits of empires. We had often heard of those natural boundaries before, though perhaps the mountains were not then so high as they would turn out to be in the excellent map which was to come forth in a short time under the hon. gentleman's sanction; but notwithstanding the height and extent of such "natural boundaries," we had before us the practical fact, that within a few years they had been passed, and our empire extended and secured far beyond their extent, and very probably it would soon be the case with respect to those very boundaries of which the hon. gentleman spoke. The hon. mover and seconder laid much stress on the accuracy of the private

correspondence from India to which they referred, and the general notoriety of the circumstances to which that correspondence alluded. He did not mean to say that it was wholly without foundation, but he would contend, that, in the form in which they appeared in that correspondence, none of the statements it contained could be properly made the subject of a criminal charge. From the manner in which the correspondence referred to several circumstances, it was evidently written by some enemy of the Governor-General's. The story of his ordering a *feu-de-joie* for every trifling circumstance connected with the advance of our troops, and of his being seen abroad only in fair weather, like the little woman in the barometer, might be very good evidence of the feeling and disposition towards the noble Lord, of the person who related them; but they were not such matters as a Court of East-India Proprietors could act upon in any serious manner, much less in making them the foundation of a proceeding deeply affecting the character of their first executive officer. The gentlemen who had preceded him, dwelt at considerable length upon the great talents and merits of Lord Hastings; he would not follow them into that topic; Lord Hastings was not then before the Court, and his talents or merits had really nothing to do with the question in discussion. The hon. mover and seconder had touched upon several other topics upon which it was his intention to have remarked, and for that purpose he had taken notes of some of them, but really, when he came to look at and examine what he had noted, he found them so slight and unsubstantial, that he thought it would only be unnecessarily taking up the time of the court (which he was very unwilling to do at that late hour of the evening), to offer any comment on them. Looking at the whole of the charges introduced by the hon. gentlemen, he thought they were brought forward in such a manner, and rested upon grounds so slight, that the court ought not to make them the foundation of any vote, but, on the contrary, they were bound to throw the shield of their protection over their Governor-General so accused. (*Hear, hear, hear!*) He therefore would support the amendment.

Dr. Gilchrist thought that the objects of the hon. mover and seconder of the original motion were very much misunderstood. All they had contended for was, that if the Court of Directors had that confidence in the talents and skill of Lord Amherst, which some gentlemen seemed to wish they should have, they were bound, in justice to that nobleman and to themselves, to come forward and declare it, and to give a contradiction to the rumours so generally circulated to the noble Lord's prejudice; and from which there was but

one conclusion drawn, namely, that he was wholly unfit for the high station he occupied in the Company's service. Could the Directors contradict the rumours which were daily arriving in this country from India, of Lord Amherst's incapacity to fill the important trust of Governor-General? If they could, why not have the justice to do so? If they could not, why not have the manliness to avow their want of confidence in their Governor-General, and let the odium of retaining an unfit man in the office rest where it ought? The charges alluded to by the mover and seconder were not accusations of theirs against Lord Amherst; and in calling the attention of the court to them, they only wished to know whether the Court of Directors could give them a contradiction? If they could be contradicted, nothing was more easy; if they could not, then the original motion was not only called for, but it was the duty of the proprietors to pass it.

Sir C. Forbes, observed that he had already expressed himself so fully on several occasions in that court, and elsewhere, on the subject of Lord Amherst's government, that little farther remained for him to say: he would therefore have to occupy the attention of the court but for a very short time. He had looked forward with anxiety for any circumstances which might lead him to alter the opinion he had long ago formed of that Lord's government, but he found nothing which would warrant him in coming to a different conclusion. Had any thing occurred since the subject was last under discussion calculated to produce a different impression on his mind, he would most gladly have noticed it—but he found no reason to change his opinion, which unfortunately was the more and more confirmed (if indeed it ever required confirmation on this question) the more he considered the circumstances that produced it. As to the conduct of Lord Hastings, he did not think it properly belonged to the present question. He fully concurred, however, in most of what was said of that nobleman's administration. Still he did not approve of all Lord Hastings did. There were some points of his government in which he could not concur, but who, he would ask, could so govern India, or any country, as to make himself liked and approved by all parties? (*Hear, hear!*) There were, as he had just observed, some things which happened in the administration of that noble lord that he could not approve; but still it was only justice to say, that the more information he received upon some of those subjects, the less he was inclined to look on them in the same light in which they were first viewed by himself and others. There were, he knew, many who had not at first approved of certain acts of Lord Hastings' administration,

administration, who, on better information, had come to a different conclusion. As to the original motion before the Court, he thought it did not go far enough. Indeed neither motion did, but still he was glad that they had been brought forward. Where was the use of any farther blinking the real question? Was it not notorious, that for months past there have been rumours current in every circle, of the removal of Lord Amherst? Could the Directors deny the fact? Let them deny it if they pleased; but if they did not, their silence on the subject would answer his purpose equally well (*hear, hear!*): for if the fact was not denied, he would take it as admitted. He would ask the Directors, was not the Duke of Buckingham mentioned as the successor of Lord Amherst? He did not urge the question as having any objection to a change; for in the present condition of our Indian affairs, any change of a governor must be for the better (*hear, hear!*), for he thought it impossible it could be for the worse (*hear, hear!*) With these impressions on his mind—and they were the result of some acquaintance with, and much consideration of the subject—he was prepared to approve of that which had been suggested a year ago; that, instead of the Company being congratulated on the progress of the war, it would be more for the good of the Company and of India to be congratulated on having come to the determination to remove Lord Amherst. These were his sentiments a year ago, and the experience of every day since had more and more convinced him of their propriety, and proved to him that every day they delayed in bringing about a change in India, they only hastened on a crisis which might prove fatal to their interests in that country. (*Hear, hear!*) On this subject he fully concurred in what fell from an hon. gent. who preceded him, that if there was any man in existence who could rescue them from that crisis, that man was the Marquis of Hastings; and he thought that the very best thing which the Company could do would be, to solicit his Lordship to return again to India as Governor-General. (*Hear, hear, hear!*) He was sure nothing that could happen would be more calculated to inspire confidence in every part of our service there, than his arrival to take upon himself the management of affairs. He did not, as he had before said, approve of all Lord Hastings did while in India, but the more he had since heard of several of those matters, the less he was disposed to condemn them; therefore he would be most ready to concur in any proposition to the Court of Directors to the effect that they might pray his acceptance of the supreme command. He had, while in India, brought

our affairs there into a most flourishing condition, and left them at his departure, as it were, in the broad sunshine of prosperity: unfortunately they had since then been overspread with clouds and darkness. As to the amendment, if it tended to bring before them any matter, which might afford an explanation of, or be an excuse for Lord Amherst's conduct, he would not object to it. He would be very unwilling to throw any obstacle in the way of what might be thought a justification of his conduct. If, therefore, it were stated to him that the documents now called for were to be forthcoming, and that the Directors would pledge themselves, that they contained matter sufficient to remove all imputation from Lord Amherst, then he would give his vote for the amendment. If, however, the information demanded should be refused—if the Directors should still adhere to the appointment of Lord Amherst, or defend his conduct, he would call upon them to explain why the Duke of Buckingham had been mentioned as his successor? He challenged the whole twenty-four Directors to deny, that the Duke of Buckingham had been named to them as the successor of Lord Amherst. Why was that so?—was it because Lord Amherst's conduct was approved? If not, why was he still continued in office? and was it not, he would ask, because the parties were not agreed among themselves as to who should be the successor? But he repeated his challenge, and called on the Directors to deny the fact if they could.

The *Chairman* said, that he accepted the hon. Bart.'s challenge, and he could assure him, that no proposition of the Duke of Buckingham as Governor-General of India was ever made to him, as Chairman of the Court of Directors, or to the Court of Directors, in any way. (*Hear, hear!*)

Sir C. Forbes pledged his honour that he had understood that such an application had been made to the Chairman on behalf of the Duke of Buckingham, and he believed the fact, though he would not say that it was made in an official form.

The *Chairman*. "I beg to ask what the hon. Bart. means by an official form?"

Sir C. Forbes said, the meaning of the word was obvious enough.

The *Chairman*. "Then I beg to tell the hon. Bart. and this Court, that a proposition of the appointment of the Duke of Buckingham, as the successor of Lord Amherst in the government, was never made to me in my public or private character, in any room or place, verbally or in writing, directly or indirectly; (*hear, hear!*) and I tell the hon. Bart., that he is bound to take this answer as satisfactory, for it is made without any qualification." (*Hear, hear!*)

Sir C. Forbes said, that of course it was satisfactory as far as the hon. Chairman was concerned, but it remained to be seen whether it would not be proposed to them by and by. (*Hear, hear!*) He did not mean for an instant to doubt what their hon. Chairman had said, but it could not be denied, for thousands had heard of the fact, that the nomination of a successor to Lord Amherst was in agitation in some quarters. The answer of the hon. Chairman was such as to make him glad and sorry at the same time. (*Hear, and a laugh!*) He was sorry to learn that no official communication had been made to the Court on the subject of a successor to Lord Amherst; and he was glad to learn, that the Duke of Buckingham had not been proposed to the Directors as such successor. He had every respect for the high rank and great worth of that nobleman; but much as he respected him, he must own he did not think him just the man who ought to be sent out to govern India, in the present state of her affairs. That task was at all times an arduous and difficult one; but it had been rendered peculiarly so, by the course of management pursued since the commencement of Lord Amherst's administration. In conclusion, he would give his assent to the amendment, in the hope that the information sought for would be supplied, and that such other documents might be added, as would give the Court of Proprietors full information on the whole of Lord Amherst's government. He hoped the learned gentleman (Mr. R. Jackson) would so shape his amendment as to reach those other papers to which he alluded.

Mr. R. Jackson said, that the information he asked for was confined to the origin and management of the Burmese war, and to the mutiny at Barrackpore. These he considered to be at present within the power of the Directors to grant; but he did not wish to wait for information on other matters, which would require the lapse of a considerable time before they could reach them.

A Proprietor wished to have it understood, before the motion was put, what were the particular documents sought for, that there might hereafter be no debate as to whether the request of the Court had been properly complied with.

The Chairman said, that before he offered any remark as to the questions more immediately before the Court, he wished to make one or two observations as to a part of an hon. Proprietor's (the Hon. D. Kinnaid's) speech. He did not know whether he had rightly understood that gentleman, but if he had not he might set him right. The hon. gentleman (as he understood him) had said, that Lord Hastings had been the most successful Governor that had ever been at

the head of Indian affairs, and that his achievements there were the more meritorious, as he had acted without the confidence of the Court of Directors at home. Now he would assert that the Marquess of Hastings always had the confidence of the Court, nor had he now lost it—and it was only lately that that confidence was endangered, by the indiscretion of some of his friends, who had brought forward a motion which he (the Chairman) and others in the Direction could not support. He was anxious to give this explanation, lest it should go abroad that Lord Hastings had acted without the confidence of the Court, and that this should have been stated in the hearing of himself and the Deputy-Chairman, who had, in the year 1820 brought forward a motion for a grant of £60,000 to that nobleman. Did that look as if he had not possessed the confidence of the Court? Such a charge as this ought not to be lightly hazarded. It was not his intention to have introduced the subject of Lord Hastings, but he was obliged to do so by the observation of the hon. gentleman: he had now done with it, and he hoped he should not have to advert to it any more. With respect to the motions before the Court, he very much regretted that either of them should have been brought forward. As to the second motion, or rather the amendment, it was not in the power of the Directors to comply with it. Both the motions, he must say, had been brought forward on very light grounds for subjects of such great importance. Every man who had connexions or friends in India, or who had some correspondence with that country, heard opinions as to what was passing there, but these were only the opinions of the individuals who wrote. Every man might have his own opinion on the subject, but he would ask, were the reports contained in private letters the grounds on which they should, not merely try, but absolutely dismiss, without trial, their Governor-General? (*Hear, hear!*) He was not much of an orator, but he thought that no oratory was required to point out the absurdity and gross injustice of such a mode of proceeding. (*Hear, hear!*) His advice to the Court would be, to have confidence in their Governor-General, while he continued at the head of their affairs. It was their duty to support him, and to leave such matters as were the subject of the present motions to the discretion of their Directors. If they had not confidence enough in their Directors to do this, then he would say, let them remove them at once. He had been thirty-five years in the service of the Company, and it had been the great object of his life to acquire and preserve the confidence of the Proprietors; if they now said they had not confidence in him, he was

prepared to surrender up his trust. (*Hear, hear!*) On the subject of the original motion, he would say that it was a matter which should be left entirely to the discretion of the Court of Directors, if the Proprietors continued to repose confidence in them: as to the amendment, calling for particular documents, it was not in the power of the Directors to grant them. The contents of these documents were known only to a few of the Directors, who were constituted by the legislature a Secret Committee, to whom such matters relating to the carrying on of war in India were referred. He might, as a member of that Committee, be acquainted with the documents in question, but he could not disclose them. He looked upon himself, as the depository of such matters, rather as the servant of the Legislature than of the Company; and in that character it was not in his power to disclose the matters that came before him. The amendment, therefore, if carried, would not be productive of the desired effect, as the Court of Directors, to which it would be addressed, had it not in its power to comply with such a request. He would therefore earnestly recommend, that both the original motion and the amendment should be withdrawn. Neither the one or the other could be productive of any good, and the assent to them might be a cause of no inconsiderable injury to the service of the Company.

Mr. *Hume* said, that the object in bringing forward the motion, was not to cause any embarrassment to the public service of the Company, but, on the contrary, to rescue the Company from the danger of projects which threatened to involve the ruin of their army in India. It would be recollected, that before he submitted this motion, he had over and over again asked for information on the subjects to which it referred. That information had been constantly refused; and now, when he was driven to the use of information derived from private correspondence, he was charged with going on light and trivial grounds. If the private communications to which he referred were ill-founded as to their facts or conclusions, nothing was more easy than to set the public right on the matter by saying so from authority. If the Directors could contradict them, why did they not? but if they could not, then he contended that (in the absence of official information, which might be given but was withheld) they were a sufficient ground for the Court of Proprietors to go upon in assenting to such a motion as he had submitted to them. He had no objection, if that should be deemed more advisable, to withdraw his motion, and let the Court of Directors lay before them some information on which they could rely on this important subject. He found, however,

that even to this course there was an objection. They were now told from the chair, that the information sought for could not be given; that it was relating to a war, and that it was in the keeping of a secret committee. Well, then, if that were so, they should proceed without it. He contended that they had sufficient of uncontradicted statement to go upon. The motion for the recall of Lord Wellesley, had been submitted upon much slighter information than they now possessed. However, he would say again, that he was now willing to withdraw his motion, provided the Directors would give an assurance that all the information in their possession and in their power to give on the subject of the Burmese war, would be laid before the Court, otherwise he would persist in pressing the motion.

The original motion was now put—there were only eight hands held up for the affirmative, whilst the greater part of the Court voted on the negative.

The *Chairman* then declared it to be negatived.

On the amendment being put,

Sir *C. Forbes* observed, that none of the candidates for the Direction had voted either way on the last question.

A *Proprietor* near the hon. Bart. declared that this was a mistake on the hon. Bart's part, as he (the Proprietor) had held up his hand against the motion.

Sir *C. Forbes* then addressed the chair, and begged to put another question on the subject of the Duke of Buckingham.—(*Hear, hear!*)—After what had already been answered by the hon. Chairman on this subject, he could not doubt that the noble Duke had not been proposed to the Court officially or otherwise, as the successor of Lord Amherst; but he would beg to ask the Directors whether they had not one and all been canvassed by the friends of that nobleman to give their support to his nomination?

The *Chairman*.—"I have no hesitation in answering the question in the negative."

Other Directors were now about to address the Court on the same subject, but the *Chairman* interfered and said, that it was not consistent with the dignity of the Court that the Directors should be thus catechised.

The amendment was now again put from the Chair, when

Mr. *Astell* rose and said, he should give it his most decided opposition. The Court of Directors were the proper persons to decide what papers should be laid before the Proprietors. This matter, he thought, would have been best left to their discretion, particularly as the subject was of so much delicacy. He, for one, was always disposed to treat the demand of a Court of Proprietors with all possible respect; but their demand, in the present instance,

stance, must be viewed as a matter of expediency, or as a matter of right. As a right, he thought the Court of Proprietors could not demand the papers now sought for—as to the expediency of granting them, he saw none. The Directors would, in their discretion, lay all necessary information before them, without being urged by the speeches of honourable gentlemen, as on this occasion. But he did not think that, in the exercise of that discretion, they could or ought to grant the papers sought for. As to the rumour respecting the appointment of the Duke of Buckingham as successor to Lord Amherst, it had been so fully answered by the honourable Chairman he did not think it necessary to say a word upon the subject.

Mr. *Hume* said, that he also had heard the report of an appointment of a successor to Lord Amherst; and that the only reason why it did not take place before now was, that ministers could not agree amongst themselves as to who the successor should be. After this refusal of information, he thought it a hopeless case, and he was only sorry that India should be left to such a governor.

The question was now put from the chair, and six hands were held up in its support. A much greater number were held up against it. The Chairman declared it to be carried in the negative.

Mr. *R. Jackson* gave notice, that if the question of the Sutees, or the assassina- tion of Hindoo widows, were not in a short time taken up by high authority, he would at no distant day submit a motion to the Court on the subject.

On the question of adjournment being put,

Sir *John Doyle* said, he would postpone to a more distant day, in consequence of the illness of an honourable Director who was personally concerned, the motion of which he had given notice, for taking into consideration the Oude papers.

It was now proposed that the Court should adjourn to the 18th of January. Some proprietors wished to know, whether an earlier day could not be named?

The *Chairman* said he did not think an earlier day after the holidays could be named. They might, if they pleased, command the services of the Directors for Thursday and Friday, and have the adjournment fixed to one or other of those days; but he did not think that an earlier day after the holidays, than that which he had already mentioned, would be convenient.

Mr. *Hume* wished to ask, whether the two subjects which had been already advertised for discussion on this day, but unavoidably postponed, would be noticed in the advertisements for the next Court?

The *Chairman* said, certainly they would.

The hon. *D. Kinnoird* wished it to be understood, whether in future the advertisements of particular subjects should be left to the discretion of the Court of Directors, and omitted at that discretion, as in the case of the subject which they had just decided, or whether there was to be any fixed rule on the subject.

The *Chairman* replied, that he thought it better that these things should be left to the discretion of the Directors.

Mr. *Hume* observed that that was the very thing which he wished to avoid; after what he had seen of the exercise of that discretion to-day, in the omission to advertise the notice of motion for Lord Amherst's recall he was disposed to leave as little as possible to their discretion in future. He understood that a requisition signed by nine proprietors, calling on the Directors to make a Court special for any particular motion, must be advertised by them in the usual way. The requisitions they had already received, were signed by only two proprietors; but to put it out of the discretion of the Directors, he now tendered to them a requisition to the same effect signed by nine proprietors. The requisition was then handed in.

Sir *John Doyle* wished it to be understood with certainty as to the day when the particular motion noticed would come on. He feared the motion of which he had given notice could not come on, unless gentlemen consented to make much shorter speeches.

The *Chairman* observed, that undoubtedly it was in the power of nine proprietors to have any court made special for the discussion of a particular question, and then it would be advertised in the usual way; but he thought that the Directors had the discretionary power of refraining from advertising questions of a dangerous tendency, such as that which they had decided about Lord Amherst.

Mr. *Hume* repeated that it was in order to take that discretion out of their hands that he tendered them that requisition.

The *Deputy Chairman* intimated that the honourable proprietor might defeat his own object, in the course he was about to pursue; and suggested that it would be better that the meeting on the 18th of January, should stand as an adjournment of the general quarterly court, in which case the two notices already advertised would be in the order in which they now stood, and come on before other matters.

Mr. *Hume* upon this suggestion consented to withdraw the requisition.

Mr. *R. Jackson* concurred in the view taken by the honourable Deputy Chairman, and thought it would be better to allow the subjects to stand in the adjournment in the usual manner.

The Court then adjourned to the 18th of January.

PROMOTIONS AND CHANGES IN THE BRITISH ARMY.

(SERVING IN THE EAST.)

16th Light Dragoons. To be Lieuts. by purch., Corn. W. V. Jillard, v. M'Mahon prom. (16 Nov.); Corn. J. P. Seward, v. Cureton prom. (17 Nov.); D. Burges to be corn. by purch., v. Seward (17 Nov.)

MISCELLANEOUS NOTICES.

The *Lotus* (late *Field*), from Rangoon to Calcutta, was lost on the Sand Heads 29th July, and only 23 persons out of 100 were saved.

The Hon. Company's ships were to sail from Madras, 3d Aug., with troops for Penang, on their way to China.

The *Gilmore*, Lawes, has been taken up by the Bengal Government, to convey stores to Arracan. His Majesty's ship *Tamar* is struck with lightning, and will be obliged to repair to Calcutta.

The *Aurora*, Spanish ship of 700 tons, was lost 11th June, in the island of Zanzibar.

The *Stedcombe*, Barnes, from London to Van Diemen's Land, was lost at Melville Island, after discharging part of her cargo.

The *Marla*, Moffatt, from Batavia to Europe, having fallen in with a tiffoon, and lost seven men, and ten more disabled, bore up for the Mauritius. She would sail from thence about the 20th of September.

The crew of the *Mary*, of London, wrecked on Jarvis Island, had arrived at Sydney, in the *Vanstart*.

The *Nereide*, cutter, Forbes, from New South Wales to Manila and Singapore, was totally lost 22d June, a few miles to the north of Heceta river.

The *Arabish* Fulke, which sailed from Bombay on the 28th July for Penang, has been driven on shore on some part of the coast of the Northern Concan, near Killie Mehim. The crew, with the greater part of the cargo, including some treasure, have been saved.

The *Athal* frigate, Capt. Murray, has been removed from the Coast of Africa to reinforce the squadron in the East-Indies.

Capt. George King, of the *Noormuhall*, was drowned off the Cape in July last.

The *Betsy* and *Caroline*, from Batavia to Amsterdam, was totally lost off the Texel on the 10th Dec: the Captain and all the passengers drowned; twenty-one of the crew saved.

BIRTHS, MARRIAGES, AND DEATHS.

BRITISH GOVERNMENT IN INDIA.

No European nation, in modern times, has ever possessed a dependency comparable with British India:—vast in extent, rich in its productions, abounding in objects to excite curiosity; claiming attention from its moral, as well as from its physical character; displaying manners, arts, literature, and peculiar institutions of high antiquity. In spite of these recommendations, however—eager as the pursuit of knowledge has become—and concerned as we ought to feel regarding a portion of our dominions, the preservation of which involves, to such a serious extent, the political and commercial interests of Great Britain, the mass of our countrymen evince an unaccountable degree of ignorance in matters relating to India and to Indian affairs. It is not merely in ordinary conversation that this deficiency is apparent, but in the transactions of serious business, and even amongst public writers. A few months back, a description was given in one of our courts of justice, of a voyage from Bombay to England, in which the vessel was stated to have touched, on its way, at *the port of Canton!*—The speaker might, with equal propriety, have represented that a ship visited New South Wales in its passage from Falmouth to Gibraltar.

Seven years ago, a dealer in dress dolls at Calcutta, having received a consignment of these commodities from Europe, advertised them at that presidency in the following humorous strain :

FEMALES RAFFLED FOR.—Be it known, that six fair pretty young ladies, with two sweet and engaging children, lately imported from Europe, having the roses of health blooming on their cheeks, and joy sparkling in their eyes, possessing amiable tempers, and highly accomplished, whom the most indifferent cannot behold without expressions of rapture, are to be raffled for next door to the British Gallery. Scheme, twelve tickets, at twelve rupees each; the highest of the three throws, doubtless, takes the most fascinating.

So much ignorance and credulity existed in England, that this advertisement was gravely appealed to as an evidence that a *trade in women* was really permitted

in British India!* To carry the farce to the utmost bounds of absurdity, and to prove what gross dupes they can be made who greedily open their ears to the nonsense preached to them by ignorance or malice, a work of extensive circulation † adopted the egregious blunder, and prefaced the terrific advertisement with this preposterous statement:

While Britons deplore the traffic in negroes, and have abolished the slave trade, IT IS A FACT that there are persons who actually import beautiful women to the British settlements in India, in order to sell them to the rich Nabobs or Europeans who may give a good price for them; but what is worse, they are sometimes played for at a game of chance. The following advertisement on this subject appeared in Grimsby's [Greenway's] *Daily Advertiser*, of the 3d of September 1818, a paper printed at Calcutta.

Then came the dreadful annunciation, to which were appended the following remarks, furnishing a tolerable specimen of the virulent language employed by certain writers of the present day, whose professed object is to enlighten the public on the subject of Indian affairs:—

What a specimen of Calcutta morals does this advertisement exhibit! Surely a more abominable outrage upon morality and virtue has never been heard of than this, which is openly practised in a settlement under British laws and British government!

Such a sample of culpable ignorance and credulity was not necessary to convince men of reflection that poverty of information exposes them to intentional deception. That motives to misrepresentation exist on subjects relating to India must be pretty notorious; and that deliberate misstatements have been made has been amply demonstrated. The newspapers of India teem with refutations of statements put forth in England which operate as calumnies.

It must be evident that the circumstances of a country situated like British India, at an immense distance from the paramount government; under the immediate control of a corporate body, obnoxious to all the odium attaching to monopolists; and the inhabitants of which are remarkable for habits and institutions repugnant to European notions, must afford a wide scope for misapprehension as well as misrepresentation. The theorist, who disregards the peculiarities of the Hindu society, and applies to India the rules and maxims which are recognized in Europe, confidently concludes that the country is misgoverned, and that the people are, or ought to be, supremely wretched. Though innocent of fraud, he grossly deceives others. The disappointed adventurer, who rashly tempts the power with which the British legislature has clothed the executive government of India, may have recourse to a multitude of common-place topics calculated to work upon the passions of the public, and make the credulous believe that he suffers by the cruelty of others, and not by his own folly. He cannot be acquitted of a design to deceive.

Materials supplied from such sources are, perhaps, wrought up by writers of talent abroad, who are unsuspecting of their rottenness; and thus ignorance and malice co-operate with apathy and indifference in fabricating an image which bears as little analogy to the truth, as the production of the Modern Prometheus (in Mrs. Shelley's novel), a hideous and distorted figure, animated with a spirit of malevolence, bore to human nature.

An Englishman who associates in his idea of comfort or social happiness, a provision for what mere habit leads him to consider as wants; who conceives that such a system of law and government as is established in his own country

* It is surprising that the price of the ladies (£3. each) did not lead to a discovery of the joke.

† The "Percy Anecdotes," part 9. *Anecdotes of Women*.

country is indispensable to the enjoyment of existence; and who sees no insurmountable barrier obstructing his access to the highest station which a subject can fill, must be shocked when he is told, and truly told, that he has fellow-subjects in one of the richest countries in the world, who subsist solely upon rice, and who can never, by the most transcendent talents, exalt themselves above the station in which they are born; that many of them are in the abject condition of outcasts, and upon a level with brutes. He is prone to believe that such a country must be misgoverned; and is not easily persuaded that these circumstances are altogether independent of government, and in the structure of society and state of opinion existing in Hindostan must remain eternally the same. Such is, nevertheless, the fact; and it is even credible that comfort and happiness may be found in this anomalously constituted society, as well as in England.

No subject of inquiry has divided speculative writers more than the question as to which form of government is best calculated to promote human happiness. The Abbé Raynal is of opinion that the Chinese system is the very perfection of government. The fact is, that no specific mode of government is fit for every climate and people. That which communicates the greatest amount of good to the greatest number, is, doubtless, the best; but in applying this principle to a dependent country, acquired like that of British India, gradually conquered and held by a handful of Europeans, the natives of which were in a forward state of civilization, in possession of codes of civil and criminal law, to the former of which they are firmly attached by religious ties, tenacious, even to death, of peculiar superstitions—are we not in danger, by precipitancy, of creating evil where we intend to produce good? Such a country cannot adapt itself to a new form of government, founded upon the truest principles, with the same facility as an infant state; though it may, eventually, be ever so great a gainer by the change. Security must, likewise, be provided for a ruling power unconnected with the governed in language, habits, religion, in short, every element of which human character is compounded. In the present circumstances of Hindostan, it is not the form of government, so much as the administration of it, which is essential to the happiness of the people. A person who maintains that, in the existing circumstances of British India, subject as it is to a foreign yoke, the people should possess all those securities against misrule which are enjoyed in the independent states of Europe, and especially in our own country, does not deserve a reply.

The grand bulwark against oppression in such a country is found in a well-regulated judicial establishment, especially if this branch be severed from the legislative and executive powers. Where courts are established for the redress of wrongs, and where justice is impartially administered, a people cannot be oppressed but by such open and flagrant acts as would excite universal attention, and could only be perpetrated by a government released from all control, not amenable to successive tribunals of revision and appeal as that of British India. Now, it would be extremely difficult to show that justice is not administered to the inhabitants of that country, under British rule, in as ample, pure, and impartial a manner as possible. Except that the judges are not, as latterly in England, irremovable at pleasure,* the administration of justice is as unexceptionable in one country as in the other. A few words of explanation upon this point may be acceptable to the uninformed.

The

* This improvement in our system cannot be regarded as of much value, since judges can be promoted, although not removed.

The system of jurisprudence established in British India is founded on the judicial institutes and local constitutions of the natives, Hindu and Mahomedan, attempered and ameliorated by the mild spirit of the British law; being incorporated into a code prepared by persons of great erudition, experience, and local knowledge, and studiously adapted to the peculiar sentiments and customs of the people, printed and published, with translations, in the several dialects of the country, for the general information of its inhabitants. The criminal law is Mahomedan, modified and corrected by the regulations—a mild and equitable codes. Both the civil and criminal codes are gradually improved wherever improvement appears practicable.

About twelve years ago, the East-India Company, anxious to ascertain what beneficial changes could be introduced, not merely into the codes themselves, but into the mode of dispensing justice to their subjects, took steps to obtain the genuine sentiments of all persons qualified by local experience or study to give an opinion upon these important points. The queries they proposed included the following:—

What is your opinion of the fitness, efficiency, and general effects of the system of judicial administration established in Bengal?

Do you conceive that any system of ancient Hindoo institution could now, either in whole or in part, be with advantage substituted for the system, or any part of the system, introduced by the British Government?

If the system introduced by the British Government is, in your opinion, to be preferred, do you conceive it to be susceptible of any meliorations that would accelerate the decision of causes—would render the access of the natives to justice more easy—would simplify the proceedings, and abridge the expense of suitors; and in general, what, in your opinion, are the best means of remedying any existing defects in the system?

Would the natives, in your opinion, confide more in the uprightness of European judges, than in judges appointed by their own people?

The answers to these questions are printed, and compose a body of valuable evidence (to which, however, none of the defamers of our Indian government think fit to resort) upon this essential branch of Anglo-Indian policy. The testimonies in favour of the existing judicial system are highly satisfactory. All the witnesses concur in declaring that the natives would prefer European judges to their own countrymen: "I know," says one, "that the people of India look to the stern integrity of our judges, to the rigid impartiality of their decisions, and to the inflexible equity of our laws, with surprise, respect, and gratitude." The same person* sums up the advantages of the system in these terms:—

Among the numerous advantages of the British judicial system in India, I reckon the more prominent to be: 1st, the admirable adaptation of its legal code to the diversified objects, laws, and usages incident to its operation; the active principle inherent in itself of amelioration; the simultaneous impulse of judging and acting communicated by it to all the different tribunals, and, by the successive gradations of reference, the comparative certainty afforded of preventing contradictory decisions, and eliciting substantial justice: 2dly, the benignant and paternal regard and toleration which it exhibits towards the harmless institutions and inoffensive superstitions and prejudices of the people, combined with the wise and cautious, but firm and temperate attempts to meliorate and reform unreasonable, pernicious, and inexorable laws and usages: 3dly, the uprightness, integrity, and impartiality of the judges; the publicity, regularity, and precision of their proceedings; the purity, solidity, and propriety of their judgments and decrees; the checks and guards established against bribery, rapacity, and corruption; the security

* A. Falconar, Esq. Selection of Papers from the Records at the East-India House, vol. ii, p. 148.

security afforded for the probity, assiduity, and honour of them all, and especially the native functionaries: 4thly, the egis, I may say, the panoply, of protection afforded by it to the lives, property, and liberty of a population who, for preceding ages, having been exposed to all the evils and perils of tyranny and misrule, must esteem this boon as an unappreciable blessing: 5thly, and lastly, I esteem, as no mean advantage, the exclusion and independence which have been established between the judicial, legislative, and executive branches of the state, and the leisure consequently afforded to the local government to attend, with greater effect, to the more appropriate functions of their administration.

So intent were the rulers of India upon perfecting the judicial system, that Lord Cornwallis, besides separating the judicial from all other functions, giving high salaries to those entrusted with the discharge of them, and fixing severe penalties on derelictions of duty, endeavoured to realize the idea of administering justice gratuitously; and abolished the judicial fees,* whereby suitors were relieved from all expenses, except the pleader's fee and the expense of summoning witnesses. This measure had the effect which other speculative plans would probably have; it led to a greater evil than it was designed to remedy. The stimulus it gave to litigation, the malice and animosity it excited, and the oppressive weight of frivolous causes with which it incumbered the courts, rendered it necessary to re-establish the fees; and in one court no less than 14,000 causes were struck off in a single day! In all countries, under any system, as it has been well observed, justice, to be well administered, must be dear, as well as slow.

The system thus eulogized, has since been still further improved, particularly in the inferior branches of administration, whereby the forms have been simplified and the expense of suitors moderated. It may still be defective, but what institution is otherwise? "Perfection," says a great moral writer, "is not attainable in human institutions; if good predominate it is all we can expect." Its outline seems almost perfect; it is distinct from the executive and legislative authorities; its courts are open; its transactions are recorded; and it admits of a gradation of appeals from the zillah courts to the King of Britain in Council. Above all, it recognizes a principle of equality, which is unavoidably obnoxious to the higher classes of the people. A powerful zemindar may now be sued as defendant by the meanest ryot, and a summons from the judge served by a peon will bring him into court, which formerly required a military force.

It is remarked by Sir Henry Strachey, a practical judicial servant of the Company, and one of known ability, that "the Eastern people have had wise kings and just judges. We have heard, no doubt, of particular acts of signal equity, and of great skill in detecting injustice amongst them; but never had they a consistent, uniform, judicial system, a set of tribunals to which the people might resort, and, without regard to the personal character of the judge or ruler, depend upon obtaining justice. This great blessing may be said, with strict truth, to have been unknown in India till conferred upon them by the English East-India Company."

Here, then, we see one grand ingredient of political happiness amongst the Hindus, one powerful security against wrong. They can, in fact, possess no greater

* The grounds of this measure are thus stated by his Lordship: "This tax, which the people are obliged to pay for having justice administered to them, at the same time that it debars many from recovering their rights, and fails of its intended effect, has a further oppressive operation, by punishing equally all suitors, whether their causes be litigious or not." *Minute*, February 11, 1793.

greater, unless it were a native legislature, competent to control the acts of the executive, and expel, if it judged proper, their present rulers. An unshackled press, which thoughtless or interested clamour demands for them, would be no security, but a bane. Such was, and continues to be, the conviction of the British Legislature; and such conviction has been recently confirmed by the solemn decision of a council comprehending lawyers of the highest rank, as well as ministers of state.

With respect to taxation, no conquered country was ever so lightly pressed. We have, indeed, been told, in works written to inform the people of England on India affairs, that the Government absorbs the entire net produce of the soil; that the Company, like a vampire, sucks the blood of its subjects as fast as it is produced; together with other assertions equally veracious. When it is recollected that the fiscal resources in India bear no resemblance to those in Europe; that the people either cannot or will not pay imposts* of a kind the most ordinary and unobjectionable in England; that indirect taxation is impracticable in a country where wants are few, and taxable articles rare; and that the weight of the imposts therefore must fall (as it always did in Hindostan) upon the soil; it cannot be surprising that the land-tax should appear (for it is merely in appearance) comparatively large. It is in this, as in other cases, the administration of the revenue-system, not the tax itself; which can be vexatious to the people; and should they feel oppression from this cause, the courts of justice will afford redress against the native zemindar or the European collector, to every individual whatever, even the most degraded pariah.

Foreign writers, misled by pamphleteers in England, who are either ignorant of the true circumstances of British India, or who have an object in misstating them, have seemed to consider that the East-India Company, and consequently the British Government, by which the Company's system is supported, are unacquainted with the simplest maxims of politics and political economy, and persevere in schemes of policy ruinous to themselves, for the mere gratification of oppressing their subjects. It is impossible for a novice to read the extravagant picture drawn by M. Sismondi of British Government in India—a government which has been administered by a Cornwallis, a Wellesley, a Shore, and a Hastings—without his instituting a parallel between that and the foulest pourtraitures of ancient tyranny.

Such writers are, doubtless, more excusable than Englishmen, whose descriptions have the same tendency. An article in a late number of the *Westminster Review* is of this complexion. The writer (or writers, for the diversity of style and the palpable contradictions in this article would lead us to suppose it to be a joint production) has attempted to show what is and what ought to be the system of Anglo-Indian government; he has failed in both respects. His politics are of that character which is well known by the epithet *radical*; his facts are *not* collected from the multitude of able works which have been written upon India, *nor* from the mass of official evidence published by Parliament and by the East-India Company at various periods—but chiefly from the very pamphlets which have misled M. Sismondi into the grave errors he has committed. Moreover, the extravagance betrayed in the article on the subjects of the "Liberty of the Press," and "Transmission of Editors;"

* An attempt to levy a house or window-tax at Benares, we believe, was resisted by the inhabitants, who quitted their dwellings and resided in the fields.

Editors;" the flippant remarks upon the characters and opinions of the members of a late Cabinet Council; the fury of invective against the late Mr. Adam; and the parade of reference to a periodical work (as an *authority*) notorious for misrepresentation and party rancour, are sufficient to shew the spirit and design of the article.

As a specimen of its style, we subjoin the concluding paragraph, forming the last link of a chain of exaggerations:—

In point of fact, this miserable people, in a very imperfect state of civilization, without accumulation of capital, actual or in near prospect, wretchedly housed, all but quite naked, supporting existence on [by] a handful of rice and a pinch of dirty salt, and painfully and primitively scratching the unmanured and never fallow earth for a yearly harvest; this unfortunate people, to whom we have *not* communicated our arts, our sciences, our capital, our liberal institutions, or scarcely any thing really worth their having, are actually saddled with the intolerable expenses of *three* governments abroad and at home, cumbrous and costly.

Fortunately, the very article of which this rhapsody is the conclusion, contains an antidote to its effect. The writer (if it be the same) who penned this paragraph, seems to have forgotten that in a preceding page he had written as follows:—

It cannot be denied that the government of the British in India has been a *prodigious*, an *incalculable blessing* to the Indian people, chiefly in having by its influence banished foreign war and invasion with all their horrors; that *many ameliorations* have been *constantly going forward* in the statute-book and in our institutions; and that, in fact, only the ordinary securities against neglect and misrule are required to make those benefits spread and fructify a thousand-fold.

How this declaration is to be reconciled with the foregoing statement, that "we have *not* communicated to the natives of India scarcely any thing really worth their having," the writer would probably be puzzled to tell.

Our conclusion we may express in the very terms of the writer: we think that "the government of the British in India has been a prodigious, an incalculable blessing to the Indian people;" we know that "many ameliorations have been constantly going forward," and are still going forward, "in the statute-book and in our institutions." If by "the ordinary securities against neglect and misrule" the writer means—the introduction of a free press into India, we are satisfied that such a measure, instead of making the benefits referred to "spread and fructify a thousand-fold," would, in the *present* circumstances of Hindostan, abrogate and extinguish them altogether. We refer for the grounds of our conviction to the speeches of Mr. Serjeant Bosanquet and Mr. Serjeant Spankie, recorded in the "Proceedings of the Privy Council in relation to the Appeal against the Regulations for the Bengal Press," and to the following sentiments of Sir John Malcolm:—

That it is our duty to diffuse knowledge and truth (in India) none will deny; but it is also our most imperative duty to exercise our best judgment as to the mode in which these blessings shall be diffused, so as to render them beneficial; nor must we be diverted for one moment from our object by the clamour of those who, from only half-understanding this great subject, seek to interest popular opinion and national pride and prejudices on the side of systems of speculative reform and rash innovations, as crude as they are dangerous. By premature efforts to accelerate the progress of the blessings it is our hope to impart, we shall not only hasten our own downfall, but replunge the natives of India into a state of greater anarchy and misery than that from which we relieved them.

CHINESE PHILOLOGY—HAINAN—SINGAPORE.

To the Editor of the Asiatic Journal.

SIR: In your Number for January, at page 15, is an article extracted from the *Singapore Chronicle*, in the closing paragraph of which, the writer speaks not a little contemptuously of all that Jesuits and others before his time have written, concerning Chinese law, morals, and philology. All that has been written on the last-named subject, he considers of very little use; and so it manifestly has been to him, for he opens his paper by this accurate piece of information:—

“ The island of *Hai-nan* (correctly *Hai-lam*, or the western country), lies, &c. &c.”

Now, Sir, this sentence is just as absurd as if he had said, in English, “ *Sea-South* (correctly *Say-Sooth*, which means the *western country*).”—

That *Hai-nan* is correct, and means, verbally, *Sea-South*, or an island situated in the Southern Sea, every child in China knows; and the writer; I conceive, should have informed himself a little more concerning Chinese philology, rather than thus proclaim its uselessness, both by word and deed.

He wants to treat of “ facts and things, instead of words,” by which “ facts and things,” he says, he means, “ natural history, agriculture, commerce, population, and geography.” About law, and morals, and history, he wishes to hear no more: nor “ philology ” either, I suppose, after the “ correct ” and “ edifying ” information he has given us concerning the meaning of *Hai-nan*.

From what we have heard of Singapore and its present Government, I think it would be well, if the “ law ” had a little more “ morality ;” for the *licenses* granted to *vices*, are productive—of revenue, indeed,—and also of personal and domestic ruin—of robberies and of murders, which scandalize the more virtuous pagans who visit the settlement. Woe to thee, O Land! when men, who think physical science every thing, and moral science nothing, are thy rulers! Licentious Chinese despise the Christian Government, which takes money to allow vices that their own paternal Government, in China, prohibits entirely; and a Chinese *farmer of gambling houses* (Oh! delectable contrivance of Christian Europe!) when brought before the magistrate at Singapore, for affrays, &c., will beard the Christian judge, with the plea that he had *paid the Government* for his profession, and he must be allowed to carry it on, as the nature of the craft requires, to get back his money again.

The wars of the Saxon Heptarchy were not dignified enough for Milton and Hume! says the writer; they were equal to the quarrels of the kites and the cranes of the same period! A fine specimen of the hard-heartedness of metaphysical historians! And the Chinese wars were like them, says the *Singapore Chronicle*. True: like all the ancient wars of small states—cruel, and bloody, and incessant. The Chinese, however, of the nineteenth century, outdid Hume and the chronicler, by comparing the wars of Europe to the “ quarrels ” of petty horned insects.

Your's, &c.

ALIIQUIS.

THE CHINESE DRAMA.

THE ORPHAN OF THE HOUSE OF TCHAO.

[Concluded from page 47.]

ACT III.

SCENE I.—*The palace of Tou-ngan-cou.**Enter TOU-NGAN-COU, attended.*

Tou. Will the little Tchao escape me?—I have promulgated an order, that if, in the course of three days, it does not appear, all children under six months old shall be put to death.—Let some one go to the palace gate and look about; and if any accuser is discovered approaching, let me know it immediately.

Enter TCHING-ING.

Tching. [*Aside.*] I have carried my own child to Kong-lun, and now I come to impeach him before Tou-ngan-cou.—[*To a soldier.*] Say that I bring intelligence respecting the orphan of Tchao.

Sold. Wait a little, if you please; I will announce your arrival.—[*To Tou-ngan-cou.*] My lord, here is a man who says that the little Tchao is found.

Tou. Where is the man? let him enter.—Who art thou?

Tching. I am a poor physician; my name is Tching-ing.

Tou. Where dost thou say thou hast seen the orphan Tchao?

Tching. In the village of Liu-liu-tai-ping; old Kong-lun has concealed him in his house.

Tou. How hast thou learned that?

Tching. Kong-lun is an acquaintance of mine; I was at his house, and accidentally saw in his bed-chamber a child placed upon a rich carpet. I said to myself, Kong-lun is more than seventy years old; he has neither son nor daughter; whence came this child then? I expressed my thoughts to him; said I, is not this child the orphan so much sought after? I took notice that the old man changed colour, but he said nothing in reply; whence I conclude, my lord, that the child which you are so much concerned about is with old Kong-lun.

Tou. Away, villain! dost thou think to make me credit this? Hitherto thou hast had no animosity against the good Kong-lun; wherefore dost thou then accuse him of so great a crime? Is it out of regard for me? If thou tellest the truth, fear nothing; if otherwise, thou art a dead man.

Tching. Restrain your anger, my lord, for one moment, and condescend to hear my answer. It is true I have no animosity against Kong-lun; but when I learned that you had ordered all the children in the kingdom to be brought hither that they might be put to death; in the hope of saving the lives of so many innocents; moreover, being at the age of forty-five, and having had a son born to me a month ago, I should be obliged to surrender it to you, my lord, and should be then without an heir; but the orphan of Tchao once discovered, the infants in the kingdom would not be destroyed, and my little heir would have nothing to fear:—these are the motives which have determined me to accuse Kong-lun.

Tou. [*Laughing.*] Thou art in the right!—old Kong was the intimate friend of Tchao-tun; so it is not surprising that he wishes to save the orphan.—

Asiatic Journ. Vol. XXI. No. 122. X

[To

[To his attendants.] Let some soldiers be assembled immediately.—I will go with Tching-ing to the village of Tai-ping, surround it, and seize old Kong-lun.

SCENE II.—*The village of Tai-ping.*

Enter KONG-LUN.

Kong. Yesterday I consulted with Tching-ing how to save little Tchao. Tching-ing went to accuse me before the cruel Tou-ngan-cou. I shall soon behold the wretch approach.—What cloud of dust is that? A troop of soldiers is coming! It is doubtless the plunderer, and I must prepare to die.

Enter TOU-NGAN-OU, TCHING-ING, and Soldiers.

Tou. We are now at the village of Tai-ping; enclose me completely.—Tching-ing, which is the house of Kong-lun?

Tching. This is it.

Tou. Drag out the old villain:—Kong-lun, know'st thou thy crime?

Kong. I have no crime that I am sensible of.

Tou. Wretch! I know thou wert connected by friendship with Tchao-tun; but why so bold as to conceal the relics of his family?

Kong. Had I the heart of a tiger I would not undertake it.

Tou. If he does not feel blows he will confess nothing:—take a good bamboo and beat him well.

Kong. [Whilst undergoing the punishment.] Where is the evidence of the crime I am accused of?

Tou. Tching-ing was the first to accuse thee.

Kong. Tching-ing is very wicked.—[To Tou-ngan-cou.] Art thou not satisfied with the death of three hundred persons, that thou wouldst destroy a poor infant, who alone remains.

Tou. Old villain! where hast thou concealed the orphan? tell me quickly, to save thyself from further torture.

Kong. Where have I concealed the orphan?—who saw me conceal it?

Tou. Still thou wilt not declare all: beat him again. [They beat him.] The old wretch must be insensible; he feels not, he confesses not.—Tching-ing, it is thou who hast accused him; take a stick, and give him a hundred blows.

Tching. My lord, I am a poor physician; I have never learned to use the bamboo.

Tou. What! thou hast never learned how to use the bamboo! thou art afraid he will impeach thee as his accomplice.

Tching. My lord, I will beat him directly. [Takes a bamboo.]

Tou. Tching-ing, thou hast chosen so small a stick, that thou seem'st to be afraid of hurting him. Thou art certainly apprehensive he will speak.

Tching. I will take a larger.

Tou. Hold! at first thou took'st merely a switch, and now thou hast got a club; in two blows thou wilt kill him, and he will die without confessing any thing.

Tching. You tell me to take a stick; one you say is too small, another is too big; what am I to do?

Tou. Take a moderately sized one, and lay it upon this rascal so that he feels:—wretched old man, dost thou know that it is Tching-ing who strikes thee?

Tching. Confess all!

Kong. O, I am beaten to pieces; the last blows were the heaviest of all;—who inflicted them?

Tou. It was Tching-ing.

Kong.

Kong. What ! Tching-ing beat me so cruelly !

Tching. My lord, do not attend to this old man ; he knows not what he says.

Kong. O, Tching-ing, what have I done to you ? am I your enemy, that you treat me thus.

Tching. Quick ! confess all !

Kong. I will confess all.

Tching. Confess then quickly, or you shall die under the blows.

Kong. I will, I will ;—we both deliberated together upon the means of saving the orphan.

Tou. That is sufficient to show he had an accomplice—Wretched old man, thou say'st both ; one is thyself ; who is the other ? If thou speakest truth, I will grant thee thy life.

Kong. You wish me to tell it ; I will satisfy you :—his name was at the end of my tongue, but I recalled it.

Tou. Tching-ing, has this no reference to thee ?

Tching. [To *Kong-lun.*] Ah ! you old fool, do not attempt to calumniate the innocent.

Kong. Tching-ing, what have you to fear ?

Tou. Thou hast mentioned two : wherefore dost thou not speak ?

Kong. You have beaten me until I have lost my wits.

Tou. If thou dost not speak, I will positively beat thee to death.

A Soldier. Good news ! my lord : in searching a cavity in the house we have found the orphan.

Tou. Bring hither the wretched abortion, that I may behold it, and have the satisfaction of cutting it into pieces with my own hands.—So, old wretch, thou saidst thou hadst not concealed the little orphan : what then is this I hold in my hands ?—The sight of this infant raises my anger : with this dagger I stab it once, twice, three times, in the heart. [*Tching-ing is in the utmost agony.*] I have now reached the extent of my wishes.

Kong. Tou-ngan-cou, most wicked of mankind ! beware ! know, impious wretch, that there is a heaven above that beholds thy crimes, and will never pardon them :—as for me, I have no desire to live ; I therefore cast myself down these stone steps ; it is the kind of death I choose.

A Soldier. Old *Kong-lun* has killed himself.

Tou. [*Laughing.*] Since he is dead, tell me no more about him.—[*To Tching-ing, in a laughing tone.*] You have been very serviceable to me in this business ; but for you I should perhaps have been unable to destroy my enemy.

Tching. Sir, I have already said I had no particular enmity towards the house of Tchao ; and what I have done has been to save the life of the little innocents throughout the kingdom, and to preserve my own son.

Tou. You shall be my confidential servant ; come and dwell in my palace : you shall be honourably entertained, and shall rear your son there. When he grows up, you shall have him instructed in letters, and let me have him to teach him war : I am nearly fifty years of age ; I am without heir, and will adopt your son, and intend to resign my office to him when he is old enough to take it. What say you to this ?

Tching. I offer a thousand thanks, my lord ; I am not worthy of so much honour.

Tou. The favour which the house of Tchao enjoyed put me into a bad temper ; the house is now extinct, and I have nothing more to fear. [*Exeunt.*

ACT IV.

SCENE I.—*The palace of Tou-ngan-cou.**Enter TOU-NGAN-COU.*

Tou. Twenty years have elapsed since I put to death, with my own hand, the orphan of Tchao, and adopted the son of Tching-ing. I have named him Tou-ching; I have taught him his exercises; I have instructed him in the eighteen methods of war, and he understands his business so well, that he is only inferior to myself. He grows fast. I think of getting rid of the King shortly, and mounting the throne myself; when I shall invest my son with the high office I fill, and all my wishes will then be fulfilled. He is now at his exercise in the camp; when he returns, we will deliberate upon the subject.
Exit.

Enter TCHING-ING, with a roll of paper.

Tching. How quickly time passes! It is twenty years since Tou-ngan-cou adopted whom he thought to be my son; he has taken great care of him, and the youth has proved himself worthy of it; the old man loves him to distraction. But there is one very important point upon which my pretended son is still in ignorance. I am now in my sixty-fifth year; if I should die, who could reveal to him this secret? This is the only thing which troubles me. I have painted the whole history of it upon this roll of paper; if my son (so called) asks of me an explanation of it, I will give him a complete one. I am convinced that, when he learns who he is, he will avenge the death of his father and mother. I will go and sit mournfully in my library till he comes to see me there. [*Exit.*]

Enter TCHING-POEI, attended.

Tching-p. Let some one take my horse:—where is my father?

Sold. He is in the library, with a book in his hand.

Tching-p. Tell him I have arrived.

Sold. [*Goes out and returns.*] *Enter.* [*Exeunt.*]

SCENE II.—*The library.*TCHING-ING, *solus.*

Tching. Let me examine this roll a little: alas! how many worthy persons have died for the family of Tchao! It has cost me an only son: all may be seen in these pictures.

Enter TCHING-POEI.

Tching-p. My father, your son has returned from the camp.

Tching. Go and get some refreshment, my son.

Tching-p. My father, whenever I leave you, upon my return you are always pleased to see me; but to-day I find you sad; tears flow from your eyes; from what cause I know not:—has any one offended you? name him to your son.

Tching. I fully intend to tell you the cause of my tears.—Go, eat something. [*Tching-poei goes.*]—I can hold it no longer. [*Sighs: Tching-poei returns.*]

Tching-p. Father, has some person offended you? I am concerned about it: if no one has displeased you, why are you so melancholy, and why do you not speak to me as usual?

Tching. My son, remain here a little at your studies; I will retire into the back apartment, and will return to you presently. [*He leaves behind the roll, as if by mistake.*]

Tching-p. My father has forgotten this roll of paper: does it consist of despatches?

patches? Let me open it and see: oh, here are paintings! What an extraordinary scene is this! A man in a red dress sets a great dog upon another dressed in black: here is another who kills the dog; and a fourth who supports a carriage, from which a wheel has been removed; again, here is one who has dashed his head against a cinnamon-tree: what can all this mean! There is no name written here: I cannot comprehend it. Let me examine the remainder: this general has before him a cord, some poisoned wine, and a dagger; he takes the dagger and stabs himself in the throat:—why should he kill himself thus? But what is meant by this physician with his medicine-box; and this lady on her knees before him, imploring him to take an infant which she holds?—Why does she strangle herself with her girdle?—This house seems to suffer greatly:—O, that I could kill its wicked persecutor!—I can comprehend nothing about it: when my father comes, he will explain the whole to me.

TCHING-ING returns.

Tching. My son, I have been listening to you for some time.

Tching-p. Father, pray explain to me the paintings on this roll.

Tching. Explain them, my son!—You little know how much the subject concerns you.

Tching-p. Explain the whole to me as clearly as possible,

Tching. The history which you desire to know is rather long: this man in red, and this in black, were formerly subjects of the same king, and mandarins at the same period; the one of letters, the other of war; hence they became enemies. They had been for some time upon ill-terms, when the man in red said to himself, "He that begins gets the advantage; he that is dilatory is always the worst off:" so he despatched secretly an assassin, named Tson-mi, whom he directed to leap the palace walls of the man in black, and assassinate him. But the latter, who was a great minister of state, was accustomed every night to go out into the court of his palace, and there offer a prayer to the Ruler of heaven and earth for the prosperity of the kingdom, instead of thinking exclusively of his own peculiar concerns. The assassin, who saw and heard him, said to himself, "If I kill such a good mandarin, I shall act in direct hostility to heaven; I will certainly not do it then. If I return to him who sent me, I am a dead man, that is equally certain." He had a dagger concealed; but observing so virtuous a mandarin, he repented; and opening his eyes to the light, he dashed his head against a cinnamon-tree.

Tching-p. Then the person I perceive killing himself against this tree is Tson-mi?

Tching. Yes, my son, it is he.—The man in black, at the commencement of spring, left the city, to urge his husbandmen to labour; he discovered, beneath a mulberry tree, a big man, stretched upon his back, with his mouth open; the good mandarin enquired the cause: the giant replied, "My name is Ling-tcha; I require a measure of rice (enough for ten men) at each meal; my master, not being able to feed me, has turned me out of doors; if I take any of the mulberries from the tree, he charges me with robbery; I therefore lie upon my back, with my mouth open, and swallow the fruit which falls into it; but I would rather die of hunger than eat those which fall beside me, and therefore be called a thief." The man in black commended his probity and resolution; and gave him as much wine and rice as he wished. When he was satisfied, he went away without saying a word. The man in black was not offended; he scarcely took notice of it.

Tching-p.

Tching-p. This single trait demonstrates his virtue. This man, half-dead with hunger beneath this mulberry-tree, is then named Ling-tcha?

Tching. Take particular notice of what follows, my son:—One day a certain king of the west offered as tribute a chin-ngao, that is to say, a dog with four feet.* The King of Tsin gave this dog to the man in red, who, having vowed the destruction of the man in black, made in his inner garden a straw figure of a man, dressed like his enemy, and filled the stomach of the figure with the flesh and entrails of sheep. He caused Chin-ngao to be kept fasting six or seven days, after which he brought his dog into the garden, and set it upon the figure: the dog devoured it all. At the end of a hundred days, during which this training lasted, he went to the King, and told him there was a traitor at court, who had a design upon his Majesty's life. "Where is he?" said the King. "Chin-ngao can discover him," replied the man in red. He led the dog into the royal chamber; the man in black was near the King. Ching-ngao supposed it was his man of straw, and rushed upon him; the man in black fled, Ngao after him; but the dog having injured a great mandarine, named Ti-mi-ming, he was killed.

Tching-p. This vile mastiff is then called Ngao, and the brave mandarin who killed him, Ti-mi-ming?

Tching. Yes:—the man in black, having escaped from the palace, would have mounted his carriage with four horses; but he was not aware that the man in red had taken two of them away, and unfixed a wheel besides, so that the carriage was useless: at this moment passed a tall strong man, who, supporting the wheel on his shoulders, forced on the horses with one hand; and, although his own entrails were scattered on the road, he succeeded in conveying the carriage beyond the walls.—Who was this brave fellow, do you think?—The very Ling-tcha, whom the man in black had found beneath the mulberry-tree.

Tching-p. I have not forgotten the circumstance: it was the Ling-tcha whose life the man in black had saved.

Tching. The same.

Tching-p. Father, this man in red is a great villain—an infamous wretch.—What is his name?

Tching. I have forgotten his name, my son.

Tching-p. And the man in black?

Tching. He is Tchao-tun, minister of state:—it concerns you nearly, my son.

Tching-p. I have heard say that there was a minister of state named Tchao-tun; but I have not paid much attention to what I heard.

Tching. I tell you this my son, in secret; preserve it carefully in your memory.

Tching-p. There are other pictures in this roll, which I beg you will explain to me.

Tching. The man in red deceived the King, and caused all the house of Tchao to be massacred, to the number of more than three hundred persons: there

* It is very probable that the translation is here faulty: the words *chin-ngao*, or, as we should write them, *chen-kow*, appear to denote a rabid or furious dog. The Chinese are attached to dogs, not merely on account of their flesh, which is a choice dish amongst them, but from better motives, like those of Pierre, "because they are honest creatures." The records of the East-India Company exhibit a complaint of their servants at Chusan, who were endeavouring to open a trade at that port, that whilst they were subjected to heavy exactions, a certain supra-cargo paid the entire mesurage of his ship with "a great Irish dog." In the present case, the animal would have been a greater object of curiosity had the number of its legs been greater or less than four.

there only remained to Tchao-tun a son, named Tchao-so, who had married the King's daughter. The man in red counterfeited an order from the King, and sent him a cord, some poison, and a dagger, directing him to choose his mode of death. The princess, his wife, was pregnant; Tchao declared to her his last will, that if, after his death, she brought forth a son, she should name it *the Orphan of the house of Tchao*. "He will avenge our family," he said; and taking the dagger, stabbed himself. The man in red confined the princess in her own palace, where she brought into the world a son. As soon as the man in red knew this, he sent General Han-qua to guard the place, and prevent the infant's removal. The princess had a faithful servant, a physician, named Tching-ing.

Tching-p. Is not that you, my father?

Tching. How many persons are there in the world who have the same name!—The princess confided to him her little orphan, and strangled herself with her girdle. This Tching-ing covered up the child, put it into his medicine-box, and endeavoured to leave the palace; he found Han-qua at the gate, who discovered the orphan; but Han-qua took a knife, and cut his own throat.

Tching-p. This general who so generously sacrificed his life for the house of Tchao was a brave man:—I will bear in mind that he was named Han-qua.

Tching. Yes, yes; 'twas Han-qua. But much worse follows: the man in red soon learned the news, and ordered all the children born in the kingdom within six months to be brought to him: his design was to massacre them all, and thereby rid himself of the orphan of Tchao.

Tching-p. [*Passionately.*] Was there ever so wicked a man in the world!

Tching. He was certainly an infamous wretch:—this Tching-ing had had a son about a month before; he clothed him in the dress of the orphan, and carried him to the village of Tai-ping, to the house of old Kong-lun.

Tching-p. Who was Kong-lun?

Tching. One of the great friends of Tchao-tun.—The physician said to him, "My lord, take this poor little orphan, and go inform the man in red, that I have concealed in my house the child he seeks; my son and I will die together, and you will take care of little Tchao till he be old enough to revenge his house." Kong-lun said in reply: "I am old; but if you have courage to sacrifice your own son, bring him hither, clothed in the orphan's dress, and accuse me to the man in red: your son and I will die together, and you will conceal the orphan until he be in a condition to avenge his family."

Tching-p. What! had this Tching-ing the courage to surrender his own child?

Tching. When you risk your own life, what difficulty is there in sacrificing that of a child?—This Tching-ing then took his son, and carried it to Kong-lun. After subjecting this good old man to many torments, they discovered the child, and the barbarous wretch in red cut it in pieces with his own hand: Kong-lun broke his neck upon the steps of the house. All this happened about twenty years ago; and the orphan of the house of Tchao must be at present twenty years of age; yet he thinks not of avenging his parents: what can he think of then? He is well-made; he is more than five feet high; he is acquainted with literature; and possesses great skill in the science of arms.—What has become of his grandfather and his carriage?—All his house have been unmercifully massacred; his mother strangled—his father stabbed, and hitherto unrevenged!—He is unworthy of passing in the world for a man of spirit.

Tching-p.

Tching-p. Father, you have been speaking to me a great while; I seem to be bewildered: I can comprehend nothing of what you tell me.

Tching. Since you cannot understand, I must speak plainly to you:—the cruel man in red is Tou-ngan-cou; Tchao-tun is your grandfather; Tchao-so is your father; the princess is your mother; I am the old physician Tching-ing; and you are the orphan of the house of Tchao!

Tching-p. What! I the orphan of the house of Tchao! You make me die with grief and rage. [*He faints.*]

Tching. My young master, revive!

Tching-p. Alas! you will cause my death.—If you had not told me all this, whence could I have learned it?—My father, sit upon this seat, and let me salute you. [*He salutes him.*]

Tching. I have this day raised up the house of Tchao;—but, alas! I have lost my own! I have destroyed the only root which remained of it! [*Weeps.*]

Tching-p. Yes, I swear to be revenged of the traitor Tou-ngan-cou.

Tching. Make not so great a noise, lest Tou-ngan-cou should hear you.

Tching-p. I will either die or destroy the traitor.—My father, be not uneasy; to-morrow, after I have seen the King and the nobles, I will go and kill the robber myself. [*Exit.*]

Tching. To-morrow, my young master should make sure of the traitor Tou-ngan-cou; I ought to follow him, in order to aid him in case of need. [*Exit.*]

ACT V.

SCENE I.—*The street.*

Enter TCHING-POEI.

Tching-p. I have the King's order to seize Tou-ngan-cou, and to revenge upon him the death of my father and grandfather. How arrogant the wretch has been! I will arrest him here; it is the way he passes on his return home.

Enter TOU-NGAN-COU, attended.

Tou. I have been all to-day in the palace appropriated to my office. I will now proceed to my own house.—[*To his attendants.*] Arrange yourselves in order, and walk gently.

Tching-p. What do I see! is this not the old wretch?

Tou. Tou-tching, my son, what dost thou here?

Tching-p. Old wretch! I am neither Tou-tching nor thy son. I am the orphan of the house of Tchao. Twenty years ago you caused my whole family to be massacred: I am about to seize thee and bind thee, and revenge on thee the death of my parents, whom thou hast slain.

Tou. Tou-tching, who has put these things into thy head?

Tching-p. Tching-ing has disclosed to me who I am.

Tou. I have a very ungrateful son; but I have nothing wherewith to reproach myself. [*Going.*]

Tching-p. Old wretch, where do you think to go? [*He is about to seize Tou-ngan-cou.*]

Enter TCHING-ING.

Tching. I fear something may happen to my young master, and I hasten after him to assist him.—Blessed be heaven and earth, he has seized Tou-ngan-cou!

Tching-p. Let this wretch be put in fetters. I go to acquaint the King. [*Exeunt.*]

SCENE

SCENE II.—*A street near the royal palace.*

Enter OUEI-FONG, attended.

Ouei. I hear that Tching-poei has seized Tou-ngan-cou. — See if he is coming, and as soon as he arrives let me know it.

Enter TCHING-POEI, TCHING-ING, and TOU-NGAN-COU.

Tching-p. My father, let us go together to the King.—[*Sees Ouei-fong.*] My lord, have compassion on my family.—I have taken and bound Tou-ngan-cou.

Ouei. Let him appear:—well, traitor, who causeth the subjects of the King to perish, thou art now in the hands of Tching-poei:—what hast thou to say?

Tou. It is for the King that I am sacrificed: but, in the present state of affairs, all I ask is to die quickly.

Tching-p. My lord, take my cause in hand.

Ouei. Tou-ngan-cou, you wish to die speedily; I will that your death be slow.—Take this wretch, extend him on the rack; let him be cut by little and little into three thousand pieces; and when his body has neither flesh nor skin remaining, let his head be cut off: but be sure, above all things, that he dies slowly.

Tching. My young master, you are now revenged, and your family is restored:—but mine is without support.

Ouei. Tching-ing and Tching-poei, fall on your knees, and listen to the King's order.—“Tou-ngan-cou has caused many of my good subjects to die unjustly; he has disordered my state in every respect. He put to death the whole household of Tchao, who were innocent. These are not crimes which heaven overlooks. By good fortune, the orphan of this house has acquired much glory; he has caused the traitor Tou-ngan-cou to lose his head: I will that henceforward he be called Tchao-von; that his grandfather and father be recorded as grandees of the kingdom, and Han-quā as generalissimo. I give to Tching-ing a fine and large estate in fee-simple. Let a magnificent tomb be raised to the memory of Kong-lun; let the kingdom recover itself, and incessantly exalt the virtue of the King.” [*Exeunt omnes.*]

CHINESE PHILOLOGY—HAINAN—SINGAPORE.

To the Editor of the Asiatic Journal.

SIR: In your Number for January, at page 15, is an article extracted from the *Singapore Chronicle*, in the closing paragraph of which, the writer speaks not a little contemptuously of all that Jesuits and others before his time have written, concerning Chinese law, morals, and philology. All that has been written on the last-named subject, he considers of very little use; and so it manifestly has been to him, for he opens his paper by this accurate piece of information:—

“ The island of *Hai-nan* (correctly *Hai-lam*, or the western country), lies, &c. &c.”

Now, Sir, this sentence is just as absurd as if he had said, in English, “ *Sea-South* (correctly *Say-Sooth*, which means the *western country*).”—

That *Hai-nan* is correct, and means, verbally, *Sea-South*, or an island situated in the Southern Sea, every child in China knows; and the writer; I conceive, should have informed himself a little more concerning Chinese philology, rather than thus proclaim its uselessness, both by word and deed.

He wants to treat of “ facts and things, instead of words,” by which “ facts and things,” he says, he means, “ natural history, agriculture, commerce, population, and geography.” About law, and morals, and history, he wishes to hear no more: nor “ philology ” either, I suppose, after the “ correct ” and “ edifying ” information he has given us concerning the meaning of *Hai-nan*.

From what we have heard of Singapore and its present Government, I think it would be well, if the “ law ” had a little more “ morality ;” for the *licenses* granted to *vice*, are productive—of revenue, indeed,—and also of the personal and domestic ruin—of robberies and of murders, which scandalize the more virtuous pagans who visit the settlement. Woe to thee, O Land! when men, who think physical science every thing, and moral science nothing, are thy rulers! Licentious Chinese despise the Christian Government, which takes money to allow vices that their own paternal Government, in China, prohibits entirely; and a Chinese *farmer of gambling houses* (Oh! delectable contrivance of Christian Europe!) when brought before the magistrate at Singapore, for affrays, &c., will beard the Christian judge, with the plea that he had *paid the Government* for his profession, and he must be allowed to carry it on, as the nature of the craft requires, to get back his money again.

The wars of the Saxon Heptarchy were not dignified enough for Milton and Hume! says the writer; they were equal to the quarrels of the kites and the cranes of the same period! A fine specimen of the hard-heartedness of metaphysical historians! And the Chinese wars were like them, says the *Singapore Chronicle*. True: like all the ancient wars of small states—cruel, and bloody, and incessant. The Chinese, however, of the nineteenth century, outdid Hume and the chronicler, by comparing the wars of Europe to the “ quarrels ” of petty horned insects.

Your's, &c.

ALIIQUIS.

THE CHINESE DRAMA.

THE ORPHAN OF THE HOUSE OF TCHAO.

[Concluded from page 47.]

ACT III.

SCENE I.—*The palace of Tou-ngan-cou.**Enter TOU-NGAN-COU, attended.*

Tou. Will the little Tchao escape me?—I have promulgated an order, that if, in the course of three days, it does not appear, all children under six months old shall be put to death.—Let some one go to the palace gate and look about; and if any accuser is discovered approaching, let me know it immediately.

Enter TCHING-ING.

Tching. [*Aside.*] I have carried my own child to Kong-lun, and now I come to impeach him before Tou-ngan-cou.—[*To a soldier.*] Say that I bring intelligence respecting the orphan of Tchao.

Sold. Wait a little, if you please; I will announce your arrival.—[*To Tou-ngan-cou.*] My lord, here is a man who says that the little Tchao is found.

Tou. Where is the man? let him enter.—Who art thou?

Tching. I am a poor physician; my name is Tching-ing.

Tou. Where dost thou say thou hast seen the orphan Tchao?

Tching. In the village of Liu-liu-tai-ping; old Kong-lun has concealed him in his house.

Tou. How hast thou learned that?

Tching. Kong-lun is an acquaintance of mine; I was at his house, and accidentally saw in his bed-chamber a child placed upon a rich carpet. I said to myself, Kong-lun is more than seventy years old; he has neither son nor daughter; whence came this child then? I expressed my thoughts to him; said I, is not this child the orphan so much sought after? I took notice that the old man changed colour, but he said nothing in reply; whence I conclude, my lord, that the child which you are so much concerned about is with old Kong-lun.

Tou. Away, villain! dost thou think to make me credit this? Hitherto thou hast had no animosity against the good Kong-lun; wherefore dost thou then accuse him of so great a crime? Is it out of regard for me? If thou tellest the truth, fear nothing; if otherwise, thou art a dead man.

Tching. Restrain your anger, my lord, for one moment, and condescend to hear my answer. It is true I have no animosity against Kong-lun; but when I learned that you had ordered all the children in the kingdom to be brought hither that they might be put to death; in the hope of saving the lives of so many innocents; moreover, being at the age of forty-five, and having had a son born to me a month ago, I should be obliged to surrender it to you, my lord, and should be then without an heir; but the orphan of Tchao once discovered, the infants in the kingdom would not be destroyed, and my little heir would have nothing to fear:—these are the motives which have determined me to accuse Kong-lun.

Tou. [*Laughing.*] Thou art in the right!—old Kong was the intimate friend of Tchao-tun; so it is not surprising that he wishes to save the orphan.—

Asiatic Journ. Vol. XXI. No. 122.

X

[*To*

[To his attendants.] Let some soldiers be assembled immediately.—I will go with Tching-ing to the village of Tai-ping, surround it, and seize old Kong-lun.

SCENE II.—*The village of Tai-ping.*

Enter KONG-LUN.

Kong. Yesterday I consulted with Tching-ing how to save little Tchao. Tching-ing went to accuse me before the cruel Tou-ngan-cou. I shall soon behold the wretch approach.—What cloud of dust is that? A troop of soldiers is coming! It is doubtless the plunderer, and I must prepare to die.

Enter TOU-NGAN-COU, TCHING-ING, and Soldiers.

Tou. We are now at the village of Tai-ping; enclose me completely.—Tching-ing, which is the house of Kong-lun?

Tching. This is it.

Tou. Drag out the old villain:—Kong-lun, know'st thou thy crime?

Kong. I have no crime that I am sensible of.

Tou. Wretch! I know thou wert connected by friendship with Tchao-tun; but why so bold as to conceal the relics of his family?

Kong. Had I the heart of a tiger I would not undertake it.

Tou. If he does not feel blows he will confess nothing:—take a good bamboo and beat him well.

Kong. [Whilst undergoing the punishment.] Where is the evidence of the crime I am accused of?

Tou. Tching-ing was the first to accuse thee.

Kong. Tching-ing is very wicked.—[To Tou-ngan-cou.] Art thou not satisfied with the death of three hundred persons, that thou wouldst destroy a poor infant, who alone remains.

Tou. Old villain! where hast thou concealed the orphan? tell me quickly, to save thyself from further torture.

Kong. Where have I concealed the orphan?—who saw me conceal it?

Tou. Still thou wilt not declare all: beat him again. [They beat him.] The old wretch must be insensible; he feels not, he confesses not.—Tching-ing, it is thou who hast accused him; take a stick, and give him a hundred blows.

Tching. My lord, I am a poor physician; I have never learned to use the bamboo.

Tou. What! thou hast never learned how to use the bamboo! thou art afraid he will impeach thee as his accomplice.

Tching. My lord, I will beat him directly. [Takes a bamboo.]

Tou. Tching-ing, thou hast chosen so small a stick, that thou seem'st to be afraid of hurting him. Thou art certainly apprehensive he will speak.

Tching. I will take a larger.

Tou. Hold! at first thou took'st merely a switch, and now thou hast got a club; in two blows thou wilt kill him, and he will die without confessing any thing.

Tching. You tell me to take a stick; one you say is too small, another is too big; what am I to do?

Tou. Take a moderately sized one, and lay it upon this rascal so that he feels:—wretched old man, dost thou know that it is Tching-ing who strikes thee?

Tching. Confess all!

Kong. O, I am beaten to pieces; the last blows were the heaviest of all;—who inflicted them?

Tou. It was Tching-ing.

Kong.

Kong. What ! Tching-ing beat me so cruelly !

Tching. My lord, do not attend to this old man ; he knows not what he says.

Kong. O, Tching-ing, what have I done to you ? am I your enemy, that you treat me thus.

Tching. Quick ! confess all !

Kong. I will confess all.

Tching. Confess then quickly, or you shall die under the blows.

Kong. I will, I will ;—we both deliberated together upon the means of saving the orphan.

Tou. That is sufficient to show he had an accomplice—Wretched old man, thou say'st both ; one is thyself ; who is the other ? If thou speakest truth, I will grant thee thy life.

Kong. You wish me to tell it ; I will satisfy you :—his name was at the end of my tongue, but I recalled it.

Tou. Tching-ing, has this no reference to thee ?

Tching. [To *Kong-lun.*] Ah ! you old fool, do not attempt to calumniate the innocent.

Kong. Tching-ing, what have you to fear ?

Tou. Thou hast mentioned two : wherefore dost thou not speak ?

Kong. You have beaten me until I have lost my wits.

Tou. If thou dost not speak, I will positively beat thee to death.

A Soldier. Good news ! my lord : in searching a cavity in the house we have found the orphan.

Tou. Bring hither the wretched abortion, that I may behold it, and have the satisfaction of cutting it into pieces with my own hands.—So, old wretch, thou saidst thou hadst not concealed the little orphan : what then is this I hold in my hands ?—The sight of this infant raises my anger : with this dagger I stab it once, twice, three times, in the heart. [*Tching-ing is in the utmost agony.*] I have now reached the extent of my wishes.

Kong. Tou-ngan-cou, most wicked of mankind ! beware ! know, impious wretch, that there is a heaven above that beholds thy crimes, and will never pardon them :—as for me, I have no desire to live ; I therefore cast myself down these stone steps ; it is the kind of death I choose.

A Soldier. Old *Kong-lun* has killed himself.

Tou. [*Laughing.*] Since he is dead, tell me no more about him.—[*To Tching-ing, in a laughing tone.*] You have been very serviceable to me in this business : but for you I should perhaps have been unable to destroy my enemy.

Tching. Sir, I have already said I had no particular enmity towards the house of Tchao ; and what I have done has been to save the life of the little innocents throughout the kingdom, and to preserve my own son.

Tou. You shall be my confidential servant ; come and dwell in my palace : you shall be honourably entertained, and shall rear your son there. When he grows up, you shall have him instructed in letters, and let me have him to teach him war : I am nearly fifty years of age ; I am without heir, and will adopt your son, and intend to resign my office to him when he is old enough to take it. What say you to this ?

Tching. I offer a thousand thanks, my lord ; I am not worthy of so much honour.

Tou. The favour which the house of Tchao enjoyed put me into a bad temper ; the house is now extinct, and I have nothing more to fear. [*Exeunt.*

ACT IV.

SCENE I.—*The palace of Tou-ngan-cou.**Enter TOU-NGAN-COU.*

Tou. Twenty years have elapsed since I put to death, with my own hand, the orphan of Tchao, and adopted the son of Tching-ing. I have named him Tou-ching; I have taught him his exercises; I have instructed him in the eighteen methods of war, and he understands his business so well, that he is only inferior to myself. He grows fast. I think of getting rid of the King shortly, and mounting the throne myself; when I shall invest my son with the high office I fill, and all my wishes will then be fulfilled. He is now at his exercise in the camp; when he returns, we will deliberate upon the subject. *Exit.*

Enter TCHING-ING, with a roll of paper.

Tching. How quickly time passes! It is twenty years since Tou-ngan-cou adopted whom he thought to be my son; he has taken great care of him, and the youth has proved himself worthy of it; the old man loves him to distraction. But there is one very important point upon which my pretended son is still in ignorance. I am now in my sixty-fifth year; if I should die, who could reveal to him this secret? This is the only thing which troubles me. I have painted the whole history of it upon this roll of paper; if my son (so called) asks of me an explanation of it, I will give him a complete one. I am convinced that, when he learns who he is, he will avenge the death of his father and mother. I will go and sit mournfully in my library till he comes to see me there. *[Exit.*

Enter TCHING-POEI, attended.

Tching-p. Let some one take my horse:—where is my father?

Sold. He is in the library, with a book in his hand.

Tching-p. Tell him I have arrived.

Sold. *[Goes out and returns.]* Enter. *[Exeunt.*

SCENE II.—*The library.**TCHING-ING, solus.*

Tching. Let me examine this roll a little: alas! how many worthy persons have died for the family of Tchao! It has cost me an only son: all may be seen in these pictures.

Enter TCHING-POEI.

Tching-p. My father, your son has returned from the camp.

Tching. Go and get some refreshment, my son.

Tching-p. My father, whenever I leave you, upon my return you are always pleased to see me; but to-day I find you sad; tears flow from your eyes; from what cause I know not:—has any one offended you? name him to your son.

Tching. I fully intend to tell you the cause of my tears.—Go, eat something. *[Tching-poei goes.]*—I can hold it no longer. *[Sighs: Tching-poei returns.]*

Tching-p. Father, has some person offended you? I am concerned about it: if no one has displeased you, why are you so melancholy, and why do you not speak to me as usual?

Tching. My son, remain here a little at your studies; I will retire into the back apartment, and will return to you presently. *[He leaves behind the roll, as if by mistake.]*

Tching-p. My father has forgotten this roll of paper: does it consist of despatches?

patches? Let me open it and see: oh, here are paintings! What an extraordinary scene is this! A man in a red dress sets a great dog upon another dressed in black: here is another who kills the dog; and a fourth who supports a carriage, from which a wheel has been removed; again, here is one who has dashed his head against a cinnamon-tree: what can all this mean! There is no name written here: I cannot comprehend it. Let me examine the remainder: this general has before him a cord, some poisoned wine, and a dagger; he takes the dagger and stabs himself in the throat:—why should he kill himself thus? But what is meant by this physician with his medicine-box; and this lady on her knees before him, imploring him to take an infant which she holds?—Why does she strangle herself with her girdle?—This house seems to suffer greatly:—O, that I could kill its wicked persecutor!—I can comprehend nothing about it: when my father comes, he will explain the whole to me.

TCHING-ING returns.

Tching. My son, I have been listening to you for some time.

Tching-p. Father, pray explain to me the paintings on this roll.

Tching. Explain them, my son!—You little know how much the subject concerns you.

Tching-p. Explain the whole to me as clearly as possible,

Tching. The history which you desire to know is rather long: this man in red, and this in black, were formerly subjects of the same king, and mandarins at the same period; the one of letters, the other of war; hence they became enemies. They had been for some time upon ill-terms, when the man in red said to himself, "He that begins gets the advantage; he that is dilatory is always the worst off:" so he despatched secretly an assassin, named Tson-mi, whom he directed to leap the palace walls of the man in black, and assassinate him. But the latter, who was a great minister of state, was accustomed every night to go out into the court of his palace, and there offer a prayer to the Ruler of heaven and earth for the prosperity of the kingdom, instead of thinking exclusively of his own peculiar concerns. The assassin, who saw and heard him, said to himself, "If I kill such a good mandarin, I shall act in direct hostility to heaven; I will certainly not do it then. If I return to him who sent me, I am a dead man, that is equally certain." He had a dagger concealed; but observing so virtuous a mandarin, he repented; and opening his eyes to the light, he dashed his head against a cinnamon-tree.

Tching-p. Then the person I perceive killing himself against this tree is Tson-mi?

Tching. Yes, my son, it is he.—The man in black, at the commencement of spring, left the city, to urge his husbandmen to labour; he discovered, beneath a mulberry tree, a big man, stretched upon his back, with his mouth open; the good mandarin enquired the cause: the giant replied, "My name is Ling-tcha; I require a measure of rice (enough for ten men) at each meal; my master, not being able to feed me, has turned me out of doors; if I take any of the mulberries from the tree, he charges me with robbery; I therefore lie upon my back, with my mouth open, and swallow the fruit which falls into it; but I would rather die of hunger than eat those which fall beside me, and therefore be called a thief." The man in black commended his probity and resolution; and gave him as much wine and rice as he wished. When he was satisfied, he went away without saying a word. The man in black was not offended; he scarcely took notice of it.

Tching-p.

there only remained to Tchao-tun a son, named Tchao-so, who had married the King's daughter. The man in red counterfeited an order from the King, and sent him a cord, some poison, and a dagger, directing him to choose his mode of death. The princess, his wife, was pregnant: Tchao declared to her his last will, that if, after his death, she brought forth a son, she should name it the *Orphan of the house of Tchao*. "He will avenge our family," he said; and taking the dagger, stabbed himself. The man in red confined the princess in her own palace, where she brought into the world a son. As soon as the man in red knew this, he sent General Han-qua to guard the place, and prevent the infant's removal. The princess had a faithful servant, a physician, named Tching-ing.

Tching-g. Is not that you, my father?

Tching. How many persons are there in the world who have the same name!—The princess confined to him her little orphan, and strangled herself with her grief. This Tching-ing covered up the child, put it into his medicine-box, and endeavoured to leave the palace; he found Han-qua at the gate, who discovered the orphan; but Han-qua took a knife, and cut his own throat.

Tching-g. This general who so generously sacrificed his life for the house of Tchao was a brave man:—I will bear in mind that he was named Han-qua.

Tching. Yes, yes; 'twas Han-qua. But much worse follows: the man in red soon learned the news, and ordered all the children born in the kingdom within six months to be brought to him: his design was to massacre them all, and thereby rid himself of the orphan of Tchao.

Tching-g. [*Pathetically.*] Was there ever so wicked a man in the world!

Tching. He was certainly an infamous wretch:—this Tching-ing had had a son about a month before; he clothed him in the dress of the orphan, and carried him to the village of Tai-ling, to the house of old Koo-ling.

Tching-g. Who was Koo-ling?

Tching. One of the great friends of Tchao-tun.—The physician said to him, "My lord, take this poor little orphan, and go inform the man in red, that I have concealed in my house the child he seeks: my son and I will die together, and you will take care of little Tchao till he be old enough to revenge his house." Koo-ling said in reply: "I am old; but if you have courage to sacrifice your own son, bring him hither, dressed in the orphan's dress, and accuse me to the man in red: your son and I will die together, and you will conceal the orphan until he be in a condition to avenge his family."

Tching-g. What! had this Tching-ing the courage to surrender his own child?

Tching. When you risk your own life, what difficulty is there in sacrificing that of a child?—This Tching-ing then took his son, and carried it to Koo-ling. After subjecting this good old man to many torments, they discovered the child, and the barbarous wretch in red cut it in pieces with his own hand: Koo-ling broke his neck upon the steps of the house. All this happened about twenty years ago; and the orphan of the house of Tchao must be at present twenty years of age; yet he thinks not of avenging his parents: what can he think of men? He is well-made; he is more than five feet high; he is acquainted with literature; and possesses great skill in the science of arms.—What has become of his grandfather and his carriage?—All his house have been unmercifully massacred; his mother strangled—his father stoned, and utterly unrevenged!—He is unworthy of passing in the world for a man of spirit.

Tching-g.

Tching-p. Father, you have been speaking to me a great while; I seem to be bewildered: I can comprehend nothing of what you tell me.

Tching. Since you cannot understand, I must speak plainly to you:—the cruel man in red is Tou-ngan-cou; Tchao-tun is your grandfather; Tchao-so is your father; the princess is your mother; I am the old physician Tching-ing; and you are the orphan of the house of Tchao!

Tching-p. What! I the orphan of the house of Tchao! You make me die with grief and rage. [*He faints.*]

Tching. My young master, revive!

Tching-p. Alas! you will cause my death.—If you had not told me all this, whence could I have learned it?—My father, sit upon this seat, and let me salute you. [*He salutes him.*]

Tching. I have this day raised up the house of Tchao;—but, alas! I have lost my own! I have destroyed the only root which remained of it! [*Weeps.*]

Tching-p. Yes, I swear to be revenged of the traitor Tou-ngan-cou.

Tching. Make not so great a noise, lest Tou-ngan-cou should hear you.

Tching-p. I will either die or destroy the traitor.—My father, be not uneasy; to-morrow, after I have seen the King and the nobles, I will go and kill the robber myself. [*Exit.*]

Tching. To-morrow, my young master should make sure of the traitor Tou-ngan-cou; I ought to follow him, in order to aid him in case of need. [*Exit.*]

ACT V.

SCENE I.—*The street.*

Enter TCHING-POEL.

Tching-p. I have the King's order to seize Tou-ngan-cou, and to revenge upon him the death of my father and grandfather. How arrogant the wretch has been! I will arrest him here; it is the way he passes on his return home.

Enter TOU-NGAN-COU, attended.

Tou. I have been all to-day in the palace appropriated to my office. I will now proceed to my own house.—[*To his attendants.*] Arrange yourselves in order, and walk gently.

Tching-p. What do I see! is this not the old wretch?

Tou. Tou-tching, my son, what dost thou here?

Tching-p. Old wretch! I am neither Tou-tching nor thy son. I am the orphan of the house of Tchao. Twenty years ago you caused my whole family to be massacred: I am about to seize thee and bind thee, and revenge on thee the death of my parents, whom thou hast slain.

Tou. Tou-tching, who has put these things into thy head?

Tching-p. Tching-ing has disclosed to me who I am.

Tou. I have a very ungrateful son; but I have nothing wherewith to reproach myself. [*Going.*]

Tching-p. Old wretch, where do you think to go? [*He is about to seize Tou-ngan-cou.*]

Enter TCHING-ING.

Tching. I fear something may happen to my young master, and I hasten after him to assist him.—Blessed be heaven and earth, he has seized Tou-ngan-cou!

Tching-p. Let this wretch be put in fetters. I go to acquaint the King. [*Exit.*]

SCENE

SCENE II.—*A street near the royal palace.**Enter OUEI-FONG, attended.*

Ouei. I hear that Tching-poei has seized Tou-ngan-cou. — See if he is coming, and as soon as he arrives let me know it.

Enter TCHING-POEI, TCHING-ING, and TOU-NGAN-COU.

Tching-p. My father, let us go together to the King.—[*Sees Ouei-fong.*] My lord, have compassion on my family.—I have taken and bound Tou-ngan-cou.

Ouei. Let him appear:—well, traitor, who causest the subjects of the King to perish, thou art now in the hands of Tching-poei:—what hast thou to say?

Tou. It is for the King that I am sacrificed: but, in the present state of affairs, all I ask is to die quickly.

Tching-p. My lord, take my cause in hand.

Ouei. Tou-ngan-cou, you wish to die speedily; I will that your death be slow.—Take this wretch, extend him on the rack; let him be cut by little and little into three thousand pieces; and when his body has neither flesh nor skin remaining, let his head be cut off: but be sure, above all things, that he dies slowly.

Tching. My young master, you are now revenged, and your family is restored:—but mine is without support.

Ouei. Tching-ing and Tching-poei, fall on your knees, and listen to the King's order.—“Tou-ngan-cou has caused many of my good subjects to die unjustly; he has disordered my state in every respect. He put to death the whole household of Tchao, who were innocent. These are not crimes which heaven overlooks. By good fortune, the orphan of this house has acquired much glory; he has caused the traitor Tou-ngan-cou to lose his head: I will that henceforward he be called Tchao-von; that his grandfather and father be recorded as *grandees* of the kingdom, and Han-qua as *generalissimo*. I give to Tching-ing a fine and large estate in *fee-simple*. Let a magnificent tomb be raised to the memory of Kong-lun; let the kingdom recover itself, and incessantly exalt the virtue of the King.” [*Exeunt omnes.*]

THE MALAY PÉNINSULA.*

THE territory of Malacca is forty miles in length along the sea, and extends thirty miles inland. That of Salengor bounds it to the north at Cape Rachado, which is within the limits of this latter state. Johor bounds it to the south, at the river of Muar, and the territory of Rumbo to the east. The largest mountain in the territory of Malacca is Leadang, which the Portuguese and other Europeans, in imitation of them, have denominated Mount Ophir, and which is 4,000 feet high. Besides a number of petty streams, there are two considerable rivers; namely, Muar, already named, and Lingy-tuah, the embouchure of which last is a little to the south of Cape Rachado. The territory of Malacca affords both gold and tin, and the mines of the latter have been wrought of late years so successfully, as to produce, annually, 4,000 piculs; which quantity, it is reasonably believed, may be greatly extended by an additional application of capital, under better security, and with free and steady markets. It does not, upon the whole, appear, as far as inquiry has extended, that the soil of Malacca deserves to be eulogized for its fertility. We draw this conclusion from its never having supplied its own population, small as it is, with sufficient corn for its consumption; a matter which would certainly not have failed to be the case in such a state of society, and where the raising of other productions does not interfere with the growing of corn, had the territory been generally fruitful. Malacca produces some good pepper, about 4,000 piculs annually, and this branch of culture may, undoubtedly, be greatly extended. Coffee has recently been tried, but sufficient time has not yet elapsed to determine with what success. Crude sago, brought from Sumatra, is manufactured at Malacca into pearl sago, and the trade in this commodity, which was first prepared here not above ten years ago, is very considerable. The trade of Malacca is, at present, principally with Singapore, to which it furnishes tin, pepper, sago, hogs, poultry, fruit, bricks, and tiles. This intercourse, instead of proving injurious to either party, as some superficial observers have suspected, is highly beneficial to both; and, in fact, their prosperity depends, in no small degree, upon its being kept free and unrestrained. The whole territory of Malacca, including the town, contains no more than 22,000 inhabitants, according to a census taken in 1822. This population, from all accounts, long stationary, and which gives little more than eighteen inhabitants to a square mile, is but a poor compliment to the different forms of European Government and policy under which this settlement has been ruled for more than three centuries. The permanent inhabitants of Malacca are the Malays, a race of Hindu colonists from Teliga, the descendants of the Portuguese conquerors, and those of the Dutch. To this list is to be added, the usual admixture of Chinese, and of Mahomedans of the coast of Coromandel.

The revenue of Malacca is derived from the farm or monopoly of opium, spirits, fresh fish, pork, buffalo beef, betel leaf, timber, gaming, together with a tax on shops, markets, ferries, the weighing of goods, and cargo-boats. Besides these, there were, until within the last year, considerable custom-house duties, recently reduced to a trifle. During the latter years of the English rule, the duties charged were double those levied at Prince of Wales' Island, and quite sufficient, in amount, to discourage consumption and production. With this multiplicity of taxation, the revenue is but a pittance: *viz.* 25,000 Spanish dollars annually; and even this is an improvement, in the present year, of near

* From the *Singapore Chronicle*.

near twenty-five per cent. upon that of former ones, an increase which is supposed to have mainly arisen from the stimulus given to industry by the anticipated occupation of the settlement by the British. It is singular, that the revenue of Singapore, derived from two or three obvious exciseable commodities, without monopolies, and without customs, is considerably more than triple that of Malacca, although its population be but one-half as numerous.

The petty state of Rumbo is an anomaly on the Malayan peninsula, being an internal territory unconnected with the sea, and its inhabitants agricultural: it lies between Pahang and Malacca. The people of Rumbo, who are poor, but inoffensive, are a more recent emigration from the parent stock in Sumatra than any of the other Malays of the peninsula. The chief still professes himself a tributary of the rajahs of Menangkabao, from whom he receives an investiture, and the people are distinguished from their neighbours, and identified with those of the western and central parts of Sumatra, by their habit of substituting the vowel *o* for *a* in the termination of words.

The principality of Johor embraces the whole extremity of the Malayan peninsula, from Muar, in latitude $2^{\circ} 10'$ north, on the west coast, and from Kamamang, in latitude $4^{\circ} 15'$, on the east. Independent of this, it embraces the numerous islands at the mouth of the Straits of Malacca, lying between the 2^{d} degree of north, and the 1^{st} degree of south latitude, and not only these, but all the islands in the China seas lying between the 104^{th} and 109^{th} degrees of east longitude, as far as the Natunas. This extensive but ill-peopled and sterile domain is virtually sub-divided into three principalities; viz. the islands lying south to the Straits of Malacca, and which are under the protection of the Dutch; those lying to the north, as well as the territory lying on the west coast of the peninsula and its whole extremity, which are under the protection of the English; and the continental portion of the east coast, which is independent, constituting the state of Pahang. The islands under Dutch protection, some of which are very large, are many of them destitute of inhabitants, and all of them ill-peopled and sterile. Several of them, however, are productive in tin, and others afford considerable supplies of black pepper, and an extensive one of catechu. By far the most important station is the Dutch settlement of Rhio, situated on the island which Europeans call Bintang, but for which the natives have no name. The continental portion of the Johor territory under the protection of the English, is still more barren and thinly peopled than the insular, and has hitherto been remarkable for affording no important productions to commerce. Johor, the old seat of Government, is situated about twenty miles up a large river, the embouchure of which is in a nook, opposite the N. E. end of the island of Singapore, and not above twenty miles from Cape Romania. The place is a small fishing village, with twenty or thirty houses, and of no consequence, unless some tin mines, which have lately been discovered, should prove productive, as is not improbable. The inhabitants of these two portions, especially those of the islands, are a rude race of fishermen, called, by their own countrymen, *Orang laut*, or "men of the sea." They have been of great and notorious repute as pirates for at least three centuries, and were early distinguished as such in the European history of India. Purchas calls them Cellati (which is evidently the Malay word *Sallati*, or belonging to the Straits), and describes them as "men living on the sea by fishing and piracy."

The territory of Pahang extends from Sadile, in lat. $2^{\circ} 15'$, to Kamamang, already mentioned; Pahang yields tin and gold. The first of these, which

produced to the extent of 1,000 piculs annually, is worked by the Malays. The gold amounts to about two piculs yearly, and is wrought by Chinese miners, who consume about twenty chests of opium. The whole population is said not to fall short of 50,000. The Rajah of Pahang, as he is commonly called, is, nominally, no more than Bindahara, treasurer or first minister of the Sultan of Johor; but, in reality, is as independent of that chief as the Vizier of Oude is of the Mogul. In early times he appears to have been altogether independent, and is described by the Portuguese writers, who, in the careless orthography of those times, style him "the King of Pan."

Tringanu, the next state on the eastern coast, extends from Kamamang to the river Basut, at which last it borders upon Calantan. In the interior it is bounded by Perak at the central range of mountains, no part, however, of which is included within its bounds. The population of this principality is said to amount to 35,000 Malays, exclusive of Chinese, and it is sub-divided into thirty-five *mukims*, or parishes. Its production in tin and gold is very considerable, the first being said not to fall short of 7,000 piculs yearly.

Calantan is a larger and more populous state than Tringanu, and on the coast extends from the river Basut to that of Banara, where it borders on Patani. It contains fifty *mukims* or parishes, with a population, independent of Chinese, of 50,000. The produce of Calantan consists of gold, tin, and pepper, the second of which amounts to 3,000, and the last to 12,000 piculs annually. Independent of the Chinese engaged in other descriptions of industry, it is said that within the three states of Pahang, Tringanu, and Calantan, 15,000 of this race are engaged in the gold mines, and that their industry produces this metal to the value of 420,000 Spanish dollars yearly. The greater part of this comes to the market of Singapore, and some portion finds its way across the mountains to Penang and Malacca; the last place, indeed, having, previously to the establishment of the new settlement, constituted the principal mart for gold in this part.

The state of Patani is the largest and most populous of the Malayan peninsula, extending north as far as the lat. of $7^{\circ} 20'$, the boundary between it and the proper country of the Siamese being a place called Tana, within the latter. This state is divided into the following five Governments; *viz.* Pujut, Jambu, Raman, Saggeh, and Sai; Raman and Saggeh are in the interior, the rest on the sea-coast. The territory of Patani, more fertile and productive than that of the other Malayan states, yields but a small quantity of tin, but a considerable one of rice, and a large one of salt. Unlike the other Malayan states of Queda, Perak, Tringanu, and Calantan, which hitherto had yielded little more than a nominal obedience to Siam, Patani is completely subjected to, and occupied by, the Siamese, who even constitute a considerable portion of its population; while, instead of paying a nominal tribute, it is assessed with a tax in corn and money. The English once had a factory in Patani, where they first arrived in the year 1612. "Some of the English," says Purchas, "came to Patani, with a letter from his Majesty (James I.) to the Queen, accompanied with a present from the merchants, of 600 rials of eight. This letter was delivered in great pomp, being laid in a basin of gold, carried on an elephant furnished with many little flags, lances, and minstrels. The Queen's Court also being sumptuously prepared to this business, they obtained grant of a trade on like conditions as the Hollanders, who had their factory there ten years before this time, and their house, in that space, twice burnt." The long discontinued intercourse with this country has been renewed since the establishment of Singapore.

TO MELANCHOLY.

O, MELANCHOLY, dark-eyed maid,
 This is the season of thy reign,
 When dreary winter stands arrayed
 In gloom upon the saddened plain :
 When every flower has closed its weeping eye,
 And all the charms of nature fade and die.

Yes, this sad time is all thine own :—
 As yet, the spring-tide's earliest flower,
 The very snow-drop, has not shown
 Her head above her earthy bower.
 Now, solemn maid, can nothing meet thine eye.
 To wake thee from thy trance of sullen apathy.

Come not to those we love in this attire ;
 No—rather come with sad and softened grace,—
 With eye like that which Guido's soul could fire,
 Pouring a pensive beauty o'er the face ;—
 Bidding the pulse with gentle rapture play,
 And charming all its giddiness away.

Oh, there's a rapture in thy tear,
 When softly stealing down the cheek :
 A something in thy sigh, more dear
 Than eloquence itself, can speak.—
 Thou canst a witchery o'er the bosom throw,
 Which feeling hearts alone are privileged to know.

What leads the votary of love,
 When night is riding at her noon,
 Amid the silent glades to rove,
 And tell his fancies to the moon ?
 It is to court thy influence, sweet power !
 That breathes around his heart at this still, solemn hour.

For, oh ! when beauty's heart is cold,
 And scorns the lover's prayer to hear,—
 How sweet our sorrows to unfold
 And speak them to night's listening ear :
 All nature, then, seems conscious of our grief—
 To her we count our woes, nor fail to find relief.

To ease his heart, how fruitless, then,
 The pleasures of the festive hall :
 He flies the gay resort of men,
 Nor heeds seductive Pleasure's call.—
 Ah, no ! his heart but sickens at their folly,
 And flies into thy arms, divinest Melancholy !

O. G.

December 1825.

LAND TENURES OF INDIA.

THE TAMIL COUNTRY.

IN considering the landed tenures in this part of India, we are struck with the distinction prevailing between them and those on the western coast; originating, apparently, in the different states of society on the two opposite sides of the peninsula. In Malabar and Canara, the natives seldom reside together in considerable number; in these districts, therefore, an assemblage of houses into townships is rarely seen. The numerous civil and military servants of Government, the merchants, traders, &c. inhabit the principal sea-port towns on the coast; but in the interior, the agricultural population is scattered in little groupes over the face of the country, and each landlord resides apart on his estate. Hence the landed proprietors evince a spirit of independence; community of property or common interest in the soil is unknown. But in the eastern coast, the whole population is congregated in villages of greater or lesser extent, like independent townships or corporations. The village community, of which the ryots form the leading party, embraces a series of officers or members, from the astronomer down to the blacksmith. Hence has arisen a community of concern in the village, and of interest in the land.

In Tamil villages the exclusive hereditary right to land vested originally in the Vellalers, one of the principal Sudra castes. In the course of time this right was partially transferred to other tribes; Brahmins, Musulmans, and even native Christians, amongst whom, as well as amongst Europeans, it is generally known by the name of *meerassy*, an Arabic word (ميراثي), denoting hereditary property in general, and apparently introduced and applied to this right by the Mahomedans, soon after their conquest of the Deccan.*

The term *meerassy* includes a vast variety of hereditary privileges (all pertaining, however, to land); it may be distinguished into *land-meerassy*, and *office-meerassy*.

The *office-meerassy* consists of right to *marahs*, or deductions from the gross produce of taxable lands; and to certain *mauniums*, or assignments of taxes on particular spots of ground, attached to various villages and district offices.

As respects the *land-meerassy*, which is peculiar to the Tamil country, the lands of every village may be divided into two kinds: those held free from the condition of any payment, and those held with the express condition of rendering a portion of the produce to the state. The first class includes *perumboc*, or lands incapable of cultivation; and *tarisee*, waste lands; both free from tax. In the second are comprehended all the cultivated lands, consisting of, 1st, *mauniums*, or land of which the revenue has been assigned; and 2d, *waraput* (paying a share in kind), and *teerwaput* (paying a money-tax), or lands, the revenue of which has not been alienated from the state.

The *perumboc* consists of rocks, public roads, beds of rivers, &c., public ground in which corpses are burnt or interred, suburbs occupied by Pariars and outcasts, lands on which the temples stand, and the site of the *nuttum*, or village itself. The *meerassidars* have, invariably, houses or sites of houses in the *nuttum*; but various pure tribes are permitted to dwell there; so that

all

* Mr. Ellis says, generally speaking, *meerassy* right in land prevails wherever the Tamil language is spoken; and all terms expressive of this right (called by the original Soodra possessors, *caunyatchi*, or free hereditary property in land) and its incidents, belong to this language. See Mr. Ellis's "Meerassy paper," in *Revenue Selections*, p. 812.

all the residents are not meerassidars. The privileges of the latter in the perumboc consist of a right to the produce of its quarries, mines, &c., and to control the concerns of the village pagoda.

The tarisee is subdivided into the immemorial waste, and land formerly cultivated; each consists either of common, on which the meerassidars graze the cattle they employ in agriculture; or of jungle, in which they cut firewood. Both kinds may be cultivated by the meerassidars (with consent of Government in respect to land not before cultivated); but the moment either is reclaimed, it ceases to be tarisee, and becomes waraput or teerwaput, and liable to tax, which is low at first, raising gradually to the general standard.

The maunium lands are divided into, 1st, arable, the public tax on which has ever belonged to members of the village community; and 2d, arable, the public tax on which belongs to individuals, by virtue of special grants from the state. The waraput and teerwaput are already explained. These divisions respect chiefly the dues of Government; the rights of the meerassidars are the same in all three.

With reference to these, the cultivated fields of every Tamil village, including the several descriptions of land mentioned above, are more generally classed under the following heads: *nunjah*, or wet; *poonjah*, or dry; and *totacal*; or gardens and plantations. A considerable portion is wet land, covered with paddy, requiring copious irrigation. These are dependent for supply of water chiefly on the rains of the N. E. monsoon, which are extremely uncertain. Tanks, or reservoirs, cuts from rivers to fill them, and from the beds of rivers, to drain off the spring water when the floods have ceased, and natural springs in sandy soils are numerous in all parts of the Carnatic Payeng haut, and the greater part of the lands of Tanjore and Trichinopoly is watered by cuts from the Cauveri; in the Madura and Tinnavelly provinces the sources of irrigation are also numerous.

The revenue claimed by the sovereign from land of this description appears to have been immemorially collected in kind: not a fixed quantity of grain for a defined extent of land, like the rents in kind in Malabar and Canara, but a certain portion of the produce, whatever it may chance to be. The custom of collecting the revenue of wet land in kind, prevailed in almost all the provinces in the peninsula east of the Ghauts.

The revenue from poonjah land is generally demandable in money in the western and southern provinces, but is still paid in kind in the northern. Dry crops are very numerous (not less than thirty); the grain ripens at different seasons, which probably made it inconvenient to collect the dues in kind. The lands producing poonjah crops were, therefore, assessed with a fixed money tax, for a fixed measure of land—generally varying, however, with the nature, not the extent, of the produce.

Totacal land is usually secure of artificial irrigation, and is more generally assessed with a fixed money tax; except that, the culture being expensive, the tax, though much higher in proportion to the extent of land, is much lighter in proportion to the value of the produce.

The teerwa was in general a certain rate for a fixed measure of land, according to its produce: raggy or pulse, so much; grain, so much, &c.; the rate varying with the nature of the crop, and the crop with the season. Lands planted with sugar-cane, plantains, betel, and tobacco, though not classed as gardens, were assessed with a high money-rent the year they were so cultivated;

but

but when re-converted into rice-lands, they fell to the usual warum. This species of assessment partook, therefore, of the nature of consumption-taxes.

It occasionally happened that land might be one year poonjah, the next nunjah, and afterwards, perhaps, totacal; so that the ancient Tamil land-tax was not fixed on the land, but regulated chiefly by the nature of the crop; and in the nunjah lands, it was dependent also on the extent and price of the produce.

The exclusive hereditary rights vested in the Tamil meerassidars, possessed an additional peculiarity in that portion of the country known by the name of Tondei Mandalam, which, extending from the southern extremity of the Nellore district nearly to the Coleroon, includes chiefly the Company's jaghire, now the zillah of Chingleput, and the two divisions of the Arcot subah. In the villages of that part, from the earliest times, a portion of arable land, tax free, was attached to the meerassy, and formed an integral part of that right. This was termed *cawnyatchi maunium*: inseparably connected with it was another peculiar privilege of these meerassidars; namely, a right to certain gratuities (*marahs*), in the shape of deductions from the gross produce of all the cultivated lands in the village paying tax. Where the lands were cultivated by their own labourers, the additional profit was derived from the nunjah lands only, for in these the deductions were made before the Government's share was paid by them; in the lands assessed with the money-tax, the whole of the produce was their own. But where these lands were cultivated by others, the meerassidars received their *marahs* on the poonjah, totacal, &c. as well as on the nunjah.

These *marahs*, peculiar to Tondei Mandalam, must not be confounded with other deductions prevalent, as already mentioned, throughout the northern and southern provinces, in favour of the village or other officers; these are *paid* by the meerassidars of Tondei Mandalam in common with others who cultivate the lands; but their own *marahs* are *received* by them.

On the establishment of every Tamil village, the rights were vested in all the original Vellaler settlers, collectively, not in each individual; each, therefore, possessed a separate equal share in the whole meerassy; and in each village the number of equal shares remains the same as when the village was originally settled. In some villages the number of shares is a hundred; in others of equal extent, fifty, or ten only. From the decrease in the number of meerassidars, some may hold two, three, four, or even fifty shares. From their increase in other places, the shares may have been split into fractional parts, and many may hold only a portion of a share.

In all Tamil villages the *perumboc*, the *tarisee*, and in Tondei Mandalam, the meerassy *mauniums*, and *marahs* also, are held in common joint property by the whole of the meerassidars, each participating in proportion to his share in the meerassy. If a village consists of thirty-two shares, and a meerassidar possesses half a share, he is entitled to a sixty-fourth part of all the benefits derived from the fisheries, mines, or quarries in the *perumboc*; of the pasturage, fire-wood, and other profits of the *tarisee*; and, in Tondei Mandalam, to a sixty-fourth of the gross produce of the meerassy *maunium* and *marahs*. In mortgaging or selling the whole or any part of his meerassy, he mortgages or sells such part of his *share* in these; but he cannot divide and dispose of any particular spot of land in the *perumboc*, *tarisee*, or meerassy *maunium*. No spot belongs to him; he possesses a *share* in all; not a *part* of each, and the whole must remain entire. This, however, does not apply to the cultivated land,

land, which, in some villages, is held in this manner by all the meerassidars, collectively, as one joint indivisible property; but in others, by each individually, as property of a separate, distinct, and independent nature. Hence its tenure is two-fold; *pasang-carei*, and *arudi-carei*.

Pasang-carei (or *samadayem* in Sanscrit) implies a collective proprietary right used to denote that particular joint tenure of the cultivated land, which, like that of *perumboc*, *tarisee*, &c. above explained, was anciently universal throughout the Tamil country, and still prevails in many parts of it, especially in Tondei Mandalam. Under this system, the meerassy of the entire cultivated lands belongs to the whole body. The number of shares belonging to each meerassidar being known, the lands are either cultivated in common, and the net produce divided according to the share of each, or the land itself is thus divided, either annually, or every five, six, or ten years, the fields being assigned by lot.

The meerassidars in many villages, however, especially in Tanjore, Tinnevely, Madura, Dindigul, and the other Tamil provinces to the south of the Coleroon, instead of dividing the cultivated lands of the village periodically, appear, after having once divided them in the manner described, to have made the division permanent, thereby converting the ancient collective tenure into one in severalty, which is distinguished by the Tamil denomination *arudi-carei*, or by the corresponding Sanscrit term *pala-b'hogum*. Under this system, the meerassidar enjoys the meerassy of his own particular fields; and when he sells it, he transfers to the purchaser not only his common right of participation in the collective property of the village, but his individual right to certain defined lands.

In Tanjore, and even in other districts, the whole meerassy of a village has by purchase or other means, become vested in a single individual: the tenure is then distinguished by the denomination *eka-b'hogum*.

From the nature of these tenures, no village can be partly held by one and partly by the other; it must be held by one of the three. The first (*pasang-carei*) is most prevalent in the northern, and the second (*arudi-carei*) in the southern, Tamil provinces; to these also the last is chiefly confined.

The Tamil meerassidars occasionally let their lands to under-tenants, named *pyacarries*, who take them for one, two, or more years, paying the meerassidars a certain share of the produce—or sometimes, on *poonjah* land, a certain *teerwa*, but rarely a fixed sum for a given extent of land. They hold either of all the meerassidars collectively, of each individually, or of the sole meerassidar, according to the tenure of the land. They never have concern with *perumboc*, *tarisee*, or meerassy *maunium*. These tenants are divided into two distinct classes: *oolcoody*, or permanent; and *paracoody*, or temporary.

The *paracoody* *pyacarries* are strangers admitted into the village as tenants for a limited period. They are, in fact, tenants at will, or under special agreements, like the *patomkars* of Malabar, or the *chalie-guenies* of Canara. But where land, for a certain period, has for several generations been farmed by the same family, the tenant is termed an *oolcoody* *pyacarry*, and by prescription becomes possessed of an hereditary right to hold his farm in perpetuity, regularly paying the *teerwa*; nor can he be ousted so long as this is paid, neither can the *teerwa* be raised. These privileges may be mortgaged, but not sold.

The foregoing is a view of the landed tenures in the Tamil country under the ancient Hindoo Governments. The meerassidars seem to have united in their own persons the characters of farmer and landlord more universally than the *jenmkars* or *mulees* of the western coast. The difference in the value of

these properties is traceable to the larger portion of the produce taken as public revenue, the less productive nature of the soil, and less favourable climate, on the eastern side of the peninsula, compared with Malabar and Canara; but at one time meerassy was universally a transferable property, and the meerassidars every where enjoyed a clear landlord's rent from lands cultivated by their pyacarries; and both a landlord's rent and a farmer's profit from those cultivated by their own labourers.*

The severe and arbitrary policy of the Musulman princes, whose power was of longer duration in the Tamil country than on the other coast, was highly detrimental to the meerassidars. Most of those of the Carnatic were reduced by the increasing demands, which absorbed not only the landlord's rent, but, in many places, the farmer's profit also, to a situation little better than that of oolcoody pyacarries; the Musulman Government becoming not only the sovereign but the landlord of the country. Tanjore, which was transferred to us directly from the Hindoo Government, was, accordingly, the only Tamil province in which meerassy right was found by us nearly unimpaired. In the district of Chingleput, as well as Dindigul, Madura, Trichinopoly, and Tinnevely, which had been only a short time under Mahomedan government, meerassy, though reduced in value, was found tolerably perfect; but throughout the soobah of Arcot, Salem, Baramahl, and Coimbatore, augmentations of the land-tax, or excessive demands in other shapes, had left little of it besides the name.

In Malabar and Canara, where the land-tax was a portion of the landlord's rent, fixed on the land, and collected whether the fields were cultivated or fallow, the Government did not interfere with the cultivation of the soil; but as the land-tax on nunjah land in the Tamil country was a portion of the produce, a neglect of cultivation affected the public finances. Hence it became a principle of meerassy-tenure, that the meerassidars should cultivate all waraput or teerwaput lands, either themselves, or by renting them to pyacarries.

Whilst the meerassidars received a toondo-warum, or clear landlord's rent, they needed no other stimulus to cultivation; but when this became absorbed by the arbitrary impositions of the Government, the land-tax was converted into a land-rent; and the landlords, sinking into mere occupiers, and restricted to the profits of farmers in the lands cultivated by their own servants, ceased to employ pyacarries in those other lands, from whence they derived no advantage. The Government, to prevent arable land from being thus left vacant, transferred it, temporarily, to pyacarries of their own selection. This principle was even applied to the waste lands; and on meerassidars declining to cultivate tarisee lands, for which other offers had been made, the Government granted cowles to pyacarries for a limited term, sufficient to ensure to them a fair return for the stock and labour employed to render the land productive. In Tondei Mandalam, the share allowed to the pyacarries thus employed was more favourable than that allowed to the meerassidars; but the difference was more than compensated by the latter's retaining the cawniaty manium, which the pyacarries never enjoyed, and which seems to have been possessed by the descendants of the ancient meerassidars, even in places where they had lost proportions of their other lands.

This

* The Brahmin meerassidars, who do not follow the plough themselves, and even many Sudras, leave their lands under the care of the oolcoody pyacarry, who pays about 45 per cent. of the produce to the Government, from 22 to 26 per cent. as landlord's rent to the absentee, and is content with from 28 to 33 per cent. in remuneration for his labour, for seed, for cattle, and for his subsistence.

This employment of pyacaries by the Government, greatly contributed to level the ancient distinctions betwixt the meerassy landlords and their tenants; for although the pyacaries thus employed often admitted the justice of the meerassidar's demands, they often, also, alleged their inability to discharge them, in addition to the public assessment; and the meerassidar had no longer power to enforce his claims, owing to these pyacaries being in immediate contact with the circar. Hence, through the succession or removal of the meerassidars, the pyacaries came into possession of a great portion of the cultivated lands of the village. In the year 1799, Mr. Place, in an elaborate report, after stating that 15,994 meerassy shares were held by 8,387 meerassidars, the whole number then in the jaghire, adds that the remainder, or 1827 shares, "are unclaimed, but occupied by pyacaries." In the following year, Mr. Lushington, in his report on Tinnevely, particularly mentions whole villages of this description. Where the meerassy was not destroyed, the meerassidars still possessed a saleable property in the land; but where they had been reduced to a condition little better than that of pyacaries, or their tenants had usurped their lands, every vestige of the original shares was obliterated: the ancient distinctions disappeared, with the property to which they were attached, and all the cultivators, being considered as Government tenants, paid their rents directly to the state.

Such was the situation, more or less, of all the Tamil provinces, except Tanjore, when we became possessed of the country. It was universal no where except in Tanjore, and was not every where of equal value. In Tanjore the meerassidar's clear net landlord's rent was estimated at about 25 per cent. of the gross produce of the land. In Tinnevely it was equal to 13½ per cent. only. It is worthy of remark, that in many parts of the country, the superstitious veneration of the inferior Hindoo officers of the Musulman Government for the privileges of the Brahmins, had preserved the meerassy rights of the sacred tribe from the additional cesses which destroyed those of their less favoured Sudra brethren; for, in the northern division of Arcot, where meerassy generally no longer existed, the *swastiums* of the Brahmins were saleable property. In Tinnevely, also, the *durmasenum* lands on the banks of the Tambrapurney, belonging to a colony of Telinga Brahmins, were found more favourably assessed than the Sudra meerassy lands; and, even in Tanjore, the Sudra meerassidars did not receive so high a warum as the Brahmins.

FROM THE HINDOOSTANEE OF MEER TUQEE.

WHY have good poets lost the fame they had?—
 Because the silly world prefers the bad.
 In vain does genius fire the poet's song,
 And elocution pour its tide along;
 Cold mediocrity usurps the bays,
 And steals, by dung-born arts, the public praise.
 Then leave, my friend, the pen and polished lay;
 The golden age of wit has passed away.
 Who now regards, as erst, a sprightly thought?
 Who tastes the fruits of talent as he ought?
 Degenerate world! which vain pretenders fill,
 Devoid of judgment, genius, taste, and skill!

THE VOYAGE TO INDIA.

To the Editor of the Asiatic Journal.

SIR: The accompanying poem, which, as you will perceive, is unfinished, was the production of a young gentleman who left England for India, and who composed it on the voyage. An early and sudden death perhaps prevented its completion—if, indeed, it was ever intended to be completed, or as more than an expedient to give vent to his feelings. His talents, though at the period of his death only in embryo, were very promising; but his temper and disposition were, as the verses abundantly prove, meek, diffident, and unobtrusive—courting retirement, though his social affections were remarkably ardent and active.

*Ars utinam mores, animumque effingere posset !
Pulchrior in terris nulla tabella foret !*

Amongst the select circle of his friends, he was an object of extreme affection; and his untimely sacrifice to a climate which annually robs our native country of its choicest ornaments, has enhanced that affection in a very considerable degree. Their opinion, therefore, of the merits of the verses sent herewith may probably be biassed, and determined by their feelings—consequently exaggerated: but should they be in your judgment worthy of publication, and of a place in the Asiatic Journal, their insertion will be gratifying to the deceased author's connexions, who cherish them as a relic; and to none more than to

Your obedient humble servant,

W. M.

LEAVING ENGLAND.

As a young fir, plucked from its native bed,
And planted in a soil it never knew,
Looks green, perchance, although its root be dead:
So I, torn from the spot where first I drew
The vital gale, and near to manhood grew,
Shew outward calm, though inly sick with grief.
The changeful landscape, fraught with objects new
To my untravelled eye, gives scant relief:
The sorrowing mind finds foes within, and memory chief!

A Mother's tenderness—a Sister's love—
Friendship, the fruit of early mingled dreams
Of hope and joy,—the loss of these must move
A stubborn soul, which knows but transient gleams
Of heavenly sympathy; but when its beams
Transpierce a softer breast, how keen the smart!
Yet there are keener:—there is *one* who seems
The focus of all charities; to part
From her transcends the loss of all, and tears my bleeding heart.

Nor these alone:—for every human face—
Peasant, or well-known beggar wandering near
My home—does Fancy's busy pencil trace;—
Lanes, fields—the stream wherein I used to steer,
With infant hands, my little bark:—I hear

The

The clamorous rooks, and see them wing their way
 To the tall elms :—shrubs, flowers, seem doubly dear :—
 Their lot I envy ;—my fond wishes say—
 Might I be fixed like them, and vegetate as they !

Are we not fools, when happiness is rare,
 To spurn it—dash aside the cup of joy—
 Fly ease, to tread the thorny maze of care ?
 Alas ! Wealth's siren-strains our steps decoy
 From present bliss, and future peace destroy !
 Why should we proudly scorn obscurity—
 The safest state, the purest from alloy
 Of vice and ills ?—When beasts from covert fly,
 And birds from deepest woods—farewell security !

Ambition's not the idol of my soul ;
 In boundless wealth no tempting charms I see ;
 I drink no transports from the sparkling bowl,
 And midnight revels have no joys for me.
 Thus the great world a solitude must be—
 A dreary waste, wherein few tracks will guide
 My footsteps from the snares of treachery.
 What woes must unsuspecting hearts betide
 Where Malice her foul shape in Friendship's garb doth hide !

These dark foreboding thoughts my mind oppress ;
 Scarcely one beam of hope shoots through the gloom
 Which melancholy wraps around—unless
 Imagination paints my future doom,
 (When hungry Time shall my green years consume)
 Re-wafted to this now forsaken shore ;
 Then joy may chance my sallow cheeks illumine,
 When they, whom now as lost my strains deplore,
 Shall bless my longing sight, and we shall part no more.

Some, joyous, quit their homes with blithe adieus—
 Scathed in life's storms, which sturdiest tempers tame ;
 Or galled by power, or vexed with inward bruise ;
 Or maddened by insatiate thirst of fame ;
 Or reft of honesty, and doomed to shame :
 But I am none of these—no hate I bear
 To fellow-men ; my native land will claim,
 Ev'n to my latest gasp, my fervent prayer :
 Howe'er remote I be, my hopes must centre there !

Absence ! how soon I feel thy deadly sting !—
 The specious maxims, drawn from ancient schools
 Of false philosophy, henceforth I fling
 To pedants : Zeno, I renounce thy rules,
 That make fools seeming wise, and wise men fools.
 Nature must triumph : pain will still be pain.—
 Thus brainless men (like me) push from their stools
 These demi-gods of science, who disdain
 Meek Nature's simple voice for Fancy's artful strain.

But

But let me quit this pleasing, painful theme,
 Ere fortitude and manly courage quail
 Beneath the terrors of a dismal dream :—
 And, lo ! the courted, coy, reluctant gale
 Swells with increasing force the slackened sail.
 Hark ! now I hear the bustle of the crew ;—
 The clinking windlass tells the doleful tale :
 The anchor's raised—the shore recedes from view :—
 Dear Parent—Sister—Friends,—and more than Friend, adieu !

(To be continued.)

ACCOUNT OF THE NAGAHS.

THE following particulars of a wild tribe in the Burmese empire, by whom certain British sepoy who recently escaped from Ava were hospitably entertained and conveyed to Banskandy, are from the *Calcutta Government Gazette*.

The Nagahs appear to be a free, independent, and very active race of people. Their villages are situated on or near the summits of the hills, and are generally small, containing from 50 to about 130 huts—some few may have more. Each village has two head men ; the duty of one of these is to take care of the lands and cultivation ; he is considered the chief personage : the other has control over the population, either in war or in working parties. In all our agreements with the Nagahs for coolies, this second in command was the organ of communication ; the other, though present, did not interfere except when applied to. In matters of importance they form a council, consisting of these chiefs, and all the old men of the village who are, in any way, remarkable for their sagacity. Generally speaking, each village is independent of its neighbours ; there are, however, instances where several, in a measure, acknowledge the authority of one chief or rajah—but he has little power over them. The produce of their hills is chiefly cotton, chillies, ginger, wild thyme, bees'-wax, elephants' teeth, an excellent kind of yam, which they call *kuchoo*, and a very superior paun leaf ; some of these articles they carry to the plains to barter for others, which they require either for their own use or for the purpose of trading : their paun leaf is much prized in Cachar. When the proper season of the year arrives, which is about the end of October or beginning of November, they come from their villages in parties from thirty to one hundred, laden with such articles as they have collected for traffic. Their manner of carrying these is the same as porters, coal and salt carriers adopt in Scotland ; viz. a large basket reaching from the back of the head to the end of the back bone, large at the top, and narrowing as it descends : in these they pack the cotton and bulky articles, whilst they have one or two of smaller size attached to the large one to hold their chillies or dried fish. The baskets are made of bamboos or rattans very neatly worked, and fastened by the bark of a tree, their substitute for a leather belt, passing over the forehead ; and another across the chest, so that they can shift the weight at pleasure, and relieve themselves : the burdens weigh from thirty to thirty-five seers, and with these they travel over the hills nearly the whole day. Their line of march is in single or Indian file ; the front and rear men being what they term warriors, they are considered as the guard ; at the same time, almost every man has a spear in his hand and a dow in his basket—the first to assist them in getting up and down the hills, the latter to cut their fire-

wood :

wood: they are extremely expert in using it either as a hatchet or a knife. On one of these parties reaching Banskandy, they pay a tax in kind of about five per cent. to the rajah of Cachar. They receive, in exchange for their articles, fowls, kids, rice, dogs, salt and betel-nuts; these latter they carry to Munnipoor, and barter for cloth, rice, and salt.

The Nagahs are not a warlike people, although they have many quarrels amongst each other—one village against another, and frequently upon a more extensive scale. Their mode of fighting, as they exhibited it for our amusement, was by lying in ambush in the jungle or behind a tree, and as their supposed enemy passed they threw their spears: if the weapons took effect, they rushed upon the fallen foe and cut off their heads; but if they missed their object, they fled into a thicker part of the wood—they must, however, occasionally meet and fight hand to hand. When they are obliged to flee before a pursuing enemy, they obstruct the narrow path through the jungle by sticking small bamboo spikes, about six inches in length, called *kumanchees*; they always go armed with these, having a case of them attached to their waists. They are very expert, and extremely quick, in placing these *kumanchees* in the ground to the best advantage. In the time of war they guard the paths to their villages by these; it is quite impossible to pass or go over them with naked feet—they will even penetratè a good shoe: the enemy must sit quietly down and lift them before he can advance. They also protect themselves from wild beasts by these *kumanchees*: a large fire is made, round which they arrange themselves, and then they form a circle of these spikes towards the country, so that no animal can come near; an elephant or tiger is stopped immediately: if the latter make a spring he falls in the midst of the spikes.

They are much addicted to spirituous liquors: in their own villages they make a spirit of a very inferior kind, and they drink freely of it. On tasting the rum which we gave them, they appeared, at first, surprised at its strength; those who were cautious took little, others drank it as they would have done their own. We saw a man take, at one draught, a bottle of rum, and in about two minutes after he drank a quarter of another bottle—this overpowered him for a few minutes. We were uneasy about him lest it might cause his death; but in about half an hour the man was quite well, ate his dinner, and went on his journey: he came again in a few days and asked for more. This was the son of the Aquee chief; the chief himself was said to be one of the strongest men in the hills—that even now, at his advanced age, he can travel from Aquee to Banskandy with a maund and a half weight on his back.

Their mode of signifying friendship is, by the two contracting parties hooking the fore-fingers of their right hands and pulling against each other—embracing, as in other parts of India, and putting their foreheads together. The chiefs of Simbelong or Seebelong, having contracted friendship with us, assured us that if the Burmese come to punish them for their having formed such an alliance, they would die for us; that if, at any time, we wanted them, they would instantly obey the summons.

These people will do more for good and kind words than by any other means: from this, a native of Hindoostan or Bengal does not know how to manage them; they only try to intimidate, and use such means as they know would succeed with themselves or their countrymen—persuasion and kind open behaviour form no part of their art. It was curious to observe the Bengalese making bargains with the Nagahs, the former parting with rice for the dried fish of the latter: the Nagahs were perfectly aware of the attempts of the Bengalese to over-reach them; but, instead of getting

in

in a passion, or shewing any symptoms of anger, they laughed heartily at them, and either gave in a little, or stoutly adhered to their own ideas of just barter, as it appeared to suit their own convenience. They seem to have a great abhorrence of idleness; for even after a fatiguing day's labour, instead of being listless and inactive as we have been accustomed to see natives of other parts of the country, they always found something to do. The cooking of their dinners was no plea for remaining inactive: they sat at the fireside watching the boiling of their rice—at the same time they were busy making baskets, or preparing the bark of trees as a substitute for ropes or leather straps, &c. They are very expert in making huts, and the rapidity, as well as neatness, with which they construct them is very surprising; they will finish a house before an equal number of Bengalese could have collected the requisite materials.

In making agreements they take time to consider, and they consult amongst themselves; but after they have come to a decision and entered into terms, they adhere to them. To give one instance of their dislike to idleness, it may be mentioned that we had agreed with a party to assist in carrying the grain from the Jiree Nullah to Noorgshie; they were to be with us on a certain day, from which their pay was to commence—three rupees per mensem and food. They were true to their time of coming, but having waited about a couple of days, and seeing we were not in a state sufficiently forward to require their aid, they all went to their houses without saying a word to any of our people. We thought they had run away, as many of the other coolies had done; but in two days more we were undeceived, for they all returned to see if we then wanted their assistance. On being asked why they had gone away, they freely answered, they could not afford to sit idle, and they saw we did not want them at that time—they had, therefore gone to work in their village; they never asked for pay, as they had not done any work. Their houses and villages are remarkably neat and clean; they will eat, from the hand of an European, meat, bread, sugar, or whatever may be given. Their mark of respect, on coming into your presence, is to sit down after having put the forehead to the ground as a *salam*. The women work the same as the men; but the men are very attentive, kind and gentle to the females, quite unlike any natives I have seen in other parts of India. They amuse themselves by dancing; they also dance to entertain strangers. These dances resemble quadrilles and reels: they follow regular figures as in our dances, keep excellent time, and have considerable grace, ease and style; the men sing whilst the women dance, or whilst they dance together. There is much modesty in the young women; it required persuasion to induce them to dance before us, and it was very pleasing to see the manner in which the men prevailed on them to overcome their shyness: it was done in the most winning, good-mannered style imaginable—no French or English beau could have acquitted himself in a more becoming manner. The girls seemed to be accustomed to this treatment, and were playful and tardy in allowing themselves to be persuaded.

EPIGRAM.

IMITATED FROM MARTIAL.

You beg a copy of my work?—you know,
 A copy may be purchased in "the Row."—
 "What! spend my money on such trash!" you cry:
 "I am not quite a fool."—Sage sir, nor I!

N E C R O L O G Y.

No. X.

MAJOR GENERAL SIR DAVID OCHTERLONY.

THIS distinguished officer was the eldest son of David Ochterlony, of Boston, New England, where he was born February 12, 1758. Although an Anglo-American by birth, Sir David was of Scottish descent: his paternal great grandfather, Alexander Ochterlony, was Laird of Petforth, in the county of Angus. At the age of eighteen he went to India as a cadet, and was appointed ensign on the Bengal establishment in February 1778: he became lieutenant in the month of September following.

The regiment to which he belonged (the 24th N.I.) formed part of the reinforcement sent from Bengal, under Col. Pearse, to Madras, at the requisition of that Government, in consequence of the danger to which the Company's territories under that presidency were exposed from the irruption of Hyder Ali into the Carnatic, and the total defeat of Col. Baillie, who commanded in the Guntoor circar, by that enterprising chieftain. The detachment marched along the sea-coast 1,100 miles, through Cuttack and the northern circars, and joined the force assembled under Lieut. Gen. Sir Eyre Coote on the Choultry plain.

The campaigns which succeeded were of the most arduous kind. Cuddalore, which had been captured by the French General Duchemin in 1782, was besieged by Major-Gen. Stuart in June 1783; and here the courage of the native troops, and especially of the Bengal regiments, was put to the severest test, by their being matched against European soldiers. A sally was made by the French troops upon the Bengal sepoy (including the 24th regiment) whilst in the trenches, who received the attack on the point of the bayonet, and finally repulsed the assailants. The recollection of this event is still cherished by the Bengal army. The testimony of Gen. Stuart to the conduct of his troops is of the warmest kind: "Nothing, I believe, in history," he observes in his despatch, "ever exceeded the heroism and coolness of this army in general." Lieut. Ochterlony had here the misfortune to be desperately wounded and taken prisoner.

On the death of Hyder in 1782, and the peace which followed next year, Lieut. Ochterlony was restored to liberty; and in January 1785 the Bengal troops returned to Calcutta. The detachment amounted to upwards of 5,000 men when it marched to Madras; on its return it was reduced to less than 2,000. The Governor-General (Warren Hastings) visited these brave troops at their encampment at Ghyretty, and the following extract from the order he issued on that occasion, dated January 25, 1785, speaks volumes:—

Great as the exertions have been, which were made by all the gallant troops employed on that service (the defence of the Carnatic), it will, in no degree, derogate from them to affirm, that to this and the Company's possessions and interests under the presidency of Fort St. George owe their present existence; and that with every report made to their Government of the successes of the war, the most honourable mention was uniformly made of the Bengal detachment, as primarily distinguished by its patience of hardship, its generous submission to the pressure of those wants which affected every corps of the service (but were to them, acting at such a distance from their native homes, the cause of aggravated distress), by its steady discipline, activity, and effective valour.

The Governor-General has deemed it incumbent upon him to visit the detachment in person, to offer his thanks to them before their separation; and desires that the commanding

manding officer, whom he is proud to call his friend, will make them known in public orders to the officers, his countrymen, and to the native officers and private sipahees of the detachment.

On the following day, Mr. Hastings, then about to retire from his high office, recorded a minute of council, strongly recommending these troops to the consideration of the succeeding government, and suggesting, amongst other tokens of approval, that "the names of the officers be entered on record for such future marks of the favour of Government as the rules of the service may admit."

The services of Lieut. Ochterlony were rewarded with the staff appointment of judge-advocate-general of one of the divisions of the army, a post which he retained for many years.

In January 1796, he rose to the rank of captain, and in April 1800, to that of major. In the early part of 1803 he was appointed lieut.-colonel, and with his regiment, the 12th N.I., was employed in the operations under General (afterwards Lord) Lake. He was present at the capture of Sasnee, Bejigurh, and Catchoura, in the Doab.

In the arrangements made by Marquess Wellesley for disconcerting the objects of the great Mahratta confederacy, supported by French aid, which were to expel the British, and acquire an ascendancy in India by the possession of the person of the unfortunate Shah Alum, the nominal sovereign of Delhi, Lieut. Col. Ochterlony was attached to the grand army, under the personal command of General Lake, the commander-in-chief, in the capacity of adjutant-general. He was consequently present at all the splendid achievements of that army: the affair at Coel, on the 29th August; the assault of Allyghur, on the 4th September; and the great battle of Delhi, on the 11th September, which rescued the descendant of the Moghul emperors from the cruelty and rapacity of Scindiah and the French adventurers, and exalted the character and prowess of the British army to an extraordinary height in the estimation of the native powers.

Lieut. Col. Ochterlony was nominated, immediately after the battle, envoy or resident at the Court of Delhi. In the following year, he had the first opportunity of displaying his talents prominently, in sustaining, with Lieut. Col. Burn, the commander of the British force at Delhi, a desperate attempt of the Mahrattas under Holkar, to recover possession of the city. To resist a powerful army, with a weak garrison, was not the only difficulty with which these officers had to contend; but it was, likewise, necessary to control a timid, restless, and discontented populace. The latter task fell to the lot of Lieut. Col. Ochterlony, and the following passage in the general orders of the commander-in-chief, dated Delhi, October 24, 1804, will prove how well he executed it.

His Excellency is happy to embrace this opportunity to express his public thanks for, and highest approbation of, the eminent services which have been rendered by the acting resident, Lieut. Col. Ochterlony. The wise and timely precautions which were adopted by this meritorious officer for the safety of Delhi, the energy and decision which marked all his measures, the assistance he afforded to Lieut. Col. Burn, both by his advice and personal exertions, the unremitting vigilance and attention with which he watched over the conduct of the inhabitants, and the promptitude with which he suppressed the first rising of discontent and disaffection, place the merits of Lieut. Col. Ochterlony in the most distinguished point of view, and entitle him to his Excellency's earnest thanks and unqualified approbation.

Peace being completely re-established in this quarter, the post of resident at
Delhi

Delhi was transferred to a civilian, and Lieut. Col. Ochterlony was appointed to the command of Allahabad. Some hostile demonstrations, on the part of the Sikhs, rendered it expedient to assemble a force on our north-western frontier, to watch their proceedings, and oppose any attempts upon the territories of our allies. Lieut. Col. Ochterlony was selected to command this force; and he accordingly established a position on the banks of the Sutlej, where he remained until the Nepal war called him into more active service, and threw in his way another and more splendid opportunity for the display of his eminent talents. He had been promoted to a colonelcy in January 1812, and was made a major-general in June 1814.

The encroachments and insults of the Ghoorkhas of Nepal compelled the Bengal Government to undertake the arduous task of chastising these hardy and audacious mountaineers; and the Earl of Moira, towards the latter end of 1814, fitted out four divisions for the invasion, by their combined movements, of the Nepaulese territories: the first, under Major Gen. Marley, was to advance from Patna and Dinapore, by Etoude and Chusapanee, on the enemy's capital; another, under Major Gen. Wood, was to penetrate the hills farther to the westward, by Rootswild; a third, under Major Gen. Gillespie, was to enter the Deyrah Dhoon and occupy Sirenaghur; and a fourth, under Major Gen. Ochterlony, was directed against Ummer Sing Thappah, the enemy's principal commander, whose position was at Irkih, towards which Gen. Ochterlony moved by Nallaghur, the key of the passes, in October. The result of these operations is too well known to require particular description. The only part of the plan completely successful was that entrusted to Gen. Ochterlony. Notwithstanding the physical obstacles opposed to his progress, and the efforts of an active and energetic enemy, he drove his antagonist from one position to another, until he cooped him up in the almost impregnable fortress of Malown, where he soon obliged him to surrender upon terms which placed a large portion of the Nepaulese territories at our disposal. When Ummer Sing made his submission to Gen. Ochterlony, he could not refrain from highly eulogizing his actions, and expressing admiration at his success.

But Gen. Ochterlony was destined to gain still brighter distinctions in this war. Although the treaty had been signed by the rajah's deputies, the rajah himself refused to ratify it; and the British troops again took the field: the chief command was now given to Major Gen. Ochterlony. The succeeding operations are still the theme of applause amongst military men:—the passage of the great Saul forest, without the loss of a man—the turning of the celebrated Cheeriaghautee pass, by a rugged, precipitous and frightful country, not unaptly compared to the Alps and Pyrennees—and the total defeat of the enemy in a desperate action on the heights of Muckwanpore, which induced the Nepaulese rajah to accept, with joy, the very conditions which a few weeks previously he had rejected with disdain. The treaty, which had been signed 2d September 1815, was ratified March 4, 1816.

When the intelligence of these successes reached England, the services of Gen. Ochterlony were duly appreciated and liberally rewarded by his employers, as well as by Government. He was created, April 1815, a Knight Commander of the Bath (one of the first Company's officers who received that honour); and in November 1815, he was raised to the dignity of a baronet. By a resolution of the 6th December of that year, the Court of Directors of the East-India Company granted him a pension of £1,000 per annum, "in consideration of the eminent and most beneficial services rendered by him to

the Company in the war against the state of Nepal," to commence with the date of his victory over the Nepaulese, 16th April 1815. The chairman (Mr. Grant), on submitting this resolution to the Proprietors, observed, that "the great weight of the war rested on Sir David Ochterlony, and the part he acted was of the utmost importance, both in its effects on the enemy, in its operation on the character of our own troops, and, above all, in its influence on the minds and feelings of the natives of India." He added, that, although other officers had failed, Sir David Ochterlony was uniformly successful, and attained every object he sought to achieve. A vote of thanks to the gallant officer "for the vigour, judgment, and effect, with which he personally conducted the subsequent operations of the force under his command," passed the Court of Directors November 20, 1816, and was confirmed by a Court of Proprietors, December 11. The Chairman (Mr. Reid), on this occasion, remarked that the abilities of the general and his officers were so transcendent that no terms of praise could reach them. It was also stated, that so economical were the expenses of the military operations against the Nepaulese, that, contrasting them (though performed in a cold and difficult country) with those of the campaigns in Mysore during 1803 and 1804, the Nepal war cost less by 5½ lacs of rupees than the campaign of 1803, and less by 26½ lacs than that of 1804.*

In December 1816, Sir David was created a Knight Grand Cross of the Bath; and in February 1817, he had the honour to receive the thanks of both Houses of Parliament. The Prince Regent was likewise pleased to grant Sir David certain honourable armorial augmentations,† "in consideration of his highly distinguished services during thirty-nine years; particularly in the Mahratta war, which conduced to the decisive victory of General Lord Lake, before Delhi; also the proofs of wisdom and military talent shewn in the defence of that city against Holkar's whole force, and his judicious conduct in the discharge of the functions of British Resident at Delhi; his great energy and animated personal exertions, to which was chiefly to be attributed the safety of the capital, and the person of Shah Alum; also the series of combined movements against Nepal," &c. &c.

Nor were the Indian princes backward in testifying their admiration of Sir David's talents. At a visit he paid to Lucknow, he was magnificently entertained by the Nawaub Vizier, who had acquired an augmentation of territory from the fruits of the General's victories over the Ghoorkhas. The officers who served under him in the Nepal war endeavoured to manifest their sense of his eminent worth, by presenting him with a superb piece of plate.

Not the least flattering mark of esteem was shewn by the head of the Bengal Government, the Marquess of Hastings. His Lordship was of opinion that the Nepaulese, vanquished a second time, should have been subjected to harder terms than those contained in the treaty they had meanly refused to fulfil. The argument of Sir David Ochterlony shows the judgment and moderation which entered into his character: "Protracted war," he observed, "can only produce enormous expenses: for which the most successful results cannot afford an indemnity, but may, as we have seen it in the western provinces, burthen us with territories without revenue, and with troops without resources

* Deb. at E. I. House, 11th December 1816. As. Journ. vol. iii. p. 53.

† "On an embattled chief, two banners in saltier, the one of the Mahratta states, inscribed 'Delhi;' the other of the states of Nepal, inscribed 'Nepaul;' the staves broken and encircled by a wreath of laurel;—with this motto to the arms; viz. 'Prudentia et Animo.' the crest, viz. out of an eastern crown, incised 'Nepaul,' an arm issuant, the hand grasping a bâton of command entwined by an olive-branch."

resources to maintain them." Lord Hastings said, in reply, "Although I differ from you in many particulars, yet whatever you may determine on shall have my concurrence. You may depend upon my supporting every resolution and engagement you may enter into." His Lordship's language, respecting the conduct of General Ochterlony, in the general orders, is highly encomiastic.

In the great Mahratta and Pindarry war of 1817 and 1818, Sir David had the command of the fourth grand division of the army destined to cover Delhi, and also the superintendence of the fifth division, under the immediate orders of Brigadier Arnold, to whom he soon transferred the command, in order to assume the difficult office of settling the distracted province of Rajpootana, for which purpose he was invested with large discretionary powers. In December 1817 he had an interview with the Patan chief, Ameer Khan, with whom he concluded a treaty, and by unremitting and most skilful exertions he succeeded in gaining over all the petty warlike chiefs in this quarter to the British interest, and introducing peace and comparative order, where nothing but turbulence and misery was found. The poor inhabitants of this distracted and desolated province, who had been actually compelled to use the dung of horses and bullocks as food, hailed the year of 1818 as an auspicious era. In April 1818, he was appointed resident in Rajpootana, with the command of the troops.

In December of the same year, he was again appointed to the residentship of Delhi, with Jeypore annexed, and he had, besides, the command of the third division of the grand army. He was afterwards entrusted with the superintendence of the affairs of Central India, as resident and political agent in Malwa and Rajpootana.

Towards the latter end of the year 1824, the political dissensions in the state of Jeypore obliged Sir David Ochterlony to take the field in order to restore tranquillity; but an adjustment of affairs took place without recourse to coercive measures.

The health of our gallant veteran, after nearly fifty years of uninterrupted residence and active service in the various climates of India, at length became impaired, and he was constrained, in June 1825, to resign his political office, with the intention of proceeding to Calcutta, and afterwards, it is supposed, to England. He went, for the benefit of change of air, to Meerut, where he died on the 15th July, in his sixty-eighth year.

Sir David Ochterlony was a fine soldier, an admirable politician, and, in every respect, an honourable and estimable man. He had most diligently studied the character of the native soldiery, who, as well as the European troops under his command, were enthusiastically attached to him. His qualities are concisely and accurately expressed in the following passage of the general order issued by the Governor-General in Council, 28th July last:

The diplomatic qualifications of Sir David Ochterlony were not less conspicuous than his military talents. To an admirably vigorous intellect, and consummate address, he united the essential requisites of an intimate knowledge of the native character, language, and manners. The confidence which the Government reposed in an individual gifted with such rare endowments, was evinced by the high and responsible situations which he successively filled, and the duties of which he discharged with eminent ability, and advantage to the public interests.

Sir David was never married: the title is not, however, extinct; for, by a second patent granted in December 1823, it is limited to Charles Metcalfe Ochterlony, Esq., son of Roderick Peregrine Ochterlony, Esq., deceased.

THE BURRAMPOOTER RIVER.

WHATEVER may be the event of the contest in which we are now engaged in the East, science will, at least, reap considerable advantage from the opportunities which it affords for rectifying the geography of the invaded country, and increasing our stock of information respecting its moral and physical character.

The problem of the origin and course of the Burrampooter seems, in particular, in a fair way of being satisfactorily solved. Enough has already been discovered to show that the A-loo-tsang-poo, or San-po, and the Burrampooter, are not the same, as Major Rennell considered them to be, and which the Chinese maps afforded every ground for believing.

In our last Number (p. 52) we inserted the result of a survey performed by Lieut. Burlton as far as lat. $27^{\circ} 54'$, and long. $95^{\circ} 24'$, at which spot the river ceased to be navigable. We have since obtained, from the same source as the former, some farther contributions to our geographical knowledge of this river and of the adjacent country; and also a sketch of the country and the course of the streams, between the meridians of 94 and $96\frac{1}{2}$ and the parallels of 27 and $28\frac{1}{2}$.

According to this chart, the Burrampooter, within the abovementioned limits, bends from a north to a north-easterly direction, forming a curve equal to about three-fifths of an arch, bounded by the Meeree, Abor, and Meeshmee hills, behind which "various ranges of lofty snowy mountains extend along the whole line of the horizon to an indefinite depth and altitude, apparently in parallel lines and ridges." In about lat. $27^{\circ} 25'$, long. $94^{\circ} 28'$, is the mouth of the Boree Dheeing river, which, branching from the Burrampooter, forms a curve to the south and south-east, communicating, by the Now Dheeing river, with the Burrampooter, in about the meridian of $95\frac{1}{2}$; so that the country embraced by the two streams is, in fact, an island, about ninety miles long by fifty broad, and is inhabited by the Mowamareeah and Singpho tribes. This is conceived, with great probability, to be the Majuli of the maps; for the island so called (Mojoulee), in the succeeding communication, is little more than twenty miles long by four wide, situated just at the confluence of the Boree Dheeing and the Boree Luheet with the Burrampooter; the eastern extremity being in lat. $27^{\circ} 20'$, long. $94^{\circ} 24'$.

The opening in the eastern chain of mountains, to the Brahma Khoond, or source of the Burrampooter, is laid down in lat. $27^{\circ} 44'$, long. 96° .

It would appear, from the chart before us, that the latitude, given in Lieut. Burlton's letter, of the spot where his survey terminated, must be six or seven miles too far north. It seems to be in the Seddeea district, a little short of the place where the Burrampooter is connected with the Boree Dheeing river, by the branch which traverses the Singpho country. At the point of connexion, it is also joined by two other streams; yet, with this accession, its current, he says, was but 150 yards wide, though the extreme breadth of its bed was, indeed, 600 yards. Lieut. B. was informed that from thence to the Brahma Khoond (which appears to be of the same nature as the Manasarowar and Ewan Hrad in Thibet, and a receptacle or source of other streams), is ten days' journey. This distance accords with that given in the succeeding account; for the boundary of Lieut. Burlton's survey is, by the chart, less than forty miles, or about four days' journey, to the opening in the mountains, which is stated to be six days' journey from the Brahma Khoond.

The

The following is the communication to which we referred; we have inserted in it the positions of the principal places according to the chart:—

“ Quitting the mouth of the Dikho river, which runs to Rungpore and Ghurgong, the course of the Burrampooter, upwards, is in a northerly direction, gradually inclining to east for a considerable distance, having, on its left bank, deep jungle of high trees, marking the sites of former populous villages, laid waste by the Burmese and Singphos.

“ On the right bank is the Mojoulee, or island formed by the two branches of the river, which, separating at this point, unite at Sotal Paat, near Maura Mookh: on it are also found the remains of villages, of which Ruttunpore alone is thinly inhabited.

“ After a certain space, the mouth of the Booree Dheeing river appears, which runs to Borhat’h, Diggle ghaut, and Jypoor, on the road to the Ava territory, and furnishes water-carriage thus far; thence it strikes into the heart of the Singpho country, and finally unites with the Now Dheeing (in lat. $27^{\circ} 32'$, long. $95^{\circ} 34'$), not far from Bheesagong, also on the Burmese route; continuing on the left bank, which is every where covered by deep forest jungle, the mouth of the Dibooroo nullah presents itself, marking the boundary of Assam Proper, from the tributary territory and tribe of the Moraus or Mowamareeahs.

“ The limits of this tract are bounded on the south by the Booree Dheeing river, on the west by a line drawn between that stream and the mouth of the Dibooroo, on the north by the Burrampooter or Luhit, and on the east by a line drawn from the Dheeing to a point opposite the Seddeea district. The inhabited portions are on the banks of the Dibooroo, which takes its rise near the south-east angle, and intersects, diagonally, the entire tract. The inhabitants are Hindoos, worshipping Vishnoo alone, and are subject to one chief, called the Burseeaputtee, whose present place of residence is Rungagora (in lat. $27^{\circ} 20'$, long. 95°), a point nearly central. He has successfully maintained his independence, and defended his country from ravage, during all the late convulsions, as well from the Burmese as the Singphos, and all the neighbouring predatory tribes. He has thoroughly embraced our interest, and seems well deserving of confidence.

“ Returning to the right bank from the head of the Mojoulee, the river pursues a tract now quite barren, desolate, and covered with trees and jungle, until it draws near the first line of hills, and enters on the country peopled by the tribe of Meerees, a nearly barbarous hill-race, rudely armed with bows and arrows, and differing altogether in language, appearance, and habits, from the inhabitants of Assam Proper. They have some villages on the bank, of which the first visible is Motgong, and shortly after Meereegong. They are very expert in the management of the bow, and make use of a deadly vegetable poison, to arm their arrows, which grows in the hills of the Abor and Meeshmee tribes, and is much prized. They use it also to kill wild animals; the flesh of which is not rendered unwholesome by its operation. The Meerees are in the interest of the Seddeea Gohein, and opposed to the Singphos.

“ Soon after passing Meereegong (still on the right bank), the river washes Sillanee Mookh, so called from the numerous stones and fragments of rock, washed down from the hills by the Dihong and Dibong rivers, which soon after empty themselves into the Luhit; these rise and flow from perceptible openings in the high chain of hills to the northward, and considerably contribute to the

mass of the river, which, after passing their mouths, diminishes materially in bulk and importance.

“ After a further space, we reach the mouth of the Koondeel nullah, on which is situated the town of Seddeea (in lat. $27^{\circ} 52'$, long. $95^{\circ} 16'$), in the district of the same name.

“ This district is also properly tributary to Assam, but now nearly laid waste, and inhabited principally by refugee Khangtis and Mulooks, driven by the Singphos from their original countries to the south-east. It is governed by the Seddeea Khaw, or Gohein, a Khangti prince, claiming the same descent from the god Indra, with the rajahs of Assam, the chiefs of the Mowama-reeahs, Moonkoong, Shaum, &c. &c. &c. He worships the Hindoo deities, according to the Assamese heresy, but has abandoned all prejudices, except in abstaining from the flesh of cows. He appears to have no force, but has been enabled to make a stand against the Singphos, by means of his auxiliaries, the Meerees, Abors, and other hill-tribes: he is accused, however, with justice, of having contributed, in no small proportion, to the plunder of Assam along the line of his frontier.

“ Returning to the left bank, opposite Seddeea; where ends the Mowama-reeah country, commences that of the Singphos, marked, if possible, by even deeper jungle; and further on we reach the entrance of the Now Dhoeng river, which intersects it, flowing from the south-east hills (on the opposite side of which lies the Khangti country), and throwing off the Booree Dhoeng (before mentioned) in its course: the Theinga nullah also runs through the Singpho country.

“ The Singpho states, which were formerly tributary to Assam, now occupy the entire space bounded by the south and south-east hills, on the north by the Luhit, and west by a meridian line, drawn from Seddeea to the hills, excluding Theokh and Makoom, and cutting the Deepung nullah.

“ They are divided into twelve distinct and independent villages, or cantons (of which Beesagong is the most powerful), governed by their chiefs, called Ghaee Gaum, and acting separately, in concert, or adversely; as circumstances or inclination may dictate.

“ They are professedly Bhuddists, but have no repugnance to taking the lives of animals, which the former never personally resort to, unless driven to it by necessity. Their native arms are the dhow, a short square-ended sword, with an oblong wooden shield, and the bow; but they are partial to muskets, of which they have a few, but are almost entirely ignorant of the use of them.

“ The lofty lines of hills extending along the north-west, north and east, are inhabited by the Abors and Meeshmees, populous tribes, differing little in character from the Meerees and others of the mountain race, of whom I have hitherto been able to gain but little information.

“ But the object of greatest interest to topographical science is, a clear and distinct opening in the lower lofty ranges bearing due east, behind which is pointed out by all ranks and classes the Bruhmakhoond, or reservoir, whence flows the Burrampooter, and distant from hence not more than forty or fifty miles—six days' journey.

“ It was, formerly, in more tranquil times, a place of very extensive pilgrimage, and is still held by all Hindoos in universal sanctity.

“ The stream is described as taking its rise from a circular basin, or well; in the side of the mountain, beneath the snowy region, while behind and above it rise stupendous ranges of impracticable transit.”

HINDU FABLES.

THE apologue, or familiar fable, is, doubtless, the earliest form of composition which fiction assumed for didactic purposes. Its simplicity, whereby it was adapted to the use of mankind in the primitive ages of the world, still recommends it as a medium of wholesome instruction at that period of human life, when the faculties are yet incapable of comprehending the refined and elaborate lessons conveyed in the higher productions of imagination. Its antiquity would alone justify us in referring the invention to the East, from whence we remotely derive many of the arts and much of the knowledge possessed by the people of modern Europe, who have, in many instances, so polished and improved the rude materials of antiquity, that, without scruple, they consider them as their own discoveries. In the instance of the apologue, there exists, however, a surer species of evidence than inference or construction, to establish the claims of Oriental nations. Not only can many of the apologues found in the compilation known under the title of "Æsop's Fables," be traced to eastern originals, but many of the more finished tales in the collections of the Italian and French novelists are borrowed from the Sanscrit, or from Persian and Arabic writers who drew from the same source. It is curious to track, by the help of Langbaine in the first stage, the stories which form the plots of many of our old plays, through various channels, up to the fountain-head in the East, where the same tales, in a different dress, amused mankind some thousand years ago. Even the story which forms the chief incident in "The Merchant of Venice," and which long eluded the persevering search of the indefatigable commentators on Shakespeare, has been discovered in an eastern author.

The sterility of the province of history in the literature of Oriental nations generally, and of Hindostan in particular, renders it fortunate for the interests of learning that the parabolical mode of composition is so ancient, and that it contains, within itself, a principle of longevity: for it is an essential property of the familiar fable that it imbibes and retains a tinge of the prevailing manners. Hence fables are better calculated than even history itself to display the exact and genuine traits which distinguish the people amongst whom the compositions originate. It is, therefore, that Lord Bacon says, "Fiction gives to mankind what history denies."

It is true, indeed, that the facilities which fiction afforded for insinuating a knowledge of facts and events, where policy discouraged their circulation, have caused fable to encroach upon the historical department. The early records of most nations making any pretensions to antiquity, are fabulous; by which term we are not invariably to understand that they are absolutely false; real events are related allegorically; or they are ascribed to fictitious personages; or, *vice versé*, the personages are real, and their actions exaggerated and adulterated with marvellous details. It is not easy to decide whether fable has, in this respect, been useful or otherwise: if we inherited from our ancestors no fabulous accounts of remote transactions, we should have possessed no other.

Fable is only legitimately employed in works which profess to be mere sports of the imagination, serving as vehicles of admonition. *Fictis jocari nos meminerit fabulis*, is the intimation with which the Roman fabulist forewarns his readers. Herein it has been really beneficial, and in a double sense. Besides their moral influence upon actions, fables contribute, as before observed, to the stores of knowledge. Europeans are more speedily and perfectly taught the peculiarities of eastern habits and manners by the popular collection of tales in the "Arabian Night's Entertainment," and by the fables of Pilpay, or

Bidpai, than by histories, or dissertations, or narratives of travels. The incident of the story often depends so much upon some local custom or superstition, that the memory retains the fact, by aid of the fiction, more firmly than by means of the ordinary process of relation, however specious or elegant the narrative. The sagacity, discernment, and profound knowledge of the human mind, which are discoverable in the actions of the Divine Founder of our religion, were never more conspicuously exemplified than by his choice of this mode of instruction. His parables are exquisite specimens of the moral apologue.

The second part of the "Transactions of the Royal Asiatic Society," which has just issued from the press, contains an analytical account of the Pancha Tantra, an ancient collection of Hindu tales, by Mr. Horace Hayman Wilson. This erudite and well-written article furnishes a key to the elucidation of Hindu manners, "before they were metamorphosed and degraded by the influence of foreign subjugation."

The Pancha Tantra, so called from its being distributed into five tantras, or sections, but better known, in common speech, by the title of Panchopachhyana, or "Five Stories," is the oldest work of this kind extant in India, being more ancient than the Hitopadesa. Most of the tales in it are likewise to be found variously related in the work just mentioned, and also in the Persian Anvari Soheily, and the Arabic Kalila Damana, which are modifications of the celebrated fables of Pilpay.

The story which supplies the vehicle of the apologues is, in substance, as follows:—A certain king who had three sons of indolent habits, and without disposition to study, placed them under the care of a Brahman of high repute for learning. This Brahman, named Vishnu Sama, with the view of insinuating instruction into his royal pupils, composed the five tantras on the following subjects: dissention of friends; acquisition of friends; inveterate enmity; loss of advantage; and inconsiderateness. The lessons on these subjects are conveyed in apologues. The princes, by this mode of teaching, in six months were highly accomplished; the Pancha Tantra became famous throughout the world, and it is observed, in the introduction to the work, that whosoever reads it "acquires the whole Niti Sastra (treatise on regal polity), and will never be overthrown by Indra himself."

The stories are interwoven with each other, forming a tissue of tales, as customary in the East, an example of which is afforded in the following cluster of stories, which are peculiarly Hindu, and omitted in the other works.

"In *Ayódhyá*, the capital of *Kósalá*, reigned a monarch of great splendour named *Rámapshóttama*. On one occasion, the Governor of the Forests came and announced to him, that the woodland chiefs were all in a state of rebellion, instigated and headed by *Vidhyaka*, the rajah of the *Vindhya* hills. The king sent his chief minister, *Balabhadra*, to quell the rebels.

"When *Balabhadra* was gone, there came to the capital, at the close of the rains, a *Swamanta*, or mendicant of the *Baudhá* religion, who, by his skill in divination, his knowledge of hours, omens, aspects, and ascensions, his dexterity in solving numbers, answering questions, and detecting things covertly concealed, and his proficiency in all similar branches of knowledge, acquired such fame and influence, that it might be said he had purchased the country, and it was his own. The report of his reputation at last reached the king, who sent for him, and treating him with great civility, asked him whether it was true, that sages could tell the destinies of others. The mendicant replied, your Majesty will know by the result. They then entered into conversation, in which he so entertained the king, that his daily society became indispensable.

"One

“ One day he absented himself from court; and on the next, when he made his appearance, he accounted for his absence, by stating that he had been upon a visit to Paradise; and that the deities had sent by him their compliments to the king. The king was simple enough to believe him, and was filled with astonishment and delight. His admiration of this marvellous faculty so engrossed his thoughts, that the duties of his state, and the pleasures of his palace, were equally neglected.

“ Things were in this condition, when the valiant Balabhadra, having reduced the forest chieftains to obedience, returned. To his surprise, he found the king in a close conference with a naked mendicant, instead of being, as usual, surrounded by his ministers. Having ascertained from the latter the pretensions of the ascetic, he approached the monarch, and inquired, if what he had heard of the mendicant's celestial visit, was truth. The king assured him that it was, and the ascetic offered to satisfy the general's apparent scepticism, by departing for *Swarga* in his presence. With this intent, the king and his courtiers accompanied the *Bramanaka* to his cell, which he entered, and closed the door. After some delay, Balabhadra inquired of the king when they were to see the mendicant again. He answered, ‘hava patience; the sage upon these occasions quits his earthly body, and assumes an ethereal person, with which alone he can approach Indra's heaven.’ ‘If this is the case,’ replied Balabhadra, ‘bring wood and fire, and let us burn his cell.’ ‘Why so,’ asked the king. ‘So please your Majesty,’ answered the general, ‘by consuming the earthly body of the ascetic, we shall prevent his re-assuming it, and then your Majesty will always have an angelical personage in your company. A case of this kind is well known.

“ In *Rājagriha* dwelt a *Brāhman* named *Dēva Sarmā*. He had no children, a subject of bitter affliction to his wife, who could not look upon a neighbour's infant without tears. At last her husband desired her to desist from farther lamentation, as by the efficacy of some mystic words, he had secured her having a son of eminent beauty, and auspicious destiny. Highly delighted with this prophecy (indications of the fulfilment of which soon began to appear), the *Brāhman's* wife anticipated eagerly the period of her delivery. What, therefore, was her surprise, and the horror of her attendants, when the offspring, so anxiously sighed for and impatiently expected, proved to be a snake. The assistants exclaimed, let the monster be destroyed; but the parent, with maternal affection, interfered to preserve her progeny, and carefully protected and reared the snake.

“ After a time, the nuptial festivals of a neighbour's son awoke the envy of *Dēva Sarmā's* wife, and she reproached her husband for not having thought of a suitable match for their child. He replied, I would do so, if I could get admittance to *Pātālā*, and present my supplications to *Vasuki*. I do not think any other so great a fool as to wed his daughter to a son like thine. Finding, however, his wife was sadly distressed, he proposed, in order to divert her thoughts, that they should travel; and equipping themselves plentifully for their journey, they set out. After some months, they arrived at a city, named *Rhatomagar*, where they were hospitably received and entertained on the night of their arrival, by an acquaintance. In the morning the *Brāhman's* friend asked him why he had come, and whither he was going? The *Brāhman* told him he was in search of a wife for his son; on which the other offered him his own daughter, a girl of great beauty, and insisted on his taking her away with him. Accordingly, *Dēva Sarmā* returned to his own city, with his destined daughter-in-law. When the people of the city saw her, they opened their eyes in admiration of her grace and loveliness, and asked her attendants how they could think of sacrificing such a jewel of a girl to a serpent. Their words filled her servants with distress, and they were urgent with the damsel to effect her escape. She refused, saying, it must not be; there are three things, which are final from the first: The command of a king, the vow of an ascetic, and the gift of a maiden. That too which is previously resolved by destiny, cannot fail to be, as it happened to *Pushpaka*, and the Gods.

“ The maiden's attendants now asked her, who *Pushpaka* was, and she thus proceeded:

“ *Pushpaka* was a favourite parrot of Indra, a bird of wonderful beauty, extraordinary

ordinary abilities, and prodigious learning. One day he was perched on Indra's hand, and was repeating the hymns of the *Védas*, when Yama arrived. The parrot immediately flew away abruptly. The Deities afterwards asked him, why he had withdrawn; he replied, how could he face the destroyer of life. The Deities, in order to remove his fears, assured him that they would protect him; and, prevailing on him to accompany them, they returned to Yama, and begged him, at their intercession, to abstain from ever taking away the life of the parrot. Yama replied, that he knew nothing about the matter, and referred them to Kála (Time), to whom they accordingly repaired. Time referred them to Death, who, he said, was at hand; and they hastened to prefer their suit to him. They no sooner encountered the grisly terror, than the parrot fell dead. Exceedingly distressed and perplexed by this accident, they returned to Yama, and inquired of him what it meant; he replied, that Fate had fixed the parrot's life, and that no care on their parts would have been of any avail.

"Therefore, I say, whatever is foredoomed by destiny, cannot fail to come to pass.

"In this manner she resisted their persuasions, and the marriage took place. She performed her duties diligently, feeding her serpent-husband during the day with milk, and keeping him in her chamber at night, in a spacious basket. One night she was alarmed by the appearance of a man in her chamber, and jumping up in terror, she ran to the door to make her escape. The person called her to stop, and dismissed her fears, as he was her husband; and, to assure her, reassumed his ophitic form, and crawled into the basket, whence, immediately after, he again issued, in all the bloom and vigour of human adolescence, and glittering with gold and gems.

"In the morning, Déva Sarmá, who had observed what was going forward, approached the basket, before his son was risen, and seizing the deserted skin of the snake, threw it into the fire; in consequence of which the youth was constrained to adhere to his natural figure, and continued ever after to constitute the pride of his parents, and the happiness of his family."

"The king of *Ayód'hya* having heard this narrative from Balabhadra, hesitated no longer to follow his advice. The mendicant's cell was therefore immediately set on fire, and he perished in the flames."

Another story is also peculiar to the Pancha Tantra, and is, as Mr. Wilson observes, so decidedly of a Hindu character, that we need not wonder at its exclusion from the Arabic work at least.

The fowler, having caught the female dove, is overtaken by a violent storm, and repairs for shelter to the tree inhabited by the male. Moved by the councils of his captive mate, and his own estimate of the rites of hospitality, he not only gives the fowler shelter in the hollow trunk, but collects dry leaves, and makes him a fire, and casts himself into the flames, to furnish his guest a meal. The bird-catcher liberates the dove, and she also throws herself into the fire; on which she and her lord assume celestial forms, and are conveyed to heaven in divine cars, agreeably to the text, that says, "A widow, who burns herself, secures for herself and her husband enjoyment in Paradise, for as many years as there are hairs on the human body, or thirty-five millions." The fowler becomes an ascetic, and voluntarily perishes in a burning forest.

The maxim that "sense is better than science, unless it improve knowledge," is inculcated by the following tale:

"There were four *Bráhmans* residing in the same village, all intimate friends. Three were men of great acquirements, but destitute of common sense. The fourth was an intelligent fellow, but equally destitute of learning. As they were poor, they determined at one of their meetings, to go to some country where learning was patronized, and where, they were satisfied, they should speedily be enriched with presents from the king. They accordingly set off, but when they had gone some way, the eldest cried out, 'It never occurred to me before, that our fourth friend here is illiterate. He is a man of sense to be sure, but that will not entitle him to any rewards

from

from the king ; we shall have, therefore, to relinquish to him a part of our earnings, and it would be fairer, I think, for him to remain at home.' The second agreed in this opinion, but the third opposed it, saying, 'we have always been friends and companions from infancy, and let him, therefore, participate in the wealth we shall acquire.' This sentiment prevailed, and they all went on in harmony.

"As they passed through a forest, they saw the scattered bones of a dead lion. 'I have met,' said one, 'with an account of a method by which beings can be re-animated: what say you? shall we try the experiment, and employ the energies of science to restore life and shape to these bones?' They agreed. One undertook to put the bones together; the second to supply the skin, flesh, blood, &c., and the other to communicate life to the figure. When the two first had accomplished their tasks, the third was about to begin his; but the fourth stopped him; 'Consider what you are going to do,' he exclaimed, 'if you give life to the lion, the consequence will be that he will devour us.' 'Away, blockhead, replied the sage, 'I am not to project things in vain.' 'Wait an instant, then,' replied the man of sense, 'till I get up into this tree.' So saying, he climbed up into a tree at hand, and his learned associates accomplished their undertaking. A substantial living lion was formed, who fell upon the three philosophers, and destroyed them. When he was gone, the man of common sense descended from his hiding place, and reached home again in safety."

To illustrate the remark that a man who neither exercises his own judgment, nor follows a friend's advice, brings on his own ruin, a story is given, which bears an obvious analogy to the European tale of "The Three Wishes," though, as Mr. Wilson remarks, vastly inferior to it in point and humour.

"There was a weaver, named Mant'hara, all the wood-work of whose loom was, on one occasion, broken. Taking his axe, he set off to cut fresh timber, and finding a large *Sisú*-tree, by the sea-side, began to fell it. In the tree resided a spirit, who exclaimed on the first stroke of the axe, 'Hola, this tree is my dwelling, and I cannot quit it, as here I inhale the fresh breeze that is cooled by the ocean's spray.' The weaver replied, 'What am I to do? unless I get wood, my family must starve. Do you, therefore, look out for another house; quick, this I must have.' The spirit replied, 'you shall have any thing else you ask for; but not this tree.' The weaver then agreed to go home, and consult a friend and his wife, and return with his final determination.

"When the weaver returned home, he found there a very particular friend of his, the barber of the village, to whom he told what had occurred, and whom he consulted what he should request. The barber said: 'Ask to be made a king; then I will be your prime minister, and we shall enjoy ourselves gloriously.' The weaver approved his notion; but first, he added, he must consult his wife. To this the barber strenuously objected. 'A wise man,' he argued, 'would confer on women food, clothing, and appropriate ornaments, but would never let them share his councils, as Bhárgava has stated, that where a woman, a rogue, or a child, had the management, the house was sure of going to ruin. A man would maintain his rank and respectability, as long as he associated with grave people, and entrusted no woman with his secrets. Women are engrossed with their own designs, and purpose only their own pleasure. They love their own children even, no longer than they derive from them self gratification.' The weaver admitted the justice of his friend's observations; but *his* wife, he said, had no other thoughts than for her husband's welfare, and he must take her advice. Accordingly he went to her, and related what had happened, what the barber had recommended, and asked her what she thought it would be most advantageous for him to solicit: she replied:

"'You should never listen, husband, to the advice of a barber; as it is said, 'Husbands should never take counsel with courtizans, parasites, mean persons, barbers, gardeners, and beggars. Royalty is a very troublesome thing, and the cares of peace and war, aggression and negotiation, defence and administration, never allow its possessor a moment's enjoyment. He, who is wise, will ever shun the station of a king, for which his own relations, brothers and offspring, would be armed against his life. I should

I should recommend you, therefore, to be contented with your station, and only to seek the means of more effectually earning your livelihood. Ask for an additional pair of hands, and another head, with which you may keep a loom going, both before and behind you. The profit of such a second loom will be quite sufficient to give you consequence and credit with your tribe, as we have already from those of the first, quite enough for our own expenditure.

This advice pleased the husband mightily; he repaired forthwith to the tree, and requested the spirit, as the price of his forbearance, to give him another pair of arms, and an additional head. No sooner said than done; and he immediately was possessed of two heads and four arms, with which he returned home, highly delighted. His new acquisitions, however, proved fatal; for as soon as the villagers saw him, they exclaimed, 'a goblin! a goblin!' and falling on him with clubs, or pelting him with stones, speedily put a period to his existence."

Here we recognize one of the most objectionable features in the Hindu form of society: the contempt of women. "To be mothers were women created," says the Sastra; "day and night must women be held in a state of dependence." "Their fathers protect them in childhood, their husbands protect them in youth, their sons protect them in age; a woman is never fit for independence." Again: "Let husbands, how weak soever, diligently keep their wives under lawful restrictions. No man, indeed, can wholly restrain women by violent measures: by confinement at home, even under affectionate and observant guardians, they are not secure." "Women have no business with the texts of the Veda; thus is the law fully settled: having, therefore, no evidence of law, and no expiatory texts, sinful women must be as foul as falsehood itself; and this is a fixed rule."

A society, where such maxims prevail, needs the institution of *castes*, or some cement equally strong, to make it cohere.

EXTENSION OF OUR INDIAN EMPIRE.

To the Editor of the Asiatic Journal.

SIR: It would appear that the British empire in India is destined to extend for purposes to be developed only by the course of time. The process of the acquisition of territory seems established by a sort of invariable prescription. Wars frequently originate from frivolous causes; and conquests made cannot be restored with safety where there does not exist any thing resembling a balance of political power. Add to this, that the unavoidable increase of public debt can be reduced only by the revenue of annexed country, where no resources can arise from an impracticable reduction of expenditure. To conciliate native prejudices, and to render conquest tolerably palatable, it is found eligible to restore to power a branch of a royal family expelled from a throne at some former period, under an understanding of deriving stability from the support of the British Oriental Government. In our senate it has been found requisite to acquiesce in principles of this description. Whatever may have been the causes of the Burmese war, the history of the usurper at present on the throne, furnishes a fair opportunity for a due exercise of the usual policy terminating Oriental warfare. The old Burmese dynasty was driven from the throne by the King of Pegue, who ruled for a time with equal tyranny and cruelty. He governed, as lately in France, by power of numbers, by a system of terror, and by a total contempt for public principle and opinion. Like another

another adventurer, Allampora, an able and ambitious soldier of fortune, and of obscure family, sprung up, not to reinstate the ancient royal family, but to establish himself sovereign of the Burmese empire. With profound sagacity, he matured his plan in secret; and, concealing his ultimate views, he communicated his well-imagined design of recovering the empire to a chosen few. He took advantage of the absence of the reigning monarch, and commenced a series of brilliant and successful operations, with a small force, which increased rapidly from the confidence inspired by the undaunted courage and consummate talents eminently displayed by this Buonaparte of the east, who laboured, like his prototype, to gratify individual ambition, under a semblance of effecting the general wish. It may, however, be fairly said of Allampora, that in usurping the throne of Ava, his progress was marked by no more bloodshed than a popular warfare is usually supposed to justify; while public massacres, private murders in prisons, and unjust executions on scaffolds, cannot be laid to his charge. In common with that eminent destroyer of the human race, Buonaparte, his memory will remain stained with the crime of usurpation, and with the reproach of not restoring the legitimate dynasty. In the abolition of more than useless and complex laws, and in the establishment of a plain and practical code of jurisprudence, still wanted in civilised kingdoms, both the usurpers, so far, merit favourable mention. Allampora proved himself equally eminent in the cabinet and field; and, by splendid military actions, he added the kingdom of Pegue, a part of Siam, of Assam, and even of the Chinese possessions, to the Burmese empire, to which he pretended to have been called, like another usurper, by the voice or suffrages of the people. The close of the life of this extraordinary character was not altogether exempt from crime; but history, in which he is, as yet, but little known, will rank him high among the conquerors whose good and bad actions she faithfully records. The ruling monarch is a descendant of Allampora, in the second generation; and, judging from the edicts and sayings ascribed to him, he appears to inherit but little of the wisdom of his renowned ancestor, who rose to supreme power from a mean station. His going to war with the mighty British power in India, and that too, on groundless pretences, evinced the heedless arrogance of a semi-barbarian, ignorant of the true interests of his people; and, it would seem, that he is now rushing fast to his fate, and to be lost in the original obscurity of a family belonging to the dregs of the people.

It may be true that this war may add three millions to the national debt, but ultimately, the revenues and commerce of conquests necessarily retained may compensate for an unavoidable expense. Every evil has its concomitant good, and this already appears from the active circulation of capital that was stagnating; from keeping armies in motion, and from giving employment to shipping in a comparative state of inactivity. Had there been a sufficient European force in India, Ammerapora, the capital town, would have been taken with one campaign less than will terminate the war. Three roads lead from Arracan, over a range of hills seen from the great river Irawaddy, a mile in breadth in the dry season, and much more in the rainy periods, swelling it three times in the year. The metropolis is a square of about 2,600 yards of side. It is surrounded by a bastioned rampart, with a deep and broad ditch. The royal palaces are in the centre; and all the streets are at right angles. The people, in habits, religion, dress, and manners, differ from the Hindoos and Chinese, with still a resemblance in many respects. The capital has few solid buildings; and the houses are furnished, on their tops, with vessels of water to extinguish fires. If peace is not made, Ammerapora, in all probability, will be destroyed

destroyed by that incomparable and destructive invention—the Congreve rockets, and then it will be

“*Hæ tibi erunt artes, pacisque imponere morem,
Parcere subjectis, et debellare superbis.*”

The wisdom of this peace will consist in an indemnity for the past, and a security for the future. This necessarily supposes the retaining of a part of the country, and the restoration of the old race of kings to the throne of a kingdom, to be kept in check by occupancy of frontier, and by the supposed gratitude of a reinstated dynasty. The valuable state of Arracan was unjustly invaded, and kept possession of, by the house of Allampora. It produces rice, salt, ivory, and other useful commodities. The excellent harbour of Ramree would receive future fleets during the south-west monsoon. Our former settlement of Negrais, at the south-west angle of Arracan, will always be a convenient commercial depôt. The command of Arracan, with its contiguous mountain-frontier, will furnish at all times, a ready access to the centre of the Burmese empire; and may, in some measure, compensate for the loss of Sumatra, whose future value was not duly estimated by our rulers. I speak from a long local residence, and from having surveyed much of a coast containing a multiplicity of land-locked harbours of the first description, and belonging to a highly productive and improveable country. Arracan will be retained, while a mere factory may suffice at unhealthy Rangoon, for building ships of war, of teak timber, in part payment of the expenses of the war. Munnypore, the capital of Cassey, being a key to the Burmese dominions on the north-east side, will, I take it for granted, be also permanently retained. It is within a few degrees of the Chinese frontier, and will render the grower of tea, and ruler of the celestial empire, wonderfully civil to the people at Canton. His Majesty of the Golden Feet and White Elephant can now inform his brother of the Sun and Moon, that British military and naval discipline is rather a serious matter to encounter.

In a moral light, this requisite left wing to our possessions will, in due time, become civilized and Christianised, by means of what ought, without delay, to be rendered *simultaneously general* in India, as recommended by the late, and present, Bishop of Calcutta; that is, the teaching of the English language, making at present but a slow progress, with ardent zeal and wishes. It ought to be made a *primary national concern*. Reading and writing will be enough. “*Paucis est opus literis ad bonam vitam.*” A French writer meant the BIBLE when he sensibly said, that “*Les bons livres sont la seule défense des esprits foibles, c'est-à-dire, des trois quarts des hommes, contre la contagion de l'exemple.*” We have every encouragement, Mr. Editor, to persevere in instructing the poor natives of India. We see prophecy there actually fulfilled, in these striking and memorable words—“God shall enlarge Japheth; and he shall dwell in the tents of Shem; and Canaan shall be his servant.” In India let the English language be *generally inculcated*, and the days must come, when “the deaf shall hear the words of the Book; and the eyes of the blind shall see out of obscurity, and out of darkness.” Infinite good is done by briefly adverting to these remarkable points, in works of circulation like yours; and it is good, now and then, to join serious to political reflections. Whatever may be the future progress of civilization in the Burmese empire, the difficulty and stumbling-block of *castes* are out of an interesting question.

Yours, &c.

Summerlands, Exeter, Dec. 6, 1825.

JOHN MACDONALD.

Review of Books.

The Mission to Siam and Hué, the Capital of Cochin China, in the Years 1821-2. From the Journal of the late GEORGE FINLAYSON, Esq., Surgeon and Naturalist to the Mission. With a Memoir of the Author, by SIR THOMAS STAMFORD RAFFLES. London, 1826. 8vo. pp. 427.

We have long expected, with no small degree of anxiety and impatience, a work which would communicate some information relative to the mission despatched by Lord Hastings from Calcutta to the courts of Siam and Cochin China. The failure of the mission, at least its non-attainment of complete success, was no ground for withholding from the public such particulars respecting the countries and the people visited, as must have been collected in the course of nearly a year's travel in parts hitherto very little known to Europeans. Projects like this may fail altogether as to their political ends; yet science must derive important advantages from the attempts:*

So, though the chemic his great secret miss
(For neither it in art or nature is),
Yet things well worth his toil he gains;
And does his charge and labour pay
With good unsought experiments by the way.

Such details as could be procured of the proceedings of the mission, chiefly from the Indian newspapers, were embodied in two narratives published in this Journal† shortly after the return of the agent to Calcutta. They appear, from Mr. Finlayson's journal, to be as accurate as, under all circumstances, could be expected; and we shall, therefore, curtail our review of the work before us; especially since we find that we are to be favoured with a publication on the same subject from Mr. Crawford himself, the agent of the Governor-General.

Sir Stamford Raffles has prefixed to the work a memoir of Mr. Finlayson, which not only displays the deceased author's talents and excellent qualities in a manner which must gratify his friends, but affords to the world an example that "knowledge and independence are within the reach of all who will labour for them, whatever be their condition or rank in life; and that the best and only solid foundation of prosperity and esteem is a steady adherence to the principle of rectitude."

Mr. George Finlayson was a native of Scotland, and descended from parents in a very humble sphere of life. He became known to Dr. Somerville, by whom he was instructed in surgery, and sent into the army, where he was distinguished for humanity and attention to his duties. By Dr. Somerville's interest he was attached to the medical staff of Ceylon, in which island he remained for some years, devoting all his leisure time to the study of botany and other branches of natural history. He became afterwards assistant-surgeon in the 8th Light Dragoons, in Bengal. On the return of this regiment to Europe, Mr. Finlayson was detained for the purpose of attending the mission to Siam and Cochin China, as medical officer and naturalist. Excessive exposure to the weather, and the severe exertions which his zeal in pursuit of natu-

* It is proper to observe that an account of Mr. Crawford's geological observations on his voyage has been transmitted by him to the Geological Society. See its Trans., vol. i, 2d Series, part ii, p. 406.

† See vol. xv, p. 267; and vol. xvi, p. 106.

ral history impelled him to make, destroyed his health at an early period of his journey; he lived to reach Bengal, and embark for Europe as the last resource—and died on the passage.

The journal of Mr. Finlayson abounds with observations on the geology, zoology, and botanical treasures of the intermediate places which the mission visited from Calcutta to the river of Siam. At Penang our naturalist was delighted with the rich harvest which the botanist reaps in this very small island. New plants surprise him at every step, in the forests, vallies, and ravines, as well as on the hills. In the harbour of Penang, the bodies which produce the curious phosphorescent appearance in the sea at night, exist in such vast abundance, that a boat might be distinguished at the distance of several miles by the brilliant light emitted from the agitated water. They were gelatinous, about the size of a pin's head, and, when placed upon the hand, moved with great agility for a second or two, when they ceased to be luminous and became motionless.

The description of Singapore is interesting; it contains much curious matter relating to natural history, including an account of a singular species of *alcyonium*, called the *Neptunian goblet*, a natural production interposed between the sponges and the madrepores, in the shape of a cup (often three feet in diameter), with stalk, &c., neatly formed; and some particulars concerning that remarkable animal the dugong.

Mr. Finlayson, though he devotes many pages to the natural history of this settlement, has scarcely a word on its mineralogy. It appears, from a paper of Mr. Jack, communicated to the Geological Society,* that the rocks of this island are secondary; the principal being a red sandstone, whose strata have a very considerable dip to the south or south-east, changing, in some parts, to a breccia or conglomerate, containing large fragments and crystals of quartz. Strata of slaty clay occur; and a small hill near the town is entirely composed of argillaceous ironstone.

The account of the Carimon Archipelago, brief as it is, contributes to our stock of information respecting these numerous but almost unknown islands. They differ much in aspect and character: some are merely masses of bare rock, others are several miles in extent; some are flat, others hilly. Wherever the smallest vestige of soil exists, forests of lofty trees are found, the inferior parts of which exhibit a specimen of the phenomena occasionally met with in the vegetable world. The roots and lower parts of the stems form curious winged appendages of great magnitude, serving to support the incumbent mass, and compensating for the want of depth of soil. These tabular compressed appendages are three or four in number. Every chink and crevice in the rocky base is occupied by the root; but a hardy net-work, of a thin cuticle, green underneath, and abounding in the vegetable juices of the tree, extends, commonly in a curved direction, fifteen or twenty feet, the edges being six or eight feet above the ground. In some instances these appendages form walls, resembling fortifications.

Many geographical errors seem to have been rectified by the observations made during the voyage through the various chains of islands in the route of the mission; and we hope that Mr. Crawford's work will contain a chart of it.

Not the least interesting portions of Mr. Finlayson's book are those which display to us the characters of the two people which travellers most frequently encounter among the eastern islands—the Chinese and Malays. The former, who

* Trans., vol. i, 2d Series, part i, p. 165.

who emigrate in vast numbers from their native country, notwithstanding the prohibitory laws of the celestial empire, and carry back considerable wealth, acquired from commerce, agriculture, and manufactures of various kinds, are distinguished by industrious and regular habits, and a degree of perfection in some of the mechanical arts equal, if not superior, to European skill. They are the chief agriculturists wherever they settle; they are the principal merchants, where Europeans are not found; and the energy of their physical character discriminates them strongly from most of the other races with whom they associate. At Penang, says Mr. F., all the principal shops, all important and useful employments, and almost all the commerce of the island, are in their hands. Under the patronage of the British Government they soon acquire riches, and in return the Government derives benefit from their industry, and from the commercial speculations in which they engage. This industrious turn is obviously owing, in a great measure, to the encouragement they met with from the Government; for, at Malacca, then under Dutch control, these same people seemed to have forsaken their active habits, "affording a discordant spectacle of reluctant idleness." In his deportment the Chinaman is grave and independent; the poverty displayed in his dwelling, and the negligence of his dress, afford no criteria of his taste and habits, which are liberal, and of ten profuse. His fare is delicate, and even luxurious, though not always very select. The fair exterior of Chinese manners, however, conceals a hollow: they possess no religion, for their mean and cold superstition is underserving of the name; they are addicted to gross sensuality; their selfishness renders them insensible to the calls of humanity; "they will stipulate for reward," says Mr. Finlayson, "with the wretch who is sinking in the water before they will extend a saving arm;" their pusillanimity renders them contemptible in the eyes of other tribes—the Malays especially:

Inferior to these in the knowledge of all the arts of civilized life, as well as in industry, stature, strength, and general appearance; but their superiors in point of courage and military enterprize, and above all in the possession of an ardent mind and exalted imagination, stand the Malays, a race of people whose origin, still involved in obscurity, would seem to be of no remote date. The most favoured of their tribes have as yet made but little progress in civilization, whilst the majority would appear to be enthusiastically attached to the unrestrained condition of savage life. The Malays constitute the principal maritime population of the Archipelago and neighbouring continent, in the different settlements of which they present themselves to the traveller under very different aspects. They are by nature less adapted to commercial pursuits than the Chinese, or the Chuliahs, or other natives of India, and are therefore easily beaten out of the field by them at the stations frequented by Europeans. They are passionately attached to a sea-faring life, and their principal occupation is that of fishing.

Bold and enterprizing in their maritime excursions, they hold the peaceful arts of civilized life almost in contempt. Negligent, slothful, and listless in their moments of ease, they display, in the hour of danger and of enterprize, the most daring courage and intrepidity. They enjoy neither the good nor ills of life with the calm sobriety and moderation of other men. In action fierce, cruel, and immoderate; their leisure is passed in a sleepy indifference that approaches to the apathy of brute life.

Their character for treachery, though founded in truth, appears to be much exaggerated. This vice would appear to attach more to the state of society in which they are found to exist, than to any inherent propensity towards it in Malays generally. It must be confessed, however, that many of their practices are shocking to humanity. Their laws regarding the right acquired over property and persons falling into their hands at sea, by shipwreck or otherwise, shew them to be possessed of as little of the milk of human kindness as any other description of Asiatics. Pp. 71, 72.

Upon the arrival of the mission at Siam, several incidents denoted an unexpected want of consideration towards the agent of the Governor-General; no person of rank attended him, and the accommodations furnished for the persons composing the embassy were of a very inferior kind. Even the chief of Pak-nam, so called, though merely the head-man of a village, did not condescend to visit the vessel; and the person sent to attend Mr. Crawford was a Malay, low, cunning, suspicious, yet fawning and familiar, and little better than a spy.

The appearance of Bangkok was curious: the floating moveable houses, of Chinese form, in which a large portion of the inhabitants reside, occupied by petty merchants, tradesmen, &c., and where numerous articles of merchandize were displayed, afforded an extraordinary spectacle. Until the ceremony of presentation to the King, the persons attached to the mission were withheld from indulging their curiosity, either on the river or on shore; they were, in fact, prisoners. In the course of a few days, they were permitted to visit the *barkalan*, or minister, and afterwards Prince Chroma-chit, an illegitimate son of the reigning King, and now the monarch of Siam. Both interviews evinced that the mission was not received in a respectful manner; and, at the presentation at court, the want of the customary etiquette was more apparent. In fact, both here and at Cochin China, it was found that the subordinate rank of the representative of the English East-India Company was alleged as an obstacle to the agent's being treated upon the footing of an ambassador.

Much mortification was felt at observing the different manner in which an ambassador from Cochin China was treated, who arrived at Siam during the stay of Mr. Crawford. His arrival was celebrated by festivities at Paknam, which lasted several days, and he was conveyed to the capital in a style which formed a remarkable contrast to the negligent reception accorded to the British envoy.

Upon all public occasions, the visitors were struck with the degrading servility exacted from the Siamese towards their superiors. Every individual in presence of persons of rank grovelled in beast-like attitudes upon the ground, not presuming to lift up the eyes, even when spoken to, and replying only in a whisper. In the royal presence, this species of veneration was carried to its utmost pitch:—

The curtain placed before the throne was drawn aside as we entered. The whole multitude present lay prostrate on the earth, their mouths almost touching the ground; not a body or limb was observed to move, not an eye was directed towards us, not a whisper agitated the solemn and still air. It was the attitude, the silence, the solemnity of a multitude simultaneously addressing the great God of the universe, rather than the homage of even an enslaved people. Not even Rome, fertile in a race of tyrants, nor Dionysius himself, ever produced any degradation to compare with this ignominy.

Raised about twelve feet above the floor, and about two yards behind the curtain alluded to, there was an arched niche, on which an obscure light was cast, of sufficient size to display the human body to effect, in the sitting posture. In this niche was placed the throne, projecting from the wall a few feet. Here, on our entrance, the King sat immovable as a statue, his eyes directed forwards. He resembled in every respect an image of Buddha placed upon his throne; while the solemnity of the scene, and the attitude of devotion observed by the multitude, left little room to doubt that the temple had been the source from which the monarch of Siam had borrowed the display of regal pomp. He was dressed in a close jacket of gold tissue; on his left was placed what appeared to be a sceptre; but he wore neither crown nor other covering on the head, nor was the former emblem of the office of royalty displayed on the occasion.

The

The throne was hung round with the same sort of cloth which formed the curtain in front, and behind it were placed two of the conical-shaped ornaments (formerly mentioned); except in the quality of the cloth, with which the throne was surrounded, we could observe no indication of splendour, or of magnificence. There were neither jewels, nor costly workmanship, nor precious stones, nor pearls, nor gold, observable about the person of the King, his throne, or his ministers. The latter were disposed in three lines laterally, extending from the curtain in front; and thus bounded on each side the empty space at the foot of the throne, according to their respective ranks. The chief Suriwong was placed at a very respectful distance. A considerable degree of light was thrown laterally on the floor at the base of the throne, where large and elegant fans were waved by persons placed behind the curtain. This circumstance added considerable effect to the scene. Pp. 144—146.

Mr. Finlayson visited the royal menagerie, and saw the white elephants, five in number—animals so highly prized in Siam, that the fortunate discoverer of one is rewarded with a crown of silver, and a grant of land equal in extent to the space over which the elephant's cry can be heard; and, moreover, he and his family, to the third generation, are exempted from all sorts of servitude and taxation. He confirms preceding accounts as to the equivocal claim they possess to the epithet *white*; they constitute an occasional variety of the common elephant, and are, he says, in fact *albinos*, possessed of all the peculiarities of these abnormal productions amongst other quadrupeds. A pair of curious *white monkeys* were preserved with the elephants, to prevent evil spirits from killing those precious animals. *Albinos* amongst buffaloes are common in Siam; and Mr. Finlayson saw upon the coast a species of *white porpoise*. This prevalence of leucæthiopic habit is, as he observes, worthy of remark.

The English were present at a dinner given by the Pra-klang, or acting barakalan, upon the occasion of the khon-chook, a ceremony accompanying the removal of a lock of hair which the Siamese suffer to grow on the forehead of their children till the 11th, 13th, or 15th year, when it is cut with great solemnity by a Brahmin, a few individuals of which sect are maintained in the country for the due performance of this peculiar ceremony. This fact, together with the non-participation of the priests of Buddha in the operation, should be regarded, we think, as decisive evidence that the Hindoo form of religion once extended to this country.* The temples also contain paintings from Hindoo stories (the *Ramayana*, for example); and many of the absurdities of the Hindoo faith are mingled with Buddhism.

The Siamese images of Buddha are not essentially different from those of Ceylon. The features of the former have rather a Tartar expression, particularly in the eye; the Ceylonese Buddha, Mr. Finlayson considers to be a complete model of the Egyptian or Ethiopic countenance. The temples, too, of the Siamese differ from the Dagoba of the Ceylon Buddhists: the former are pyramids, generally quadrangular; the latter is always a dome. Comparing the two people, who profess the same religion, Mr. Finlayson deems the Siamese prodigiously inferior to the rude inhabitants of the interior of Ceylon. Prince Chroma-chit, hearing that Mr. Finlayson had been in Ceylon, which they esteem as the holy source of their faith, was very inquisitive as to the state of religion in that island.

The remarks of Mr. Finlayson upon the physiology of the Siamese are curious

* The Siamese state that their religion was introduced into the country 2,340 years ago, as shown by their sacred books.

curious and interesting. Their face is remarkably large; the forehead very broad, prominent on each side, and covered with the hairy scalp to such a degree, that in some it descends to within an inch of the eye-brows, over-spreading the temples, and stretching forwards to within nearly the same distance of the outer angle of the eye. The cheek-bones are wide and prominent; the back part of the lower jaw singularly large; the *corona* process here projects outwards, so as to give to this part of the face an uncommon breadth. He refers the Siamese to the Mongol family of the human race, in which grand division he also conceives that the Malays should be included. The average height of the Siamese stature is five feet three inches. Their skin is lighter than the generality of Asiatics to the west of the Ganges—its complexion yellowish, and its texture smooth, soft, and shining. There is a remarkable tendency to obesity, especially amongst the higher orders.

The character of the people is portrayed in not unfavourable colours: the higher orders are, indeed, arrogant in the extreme, and offensively coarse in their manners; the vices of the lower orders are but the effects of a despotic government. They are kind and charitable towards each other, peaceable, and remarkable for fidelity and honesty. Towards strangers they are affable, kind, polite, obliging, and communicative. The mission was, however, restrained from visiting the interior, so that the observations were necessarily confined to the capital.

Amongst the manners and customs of this people, one of the most singular is their treatment of the dead. The poor throw their dead without ceremony into the river; persons higher in the scale of society partially burn the bodies, and then leave them to be devoured by ravenous beasts. The highest ranks embalm their dead, and, after thus preparing the body for preservation, consume it by fire. In some instances, previous to combustion, the flesh of the body is scraped from the bones, cut into small pieces, and thrown to dogs and vultures. The ceremony which attends the burning of a royal corpse forms a most imposing spectacle.

The author's observations upon the trade of Siam, which was then, to a considerable extent, monopolized by the King, and upon the great embarrassments to which mercantile transactions were exposed, have been superseded by subsequent events; the present King having removed the restrictions upon foreign trade (except in a few articles); but Mr. Finlayson entertained a very low opinion of the value of this trade to foreigners, even supposing it altogether unshackled. "It seems doubtful," he observes, "whether it be equal to employ annually four or five ships of moderate size; and the most valuable commodities of the country are bulky, such as sugar. The consumption of British manufactures by the natives is trifling in the extreme. Britain has more to give than to receive from such a nation." This is one point on which the testimony of Mr. Crawford will probably be found somewhat at variance with that of Mr. Finlayson.

On leaving Siam the mission touched at some of the islands in the gulf, which appeared to abound in objects highly interesting to the mineralogist, the zoologist, and the botanist. The Sechang, or Dutch islands, inhabited by some Siamese exiles, who were in a state of supreme wretchedness, rested on an immense base of coarse-grained granite, exhibiting plates of grey and black mica disposed in parallel laminæ. The bed of the bay was with reason supposed to be of the same rock; on its horizontal surface it terminates abruptly—not in peaks; and rarely rises above high-water mark. The superincumbent rocks are principally quartz-rock, of several varieties, and granular limestone.

Mr.

Mr. Finlayson speculates upon the advantages of occupying these islands as commercial dépôts for the trade of Siam and Cochin China. The principal island, he says, lies in latitude $13^{\circ} 12' N.$, and longitude $155^{\circ} E.$ The longitude is palpably wrong: it is probably a misprint for $100^{\circ} 55'.$

On touching at Pulo Condore, the travellers were agreeably surprised to find there, instead of about 200 refugees, "extremely indolent, covetous, and poor," as the old books describe them, a numerous, interesting, and lively people, without any complexion of the savage state; their disposition mild and disinterested—their manners polite and hospitable. The next place they made was Cape St. James, the eastern boundary of the small Saigon gulf.

Here the mission experienced rather more attention than at Paknam; a mandarin of rank waited upon the agent to invite him to Saigon, by desire of the Governor of that city. Mr. Crawford went thither, accompanied by the author of the Journal. They were conveyed in highly ornamented barges, the larger containing thirty or forty rowers, who were soldiers: every public duty is here performed by the military. The strictest discipline is preserved, and the rattan kept in constant exercise.

On their arrival at Saigon they were commodiously lodged, and treated with some respect. Negotiations were immediately commenced, by the deputation of proper officers to receive the communications of the British agent; but still the subordinate rank of the personage from whom the agent came was objected as a diplomatic difficulty. At their visit to the Governor of Saigon, the letter to the King was delivered; but the Governor observed that it was customary for kings only to write to kings; "how then," added he, "can the Governor-General of Bengal address a letter to the King of Cochin China?" Objections were made at a later stage to the style of the letter: the Governor-General wrote, it was said, as if he was writing to his equal.

After a short stay at Saigon, where they were entertained with a fight (the details of which are disgusting) between a tiger and an elephant, Mr. Crawford and the naturalist returned to the ship and proceeded to Turon. Here they also met with proper attention from the public officers, and great civility from the people; but upon learning the arrangements made for conveying the mission to Hué, the capital, they found that ten persons only were permitted to proceed thither. It seemed to be the design of the Court to make the mission appear obscure, not only from this measure, but from sending persons of mean condition to confer with Mr. Crawford. The accommodations provided in the barges were of a most paltry kind.

The journey from Turon to Hué seems to have been, in other respects, a very agreeable one. The country was extremely picturesque: the banks of the river of Hué presented the most beautiful scenery of any river they had seen in Asia. On landing at Hué the visitors met the two Frenchmen, Messrs. Vannier and Chaigneaux, who have so long resided in Cochin China, where they have attained the rank of mandarin, as the title is vulgarly called. They were attired in the Cochin Chinese fashion, in silk robes. These persons have since left the country, on their return to France; and we may expect that the savans of that nation will not fail to obtain from them a full account of the history, natural as well as political, of these and the adjacent countries.

The negotiations were conducted at the house of the Mandarin of Elephants (a whimsical title for a minister of commercial affairs), who expressed the utmost readiness to afford facilities to commerce; and declared that free trade was allowed at every port in the kingdom. Upon the agent inquiring when he might expect to be presented at Court, he was answered, that had he

come

come on any other than commercial business he would have been presented, or had Mr. Crawford been the envoy of the King of England; but that, in the present case, "it was as if the Governor of Saigon had sent an envoy to the Imperial Court." This was repeated subsequently in a message from the King. Mr. Crawford ought to have been aware, from the experience of others, that a mercantile agent was lightly esteemed here.

The opportunities they had of examining Hué were few, but they afforded a favourable idea of the place. The fortifications are remarkable, being constructed upon the principles of Vauban; but the present King has adopted the very mode of making embrasures recommended by some military writers—having built them narrow towards the ditch, and wide towards the rampart. The town is rather paltry, though the streets are neat and regular; the bazars appear poor. The King's palace is surrounded by barracks, which are worthy of comparison with the best in England. The arsenal afforded a display which surprised the visitors. Every thing, in short, was in a style of neatness, magnitude, and perfection, which cast the works of other Asiatics into the shade, and denoted a bold, enterprising, and warlike people.

Such they would appear to a superficial observer; but their character is not really so advantageous. They are mild and inoffensive, lively and good-humoured, affable and polite to strangers; but cunning, deceitful, impudent, conceited, and tyrannical where they can be so with impunity. With regard to religion, if not absolutely without it, they can scarcely be said to derive moral feeling from this source. The bamboo, which is perpetually at work, is the universal reformer of manners throughout Cochin China: a despotic and illiberal government is the engine which has formed and cultivated the national character; and we are, therefore, bound to think highly of the soil, since, so few vices are thereby generated in it.

In physical exterior there is little diversity amongst the Cochin Chinese. They are lower in stature than the Siamese, and the most diminutive of the Mongol race. They are stout and squat; they want the transverse breadth of face of the Malay, the cylindrical form of the cranium, as well as the protuberant and expanded coronoid process of the lower jaw remarked in the Siamese, and the oblique eyes of the Chinese. The characteristics of the head of the Cochin Chinese are the globular form of the cranium, and the orbicular shape of the face. Mr. Finlayson observes that there is, in the form of their head altogether, a degree of beauty, and in the expression of their countenance a sprightliness, intelligence, and good-humour, not to be found in either Chinese or Siamese. They are distinguished from the Siamese by another external property, namely their dress, which covers the body; whereas the Siamese are half naked.

The Cochin Chinese are not wanting in industry; but the military system of the government, by which about two-thirds of the male population are compelled to serve as soldiers, at a paltry rate of pay, takes the people away from agriculture and mechanical pursuits, and instils into them idle and unprofitable habits. Their behaviour to their superiors, though respectful, is not characterized by the base servility of their neighbours.

The objects of the mission being attained so far as to acquire for British commerce the same facilities as the most favoured nations enjoyed, arrangements were made for departing; but as the King had declined to receive the Governor-General's presents (on the plea that the English had not hitherto traded sufficiently here to bear such expense), Mr. Crawford courteously declined the presents sent to his Lordship from the King. Piqued at this, the officers of the

the Court displayed such petty acts of meanness, as to excite contempt. They obliged the agent to walk over bad roads, under a powerful sun, some distance to the house of the minister, who treated him in a very unceremonious manner.

Instead of returning to Turon, by water, they were permitted to proceed overland, and were conveyed in palanquins by Cochin Chinese bearers. Mr. Finlayson was now seriously ill, to which circumstance we must attribute his omission of a curious fact, recorded by Mr. Crawford in his communication to the Geological Society before quoted. That gentleman observes that, on his way back to Turon, he made an excursion to the city of Tyfo. On his route, he met with "a remarkable range of marble rocks, rising almost perpendicularly from the low sand-hills to a height of from 300 to 400 feet, without a hill or mountain within twenty miles of them." He adds, that these rocks abound in splendid caves, containing temples and images in honour of Buddha, although his worship is not now the common religion of Cochin China.

We had intended to point out the extraordinary discrepancies between the account of Cochin Chinese manners given by Mr. Finlayson, and the American Lieutenant White, in his "*Voyage to Cochin China*."* It must, however, suffice to say, that the contradictions are as extraordinary as it is possible to conceive. The American's Cochin Chinese are drunken, disorderly, beggarly, and impudent; those of Mr. Finlayson are sober, quiet, respectful, and in comfortable circumstances. We fear that the American's mercantile disappointments excited a portion of spite, and that he copied too nearly the practice of the old missionaries, who bedaubed and blackened the character of the people from whom they experienced any discourtesy.

We cannot close our review without expressing thanks to Sir Stamford Raffles for the share he has had in this publication.

A Historical View of the Hindu Astronomy, from the earliest Dawn of that Science in India to the present Time, in Two Parts: Part I. The Ancient Astronomy. Part II. The Modern Astronomy, with an Explanation of the apparent Cause of its Introduction, and the various Impositions that followed. By JOHN BENTLEY, Member of the Asiatic Society [of Bengal]. London, 1825, 8vo. pp. 282; with illustrative plates and tables.

While engaged in the consideration of this laborious work, we learned that its author had paid the debt of nature. We were prepared for such intelligence by the closing paragraph of the work before us: "The time is now come that I must relinquish these pursuits. Ill-health for some years past, with an enfeebled constitution, from a long residence in a warm climate, having been between forty and fifty years in India, obliges me to lay down my pen, and to desist from all further investigation: indeed, it has been with a great deal of difficulty that I have brought this essay to a close."

The skill of Mr. Bentley in the pure sciences, his knowledge of the Hindu tongues, his long residence amongst the natives of India, and his intercourse with the scholars of that country, rendered him competent to treat upon the difficult subject of Hindu astronomy. In the sixth volume of the *Asiatic Researches*, will be found a paper "on the Antiquity of the Surya Siddhanta," an ancient astronomical treatise of the Hindus, in which Mr. Bentley first combated the claims of this production to the monstrous age attributed to it.

This

* Reviewed in the *Asiatic Journal*, vol. xviii, p. 377.

This article was reviewed, amongst the other contents of the volume, superficially, it must be admitted, in the first volume of the *Edinburgh Review*. The strictures of the reviewer, upon the proofs adduced by Mr. Bentley, led to a further investigation of the subject by that gentleman, which may be seen in the eighth volume of the *Researches*, and to renewed strictures in the *Review*. These criticisms seem to have disturbed Mr. Bentley, who displayed some warmth towards his antagonist in his last-mentioned paper; and in the preface to his present work he complains of the "opposition" and "ill-will," and elsewhere of the "inveterate enmity," which have been "the only reward of his labours;" and that the "attacks" of the *Edinburgh reviewers*, "apparently with a view of putting down all further researches into antiquity and the investigation of truth," had nearly extinguished the zeal and harmony of the Asiatic Society, and produced a general apathy and disgust amongst its members. We can only say that such effects ought not to have been produced by the cause alleged: whatever may, in other respects, be the demerits of the articles in the *Review*, they are certainly free from asperity, and from any indication of the design imputed to them by Mr. Bentley.

But Mr. Bentley's opinions met with another antagonist, who must be exempt from all suspicion of entertaining a desire to "put down researches into antiquity and investigation of truth;" whose profound learning and great candour it was, perhaps, vexatious to find opposed to the views which, in his ardour to overturn the claims of an acknowledged ancient people, Mr. Bentley had developed: we mean the president of the Astronomical Society.

Finding reason to believe that the *Surya Siddhanta* was written by Varaha, and that this author flourished in the eighth century of our era, he employs the discovery as evidence to confirm the date he assigns to the *Surya Siddhanta*. He then extends the proof by applying it to all works in which the name of Varaha or his system is mentioned, and thereby demolishes, at once, "the pretended antiquity of many of the Purans and other books, which, through the artifices of the Brahminical tribe, have been hitherto deemed the most ancient in existence." He proceeds thus:—

From what has been said above, it appears extremely probable that the name of Varaha must have been to the *Surya Siddhanta* when it was first written, and the author well known; but that, after his death, priestcraft found means to alter it, and to introduce the ridiculous story of Meya, or Moya, having received it through divine revelation at the close of the Satya yug: upon which petty fiction its present pretended antiquity is founded. But this, it seems, was not the only pious fraud committed by the crafty sons of Brahma; for it appears that a number of astronomical works were then framed, calculated also for the purpose of deception; among these, some were pretended to be delivered from the mouth of one or other of their deities, as the *Brahma Siddhanta*, *Vishnu Siddhanta*, and the works of Siva, commonly called *Tontros*. Others were pretended to have been received through revelation, as the *Soma Siddhanta*; while others were fathered on sages, who were supposed to have lived in the remotest periods of antiquity, as the *Vasishtha Siddhanta*, *Parasar Siddhanta*, *Rudra Siddhanta*, *Gorga Siddhanta*, *Bhargob Siddhanta*, &c. to the number of about eighteen altogether, including the *Surya Siddhanta*. These eighteen are now called, by way of pre-eminence, the eighteen original masters of astronomy; though, amongst the whole, I am informed, there are not above three or four real original works—the rest being compiled from one or other of these, with the diction or style a little altered, to answer the purposes of priestcraft; but the revolutions, motions, &c. of the planets remaining the same as in the original.

The sweeping inferences intended to be deduced from Mr. Bentley's assumptions

tions

tions were calculated to overthrow all testimony derived from Hindu books : but Mr. Colebrooke, in a paper on the Vedas, in the eighth volume of the *Researches*, observes :—

A work must not be hastily condemned as a forgery, because, on examination, it appears not to have been really written by the person whose name is usually coupled with quotations from it; for, if the very work itself show that it does not purport to be written by that person, the safe conclusion is, that it was never meant to be ascribed to him. Thus, the two principal codes of Hindu law are usually cited as Menu's and Yajnyawalkya's; but, in the codes themselves, those are dialogists, not authors; and the best commentators expressly declare that these institutes were written by other persons. The Surya Siddhanta is not pretended to have been written by Meva; but he is introduced as receiving instruction from a partial incarnation of the sun, and their conversation constitutes a dialogue which is recited by another person in a different company.

The efforts of Mr. Colebrooke to attribute a higher antiquity to the Surya Siddhanta than Mr. Bentley was disposed to allow, have provoked some animadversions in the work before us, which cannot be read without regret. Mr. Bentley should have bethought himself of the pain he felt from what he esteemed as uncanon'd criticism.

This is not the only instance in which Mr. Bentley has displayed a want of due consideration towards this eminent and talented individual. His exposure of an alleged forgery of the *Brahma Siddhanta Sphuta* shews too great a vivacity of hostility. This work was found by Mr. Colebrooke on the shelf of his library, and Mr. Bentley not only asserts that it was placed there with a design of furnishing proofs against his theory, but insinuates that it was forged by a certain Hindu astrologer, out of resentment against him. The account he gives is as follows :—

He offered his services to me before he was in the employ of Mr. Colebrooke, but when he told me that his profession was book-making, and that he could forge any book whatever, to answer any purpose that might be required, I replied, I wanted no forged books; that there were too many of that description already; that I was extremely glad he was so candid, and must decline his services in any way whatever. In the course of the conversation that passed, he made himself acquainted with Mr. Colebrooke's opinions that were in opposition to mine, which, it seems, he carefully treasured up in his mind. He went directly to Mr. Colebrooke's from my house, and there got into immediate employ, as he himself afterwards informed me. This will serve to explain the circumstance of the forged book, the *Brahma Siddhanta Sphuta*, being found by Mr. Colebrooke on a shelf in his library, without knowing that he had it; as also the various forgeries of names and quotations in the spurious *Brahma Siddhanta*, made up on purpose to throw the person's name back into antiquity to answer the end in view.

Mr. Colebrooke could probably give a very different account of the matter; but that is superfluous: every syllable uttered by such a person as this astrologer is stated to be, must be unworthy of credit, and Mr. Bentley ought to have thought so.

That a system which refers the origin of a nation to the incredible date of thousands of millions of years ago, must be false, few persons will feel any scruple at believing. Such pretensions must appeal to some evidence; and evidence of all kinds, not preternatural, is subject to human judgment. The value of historical or traditionary evidence in favour of such pretensions would be insignificant. Astronomical systems, on the contrary, are of infinite value: they are not only extremely difficult to fabricate, but they may be, at all times, tried by principles which are unerring and eternal. Astronomical evidence is

the only substantial ground adduced by the Hindus for attributing a high antiquity to their nation, for historical records do not exist there.

The pretended antiquity of the Hindu astronomical writings cannot be maintained: the question then is, what epoch are we justified in assigning to them? Those who believe with Mr. Bentley that "literary forgeries are now so common in India that we can hardly know what book is genuine and what not," have, comparatively, an easy task to perform, in adjusting the dates of writers; because conflicting evidence can be reconciled or dismissed on the plea of fabrication or interpolation. There may be others who think that extensive literary frauds, universal corruption of copies, and universal destruction of historical evidence that would expose the fraud, are not so practicable as it is assumed. Hence arise difficulties which, in spite of the facility of trial already adverted to, embarrass the question.

We shall lay before the reader the substance of Mr. Bentley's work in as familiar and popular a form as we can. His reasoning, which is generally cogent, we should impair by an attempt to epitomize it. Those who are capable of deciding upon its value will, doubtless, examine the book itself.

The earliest epoch of Hindu astronomy Mr. Bentley assumes to be the formation of the lunar mansions, which he refers to the year 1424-5 B. C., by means of three data, the results of which correspond. It was not, however, till the year 1181 B. C. that the solar months were formed, and the seasons established, depending, as well as the new set of lunar mansions then introduced, on the tropical revolution of the sun. By means of the latter date, he fixes the era of Parasurama, in 1176 B. C.

The astronomical data given in the *Ramayana* enable Mr. Bentley to determine the epoch of Rama, who was born, he finds, on the 6th April 961 B. C., and also the date of that extraordinary event, the Churning of the Ocean, or war between the Gods and Giants, which occurred sixteen years before the birth of Rama. The origin of this fiction, "in itself nothing more nor less than a feigned war between light and darkness and their imaginary offsprings," as well as that of the assault of heaven by the Titans, related by Hesiod, and supposed, with great probability, to be copied from the former, Mr. Bentley refers to an astronomical allegory. The fiction of Hesiod he dates in the year 746 B. C.

The antique claims of the Egyptians and Chaldeans to a knowledge of astronomy meet with less deference from Mr. Bentley than those of the Hindus; he considers the proofs to be direct and positive that they had no astronomy until they received it from India, about the time of Nabonassar.

At the commencement of the third astronomical period of the Hindus; 606 B. C., the precession of the equinoxes amounted to $6^{\circ} 40'$, in about 494 years; their astronomers having thrown back the second period eleven years. To remedy a supposed inconsistency arising from thence, and to show the quantity of the precession, an imaginary line, or great circle, was assumed, passing through the poles of the ecliptic and the beginning of the fixed lunar asterism Magha, which circle was supposed to cut some of the stars in the Great Bear. The seven stars, in this constellation, being called the Rishis, the circle so assumed was called the line of the Rishis; and being invariably fixed to the beginning of the lunar asterism Magha, the precession would be noted by stating the degree, &c. of any moveable lunar mansion cut by that fixed line or circle. This expedient Mr. Bentley conceived would explain some very important texts in the Hindu astronomical writers, which, when understood, will defeat the attempts of the moderns to destroy the epoch of Yudhisht'hira, and to throw back his time to a very remote antiquity.

The fourth period contains nothing remarkable. The fifth commenced on the 25th December 204, B. C., when the precession amounted to one whole lunar mansion, or $13^{\circ} 20'$, reckoning from 1192 B. C., when it was nothing. At this period astronomy received great improvements; and the periods, called Yugas, were first settled by astronomical computations. The manner in which these periods were fixed is thus stated:—

The years with which each period was to commence and end having been previously fixed on, the inventor then, by computation, determines the month, and moon's age, on the very day on which *Jupiter* is found to be in conjunction with the *sun*, in each of the years so fixed on; which being recorded in the calendar and other books, might at any time be referred to for clearing up any doubt, in case of necessity.

The dates of the four yugas are as follow: The Kali, or first period, immediately preceding the inventor, began B. C. 540; the Dwapar, or second, began B. C. 901; the Treta, or third, began B. C. 1528; the Krita, or fourth, began B. C. 2352. This was the date of the creation, according to the Hindu theory, and it is remarkable that the year corresponds with that of the Mosaical deluge.

The sixth astronomical period began January 23, A. D. 44. At this time Mr. Bentley considers that the Hindus acquired a knowledge of the opinions entertained in the West, respecting the era of the creation, and, in order "to make the world believe they were the most ancient people on the face of the earth," they remodelled their chronology, dividing it into nine Manwantaras, or patriarchal periods, making the first begin in 4225 B. C. The seventh astronomical epoch began A. D. 291, and ended A. D. 538, with which year terminates the ancient and begins the modern astronomy of the Hindus.

At this epoch, it is alleged, the great corruption of Hindu astronomy took place, by a preposterous attempt to throw back the date of the creation to the immense distance of 1,972,947,101 years before the Christian era. The plan by which this attempt was to be carried into effect, Mr. Bentley details very minutely in the first section of Part II. It was, in few words, by framing an astronomical system, in which the planetary motions were to commence with a *Kalpa* (or cycle) of 4,320,000,000 years, which they subdivided into periods called by the same names as in their ancient system; and to make the computations of the eclipses and positions of the planets, at all times, to depend on that fact. They, moreover, adopted the sidereal sphere and year, instead of the tropical; so that the beginnings of the months and years would remain at the same points, in respect of the fixed stars, in which they then stood, and be also the same at the beginning of the kalpa.

In describing the various arts by which the fraud was to be perpetrated, Mr. Bentley observes that "there is no imposition too gross or absurd that a Hindu will not employ to gain his ends." In the present case, the ends themselves seem to be every whit as absurd and gross as the means.

It is natural to entertain some doubt as to the practicability of such an extensive imposition. If it be within the power of a collusive priesthood to impose a given creed upon their besotted followers, it is not easy to extinguish the adverse evidence, which may be found in books and records of various kinds. Mr. Bentley anticipates, and thus answers, the objection:—

To some it would doubtless appear, as a thing impossible, that a set of *Brahmins* is *Ujein* could impose such a system on the rest of India. Those, however, who are acquainted with the *Brahminical* character, know too well that every thing was in their power: they were in possession of all the learning in the country, and their influence

was

was so great, that even the princes of the country were obliged to bow submission to their will. Therefore, when they assembled together in convocation, to consult on the general interest of the whole body, whatever resolutions they came to on that head, would be universally adopted by the brethren: and woe to the man that should dare oppose them; for their power and influence far exceeded those of the Popes in Europe, so that wherever they sent their secret orders, they would be sure to be obeyed.

He moreover suggests that the introduction of this new system was, in a great measure, designed to counteract the progress of Christianity in India, which object was furthered, likewise, by the invention of the *avatars*, or descents of the deity; which Mr. Bentley thinks were devised by the Brahmins to show superior favour displayed by Heaven towards the Hindus, in the very mode which the Christians consider as so miraculous. The birth of Krishna, which the Hindus assign to the era (corrupted) of Yudhisht'hira, Mr. Bentley finds, from astronomical data recorded in the *Janampatra* of Krishna, was on the 7th August, A. D. 600.

The system of Varaha, as it is called, given in the *Vasish'tha Siddhanta*, the *Surya Siddhanta*, and the *Soma Siddhanta*, Mr. Bentley pronounces to have been framed in the ninth century of the Christian era, instead of being upwards of a million of years old, as the Hindus pretend. This system begins later than the great kalpa by 17,064,000 years, owing to the formation of the revolutions of the planets into small cycles for the convenience of calculation. It is, however, dependent upon the great or Brahma kalpa; for, in computing the number of years elapsed of the former, the time must be found according to the latter, from which 17,064,000 must be deducted, to show the years elapsed of the system of Varaha. By a series of elaborate calculations, Mr. Bentley endeavours to shew that this system was even posterior to the observation of the star Canopus, when it was exactly in the beginning of Cancer, which is alleged to have been made by Vridha Vasish'tha, the presumed author of the *Vasish'tha Siddhanta*. The longitude of Canopus, in A. D. 1750, was $3^{\circ} 11' 30'' 39'' 6''$; difference of longitude since the observation $11^{\circ} 30' 39'' 6''$; which, reduced to time at 1° in $71\frac{1}{2}$, gives 822 years. Therefore, $1750 - 822 =$ A. D. 928, the time of the observation. By dividing the errors or differences in position of the planets at the beginning of the Kali Yuga, by those in their mean annual motions, Mr. Bentley obtains the mean result of K. Y. 4192, or A. D. 1091, as the genuine date of the system; whence it appears to have been framed even many years subsequent to the observation before-mentioned.

The ingenious contrivance by which the precession of the equinoxes was computed in the system of Varaha, without recourse to the laborious calculations requisite to find it according to the great kalpa, Mr. Bentley explains very clearly, by the help of a diagram. He thence infers that the notion of a libration or oscillation of the equinoxes, instead of a complete revolution, is erroneous, and unsupported by the Hindu texts.

The author next considers the system of Aryabhata, contained in the *Arya Siddhanta*, and assigns to it the date of A. D. 1322. The principal objects of this system, he conceives to have been, to assign a position to the planets, agreeing with their real places in the heavens, much nearer the truth than in preceding works; to support the modern impositions; and to pervert the meaning of the passage in Parasara, respecting the Rishis being in Magha, &c. This system was constructed precisely on that of Brahma, or the great kalpa, and the precession of the equinoxes was computed on a plan nearly similar to that of Varaha. To perfect his scheme respecting the Rishis, Mr. Bentley alleges that Aryabhata forged a work which he attributed to Parasara; this is the

Parasara

Parasara Siddhanta, which is included in the Arya Siddhanta. Pursuing the same plan with these works as with the preceding, Mr. Bentley deduces from the errors in the positions and motions of the planets a mean result, which gives the date of Aryabhata A. D. 1322.

Varaha Mihira supported the fraud attempted by Aryabhata. The date of Varaha Mihira is fixed at A. D. 1528. He mentions Aryabhata, and was, therefore, subsequent to him; he also states, in the *Varaha Sanhita*, that "Canopus rose heliacally at Ujein, when the sun was 7° short of Virgo; that is, when he was in 29° of Leo." This Mr. Bentley considers as an important fact, as serving to decide a point of time long disputed.

In explaining the causes of Varaha Mihira being thrown back into antiquity, Mr. Bentley states, that upon the presentation of a work of Bhaskara Acharya to the Emperor Akber, who ascended the throne about 1556, the Hindus, desirous of exalting the antiquity of their literature, represented that it was not the work of Bhaskara then living, but of another Bhaskara of antecedent date. But as Bhaskara Acharya, in his *Siddhanta Siromani*, mentions the name of Varaha, it became necessary to practise the same deception with respect to him; so that there were thus two Bhaskaras and two Varahas. The proofs in support of these impositions, or rather the expedients employed to remove the inconsistencies which they disclose to the inquirer, were not thought of, Mr. Bentley imagines, till about the middle of last century. The expedients, he alleges, were fabricated books; amongst others a spurious Arya Siddhanta, substituted for the real one. In unravelling these alleged frauds and forgeries, which brings him into collision with the great oracle of Hindu literature, Mr. Colebrooke, the fact mentioned by Varaha Mihira himself, of the heliacal rising of Canopus, is considered by Mr. Bentley as the only evidence (inadvertently overlooked by the forgers) by which they could be fully detected.

In the analytical account of the *Pancha Tantra*, which appears in the recently published part of the Transactions of the Royal Asiatic Society, Mr. Wilson, the author of the paper, adverts to the quotation from the astronomical writings of Varaha Mihira, in that work, and which occurs, he says, without variation, in the two best manuscripts of the original; and adds, that "this citation is justly considered, by Mr. Colebrooke, as a proof of the astronomer's priority to the composition of the *Pancha Tantra*, and a satisfactory corroboration of other arguments favourable to his existence at the time usually assigned to him, in the fifth century of the Christian era."

This proof, which Mr. Colebrooke brought forward in the eleventh volume of the *Asiatic Researches*, observing that the *Pancha Tantra* was the original of the fables of Pilpay, translated into Persian for Nushervan more than 1200 years ago, Mr. Bentley thus comments on:—

"It does not follow that the *Pancha Tantra* of Vishnu Sarmana is the original of the fables of Pilpay: on the contrary, it is more likely that the latter should be the original of the former.—We have no proof whatever that the *Pancha Tantra* of Vishnu Sarmana is even a hundred years old: for to prove that it was the identical one that was translated into Persian more than 1200 years ago, it ought to be shown that the name of Varaha Mihira was actually in that very translation, and still continues, without which it could be no proof; for we know that all Hindu books are liable to interpolations, and consequently the *Pancha Tantra* as much so as any other. But supposing the fact was true that the name of Varaha Mihira was actually in the original translation into Persian upwards of 1200 years ago, it could only go to prove that there have been more persons of the name of Varaha Mihira than one, but would never affect the time of the author of the *Varaha Sanhita*, who was the contemporary with Akber."

Of the readiness with which literary frauds are practised in India, Mr.

Bentley

Bentley adduces (note p. 175) a proof in the confession of a Hindu astronomer, who, upon grounds stated by him, avowed that he would put his name to an astronomical work, wherein the epoch from which the calculations were made should proceed 1000 years back: but he added, "in such cases, it was usual to put the name of some ancient sage to it, or that of some fictitious astronomer, with an account of his birth, parentage, connexions, and country, in order to give it the plausible appearance of being ancient and real, which, according to modern notions, would much enhance its value." It is proper to remark that Mr. Colebrooke himself admits that the affixing the name of a celebrated author to a work composed in later times, is "a practice which is but too common in India, as in many other countries."

The examination of the alleged spurious works, which are the foundation of the pseudo-ancient system of Hindu astronomy, occupies the whole of Mr. Bentley's fifth section. He adduces a mass of proofs in support of his opinions, which many readers will think amount to demonstration. We cannot pretend to give an epitome of this portion of the work; neither do we feel competent to decide upon the merits of the controversy between the author and Mr. Colebrooke, which is the subject of the concluding section.

The reader will have already perceived how perplexed and difficult a matter is here treated of. Whatever discordance of opinion may exist between the author and other learned persons, on this abstruse subject, no one can justly deny to the memory of Mr. Bentley, the reputation due to the display of great skill, great diligence, profound inquiry, and unwearied perseverance. It would have been more gratifying to us had he evinced less captiousness towards his adversaries. No writer ought to deprecate criticism; its end, whether the criticism be just or not, is the establishment of truth: and even where the critic debases his office by the use of vulgar invective, his censures should inspire no other sentiment than contempt.

Moore's Views in the Burman Empire.

THIS work is to consist of eighteen coloured views in aqua-tinta, to be published in three series, each containing six plates, with an emblematical frontispiece. The first number only has yet been published, and the plates display, to great advantage, Mr. Moore's graphic talents. The pen is unable to delineate faithfully the peculiar objects which awaken attention in the country we are now invading. The most laboured description can give Europeans but an imperfect idea of a Burmese stockade, or a pagoda, with its countless lines and curves, its variegated shades, and its innumerable ornaments in detail. These can only be portrayed by a skilful pencil.

The plates which appear to us the most interesting of the set are, that representing the storming of a stockade by our troops (giving a very good idea of the nature of that kind of defence), and the two views from the Great Dagon Pagoda near Rangoon. The latter afford an admirable representation of the gorgeous and peculiar character of Burmese architecture. The gold temple, containing the principal idol of the deity Guadama, or Buddha, is described by Mr. Moore as "a magnificent edifice, which, for the light elegance of its contour, and the happy combination of its several parts, may be fairly said to challenge, for beauty, any other of its class in India."

In the several views, Mr. Moore has had to represent not only landscape and figures, but marine and architectural objects; and, although he may not have succeeded equally in all, he has produced a work that does him great credit.

VARIETIES,

VARIETIES;

PHILOSOPHICAL, SCIENTIFIC, AND LITERARY.

ASIATIC SOCIETY OF CALCUTTA.

A meeting of the Asiatic Society was held at the Society's apartments in Chouringhee, on Wednesday evening, the 13th of July. The hon. J. H. Harington, Esq., president, in the chair.

At this meeting the dried and prepared head of a New Zealander was presented by Mr. Ashburner, in the name of Capt. Sعاد.

A letter was read from the Secretary of the Calcutta Medical and Physical Society, presenting the first volume of their transactions.

A work on the Principles and Precepts of Mahomedan Law, by W. H. Macnaghten, Esq., was presented by the author.

A letter was read from M. Abel Rémusat, acknowledging his election as an honorary member, and forwarding numbers 12 to 20 of the Journal Asiatique, on the part of the Asiatic Society of Paris.

A map of the Burmese empire was presented by the Asiatic Lithographic Company.

A letter was read from Mr. Secretary Lushington, forwarding the second part of the first volume of the Transactions of the Astronomical Society of London; and another from the same gentleman, transmitting a letter from the Governor of Batavia, to the Governor-General of British India, with a Latin dissertation by Dr. De Siebold, of the Residency at Japan, upon the knowledge of Sanscrit letters among the Japanese.

Dr. Siebold, physician to the Dutch establishment in Japan, notwithstanding the jealousy with which inquiries of every kind are regarded by the Government, has been enabled, by the assistance of his pupils in the medical art, to acquire some knowledge of the literature and language of Japan, and has ascertained that the prayers of the priests of Eutsdoo or Buddha, are written in characters derived from the Brahmins, whom they term Brahamura. He has also procured a treatise on the Sanscrit language, printed at Su-jako, in Chinese and Japanese characters, and forwards a specimen there given of the Sanscrit alphabet, together with the pronunciation as expressed by the Japanese author, for the Society to determine whether the alphabet is what it pretends to be. He has also translated the account of the origin of the alphabet, with the view that it may be decided by the same authority, whether it be derived from Indian tradition; and under an impression that the Society may

Asiatic Journ. VOL. XXI. No. 122.

be able to form a judgment from the shape and appearance of the characters from what part of India they originated, and, as accompaniments of the extension of the Buddha religion, from whence that legislator proceeded.

Dr. Siebold also offers his services to determine any questions, or prosecute any inquiry, the Society may propose, whether relating to the natural history, botany, language, people, or country of Japan.

The tract is called *Sittan Mata Teimoi*, or Perfection of Indian Letters. The letters of Southern India were communicated through divinities. In the beginning of the world Makeis yura (Makeswara) had by his wife, Bifu-ken, a son, named Barama, also named Bonten, that is, the divine author of letters. He had three brothers, who taught the three modes of writing, according to the direction of the letters.

The letters of Southern India were written from right to left. From their being invented by Bonten, they are said in the book Ziks to derive their origin from Makeis-yura. In the book of S-saka mention is made of this kind of writing in seven different places, and the characters are said to amount to fifty. The god of the sublime religion, the offspring of the sun, has left two books, the Book of the Sun and the Book of the Moon, in which these fifty letters are detailed; five forms of them are also there distinguished, or the letters of central, southern, northern, eastern, and western India. These letters are then attributed to K-jug-ju (*Curia Draconis*), and are said to have been first taught by a priest named K-ju-djo. In Central India they are called *Siti Arasato*.

After this the author proceeds to represent the different letters, vowels, and consonants, and their various combinations, with their value in Japanese letters. The specimen sent by Dr. Siebold, is only a part, probably, of the work, as it gives only the short vowels of the Nagaree alphabet, and their combination with but nine of the consonants, making fifty in all, which has probably induced him to think it was the alphabet. Of these eight correspond in form precisely with the Nagaree letters, and the value given to six of them is quite correct. The letters called Suwa, Huwa, and Tawa, or व S, प T, य G , are very differently expressed from the Indian pronunciation, which calls them, invariably, B, P, and Y. The first, however,

2 E

ever, is in shape the B of the Bengalee alphabet. In inscriptions, it sometimes represents *Cha*, which may possibly be intended by *Sa*. There is no doubt that the letters are of Indian origin, and the legends, although they have undergone some local modification, are from a similar source. Brahma is, by some Saiva-puranas, considered to have been created by Siva and Makeswara, and is so far his son. As the author of the Vedas, he is the inventor of letters. Again, the order of the alphabet, as taught by Punini, was communicated, it is said, to that grammarian by Siva, and the first rule of Punini's grammar, which contains the letter S, is called the Siva *Sutra*. The rule of Siva K-jug-ju, *Curia Draconis*, is Rahu. The head of the Dragon Sakya, or Buddha, is called Arha Bandhava, the friend or relation of the sun, and as a Kshetriye, possibly of the solar line, may be called his progeny. The existence of different characters in different parts of India is indisputable, although the enumeration given by the Japanese author is not very correct. What he means by Sitti Arasato, cannot be well conjectured, unless Arasato be intended for Akshara, a letter. The other circumstances adverted to are Buddha or Japanese, and find no equivalent in the sacred literature of the Hindoos.

A paper was also read upon the literature of Thibet, the date of Buddha, and the progress of the Buddha religion, by the Secretary, as derived from information communicated by Mr. Goma de Korous, compared with the inquiries of ancient and modern writers in Europe on these subjects.

Mr. Korous, a Hungarian traveller and philologist, has succeeded in finding his way from Wallachia to Ladakh, and, with the aid of Mr. Moorcroft, has there enjoyed favourable opportunities of acquiring an insight into the language and literature of Thibet. After passing several months in Ladakh with Mr. Moorcroft, he studied a considerable time under an intelligent Lama at Zanskar, in that principality, and expects to be able, in the course of twelve months, to complete a grammar and vocabulary of the language, which are now in a state of great forwardness.

ASIATIC SOCIETY OF PARIS.

Meeting of 7th November. M. Bopp announced, in a letter from Mannheim, the approaching arrival of the second part of his Sanscrit grammar.

Dr. Lesson presented to the Society a Javanese MS. which will be deposited in the library. The thanks of the council will be transmitted to Dr. Lesson.

Capt. Troger was introduced and admitted a member.

M. Klaproth presented the first thirteen sheets of the Georgian and French vocabulary, and intimated that the printing of the French and Georgian vocabulary is about to commence, and will be completed in two months.

M. Stan. Julien presented three printed sheets of his *Mencius*, and stated that the second part of this work will be completed before the next meeting of the council.

A member communicated a work undertaken by Messrs. E. Burnouf and Lassen, on the dialect known under the name of *Pali*. The examination of this work was referred to a committee composed of Messrs. Kieffer, Garcin, and Abel-Rémusat.

A member adverted to the Sanscrit inscriptions, the originals of which exist in Portugal, which had been transmitted to the Society, and requested that a report be made on the subject. Referred to the next meeting of the council.

M. Schulz read a memoir on Hoai-nantseu, a Chinese philosopher of the sect termed Rationals, or Free-thinkers.

TERMITES.

The *termites*, or white ant, so destructive in the East-Indies, are not less so in South America. The mode of destroying them is a little singular, that of turning the antipathy of the races to good account. As soon as they are observed, a little sugar is put down, which in a moment summons a tribe of brown or black ants, who instantly attack and destroy the termites.

NEW KIND OF STEREOTYPE.

The Gazette of Munich announces the invention of a new kind of stereotype, by M. Lanefelder, to whom the art of lithography is due. A sheet of ordinary printing paper is covered with a layer of stony earth (*terre pierreuse*), to the thickness of half an inch, and sufficiently moistened with water. In half an hour it assumes the consistency of paste, when it is put in frames and on types composed in the usual manner, but not blackened, and the paste becomes impressed with the characters. The sheet is then dried on a stone flag, and melted metal poured on it. The metal becomes a thin plate, and has all the characters standing out on it, as well formed as the original types. The proofs from those stereotype characters do not differ from those taken from moveable types. The author of this discovery offers to explain it fully for a subscription of 100 florins, as soon as he shall have thirty subscribers. He estimates the preparation necessary for the casting at 100 florins, and the paper covered with the stony paste at six kreuss (2d English) a sheet.

METEM-

METEMPSYCHOSIS.

Souls transmigrate, according to the tenets of the Fo religion, by means of six passages, to six orders or classes of beings: the first is that of the celestials; the second that of men; the third that of the genii; the fourth that of beasts; the fifth that of demons; the sixth that of the inhabitants of hell. Into one or other of these classes, by means of transmigration, whatsoever is animated passes and repasses perpetually, according to merit or demerit. To get to heaven it is necessary to do good and shun evil; but as beneficence is more or less perfect, so heaven has many degrees or stages, which, beginning at the earth, are elevated one upon another. There are thirteen of these heavens; after which there are five others, from whence the tenants, who are called saints, never return. Those in the fifth, or highest, are entirely purged from error, and behold clearly the nature of all things. They are still, however, material, not having yet arrived at perfect *exinanition*, or complete annihilation. *Deshaüterayes*.

THERMOMETER IN INDIA.

According to a register published in the Calcutta *John Bull*, the greatest height of the thermometer at Nipal, during the month of March last, inside the house, was 74°, the least height 48°; outside, in the shade, the greatest height was 84°, and the least 32°. At Madras, the greatest height of the thermometer in the month of March was 89½°; the least height 74½°.

HINDOOSTANEE PROVERBS.

"Come, bull, gore me." Spoken of one who willingly brings misfortune on himself.

"The barber, the shaver, and the beard-scraper, I and my brother, the mare and her colt, and me you know." Applied to one who pretends, in a distribution of provisions, to receive the shares of several people, which are, in fact, all for himself.

"His Turkish is expended." *Angl.* He has got to the length of his tether.

"The crowing of a hen is no rule." *i. e.* A woman's opinion is not to be depended upon.

"He fell from heaven, and stuck in a date-tree." Said of a person who commences great things, and is stopped by trifles. *Angl.* To swallow an ox and be choked with the tail.

"A gourd and pumpkin, curse on both!" Applied to a dispute between two persons equally worthless.

"Hear, drum, the lady's voice." Spoken by one to whom another has made many professions of kindness, which have not been fulfilled.

"May the devil be deaf." *i. e.* I hope this will not reach the ears of those who will found a calumny on it.

"What garden is this radish from?" An expression of contempt.

"My father has eaten ghee, smell my hand." Applied to one who, without any merit of his own, boasts that of his ancestors.

"The poor devil of mankind is man."

"His eyes are covered with fat." *i. e.* He is too proud to recognize his old friends.

"Come, squirrel, another colour." *i. e.* Change the subject.

"Up with the fire-pan." *i. e.* Let us shift our quarters.

COPIOUSNESS OF THE ARABIC TONGUE.

According to Firouzabadi, an Arabian lexicographer, the Arabic language contains 1,000 words to designate a *camel* and a *lion*; and 500 to express a sword. This abundance of synonyms (arising from the multitude of tribes which composed the Arab nation) is not altogether unexampled in modern languages: the Laplanders have 30 words to designate a *reindeer*; the French have more than 50 for a *ship*, with relation to its size, shape, and the purpose for which it is employed; the Germans have 100 words and the French 50 to express a *horse*.

It is reported of Saban, a celebrated orator and poet of Arabia, that he once spoke for half a day, without using the same word twice over.

CHINA INK-MAKERS.

Ink-making is considered a very respectable employment in China; it is even ranked among the liberal arts, on account of its utility to the sciences. In a city famous for the finest ink, the ink-makers have several small apartments illuminated night and day.

ARAB HORSES.

Arab horses of good extraction, says M. Jean Humboldt, called *acil*, display uncommon fidelity and intelligence. They follow their master like a dog. If he goes into a house, they stop on the threshold of the door, without being fastened by a halter, and wait for him there a whole night. Moreover, these horses have such an exquisite scent, that they smell their master's track when he is at several leagues distance. If he happen to die, it is not uncommon to see them lay down upon the earth that covers the body, and expire with hunger rather than quit the place. *Anthologie Arabe*.

College of Fort William.

27TH JULY, 1825.

The Rt. Hon. William Pitt, Lord Amherst, Governor-General, and Visitor of the College of Fort William, having appointed Wednesday, the 27th July, for the distribution of the prizes and honorary rewards adjudged to the several students reported qualified for the public service, during the past year, the president and members of the College Council, the officers, professors, and students of the College met at ten o'clock in the forenoon, at the Government House, where the Hon. Sir Charles Grey, Chief Justice; the Hon. J. Fendall, Esq.; Sir Antony Buller; the officers of the Rt. Hon. the Governor-General's suite; many of the civil and military officers of the presidency, together with several of the principal inhabitants of Calcutta, and some respectable natives, were also assembled.

Lady and Miss Amherst, Mrs. Pearson, the Misses Buller, and several other ladies, honoured the ceremony with their presence on the occasion.

Soon after 10 o'clock, the Rt. Hon. the Visitor, attended by the officers of his staff, entered the hall. When the Visitor had taken his seat, W. B. Bayley, Esq., President of the College Council, presented to the Rt. Hon. the Visitor the several students of the College who were entitled to receive medals of merit, adjudged to them at the public and private examinations of the College holden since June 1824, and read the certificates granted by the Council of the College to each student about to leave the institution.

The Visitor then presented to Lieut. A. D. Gordon and Lieut. H. Todd, entitled to receive degrees of honour, the usual diploma, inscribed on vellum, expressing at the same time the satisfaction which he felt in conferring it.

The medals which had been awarded to the several students having been distributed to them respectively, the Rt. Hon. the Visitor delivered the following discourse:—

“Gentlemen of the College of Fort William: The proceedings of the College Council, with the several reports of the professors, and other public officers, relating to the affairs of the institution for the elapsed year, have been laid before me, and have been perused with attention and interest. The results are, upon the whole, extremely gratifying. Scarcely any instances of a serious breach of discipline, during the past year, have been brought to my knowledge, while the distinguished success of some, and the steady and assi-

duous application of a great majority of the students, have been no less honourable to themselves than creditable to the institution to which they have been attached.

“The alterations which have, from time to time, been adopted in the course of study pursued in the College, and in the test of qualifications for the public service, will not admit of any very accurate comparison between the present and former years; but with every due allowance for the changes alluded to, I feel myself authorized to state, that both in the number of students who have qualified themselves for the public service by a competent knowledge of two of the native languages, and in the extent of that knowledge, with reference to the time in which it was acquired, the results of the past year are as favourable as those of the most flourishing periods of the institution.

“Thirteen medals of merit, for rapid and considerable proficiency in the native languages, have been awarded to students since June 1824; and degrees of honour in Persian and Hindoostanee have been conferred on Lieuts. Gordon and Todd for extraordinary proficiency in those languages. I am happy to have had an opportunity of rewarding the honourable acquirements of those meritorious officers, by nominating them to fill the respectable situation of public examiners in the College of Fort William.

“The collegiate year now under review gives a total amount of nineteen students competent to the discharge of their public duties, by the extent of their attainments in the Persian, and in the Hindoostanee or Bengalee language.

“Of that number, Messrs. Charles Grant Udny, Henry Pidcock, Francis Horsley Robinson, Frederick Octavius Wells, and Thomas Barbot Beale, were declared qualified in Persian, and Mr. Wells in Hindoostanee, at the late annual examination in June; Messrs. Edward Currie, Edward Lennox Campbell, Richard Walker, Henry Lushington, John Dunbar, and James William Alexander, were declared qualified in Persian; and Messrs. Edward Currie, Edward Deedes, Richard Walker, and Alexander Grant, in Hindoostanee, at the half-yearly examinations in December last.

“The remaining students, *viz.*, Messrs. James Stephen Lushington, Hugh Vans Hawthorn, Robert Neave, Charles William Truscott, David Brooke Morricson, George James Taylor, Edward Deedes, and Alexander Grant, were pronounced qualified at intermediate examinations held at different times since June 1824.

“Messrs.

“Messrs. Udny, Pidcock, and Robinson, were admitted into the College in November 1824, and in the short space of seven months, their talents and assiduity enabled them to pass with great credit the requisite examinations in Persian and Bengalee. Medals of merit were awarded at the late examination to Messrs. Udny and Pidcock for rapid and considerable proficiency in the Persian, and to Mr. Robinson for rapid proficiency in the Bengalee language; and it is the opinion of the examiners, that if these gentlemen had remained attached to the College for a few months longer, they would have entitled themselves to those honours which are usually assigned as the reward of the highest attainments in the College. Similar praise is also due to Mr. Edmonstone for his knowledge of Persian; but as he has passed in that language only, his progress in his studies will be more properly commemorated at the next anniversary.

“Mr. Frederick Octavius Wells was admitted into the College in May 1824, and among the students reported qualified for the public service at the late annual examination, he ranks first in Hindoostanee, and fifth in Persian.

“Mr. Thomas B. Beale having commenced his studies in October 1824, was reported qualified in Hindoostanee at a separate examination in April last, and he obtained the sixth place in the first class of Persian students at the late examination in June, which entitles him to emancipation from the College.

“In the report of 1824 was noticed the rapid progress of Mr. James S. Lushington. He was not, however, declared qualified by a competent knowledge of two languages to enter the public service until July in that year, and he may, therefore, be more properly considered as holding a place among the students whose names are included in the present address. Previously to his admission in May 1824, he had acquired a considerable knowledge of Persian, and at the annual examination in June, he held the first place among the qualified students in that language. Mr. Lushington's knowledge of Hindoostanee when he arrived in India was not extensive, and the fact of his having qualified himself to pass a very creditable examination in that language in the following July, furnishes a highly honourable proof of his talents and application.

“Mr. Hugh Vans Hawthorn commenced his collegiate course in October 1823, passed in Hindoostanee at the annual examination in June 1824, and in Persian at a separate examination in September of the same year.

“Mr. George James Taylor was admitted into College in May 1822, and it appearing at the annual examination in June 1823 that he had made inadequate pro-

gress in study, he was removed from the institution to a station in the interior of the country, where he obtained such an acquaintance with Persian and Hindoostanee, as enabled him to gain the usual certificate of qualification for the public service, by a competent knowledge of those languages at separate examinations in June and December 1824.

“Mr. James Wm. Alexander commenced his oriental studies in October 1824, obtained a medal of merit for rapid proficiency in Persian at the half-yearly examination in December 1824. He passed a separate examination in Hindoostanee in February 1825, and was then declared competent to enter on the discharge of his public duties.

“Mr. Edward Deedes entered College in May 1823, and passed the requisite examination in the Persian and in the Hindoostanee languages in June and December 1824.

“Mr. Alexander Grant was admitted in October 1823, passed a separate examination in Persian in September 1824, and at the half-yearly examination in December of the same year held the fourth place in the first class of Hindoostanee students.

“Mr. Henry Lushington first joined the College as a student in October 1821, but having revisited England before his collegiate course was completed, he rejoined the institution on his return to Bengal in August 1824, passed in Persian at the half-yearly examination in December following, and in Hindoostanee at a separate examination in March 1825, when he was reported qualified for the public service.

“Mr. Edward Currie was admitted in May 1824, and in the short space intervening between that date and the half-yearly examination in December following, his talents and application enabled him to attain the highest rank in the first classes of both Persian and Hindoostanee, and at the same time entitled him to the reward of medals of merit for rapid and considerable proficiency in both those languages.

“Mr. David Brooke Morrieson was attached to the College in May 1824, and at the half-yearly examination in the following December, he held the first place in Bengalee, being distinguished upon that occasion by the reward of a medal of merit for his proficiency in that language, and at a separate examination in February 1825 he passed in Persian, and was then declared qualified to commence his public duties.

“Mr. John Dunbar was likewise admitted in May; at the half-yearly examination in December following he obtained the fifth place in the first Persian class, and was pronounced qualified at a separate examination in Hindoostanee in March 1824.

“Mr.

"Mr. Richard Walker commenced his Persian and Hindoostanee studies in June 1824, and his abilities and diligent application enabled him to pass very creditably, in both those languages, at the half-yearly examination in the following December, obtaining a medal of merit for rapid and considerable proficiency in Hindoostanee.

"Mr. Edward Lennox Campbell being admitted at the same time as the last-mentioned student, obtained the second place in the first Persian class at the half-yearly examination in December 1824, and passing, at a separate examination, in Hindoostanee, in March 1825, he was then, by his knowledge of both languages, reported qualified to enter upon the discharge of his public duties.

"Mr. Robert Neave likewise commenced his studies at the same time as the two last-named students, and obtained his emancipation from College in April 1825, by passing a separate examination in Hindoostanee in February, and in Persian in April, of the above year.

"Mr. Charles William Truscott was admitted into the College in August 1824, and passed, at separate examinations, in Persian and Hindoostanee, in April and May 1825, being upon the latter date reported duly qualified for the public service.

"Two of the students who, by inattention to the rules of the institution, had incurred the penalty of the sixth statute, have lately been removed from the College, but in the hope that a sense of their duty and situation will induce more vigorous exertions, I forbear, on this occasion, to mention their names, or to animadvert any further upon their conduct.

"An alteration in the studies of the College has been introduced within the last year by the enactment of a new statute, requiring of every student, as a qualification for the public service, a knowledge either of the Hindee or of the Bengalee language in addition to the Persian.

"Experience had shewn that the students generally attended to Hindoostanee lectures in preference to Bengalee, because the simultaneous acquisition of the former and of Persian, was much less difficult than of Bengalee and Persian.

"The study of Bengalee and of the Hindee dialects was in consequence greatly neglected, and the exhortations delivered from this chair, at successive anniversaries, having failed to induce a more general cultivation of them, the acquisition either of Hindee or of Bengalee, in addition to Persian, has been made, by the statute before referred to, an indispensable part of the course of study now observed in the College. In the general term Hindee are included those vernacular dialects which, with some local variations and modifications, are used by the bulk of the Hindoo

population throughout the provinces of Behar and Benares, and in the ceded and conquered provinces.

"Every information which I have received from those best qualified to speak on the subject, prompts me to urge, in the strongest manner, an attention to these, which I may properly call, the languages of the country.

"In former times, when English gentlemen, comparatively few in number, were required to communicate chiefly with natives of rank or influence, by whom the details of the civil administration were conducted, a knowledge of Persian, the language of official record, and of Hindoostanee, the medium of personal communication among the higher orders, might enable the possessor adequately to discharge the functions that ordinarily belonged to the civil servants of the Company.

"But that state of things has long since ceased to exist. You are now constantly called upon to administer justice to the humblest, to ascertain the rights and interests, and institutions of the rudest classes. These, indeed, are they who, being most exposed to oppression, will chiefly demand your care: their happiness will be the proudest glory of your country, the surest foundation of empire in India. We profess to fence the cottage of the peasant by a barrier no less firm than that which guards the possessions of the highest and most opulent classes. And could the lowliness of the individuals reconcile the mind to a neglect of their humble, yet much prized rights, could you overlook the obligation recognized by every heart, of seeking, with more than ordinary care, to cherish and support those who most require protection, yet the number and importance of the class (they constitute, in fact, the yeomanry of the country) would sufficiently inculcate the duty of attending to their claims.

"But if you cannot speak their language (Persian and Oordoo are nearly as foreign to them as English), the best laws of the Government will be a mockery; your most generous resolves will end in disappointment; the real rudeness and ignorance of the people will be exaggerated; they will seem to be unreasonable because they cannot explain to you their reasons: you will appear to them capricious, if not tyrannical, even when actuated by the purest motives, because you cannot state your purposes, and because you cannot discover the real influence of your acts. In one word, you will be strangers to the people, and they to you; and the inconvenience may be aggravated into the most intolerable mischief through the designs of those who may seek their profit in the estrangement.

"I would, therefore, in the strongest manner, inculcate on those who are destined

tined for the western provinces, to make themselves masters of Hindee: a knowledge of Bengalee is not less necessary to the due discharge of the duties confided to those who are employed in Bengal.

“To persons so grounded, the elegancies of polite conversation will not probably be of difficult attainment; it is certainly very desirable that you should be able to converse with a native gentleman in language which he would not himself be ashamed to use. But to understand and to be understood by the bulk of the community is a positive duty, which you cannot neglect without dishonour to yourself, without unfaithfulness to Government, without discredit to your own country, and injustice to this.

“The firm belief I entertain of the substantial advantages of the College of Fort William, and the sincere personal interest I take in its honour and prosperity, make me particularly solicitous to impress upon the minds of the gentlemen now attached to it, the importance, not only of a diligent and persevering attention to their prescribed studies, but also of cautiously avoiding all unnecessary and expensive indulgencies.

“The extravagance of some of the students has, at all periods, formed the chief ground of objection to this institution; an objection, indeed, which, if it were true to the extent which has been some times asserted, would justify the conclusion, that the benefits arising from efficient instruction in the native languages of India, were more than counterbalanced by the baneful effects of pecuniary embarrassment. I am happy to believe, that the students, during the past year, have been comparatively free from habits of extravagance and dissipation, but I cannot indulge the hope that many of them are exempt from debt.

“This subject has engaged the anxious attention of Government, whose sacred duty it is to secure those who are to be entrusted with the administration of public affairs from all undue influence in the discharge of their official functions, and to take care that they commence their public career in perfect freedom and independence.

“Arrangements are now in contemplation, which, when carried into effect, will obviate all plea of necessity on the part of the students for contracting debt; and I take this public opportunity of announcing, in the most distinct manner, that as soon as the measures in question have been brought into operation, every endeavour will be made to discourage extravagant and expensive habits, not merely by the immediate removal from Calcutta of individuals who may violate the rules, but by considering those young men in the civil service who may contract any considerable

debt, to be thereby virtually disqualified for situations of trust and emolument. The Government must reluctantly impose upon the officers of the College, and upon the gentlemen who form the College Council, the irksome, but necessary, duty of ascertaining and reporting to Government every instance in which they have reason to know that a student attached to the College is inconsiderate enough to live beyond his income, and is likely by his habits of extravagance to set an injurious example to those around him.

“I trust that it may not be necessary to apply to any individual case the rules which I shall consider it my duty to enforce, should the necessity unhappily occur. Awakened to a sense of the real mischief of pecuniary involvement, and aware of the sentiments with which it is regarded by the Government, young men entering the service will have no reasonable plea to palliate the folly which induces it. They may, I trust, be made sensible, that on a body such as the civil service, vested, by the operation of a peculiar system, with the possession of extensive authority, moderation and self-denial, are peculiarly incumbent. The advantages they enjoy are justified by the security they afford for good government, they would otherwise be a burthen on the country, which it would be unjustifiable to maintain; and if, therefore, any civil servant shall be found turning the privileges of his class into the means of extravagant indulgence, he will have himself to blame if he finds in his person those privileges abridged. I rejoice in all opportunities of evincing my respect for the distinguished body to whom you belong. Their fair claims are sacred to me, and I consider it not the least of the advantages derived from the College of Fort William, that it enables the Government to discriminate eminent merit in the first dawn of public life. To promote the early career of those possessing such a title, is the most gratifying act belonging to the station I hold. You may be assured that the interest excited now will follow you into active life. I would fain hope that it may be my pleasing task to speak only the language of encomium and praise, that the good sense and virtue of the young men who may be attached to this institution, will enable me cordially to rejoice in their attainment of the high and honourable posts within their reach, and that I may be spared the painful but solemn duty of averting from the sacred interests committed to our charge, the mischief and peril that must flow from the promotion of those who are unworthy of their high calling.

“I cannot omit the opportunity of congratulating you on the new advantages which the well-timed liberality of the
Honourable

Honourable the Court of Directors has extended to you. Of these benefits none can be more touching than the facility which will be afforded to you of revisiting your native land, and of strengthening and renewing home feelings and home attachments. May your conduct in the stations to which you are now about to proceed, be ever such, that on your return to England, you may, with an honest pride, claim to have maintained her honour, to have advanced her interests, which are those of India, and to have acted on the principles becoming the citizens of so great and so singularly favoured a country.

"I beg to return my cordial thanks and acknowledgments to the gentlemen of the College Council, and to the other officers of the institution, for their unwearied exertions during the past year, and I look with confidence, from their continued zeal, to the augmented success and reputation of the College of Fort William.

"The return to England of Dr. Lumsden, professor of the Arabic and Persian languages, has deprived the institution of the further services of a gentleman, whose distinguished abilities and learning, and whose indefatigable labours have, in an eminent degree, promoted the success and enhanced the reputation of the College of Fort William, ever since the period of its first establishment. I cannot but regret the loss which we have thus sustained, but Dr. Lumsden's character and example will still shed a beneficial influence, and will stimulate the honourable ambition of others to seek, by similar exertions, similar applause.

"Several works of great interest or of real importance to the promotion of eastern literature and learning, have been encouraged or published during the past year. A list of them will appear in the Appendix to this address.

"Gentlemen, I am not aware that there are any other topics immediately connected with the affairs of the College of Fort William which require notice on the present occasion; and I shall conclude this address by briefly adverting to the progress of those institutions which, under the support and patronage of Government, are directed to the education of the natives of India, and to the dissemination amongst them of useful knowledge.

"The General Committee of Public Instruction have continued during the past year to direct their attention towards the great object of diffusing gradually, but steadily, an improved system of education throughout British India. It is the general defect of schemes of amelioration to anticipate rapid progress, and to estimate the advance to be made by the motives which suggest the object in view, rather than by the means by which it is to be

attained. Such calculations, however, can only lead to disappointment. We have, in the present case, a vast mass of people of various languages, habits, and religions, ill-provided with facilities for acquiring information, and little sensible, from long neglect, of the value of instruction. The number and wants of such a population can be but partially supplied from the public resources; and the Government, therefore, can only propose to shew the way, and to stimulate the natives of India to assist in their own education. Before this can be effected, however, they must be made conscious of its importance and necessity; and a considerable period must inevitably elapse before such impressions can be generally or widely diffused. In the mean time, a steady adherence to a plan which purposes to raise the scale of acquirement amongst those classes which may be expected to influence their countrymen, and to furnish them hereafter with instructors, as well as example, appears to be the most efficacious mode that can be devised to improve and extend education in India.

"It must at present, therefore, be our chief object to facilitate the progress of the higher classes of the native population in those studies which are by them considered most useful or interesting, to lead them, whenever opportunity offers, into new and more improving paths, and, above all, to habituate their youth to a system of order, assiduity, and perseverance, which cannot fail of being highly advantageous to the development of their intellectual faculties, and of producing a beneficial operation on their characters through life.

"The attention of the Committee has accordingly been directed, as much to preserve the organization of established seminaries, as to promote the progress of those of more recent date. They have assisted at the annual examinations of the Madrassa and Government Sanscrit College, and presided at the distribution of the public rewards. The report of the Madrassa examination indicates a successful perseverance in the course of study established by the late secretary, and the Elements of Euclid now form part of the ordinary course of Mohammedan education.

"The early date of the Sanscrit College does not admit of any estimate being made of the proficiency of the scholars, but their progress is reported highly satisfactory, with reference to the time during which they have been attached to it. At the date of the first annual examination, the College enumerated ninety scholars, of whom seventy-one received support, and the rest attended without stipend. The half-yearly examination held in June last,

* The permanent establishment of the Madrassa comprises eighty-five stipendiary students.

last, presents a list of 118 scholars, of whom forty-nine are free scholars, and sixty-nine are on the establishment.

"The report of the annual examination of the Benares College has only been lately received, circumstances having delayed it beyond the regular period. It seems probable that the interval which elapsed between the death of the late superintendent, Capt. Fell, and the nomination of his successor, has been productive of some relaxation in the discipline of that institution; the evil, however, is but temporary, and is in the course of reform; the Benares College, according to the last report, contained sixty-one day-scholars, and 175 free students; making a total of 236.

"The Agra College has been established according to the principles adverted to in the last year's discourse, and is now in full operation. No particular report of the progress of the students has been yet received, nor is it to be expected that they have made any considerable advance. The establishment, however, appears to have excited much interest amongst the population, and the candidates for admission have been more numerous than the College has been able to receive; the present number of scholars is seventy-three, all stipendiary; of whom thirty-eight are engaged in the study of Persian and Arabic, and thirty-five of Sanscrit and Hindee. It has also been determined to establish a college for Mohammedans at Delhi, partly at the expense of the general fund, and partly provided for by local funds; the arrangements for this object have received the sanction of Government, and are in progress; but time has not yet permitted their being carried into effect.

"A great impediment to the progress of education in these establishments is the want of correct copies of useful books, the errors of the manuscripts to which the students are confined, which occasion much painful perplexity, and serious waste of time. In many cases, also, books of the best description are exceedingly rare. The necessity of multiplying such works, therefore, and supplying correct copies, has engaged the consideration of the Committee, and the most effective, as well as economical expedient, has been considered, that of attaching a press to the Committee for the printing of such oriental works as may be required for the public seminaries. In consequence of this determination, several founts of new types have been cast, and other materials collected, and the press, it is expected, will shortly be able to commence its operations.

"An establishment, which differs in many respects from the preceding, is the Anglo-Indian College of Calcutta, established originally by respectable members of the native community of Calcutta,

chiefly for the instruction of Hindoo youths in the English language, in part gratuitously, and in part on the payment of a moderate charge.

"A connexion has been established between the Committee and the College, acceptable to its conductors, and calculated to maintain the institution in that efficacy which can alone entitle it to public support. The progress made in the English language at the Anglo-Indian College, as determined by the last annual public examination, at which the president of the General Committee presided, was, in many instances, respectable; and the dawn of an acquaintance with the elements of science was displayed. The information acquired by the students, in this latter respect, is derived from a course of lectures on natural and experimental philosophy, delivered by a professor attached by Government to the College, in order to render available to the seminary an apparatus of some extent, presented to it by the British Indian Society. Measures have also been sanctioned to render this apparatus more complete, and in the continuation of the lessons to which it will be applied, it is to be expected that much useful knowledge will be imparted, and much liberal curiosity excited, by which further proficiency may be attained. In connexion with this establishment, measures have also been taken for providing a collection of useful books, both in literature and science, and other arrangements for the more advanced cultivation of both have been suggested by the Committee, which await the sanction of the Honourable the Court of Directors.*

"There are other seminaries in various parts of the country maintained by the education fund, which, although reflecting the highest credit on the benevolent intentions from which they sprang, have not, it is believed, realized the advantages that were anticipated from their institution. Should such be found to be the case, measures will eventually be suggested for a more beneficial appropriation of the funds now applied to the maintenance of the schools in question.

"The duties of the Committee of Public Instruction are of the most elevated and important description. It is their aim to raise and strengthen the character and the understanding of the people. They seek, not only to give us more able and better agents for that important part of the civil administration of the country which devolves on natives (an object in itself of infinite importance, and one which Government will strenuously lend its co-operation and patronage to secure), but gradually to

* The number of scholars at this seminary amounts to 175, of whom 60 are taught gratuitously, 30 are supported by the school only, and 85 contribute to the cost of their own education.

to introduce our native subjects to every species of knowledge that can enlighten their minds and improve their moral feelings.

"It gives me the sincerest pleasure to state thus publicly, that in the proceedings of the Committee, under their respected president, I have perceived the happiest possible union of zeal and of discretion. With a just sense of the superior advantages of our own country, there is no overweening contempt of what others dearly prize. While the great objects above sketched are kept anxiously in view, and the means of introducing European science, especially, are diligently sought, there is no desire hastily to supersede what exists; no attempt, abruptly, to introduce improvements before the way is paved for their reception; no ambition to anticipate what must be the work of time, for the vain indulgence of a personal triumph. Their attention to the feelings and prejudices of the natives appears to have gained, as it deserved, their fullest confidence: and their policy, being the simple one of candour and conciliation, can scarcely fail to secure the safe and certain attainment of their salutary ends.

"In noticing the progress of the institutions for the encouragement of education amongst the natives, it is proper to advert to the school founded by Government in the year 1822, for the instruction of Hindoos and Mahomedans in medical knowledge.

"The management of the institution has been confided to the zealous and able superintendence of Dr. Breton, and that gentleman has already prepared, in the native languages, various essays and short treatises, calculated, not only to promote the instruction of the pupils under his charge, but gradually to disseminate amongst the natives of India a highly useful knowledge of the principles of medical science.

"A list of the works which have been hitherto completed by Dr. Breton, will be inserted in the Appendix.

"It is impossible to quit the subject of the measures taken for the diffusion of education, without adverting to the meritorious interest exhibited by two native gentlemen on this important subject: Raja Calisunker Ghosal and Raja Hurri-nath Rai, have placed at the disposal of the General Committee, severally, the sums of 20,000 and 22,000 rupees, to be applied by them in any way they may deem most conducive to the objects of the Committee: an act of liberality which does honour to the public spirit and the enlightened judgment of those from whom it emanates. It is to be hoped that the example may not be set in vain, but may point out to the elevated and opulent the path by which they may best benefit their

countrymen, and perpetuate their own reputation. The means at the distribution of any Government must be always inadequate to the education of a people, but they are especially disproportionate in a country where the demand is so general as in India, and where the endowments that had accumulated through successive years have been wholly swept away by public disorganization, or diverted from their purpose by private cupidity. It is now necessary to begin again, and whatever success may be attained by the efforts of the ruling power, it must necessarily be limited and partial, unless those efforts are seconded by enlightened individuals, and finally crowned by the concurrence and exertions of all."

APPENDIX.

Works in the Native Languages, or connected with Eastern Learning and Literature, lately published or now preparing for Publication.

A Dictionary of the Bengalee Language, by the Reverend and Learned Dr. Carey, consisting of 2,160 closely-printed quarto pages, in which the derivations and various meanings of all the words in the language, used either in writing or for colloquial purposes, are traced and given. This long desired and laborious work, in the compilation of which Dr. Carey was employed for a period of ten years, will supply the wants, and surpass the expectations of every student of that highly useful language.

An English and Burman Vocabulary, preceded by a concise Grammar of the Language, in which the pronunciation of the words is exhibited in both Burmese and English characters, by the Rev. Mr. F. Hough.

Another Vocabulary, Burman and English, is under preparation, and will shortly be published, by the Rev. Mr. Wade.

A Vocabulary of the Turkish Words that occur in Persian Authors; comprised in 250 octavo pages; by Molowee Abdooor Ruheem. A very useful and necessary assistant in the perusal of many Persian authors to such readers as are not in possession of Meninski, or some general lexicon of the Turkish language.

A new and complete edition of the celebrated heroic poem the Shah Numa, of Firdoosee, by Capt. T. Macan, Persian Interpreter to his Excellency the Commander-in-Chief.

The admirers of eastern literature may at length anticipate the publication, by a gentleman eminently qualified for the task, of a correct and valuable edition of a poem which, through the revolution of more than eight centuries, has preserved the highest reputation, and which will continue to be read and admired whenever the Persian language and history are thoroughly known. A new font of types is to be cast for the express purpose of printing the work, which will appear on the best English paper, in three large quarto volumes, each containing about 550 pages, and to the last volume will be added a life of the author, and probably some observations on the poem. The time and trouble requisite for the collation of numerous copies of such a large work as the Shah Numa, render it difficult for the editor to fix any precise date for the completion of his design, but as no pains or expense will be spared to prevent delay, he hopes to see his edition in print in two years and a half, or, at the most, in three years.

Principles and Precedents of Mahomedan Law, by W. H. Maccaughen, Esq. of the Bengal Civil Service.

The eminent qualifications, the learning, and practical experience of the author, afford ample assurance of the value of this work, which will be circulated, under the authority of Government, to all the courts of justice in the territories subordinate to this presidency.

The following is an extract from the remarks of the author prefixed to the work:—

"In compiling the principles of law, contained

In this work, I have had recourse to none but the most approved authorities, and I have appended to this work extracts from the original Arabic, to vouch for the accuracy of the doctrines I have laid down. I have taken care to note any material difference of opinion which I have discovered in these authorities. The precedents consist of legal expositions which have been actually delivered in the several courts of justice. I have selected such as appeared to me of the greatest importance, and those which seemed to embrace doctrinal points most likely to recur. With a view to retain the sense as far as practicable, I have left them in the original shape of question and reply; and none have been admitted but such as appeared to me (assisted by all the legal talent I could procure) to admit of no doubt as to their accuracy.

Considerations on the Hindoo Law, as it is current in Bengal, by the Hon. Sir Francis Workman Macnaghten, one of his Majesty's Justices of the Supreme Court of Judicature at Fort William in Bengal.

This valuable work, explaining the principles which have regulated the decisions of the Supreme Court of Judicature on questions of the greatest importance, and of the most frequent occurrence in Hindu law, is calculated to be of extensive benefit, and to afford great practical assistance to those whose duty it is to administer that law. Copies of the work have been circulated, under the authority of Government, to the different courts of justice throughout this presidency.

Translations of Tracts on Medical Subjects, prepared by Mr. P. Bteton, Superintendent of the School for the Instruction of Native Doctors, and printed at the lithographic press:

1. A Vocabulary of the Names of the different

Parts of the Human Body, and of Medical and Technical Terms in English, Arabic, Persian, Sanscrit, and Hindee.

2. Hindoostanee Versions of the London Pharmacopœia, in both the Persian and Nagree characters, in two volumes.

3. Treatise on Suspended Animation from the Effects of Submersion, Hanging, Noxious Air and Lightning, and the means of Resuscitation; in the Nagree Character and Hindoostanee Language.

4. Substance of a Lecture on the Cholera Morbus, delivered to the Students of the Native Medical Institution, in the Nagree and Persian Characters, and Hindoostanee Language.

5. Introductory Letter on Anatomy, in the Persian and Nagree Characters, and Hindoostanee Language.

6. Demonstrations of the Brain and its Appendages, also in the same characters and language as that described under number 5.

7. Essay on the Venom of Serpents, in Persian and Nagree Characters, and Hindoostanee Language.

8. Essay on Intermittent Fever, in ditto

9. Essay on Rheumatism, in ditto.

10. Essay on Cataract, in ditto.

11. On the Structure of the Eye, in ditto.

12. On Osteology, in ditto.

13. Demonstration of the Abdominal Viscera, in ditto.

14. Demonstration of the Thoracic Viscera, in ditto.

15. Essay on the Cholera Morbus, in the Bengalee Language.

[The examination was inserted in our last vol. p. 708.]

PROCEEDINGS OF THE ROYAL ASIATIC SOCIETY OF GREAT BRITAIN AND IRELAND.

January 7, 1826.—A general meeting was held this day, at 3 o'clock P.M.

The Most Noble the Marquess of Hastings, a Vice-Patron of the Society, and the Prince de Polignac, Ambassador from France to Great Britain, a Foreign Member of the Society, honoured the meeting with their presence, and inspected the Society's house. Professor Bopp, of Berlin, another Foreign Member of the Society, also attended the meeting.

The Marquess of Hastings presided; and the Director, H. T. Colebooke, Esq., officiated to conduct the business.

The minutes of the last meeting were read and confirmed.

The following donations were presented:

From Major Edward Moor, *Tytler's Illustrations of Ancient Geography, &c.*

From Sir A. Johnston, 1. A very valuable work on the Buddhoo religion, written in the Cingalese language on Palm leaves. A short account of its contents, by the Rev. Mr. Clough, accompanied it. 2. Fac-similes of some of the oldest inscriptions in the Island of Ceylon.

From Sir Robert Colquhoun, of the Bengal M. S., by David Colvin, Esq., fourteen articles of Natural History, from Kumaon, the Himalaya Mountains, &c. among which are the *Munal* and *Sing Chinis*, or Blue and Red Pheasants of the Himalaya; a large moth (the *Bombyx Atlas*, Linn.); butter, the produce of the *Choorée*, or butter tree, of Kumaon; fossil bones, from the Himalaya, &c.

From Capt. P. P. King, R.N., several different weapons used by the natives of Australia, spears, flint axes, &c.

From Col. J. Young, a Burmese harp, sent from Rangoon.

The reading of Mr. Davis's Extracts from Peking Gazettes for 1824, being the fourth year of the Emperor Taou Kwang, was concluded. The paper contains thirty-one extracts, one of which "on the depreciation of the metal

currency, in consequence of over-coinage," is the same as printed in the second part of the Society's *Transactions*, p. 255, just published. Amongst the most striking subjects of these extracts, are the following:—"Malversations in office." "On the Emperor's putting off his journey to Tartary." "Forbidding the possession of fire-arms to the common people." "Petition from a sick and aged minister, to retire permanently from office." "Forging the current coin." "Plundering inroad of Kassacks or Cossacks, on the Russian frontier," &c. The second extract, respecting the Emperor's journey into Tartary, is a special edict, written with the vermilion pencil, published on the 1st moon, 20th day (19th February). The following is the concluding paragraph:

"The civil and military officers of Chih-le ought to fashion their hearts by mine. Let them punish and repel every thing that is irregular and bad; let them advance and encourage the worthy and capable. Every measure that is profitable for the people, let them pursue with all their hearts; let them extend the principle of soothing and compassionating, in order that my little children may be saved from the extremity of distress, and from being scattered abroad without a resource: thus seconding my sincere wish to cherish them in proportion to the necessity of the times."

Mr. Davis observes, in a note: "The above is a curious specimen of the cant by which the empire of China is, in a great measure, governed."

January 21.—The Society met this day, at the usual hour; Henry T. Colebrooke, Esq., Director, in the chair. The minutes of the last meeting were read and confirmed.

The following donations were presented:—

From Robert Grant, Esq., the substance of a Speech delivered in the Court of East-India Proprietors, on the motion respecting Haileybury College.

From the Astronomical Society: Part 1, Vol. i., of their Memoirs.

From the Horticultural Society: Parts 1 and 2 of Vol. vi. of their *Transactions*. List of Members, and Report of Garden Committee.

From the Proprietors: Nos. 1, 2, 3, of the *Annals of Oriental Literature*.

From the Rev. S. Weston: Notices of Greek cities which have struck coins.

George Parkhouse, Esq. was introduced and admitted a Member of the Society.

Frederick Leman Rogers, Esq., was elected a Resident Member, and Professor William Freytag, a Foreign Member of the Society.

The reading of a paper, by Capt. James Delamaine, entitled "Of the Srawacs or Laity of the Jains," was commenced.

Capt. D. considers the Srawacs to be the only considerable remnant of the Arhatas in India. As, however, they principally follow the trade of Banyas, most of the twelve *brats* (*oratas*) refer to their particular calling, nor does the author think that they formed a part of the older Jain institutes, as they are quite unsuitable to any purpose of government. They have no longer the distinction of castes; but they do not hesitate to employ the services of the Brahmans at marriages, &c. Capt. D. gives an account of the following sects, the *Dravér*, the *Jápalya*, the *Káshta Sankis*, the *Nichik Sankis*, the *Teú Pant'his*, and the *Tárana Pant'his*, all belonging to the Banya class. The continuation of this paper was deferred to the next meeting of the Society, on Feb. 4th.

The second part of the first volume of the *Transactions* of the Society was published this day, and copies were distributed to the members.

Erratum.—In the report of the Proceedings of the Society for December 17, Robert Birks Pitman, Esq., was erroneously designated *Lieut. Col.*

ASIATIC INTELLIGENCE.

Calcutta.

GOVERNMENT GENERAL ORDERS.

CIVIL SERVICE ANNUITY FUND.

Fort William, General Department, June 30, 1825—The Civil Service Annuity Fund being now established, notice is hereby given, that the civil auditor has been directed to retrench four per cent. from the bills of all those members of the service who have intimated their assent to the plan, or who may hereafter be admitted to the fund, commencing from the 1st May last.

AUGMENTATION TO THE HORSE ARTILLERY.

Head-Quarters, Calcutta, July 8, 1825.—The Commander-in-chief is pleased to direct, in pursuance of G. O. by Government of the 24th ult., that two new troops of horse artillery be formed at Meerut, from the 1st inst. These will be numbered the 3d troop of the 2d horse brigade, and the 2d troop of the 3d horse brigade.

The commandant of artillery will give orders for the non-commissioned officers and bombardiers required for the new troops being draughted in due proportions from the other European troops of horse artillery, and for their places being supplied by promotion in the usual manner. The supernumerary non-commissioned officers and bombardiers for the horse artillery, in Maj. Whish's detachment, are to be included in the number posted to the new troops, and will thus be brought on the effective strength.

Lieut. Col. Stark, commanding the horse artillery at Meerut, will likewise direct such number of gunners to be removed to the new troops as he may consider expedient. They will be completed from the men draughted from the companies of foot artillery by G. O. of the 25th ult., and by the detachment proceeding to the Upper Provinces, under Maj. Whish.

Lieut. Col. Stark will complete the new troops with horses from the supernumerary remount horses, now attached to the horse artillery. The usual establishments of all descriptions to be hired from the 1st inst.

SIR DAVID OCHTERLONY.

Political Department, July 28, 1825.—The right hon. the Governor-General in Council has learnt, with great sorrow, the demise of Maj. Gen. Sir David Ochterlony, resident in Malwah and Rajpootana.

This melancholy event took place on the morning of the 15th inst. at Meerut, whither he had proceeded for the benefit of change of air.

On the eminent military services of Maj. Gen. Sir David Ochterlony it would be superfluous to dilate: they have been acknowledged in terms of the highest praise by successive governments; they justly earned a special and substantial reward from the Hon. East-India Company; they have been recognized with expressions of admiration and applause by the British Parliament; and they have been honoured with signal marks of the approbation of his sovereign.

With the name of Sir David Ochterlony are associated many of the proudest recollections of the Bengal army, and to the renown of splendid achievements he added, by the attainment of the highest honours of the Military Order of the Bath, the singular felicity of opening to his gallant companions an access to those tokens of royal favour which are the dearest objects of a soldier's ambition.

The diplomatic qualifications of Sir David Ochterlony were not less conspicuous than his military talents. To an admirably vigorous intellect, and consummate address, he united the essential requisites of an intimate knowledge of the native character, language, and manners. The confidence which the government reposed in an individual gifted with such rare endowments was evinced by the high and responsible situations which he successively filled, and the duties of which he discharged with eminent ability and advantage to the public interests.

As an especial testimony of the high respect in which the character and services of Maj. Gen. Sir David Ochterlony are held, and as a public demonstration of sorrow for his demise, the Governor-General in Council is pleased to direct that minute guns, to the number of sixty-eight, corresponding with his age, be fired this evening at sunset, from the ramparts of Fort William.

STAFF SITUATIONS.

Fort William, Aug. 12, 1825.—The right hon. the Governor-General in Council is pleased to direct, that the provisions of G. O. under date the 31st Jan. 1823, prescribing the period of service necessary to entitle an officer to hold any situation on the general staff of the army, be extended to every civil situation to which a military officer is eligible.

COURT.

COURT-MARTIAL.

ASSIST. SURG. J. A. D. WATSON.

Head-Quarters, Calcutta, Aug. 17, 1825.

—At an European general court-martial held at Cawnpore, on Tuesday the 12th of July 1825, of which Lieut. Col. Murray, C.B., H.M.'s 16th Lancers, is president, Assist.surg. John Alex. Davidson Watson, of the 32d regt. N.I., was arraigned upon the undermentioned charges, *viz.*

“That Mr. Assist.surg. John Alex. Davidson Watson, on being ordered, about the 14th of May last, to proceed in medical charge of the light wing of the 11th regt. N.I., on its march from Allahabad to Lucknow, reported himself sick, thereby subjecting himself to the report of a medical committee, that there was not found any existing active disease to interfere with his, Mr. Assist.surg. Watson's, performing the ordinary duties of his profession, and causing the wing of the 11th regt. to proceed on its route without a proper medical officer, such conduct being a disgraceful evasion of public duty, and highly prejudicial to the service.”

Upon which charge the court came to the following decision :

Finding of the Court.—“The court, having deliberately weighed all the evidence adduced in support of the charge, together with what the prisoner has brought forward in defence, is of opinion, that he is guilty of the charge, with exception of the words ‘on being ordered, about the 14th May last, to proceed in medical charge of the left wing of the 11th regt. N.I., on its march from Allahabad to Lucknow,’ in the former part of the count, and of the word ‘disgraceful,’ in the latter part of the count, of which the court acquits him.”

Sentence.—“The court, having found the prisoner guilty of so much of the charge; *viz.* of having reported himself sick, thereby subjecting himself to the report of a medical committee, that there was not found any existing active disease to interfere with his, Mr. Assist.surg. Watson's, performing the ordinary duties of his profession, and causing the wing of the 11th regt. to proceed on its route without a proper medical officer, such conduct being an evasion of public duty, and highly prejudicial to the service, which being in breach of the Articles of War, the court doth sentence him, Assist.surg. John Alex. Davidson Watson, to be reprimanded by His Exc. the Commander-in-chief.”

Disapproved.

(Signed) EDW. PAGER, General,
Commander-in-chief in India.

Remarks by His Exc. the Commander-in-chief.

The Commander-in-chief disapproves of

these proceedings, because he does not conceive that a reprimand is at all proportioned to conduct pronounced by the court, “an evasion of public duty, and highly prejudicial to the service.”

But if he were even of a different opinion, His Exc. could not confirm the sentence, as the court have inadvertently exercised an undue power in sentencing a prisoner “to be reprimanded by His Exc. the Commander-in-chief.” The extent of a court's power, in such a case, is to award a reprimand to be pronounced in such mode as His Exc. should direct.

Assist.surg. J. A. Davidson Watson is to be released from arrest, and return to his duty.

CIVIL APPOINTMENTS.

Judicial Department.

June 30. Mr. C. G. Udny, an assistant in office of register to Courts of Sudder Dewanny Adawlut and Nizamut Adawlut.

Mr. H. Pidcock, assistant to magistrate and to collector of district of Moradabad.

Mr. F. H. Robinson, assistant to ditto ditto of district of Barreilly.

July 28. Mr. C. T. Sealy, a prize judge of Courts of Sudder Dewanny Adawlut, and Nizamut Adawlut.

Mr. G. C. Master, first judge of provincial courts of Appeal and Circuit for division of Calcutta.

Mr. F. Law, second judge of ditto ditto of Dacca.

Aug. 4. Mr. W. Lowther, judge of zillah Chittagong.

Mr. W. Blackburne, magistrate of ditto.

11. Mr. T. B. Beale, assistant to magistrate and to collector of Furruckabad.

26. Mr. H. Shakespear, a prize judge of Courts of Sudder Dewanny Adawlut and Nizamut Adawlut.

Commercial Department.

July 28. Mr. H. S. Lane, assistant to commercial resident at Cossimbazar.

Political Department.

July 29. M. Ainslie, Esq., agent to Governor-General in Bundelcund.

Aug. 28. Sir Chas. T. Metcalfe, Bart., resident and commissioner at Delhi, and agent to Governor-General for states of Rajpootana.

Mr. W. B. Martin, resident at Hyderabad.

Mr. G. Wellesley, resident at Indoor, and agent to Governor-General for affairs of Malwa.

Lieut. Col. J. Delamaine, political agent in Nimar.

Mr. A. Edmonstone, extra assistant to resident at Hyderabad.

Maj. W. G. A. Fielding, first assistant to resident at Gwalior.

Capt. J. D. Dyke, second assistant to ditto.

Territorial Department.

Aug. 4. Mr. J. B. Blacoe, collector of Purneah.

Mr. J. S. Clarke, assistant in office of secretary to Board of Revenue in Lower Provinces

General Department.

Aug. 11. Capt. W. G. Mackenzie, of 5th regt. N.I., resident at Malacca.

Secret Department.

Aug. 12. Mr. T. C. Robertson, agent of Governor-General on south-east frontier, and commissioner in Arracan.

MILITARY

MILITARY APPOINTMENTS, PROMOTIONS, &c.

Fort William, July 8, 1825.—Infantry. Sen. Lieut. Col. P. Byres to be lieut. col. com., and Sen. Maj. G. D. Heathcote to be lieut. col., from 13th June, in suc. to Campbell dec.

1st *Extra N.I.* Capt. G. Williamson to be maj., Brev. Capt. and Lieut. J. M. Sim to be capt. of a comp., and E. F. Smith to be lieut., from 19th June, in suc. to Heathcote prom.

28th *N.I.* Capt. S. Swinhoe to be maj., and Lieut. C. D. Wilkinson to be capt. of a comp., from 14th June, in suc. to Hiatt dec.

34th *N.I.* Lieut. G. H. Robinson to be capt. of a comp., and Ens. W. C. Carter to be lieut., from 19th May, in suc. to Walkinshaw dec.

42d *N.I.* Ens. C. Hutchinson to be lieut., from 11th June, in suc. to Blackburn dec.

54th *N.I.* Lieut. J. Kerr to be capt. of a comp., and Ens. A. Learmouth to be lieut., from 18th June, in suc. to Hayes dec.

Lieut. G. Grose, 35th *N.I.*, transferred to pension establishment.

Mr. H. Donaldson, surg., admitted to do duty (temporarily) as an assist. surg.

July 12.—Capt. Pogson, 60th *N.I.*, to be a dep. assist. adj. gen., v. Showers prom.

Lieut. G. C. Smyth, 3d *L.C.*, to be a brigade maj., v. Pogson.

Messrs. J. T. Gells, R. T. Sandeman, and W. H. Nicoletts admitted to inf., and prom. to ens.

Mr. W. Stevenson admitted an assist. surg.

July 15.—Lieut. H. Todd, 21st *N.I.*, to be an examiner in College of Fort William.

Sen. Exts. to be Lieuts. J. Powell, 28th *N.I.*; A. R. Swinton, 32d ditto; A. Fisher, 34th ditto; and J. Laing, 36th ditto, all from 9th July, to complete establishment.

35th *N.I.* Lieut. A. G. F. J. Younghusband to rank from 21st April, v. Dalsell dec.

Head-Quarters, July 7.—Brev. Capt. Mackinlay, 63d *N.I.*, to act as detachment staff to troops assembled for service in Bickaneer, from 18th Jan., till period of their separation.

for four months, for health.

Cancelled.—Aug. 8. Lieut. Hill, 87th regt., to
Europe.

MISCELLANEOUS.

ADDRESS TO THE LATE MR. ADAM.

The following is a copy of the address
of the British residents of this presidency
to the late Mr. Adam, which was for-
warded to England by the *Asia*. The
signatures attached to it are those of per-
sons of the first eminence and respectabi-
lity. This document, therefore, is a
pretty strong indication of the genuine
feelings entertained at Calcutta of this
lamented gentleman's worth, talents, and
public services.

"Hon. Sir: Under the influence of the
same feelings which induced us, on the late
occasion of your retirement from the high
office of Governor-General of the British
possessions in India, to testify our sense of
the principles which had directed your
conduct

conduct in the administrations of its duties, we consider it to be equally incumbent on us at the present time, when the relation which then connected you with the Government of India no longer exists, and when every personal consideration of hope or fear has therefore ceased to operate, to renew the expression of our unaltered sentiments of cordial esteem and approbation.

“ At a moment when, in unison with the general feelings of the Indian community, we were indulging the anxious hope of seeing you resume, together with the blessing of invigorated health, the discharge of those functions in the Supreme Council of the empire, which you have so long exercised with distinguished honour to yourself, and with eminent advantage to the public interest, we lament to find ourselves called upon to perform the duty of addressing you, not in the language of exultation which the realization of that hope would have inspired, but with expressions commemorative, no less of our private grief at the still impaired condition of your health, than of our public sorrow at the necessity which deprives us, under circumstances of peculiar exigency, of the future benefits of those vigorous and enlightened councils, which have so long contributed to the prosperity, the safety, and the glory of the state.

“ After a long course of honourable service, during which ample opportunities have been afforded of appreciating the qualities of your character, as they have been exemplified in the various relations of public and private life, it will be gratifying to you to receive from those amongst whom the largest portion of that life has been consumed, this deliberate and solemn record of the affectionate sentiments of respect, esteem, and confidence, which the recollection of it has inspired.

“ In the intercourse of private life your deportment has been characterized by a happy union of the amiable and endearing qualities which constitute the charm of social existence, with the possession of distinguished rank, and with the ascendancy of superior intellectual attainments; while in the exercise of the arduous duties belonging to the exalted public station which you have been called upon to fill, you have exhibited, in the elevation of your views, in the clear integrity of your principles, in the wisdom and decision of your measures, and in the sacrifice of every personal consideration to your sense of the exigencies of the public weal, a bright example of those great and good qualities which, as they are the main constituents of public virtue, are also the most appropriate objects of public respect and honour.

“ Entertaining this opinion of your character, and animated with these sentiments of high respect and esteem for your

public and private virtues, it is with feelings of unfeigned sorrow that we contemplate the necessity which has interrupted the brilliant career of your exertions in the public service, and prematurely withdrawn you from the bosom of a society which you have equally adorned by your talents, and instructed by your example; and while we cherish the anxious hope that, with the blessings of recruited health, you are destined to experience, in the enjoyment of your native land, the full measure of happiness which they are calculated to afford, we venture, at the same time, to indulge a confident expectation that your eminent public services, in this remote but valuable portion of the British empire, will receive, in the approbation of a discerning sovereign and a grateful country, their just and most appropriate reward.

“ Calcutta, May 2, 1825.”

NEW LOAN.

By Government Orders, dated 18th August 1825, the public officers at the presidencies, native courts, &c., are authorized to receive subscriptions to a new five per cent. loan, in cash, bills for arrears of salary, bills of exchange on the public treasuries, treasury notes, and all authorized public demands. The notes of this loan are not to be paid off before 26th April 1832, nor after that date without a previous notice of three months. Proprietors of notes of this loan to receive payment of interest, at their option, in cash, or bills (not less than £25) on home, at 2s. 6d. per sicca rupee, payable twelve months after date.

SICKNESS.

It appears from the Calcutta papers, that great sickness has prevailed at that presidency, and at Benares, and other places, arising chiefly from the excessive heat of the weather. The *cholera morbus* has made dreadful ravages amongst the natives. Up to the 1st September, it was computed that 6,000 Hindus and Musulmans had been carried off. The epidemic raged most amongst the latter class; the dissipation, fatigue, and exposure attending the celebration of the *Mohurram* festival, may probably, it is imagined, account for this circumstance.

With respect to the character of the disorder, it was at first considered to be only of the sporadic sort; but subsequently, it seems to have become spasmodic and epidemic. Europeans were principally attacked by a smart fever, quickly running its course, and rarely exhibiting serious symptoms. The natives were assailed first by the fever, on the subsidence of which, cholera supervened, and proved fatal. The districts in Calcutta where the disorder raged (for some spots were unvisited) were those remarkable for filth, luxuriant vegetation, and stagnant tanks. The unwholesome food of the poorer classes is assigned as another cause, or a promoter of the disease; and from the want of attention to each other, common amongst the natives, many are supposed to have perished for want of proper aid. It is stated in one paper, that the funeral piles at the ghauts could not be lighted fast enough to consume the bodies brought for cremation.

The thermometer on the 22d August stood at 80°, at Garden Reach, so late as nine o'clock P.M., without a breath of air.

Towards the latter end of August, the cholera

cholera began to abate; and the heavy rains which fell in the beginning of September contributed to increase the salubrity of the atmosphere. The number of carcases brought down by the swollen river is described as presenting a horrible sight: some were floating about, others cast on the bank a prey to dogs and carrion birds. Some of the public writers have hinted the possibility of the sick Hindus being occasionally sacrificed to the superstitions of their brethren, by being brought to the Ganges before life was extinct: we trust this conjecture is groundless.

At Benares, the excessive heat and absence of rain produced similar effects. The sickness in the city has been most extensive, so much so, as to produce a panic amongst the natives. At Ghazeepoor and Chunar they have suffered greatly, as well as at Futtyghur.

STATE OF THE CALCUTTA PRESS.

Contentions still rage amongst the editors of the Calcutta papers. Since the affair between Mr. Macnaghten and Mr. Greenlaw, these gentlemen have seceded from the editorship of their respective papers. The duration of the *Hurkaru* (with which the *Scotsman* is now incorporated) is undertaken by Mr. Dickens, a gentleman of the Calcutta bar. The *John Bull* is ostensibly edited by Mr. Meiklejohn, brother-in-law of Dr. Bryce, a principal proprietor of that paper. Mr. Dickens and Dr. Bryce appear to have been previously friends; but soon after the former became editor, terms of reproach and recrimination passed between the two papers, and Mr. Dickens called Mr. Meiklejohn to the field, where he received his antagonist's fire, and discharged his own pistol in the air. This meeting, so far from quieting discord, exasperated former animosities. Dr. Bryce was charged with suffering, and, in fact, encouraging his relation to take up, in this unchristian manner, a quarrel not his own, since it originated in some obnoxious reflexions upon Dr. B. This imputation the reverend gentleman has disproved. The subject has deluged the various prints with polemical articles, evincing a state of angry feeling at Calcutta, which it is lamentable to perceive its press is rather inclined to exasperate than allay.

MUSSULMAN INSOLENCIE.

The following is a specimen of Mussulman insolence, and will shew at once to what length these people will go when unrestrained:—

At the village of Bauspool the people brought out on the 26th instant, being the last day of the Mohurram, their gowarah, on which was stuck two effigies of the

magistrate, as may be supposed, for they were given out to be such, of the Baraset magistrate, in which zillah the village is situated. He is represented as with his aumlahs and sheristadar receiving a petition. One of the witnesses, an European, is standing before the magistrate fainting at the judges severe reprimand. On the second effigy the judge is represented quite in a different attitude receiving an order from the Court of Appeal to reverse his sentence, and to punish the petitioners: visages of the difference of situation of parties are also portrayed. In these visages one of the parties is running away; the whole of this insulting scene, reflecting on the Mofussil Court and its proceedings, was actually carried through a number of villages, and even to the Thannah, where it was greeted with a due share of applause. Whether this will hereafter be noticed remains to be seen; but if such scenes are suffered with impunity, it must be evident that the situation of the officers of justice cannot be enviable. In this case the malice goes much further than the mere mockery of the simple transaction to which they must have intended their allusions. The magistrate and his officers are here held up to the ridicule of an infuriated mob, whilst the orders are also held up in a such a form of caricature, as to create in the minds of these ignorant persons nothing but contempt of that authority which should be our pride to uphold. A British magistrate painted in effigy, and his orders carried about as a subject of contempt!!! Bauspole is in Hobrah Thannah, or else very close to it, and the allusion to the disturbances in that neighbourhood too contemptible to notice. The Sheristadar of the court is strongly suspected to be at the bottom of this act.—*Beng. Hurk. Sept 1.*

CIVIL ANNUITY FUND.

We are credibly informed, that a notice will be published (under the authority of the Government and of the Committee for the Civil Service Annuity Fund), to acquaint the subscribers, that a general meeting of the subscribers for the purpose of electing five managers, will be held at the Town Hall on Saturday, the 1st of October next. Also, we understand, it is in the contemplation of the Government (at the suggestion of the Committee) to recommend to the indulgent consideration of the Court of Directors the case of all individuals who may be precluded by ill health, from continuing in this country for the full period required by the regulations, for a reduced grade of annuity, calculated with reference to the period they have resided in the country, and without any specific limitation of time. In all cases, however, it will be expected that the certificates of health,

health, and other rules to be observed, shall be so strict and particular in all their stipulations, as to prevent all possibility of this very humane and liberal indulgence being perverted. The Honourable the Court of Directors will likewise, it is said, be solicited to permit that the terms of students passed at Hertford college after the age of 17, and not exceeding 19, may be considered equivalent to actual residence in India, and to form a part of the qualification for the benefits of the furlough and annuity provisions.—*India Gaz.*

EAST INDIA SUGAR MEETING.

We are glad to hear that a meeting of the merchants interested in the growth of, and trade in East India sugars, has lately been held here, and a committee formed to communicate with the association at home, having the same object in view.—*Cal. John Bull.*

BENEVOLENT INSTITUTION.

The Tenth Report of this Institution contains evidence of great good effected, and at the same time a serious complaint of want of funds. The managers have been obliged to relinquish the school at Serampore. Those at Dacca and Chittagong still continue, and the two schools at Calcutta. In the latter, at the close of 1824, the number of children in the school for boys amounted to 161, and the number of children in that for girls was 96, forming, in the whole, a total of 257. Of these, sixteen were descended from British parents, either on one or both sides; ninety-five were Portuguese; three were Armenians; twenty-one, Hindoos; six, Musulmans; ten, Chinese; and four Malay youths. Thus the Institution is still, as it has been from the beginning, an asylum in which youth of all nations and all religions may take refuge; and while no condition is imposed on them beside those of regular attendance and quiet behaviour, they have an opportunity of obtaining that knowledge which may open to them the path to useful life.

INDIAN GENEROSITY.

On Thursday last, the 23d instant, the funeral rites of the late Moha Raja Ranichunder Roy Bahadoor were celebrated; on which occasion an immense multitude of beggars collected from different quarters, and received ample donations. Among other deeds of charity and goodness we may observe, that a respectable Goshy, who had a debt of 900 rupees, had been invited to attend on the occasion of the celebration, and was accordingly coming to appear before the assembly. His creditor knowing, that such an opportunity would happen, had previously procured a warrant from the Supreme Court, and had

him seized on the way by the sheriff's officer. The son of the Moha Rajah, Rajah Rajnarain Roy Bahadoor, being informed of this circumstance, immediately sent the above sum (900 rupees), and thus freed the Goshy from the debt.—*Kowmoody, June 25.*

LOAN FROM OUDE.

We are given to understand that his Majesty the King of Oude has come forward with a loan to the Supreme Government of one crore of rupees, and that thirty lacks are daily looked for from Madras.—*Beng. Hurk. Aug. 13.*

CHOWRINGHEE THEATRE.

The annual meeting took place on Saturday morning. We have only space to say, that the theatre is neither to be sold nor shut up. The former managers were re-elected, and they are authorized to effect such arrangements as they may deem best, for the purpose of getting up performances during the ensuing year.—*Beng. Hurk. July 19.*

LOSS OF THE LOTUS.

The East India Company's transport, *Lotus*, Capt. Brown, was lost upon the Saugor sand, on the 22d of July. The vessel left Rangoon on the 5th with some troops, and several British officers as passengers. Some of the crew escaped from the wreck in the boats, leaving the rest of the crew and passengers on the wreck. Part of them made their escape on a raft, and the remainder were taken off by the *Mermoid* brig.

MISREPRESENTATION.

The following paragraph is from the Calcutta John Bull of March 21. We have kept it back in expectation of seeing the statement explained or denied. As it has appeared in an English paper (the *Telescope*) without being, to our knowledge, impugned, we think it incumbent upon us to publish it.

"We have at length received the September number of the *Oriental Herald*.—We find that its motto is again changed; whether from any conviction that the former one was inappropriate we do not know; but since so very much attention is bestowed on the title-page, we cannot but wonder that an error, connected, too, with its conductor, of some importance, should be suffered to have remained so long. We allude to the "Member of the Asiatic Society in Bengal." Why Mr. Buckingham chooses to continue this designation is best known to himself. He is not, and was not for some period previously to his departure for England, a member of that body. It is sufficient to make

make this statement—comment is unnecessary."

SHIPPING.

Arrivals in the River.

July 2. *Hope*, Flint, from London.—28. *Madras*, Fayer, from London.—29. *Lady Blackwood*, Russell, from Coast of Mexico and Singapore.—Aug. 2. *Charles Grant*, Hay, from London.—3. *Tiger*, Kent, from London and Ceylon.—5. Madras.

CIVIL APPOINTMENT.

Aug. 11. Mr. R. Rogers, register to Provincial Court of Appeal and circuit for southern division.

MILITARY APPOINTMENTS, PROMOTIONS, &c.

Head-Quarters, Bangalore, Aug. 16, 1825.—Officers of the corps of artillery are posted as follows:

Horse Artillery.

1st Brigade. Col. (Lieut. Col. Com.) J. Limond.—Lieut. Col. W. G. Pearce.—Maj. W. Morrison.—Capt. N. Hunter, J. J. Gamage, G. Conran, F. E. Whynnyates, R. S. Seton.—1st-Lieuts. W. Brooke, E. Sheriff, J. Pinchard, M. Campbell, E. Amsinck, G. W. Onslow, T. R. Gelle, T. K. Whistler, P. Anstruther, T. Lavie.—Adj. W. Brooke.—Quart. Mast., Interp., and Paymast. J. Pinchard.—Surg. M. S. Moore.—Assist.surgs. J. Lamb, J. Macfarland, D. Falconer, D. Archer.

2d Brigade. Col. (Lieut. Gen.) R. Bell.—Lieut. Col. E. M. G. Showers.—Maj. W. Cullen.—Capt. J. Harrison, T. V. B. Kennan, P. Montgomerie, W. F. Lewis, J. M. Ley.—1st-Lieuts. C. Taylor, J. H. Steill, A. G. Hyslop, A. E. Byann, E. S. Burchell, N. H. Fish, S. S. Trevor, G. Hall, W. H. Brotherton, G. Briggs.—Adj. C. Taylor.—Quart. Mast., Interp., and Paymast. A. G. Hyslop.—Surg. J. Dean.—Assist.surgs. J. Smith, J. Ricks, E. Fannerty, D. Vertue.

Foot Artillery.

1st Bat. Col. (Maj. Gen.) T. Clarke.—Lieut. Col. S. Cleaveland.—Maj. T. S. Watson.—Capts. J. Ketchen, T. H. J. Hockley, T. Biddle, R. G. Polwhele, J. Chisholme.—1st-Lieuts. F. Blundell, J. Anderson, R. D. Patterson, A. E. Beat, J. Back, T. H. Humffreys, J. W. Croggan, W. H. Miller, T. A. Ashton, G. A. Goldingham.—Adj. J. Anderson.—Quart. Mast., Interp., and Paymast. F. Blundell.—Surg. W. Wilson.—Assist.surg. (vacant).

2d Bat. Col. (Maj. Gen.) T. Hayes.—Lieut. Col. C. Hopkinson.—Maj. J. Wilkinson.—Capts. A. Crawford, F. Derville, F. Bond, J. Laine, J. Dickinson.—1st-Lieuts. J. Wynch, T. Cussans, J. Adkritt, R. S. Yolland, C. Grant, J. G. Patterson, G. Middlecoat, P. J. Begbie, J. G. H. Bell.—Adj. J. Adkritt.—Quart. Mast., Interp., and Paymast. (vacant).—Surg. R. Sladen.—Assist.surg. R. Oliphant.

3d Bat. Col. (Maj. Gen.) J. G. Scott.—Lieut.

Col. J. Noble.—Maj. J. H. Frith.—Capts. J. N. Abdy, A. L. Murray, C. Patton, H. Gregory, C. Hosmer.—1st-Lieuts. H. S. Ford, P. Hammond, G. Alcock, T. Baylis, R. C. Moore, F. Burgoyne, J. H. Gunthorpe, C. W. Rolland, H. Watkins, H. Newman.—Adj. T. Baylis.—Quart. Mast., Interp., and Paymast. H. S. Ford.—Surg. W. Mackenzie.—Assist.surg. (vacant).

4th (or *Golconda*) Bat. Col. Sir J. Sinclair.—Lieut. Col. J. J. Mackintosh.—Maj. W. M. Burton.—Capts. J. G. Bonner, W. T. Brett, T. T. Paske, D. H. M'Kenzie, C. F. Symes.—1st-Lieuts. W. S. Hele, W. S. Carew, J. Home, T. D. Whitcombe, J. Booker, J. T. Baldwin, T. Ditmas, A. J. Begbie, M. Watts, J. G. M'Nair.—Adj. W. S. Hele.—Quart. Mast., Interp., and Paymast. W. S. Carew.—Surg. J. Jeffries.—Assist.surg. T. Thornton.

LAW.

SUPREME COURT, AUG. 19.

The Hon. Sir Robert Buckley Comyn, Kt., took the oaths and his seat on the bench as a Puisne Judge of the Court, under a salute of 15 guns from the fort battery.

On the same day, W. Bathie, esq., took the usual oaths, and was admitted as a Barrister of the Court.

MISCELLANEOUS.

SIR JOHN MALCOLM'S "INSTRUCTIONS."

The following tribute to the admirable instructions, written by Sir John Malcolm, is as just as it is flattering:—

Revenue Department.—Minute of the Honorable the Governor in Council, 25th March, 1825.—The hon. the Governor in Council had thought it desirable that some rules should be framed for the guidance of the officers of government with the natives of India. This has been rendered unnecessary by Sir John Malcolm's instructions to his assistants and the officers acting under his orders, dated 28th June, 1821, in which he states fully and clearly every thing that can be wanted for the object in view.

The directions which follow are extracted from that paper: they can hardly be perused without advantage; and the Governor in Council cherishes the hope that every public officer, for whose use they are intended, will be guided by the spirit which pervades them.

By order of the hon. the Governor in Council. D. HILL, Chief Sec.

THE HON. THE GOVERNOR.

The Hon. the Governor left the presidency on the 24th August on a visit to the provinces, under a salute of nineteen guns from the fort battery.

GAZETTES.

The public assembly of Monday evening is considered to have outvied all the former, both as to numbers and attraction: at the same time it was generally admitted, that the present building did not

not afford sufficient room for these meetings, encouraged as they now are, and that a larger ought to be engaged: we are glad to learn, in support of this change, that the funds of the assembly are much improved.—(*Mad. Gov. Gaz. Aug. 18.*)

LOSS OF THE THEODOSIA.

We regret to find, that accounts have reached the Presidency of the loss of the Theodosia, of Liverpool, on the coast near Ganjam. This ship was from Calcutta homeward bound: all on board are stated to have been saved. The Theodosia left the Bengal river about the 3d, and was lost on the 14th Aug.—(*Mad. Gov. Gaz.*)

SHIPPING.

Arrivals.

Aug. 6. Minerva, Probyn, from London.—11. *Atlas*, Hunt, from London.—14. *Warren Hastings*, Mason, from London, and *Jane*, Maitland, from New York.—16. *Princess Charlotte of Wales*, Biden, from London.—24. *Isabella*, Wallis, from Calcutta.—25. *Lord Amherst*, Lucas, from Calcutta, and *John*, Popplewell, from London.—26. *Sarah*, Milne, from London and Ceylon.—30. *Lady Flora*, M'Donald, from London.—*Sept. 3. Eliza*, Sutton, and *Royal George*, Reynolds, from London.—4. *Guildford*, Johnson, from London, and *Boyne*, Lawson, from Calcutta.

Departures.

Aug. 3. Atlas, Hine, for Penang, Singapore, and China.—7. *Herefordshire*, Hope, for Penang and China.—13. *Windsor*, Haviside, for Penang and China.—19. *Minerva*, Probyn, for Calcutta.—20. *Jane*, Maitland, for Covelong and Calcutta.—27. *Warren Hastings*, Mason, for Calcutta.—29. *Sarah*, Milne, for Calcutta.—*Sept. 4. Isabella*, Wallis, for London, and *Princess Charlotte of Wales*, Biden, for Calcutta.—5. *Royal George*, Reynolds, for Calcutta.—6. *Lord Amherst*, Lucas, for London.—8. *Boyne*, Lawson, for London.

BIRTHS, MARRIAGES, AND DEATHS.

BIRTHS.

July 19. At Jaulnah, the lady of Capt. Gibbins, of a son.
21. At Secunderabad, the lady of Lieut. Poyntz, H.M.'s 30th regt., of a daughter.
27. The lady of Lieut. Col. G. L. Wahab, commanding 32d regt., of a daughter.
— At Berhampore, the lady of J. T. Anstey, Esq., civil service, of a son.
28. At Trichinopoly, the lady of Capt. Fulton, dep. assist. quart. mast. gen. southern division, of a son.
Aug. 5. At Nagpore, the lady of Capt. H. C. Sandys, of a daughter.
8. On board the Princess Charlotte of Wales, on her passage from England, the lady of Maj. Haddock, 97th regt., of a daughter.
10. On the Nilgherries, the lady of J. Sullivan, Esq., of a daughter.
18. At Neemuch, the lady of Lieut. C. J. Lewes, sub-assist. com. gen., of a daughter.
— Mrs. Blacker, of a daughter.
— At Masulipatam, the lady of Capt. G. Jones, major of brigade, north div., of a daughter.
20. At Jaulnah, the lady of Lieut. Col. Hackett, 40th N.I., of a daughter.
21. At Trichinopoly, the lady of Capt. Bruce, 35th regt., of a daughter.
23. At Quilon, the lady of W. Huxham, Esq., of a son.
— Mrs. R. Franck, of a daughter.

MARRIAGES.

June 11. At Mysore, Mr. R. Fitzsimons, to Miss E. Atkinson.
July 27. At the Luz Church, Mr. J. M. Genot, to Louisa, youngest daughter of Mr. Favis.
— At Berhampore, Mr. W. R. M'Koy, to Julia Maria, eldest daughter of Mr. J. Lavale.
30. At St. George's Church, J. W. Kindersley, Esq., civil service, to Miss J. C. Elliot.
Aug. 1. At the Scotch Kirk, Mr. James Alms, son of Capt. J. M. B. Alms, of the Royals, to Miss M. A. Carr.
15. At Ranipett, Mr. T. Morris, to Miss S. Lincoln, fourth daughter of Mr. H. Lincoln, revenue surveyor, cente division.
Lately. Alex. Grant, Esq., to Mademoiselle Marie Therese de Champ.
— At Secunderabad, Lieut. and Adj. Pinson, 46th N.I., to Mrs. Cowen, widow of Dr. Cowen, H.M.'s 41st foot.

DEATHS.

April 16. At Rangoon, Lieut. J. Williamson, Royal regt., son of Maj. Williamson, of Caithness, North Britain.
May 22. At Promé, Lieut. W. Stokes, 28th Madras N.I.
June 9. At Masulipatam, Capt. F. Best, of the Madras artillery.
26. At Manantoddy, Lieut. E. Newton, 14th N.I.
July 13. At Pondicherry, Mr. Aime de Lasselles, second in council at that place.
29. Mr. W. Maggs, late of the firm of Laird, Maggs, and Co.
30. At Vizagapatam, Mrs. E. Samuels.
Aug. 1. At Nagpore, the lady of George Adams, Esq., surgeon Madras establishment.
4. At Mahattee, Lieut. Bradley, 18th Madras N.I., doing duty with the 10th regt.
6. At Negapatam, William Arthur, infant son of Mr. C. Richardson.
— Mr. D. J. Deckers, aged 52.
— Margaret Bridget, infant daughter of Lieut. S. B. Goodrich, 1st N.I.
7. Mr. P. Samuels.
9. On board the Indiana, hospital ship, in the Arracan river, Capt. Howell, 16th Madras N.I.
— At St. Thomas's Mount, Mrs. M. Jepp.
11. At Sadras, the lady of B. Cunliffe, Esq., of the Madras civil service.
15. At Secunderabad, Ens. Wilson, H.M.'s 30th regt.
— At Pondicherry, Mary Louisa, third daughter of Lieut. Col. Warren, aged five years.
20. At Cuddalore, Capt. W. Preston, late of 2d Nat. Vet. Bat.
— At Negapatam, James Smart, Esq., surgeon.

Bombay.

MISCELLANEOUS.

METROPOLITE OF THE SYRIAN CHURCH.

A very interesting occurrence took place at St. Thomas's church on Sunday last, and such as probably was never before witnessed in any church of our establishment. Many of our readers are aware that a primitive Syrian church exists in Travancore, who were long accustomed to receive their bishops from Antioch. The Syrian Metropolitane Mar Athansius, who has lately arrived in Bombay, and is proceeding on a mission to that church from the Patriarch, in the course of the last week waited on the Bishop of Calcutta, and on Sunday morning attended divine service at St. Thomas's. The metropolitane remaining after the sermon to receive the sacrament, the lord bishop conducted

him within the rails of the altar, placed him in his own chair, and administered the communion to him, together with the English clergy and the Syrian priest in attendance. It was not a little gratifying to witness this friendly and brotherly union of the head of our own church with the representative of one so venerable for its antiquity. The two bishops left the church together, and embraced at the door.—[*Bom. Cour. Aug. 13.*]

BISHOP OF CALCUTTA.

The Lord Bishop of Calcutta and his family embarked in the *H. C. S. Discovery* on Monday, in prosecution of his episcopal visitation to Ceylon, taking with him the Rev. Thomas Robinson, of Poona, as his chaplain. His lordship was accompanied into town from Parell by the hon. the Governor, and was received at the government house by the general staff, many of the civil servants, and the archdeacon and several of the clergy, by whom also he was attended to the pier head; and there, in taking leave of the gentlemen, the bishop made his grateful acknowledgments for the great attentions which had been paid to him, and with wishes for the prosperity and happiness of those he left, expressed the pleasure he had derived during his residence from the excellent and valuable society of this presidency. The high talents of Bishop Heber, united with his very kind and amiable feelings, engage the regard and friendliness of all who know him; and his frequent discourses from the pulpit, exhibiting with unusual force the leading features of the Christian faith and character, leave an impression on his hearers which will long remain to their delight and improvement. He carries with him, we are sure, the prayers of every good man for his health and success in the arduous and awfully important duties in which he is engaged.—[*Ibid. Aug. 20.*]

LUNAR IRIS.

On Monday evening a beautiful Lunar Iris made its appearance towards the west, and continued visible nearly twenty minutes. It formed a perfect arch of about 60°, the extreme altitude of which was 50° from the horizon: but as the moon rose, the circle of which it formed a segment diminished, till its altitude was not more than 30°. The colours were at times very brilliant, and, from the contrast of dark clouds to which they were opposed, the effect was singularly grand.—[*Bom. Gaz. Aug. 3.*]

CHEVALIER DE RIENZI.

Among the strangers who have from time to time visited Bombay, is the Che-

valier Domeny de Rienzi, who lately arrived here by way of the Red Sea. This young French *savant* is well known by his travels to Mount Caucasus, in Barbary, in Syria, among the Druses, in America, the Orkneys, Greece, &c. It is to be hoped he will give to the public his recent travels in the three Arabias, to Mount Sinai, Taief, in the plains of Hali and Betelfaki, to Surakem, to Hinderab and in Abyssinia. These travels would be more interesting, as the Chevalier de Rienzi is the first European who has ever visited the country between Mount Samen and Assab, and the vicinity of the ancient Adulis. Several gentlemen in Bombay have had the satisfaction of inspecting the collection of inscriptions, antiques, plants, minerals, and other curiosities, brought by the Chevalier de Rienzi from antient Ethiopia, besides the various drawings he made during his travels.—[*Bom. Cour. Aug. 6.*]

BIRTHS, MARRIAGES, AND DEATHS.

BIRTHS.

- July 6. At Booj, the lady of Capt. Soppitt, 18th regt., of a son.
 15. At Marine Villa, the lady of Lieut. Col. Tucker, dep. adj. gen., of a son.
 25. At Mahidpoor, the lady of Capt. Dungenfield, assist. opium agent Malwa, of a daughter.
 Aug. at Huttah, Mrs. M. F. Barthelemy, wife of Mr. F. Barthelemy, of a daughter.
 8. At Belghaum, Mrs. Mignan, of a daughter.
 11. The lady of the Rev. D. Young, of a daughter.

MARRIAGE.

Aug. 10. At St. Thomas's Church, John Vibert, Esq., of the civil service, to Anna Holland, fourth daughter of the late John Forbes, Esq., of Oyer Skibo, Sutherlandshire.

DEATHS.

- July 21. At Poonah, Lieut. C. D. Blachford, adj. 2d troop of horse artillery, aged 31, son of Maj. Gen. Blachford, of this establishment.
 22. At Girgaum, Mrs. Trash, aged 40, the wife of Mr. E. Trash, chief officer on board the H.C.'s ship Elizabeth.
 Aug. 5. At Seeroor, Helen Elizabeth, daughter of Capt. Sykes, aged 6 months.
 9. At Mazagon, Master J. M. de Quadros, aged 8 years, youngest son of the late Rozario de Quadros, Esq.

Ceylon.

CIVIL APPOINTMENTS.

- Aug. 5. T. Eden, Esq., to be an additional deputy secretary to government and secretary to council.
 C. P. P. Stewart, Esq., to be an assistant to collector of district of Chillaw and Putlam.
 H. R. Scott, Esq., to be an assistant to collector of districts of Colombo.

ALTERATION IN THE CURRENCY.

By a regulation, dated July 4, 1825, the legal currency of the island is declared to be the silver and copper coin of Great Britain;

Britain; the silver six dollar to pass current at 1s. 6d., and the present copper-coin of the island, as under:

1 Fanam at	1½d.
½ ditto	¾
1 Pice	¾
½ ditto	¾
1 Challie	¾

BIRTHS.

June 19. At Colombo, the lady of the hon. J.W. Carrington, of a daughter.

Aug. 10. At Colombo, the lady of Capt. Hilton, H.M.'s 45th regt., of a daughter.

MARRIAGE.

Aug. 8. At St. Peter's Church, Colombo, H. R. Scott, Esq., Ceylon civil service, to Eliza, third daughter of Lieut. Col. Hook, commanding 16th regt., and commandant of Colombo.

DEATHS.

June 17. At Kandy, Capt. R. P. Campbell, of the Ceylon rifle regt.

Aug. 15. At Colombo, the infant daughter of Capt. Hilton, H.M.'s 45th regt.

Malacca.

We are rejoiced to learn that, during the last fortnight, the harbour has been full of shipping, and a great deal of business transacted. Trade is reviving, and the acting resident daily receives the most gratifying tokens of confidence and goodwill from all classes of the inhabitants. In former years, during the British administration, Malacca was a place of considerable trade, and we have little doubt that, under the same liberal and benevolent government, commerce will be revived, and its dormant energies restored. Its central situation, internal resources, and close vicinity to Siak, on the east coast of Sumatra, and Selangore on the Peninsula, together with the convenient position of the port for ships passing to and from China, Batavia, &c., must always ensure to Malacca a very considerable portion of trade.—[*Penang Gaz.* May 21.]

DEATH.

July 19. At Malacca, Adrian Koek, Esq.

Penang.

SHIP-BUILDING.

The Ex-King of Acheen, the second son of the late Syed, proceeded a few months ago to Cochin, and intends bringing with him, on his return, a new ship of four hundred tons, for this port.

Several handsome junks, of large dimensions, have lately been built at Poongah, near the island of Junk Ceylon, for Chinese merchants of this place. One in particular, a very fine vessel of 225 tons, belonging to Che Toah, one of the prin-

cipal merchants, which lately arrived from Poongah with a full cargo of rice, sea-slug, birds-nests, tin, &c., quitted this island last week, with a very valuable cargo, consisting principally of piece goods and opium, for the west coast of Sumatra—for which trade the junk is destined, and in which a very considerable number of junks belonging to this island are at present engaged.—[*Penang Gazette.*]

NICOBAR ISLANDERS.

From a report from the deputy master attendant at Penang, despatched by government to the Nicobar islands, to endeavour to rescue the crews of two vessels wrecked there, it is evident that these people really are pirates, two of the inhabitants of Bompoka having confessed that several ships had been lately cut off and their crews murdered by the natives. The editor of the *Penang Gazette* observes, that the inhabitants of these islands are represented to be stout, well-proportioned men, resembling the Malays in their general appearance. They have been considered as a quiet, inoffensive, and rather hospitable people. It is very certain, however, that several vessels have been wrecked close to these islands and the crews have never been heard of, especially during the last few years.

COCHIN CHINESE TRADERS.

The Cochin Chinese, we understand, have disposed of the whole of their cargoes of sugar, rice, raw silk, &c. and are making large purchases of woollens, glass-ware, and various other articles. It is amusing to see these men going about from shop to shop followed by their retinue, and to observe their tenacity at making bargains, and their keenness with regard to the measure and weight of any thing they purchase. They are constantly accompanied by a man with a measure in his hand, which is applied to every piece of woollen they purchase, and with such scrupulous nicety, that they haggle about the slightest deficiency. They seem an intelligent people, civil and well behaved, and although they spend the most part of their time ashore, no disturbance of any description has taken place. They talk of quitting a month hence, but very probably may be induced to wait the arrival of the Indiamen of the season.

DEATH.

June 27. At Penang, the lady of Capt. W. H. Hewitt, 40th regt. B.N.I.

Singapore.

ORES OF ANTIMONY AND TIN.

In some of our earlier numbers we speculated upon these two commodities as probably

in the middle of which sparkled two of the largest diamonds ever known. On each side of the hall many of his sons were seen fixed motionless as wax-work figures; they were all magnificently dressed, and covered with pearls. Opposite the shah, and behind us, in a sort of vestibule, appeared men in grand uniform, bearing golden axes on their shoulders, emblems of their terrible office; their eyes fixed upon the *lord of all*, they indicated not by the smallest motion that they were of this world.

"This stillness, and the Eastern splendour which reigned throughout the scene, produced mixed emotions of terror and admiration; it had such an effect upon our poor drogeman, that he became ill.

"Futty-Ali-Shah is about sixty-six years of age, less remarkable by his features than by a beard, which has become historical; it almost covers his face, scarcely allowing his eyes to be seen, and descending to his waist. This excites great admiration amongst his subjects, who declare that there is not a greater king upon the earth, for he has a long beard, an infinite number of wives, and plenty of horses."

M. de Richemont has since been taken seriously ill, owing to the excessive heat and unhealthiness of Teheran. He has been attended by Dr. M'Neil of the British mission, as well as the writer of the letter.

Postscript to Asiatic Intelligence.

THE intelligence from the seat of war is very scanty. All accounts agree in representing that great sickness has prevailed amongst our troops at Prome. A mortality appears likewise to have raged amongst the horses and bullocks; the disease is described as the same which visited the lower provinces of India in 1824, and was, probably, transferred to the Burmese country by the army bullocks sent to Rangoon. The country about Prome has been flooded with water to such a degree, that fears were entertained that the army must betake themselves to the hills. The excessive moisture and the decay of vegetables, have produced a dysentery amongst the natives; but it was not of a dangerous nature. The monsoon had been, however, light, and the troops were under excellent care. The bazaar at Prome was well supplied, and the climate is described as infinitely superior to that of Rangoon. At the commencement of August the waters began to subside; and it is asserted in the Calcutta Government Gazette of August 25, that the army had recovered its health, and that every thing was going on well.

The Burmese seem intent upon further hostilities, though the reports upon this point are contradictory. A communication of some kind appears to have been made by the court of Ava to the Supreme Government, through the authorities at Rangoon. This circumstance is said to have caused the visit which Sir A. Campbell paid to this place. He returned to Prome August 2d. The last accounts from Prome which appear on the Calcutta Gazette of September 8th, state that the bulk of the Burmese force in the vicinity of that city had been summoned to Ava, as a disturbance had taken place at the capital, supposed to have been an insurrection of the Shaum and Cassay troops. The British army was not expected to move for some time. But little

sickness has occurred at Rangoon, although this season was last year attended with very fatal disease.

The sickness at Arracan has been most extensive. Almost the entire force had experienced its effects, and in many cases it has proved fatal to the British officers. Every provision had been made for the relief of the troops, by sending hospital vessels for the reception and conveyance of the sick. Among the invalids is Brig. Gen. M'Bean, and it is said Gen. Morrison. By late accounts it is consolatory to find that the sickness is daily decreasing, and that the troops are recovering their health. The cause of the disease is traced to the unusual sultriness of the season, the humidity of the place, and the miasma arising from the stagnant water. In ordinary circumstances Arracan is described as healthy, the climate being fine, the nights cool, and the days not commonly hot.

The communication between Arracan and Prome has been found so difficult, that it is said the intention of crossing the Mug mountains is abandoned at Arracan. A passage has been found to the east by water, from Prome to Arracan, which realizes the hope entertained that one of the branches of the Errawaddy empties itself at the Bay of Bengal, far to the northward of Cape Negrais.

Letters from Assam state, that the auxiliaries employed by Lieut. Neufville are operating against the Singphos, and have occupied Beesagoang.

Accounts from Ramree mention, that all was tranquil there; the inhabitants were contented, provisions were plentiful, and but little sickness exists there.

Gumber Sing has returned from Munnipore to Silhet, having left a force to garrison the place until the advance of our troops in September. A detachment of the Rajah's pharis occupies Banskandi.

ing off the restriction as to the specific quantity of 4,050 piculs, and extending the indulgence of exemption from measurement duties at Whampoa, to vessels of any size, provided they imported a full cargo of that article.

The Mauritius.

Government Notice.—His exc. the governor has been pleased to direct that the following proclamation of Radama, king of Madagascar, be published in the gazette of the colony for general information.

Chief Secretary's office, Port Louis, 16th June 1825.

G. A. BARRY, Chief-sec. to Gov.

“By Radama, King of Madagascar.

“Whereas having recently possessed myself of the town of Muzungu and of the bay and harbours of Bombatok, and it appearing that various exorbitant and undefined sums have heretofore been extorted from British vessels, as well as others visiting this harbour for the purpose of trade or refreshment, and being desirous of manifesting on all occasions my high consideration for the British nation, and my friendship for Commodore Joseph Nourse, C. B., commanding his Britannic Majesty's ships and vessels in these seas, it is hereby ordered: That all British vessels, visiting the said ports and harbours for the purpose of engaging in lawful trade, shall have free liberty to do so, without let or hindrance of any kind, on payment of the sum of fifteen dollars anchoring money, and of five per cent. duty on all articles the produce of Madagascar exported for the purpose of such trade and traffic. The said duty to be levied in the most equitable and convenient manner, and no other duties or fees of any kind whatsoever to be imposed.

“That, with a view to encourage the residence of British subjects in my dominions, for the better civilization of my people, and the introduction of various arts and sciences, I hereby assure them of my special protection; and that they shall have free liberty to dwell therein, to build ships and vessels and houses, and cultivate lands, to carry on lawful trade and traffic, to come and to go at their own will and pleasure, without let or hindrance of any kind, and without payment of any duty or tax than before-mentioned.” (Signed) RADAMA.

Cape of Good Hope.

Cape papers have reached England to the 22d October: a great portion of the colonists have suffered materially from drought and the excursions of the Caffres and Bushmen. The latter evil seems to have become a terrible scourge upon the

peaceable settlers. The Enterprize remained at the Cape at the date of these advices, and Capt. Johnstone had issued cards for the inspection of her machinery. Lord Charles Somerset and a large party went on board, and partook of a splendid collation. She was to sail on the 22d for India, after taking on board 280 chaldrons of coals.

Persia.

FRENCH MISSION.

The French papers contain a letter from M. Belanger, who accompanies the Vicomte de Richemont in his mission to Persia, dated from Teheran, where they arrived in June last. He states, that M. de Richemont was received at the Persian capital with the same honours paid to him at Tabriz.* He was lodged with Aboul Hassan Khan, the ambassador to England, who is now minister for foreign affairs. M. Belanger gives the following description of their presentation at court:

“We were conducted into the presence of his majesty by the grand master of the ceremonies, and by the minister for foreign affairs, attended by a crowd of other khans in court dresses, and a multitude of armed men. When we arrived at a little gate, a porter of enormous size, and like Lucifer in figure, opened it, and we entered a garden where two tents were pitched opposite each other. At the extremity of that which looked towards the hall of audience, was a number of courtiers in magnificent dresses, arranged in line, and motionless as statues, scarcely daring to breathe, although they were about 200 feet distant from him who, by a motion, could cause the thread of their existence to be cut.

“Before we ascended to the hall of the throne, the grand master of the ceremonies announced, as loudly as he could, that ‘the Vicomte de Richemont, bearer of a letter from the King of France, desired to be introduced.’ The shah replied: ‘Let him be welcomed.’ Accordingly, after two salutations, we were admitted—the Vicomte deposited, accord to etiquette, before the shah, who was seated upon a kind of throne or chair of ancient form, but covered with jewels, the letter and present of the king.

“The hall of audience was extremely superb, adorned with ornaments or glass-work resembling crystal. Near the shah, on his left hand, were placed, in a theatrical attitude, the grandes of his court, holding, one his diadem, another his scymetar, a third his shield, and a fourth his sceptre. Nothing could be more splendid. All these articles were covered with jewels; at the top of the shield was an emerald of extraordinary size. The shah had bracelets,

in

* See *Asiat. Jour.* vol. xx. p. 485.

in the middle of which sparkled two of the largest diamonds ever known. On each side of the hall many of his sons were seen fixed motionless as wax-work figures; they were all magnificently dressed, and covered with pearls. Opposite the shah, and behind us, in a sort of vestibule, appeared men in grand uniform, bearing golden axes on their shoulders, emblems of their terrible office; their eyes fixed upon the *lord of all*, they indicated not by the smallest motion that they were of this world.

"This stillness, and the Eastern splendour which reigned throughout the scene, produced mixed emotions of terror and admiration; it had such an effect upon our poor drogeman, that he became ill.

"Futty-Ali-Shah is about sixty-six years of age, less remarkable by his features than by a beard, which has become historical: it almost covers his face, scarcely allowing his eyes to be seen, and descending to his waist. This excites great admiration amongst his subjects, who declare that there is not a greater king upon the earth, for he has a long beard, an infinite number of wives, and plenty of horses."

M. de Richemont has since been taken seriously ill, owing to the excessive heat and unhealthiness of Teheran. He has been attended by Dr. M'Neil of the British mission, as well as the writer of the letter.

Postscript to Asiatic Intelligence.

THE intelligence from the seat of war is very scanty. All accounts agree in representing that great sickness has prevailed amongst our troops at Prome. A mortality appears likewise to have raged amongst the horses and bullocks; the disease is described as the same which visited the lower provinces of India in 1824, and was, probably, transferred to the Burmese country by the army bullocks sent to Rangoon. The country about Prome has been flooded with water to such a degree, that fears were entertained that the army must betake themselves to the hills. The excessive moisture and the decay of vegetables, have produced a dysentery amongst the natives; but it was not of a dangerous nature. The monsoon had been, however, light, and the troops were under excellent care. The bazaar at Prome was well supplied, and the climate is described as infinitely superior to that of Rangoon. At the commencement of August the waters began to subside; and it is asserted in the Calcutta Government Gazette of August 25, that the army had recovered its health, and that every thing was going on well.

The Burmese seem intent upon further hostilities, though the reports upon this point are contradictory. A communication of some kind appears to have been made by the court of Ava to the Supreme Government, through the authorities at Rangoon. This circumstance is said to have caused the visit which Sir A. Campbell paid to this place. He returned to Prome August 2d. The last accounts from Prome which appear on the Calcutta Gazette of September 8th, state that the bulk of the Burmese force in the vicinity of that city had been summoned to Ava, as a disturbance had taken place at the capital, supposed to have been an insurrection of the Shaum and Cassay troops. The British army was not expected to move for some time. But little

sickness has occurred at Rangoon, although this season was last year attended with very fatal disease.

The sickness at Arracan has been most extensive. Almost the entire force had experienced its effects, and in many cases it has proved fatal to the British officers. Every provision had been made for the relief of the troops, by sending hospital vessels for the reception and conveyance of the sick. Among the invalids is Brig. Gen. M'Bean, and it is said Gen. Morrison. By late accounts it is consolatory to find that the sickness is daily decreasing, and that the troops are recovering their health. The cause of the disease is traced to the unusual sultriness of the season, the humidity of the place, and the miasma arising from the stagnant water. In ordinary circumstances Arracan is described as healthy, the climate being fine, the nights cool, and the days not commonly hot.

The communication between Arracan and Prome has been found so difficult, that it is said the intention of crossing the Mug mountains is abandoned at Arracan. A passage has been found to the east by water, from Prome to Arracan, which realizes the hope entertained that one of the branches of the Errawaddy empties itself at the Bay of Bengal, far to the northward of Cape Negrais.

Letters from Assam state, that the auxiliaries employed by Lieut. Neufville are operating against the Singphos, and have occupied Beesangong.

Accounts from Ramree mention, that all was tranquil there; the inhabitants were contented, provisions were plentiful, and but little sickness exists there.

Gumber Sing has returned from Munnipore to Silhet, having left a force to garrison the place until the advance of our troops in September. A detachment of the Rajah's pharis occupies Banskandi.

DEBATES AT THE EAST-INDIA HOUSE.

East-India House, Jan. 18.

A General Court of Proprietors of East-India Stock was this day held at the Company's house in Leadenhall Street, pursuant to adjournment from the 21st of December last.

The minutes of the last court having been read,—

Mr. S. Dixon rose to make an observation relative to the manner in which the meetings of the Court of Proprietors were advertised. It appeared that no notice had been taken of the present meeting through the medium of the newspapers. This course might have been pursued on account of its being an adjourned court; but how few of the proprietors might be aware of the fact without a regular notice. He trusted that, in future, although they met pursuant to adjournment, proper notice would be given of the day on which a general court would be held.

The *Chairman* (C. Marjoribanks, Esq.) stated, that the circumstance must have arisen from the advertisement not having been inserted on particular days in the paper which the hon. proprietor was in the habit of reading. The meeting had been regularly advertised, and appeared in *The Morning Herald* of that day.

Mr. S. Dixon said, he took in *The Morning Herald* and *The Times*, but he had not seen the advertisement in either paper. It might be in those papers this day, but he had not seen the meeting advertised in the ordinary manner.

The *Chairman*. "I assure the hon. proprietor it has been duly advertised."

General Thornton. "I saw it several times advertised in different papers."

COMPANY'S SHIPPING.

Capt. Maxfield inquired whether the papers relative to the Company's shipping, for which he had moved at the last general court, were ready.

The *Chairman* said, they were not yet ready. The subject had been referred to the proper committee, who would, as soon as possible, make a report to the court.

MR. J. S. BUCKINGHAM'S CASE.

The *Chairman*. "I have to acquaint the court, that it has met pursuant to adjournment, and made *special* for the purpose stated in the requisition, which shall now be read.

The clerk then read the requisition, as follows:—

"We, the undersigned proprietors of East-India stock, being duly qualified,
Asiatic Journ. Vol. XXI. No. 122.

request you will be pleased to let the ensuing Quarterly General Court of Proprietors be made further special for the purpose of taking into consideration the following propositions: That there be laid before this court copies of all correspondence between the Court of Directors and Mr. J. S. Buckingham, late proprietor of the Calcutta Journal, respecting his claims for reparation of the injury sustained by him in his property in Calcutta in consequence of the measures of the Bengal government; also copies of all proceedings of the Bengal government referred to in the correspondence beforenamed.

(Signed) "DOUGLAS KINNAIRD,
"JOSEPH HUME."

The Hon. D. Kinnaird then proceeded to address the court. He said, that in introducing the subject which it was his duty to bring before the proprietors, he was extremely anxious, in the outset, to state what it was not his intention to do, rather than to detail what he did mean to do; because, unfortunately, in discussing all subjects, a very considerable latitude was allowed to speakers—and the consequence was, that the question in debate was often overlaid by collateral and incidental matter. He would now most distinctly state, that it was his intention, and would be his earnest endeavour, to keep the subject which he was about to introduce to the proprietors of East-India stock and to the English public, totally and entirely distinct from the general question of the press in India; and also perfectly free from the question, whether the government in India had acted wisely or unwisely in adopting certain measures with respect to the press, for the purpose, as they alleged, of enabling them to carry more readily into effect the views of government. Whether those measures had been wise or unwise, he would not stop to inquire; but he would prove that they had been the cause of unnecessary, unmerited, and severe injury to a deserving individual. He was not questioning whether other measures might not have been adopted that would have effected the object government had in view, without producing the evil of which this individual complained; but he would call the attention of the court to this single fact, that great injury had been inflicted on him—injury that could not have been contemplated by the government. He said this, because he had never heard that Mr. Buckingham had been charged at any time, by either a public or a private accuser, as being guilty of any act which rendered him unworthy of the respect and confidence which he had long enjoyed amongst

all those with whom he was acquainted. He would confine himself to the simple proposition, that a most serious injury had been done to an individual—an injury growing out of certain measures which the Indian government thought it necessary to adopt with reference to the control of the press in that country; and he begged leave explicitly to state, that he meant to hint nothing whatever as to whether the government were right or not in placing the press under a censorship, or in adopting the system of licence, as a subject quite distinct from the question under consideration. He was not competent, in a narrow compass (neither would it be agreeable to Mr. Buckingham, to the proprietors, or to himself), to give an adequate idea of the gentleman whose case he was about to bring forward. He, therefore, would state the leading features of his life, and detail those circumstances, which, without any fault or error of his own, rendered him the object of unjust and improper suspicion. Mr. Buckingham had long lived under obloquy and calumny, but he had at length triumphed completely over the imputed improprieties that had been laid to his charge, and proved, beyond the possibility of doubt, that there had been nothing in his public or private conduct that, in the slightest degree, deserved reproach or blame. It was now well known in what way the hostility against Mr. Buckingham originated; and he felt it necessary to mention the circumstance, because he believed in his conscience, had it been originally understood, so far from wishing to go out of their way to punish Mr. Buckingham, the government would have been rather disposed to act leniently towards him. He would now show the reason which caused the outcry against him. On his way to India, Mr. Buckingham met with a gentleman named Bankes, the present member for the University of Cambridge, and, unfortunately for him, remained for some time in that individual's company. Mr. Buckingham wrote two volumes, the result of his travels in the East: they were open to the criticism and examination of all men of literature and science; and he (Mr. K.) believed the result was, that Mr. Buckingham ranked as a considerable benefactor to this curious, instructive, and amusing branch of literature. He arrived in India with a far different view than that of publishing his travels; but he thought fit to avail himself of the opportunity of giving them to the world, and he sent forth a statement of the nature of his work, for which a respectable bookseller offered him some thousands of pounds. Not many months, however, had passed over his head, before a statement arrived in India, which was, in the first instance, made known through an hon. friend of his (Mr. Kinnsaid's), Mr. H. Hobhouse, which struck directly at the

root of Mr. Buckingham's reputation. That statement was contained in a letter from Mr. W. Bankes, in which he proclaimed Mr. Buckingham to be a literary thief; and asserted that the principal part of his work had been stolen from him. This letter was placed in the hands of Mr. Hobhouse. He, knowing that it came from a gentleman of refined education, connected with one of the first families in England, could not but give credence to the charge. He could not conceive that any man would boldly state that as fact which had not a just foundation. The charge having been circulated, not only did the bookseller, Mr. Murray, refuse to publish the travels, but, in a quarterly publication, under the influence of Mr. Murray, a letter appeared, written by Mr. Bankes himself, describing Mr. B. to be a most immoral character, and a mere *charlatan*. (*Hear!*) The consequence was, that an universal impression, unfavourable to Mr. B.—an impression, which time and talent alone could enable him to overcome—spread itself all over India. What a melancholy situation was this to be placed in! Here was a man in a foreign country, where he hoped to have acquired honour and competence, held up to contempt, and disgraced in the eyes of every person: the judgment of individuals was warped, and intercourse with Mr. B. was suspended, until he cleared himself, and proved that he had been most unjustly treated. (*Hear!*) These were the disadvantageous circumstances under which Mr. B. undertook, what he would venture to say was one of the most arduous, and, at the same time, one of the most useful situations which could be pointed out in society—a situation which, when the duties of it were discharged creditably and honourably, benefited the individual, while it served the country. He became the conductor of a daily newspaper: when it was recollected that extraordinary temptations must necessarily present themselves in such a situation; that though a man, placed in a post of this description, might feel inclined to forbear, at times, yet still must act as a public censor of public conduct—much should, in his opinion, be conceded to those who had the guidance of so powerful and useful an instrument. It was evident that a newspaper in India could only circulate amongst those persons who possessed ample means, from situation as well as education, of duly appreciating what the journal was worth; and he believed Mr. B.'s paper arrived at a circulation, and produced a profit, far greater than was ever before known in India, and equal, perhaps, to any thing realized in this country, by similar property. In the course of five years, a very large sum of money, and a vast deal of labour, were expended, in establishing this journal. At the end of that

time it produced a net profit of £8,000 per annum; and, when Mr. B. had paid all his debts (for he had borrowed money at the rate of interest common to India), he vested £20,000 in buildings, and in setting up the Columbian press, which was the finest establishment of the kind in the English colonies, east or west. To a number of independent gentlemen he sold a quarter of the paper, for the sum of £10,000, which he received in hard cash: one hundred individuals thereby became contributors to, and supporters of, the journal. All this showed the well-founded prospect which existed, that this paper would continue successful—that it would continue progressively to increase in value. This success, let it be observed, was obtained in defiance of all the imputations cast on Mr. B.: those imputations were, at the time, unremoved, because proofs of their falsehood could not be immediately produced. Mr. B. had been stigmatized, not only as a speculating adventurer, but as a literary thief. Those charges had been brought to the test in this country, and the investigation had left the character of Mr. B. pure and unspotted—without stain or imputation. He stood forward as an individual who had moved in the first class of society in India, as a man of honour and integrity—as a moral man. He discharged his public duty fairly and honestly, without swerving, in the slightest degree, from those principles he conscientiously believed to be correct. Had he done so, and shewn a great worldly wisdom, perhaps he might still have continued in India: he certainly did not act the part of a worldly wise man—many observed, that he could only seek his own ruin by pursuing the straight-forward course he had adopted—and, therefore, it was a fair presumption, that he was influenced by a just and proper feeling. Placed at the head of that paper, he proved himself to be a skilful conductor of the establishment; and, as such, every unprejudiced man admitted that the undertaking deserved all the success which had attended it. Mr. B., in this situation, was enabled to clear his character in the eyes of those who inquired into the circumstances of his case and thought proper to judge for themselves. This he would boldly say, that nothing was ever heard contrary to the good and estimable character of Mr. B. until the statement of Mr. Bankes appeared; and he would farther assert, that no man, whose mind was not imbued with prejudice, could read the vindication of Mr. B., and not feel that he was satisfied with it. (*Hear!*) It was not, however, to be denied, that Mr. B.'s political enemies, the editors of other newspapers, made the charge of Mr. Bankes the foundation of abuse—yes, of the most horrible abuse. He (Mr. K.) had received a statement

from Dr. Bryce, given under his own hand, in which he declared his belief of Mr. Bankes's allegation; and the government of Bengal did still believe that he was a literary swindler. This feeling would remain, until the truth went forth to India from the courts of justice here, where, thank God, while a man had a few hundreds, he might go before a jury of his country, and demand justice. Mr. B. had done so—no proof was offered in support of the calumnies levelled against him; but, on the contrary, concessions were made to him, and the charges were admitted to be all false. The calumnies of Mr. Bankes were thus proved to be entirely unfounded; but his innocent victim suffered not the less from those calumnies; and the end was, that his ruin in India was accomplished. (*Hear!*) He would assert, that a more conscientious or estimable man than Mr. B. did not exist. He did not ask one shilling damages—all he desired was, to have his character cleared: for, let it be understood, that when the nominal damages of £5. were given, it was expressly stipulated that the costs, £1,000. or £2,000., should be paid by the defendant, as a miserable equivalent for all the evil which these calumnies had inflicted on Mr. B.; but not one particle of compensation has he received from those to whose falsehoods he had fallen a victim. One of the actions brought by Mr. B. was against the editor of the *Quarterly Review*, for publishing that most unjust and unfounded statement. Mr. Murray believed it to be true, and therefore, against him, Mr. B. harboured no ill feeling; the only feeling he entertained was a strong desire to rescue his character from obloquy. (*Hear!*) He had pursued the same conduct towards Mr. Bankes, senior, who had not attempted to justify his letter. He did not mention this as matter of reproach to Mr. Bankes, who, having been led into an error, deserved their sympathy, rather than their censure. He wished to do justice to Mr. Bankes, and also to Mr. Murray, because he had it from the latter gentleman's own lips, that they would both do any thing in their power to compensate Mr. B. for the injury they had unwittingly inflicted on him. This statement would, he thought, account, in a great degree, for the unworthy way in which Mr. B. had been treated, by a very considerable portion of the community in India. He had been a severe sufferer in consequence; but, at this day, his vindication in a court of justice had gone out to India, and so far as his reputation was concerned, his triumph was complete. And now he begged leave to call the attention of the court to a circumstance which proved the state of subjection in which the public mind was kept in India. When Mr. B. published the second volume of his travels, he appended to it a number

of documents for the purpose of repelling the injurious statements which had appeared in the Indian *John Bull*, and other papers. Would it be believed, that the agents of Mr. B., in Calcutta, when he sent out the advertisement for the publication of his book, were afraid to insert the latter part of it? The advertisement announced for publication "The second volume of *Travels in Syria*, with an appendix, containing a refutation of the charges made by Mr. Bankes, &c." Mr. B.'s agent declined putting in the latter part of the advertisement, and he gave as his reason that he thought it would be offensive in the eyes of government. (*Hear!*) Such, unfortunately, was the effect which power, when strongly exercised, had over the minds of a community. He stated it, as an incontrovertible fact, that the agents refused to publish the advertisement, in its original shape, for fear of giving offence to the government. (*Hear!*) This proved, beyond a doubt, how far the public in India connected *The John Bull*, and other papers of the same description, with the government: it was, in consequence of that supposed connexion, that the agent refused to publish the advertisement. God forbid that he should assert the actual existence of such a connexion: he did not mean to do so; but he stated the fact, to shew what a *black sheep* Mr. B. was considered—that he was looked upon as having arrived in India, a literary rogue—and that, until he was white-washed by the British courts of justice, *The John Bull*, and papers of a similar character, would not cease to declare, that the statement of Mr. Bankes was worthy of entire belief. Mr. B. had been held up to obloquy as a man of the worst character—as an individual, who in enlightened society could claim no sympathy—who was entirely unworthy of compassion. He was not ashamed to say, that he was not displeased to see this indirect kind of justice visited by society on men of bad character; but the rule of society should be, to deal out equal justice to all—and to ascertain the fact of the guilt before the punishment was awarded. If Mr. B. were really such a man as his enemies had described him to be, he (Mr. K.) was not the person who would stand up in that court and advocate his cause. Even though a man's cause were a good one, the fact of his having a bad character created a prejudice against him, and tended to place him on a worse footing than that on which he would otherwise have stood; and he knew no distinction between good and bad, he knew no difference between virtue and vice, so strong and so important, as the feeling which produced this effect. But Mr. B. set calumny at defiance: he challenged the world to utter one syllable against his possessing the fairest and the most unsullied reputation; and, when he

did this, were they not to manifest a little kind feeling towards him—and, if consistent with their own rights and interests, to relieve him—or, in plain terms, to do him justice? When he acquitted Mr. Bankes, senior, and Mr. Murray, of all private feeling of hostility against Mr. B., he had no objection to acquit the Bengal government on the same grounds. When Mr. B. left India, he must, of course, submit to the laws which forced him to quit that country, where his property was vested, and where his best prospects were centred. That was the inevitable consequence of the Governor-General's determination; and he (Mr. K.) did not call for remuneration on that ground. No; it was on account of the unnecessary acts of the Bengal government, after Mr. B. had left the country, that he thought relief should be extended to that gentleman. He challenged contradiction to the fact that those acts were unnecessary, and it was notorious that they had done enormous injury to Mr. B. When he quitted India, another editor was appointed in his place; and soon afterwards the government determined to put the press under license. The editors were made responsible for any article that might appear in their respective publications; and if they erred, the government had it in their power to take the license for printing away—so that, in fact, all property in the press was subject to annihilation when the license was suspended. Things were in this state when the new editor of Mr. B.'s paper, or some of the proprietors, it seemed, wrote an article which displeased the government, and the license was suspended. The license had not been renewed: the consequence was, that Mr. B.'s property had been ruined, and his object was to procure compensation for the injury which that gentleman had sustained. He held in his hand some printed documents which would fully explain this part of the subject. He produced them for the purpose of showing that Mr. B. had, through the unnecessary acts of the government, been a most severe sufferer. He asked for no credence to those documents, farther than as papers that would be produced, and might be thoroughly examined by the proprietors, if they pleased to call for them. It appeared that a gentleman of the name of Muston, a servant of the government, wished to become the editor of the journal, and to take the types, &c. belonging to the establishment. It was necessary, however, that he should first procure a license, and he encountered very great difficulty in his endeavours to attain that object. In the course of the negotiation on this point, he found himself placed in such an equivocal situation, as between man and man, with reference to Mr. B., that he deemed it proper to send to that gentleman copies of the correspondence which had taken place between

tween him and the official authorities on this subject. Mr. B., of course, wished that an editor should be appointed, in order that he might receive some return from his property; and certainly, the government still having the full power to suspend the license when they thought fit, they could have nothing to fear from such an arrangement. When they had the power to extinguish a license every morning they got up, what good reason could be adduced for their withholding the boon in this instance? When a man, without moral stain, offered to become editor, why would they not allow him to proceed with the paper? They might have said, "we give you leave to publish, but it is at your peril. Perhaps you may have but half a day's circulation, for we certainly will revoke the license if you offend; however, you may go on." The government, however, did not proceed in this rational manner. After a long delay the license was refused, and Mr. B. was ruined. He should now proceed to lay the correspondence before the proprietors. The first letter Mr. B. received from his agent was as follows:—

"Calcutta, 2d January 1824.—Dear Sir: We have delayed writing fully to you on the subject of the affairs of the Calcutta Journal. We were aware that communications were made direct to you from the office, and have of late postponed writing until we might be able to inform you of the final arrangements intended to be adopted for the concern.—We need not repeat the circumstances which led to the suspension, in November last, of the license under which the paper was published. With a view to promote your interest, as well as that of the other proprietors, we used every exertion to procure the restoration of the license, and, at one time, had some prospect of success.—We have now ascertained that no license will be granted for the issue of any paper from the Columbian press whilst the ownership is constituted as at present."

Here, be it observed (said Mr. Kinnaid), that the chief part of this property belonged to a gentleman who was 3,000 miles from India. The letter went on:—"This being the case, it has become necessary to make some arrangement for the close of the present concern, and the transfer of the property to the best advantage." Now, he would ask, how could any new transfer contribute to place the press more completely under the control of government, than it was at the time this negotiation was going on—when the licensing system enabled the government to put down any obnoxious publication in a moment? Of what consequence was it, whether A or B had the head management of a printing concern, or the ownership of it? If it could be shewn that it made the

least difference, as to the control of the press, he would, at once, give up the whole question. He stated this to shew, that the injuries sustained by Mr. B. arose from acts which were uncalled for. The letter proceeded:—

"Mr. W. P. Muston has been negotiating with us for the purchase of the stock in trade and good-will of the concern, such as it now is, and we expect a formal overture from him when he has assured himself that he will be able to obtain a license."

This letter was written on the 2d of January 1824, when the property was in a very different state from that in which Mr. B. had left it. It was greatly diminished in value, since most of the readers of the journal had gone to other papers. The letter concluded thus:—

"Should we fail in effecting to him, or some other person, a private sale, which may be deemed satisfactory, it will become necessary to dispose of the whole concern by public auction. Further delay will detract from the value of the property.—We are, &c., ALEXANDER AND CO."

The next letter to Mr. B. was dated the 8th Jan. 1824, and the writer, Mr. John Palmer, thus expressed himself:—

"Your several correspondents here will have reported the progression of destructive events, which was closed with the utter ruin of your press. It is sunk irretrievably and eternally, until some constitutional change be operated in the government. It has been disclosed that no paper in which you had an interest would be tolerated, or even in which those who had an interest in the (Calcutta) journal might be concerned; but the public declaration of this prescriptive doctrine has not been hazarded, so that we can only reach the fact by means always unwillingly resorted to, and which might be disavowed as a rule of government, though uttered by one of its members!"

He wished particularly to draw the attention of the proprietors to this passage. It was nothing more than the private statement of Mr. Palmer, and it certainly was a most extraordinary thing that they possessed the means of proving it. Mr. Muston found it absolutely necessary to send copies of the correspondence relative to the license to Mr. B., and that correspondence would completely shew, that the principle adverted to in Mr. Palmer's letter had been actually adopted and acted on. The next letter was from Mr. J. C. C. Sutherland, who was a partner in the house of Alexander and Co., the agents of Mr. B. It was dated the 10th Feb. 1824, and commenced thus:—

"I regret that I have nothing satisfactory as yet to communicate in respect to the affairs of *The Calcutta Journal*, since our letter of the 2d Jan. The enclosed copies

copies of correspondence will show how matters stand at present, and you will form from it a correct idea of the feeling felt towards the property vested in *The Calcutta Journal*. It is sufficient to say, that Mr. W. P. Muston's last letter has as yet received no reply. This procrastination is fatal to your property."

During this long procrastination, it appeared (said Mr. K.) that the subscribers to the journal were falling off—they attached themselves to other concerns—and thus the delay was fatal to the property. It was the property the government were injuring, and not Mr. B. The property of the editor of this newspaper, who had been sent away, was, by the conduct of government, greatly deteriorated; and, of course, the other proprietors were punished, in proportion as their interest in the journal was injured by those proceedings. The letter continued:—

"In the hope of Mr. Muston being able to hire the concern on the principle of an arrangement specified in the circular to the shareholders, a heavy establishment has been kept up; and by the delay, the chance of your subscribers transferring their good-will to *The British Lion*, a successor of the journal, is nearly annihilated.—The party who gains most at your cost is the owner of *The Hurkaru* newspaper. You may recollect that on the suspension of the license of the journal, Mr. S. Smith, proprietor of *The Hurkaru*, volunteered and was employed to furnish *pro tempore* your subscribers with his paper. This arrangement at once made that paper productive—so much so, that the owner has been enabled to induce Dr. Abel, the private physician of the Governor-General, to accept the editorship, on terms which I have heard improve as the profits of the paper may increase."

Dr. Abel, the gentleman here mentioned, was the individual whose extraordinary appointment to the situation of head of the medical department, had called forth some remarks in that court. Mr. Sutherland goes on to say:—

"I fear the value of the Journal is now only limited to its printing materials. We shall probably shortly have to advise the final close of the concern by sale.—We cannot much longer keep up the present establishment whilst the government is slowly deliberating [on what? asked Mr. Kinnaird—why] on the expediency and safety of permitting use to be made of types and materials which were bought with a fund in which you have a principal share.—The correspondence enclosed is only part of what has passed. As you may wish to see the whole, it shall be sent hereafter."

The correspondence here alluded to was that of Mr. Muston, who was as capable of producing official documents as the

government. On the 19th Nov. 1823, Mr. Ballard, a partner in the house of Alexander and Co., writes thus to Dr. Muston:—

"My dear Muston: Palmer and myself now tender you the editorship of a new paper which it is intended to publish from the late *Calcutta Journal Press*. Your salary shall be fixed at 600 rupees per month; and if the paper flourishes, you shall have our recommendation of a proportionate increase. If you accede to our terms, say so, and I will immediately ascertain the form of application for a license."

On the 28th Nov. 1823, the following letter was addressed by Dr. Muston, to Mr. Bayley, chief secretary to government:—

"Sir: By the enclosed it will appear that I have engaged to be the editor of a paper belonging to certain proprietors, the principal of whom are Messrs. Palmer and Ballard; and I beg you will assure the Right Hon. the Governor-General in Council, that both from principle and interest, independently of my public and official situation (which would alone render it my duty), I shall pay the most scrupulous attention to the letter and spirit of the press regulations; and therefore hope to obtain that license which it is the object of this letter to solicit."

On this a private letter, dated Dec. 18, 1823, was written to Dr. Muston by Mr. Ballard. It ran thus:—

"My dear Muston: Unless you can get Mr. Harrington to interest himself on your account, the license will not be granted. I cannot imagine where the difficulty lies: if I could, I would do any thing not incorrect to remove it. I am, on all accounts, anxious to see you at work."

He now came to a letter, dated Dec. 20, 1823, and addressed by Mrs. Muston to her husband. And here, he would say, that he gave Mr. Muston very great credit for the motives which induced him to place this correspondence in the hands of Mr. B.; but he felt that his character was compromised, and he boldly determined to tell the whole truth. Mrs. Muston's letter was couched in these terms:—

"My Love: Henry came here to tell you that my father had seen Mr. Feudall, from whom he learnt that the license had been refused, and would be refused so long as Mr. Buckingham had any share in the concern. They have none the slightest objection to you:" [here, said Mr. Kinnaird, is a direct recognition of the fact, that, to Dr. Muston the government had not the slightest objection], "but (continued the letter) the writing of Mr. Ballard's letter to you says you will have the sole control, so long as he and Mr. Palmer are proprietors; from which the government infer you would have it only so long, and

and then you might be subject to Mr. Buckingham's interference."

This, truly, was a very ingenious interference. Here a proper editor, one against whom no objection existed, was refused a license, because, at some future time, a change of proprietors might take place, and Mr. B. might, once more, interfere with the management of the paper; the government having, let it never be forgotten, the full power, whenever they thought proper, to take away the license. (*Hear!*) Was this the conduct of men of common understanding? Was this the course that would be taken by men who possessed reasoning faculties? "Because (said the government) at some future day or other Mr. B. may attempt to influence a press over which annihilation hangs, *in terrorem*, we will not grant you, to whom we have no objection, the power to exercise any authority over these types." (*Hear!*) On the 23d Dec. 1823, Mr. Bayley thus wrote to Dr. Muston:—

"Sir: I am directed by the Right Hon. the Governor-General in Council to acknowledge the receipt of your letter of the 13th inst., and to apprise you, that after full consideration of the circumstances stated in it, and in Mr. Ballard's private communication which accompanied it, his Lordship in council does not deem it expedient to sanction the application contained in your letter of the 28th ult., and in that acknowledged."

One letter was the comment, the other was the formal notification of the fact. Mr. B. was far enough removed from India; but the government seemed "to fear this Percy, though he be dead." (*Hear!*) On the 31st Dec. 1823, Dr. Muston again addressed Mr. Bayley:—

"My dear Sir: Being informed that the agents of Mr. B. have given orders to pay off the establishment of the Columbian press, preparatory to a peremptory sale of the property, I was desirous of ascertaining whether I could get assistance from my friends for purchasing the same. Provided I can satisfy them that the purchase will not be merely that of the types, &c. without the power of using them, I am led to hope the sum for which it will sell will be within their power to raise."

Here Dr. Muston admitted that he could not get any one to lend him the money, necessary to purchase the types, unless he was previously assured that a license would be granted. At this time, a property, which had cost Mr. B. £20,000, was not worth one-quarter of that sum. Dr. Muston went on to say—

"I, of course, feel no fears respecting the conduct of government towards myself [it appeared evident from this, said Mr. Kinnaird, that one line of conduct was adopted towards one person, and another towards another]; but it is still a matter

of the most serious importance that I should ascertain the certainty of being allowed a license, before I avail myself of their kindness, or embark myself in so serious an undertaking. Will you kindly do what may be within your power on this occasion, and inform me whether it would be necessary or proper that I should solicit an audience with his Lordship?"

On the 31st Dec. 1823, Mr. Bayley returned the following answer to Dr. Muston's application:—

"My dear Sir: I think it would be advisable for you to request an audience of Lord Amherst, before you make any engagement of the nature adverted to in your note. Government would not, I think, grant the license, except from a perfect assurance that the concern and influence were altogether transferred from the former hands;"—(Mr. B. being at the time in England)—"that the ostensible are the real proprietors; and that the rules regarding the press would be attended to, in their spirit as well as in their letter."

Now the beauty of all this was, that, while the government were stipulating for these points, they had the press completely under their control. What fair motive could there be for requiring that the *ostensible* should be the *real* proprietors, when the government had the power of suspending the license at a moment's notice? If it could be shewn, that such regulation rendered the control of the press more effectual, he would give up the question. At that time all the press were upon their good behaviour; and, if they transgressed, the license might be immediately suspended. When this was the case, could he be charged with unfairness, if he said, that this strange conduct arose from a horror of Mr. B., from a superstitious dread and alarm, for which he could not account? (*Hear!*) On the 9th Jan. 1824, Mr. Ballard writes thus to Dr. Muston:—

"My dear Muston: Of all our constituents none have proved so troublesome as the defunct Journal; we can neither satisfy the pecuniary or political interests or views of those whom we are bound to serve as agents or subjects. However, I have determined not to trouble the government, my friends, or myself, any more, but to sacrifice the property; and it is therefore at your service, if you are bold enough to buy it at a fair valuation, or at auction: or, if you please to rent it, which I think is a better plan, I will let it to you for a twelvemonth certain, at 2,500 rupees per month, including house-rent; and at the end of this period of probation, you shall have the refusal of it. The renting can be applied only to permanent stock, not that which is consumed in the using; for such you must pay as far as that on hand goes, and provide yourself in future. Before you do any thing, however, ascertain

if you can get the assistance you expect ; and, above all, a license."

So that this unfortunate property, to be sold to any advantage, should be accompanied by a license, which Mr. Ballard strenuously advises Dr. Muston to obtain, if possible. On the 10th Jan. 1824, Dr. Muston answers the letter of Mr. Ballard in these terms :—

"My dear Ballard: From the impression left on my mind, after a long interview with the Governor-General on the subject of a license for the Calcutta Journal, I am inclined to believe that no objection will be made (on a renewal of my application), provided another name be substituted for its designation, and that the government is convinced, at the same time, of my being, *bonâ fide*, the proprietor of it."

Could it be supposed, that Dr. Muston had had a long interview with the Governor-General on the subject of the title of a newspaper? (*Hear!*) Dr. Muston continued—

"The property Mr. B. possesses in it is no objection, if it can be held without a right of influencing its details by any interference on his part; and this is a point on which you must be better able to speak than I can."

As if a man could hold a property without having any right of control or influence over it. Here again, he asked, could any rational man draw any other inference from this passage, but that these proceedings were instituted completely to hunt down the man, and to injure his property. It was not only intended to hunt down his character, and to send him away from his family and from his adopted home, but the attempt was made, and successfully, to prevent him from having any supervision of his own property.

"It appears, at first sight (says Dr. Muston), to be impossible to prevent the proprietor exercising a proprietary right; but as his agents, you may do, perhaps, what he could not do himself."

Here he called on the court to mark how men confused their own minds, and became mere Jesuits, without thinking of it, when they had some object in view which they eagerly wished to obtain.

"But, as his agents (said Dr. Muston), you may do perhaps what he could not do himself; I mean, dispossess him of that right, by letting the press, as you have already proposed to do, for a certain period of time. In this manner I might become the *bonâ fide* proprietor for that time, and could apply for a license for that period only. The name also was objected to by Lord Amherst, and I should think the '*Scotsman in the East*' (as that is, in my opinion, the best paper now in existence), the best name for a new publication. I will see Mr. Duncan and Mr. Sutherland,

for the purpose of ascertaining what aid I can get; without that, the attempt would be vain."

Mr. Harrington, the father-in-law of Dr. Muston, on the 13th Jan. 1824, wrote the following letter:—

"My dear Muston: I spoke to Bayley, who thinks government will not be satisfied with a transfer of the management to you for twelve months, or any other limited period. He thinks nothing less than a transfer of the property from the present proprietors will suffice; and says, the license must be given to the proprietors, printer, and publisher, not to the editor only."

Here, it appeared, that the government would not allow Mr. B.'s property to be let for twelve months, or any other limited period. So that, acting upon this principle, if Mr. B. possessed a house in Calcutta, the government would not suffer it to be let. This was the plain fact. It was determined that he should be cut up, root and branch; such was the true history of the matter. Not Mr. B. only, but all the rest of the proprietors were to be punished. Was not this a most vindictive proceeding? Was it not cruel thus to punish all the proprietors, through their pockets? for, without a license, their property could not be disposed of but at a ruinous loss. Here he could not avoid drawing an inference favourable to the ability of Mr. B. As long as he was connected with the Journal, it was felt that his integrity and talents would be a guarantee for its success, and that his prudence would afford a certain security that the property would be taken care of, and that the proprietors would regularly receive their dividends. He was the mainstay of the establishment; and it was, therefore, determined he should be cut away from it: those who projected the plan well-knowing that the property was then likely to become utterly worthless. On the 15th Jan. 1824, Dr. Muston addressed the following letter to Mr. Bayley:—

"My dear sir: I heard from Mr. Harrington it was your opinion that no license would be granted to me, unless I became proprietor of the concern, or an actual transfer of the property was made from the present proprietors to others, who should apply with me and the printer, jointly, for a license to publish a newspaper."

Here he wished to observe, incidentally, that Dr. Muston sent those letters to Mr. B. uncalled for. He proceed to say:—

"If this be the case, I have misunderstood Lord Amherst, who appeared to me to require only the exclusion of Mr. Buckingham, from all and every power of interference or control, and in no way to injure that gentleman's property. Indeed, his Lordship distinctly stated it to be

be his wish not to injure the property vested in the Columbian press, but this wish cannot be realized if the property be transferred from the present proprietors."

Here was the evidence of Dr. Muston as to what occurred at his interview with Lord Amherst; and he was obliged himself to confess, that it was impossible not to injure the property "if it were transferred from the present proprietors."

"His Lordship (continued Dr. Muston) also stated the necessity for changing the name of the '*Calcutta Journal*,' a circumstance, I conclude, his Lordship would not have deemed of importance to mention, had he not intended to favour me with the grant I applied for, in the event of my being able to effect the object of exclusion before-mentioned. Mr. Hogg is preparing a draft, securing to me the entire control of the contents of the paper, and full and sole possession of the concern (I agreeing to pay the profits of the same, after meeting every disbursement, including my own per centage on the returns of the paper) for one year, renewable at the option of the parties concerned. This draft I intend to forward for his Lordship in Council's inspection and approval, and any alterations suggested in consequence will be instantly complied with. The property will be a *bonâ fide* transfer from the proprietors to me for one year, and I shall only solicit a license for that term; at the close of which the government will be able to judge how far the paper is deserving of a renewal of its license or not."

On the 16th Jan. Mr. Bayley answered the foregoing note in the following terms:

"My dear Sir: I cannot, with propriety, write on this subject in my private capacity. I stated to Mr. Harrington my impression, that a temporary transfer, of the nature described, would not be such as would induce the government to grant the license. But, of course, the question will be considered with reference to the circumstances which may be stated in your proposed official communication."

Dr. Muston then wrote to Mr. Williams, a solicitor, on the subject of drawing up a deed for the transfer of the property, at a time when the proprietors had not agreed to any such transfer. Dr. Muston's letter ran in these terms:—

"My dear Sir: the accompanying documents, Nos. 1, 2, 3, 4, and 5, relate to terms in which Mr. Ballard (as attorney for Mr. Buckingham) and myself are agreed, and provided the shareholders do not object thereto, we propose to conduct, for a time, the paper we may be allowed to publish from the Columbian press on the terms alluded to. The private notes at B. and C. will point out the difficulties to be overcome, and how necessary it will be to obviate any which can be made on the *Asiatic Journ.* Vol. XXI. No. 122.

subject of that control which government is so determined to destroy. What is required at present is, that you should prepare a draft of a deed in such manner as your judgment and experience will suggest, in order that it be submitted to government and the shareholders previously to its being engrossed. I shall be happy to consult with you personally on the subject, should you require any further information."

The answer of Mr. Williams was well worthy of attention. It was this:—

"My dear Sir: For want of the documents I have required, I cannot prepare a deed with proper force and effect. I should have been very glad to draw such a deed professionally, if I had possessed the requisite materials. The several (perhaps 200) shareholders have legal rights in the property in question, and I cannot convey them to you without having some visible authority for so doing."

All this was very cruel! A strong anxiety prevailed to convey away this property (he might incidentally observe, that *conveying* was an old term, which Shakspeare used for *stealing*, and he could give it no other interpretation here), but unfortunately the solicitor demanded, before the conveyance could be effected, the sanction of all the shareholders resident in Calcutta. On the 26th Jan. this negotiation (which appeared to be the most important thing that had occupied the Governor-General in Council for several months) was still going on. At that date Dr. Muston addressed the following letter to Mr. Bayley:—

"Sir: I beg the favour of your laying the enclosed draft of agreement (making over to me the property of the Columbian press, for a twelvemonth, by Messrs. Alexander and Co.; the agents of Mr. Buckingham, they having obtained also the sanction of the shareholders resident in Calcutta to that measure), and at the same time to solicit from the Governor-General in Council the license applied for in my letter of November 28, 1823. Should the government be satisfied with this draft, it shall be immediately engrossed and executed. The intimation I received from the Governor-General, respecting a new name by which the paper is to be designated, will be duly attended to."

What would the proprietors think was the name which it was proposed to call this new paper? Was it *The Elephant*, or *The British Tiger*? It might have been the latter, because an allusion to the tiger and to the Governor-General had already been made; but neither of these titles was selected. Dr. Muston concluded his letter by saying:—

"And, should it meet the sense of government

government, it is proposed to call it 'The British Lion.'" (A laugh)

The next letter, dated Jan. 30th, was from Mr. Bayley to Dr. Muston. The writer says:—

"Sir: I am directed by the Rt. Hon. the Governor-General in Council to acknowledge the receipt of your letter of yesterday's date, and of its enclosure. The temporary nature of the proposed arrangement" (as if, said Mr. Kinnaird, every arrangement was not temporary, as if there could be an eternal arrangement), "as described in those papers, does not afford any security that the control and influence of Mr. Buckingham" (Percy! dead Percy! once more) "in the management of the paper may not again be exercised at the expiration of one year, to which only the engagement extends."

Government would not, forsooth, grant the license, because, at the end of a year the property might come under the influence of Mr. B. This was a most lame and impotent excuse, seeing that they had the power of putting down the Journal immediately by withdrawing the license. Mr. Bayley concluded by stating, that

"The Governor-General in Council does not therefore deem it expedient to comply with the application submitted by you. The draft of agreement which was enclosed in your letter is herewith returned."

A letter next came from Mr. Sutherland, a partner in Mr. B.'s house of agency, addressed, on the 4th Feb., to Dr. Muston, in which the writer says:—

"As Mr. Ballard may be absent some days, I wish to know if you are likely to obtain a license for a new paper; the keeping up the old establishment of the Journal is ruinous."

The fact was, that by these proceedings Mr. B. was not only deprived of every shilling he might have made by the profitable employment of his establishment, but he was plunged in debt to the amount of £4,000 or £5,000 by keeping up that establishment during the continuance of this ruinous delay. Mr. Sutherland then asks:—

"Can you not apply for leave to set up the — (any name), a daily paper, your own property? What is it to government whether you buy or hire types? If there is no chance of your obtaining a license, we will sell the concern."

Dr. Muston, in answer to this letter, wrote, on the 4th Feb., as follows, to Mr. Sutherland:—

"My dear Sir: I lost no time in meeting your wish on the subject of a license, and addressed Mr. Bayley, privately, on the moment of its receipt. I stated my idea respecting the several refusals I have met with, that no license would be granted

for a paper, which license in prospectus could be considered the property of Mr. Buckingham and his shareholders; adding, if I was correct in my suspicion of the cause of my failures, I hoped he would obtain permission for me to apply on my own account and responsibility for a license, according to the form prescribed."

This letter he followed up by another on the 10th Feb., addressed to Mr. Bayley:

"Sir: An offer I made to the agents of Mr. Buckingham, to rent the concern, having been accepted, I am now totally unconnected with Mr. Buckingham or the proprietors of the late Calcutta Journal; and, therefore, hope the enclosed, which is in conformity with the rules laid down in the Press Regulations, will be complied with, and that his Lordship in Council will allow me to edit and publish *The British Lion* on my own account."

To this application Mr. Bayley, on the same day, returned the following answer:

"My dear Sir: You will receive an official answer to your last official letter, in the course of to-morrow. It is merely to the effect, that government were aware, in the former answer they gave you, that the application for a license, as regarded yourself, was for one year only. I cannot with propriety, on such a subject as this, enter into a private correspondence, or reply satisfactorily to your private note. My own notions might not prove to be those of the government, and I might embarrass you and others by saying that which might not ultimately be confirmed when the subject was officially considered. I can only recommend you to put the subject of your newspaper in as distinct and clear a light as possible, in an official letter. If you are *bond fide* the actual purchaser and proprietor of the concern, and the interest of Mr. Buckingham in it be entirely and permanently at an end, I, as an individual, should conceive that no objection could be made. You will consider this as the private opinion of a private individual, and for the correctness of which I cannot vouch."

Mr. Sutherland, on the 10th Feb., made, by letter, the following inquiry of Dr. Muston:—

"My dear Sir: Permit me to ask if you have taken the preliminary steps for bringing personally before the government your application to establish a paper of your own? We are anxious to adopt something decisive as to the stock of the Calcutta Journal."

On the 11th Feb., Dr. Muston thus answered Mr. Sutherland's inquiry:—

"My dear Sir: Mr. Bayley promised me a reply to my last application (which was a public one for a license commensurate with the lease for one year) in the course of to-day. He advises me to put the object I have in view in a clear and distinct

distinct form officially; and if I can do so as the actual proprietor, showing that the interest of Mr. Buckingham in it has entirely ceased, he thinks (as an individual, not as a public servant), that no objection would be made. From this it is evident that no license will be granted, unless I make an application unconnected with the proprietors and shareholders of the Calcutta Journal. If your house will let me the concern for a period, say one year, at a rent to be claimable from the actual profits, or receipts above a stipulated sum, at which the expenditure (from an average of years) might be fixed, I will rent it, and set up a paper unconnected with the Calcutta Journal, and *bonâ fide* my own."

At last, to end "this strange eventful history," a letter was addressed, on the 12th Feb., by Mr. Bayley, the chief secretary to the government, to Dr. Muston, in which he says:—

"I am directed by the Right Hon. the Governor-General in Council to acknowledge the receipt of a letter from you of the present date, with its enclosure; and in reply, to transmit you the accompanying license, authorizing Mr. Peter Stone D. Rosario to print, and you to publish, in the English language, a daily newspaper, entitled and called, 'The Scotsman in the East.' I am likewise directed to transmit to you, for your information and guidance, and that of Mr. D. Rosario, the accompanying copy of printed rules passed on the 5th of April last."

Such was the correspondence which he felt it to be his duty to lay before the proprietors. He read it for the purpose of putting them in possession of that which he sincerely did think was the most unjust proceeding he had ever heard of. It appeared as if the ruin of Mr. B. was determined on: it appeared that his connexion with any body of gentlemen in India was destined to prove fatal to them. He said this because Mr. B.'s one hundred co-proprietors were, to the extent of their shares, as much injured as he was himself. The minds of men seemed to have been poisoned against him most unjustly; but, as far as his character was concerned, the honourable testimony which was borne to his rectitude in the courts of this country, must effectually overturn the slanders which had proved, in India, so grievously injurious to him. If the government of that country really feared that any ill consequences might result from Mr. B.'s possessing an influence over those types, he then could understand the motives of their conduct; but if they could not imagine that to be the ground of their proceedings (and he, for one, could not believe it to be the ground), he could not account for the course they had pursued, except by supposing that the government were anxious to strike terror into the mind of any per-

son who was disposed to mention the name of Mr. B. with respect. (*Hear!*) He (Mr. Kinnaird) could prove by the books of Messrs. Alexander and Co., that Mr. B. had been the loser of many thousands of pounds in consequence of the system which had been pursued by the government with respect to him. Surely no gentleman could rise and say that there was any connexion between Mr. B., as a proprietor of this paper, and the owner of those types, and his former conduct as editor. The two things had no connexion with each other. The government, having the power of annihilating the press at once, if offence were given, might have said, "Let the paper go on; it does not concern us what proceeds Mr. B. gets from it, only let it be so conducted as not to call on us to exercise the power with which we are vested." Mr. B. might have sold that property in this country, ignorant of what was going on in India, and what would have been his situation if, when called on to make good his contract, he found that the acts of government had put it out of his power? He might have borrowed £10,000, under the idea that he possessed the means in India to pay it honestly; but what would his feelings be when he ultimately discovered that he had been deprived of those means? In a court of law, the holder of that equitable security would have a strong case against the Bengal government for destroying that property, because some old grudge existed against Mr. B. He (Mr. Kinnaird) did not want to bring the conduct of the Bengal government specifically before the court. There would be no good in such a proceeding: no benefit could result from it; because their conduct was so absurd, so utterly at variance with common sense, that no future government of India, he was confident, would attempt to pursue a similar course. And here he would call the particular attention of the court to the situation in which Mr. B. was placed. That gentleman having vindicated his character in the most complete and satisfactory manner, having put to flight all the calumnies which had been invented against him, was at that moment in a situation which every feeling man must deeply deplore. He had the authority of Mr. B. for stating, that perhaps before any great length of time had elapsed, he might be placed within the walls of a prison, and rendered unable to pursue those avocations from which he hoped to derive reputation, as well as emolument. He (Mr. Kinnaird) felt his heart yearn within him when he heard the story of his distresses, and the details of the vexatious and ruinous expenses to which he had been subjected. He was the victim of circumstances which it was not in his power to avert; but if he had not succeeded in ob-

taining justice, no man could say that he had spared either pains or expense in endeavouring to procure it. All those who knew Mr. B. would agree with him, that a more honourable man did not exist on the face of the earth; he had shewn, through all his trials, a patience and a forbearance that did him honour: he had claims on the justice—on the humanity—on the liberality of the Company; and he felt convinced that the proprietary would gladly contribute, each his mite, their sixpence a piece, for it would hardly be more, to enable him to meet those engagements which the refusal of a license prevented him from fulfilling. A grant of £5,000 from the Company would be honourable to those who gave it, and would enable him who received it to take that place in society, to which the respect of all unbiassed men declared he was entitled. For his own part, he thought that if ever virtue was to be rewarded, this claim of Mr. B. should not be overlooked. (*Hear!*) He felt strongly on the subject, for Mr. B. was no common man; his injuries had been of no common nature; and, therefore, he (Mr. Kinnaird) expressed his opinions with all that warmth which he conceived the circumstances of the case justified. Mr. B., he admitted, had expressed opinions unfavourable to the existing restrictions on the press in India, and how had he acted? He had, at his own expense, gone before the Privy Council, to have the question fairly settled according to law: it was true, judgment was given against his appeal; but it should always be recollected, that he did not endeavour to carry his point by clamour. No; he had, at a very great expense, brought the question fairly to issue—he had instituted this and other legal proceedings; under the conviction that he possessed large resources. He believed, and he had a most just right to believe, that he had a property in India of many thousands of pounds. Instead of that, he had learned from his agents, Alexander and Co., that in consequence of the proceedings of the government, they were his creditors to the amount of £3,000 or £4,000. He (Mr. Kinnaird) knew that if an appeal were preferred to the public, on behalf of Mr. B., his countrymen would gladly come forward to assist him: he knew many individuals who would willingly come forward on such an occasion; but he thought it would be creditable to the Company if they themselves took up this gentleman's case. It had nothing to do, he repeated, with the question of the press, or the measures which the Indian government had adopted for the control of that engine: it was quite clear that Mr. B. ought to be compensated for the injuries he had sustained, and he trusted that the court would not quibble as to the means of granting that compensation. A grant recently awarded

to Mr. Arnott, was not given on account of loss of property. He (Mr. Kinnaird) did not ask a sum of money to be given to Mr. B. on account of any mental or bodily suffering which he had endured: it was true he had suffered much; but still, the claim which he made on behalf of Mr. B. was founded on positive loss of property. Mr. Arnott, like many others, never, perhaps, had £1,500 in his life, though he probably had talents to acquire an independence. Mr. B., on the other hand, had really reared a fortune, which had been overthrown in the manner he had already stated. He could not understand the distinction, which would award remuneration to Mr. Arnott, and would refuse it to Mr. B. If it were said, that the ship in which Mr. Arnott sailed was burned, and that he was entitled to compensation for what he lost on that occasion, he (Mr. Kinnaird) would observe, that any other person sent home from India, would, if the like accident occurred, have precisely the same claim; but Mr. B.'s claim stood perfectly alone. Perhaps an agreement might be come to, on both sides of the bar, to form a committee for the purpose of considering this subject. Mr. B. would produce his papers, to shew what his property would have sold for, if it had been fairly dealt with, and the committee would decide on the amount of the remuneration to which he was entitled. In conclusion, Mr. Kinnaird said, I think a proposition for remuneration would come much better from the gentlemen inside the bar, than from the proprietor's side. I should much rather that a proposition for the production of those papers, on which a grant of £5,000 might be founded, should have proceeded from some one of the executive body, than from any individual proprietor. As it is, however, I have felt it my duty to introduce a motion for the production of those papers, in order that the matter might, as far as possible, be placed officially before the Court of Proprietors. A grant to Mr. B. would, I am sure, be honourable to the East-India Company, and would be an act of justice, and only an act of justice, to that much injured individual. The honourable proprietor then moved for the papers in the terms of the requisition.

Mr. Hume seconded the motion.

Mr. Poynder requested it might be understood that he would apply himself less to the observations which had fallen from the honourable mover, than to the omissions, which, peculiar and remarkable as they were, struck him as being the principal feature of his speech. He was old enough, as well as many around him, to recollect an address delivered by Mr. B. in that court, in which very different grounds indeed (which the hon. mover had this day avoided) were disclosed, as having

having given rise to the conduct of the Bengal government. He could not, as the hon. mover wished, lay aside all consideration of the motives which induced that government to act as they had done. The question was, which of the two parties—the government or Mr. B.—had acted correctly? If Mr. B. were wrong, the government were right; and, *vice versa*: it was impossible that they could be both right. What was the allegation on the part of the government? It was this—that a long series of most unprovoked attacks had been made by Mr. B., as editor of a public journal, on the government. Those attacks formed the substantive grounds of offence on which the subsequent conduct of the government had proceeded. The government said to Mr. B.: “You are endeavouring to sow the seeds of discord, of sedition, of bad policy, in this empire; and we cannot allow you to proceed, consistently with what we owe to the people of India, to the people of England, to the East India Company, and to the world at large.”

Mr. *Gahagan* rose to order. The hon. proprietor was not applying himself to the question; he was answering an antecedent speech, delivered on a former occasion.

Mr. *Poynder*.—“Mr. Chairman, I am entirely in your hands, and in the hands of the court.”

Mr. *R. Jackson* was of opinion, that the manner in which the motion was drawn up, gave to the hon. proprietor, a fair opportunity to take the course which he was pursuing. These words, it would be observed, were added to the proposition, for laying before the proprietors the correspondence of the Court of Directors with Mr. B., namely, “That there be also laid before the court, copies of all proceedings of the Bengal government, referred to in the correspondence before-named.” This let in the whole question; such a reference undoubtedly comprized all that had passed on this subject. If the hon. mover had confined his motion to the first proposition, the range of observation would have been limited to that point; and the hon. proprietor, in diverging from it, would have been out of order. But, as the motion stood, it seemed to him, that the demand for the other papers did admit of the course of argument adopted by the hon. proprietor.

Mr. *Poynder* thought, that the view taken by the hon. and learned gentleman must be satisfactory to the court. He apprehended, that he could not avoid looking to the preceding conduct of Mr. B.; whether he referred to that gentleman's speech or not, was another matter. The conduct of Mr. B. could not escape notice on the present occasion. He would take the liberty of describing,

in a few words, what that conduct had been; and, he hoped, the language of the quotation he was about to use would not be deemed harsh or improper. The judicious Hooker had the following remark in his book:—“He that goeth about to persuade a multitude that they are not so well governed as they should be, never wants attentive hearers.” Mr. B. proved the truth of this maxim. He went about endeavouring to shew, that the people of India were not so well governed as they ought to be; and, no doubt, his hearers were numerous and attentive. The government did not, however, in the first instance, take the matter up with a strong hand; they manifested a paternal feeling towards Mr. Buckingham. They remonstrated; they told him, that, if he went on in this course, they could not, consistently with their duty, and the great interests committed to their care, refrain from interposing. This, however, had no effect; and, if the time served as well as his (Mr. Poynder's) memory did, he could quote a multitude of instances in which Mr. Buckingham's attacks were of such a nature as could not be borne by the government of India,—nay, as would not be tolerated by the government of England. (*Hear.*) It was impossible for the Indian government, consistently with the interests they had to support, to suffer such charges, and such abuse, to pass unnoticed. (*Hear.*) But still it was not until this system of vituperation had gone on for a very considerable time, and in spite of warnings, appeals, and intreaties, that the license was recalled. These things he could not dismiss from his recollection; and he thought the proprietors were not fairly dealt with, when they were called on to do so. Was it for the conduct he had described, that Mr. Buckingham deserved their support—their patronage—or their pay?—for it appeared that the hon. mover wished the sum of £5,000 to be bestowed on him. If Mr. Buckingham had been unfortunate, he had clearly brought his misfortunes on himself. To him he would apply the remark of Charles the Second, when his brother married the daughter of Lord-Chancellor Hyde. On that occasion, the monarch is reported to have said, that “his brother James must drink as he brewed.” And so it was in this instance; Mr. Buckingham could only expect to drink that which he had himself brewed. He (Mr. Poynder) said nothing against the morality of Mr. Buckingham, which had not been questioned. They were trying him for his political conduct, which the terms of the motion brought fairly before the court. With respect to Mr. Buckingham's moral character, they had nothing whatsoever to do with it; and it appeared to him to have been quite idle to introduce it here. He was anxious, in discussing this question,

tion, to throw overboard a little of the lumber (he did not mean to use the word offensively) with which it had been loaded. He would ask of the court, what was it to him, or to any person who heard him, whether Mr. Buckingham was a "literary thief," or "a black sheep?" Such accusations were not before the court. Whatever impression might have been made on the minds of the people of India, by the charges brought against Mr. Buckingham, it was quite clear, that it had nothing to do with his deportation. He was not sent away from that country on account of piracy, or in consequence of any impeachment of his moral conduct: but for offences against the government,—for pursuing a line of politics which could not be endured in India, in England, or in any other country. With respect to the *argumentum ad misericordiam*, with which the hon. mover had concluded his speech, it appeared to him to be quite misplaced. This was a matter of business, not of charity. If Mr. Buckingham, on account of his untoward circumstances, stood in need of relief, let the public at large subscribe their sixpences for his benefit; but let not the proprietors of East India stock be exclusively called on to minister to his wants, unless on grounds very different from those which had been stated. The hon. mover had read the correspondence with a great deal of humour. He had displayed that easy flow of eloquence and ready wit, which all must admire, whenever he opened his mouth, and which he (Mr. Poynder) listened to with pleasure. But what did this all amount to? Why, that the government of India, after Mr. Buckingham had left that country, acting, as he thought, very properly, being perfectly aware of the tone of that paper, and having had ample experience of the conduct of its proprietor (for it was well known that Mr. Buckingham owned three-fourths of the concern), determined to prevent the dissemination of inflammatory matter from that quarter. It mattered not whether Mr. Buckingham was proprietor of the whole concern, or of only a fourth part of it; so long as he possessed the power to continue the same obnoxious line of politics, the government had a right, in his opinion, to pursue the course of conduct they had adopted—not only with respect to the actual editor, but with respect to Mr. Buckingham; because they knew that he had the capability of keeping up that spicery of contempt and aversion towards the constituted authorities, with which his publication was so plentifully seasoned. Nothing had been proved, with respect to the government, except that they had shown a paternal care in watching over the welfare of their subjects; unless it were shewn that the government had acted improperly—that they had been actuated by private in-

stead of public motives; he would not hold Mr. B. up as a man to be rewarded—to be esteemed—to be paid. He respected him as a man of ability, but that had nothing to do with the question; they were trying him as a politician. Was this, then, a case that called for compensation? Certainly not; and, he was really astonished that such a case should have been brought before them. Having attempted to point out what he conceived to be the sins of omission in the hon. mover's speech, he could not avoid thinking, considering the importance of the matters so omitted, that this was the very last case that should have been submitted to the court, as calling for compensation. In that court all was open (*Hear!*)—every thing was known (*Hear!*)—and, therefore, they must all be acquainted with the facts regarding Mr. B. Being aware of his conduct, he thought it behoved the Court of Directors, and the Court of Proprietors, to put their decided *veto* on such a proposition.

Mr. Lewin—Though unwilling to take up the time of the court, yet he deemed it to be his duty, to state to the proprietors his impression, with respect to this case, with as much brevity as possible. Notwithstanding the observations which had fallen from the hon. proprietor who spoke last, he (Mr. Lewin) entirely concurred in the propriety of the mode in which the hon. mover had brought forward this question. He thought it quite unnecessary to enter into a consideration of the conduct of the Bengal government, or of Mr. B. while he was in India; that subject was entirely past and gone by. The proceedings of Mr. B., which had been taken up by the Bengal government as improper, that government had dealt with as they thought fit. They had visited those proceedings with their most severe censure—with such a censure as accorded with what the hon. proprietor was pleased to call their "paternal regard." (*Hear.*) They banished this gentleman from India; they followed up that by putting an end to the concern—and the consequence was the ruin of Mr. B. (*Hear!*) The question, therefore, was, not whether Mr. B. or the Bengal government had acted right or wrong; but, allowing that Mr. B. was in error, the question was whether that individual was to be denounced altogether—(*Hear!*) whether any medium was to be observed in his punishment—(*Hear!*)—whether it was fit that he should be interfered with in his concern—that his property should be annihilated—that he should be removed from one end of the globe to the other, and not be permitted, even by proxy, to attend to his business; (*Hear!*)—in short, whether he was to be hunted into a corner and destroyed like a wild beast? (*Hear!*) The question was, whether, looking to the documents brought forward, Mr. B. had

had or had not been treated in the oppressive manner described, and whether that court would or would not interfere to relieve him; and to prevent the repetition of such conduct? (*Hear!*) Mr. B. had been banished; and his property had been reduced from a large amount to almost nothing, by those who represented that court in India. He did not mean to impeach them, but he did not know how they could justify such severity. It being admitted on all hands that Mr. B. was as honourable a man as any in existence, was it right, proper, or moral, on the part of this "paternal government," to pursue him as they had done? He demanded, whether the court would suffer Mr. B. to be hunted *ad vocem*? He could not conceive why that gentleman, who stood so high in general estimation, should be treated worse than a felon. (*Hear!*) He was in the hearing of many legal gentlemen, and he was sure they would bear him out, when he said, that though a printer might, by act of parliament, be transported from this country, yet others would not be prevented from carrying on his business. If a man conspired to take away the life of another, and was sent to Botany Bay for the offence, government never thought of inflicting any farther punishment on him. There was no such power in this country; and if there were, he was sure there would be no inclination to use it. (*Hear!*) He was shocked, for a moment to mention in the same breath such characters as he had adverted to, with a man of such high honour and character as Mr. B., but he did it to strengthen and elucidate his argument. Mr. B. had been doubly punished: when he had suffered deportation, surely he had suffered enough. But the government thought otherwise: they said, "Mr. B. has a considerable share in this property—let us destroy it." Was this conduct worthy of any government? And yet such was the conduct of this "paternal government," which had been so highly extolled by the hon. proprietor. (*Hear!*) Where was the necessity, the use, or the common sense of it? No one that heard him could think of the fears on which the conduct of government was alleged to have been founded, without perceiving that they were perfectly ridiculous. Mr. B. had been sent to this country, and it was supposed that he would transmit documents from hence to the Indian press, to check, control, or at least to interfere with that great government. (*Hear!*) Such a consideration must appear perfectly ridiculous to every thinking man. Mr. B.'s property had been reduced from a splendid fortune to absolutely nothing, or next to nothing. He would ask the most violent opponent of Mr. B. in that court, when he considered these things maturely, whether this was the measure of justice he would

like to have dealt out to his children or friends? Certainly the court ought to regard Mr. B. with an eye of mercy; not of destruction. All men were fallible; but if Mr. B. had erred, his punishment should not be allowed to transcend his fault. For the purpose of argument, he would admit that Mr. B. was in the wrong: but, if he were so, had he not been most abundantly punished by deportation from India? Mr. B. was an object worthy of commiseration. He was a man of high character and acquirements, and he ought to be treated with that feeling of mercy, combined with justice, which had always distinguished the Company. This was a case which called for their earnest support; and he trusted they would deal out, with a generous and just hand, that degree of remuneration which Mr. B. deserved. (*Hear!*)

Mr. S. Dixon thought the worthy gentleman who brought this question forward; and who naturally consulted others, had not pursued the best line of conduct for serving Mr. B. The hon. mover stated; that perhaps before another court was held, Mr. B. might be within the walls of a prison. Were his friends then serving him by asking for papers, which it would take a very long time to produce? Every proprietor had an undoubted right to look at Mr. B.'s conduct in India, in the most extensive point of view. He must say, as he had done before, that Mr. B. had railed in terms the most gross against the government of India. Because the hon. mover chose to take a different line of observation, he was not therefore to censure his (Mr. Dixon's) ideas, nor to prevent him from alluding to the past. It was his wish, if he could, to stand up in favour of a complaining or suffering individual; but if the friends of Mr. B. wished to bring this matter to a speedy issue, and to remedy his pecuniary losses, which it seemed were great, they ought, he conceived, to have adopted another plan. He must however say, without meaning to hurt Mr. B.'s feelings, that he had himself to thank for most of his misfortunes. (*Hear!*) They all had heard that he had been removed from India, not for one offence, but for many. He had frequently been reminded of the danger of the course he was pursuing; that if he did not change his conduct, government would be under the necessity of putting a stop to proceedings which endangered the safety of India. Remonstrance, however, was vain: he would not deviate from his accustomed course, and he drew down ruin on his head. He (Mr. Dixon) thought that Mr. B. should have asked as a favour for remuneration for his losses: If the motion should be agreed to, and the papers produced; still he thought a great deal of time would be consumed in considering

considering them, and the issue would be protracted, which was of such importance to Mr. B. He was sorry he could not agree to the motion, although his feelings of humanity might induce him, and he could say the majority of this court, to do so.

Sir Charles Forbes said, that it was with great pleasure he had listened to the speech of the hon. proprietor who had just sat down; and he must say, he wished that the course the hon. gentleman had alluded to had been pursued: still it was not improbable that an objection might have been made, that the papers were not before the proprietors. It was contemplated by Mr. B.'s friends to move for a specific grant, but it was then thought preferable to move for the production of papers. It was found extremely difficult to determine upon any particular course; but he thought it was not too late to alter the proceeding, and to substitute the proposition of the hon. proprietor in place of the one before them, if the feelings of the court were for such a course. He would now confine himself briefly to the subject before the court. He would not justify the conduct of Mr. B. when editor of the *Calcutta Journal*. He never had absolutely justified his conduct. When the question was first brought before the Court of Proprietors, he (Sir C. Forbes) had admitted that Mr. B.'s conduct was imprudent, and that he had thereby laid himself open to that punishment which had been finally inflicted upon him, after having received repeated admonitions of the consequences which would result from his continuing in the course he had adopted. This was the argument he adopted, and he had since seen no reason for altering it. He had always thought that Mr. B. had been made the tool of those persons who wished to establish a free press in India. He was put forth as the instrument of those persons so long as he resided in India; and when the government inflicted upon him that punishment which it considered he deserved, he was deserted by those pretended friends, who had encouraged him in the course which led to his destruction. Mr. B. was certainly very imprudent for admitting many articles into his paper; but he could see no reason for believing that any one of those articles was dangerous to the safety of India. He had unquestionably put himself in opposition to the government, and on many occasions seemed to set them at defiance; but it must be remembered that the press was governed by no regulations, and that what might be looked upon as perfectly harmless by one person, might be viewed in quite a different light by another. Mr. B. might be considered by the censors of the press and the secretaries of the government, to

have transgressed regulations which they had laid down among themselves, but which they had never published. He could not think that Mr. B., whom he knew to be as honourable a man as any in court, would be guilty of intentionally offending the government, after the repeated promises he had given to the contrary. That gentleman had been warned several times that he had given displeasure to the government; but was it proper, because he had been warned nine times, that he should on the tenth occasion of that kind be visited with such tremendous punishment? It might as well be said, that because a man had been convicted nine times of a misdemeanour, he should on the tenth be capitally punished. Mr. B.'s property, it appeared, had been completely destroyed by the acts of the Indian government. He did not mean to contend that the government of India had no power to send Mr. B. away, for it unquestionably possessed such power: Mr. B. was aware that it possessed the power; and if he had acted a different part, he would not have been subjected to its power, and he had no doubt that, were the time to come back again, he would act differently, in justice to himself and his family. The existence of such a power was necessary, as the Indian government was constituted, for the protection of that great empire. After the government had banished Mr. Buckingham from India, they ought to have stopped there. It was unnecessarily cruel to continue persecuting him, until the property he had left behind was completely destroyed, and himself and his family brought to such a pass that the doors of a jail were staring them in the face. He knew that this was the case at the present moment, and he would pledge his word for the fact. (*Hear!*) He called upon the court to do that, in the name of justice and humanity, which Mr. B. no longer claimed as a matter of right. He came before the court as a supplicant, for he was no longer in a condition to compel justice to be done him as a right. The case came before the court in the names of Mr. B.'s wife and his children, who appealed against being turned into the streets. He was convinced that the Court of Directors could never have contemplated that matters should have come to such an extremity as this was; for he knew too well the goodness of the hearts of some of those gentlemen to suppose this possible. It was owing to the goodness and humanity of their hearts that the late grant to Mr. Arnott was made. He thought that the Court of Directors were highly to be commended for their conduct on that occasion; and he hoped they would follow up the kind and charitable feeling, and behave to Mr. B. in a man-

a manner which he was sure would be agreeable to the general feeling of the court. A few perhaps in the court might hold up their hands against the question, but he was sure there could not be many; for the sake of humanity, he would believe that there were very few who would shut their hearts against such an appeal as was now made to them. He would move, that a grant of £5,000 be made to Mr. B., in consideration of the heavy pecuniary losses to which he had been subjected, by circumstances connected with his being sent from India.

The hon. *Leicester Stanhope* was not acquainted with the tactics to be observed in this court; and knew not whether the motion of his hon. friend (*Mr. Kincaid*) or that of the hon. *Bart.* was best suited to the taste of the court; but he thought that every cause was best served by a simple statement of facts, and he would therefore proceed with one on the present occasion. In entering upon the consideration of the question before the court, he would make a few observations respecting the character of the hundred shareholders of the *Calcutta Journal*. Some of them were the most eminent men in British India, whom he would not venture to name, for fear of injuring their fortunes in India; but there were others whom he need not hesitate to mention, for they were so high in rank, and so conspicuous for virtue, that they stood beyond the reach of bad power: *Mr. John Palmer*, son of General *Palmer*, who almost governed India during the administration of *Warren Hastings*, was one whom he would particularly mention. *Mr. John Palmer* had had influence with every government since that time: a more honourable or loyal citizen, or one more devoted to the government, did not exist. His knowledge of British India, and of the feelings of the natives, was greater than either *Lord Amherst's* or that of the twenty-four gentlemen who sat behind the bar; and in saying so, he did not wish to offer any disrespect to them. Respecting *Mr. B.*, he concurred in all the praise that had been bestowed upon him; he knew him to be a moral and religious man, a good father, a faithful husband, and a loyal citizen. These were qualities that deserved esteem and admiration. With the exception of *Edmund Burke*, *Lord Cornwallis*, *Lord Hastings*, and the great historian of British India, *Mr. Mill*, he conceived that there was no person who had done more good to the people of India, or who had been a greater honour to the government, than *Mr. B.* Having spoken on the character of the shareholders and original proprietor of the *Calcutta Journal*, he would now consider the injury which had been done to *Mr. B.'s* property. The *Asiatic Journ.* Vol. XXI. No. 122.

first proceeding connected with this case was the prosecution of *Mr. B.* by the six secretaries of the government, and his being acquitted by a jury, though every jury in India must consist, two-thirds of persons connected directly or indirectly with the government. But when the Indian government saw that *Mr. B.* was innocent in the eye of the law, they employed extra-judicial measures. *Mr. B.* made some observations in a humorous strain on the appointment of *Dr. Bryce*, as clerk of the stationary, and for this he was exiled from India. Although *Mr. B.* had been banished for commenting on this appointment, the Court of Directors disapproved of the conduct of the Indian government in having made the appointment, and obliged them to dismiss him. The Scotch church was also adverse to the appointment, and ordered the reverend doctor to be deprived of his clerical office. Now came *Mr. Arnott*. After the removal of *Mr. B.*, *Mr. Arnott* was left editor of the paper, and in that capacity he happened to make some observations, in which he attributed *Mr. B.'s* calamities to *Dr. Bryce*, and for that he too was exiled. Thus did this parson, deprived of his civil office by the Directors, and of his clerical one by the church to which he belonged—this editor of the *John Bull* and vender of pens, pounce, and paper—triumph over two honourable men. The editor who succeeded republished his (*Mr. S.'s*) pamphlet on the press in India. He had many political enemies, but he never heard that a character for immorality and irreligion, or dangerous nature, was imputed to that work from any quarter. Notwithstanding this, *Mr. Sandys*, the new editor, had republished it, essay by essay; but not until he had published it entire, was he removed from the editorship of the paper. These extra-judicial measures were not sufficient, however, to satisfy the angry spirit of the Indian government; they had recourse to that wild justice, as it was called by *Lord Bacon*, namely revenge: they prohibited the machinery from being used. Upon this, the shareholders remonstrated, stating that they conceived it to be a very hard case that, because one person was to blame, a hundred should suffer. They also reminded *Lord Amherst*, that at the time *Sir Francis Macnaghten* registered the regulation regarding the press, he did it expressly upon the condition that the property invested in the *Calcutta Journal* should be respected. This appeared to have some effect in frightening *Lord Amherst*, and he promised to allow the paper to be published. He had been obliged to commit to paper all that *Lord Amherst* had said he would or would not do; for so great was his capriciousness, that he dared not trust to his memory. First of all.

all it was agreed that the paper should be published; afterwards he would not permit it to appear, unless it was edited by a Company's servant; then it must not be published under the title of the *Calcutta Journal*, then he would permit it to be called the *Scotsman in the East*, and afterwards would not allow it to be published at all, as long as Mr. B. and the hundred shareholders had any interest in the concern; but at last it was published under the title of the *Scotsman in the East*. Thus his Lordship added to the capriciousness of a harlot the cruelty of a tyrant, and by his conduct the paper was ruined; and the result was, that property which cost Mr. B. £20,000, and from which he annually received £8,000 a year, sold for £1,500. Besides this, £4,000, which he had left in his banker's hands, was entirely lost, and he had been called upon to pay £5,000 for an expenditure incurred in consequence of the vacillating conduct of Lord Amherst. Mr. B.'s total loss amounted therefore to £39,000. The conduct of Mr. B. had been scrutinized by the Indian public, and by the Indian government, by the Court of Directors and the press at home. Writers of all parties, the editors of the *Courier* and *Morning Post*, from honourable motives only, have disapproved of the conduct pursued against Mr. B. It has passed the ordeal of public opinion and has been pronounced blameless. Still he has been persecuted and sacrificed by a spirit which could only have arisen from a satanical desire of revenge. He would not say that acts of greater cruelty and oppression had not been perpetrated in darker ages, or under the reigns of a Dionysius, a Tiberius, or a Robespierre; but he could affirm, that under a government calling itself free, and existing in the nineteenth century, a more cold-blooded, heartless system of persecution than that exercised against Mr. B., had never been seen. He had often heard that court abused on the other side of the water, but had always defended them; because he saw that when a person had been persecuted in India, the directors at home were always inclined to do him justice. But if they should not be so disposed towards Mr. B., he must then appeal to Parliament, where every man was entitled to seek redress; no matter of what colour, the whole of the inhabitants of India were virtually represented in the Parliament of this country. But if Parliament has not industry or talent enough to take into consideration the affairs of that distant country, they do not deserve the character they profess to possess. If they do not possess these qualities, it is in vain to talk of the integrity of British statesmen or the justice of British government. He thought

it of little consequence, whether it was the motion of his hon. friend on the floor, or that of the hon. bart., whom he was sure was always influenced by honourable feeling, which should be carried. (*Hear!*)

Mr. R. Jackson said, that his hon. friend, in bringing forward this subject, had pursued exactly the course he expected he would. He had endeavoured in his outset to conciliate the court, and had avoided discussing the subject of the freedom of the press, or of dragging forth that awful authority which was vested in the Governor-General, namely, the power of transmitting persons from India. These subjects were too important to be identified with the case of any individual whatever. If he professed an earnest zeal for the liberty of the press, he was aware that he should run the risk of being arraigned by his hon. friend as a secret enemy; but he would again avow as ardent and consistent a regard for that freedom as his hon. friend, or any Englishman could entertain; and he would observe, that if the subject had not as yet come under the consideration of the authorities at home, he did not think a nobler purpose could be served than by their inquiring into the real situation of the press in India, for the purpose of giving every fair degree of freedom to that great engine of intellectual improvement and of human happiness. Perhaps, too, it would be well worth considering, whether or not the power of banishment, that was at present in the hands of the Governor-General singly, might not be in some degree qualified by rendering necessary the co-operation of his council? He would say no more upon these serious subjects, for fear of falling into the error which had been so justly deprecated by his hon. friend. But he thought that the speech of his hon. friend had been characterized by too much asperity, when speaking of the Bengal government; but he merely referred to that circumstance for the purpose of doing justice to an absent man. He had no acquaintance with Lord Amherst; but were he a man of much less importance than he was, his being absent would be sufficient for him (Mr. Jackson) to defend him, when he was unjustly attacked. The whole tenor of his hon. friend's speech, and that of the gallant officer who had just spoken, the tendency of other speeches and of many writings that have been published, have been to insinuate that Lord Amherst personally refused to give a license to any paper, in which Mr. B. had any interest or property. A reference to the papers which have been circulated in court by Mr. B. will prove, that Lord Amherst never refused a license to a paper on account of Mr. B.'s having a share, but only on account

count of his retaining an influence over it. Lord Amherst may have been right or wrong in so acting, but the question was, whether he had not limited his objection to the fact of Mr. B.'s having an influence over the paper, disregarding that of his being a mere shareholder. But let not Lord Amherst be condemned for this; had the court forgotten the declaration of Mr. B., that he consoled himself for being banished from India, with the idea that the *Calcutta Journal* would still be materially under his direction, and would publish such articles as his warm imagination might produce in this country, where no danger could reach him? Was Lord Amherst then to be blamed for thus guarding against what had been found so serious an evil? (*Hear!*) His hon. friend (Mr. Kinnaird) read a letter, in the course of his speech, from Mrs. Muston, the wife of the gentleman who was in treaty with Mr. B.'s attorneys, and applying for a license for the paper under the name of the *British Lion*; and the gallant officer, who spoke last, was entirely wrong when he stated that Lord Amherst was at first willing to sanction the paper under that name—he was totally adverse to it. His hon. friend had read a letter from Mrs. Muston to her husband, from which it would appear that Lord Amherst had been influenced only by little feelings of resentment towards Mr. B. He would read the letter.

“ My Love: Henry came here to tell you that my father had seen Mr. Fendall, from whom he learnt that the license had been refused, and would be refused so long as Mr. Buckingham had any share in the concern. They had not the slightest objection to you; but the writing of Mr. Ballard's letter to you says, you will have the sole control so long as he and Mr. Palmer are proprietors; from which the government infer, that you would have it only so long, and then you might be subject to Mr. Buckingham's interference.”

This was the lady's letter; but as occasionally happens in the world, her husband had presumed to take the liberty of contradicting her point blank. (*Laughter.*) Dr. Muston had asked Mr. Bayley, whether he did not think it advisable to beg an audience of Lord Amherst, which Mr. Bayley advises him to do, and which Lord Amherst (what an unbending and tyrannical man would not be supposed to do), grants immediately, upon being applied to. He would read an extract from the letter in which Dr. Muston described the result of his audience with the Governor-General:—“ From the impression left on my mind, after a long interview with the Governor-General on the subject of a license for the *Calcutta Journal*, I am inclined to believe that no objection will be made (on a renewal of my ap-

plication), provided another name be substituted for its designation, and that the government is convinced at the same time of my being *bonâ fide* the proprietor of it. *The property* Mr. Buckingham possesses in it is *no objection*, if it can be held without a right of *influencing its details* by any interference on his part.” This was, in his opinion, a proof that Lord Amherst had no objection to Mr. Buckingham's interest, but to his influence in the concern. In another letter, addressed to Mr. Bayley, Dr. Muston writes: “ I heard from Mr. Harrington it was your opinion that no license would be granted to me unless I became proprietor of the concern, or an actual transfer of the property was made from the present proprietors to others, who should apply with me and the printer jointly for a license to publish a newspaper. If this be the case, I have misunderstood Lord Amherst, who appeared to me to require only the exclusion of Mr. Buckingham from all and every power of *interference or control*, and in no way to injure that gentleman's property. Indeed, his Lordship distinctly stated it to be his wish *not to injure* the property vested in the Columbian press; but this wish cannot be realized if the property be transferred from the present proprietors.”

The hon. *D. Kinnaird* said, that the actual intentions of the government were made more plain in the official letter of Mr. Bayley, after the period to which he was now alluding, in which he said that “ the Governor-General will not agree to Dr. Muston's proposal to take the paper for a year, because there was no security given that at the expiration of the twelve months that Mr. B. would not exercise his influence.”

Mr. *R. Jackson* said, that his only intention in noticing these letters was to show that the conduct of Lord Amherst had been greatly misconstrued, for either Dr. Muston entirely misquoted him, or Lord Amherst had, on more than one occasion, in express terms, declared that he had no objection to Mr. B. having a property in the concern—he only wished him to have no influence upon the managers of the paper. He thought it quite sufficient for the defence of Lord Amherst, to contradict the statement of one of the acts which had been imputed to him, out of the mouth of the very man upon whose testimony the charge was supposed to rest. He had now arrived at the important question, namely, what was to be done under all the circumstances of the case? The motion before them was, “ That there be laid before this Court copies of all correspondence between the Court of Directors and Mr. J. S. Buckingham, late proprietor of the *Calcutta Journal*, respecting his claims for reparation of the injuries sustained

was stated by him in his property in Calcutta, in consequence of the measures of the Bengal government. Also, copies of all proceedings of the Bengal government, referred to in the correspondence before named." This motion he thought a great deal too comprehensive. It gave an opportunity for the re-arguing of all the circumstances, upon which the court had before passed judgment. The correspondence required by the last part of the motion had already been commented on by this court. Mr. B.'s conduct had been before the subject of full discussion and debate, and the court came to the resolution that that conduct was wrong and contumacious, and that the government had done quite right in acting as it did; for Mr. B. had left it no alternative but either to bow before him, or prove to him that the constituted authorities were stronger of the two. It was now universally admitted that the Bengal government had acted right, and this court had come to a decision, an almost unanimous decision, to that effect. Would it be proper, then, to resume the discussion upon those papers, upon which that decision was grounded? Had the motion been limited to the production of papers subsequent to the departure of Mr. B. from India, he would have no objection to it; because, supposing that the government of India had acted legally and judiciously—supposing the course they pursued was unavoidable, yet, he thought, this court could not see, with indifference, the amiable wife and children of a gentleman of character, talent and honour, brought into a painful, pitiable, and unforeseen predicament, by the desolating consequences of even a just adjudication; the punishment may have far exceeded the object and expectation of those who inflicted it. (*Hear, hear!*) He would be ashamed if he did not feel that the case of Mr. B. was one of sympathy, and the kind consideration of which, on the part of the Court of Directors, would have him for its most cordial supporter (*Hear, hear!*) But when they thus indulged sympathy for Mr. B. they should consider whether the mode that was pursued was the best means of attaining the object in view. An hon. proprietor (Mr. Dixon) had said, that if Mr. B. would throw himself and his misfortunes on the merciful consideration of the court, such an appeal would not go unregarded. But such an appeal had recently been made to a higher authority. Mr. B., a husband and a father, had given way to his agonized feelings, and had thrown himself and his family upon the mercy of their executive power. But if he supposed that, by limiting the motion as he proposed, there was any intention of coercing the directors to make a grant, he should not be less friendly to the proceeding than he

was. If the papers should be laid before the court, and wisely and justly used, they might be made the instrument for an application to the Court of Directors, requesting them to take a merciful consideration of the case of Mr. B., and stating the pleasure the proprietors would feel, if their directors would partake in the sympathy, which so evidently and so generally existed towards that gentleman. (*Hear!*) He had drawn up a motion while the hon. baronet was speaking, according to the ideas which he had thrown out, but he would not propose it as an amendment. He would support the motion for papers, if limited in the way he had described.

The hon. D. Kinnaird said, that he had no objection to limit the motion as was proposed.

Mr. R. Jackson continued. He wished but to know what was the best course to pursue, in order to relieve Mr. B. He thought that he should not ask for justice, but appeal to that sympathy, which every gentleman, every father of a family, and every admirer of talent, must feel for Mr. B.'s present situation. The dignity and the authority of government having been so decidedly upheld and assisted, he wished to look upon Mr. B.'s conduct with an indulgent eye; many parts of which, since his arrival in England, that were considered ill-judged, arose from his ignorance of the forms and modes of proceeding of public bodies, with which he would have been more conversant had he lived longer in this country. The motion which he had drawn up was, "That the Court of Proprietors request the Court of Directors to take into consideration the losses sustained by Mr. B. since his departure from India; and the Court of Proprietors beg leave to assure them, that if they find Mr. B.'s situation such as to induce their sympathy and pecuniary aid, they will meet with the cordial support of this court." With the deepest feeling of sympathy for Mr. B. and his amiable family, he had drawn up this motion. He would support the motion for the production of papers, in hopes that they would afford ground, not for retributive justice, but for those kindly feelings which the directors never withhold, when fairly called for; and in the exercise of which, they ever received the cordial support of this general court. (*Applause.*)

Mr. Hume would confine himself to what had occurred subsequently to Mr. B.'s departure from India. His hon. friend and himself had not the slightest objection to adopt the suggestion of the learned gentleman who spoke last—their only purpose being to serve Mr. B., whom they conceived to have been punished much more than was originally intended. He totally differed in his view of the case from

from the hon. proprietor who spoke early in the discussion, and who thought that Mr. B.'s general conduct ought to be taken into consideration: that question has been already decided. He always thought Mr. B. was quite right in his conduct; but this court was of a different opinion. He was willing to believe that Mr. B.'s punishment arose out of offences against the government; but he denied that Mr. B. opposed himself to the government; he merely endeavoured to point out abuses. The whole of the general question, however, ought to be put out of consideration, for the court had only to look to what had taken place since Mr. B. left India. Was it not sufficient for a man to be banished from a country where he was establishing himself in a business that would bring an independence for life, without having the whole of the property he left behind him confiscated? He agreed with his hon. friend, that Mr. B. laboured under an unfavourable impression, from circumstances which have only been removed after the lapse of eight years. But since his character had been cleared from the imputations cast upon it, in a court of justice, this court ought to consider in what situation they placed a man, banished, perhaps, from the unfavourable circumstances raised by groundless calumny. On the 1st of January, 1823, a proposition was made to Mr. B. to sell a part of the property of the *Calcutta Journal*. A number of gentlemen, desirous of being purchasers, found that the paper yielded an annual income of £8,000. The value was taken at £40,000 and one fourth was distributed among one hundred persons for £100 a share. Thus three fourths of the property, amounting to £30,000 remained in the hands of Mr. B. He had laid out £20,000 in the purchase of buildings, presses, and types, and of every thing that was calculated to make his establishment the completest possible. When he was ordered to quit India, Mr. B. might have sold his share in the property, under the disadvantage of a change of editorship, for £20,000. He preferred, however, to keep it in his possession, not supposing that the persecutions of the government, and of other persons (for he had heard of circumstances, which made him believe that persons under government, and who were Mr. B.'s enemies, exerted their influence to ruin him) would go so far as to deprive him of it. He would state a circumstance which would shew the good faith on which Mr. B. intended his paper should be carried on. In order to do away with all doubt, as to the spirit in which it was to be conducted, he drew up a set of regulations before he left India for the editor, and for every person who might be concerned in the business, in order that

they might avoid giving offence to the government. He (Mr. Hume) thought the whole of the regulations very judicious, and should he ever have any connection with a paper, he would adopt them. It ought to be remembered, that these instructions were drawn up at a time, when the feelings of Mr. B. might be supposed to be irritated, for being, as he imagined, unjustly banished from India; and they thus exhibit a great proof of forbearance and good intention. Was it just, that, after Mr. B. had been banished, his property should be destroyed? If such a circumstance had happened in this country, a strong commotion would have followed. Supposing that the editor of the *Morning Chronicle* were to be convicted of libel and punished by imprisonment, would it be tolerated that his property, which a short time ago was worth £40,000, and he believed was still so, should be ruined. The destruction of Mr. B.'s property was an additional punishment, inflicted on him in the nature of a fine. At first there was no idea of punishing Mr. B. in India, in any other way than that of deportation. Sir F. Macnaghten declared, when he registered the regulations respecting the press, that if he had had any idea that the license was to be taken away and the property injured, that he, as his Majesty's representative, would never sanction the regulations. His hon. friend (Mr. Jackson) would be convinced, that the apparent contradiction he discovered in the manuscripts, would vanish upon a closer view of them, and by paying attention to the dates. It was ridiculous to imagine that the government could have any fear of the paper being controlled by a person at the distance of 3,000 miles. Under these circumstances, he thought that Mr. B. had been completely robbed of his property; he would not say it was intentional, but every body who was acquainted with the nature of a periodical publication, must know that the step taken would entirely ruin the property. If it were thought better to address the Court of Directors, instead of calling for papers, he would be willing to adopt that course, though he must say, that the latter had been followed in concurrence with his advice. He thought it proper that the court should have all the correspondence before it, in order to be the better prepared to discuss any motion which might arise out of them.

Sir *John Sewell* had been very much surprised to hear the word *confiscation* used in this debate. He could not, after reading the papers which had been circulated in court, discover that any thing like confiscation had been employed. The term appeared to him the more extraordinary, because the friends of Mr. B. had themselves owned, that that gentleman

man had been legally banished from India; for having conducted himself in a way that made him unfit to remain in that country. But where was the use of sending away the body of the man, if they allowed his mind and spirit to remain? How then had the government acted? They had allowed Mr. B.'s agents to sell his property in the best way they could. He had not heard that the government interfered with the house and furniture: the types had gained a certain value from the use Mr. B. made of them. With respect to the paper—so long as its readers imagined that Mr. B. had anything to do in influencing its details, the property would possess additional value. He understood that Mr. B. possessed no fortune when he went out to India, and he had heard something about his success in paying his debts. In a short time he raised the value of his paper to £8,000 a year. He imagined, that the paper rose in value from the cause that made it appear bad in the eyes of the government, namely, the improper manner in which it was conducted. The types and buildings, which had gained value from the name of the person whose property they were, very naturally fell to their intrinsic value, when they could no longer be employed in the way they had been. The sale of the property had been commented upon as something unjust; as if the government had forced it to be sold to a particular person: this was not the case. Mr. B.'s friends might have purchased the types and brought them to England, or taken them any where else. The word *confiscation* was most improper, and as many gentlemen who came here to vote would not take the trouble of reading the papers laid before them, the use of that term was calculated to produce a wrong impression on their minds. The whole history of Mr. B. was this—He went to India, and there pursued a line of conduct which raised him to affluence, but which was inconsistent with the well-being of that country. Nothing was taken from him at that time, and afterwards his agents were permitted to sell the property he left behind him any way they could. The question resolves itself into this, that Mr. B. has suffered nothing but what his most earnest friends admit to have been legal; namely, his removal from India. He understood the present proceeding as an appeal from the Court of Directors to the Court of Proprietors, and in order that this court might form a correct judgment upon the case, they should have all the papers before them. He would therefore vote for the motion, and he understood that there would be no objection on the part of the Court of Directors, to produce

what papers the Court of Proprietors might consider necessary.

Mr. *Gahagan* remarked, that the term "*confiscation*," to which the hon. proprietor, who had just sat down, had alluded, was never applied to any legal act of the government. (*Hear!*) In the present instance, it signified merely that the "*confiscation*" of Mr. B.'s property had resulted from the extent to which the government had proceeded. He was likewise compelled to differ from the hon. proprietor with respect to one of the doctrines put forth by him—a doctrine too monstrous even for a lawyer to broach. The hon. proprietor had contended, that the Governor-General was empowered by the legislature to remove Mr. B.; it followed, as a matter of course, that he was likewise at liberty to deprive him of his means and appurtenances. The government of India had no right to banish Mr. B., though they might consider such a measure expedient; and having proceeded to that measure, they had no right to go further. If Mr. B. could set up an engine in India to propagate his opinions, by steam, from England to that country, he contended the government would have no right to remove that engine. He also contended, that they were not empowered to impose conditions on any one who applied for a license to publish a newspaper. The government might have refused the licence altogether when Dr. Muston applied for it; but they had no authority for saying, "You may have it on condition that Mr. B. has no interest in the concern." They had no authority to make conditions of any kind. Had they given Dr. Muston an unconditional license, that gentleman would have known that he must use it at his peril; and that the government, if it were seen that Mr. B.'s influence was felt in the paper, could have deported him as they had deported Mr. B. But what was meant by influence? Was it meant to infer the possibility, that Mr. B., whilst residing in Cornwall-terrace, Regent's-park, could influence articles which might appear in a daily paper in India? Were it, indeed, a half-yearly publication, there might be some ground for the argument. Then what does such an objection go for? He considered Mr. B.'s case to be one which called for their sympathy, and he hoped it would be extended to him. He would before he concluded advert to one point. A great deal was usually said in that court about censoring behind a person's back. He would readily admit, that it was unfair to say of an absent individual what would directly impeach his character, for honour and integrity; but would this qualification apply to the public acts of the government abroad? Should they abide by that rule

rule, they must wait until Lord Amherst and his colleagues had ruined India, reduced it to a state of nonentity, and returned home, before they opened their lips about them. This was an *argumentum ad absurdum*. They had a case before them—the data on which to decide. They had proof of the deportation of Mr. B., and of the destruction of his property. Let them apply a remedy, and not listen to the imbecile and chamber-maid discourse about attacking a person behind his back. He only hoped that no further charges were to be preferred against Lord Amherst than were founded on the documents before them. But they had not at present to give judgment on Lord Amherst, but on Mr. B.; and to say whether he was entitled to some small indemnification for the injuries he had undergone, and the loss he had sustained.

Sir J. Sewell, in explanation, said, he had not contended that the government of India had a right to interfere with the materials of Mr. B.'s establishment; nor had they in fact done so. As to that gentleman's influence in the paper, it was very well known that he might have kept up a constant communication, as vessels leave this country almost every week for India.

Mr. R. Jackson asked leave to explain. He had merely said that the language imputed to Lord Amherst was contradicted by the papers handed about in this court. He had, at the last meeting, contended for the right of examining into the public conduct of persons, whether at home or abroad, when the necessary information, on which they might found their judgment, was laid before the proprietors.

General Thornton was grieved to find that a feeling of opposition had arisen, because he had hoped that the court was coming to a good understanding on the subject, and that a direct motion was to be substituted for the one before the court. What his hon. friend (Sir John Sewell) had stated about the types, was of little consequence, because the subject for consideration was the ruin of a great establishment. It was ridiculous to talk about the evil Mr. B. could effect in India after he had been banished from that country. He thought that he had been extremely ill-treated. Every person agreed in giving that gentleman a high character; and he could not imagine any cause for the way in which he had been used, unless he had got a bad name in India. Mr. W. Bankes had circulated unfounded calumnies against Mr. Buckingham, through the medium of Mr. Bankes, sen. which excited a prejudice against Mr. B. in India. That prejudice had prevented the authorities there from exercising that clemency towards him which otherwise they would have done. Mr. B. had appealed to

the law, and proved that the calumnies in circulation against him were unfounded. He had shewn himself to be quite the reverse of violent; for when he might have got heavy damages, he contented himself with having his character cleared.

Dr. Gilchrist observed that the speech of the hon. bart. was calculated to lead the subject to that merciful conclusion, which must be desirable to all parties. He had heard quotations made from Greek and Latin authors, with whom or whose countries we had a much less profitable connexion than with India. Now he would give them a quotation from Indian poetry (*Hear! and a laugh*)—from the poetry of that country which, notwithstanding the very profitable connexion we had with it, were too apt to look upon as degraded and debased. He would read the original Persian, as the court should be accustomed to the sound of the language, and would afterwards give a translation in English.

“ Khurabee zi be dad beenuj juhan
Choo boostani khoorrum zi badi khizan
Mudih rookh suti zoilm dur hech hal
Ki khoors hurdi moolkut nu yabud kumal
Mukoon bur zueefani be charu zor
Been desk akhbir zi tungee egor!
Muhoon murdoom azaree ne toond ral!
Ki naguh rusud bur to guhri khoodal.”

He would now give the substance in English verse:—

“ As storms destroy bright Autumn's cheerful robe,
So foul injustice desolates the globe:
Such ruthless kings as by oppression reign,
Their empire's crescents prematurely wane.
Crush not the man whose hopes on you depend;
Ah, think betimes where such misdeeds must end!
Nor goad the wretched on to fall despair;
Slight not their sighs as passing breaths of air;
Lest these collected may your prospects blast,
And crack your crown with thundering storms at last.”

The sentiments thus expressed were well worthy the consideration of the court, as they served to remind them, that justice should be tempered with that noblest attribute—mercy. If, however, they still wished to uphold an unmitigated despotism in India—if they were disposed to tolerate, in the government of that unhappy country, a direct violation of the rights of private property—why, then, he would say, let them “pay for their whistle,” and let them repair, as far as they could, the injustice done to an innocent individual by the tyrannical policy of their Eastern government. He had the pleasure of being acquainted with Mr. Buckingham, and a more able, a more intelligent, or a more honourable man, he did not know. He was not, however, aware that he possessed that ubiquity which had been attributed to him that day, and gave him a direct personal influence, and almost a corporal presence in India, at the moment that he was residing in London. As to the advice given to the court by the two lawyers, to turn them from a merciful consideration of this question, he hoped that the court would disregard it, as being opposed to both law and

and gospel. As honest men, he trusted they would not be influenced by such advisers, but would take into consideration the severity with which Mr. B. had been treated, the losses he had sustained, and the injury his family were likely to suffer. He hoped the court would extend its merciful protection to Mr. B.'s numerous children, and his amiable wife, who were suffering, not from his demerits, but from that system of government of which he had been made the victim.

The hon. *D. Kinnaird* rose to reply, and observed, that he would have to trespass on the time of the court but for a very short time. His task, on this occasion, was rendered the more easy, as he had heard nothing to contradict the statement he had made, or which could induce the court to withhold its sanction from the motion he had submitted—that statement was founded on the integrity of Mr. B.'s character, and the justice of his conduct. He had not heard any proprietor object to the extension to Mr. B.'s case of that kind and compassionate feeling which the court ever evinced towards those who were suffering under a long series of unfortunate events. He had not heard it asserted, that, if state necessity warranted the confiscation of Mr. B.'s property, his ruin must be considered as the result of any moral offence; it was rather that he had mistaken the nature of the government under which he was placed. He trusted, therefore, that, if his motion should not be carried in the affirmative, it would not be from any indisposition on the part of the proprietors to extend a helping-hand to those who were pressed down by a series of undeserved misfortunes. He did hope that, if hon. proprietors voted for the amendment of the learned gentleman (*Mr. R. Jackson*), which he was now willing should be substituted for his motion, they would at the next general court have occasion to reflect with pleasure on their vote. This after all was the main question: it was one by which they were called upon as gentlemen of property, for such, in fact, they were, to put their hands in their pockets and relieve the unmerited sufferings of one who had a claim on them as East India proprietors and as fellow subjects—but more particularly in the latter character—a claim which, on the grounds as well of common justice as of Christian charity, they were bound to respect. He would now advert to a subject on which, from the observations he had before made, he thought it would not be necessary for him again to touch. He had laid down for himself a rule, that he should avoid as much as possible any allusion to the conduct of Lord Amherst, or to that of the authorities in India connected with these transactions. He now appealed to the recollection of the court, and asked, whether he had not endeavoured to observe that rule as closely as

the subject would admit? He had, however, been more than intimated, that he had gone out of the subject, to attack the character of an absent man. He felt as much as any one what was due to an absent man where any part of his conduct was brought into discussion; and he was disposed to act upon that feeling towards Lord Amherst; but there was another circumstance which weighed still stronger with him, and that was, the conduct of the directors themselves towards that noble Lord, which had placed him (*Mr. D. K.*) in a most unpleasant situation; and let what would happen in India, his mouth was shut up now and for ever as to Lord Amherst's conduct there. After all that he had said respecting that noble Lord's conduct in the administration of affairs in India, not one of the directors came forward to utter a syllable in his defence; and thus, in the account of the discussion which went forth to the world, he (*Mr. D. Kinnaird*) was made to appear as attacking a man, not only in his absence, but in the absence also of those who were, or should be, his natural defenders. This was a situation in which, could he have anticipated what was to happen, no consideration should have induced him, to place himself. He was anxious that his statement should go forth to the world, as well in justification of what had passed, as to explain the line of conduct which he should feel it necessary to observe on this question in future; on the present occasion, however, he denied that he had adverted to the conduct of Lord Amherst more than was necessary, nor would he have done so at all were it not to point out the errors of the Bengal government in disqualifying Mr. B. from the disposal of his property to the best advantage. Before he concluded, he could not avoid remarking on the levity, as he must call it, with which an hon. and learned proprietor (*Sir J. Sewell*) near him had treated this question, and of the unfairness which his arguments were calculated to deal towards Mr. B. The hon. and learned gentleman, in a lawyer-like manner, recommended to strike a sort of balance between Mr. B.'s situation before he went out to India and that in which he found himself on his return, and added, that his circumstances at both periods would be found so pretty nearly equal, that no loss could have been sustained. "What was Mr. B.," said the learned proprietor, "before he went out to India, and what is he now? He went out without property, and he returned poor; therefore his situation at present is not worse than it was before." Was this fair play towards Mr. B. or his property? Did the learned proprietor make no account of the honourable and laborious exertions of his great talents, by which Mr. B. had acquired property

property after he went out; and did he account the loss of that property as nothing? (*Hear, hear!*) The hon. and learned proprietor had filled many high and important situations; the duties of which he (Mr. D. Kinnaird) would admit he had discharged alike honourably to himself and beneficially to his country, and was now enjoying, as the reward of his labours, a pension from government.

Sir J. Sewell. "I beg to set the hon. proprietor right. I do not receive a pension from government; I receive it from the country (*Hear, hear! and a laugh*), and it was stipulated at my acceptance of the situation which I filled, that at retiring from it I should receive that pension." (*Hear, hear!*)

The hon. D. Kinnaird said, that the explanation with which the learned gentleman had interrupted him, did not at all alter the argument he was pursuing. He had stated that the learned gentleman enjoyed a pension, no matter whether from the country or the government; though in the end they came to pretty nearly the same thing. Now suppose that by some means this pension should be taken away.

Sir J. Sewell. "It can't, the faith of parliament is pledged for its continuance." (*Hear, and a laugh.*)

The hon. D. Kinnaird. So much the better. (*Laughter.*) He could assure the learned gentleman, that he did not allude to the fact of his receiving a pension with the view of casting the slightest imputation upon him. He freely admitted, that whatever pension he enjoyed was the well-merited reward of his own honourable and useful exertions; but, for the sake of the argument, he would suppose the learned gentleman should lose that pension, would it be a fair way of viewing his case to say, that his condition was not then worse than it was before the pension was granted? Would it be treating him well to overlook the whole of the labours and talent by which that pension had been acquired? (*Hear, hear!*) and was it not equally unjust to apply the same principle to Mr. B.'s case? But the learned gentleman seemed to think Mr. B.'s loss was the result of his own act, and that he might have avoided it if he had pleased, for that he might, if he thought fit, have brought his types and other printing materials with him to England. Surely the learned gentleman must have been strangely ignorant of the relative value of such property in England and in India. So he might have brought the bricks of which his printing-house was built; but would his loss have been the less on that account? But he (Mr. D. Kinnaird) begged to ask, whether he might not have disposed of them in India for £20,000, if he had not been dis-

lifted from bringing them to the best market there? Did the learned gentleman mean to rest upon the quibble, that Mr. B. was not personally disqualified from disposing of them to the best advantage, because that permission had not been actually denied to him? Was it not a disqualification to him, when it was known that a license would not be granted to any man who might purchase Mr. B.'s interest, under the assumption that Mr. B.'s influence would still continue to direct the press, even after his deportation from India? Was it not a disqualification from disposing of his property in the paper, the types, and other materials to the best advantage to say, after a long and most expensive delay, no license would be granted to any person to conduct the paper, unless the property was transferred from all its former proprietors and vested in some other parties? He would contend, that on these grounds Mr. B. was entitled to compensation on the score of justice; but he chose rather at the present to appeal to their mercy and compassion. He (Mr. D. Kinnaird), on behalf of this injured gentleman, called on the proprietors to take his case into their serious and humane consideration. Let them bear in mind that, by consenting to the amendment, they might be the means of rescuing an able and honourable man from the misery of beholding his innocent family reduced to distress, a circumstance which would ever render the recollection of that day's proceedings grateful to their feelings.

Sir John Sewell, in explanation, said, that he had never intended to speak with levity of Mr. B.'s situation, or of the losses which he had suffered, but he did say, that what had happened was attributable to his own conduct, and that in that respect he was not entitled to such consideration as he might claim, had the same effects proceeded from different causes. As far as Mr. B. or his family suffered he should regret it, for he was wholly incapable of treating with levity the sufferings of any man, no matter from what cause they arose.

The Chairman said, that before the question was put, he wished to bring back the attention of the court to the situation in which it was placed. The original motion of the hon. proprietor who had just sat down was, for copies of all communications which had passed between Mr. B. and the Court of Directors on the subject of his return from India and the sale of his property there, and also, that all the correspondence with the Bengal government on the same subject should be laid before the court. This was what the honourable proprietor wished to have done, and yet he was arguing the question as if those papers had been produced, and were already

already in the hands of the proprietors. This was hardly a fair way of treating the court. If the sense of the Court of Proprietors should be for the production of those papers, he for one should not feel it to be his duty to object to such a course, at the same time it must be distinctly understood that it should not involve him, or the Court of Directors, in an acquiescence in any future motion which might be founded on them; and he must say, that during the period the subject had been under consideration, from all he could collect of the opinions of the different authorities in that court or elsewhere respecting Mr. B.'s case, he was not inclined to think that any view would be taken of it different from that which had been taken by the Bengal government. The Court of Proprietors must decide, whether the papers called for should be produced. One thing he was satisfied of, that it would appear that Mr. B.'s case was not viewed with any feeling of hostility from that side of the bar. The papers ought to be defined, the words used were, "all papers," and "all" was a very large word. Nevertheless, he would not individually offer any objection, provided the Court of Directors were not to be involved in a supposed assent to any further motion on the subject.

The Deputy Chairman (Sir G. A. Robinson) observed, that the motion of the hon. gentleman called for some remarks, the more particularly as there seemed to be a difference of opinion between him (Mr. D. Kinnaird) and some of his hon. friends at the same side on the subject. The motion, as he understood it, called for copies of all correspondence between Mr. B. and the Bengal government after his deportation from India. (*Hear, hear!* from Mr. D. Kinnaird.) Against such a motion he should enter his protest, for he thought it would be impossible to come to a sound understanding of the whole question, unless they had also the whole of the circumstances which led to Mr. B.'s deportation, and to the farther proceedings. The justification of the Bengal government would rest on the contumacy of Mr. B. The whole merits of the case might rest on the proceedings before the period to which alone the present motion referred. He begged to be understood as not consenting to the production of any of the papers sought for, because he considered that the case did not require farther discussion; but if any papers were to be produced, he thought that justice to both parties required that the whole should be forthcoming. (*Hear, hear!*)

Mr. Astell entirely concurred in the view taken of the case by his hon. friend, the deputy chairman, and notwithstanding the implied disavowal on the part of the hon. Proprietors, he could not help think-

ing that this was the same question (though under a different shape) on which they had decided in July last. (*No, not from Mr. D. Kinnaird.*) He would give his reasons, and the hon. Proprietors would have an opportunity of replying to him afterwards; in the mean time, he hoped he would allow him for the present to express his opinion. The papers sought for consisted of all the documents on which the Directors decided in July, when the court approved of the conduct of the Bengal government up to that time. That decision he thought closed the question; and farther discussion, as it appeared to him, was unnecessary. But what was the object for which these papers were now sought, if it were not for having the discussion over again? He therefore would oppose the motion for these papers; and in doing so, he went upon the shewing of the hon. mover himself, who had first gone upon the justice of the case, but afterwards abandoned that ground; and left it to the court to say whether they would advance 5,000*l.* or any sum, entirely on the ground of compassion towards an individual, who, it was alleged, had suffered severe losses. He (Mr. Astell) was long known to the Court of Proprietors; and he hoped he should obtain credit, when he said, that on the score of compassion to the sufferings of any individual, he was not deficient in those feelings which became a man—but he could not consent to the present motion merely on the ground of compassion. He would most readily acknowledge, as he had always done, that Mr. Buckingham was a man of very considerable talent; but, he must repeat what he had said before, that he was deficient in judgment—and were the court, he would ask, now to reward him with a pecuniary grant on the ground of such deficiency? They were there acting as trustees for the absent proprietors, but he thought that if they were to vote the grant of a sum of money on an occasion like the present, merely on the score of compassion, they would be acting unjustly towards the absent proprietors, and transgressing the object for which they met. He thought he saw something like a change of tack on this occasion, and the hon. mover and his friends, when one tack failed, tried another. Hence, after some remarks on the justice of this gentleman's claim, that ground was given up, and then came an appeal to their compassion, as fathers and husbands. He must repeat, that in justice to his fellow proprietors who were absent, he could not consent to such an application of their funds, and would therefore oppose the original motion and the amendment.

The hon. D. Kinnaird hoped that he might be permitted to say a few words. The more particularly did he seek this indulgence,

gence, as not only his manner of introducing the original question, but his motive, had been attacked. He begged, then, distinctly to deny any thing like manoeuvring on this occasion, or that this was the old case, over again. The ground of it was, that the knowledge of Mr. Buckingham's losses, had not reached him at the period of the former motion. It should be borne in mind, that no money was asked by his motion. All they wanted was that, as trustees for the absent proprietors, such information should be laid before the court, as would enable them to form a correct judgment on the case, and direct them as to the ground of any future vote for which they might be called on respecting it.

Mr. R. Jackson begged, before the question was put, to remind the court of the nature of his amendment, which was, to refer the whole case to the consideration of the Court of Directors, with the view of ascertaining what loss Mr. Buckingham had sustained, and whether, under the circumstances, it was a case to which pecuniary consideration should be extended. This was the course pursued in the case of Mr. Arnot, and he thought it might be very properly followed in the present instance. He would repeat the substance of his amendment, which went to recommend that the Court of Directors be requested to take into consideration the loss sustained by Mr. Buckingham after his deportation from India, and that this court assures them, that should they find Mr. B.'s circumstances such as to induce them to extend their sympathy to him by recommending pecuniary aid, this court will give its most cordial aid to any proposition to that effect.

The question was again about to be put from the chair, previously to which

The *Chairman* requested (in the usual manner) that all persons who were not proprietors entitled to vote, should withdraw.

Dr. Gilchrist said that he was a proprietor of stock, but he was not yet entitled to vote, as not having held it the requisite length of time. He had no objection to obey the order of the *Chairman* and retire; but before he did so, he wished to know whether or not, a proprietor not having a right to vote had a right to be present at a division? If such a right existed it should be known, and as he was unwilling that the right of any class of proprietors should be compromised in his person, he did not wish to retire until he was further informed on that point. He would say further, that on the last court day, he was allowed to remain while a shew of hands was taken upon a question. He did not of course attempt to vote; on that occasion, nor should he do so now if suffered to remain. Before he went he again begged to be in-

formed of the principle, on which as a proprietor he was to be excluded.

The *Chairman* replied, that he had been for a long time a member of that court, and he had never before heard such a request, as that he had made, respecting the withdrawing of persons not having a right to vote disputed. He must once more repeat the request.

Dr. Gilchrist repeated, that he had not been requested to withdraw on a similar occasion on a former court-day, and he did not see why the difference should be made in the present instance. All he wanted was, to ascertain the principle on which the order was made.

The *Chairman* said, that the hon. Proprietor had not been called upon to retire on the last court day, as he (the *Chairman*) did not wish to cause any inconvenience; and as the opinions of the court upon the question then at issue, were by no means so nearly balanced as on the present occasion, he must therefore again request that Dr. Gilchrist do retire.

Mr. Hume asked by what law, by what rule was it that a proprietor was thus to be excluded?

Mr. Weeding — By the rule of common sense, which would prevent any gentleman from claiming a right to remain in an assembly in whose business he was not allowed to take a part.

The *Chairman* said he was not surprised at the mistake into which Dr. Gilchrist seemed to have fallen on this occasion; but he must own, he was surprised at the objection made by the hon. prop., Mr. Hume, who must be acquainted with the rules of discussion in that and other public bodies. He believed that the principle to which that hon. Proprietor now objected was not unknown in the House of Commons.

Mr. Hume denied the accuracy of the hon. *Chairman's* allusion to the practice of the House of Commons. It was well known, that in committees of that house every member had a right to attend, though only the number particularly selected for the business in consideration had a right to vote. The proprietor, therefore, who [here there was a partial interruption] to the hon. gentleman from some proprietors at the end of the court. Mr. Hume expressed a hope, that those proprietors who did not choose to conduct themselves with decency would retire from court. He was respectfully exercising his right of addressing the court, and he ought not to be interrupted. — The hon. gentleman then proceeded — and observed, that the proprietor who spoke of the rule of common sense, was himself ignorant of common knowledge and common information as to the rules of discussion among public bodies. Again he repeated, that the proprietors ought to be informed whether the exclusion

exclusion of any of their body not having a right to vote, rested on any law or practice of the court.

The *Chairman* said that it was at all times the practice of the court, as far as he was acquainted with it. A great deal had been already said upon this subject, but he would now set the matter at rest, by putting the question that *Dr. Gilchrist* do retire.

Mr. B. Jackson hoped *Dr. Gilchrist* would allow him to say, that the practice was as it had been already described by the *Chairman*. The question was one which it was not worth his (*Dr. Gilchrist's*) while to argue, as only a few short months would elapse before he would be equal to the other proprietors present in the right of voting. He must see that great inconvenience would result from the practice of allowing any persons not having a right to vote, to be present during a division.

Dr. Gilchrist said he was possessed of (as we understood) £1,000 stock; but it was not in his possession the necessary length of time to qualify him to vote. He repeated that he had no wish to remain in court if he had no right; but he was unwilling that any act of his should compromise any right of the proprietors. It was the farthest thing from his inclination to disturb the proceedings of the court; but if he were wrong in staying at present, it was because he had been allowed to remain during a division on a former occasion.

The *Chairman* remarked, that such permission was granted because he did not wish to stop the proceedings by directing him to withdraw, and because (as he before observed) the court seemed much less divided in opinion on the subject than in debate than they were on that now before them. He again put it to the hon. proprietor to withdraw.

Mr. Hume protested against any proprietor being compelled to leave the court by order of the *Chairman*, when there was nothing in the by-laws, nothing in the charter, nothing in any act of Parliament, which directed him to absent himself from any of its proceedings at any period. Such a course towards a proprietor was the most objectionable when he saw that more than fifty strangers were allowed to remain up yonder there (pointing to some persons who were standing outside the railings at the back part of the court).

A *Director* observed, that the practice which the hon. proprietor seemed to advocate was against the general custom of that court, and he believed of other public bodies where the members proceeded to a division. The hon. gentleman had mentioned what he said was the practice of committees in the House of Commons; but he omitted to notice what was the practice in the House itself, where, on divisions, no person was allowed to remain who had not a right to vote; and, he believed that, in

divisions even in committees of the House, all persons were excluded who had not a right to vote.

The hon. *D. Kirkcaldy* thought that the hon. director was mistaken as to the practice of committees of the House; but that as it might, he could not see what inconvenience could be produced by allowing a proprietor not having a right to vote, to remain during a division—for it was well known, that many proprietors who had the right remained in court without voting at all.

The *Chairman* repeated, that the practice had invariably been as he had before described it; and he hoped it would be observed in the present instance.

Dr. Gilchrist said, he would withdraw, in compliance with the *Chairman's* request. He then left the court.

After some slight delay as to the forms which the questions should be put, the original motion was put and negatived by a considerable majority. The number of hands held up for it was 12. This majority was not numbered.

On the amendment being put, *Mr. Hume* demanded that the opinion of the court should be taken by ballot.

The *Chairman* said, that it was now too late to make such a demand.

The question was then put, and the amendment negatived by a large majority. The minority in its favour were fourteen.

Mr. Hume said, that as he had been prevented by the forms of the court from demanding a ballot, he now gave notice that he would take the earliest opportunity of presenting to the Court of Directors a paper signed by the necessary number of proprietors for the purpose of demanding that the question just now decided by a shew of hands, should be submitted to a decision of the proprietors by ballot.

The *Chairman* observed, that the Court of Directors would pay proper attention to any requisition submitted to them by the proprietors.

THE OUDE PAPERS.

On the question, that the court do adjourn,

Sir John Doyle said, he had a few observations to make, to which he requested the patient attention of the court for a few minutes. He was glad to observe that an hon. director (*Col. Baillie*), to whom he should refer, was in his place, as it relieved him from the unpleasant feeling of speaking of him in his absence. What he was anxious that the hon. director should inform him was, his motive for causing to be printed such a vast mass of papers as had recently been laid before that court and the House of Commons, called the "Oude Papers?" what measure did he intend to found upon them; and what did he intend to bring the subject forward? Information on these

points was the more necessary, as it was impossible either in that court or in the two Houses of Parliament to discuss such a mass of documents, without ample time for consideration. These papers had been printed at a most enormous expense; he presumed therefore that some important object must have been intended by their production. He would give notice, that after he had got his explanation he would—but first it would be better that his questions should be answered; he would therefore again ask, why this immense volume of papers had been printed; and what ulterior object had the hon. director in calling for them.

Col. Baillie said, that as a question had been put to him, some answer would be expected, though the facts of the case would justify him in not offering the explanation which the hon. and gallant general required. It would be sufficient for him to state, that never having moved for the production or printing of those papers, he could have no ulterior object on that subject. The gallant officer was in a mistake in supposing that the motion for their production was his.

Sir John Doyles: The hon. director was, he presumed, well acquainted with that maxim of law which said, that

“*Qui facit per alium facit per se.*”

The motion for the production of those papers might not have been his own personally, but it was not the less his act if it were made by another by his desire, as he believed was the fact. He would now say a word to the court as to the circumstances under which those papers came to be printed. It was well known, that when the Marquess of Hastings retired from the government of India, after an administration of nine years, with what effect to India he would not enquire, further than by calling on the court to compare the state of that country at his going out to what it was at his return. When he retired from that high station, with the thanks of his employers, he thought it his duty, as a faithful steward, to give a statement of the manner in which his duties had been discharged. With this view, in his first leisure hours, he published a summary of the affairs of India during his administration, and transmitted it to the Court of Directors; that body, however, not thinking it a public or official document, as the noble Lord was not at the time it was written in their employment as a public servant of the Company, paid no farther attention to it than to any other publication which might have been addressed to them. How far such a course was wise he would not say, but it was certain that it was overruled by the Court of Proprietors on a motion which he had the honour to submit. Subsequently to this, the hon. director was called to give

evidence before a committee of the House of Commons, of which he was a member, on the subject of the affairs of the Nabob of Oude, and there made a statement; between which, and parts of the summary of the noble Marquess, there was observed a considerable discrepancy. To explain this discrepancy, a motion was made in the House by an hon. baronet, a friend of the hon. and gallant director, for the production of some papers. These papers were produced, and printed at an expense of, he believed, not less than £5,000. It was more than probable, that at the time he made this motion, the hon. bart. never contemplated the production of such a mass of papers as had been presented. If explanation had been the object, it could have been given in ten pages as well as in the 1047 folios, of which the book actually consisted. The hon. member's muse was more prolific than that of the Arabian author of a thousand and one night's entertainments, with which all who heard him had been delighted at one period of their lives. His thousand and forty-seven folios were, however, not half so amusing, though, like those of the Arabian author, a great part of them was founded on fiction. (*Hear! and a laugh.*) This motion was made nearly two years ago; and after an unnatural period of gestation of eighteen months, the hon. member was delivered, not of a little mouse, but of a huge young mountain (*laughter*), so large and unwieldy that it required the obstetric aid of twenty-four doctors to bring it forth. (*Much laughter.*) Some of those doctors seemed so pleased with the animal on its appearance, that they actually stood sponsors to it, and were ready to adopt it as their own. It would, however, have been more creditable to the parties to have strangled the young monster in its birth, than to have allowed it to stalk abroad, reflecting equal ridicule and disgrace on the authors of its existence, whoever they were. (*Hear, hear!*) Of this mountain of a volume, the greater part had no more to do with an explanation of the discrepancy between the hon. Director's evidence and the “Summary,” than it had with what was now passing in the Burman empire. The first 750 pages were taken up with details of the conduct of refractory zemindars and a second edition of the proceedings at Hyderabad. They detailed the usurpation of power over the princes at whose court they resided, in the first instance, and then accounts of their rebellion against the authority by which they had been appointed. The discrepancy, of which this book affected to be the explanation, might have been owing to a defect of memory; but he could prove, from the very papers produced, that the statement was altogether without foundation. Having made these few

few remarks, he now stated that he would take an early occasion of presenting a regular notice, signed by nine proprietors, of a motion for taking into consideration the Oude Papers. He would wish, therefore, to know from the hon. director what day would be most convenient to him to have the subject brought forward, for he was anxious to observe the same delicacy to the hon. member now that he did on a former occasion. (No day was named by the hon. director to whom the question was put.)

The *Chairman* was again putting the question of adjournment, when

Mr. Hume expressed a wish that the court might be adjourned to an early day, in order to give him an opportunity of submitting a very important motion on the subject connected with the Indian army.

The *Chairman* thought that the next general court would be a good opportunity, unless it were thought proper to name an earlier day.

Mr. Hume would wish to name that day week, or that day fortnight, or any day before the 2d of February (the day of the meeting of Parliament).

The *Chairman* said he would prefer a general court to a special one, as in the former proprietors had the privilege of introducing any question of alleged grievance or complaint, from which they were prevented in special courts, unless the subject had been noticed for discussion in those courts. He was not willing, by taking matters to special courts, to debar proprietors from the privilege of complaint.

Mr. Hume said that the question on which he was anxious to submit a motion was of the utmost importance, and he was anxious that as little delay as possible should intervene before its discussion. The court were now about to send out three or four hundred young men, as officers for our Indian army, and his motion would be to shew that that course was not the best which could be adopted. The principle of his motion would be admitted on all hands, but some difference might exist as to the best mode of carrying it into effect. The real question was, whether they were to send out qualified or unqualified officers.

After some short conversation between *Mr. Hume*, the *Chairman*, and one or two directors, as to the comparative advantage and convenience of general courts over special, it was at length agreed, that the court should meet on the first day of February, for the discussion of the hon. gentleman's motion; and the question of adjournment to that day was put, when a requisition, signed by nine proprietors, was handed to the *Chairman*, calling on the directors to appoint a day for the dis-

ussion of a motion for taking into consideration the Oude Papers. The *Chairman* said he would now name Wednesday the 28th, as the day of meeting, with the understanding that both the motions might come on on that day. This was assented to by all sides, and at half past 6 o'clock the court adjourned to that day.

East-India House, Jan. 25, 1857.

A quarterly general Court of Proprietors of East-India Stock was this day held, pursuant to adjournment from the 18th inst., at the Company's house in Leadenhall-street.

LORD AMHERST.

The usual routine business having been disposed of—

The Hon. *L. Stanhope* said, "Previously to entering on the important discussion, which is notified for this day, I wish to know whether the Marquis of Hastings or Lord Wellesley has been nominated to the government of British India, or whether Lord Amherst has been recalled? I will not take up more than two or three minutes of the time of this court, in stating my reasons for asking this question. If the question be satisfactorily answered, it will prevent me from making a specific motion on the subject. My reason for asking this question is, because Lord Amherst has plunged this country into a most unnecessary and destructive war. And when we hear of the calamitous events which are daily occurring in India; when we hear that great numbers of our brother soldiers are perishing in the unwholesome swamps and under the incongenial climate into which they are led; and when we recollect the enormous expense to which this Company is put, in carrying on this disastrous war, amounting, I believe, to a million of rupees per month."

Sir J. Sewell rose to order. The hon. proprietor had stated that he meant to put a question, and now he was giving the court, in detail, the reasons which induced him to ask that question. In doing so, he was going into matters that were not before the court, and which could not be entertained, unless a specific motion were submitted to the court.

The Hon. *L. Stanhope*. "The learned gentleman is perfectly correct in his statement as to the course I mean to pursue. I wish to ask a question, and I am going into certain reasons on which that question is founded. In doing so, I will not occupy more than two or three minutes; and, if I am not allowed to go on in my own way, I must bring forward a specific motion on this subject. I was proceeding to say, that this Company was put to an immense

immense expense, a million of rupees a month, in the prosecution of the present war; an expense so great, that since I last addressed the court on this subject three months ago, a sum had been laid out sufficient to have built a second St. Paul's, and to have formed the projected quay on the banks of the Thames, and to have made this the finest city in the world. Another reason which induces me to ask this question is, my firm conviction, that if Lord Amherst be allowed to remain at the head of the government of India, we shall inevitably lose that country, as we formerly lost America. It is extraordinary to me that a man like Mr. Canning—a man of undoubted talents—a man who had conferred such extraordinary benefits on the country"—(Order, order!)

The *Chairman* thought that the hon. proprietor was certainly occupying the court unnecessarily by the course that he was at present pursuing, when no motion was before them.

Mr. *Hume* begged of his hon. and gallant friend to take the usual course, and to let the business of the day have precedence. No man felt more strongly than he (Mr. *Hume*) did, on the subject to which his hon. and gallant friend had alluded; but still he thought the better way would be not to introduce it at that period of the day.

The hon. *L. Stanhope*.—"It is usual, I believe, to ask questions in this court, and I mean to do nothing more than others have been in the habit of doing."

Mr. *R. Jackson* said, when questions were asked or notice of motion given, and those questions or notices were accompanied by arguments, it was manifestly irregular. Such a course might in fact shut out the order of the day, for the discussion of which they were expressly met. He had proposed to ask some question this day, of very great importance to the Company; but, if he prefaced those questions with an address, which could not regularly be answered, he felt that he should be acting contrary to the rules of order.

The hon. *L. Stanhope*.—"The learned gent., who complains of the course I am pursuing, is taking up a much greater portion of the time of this court, than I would have done if I had been allowed to proceed."

Mr. *R. Jackson*.—"The question must be direct. Put your question in a direct manner, and there can be no objection to it."

The hon. *L. Stanhope*.—"My question then is, whether the Marquess Wellesley or the Marquess of Hastings, has been placed at the head of the government of British India; or whether Lord Amherst is allowed to remain there? If he be, then we are likely, as we lost America, to

lose our possessions in that part of the world."
The *Chairman*.—"If I understand the question of the gallant officer, it is—Whether the Marquess of Hastings or the Marquess Wellesley has been proposed or appointed to the situation of Governor-General of India? Now, I have no hesitation in saying, that I have proposed neither one nor the other—and they have not been proposed to me. There is no question at present for the removal of Lord Amherst, and he is not removed."

OUDE PAPERS.

The *Chairman* was proceeding to state for what purpose the court had been convened—when

Mr. *Hume* rose and said "Perhaps before I address to the court what I have to offer on the motion which it is assembled to consider, I may be allowed, having in view the convenience of gentlemen who have come here to consider another subject, to ask whether you, sir, have not received a letter from Sir J. Doyle, on the subject to which I have alluded; and if so, I shall be glad to learn, whether there is any objection to dispose of that question in the first instance?"

The *Chairman* said, there was no objection to have the letter, which had been received from the worthy baronet yesterday, immediately read.

The clerk then read the letter, in which Sir John Doyle stated, that being confined by a severe cold and sore throat, it was not in his power to attend the court this day; he, therefore, requested the Court of Directors to postpone the motion till Wednesday se'night, or any other day, they might think fit.

In answer to this, the Court of Directors wrote, that it was not competent for them to adjourn, to a given day, the consideration of the subject on which the hon. Bart. had given notice. The directors would cause the letter of the hon. Bart. to be read in the general court tomorrow; when, perhaps, the most convenient course will be, for one of his friends to move for the postponement of the question to some specific day, or six die.

Mr. *Hume*.—"Now, sir, at the request of Sir John Doyle, I will move that the question be postponed till this day fortnight."

The *Chairman* had no hesitation in stating, that it would be more convenient, if the question were adjourned to the next quarterly general court. Parliament was about to meet, and that might afford occasion for calling a general court. At any rate, the ordinary matter at the next quarterly general court would probably occupy a very short time, and the remainder

remainder of the day might be devoted to Sir John Doyle's motion.

Mr. R. Jackson said, he felt the strongest disposition to accede to any proposition that came from the chair, particularly if the suggestion was founded on the plea of convenience. There could be but one wish and feeling on that point; but he must be permitted to say, that, unless the proprietors were desirous of postponing this important motion to an unreasonable time, they could not agree to so distant a day as the hon. chairman had suggested. Sir J. Doyle, on account of temporary indisposition, wished the motion to be postponed for a short time; but, if it were adjourned for seven or eight weeks, it would in fact be a denial of his request. If Wednesday fortnight were an inconvenient day, let another day be named; Thursday, or any other day, within a reasonable time. The Oude papers, did, in the opinion of the Marquess of Hastings' friends, contain injurious reflections upon his conduct and character. It was on this ground, that the hon. bart. determined to bring them forward to the view of the proprietors. The hon. bart. considered, that the character of the noble marquess was attacked, and he meant to defend that character. Was it consistent with fairness, that this defence should be deferred until its noble object had left the shores of his country for his hon. exile, at Malta? Yet such must be the effect of postponing it for seven or eight weeks. The alternative, therefore, was, either to deny the application of the hon. bart., or to consent to entertain his motion while the noble marquess continued in this country.

The *Chairman*.—"I beg leave to state, that I do not oppose the proposition; I merely threw out an idea. But I think the learned gentleman has taken the matter up, as if I wished to resist the bringing forward of the question on the day proposed. I harboured no such intention; although the learned gentleman's speech and argument went to that point. I repeat, that I only threw out a suggestion. Let it not, therefore, be understood that I meant to raise a single obstacle to prevent the motion being brought forward at the time proposed."

Sir J. Sewell understood the learned gentlemen to wish that the motion might not be postponed, because the character of the Marquess of Hastings had been attacked. The learned gentleman was, therefore, anxious that the discussion should not be put off until the noble marquess was some thousands of miles from this country. Now, to be sure, if it were quite clear, that the noble marquess was likely to be in England, when the motion was introduced, it would be advisable to bring it on as quickly as possible. But he understood, from pretty good authority,

that the noble marquess's stay in England had been protracted beyond what the exigencies of his government fairly allowed, much against his own inclination, and against the wishes of the government at home. A frigate had been prepared some time ago, to carry his Lordship to Malta; and a letter had been written by him, (Sir J. Sewell) under the idea that his lordship would have left this country six weeks ago. Now, that the Decar prize-money question was settled, his lordship would most probably sail in the course of a week from this time. The reasoning, therefore, of the learned gentleman, as to the absence of the Marquess of Hastings; and the necessity, on that account of postponing the subject to an early day, did not apply. With respect to the motion of the hon. bart., he saw it in a different light from that in which the learned gentleman viewed it; and when the hon. bart. recovered his voice, he would state his reasons for the opinion he had formed. It seemed to him, that it would be very hard on the noble marquess, the hon. bart., and their friends, if, on account of the hon. bart.'s sickness, this question were put off for any considerable time. But he must, at the same time, observe, that, when a court was called for the express purpose of entering on this question, if the hon. person who called it was not able to attend, from indisposition, it was a little unreasonable towards those who had come a long way, and at considerable personal inconvenience, to appoint a day for considering the subject, without at all attending to their accommodation. He agreed with the chairman, in what had been proposed. He thought the best day for discussing the motion would be, when the proprietors met together for despatch of business. That day would suit the convenience of the Court of Directors as well as of the Proprietors.

Mr. Hume said, the court might dispose of the matter as they pleased. He and his friends still had it in their power to call a meeting of the proprietors, in the course of ten days, if they thought it necessary. He therefore proposed to let the matter stand over till the business of the day was finished.

The *Chairman*.—"It is better to dispose of it now."

Mr. Hume.—"Then I propose a postponement of the motion to this day fortnight."

Mr. R. Jackson, in explanation, said, that so far from intimating, or insinuating, that the chairman wished to put off the question unnecessarily, he could not forget what had fallen from that gentleman, and the deputy chairman, at the last court; and he could bear testimony to the uniform kindness with which the marquess of Hastings had been treated by them.

Dr. Gilchrist wished the question to be brought forward as early as possible. They were all liable to death, and they knew not what might happen if this motion were put off to an indefinite period. His motto always had been, "Take time by the forelock," and he recommended it to be acted on in this case.

The Chairman.—"I have to move that the consideration of the Oude papers be adjournment to this day fortnight."

Carried in the affirmative.

EDUCATION OF CADETS.

The Chairman.—"I have now to acquaint the Court, that it is met by adjournment from the 18th instant, and has been made special, in consequence of a letter signed by two proprietors, and addressed to the Court of Directors, which will be read."

The clerk then read the following letter:—

"To the Honourable the Court of Directors of the East India Company.

London, Dec. 6, 1825.

"Sirs.—We, the undersigned Proprietors of East India Stock, duly qualified, request that the General Court of Proprietors, appointed to be held on the 21st instant, may be made further special, to take into consideration the following proposition, which it is our intention to submit to the Court:—

"That this Court, considering the great importance of a knowledge of the Hindoostanee language to European officers destined to act with and to command the native troops in India, recommend to the Court of Directors to take into their immediate consideration the propriety of making regulations, that no cadet shall henceforth be permitted to proceed to India unless he shall, upon examination, be found sufficiently grounded in the rudiments of the Hindoostanee language.

"We have the honour to remain, your obedient humble servants,

JOSEPH HUME,

JOHN BORTHWICK GILCHRIST,

Proprietors."

Mr. Hume then rose. In order, he said, to obtain a favourable hearing of this question, which was one of very great importance, and one, as the proprietors well knew, which had been introduced into that court several times during the two last years, he begged those whom he now addressed to understand, as he was sure they must, that this, the subject of education, to which he was anxious to call their attention, was one that could not in any way affect himself. It was a subject with respect to which he could not be supposed to be actuated by any view of personal convenience or interest; and if he did not consider it one of paramount importance to India—if he did not believe that it was

Asiatic Journ. Vol. XXI. No. 122.

so viewed by every proprietor present, he would not have taken up so much of their time and his own as he had formerly done, and would again, on this occasion, be obliged to do. The observations he should lay before the court were forced from him by a conviction of the necessity which existed for giving their cadets a proper education—a conviction that the interests of this great company, with which they were all engaged, were intimately connected with the success of the proposition he should submit to them. Having an extensive empire under their control, it was essential to its well-being that it should be governed by persons who were qualified to perform their duties in the best possible way. It was with this impression on his mind that he had twice before submitted a motion to this court on the subject of education; and he was most anxious that the court should not think that he alone had forced this question on public attention. The name of the Marquis Wellesley had this day been mentioned, and he wished that he could be permitted to read over the minute of that noble lord, of August, 1800, on the subject of the lamentable deficiency in a knowledge of the oriental languages, which prevailed amongst the civil servants of the company in India, and pointing out a remedy for the evil. That very able minute was answered by the Court of Directors in a very satisfactory manner. They approved of the proposition for granting extensive instruction to the Company's civil servants, but they differed from Lord Wellesley as to the mode in which that object should be carried into effect. Now he would contend, that if the arguments in favour of education were applicable, as they manifestly were, to the civil service, they were equally applicable to the military officers commanding the Company's troops in India. Indeed he was satisfied that it would appear on reflection to every thinking mind, that men having arms in their hands, and being ready to perform military execution, should be so trained (it was a matter of infinite importance) as not to be likely to be led away by misapprehension or mistake. Such fatal mistakes might take place, and had indeed taken place, where men were called on to act in a country in utter ignorance of the language of those whom they commanded. He was therefore ready to maintain, that if the education of civil servants were considered a matter of great national importance, the extension of proper instruction to their military officers was no less so. This subject was introduced into this court in 1805. He was much gratified by the resolution of the Court of Directors at that period, agreeing in the necessity of giving their servants the means of instruction; he re-

stre the speech of his learned friend (Mr. R. Jackson) on that occasion; and he observed with the utmost satisfaction the concurrence of every person present as to the immense importance of the measure then contemplated, and the benefit which must necessarily be derived from the continuance and extension of the system. Now, it was rather surprising, with that conviction so strong on the mind of every proprietor at that time in court, and, he would add, of every person whom he had conversed with on the subject, that the Company had suffered so many years to pass by, without placing their military officers, in this respect, in the same situation with their civil servants. Though great expense had been incurred for instruction, yet it was not of that description which he was most anxious to see afforded; and certainly the progress which the young men made in acquiring a knowledge of the oriental languages was not so great as could be wished. He hoped, however, that the present session of Parliament would not pass over without a remedy being applied to that defect, which ought not to be suffered to exist for a day longer. They would then have the ablest and most intelligent men to perform the duties allotted to them—men who would be free from that ignorance of the native language which at present tarnished the character of many otherwise eminent persons, who held distinguished situations in the Company's service. If a defect of this kind in the civil service were carefully guarded against, let the court consider how much more necessary it was to prevent its existence in the military department. If they looked at the subject with the eyes of reasoning men, they would not suffer the existence of such an evil for another day. No man could rise up and say, that mistakes had not occurred in consequence of ignorance, on the part of officers, of the language through the medium of which their duties were to be performed. He recollected a very strong argument (at least it appeared to be so to the gentlemen behind the bar) which was urged against him when he first brought forward this subject. The argument was: "You have not the means in this country to afford that degree of instruction in the native languages which you yourself propose." It was very true that, at that period, the opportunities of obtaining this species of instruction were very few, compared with what they were at present; and they had to thank the zeal and perseverance of his hon. friend (Dr. Gilchrist) who, with himself, had signed the requisition which brought the proprietors together this day, for the facilities which were now afforded. (*Hear!*) The exertions of that gentleman in this country had produced the most beneficial effects; and if he were not present,

he would state, in other and in warmer language, the high sense which he entertained of the usefulness of Dr. Gilchrist's efforts. His conduct, he thought, was above all praise; and, when the subject was inquired into, it would be found that he had conferred great and lasting benefit on the Indian service. (*Hear!*) The difficulty, however, which impeded his (Mr. Hume's) course, seven years ago, no longer existed. There was at that time no establishment for instruction in the native language, except that formed by Dr. Gilchrist himself, and attended to by him. He had now, however, to state, that there were, at the present moment, nearly thirty-seven establishments, including Dr. Gilchrist's own; but, independent of those, there were thirty establishments, where young men might receive instruction in the Hindoostanee language, at very little expense. Many gentlemen in that court might not, perhaps, have considered what was the number of individuals who commanded the Company's numerous armies in India, and who were consequently placed in a situation of great importance and responsibility. Perhaps he might say, that the Company had 150,000 men in arms, who were commanded by 5,000 European officers. He could not make up the exact number at this moment; but, in 1819, when he mentioned this subject to the court, there were 3,467 European military officers in India; and, at present, he thought he under-rated the number if he said, that between 5 and 6,000 individuals composed the officers of the Indian army. It ought to be considered, that of this number a very large proportion were not confined to mere military duty; and he would prove, before he sat down, that scarcely any part of an officer's duty could be performed satisfactorily and properly, without a knowledge of the Hindoostanee language. If any gentleman were not convinced of the truth of his statement, he would call on him to peruse a pamphlet on this subject, published since he had given notice of this motion. It was written by a military officer who had been seventeen years in India, and who pointed out, in the clearest manner, the necessity of giving to military men a knowledge of the native language, to enable them to perform their functions properly. The detail contained in that pamphlet was quite conclusive on this subject; and if the directors, who were the governors and rulers of India, had not read that publication, he would strongly recommend it to their notice. It contained many very valuable remarks with respect to the inconvenience suffered by king's officers in India, in consequence of their ignorance of the language. He had been at the trouble of extracting from that publication some observations which

he conceived to be perfectly correct, and which would give the court an idea of the number of important duties, which king's officers sent out to India, generally ignorant of the language, had to perform. If gentlemen were not in part instructed before they proceeded to India, his decided conviction was, that very few indeed would have sufficient perseverance and courage to master the language after they arrived in that country. He knew there were instances to the contrary; but when he looked to those who were oriental scholars in India, he found that nine out of ten of them had made some progress in the language before they left this country. They had then a voyage of six months—and to young men, anxious to make their way in life, those six months afforded an opportunity for acquiring a farther efficiency in that language, which, if they had entirely neglected in this country, they would perhaps never attain. As an example of the many important duties which European officers had to perform, he would state, that in the year 1823 there were in the engineers, the cavalry, the artillery, and thirty regiments of native infantry, at the presidency of Bengal, 1,795 European officers; and here he might observe, that the same rule prevailed, with respect to European officers, in the other presidencies, that obtained here. Of these 1,795 officers, 1,664 were present; and of that number the court would be surprised to hear, there were no fewer than 535 who held staff appointments: that was to say, they were called on to perform duties out of the ordinary line of military business. It was very well known, that military officers were often selected to take charge of the commissariat; that they were called on to make surveys, to attend to the arsenal, and that they were occasionally employed on diplomatic missions: and, with all due deference to the superior education of the civilians, he would say, that, on a fair view of the conduct of those military men, when engaged in matters of a diplomatic nature, it would be found to bear a comparison with the proceedings of their more favoured brethren. They were compelled to climb the ladder of promotion with such greater toil than the civilians. They did not proceed to India with those high and, he would say, mischievous feelings of dignity, which were instilled into the Company's civil servants. They were not paid so well, and they found it necessary to feel their way steadily and progressively. When it was seen that one third of the whole of their military officers in India were employed on staff appointments, with what satisfaction could they, sitting in that court as reasonable men, declare that they performed their duty towards this great empire, or to those

gentlemen, if they sent them out without that knowledge which was necessary for a due discharge of their important functions? He asked of any gentleman, whether a merchant, engaged in commerce with Spain or Holland, would employ an individual who did not understand a word of French or Dutch, to bargain with the natives? Could a man perform the various duties of an agent, without a knowledge of the language of those with whom he was to come in contact? As a matter of course, the merchant would say, "I want a gentleman who understands Spanish or Dutch to perform those duties. I cannot entrust my affairs to a man who knows nothing of the language." If a merchant were to act otherwise—if he did not send a competent person to transact his business—he (Mr. Hume) would look upon him as a man who did not understand what he owed to his own interest. The course he had described was adopted by the highest and the lowest throughout the mercantile world. How then, he asked, could those who were proprietors of East-India stock—how could the Court of Directors reconcile it to their duty, when they pursued a course towards their servants, which they would not follow when their own private interests were concerned? All he asked of them was, to assimilate their conduct, as public men, to what they would do in their own private establishments. If they had nearly one-third of their military officers, acting in staff situations, taken out of the ordinary course of military duty, ought they not to receive that instruction which would enable them to fill those situations with propriety? Here he regretted to say, that accounts from India contained lamentable complaints of certain appointments which had been recently made there. Persons had been, it was said, appointed to the staff, who were utterly unworthy of such a situation. He hoped statements would be sent home to this country, shewing how an extensive patronage had been abused, and the public interest sacrificed to private ends. He had latterly seen more statements of this kind from India than he ever before recollected; and he was sure, if there were any military man in that court, or any other person who had recently received letters from India, that he would bear him (Mr. Hume) out in this statement. He regretted this deeply, because most of the mischief, occasioned by the want of regular supplies in different quarters, arose from the ignorance of individuals employed in departments for which their ignorance, chiefly of the language, rendered them unfit. Those who had been in India must know, how helpless a being an European was, if ignorant of the vernacular tongue. Lord Minto, in one

of his despatches in the year 1808, had advertised most strongly to the evils which were produced by ignorance of the native language. His Lordship stated, that ignorance of the language on the part of those who were employed by the Company in India, creates unavoidably, an almost unlimited dependence on the natives.—How much extortion, and how much cruelty to the native subject (demanded his Lordship) are the consequences! And how much ruin and distress to the unfortunate European, whose ignorance has handed him over to the power of men, whom he ought to direct, but who are soon converted from the servant into the master! How much loss and misery, how much ruin and disgrace, have resulted, and are daily resulting from this cause, a very short acquaintance with India will shew. These remarks were applied publicly to the civil service, and he believed, with great justice; but certainly they were equally applicable, in many instances, to both the military and civil services. If, at the period when the Company adopted the plan of educating their civil servants, they had adopted the same plan with reference to the military service, the effects would have been this day most beneficial. From the year 1814 to the year 1820, 2,574 cadets had been sent out to India; and from the latter period to the year 1828-4, the number of cadets sent out was 4,728, exclusive of medical servants—making together an aggregate of upwards of 7,000 military officers, who had been sent to the Indian army since the date of their last charter. Now, if attention had been paid to the education of the cadets at that time, there was not an officer amongst this large number that would not have been qualified for the correct performance of his duties, by his knowledge of the native language. This was a very serious consideration. They could not, however, apply a remedy to the past, but it certainly was their duty to look to the future; and he now called on the court, to take care that hereafter no officers were sent out, unless they were in a capacity to do their duty properly. He was aware it would be said, that the duties of a civilian were different from those of a military man; he admitted this to be the fact in one point of view, but not in another. With respect to his intercourse with the natives, a knowledge of the language commonly spoken was more necessary for the European officer than for the civilian. The civilians had natives of character and talents to attend them; and to correct them if they were wrong in the interpretation of any document, or of any conversation addressed to them; but the military man had no such assistance in the various duties which he was called on to perform.

He must himself be master of the language, or he could not act efficiently. (Hear!) In 1814, they owed to the Marquess of Hastings, amongst the many other benefits which he had conferred on the country, an improvement of the then existing system. That noble Lord had appointed interpreters to the native regiments; but this very appointment was a reflection on the Company's Goodness; God could it be believed, that at so late a period it was found necessary to nominate interpreters between the native troops and their European officers? Was it not a reproach, that interpreters were at that time of day obliged to be appointed to assist the Company's military officers—men, who were destined to spend their whole lives in the service? What a situation, then, were European officers placed in! In time of danger and need, was that time when the value of a good and expert officer was best known, is it seemed, by the appointment of interpreters, to be acknowledged, that their military men could not understand any information, though it might be one of the greatest consequence, unless through the medium of a native? That very appointment, so honourable to the Marquess of Hastings, was a disgrace to the Indian army, and a reflection on the Company. (Hear!) If the interpreter could be divided into ten parts, or possessed of a tenth part of a man's abilities, and in time of action, when a moment was precious, how could he interpret at different points where he might be wanted? But, with the same inconsistency which marked many of their proceedings, though the Company had appointed interpreters to the native regiments, they had withheld them from the European troops! Thus, a body of 1,000 Englishmen were landed on the shores of India who had no mode of acquiring a word of the language. All were ignorant of it, even the adjutant and colonel—so that, if disputes arose between the soldiers and the natives, if oppressions were committed, if fraud and extortion were practised, those who ought to see justice done, could not arrive at the real merits of any complaint made to them. He had heard the conduct of Spain arraigned, because the mother-country had behaved towards South America in a manner inconsistent with good government. The reproach was justly deserved; but he held the conduct of the East-India Company to be equally blameable: because he was confident that many of the most disgraceful actions—the destruction of the lives of thousands of his countrymen—and the loss of much treasure—had been occasioned by the ignorance of the native language which prevailed amongst their European

European officers? He himself, while in India, had been witness of a most lamentable transaction wholly arising from this shameful ignorance of the language of the natives. In consequence of that ignorance, the 1st Battalion of the 18th regiment of Bengal Infantry was, in the year 1804, nearly destroyed. He (Mr House) marched in the morning with his regiment, and 24 hours had not elapsed, when one-half of that regiment was cut to pieces, and every European officer destroyed. He was the interpreter at the court-martial held to investigate this melancholy affair; and it was a lamentable fact that it was proved in the course of the inquiry, that none of the officers of the detachment understood the language. The European officer in command being ignorant of the Hindoostanee, could not avail himself of the advice and information which were given by the natives—a knowledge of which would have rescued the troops from destruction. He knew this to be the fact from the evidence given in open court. It appeared, that some officers who had been nearly fifty years in India, were not acquainted with the native tongue; and, it was stated by a subahdar, who had been 30 years in the service, that intimation was given that the enemy's horse would break through such and such places if precautions were not taken; but ignorance of the language rendered those intimations useless; and ruin was the consequence. Now, when they knew that one instance of this kind had taken place, might they not fairly suppose that many others had occurred of which they had heard nothing? He hoped, that common humanity, as well as a just feeling for the safety and security of their British and native subjects in India, would not suffer this stain to continue any longer. It might, perhaps, be asserted that, though a knowledge of the native language might be necessary for civilians, it was not necessary for military officers. But the very reverse of this was the fact; and to shew that it was, he had put down a few of the points of duty to which a military officer had to attend. The cadet, when he landed in India, was suffered, at the utmost, to remain but one month in Calcutta; this was the consequence of the present dearth of military officers in that country. He was then sent off to join some body of troops in the interior, and was entrusted perhaps with the command of a company, although he might then be only 16 or 17 years of age. He was very sorry that those young men were sent out so raw and inexperienced; and it really was a wonder that they reared so many good and meritorious officers from so weak a stock. He believed there was not a European officer in India, at this moment, that had not the charge of a company. So defective were they in point

of numbers, that fastatices had been known where a young ensign or lieutenant was entrusted with the care of two or three companies. When the young man landed he could not, as in the king's service, have a European attendant; he must have a native servant, with whom, however, it was impossible he could communicate, to assist him in every thing. He might indeed learn to say—"Give me water—give me bread;" but if the native servant wished to inform him of matters of moment, he was unable to understand a word. But it would be asked, Why not call in the interpreter? It should be observed, that there was but one interpreter to each regiment consisting of ten companies—so that, if his services were always to be in requisition, the time of the officers must be consumed in running from one place to another in search of him! Now, what were the duties which an officer commanding a company, had to perform? The native subalterns had to report to him every occurrence; yet he was as incapable of understanding the report as the statue in that niche. The European officer ought to be superior to the native; he ought to be acquainted with all the native knew, in addition to his own stock of European knowledge: that was the true way to maintain the superiority of the British in India; but as things were now conducted, the European officer could not receive a report from his native subaltern. This state of things never was intended, and military business could not go on, unless it were rectified. The European officer should be able to attend to all complaints; and when he appeared on parade, he ought himself to be able to inquire into all the details connected with the troops he commanded, and to ascertain that such and such divisions were all in a correct state. It was only by adopting this system, that they could hope to have efficiency in their army. In what situation was a boy or a young man placed, who was untutored in the language of those whom he commanded? Nay, how was an old man situated, under similar circumstances?—for he had known officers who were thirty years in the army, and who could not understand the language beyond what was necessary to minister to their own sensual appetites. Such a man could not conduct his household; on all matters of business he was useless, and his ignorance of the language rendered him inefficient on parade. In no respect could he perform his duties properly; but, as they proceeded, it would be found that the European officer had duties of a much higher character than those he had mentioned, to attend to. He had to procure supplies and accommodations for the native troops, who were constantly in motion. The policy pursued in India was to

to spare the European troops as much as possible, and not to employ them except in cases of emergency. It was very rare to find all the companies of a native regiment in one place; they were out in two, three, or four companies, in different directions—they were employed to assist the amils and chiefs in gathering in the revenue. When commanding parties of troops thus circumstanced, the European officer must often act as a negotiator, and, therefore ought to be more intelligent than the ordinary run of officers. But, allowing him to be so, as an Englishman, when compared with the native officers, still his superiority was rendered useless, because, from his ignorance of the language, he was obliged to act, as it were, blindfolded. There was another point, of great importance, to which he would draw the attention of the court. The Company, he believed, were very anxious to prevent the plunder of the natives by camp followers; and to protect the inhabitants as much as possible; but how could so desirable an object be attained, when the European officers could not understand any complaint made to them? It was utterly impossible that justice could be administered, unless the commanding officer understood the language. In marching, supplies could not be got readily, nor at a fair rate, if the commanding officer knows nothing of the native tongue; because, in that case, he must trust to some person in the bazaar or market, or to some venal servant; and in that case abuses would and must prevail. Under circumstances of that kind, where advantage could be taken in making a bargain, he found the conduct of people in the east and in the west pretty nearly alike. They seemed as fond of plunder in England as in India. (*A laugh.*) Nothing but a good look-out could prevent fraud. But he would ask, whether it was not inviting the commission of abuses, when men, ignorant of the language commonly spoken in India, were employed to negotiate for supplies with the natives? The Court of Directors perhaps thought they had done enough, when, in their letter, signed by Joseph Dart their secretary, they declared that "the inhabitants of British India had the strongest claim to their protection! That they felt the deepest interest in the welfare and prosperity of that vast population, and would make every effort to protect and support it!" Good God! was it protection to let loose a band of armed men amongst them, ignorant of their language, and therefore incapable of doing them justice? Was this their paternal care? He called on the proprietors to support him in altering this system. He called on them to induce the Court of Directors to reconsider their resolution, and to introduce those checks which were necessary in the Indian army.

Officers and soldiers in India, as well as officers and soldiers elsewhere, were but men, and required checks by which their passions and feelings might be controlled. As matters now stood, he should contend, that so far from this being a paternal government, it was the very contrary, in letting loose on the natives bodies of armed men, most of whom were wholly ignorant of the current language of India; and, in his opinion, it was a severe reflection on the government, that reason was given for bringing this question forward at the present day. When the government were placed before the public or Parliament, they were described as every thing good and estimable; but, when gentlemen looked at the circumstances which he had stated, they must at once see the defective system. Suppose desertion from our army took place, or that theft was committed, or that personal violence was offered to the natives by the troops—how was justice to be done? how was the abuse to be remedied? He would be answered, by assembling a court-martial. Such was the fact; because, for very few crimes, short of murder, were the native troops suffered to be taken out of the ranks and subjected to judicial proceedings. The European officers wished to keep their men under their own exclusive jurisdiction, and they were very unwilling to bring them before a civil court. But, to go farther, a European officer was often placed in a situation where access could not be had to him by the natives—where he could only be approached by means of an address or letter. Now, in such a case as that, unless he possessed some knowledge of the language, such a document was useless. He might indeed command the interpreter, or some of his servants, to represent the matter to him; they, however, might have an interest in giving a false version of the case. Again, in courts of justice, and in courts-martial, the chief evidence was constantly that of natives. There was not a court-martial over which an European officer did not always preside, and the evidence there adduced was almost uniformly native evidence. Surely, he who sat in judgment should understand the language of those whose evidence must lead to acquittal or condemnation; and his hon. friend, Dr. Gilchrist, would tell them, that the difference in the pronunciation of a single letter in Hindoostanee—which letter might, perhaps, have four different sounds—would entirely pervert the real meaning of an expression. So nice was the pronunciation of Hindoostanee, that it required a man to be properly educated to understand it thoroughly. The mischief that took place in India must be traced to them. Let them not "lay the flattering unction to their

their sons," and say, "We did not occasion this evil;" for they alone did occasion it. If there were any officers in court, they must know the important advantage to be derived from a knowledge of Hindoostanee, on the line of march, in proceeding to action, and on the arrival of spies who communicated intelligence of the motions of an enemy. Now, suppose the officer of the advanced guard of a detachment to be a young man not well versed in the vernacular tongue—how could he perform the duties which necessarily fell to his lot? How was he to provide guides, supplies, and the various necessary accommodations? He recollected a part of the regiment he was attached to going out, with five hundred irregular horse, in pursuit of some plunderers. That force was put under the command of an individual, who had been scarcely six months with the regiment: he knew little of the language; but there must be an European at the head of the detachment, and a better man could not, at the moment, be sent. In circumstances of that description, a native officer would do the duty much better than an inexperienced European officer, without a knowledge of the language. He would here declare, the more firmly to support his argument, that he had been informed, by an individual of undoubted veracity, that the present Burmese war had arisen entirely out of a misunderstanding originating from a want of a competent knowledge of the Hindoostanee language. The governor of Arracan had some differences respecting the small island of Shapoorce, and had sent a messenger to Mr. Warner, who was the Company's civil resident in the governor's district, requesting an interview with him, in order that mutual explanations might take place and a friendly arrangement be made; but Mr. Warner, not understanding the purport of the message, would not condescend to meet the governor, but referred him three several times to a darogha of police (an inferior officer, who received twenty-five rupees a month), and the consequence was that hostilities were resorted to about that paltry island, and the government had been involved in a lamentable and expensive war with the Burmese empire. (*Hear, hear!*) In short, there was not an officer in any of the districts, or who went out with the zemindars to gather in the rents, who could get through his business with any degree of credit, unless he understood the language. He had marked with an anxious eye all that had taken place during the present war;—and it was manifest to him, that, without a proper establishment, either of camels, elephants, or bullocks, to convey the necessary supplies, &c., their army must be useless. Here, again, the necessity of an acquaintance

with the language, was evident. The natives alone had the care of those animals; and unless the officers understood their language, it was impossible to conduct that department properly. An instance had been mentioned to him, where very unpleasant consequences occurred, on the line of march, in consequence of this ignorance of the native language: the individual to whom it related commanded a flanking party, whose duty it was to protect the baggage—most of those who heard him, he believed, knew that the baggage of an Indian army was rather bulky. It sometimes happened, that, after the troops were put in motion, the commanding officer thought proper to change the route, and the baggage was ordered to proceed in a different direction. The route, in this instance, was changed, and orders were sent, by a native officer, for the baggage to proceed by another road: the officer in command of the flanking party, did not understand the native; in consequence, a large portion of the baggage continued the route first pointed out, and was taken. They had, he knew, European sergeants in the army, who by practice with the natives had acquired considerable intelligence in the Hindoostanee; that intelligence ought not to be confined to them—it was his wish that the commissioned officers should also acquire the same sort of information. Was it not fit, then, that they should consider of a remedy for the evil he had described? Then, the only objection to his proposition, which he knew of, or could think of, was, that, if they compelled young men to remain, during two or three months in London, for the purpose of instruction, their morals would be corrupted, and a great additional expense would be entailed on their friends. It would be argued, that they could not get their appointment without a certain expense—and that it would be unfair to render that expense greater. Good God! was this a fair way of considering the question? Was it so difficult to procure military servants? If the Company could not get men to go out to India on the terms dictated by them—why, then, of course, they must accept of the services of individuals, under such stipulations as those individuals might think proper to make. But he would undertake to say, that, so far from being reduced to this dilemma, they might have 500 candidates for the situation of every cadet who went out to India. Was it not, then, the duty of the Company to say, when applied to, "We will give you the appointment, but we expect you to be qualified for the fulfilment of all the duties connected with it." What had the directors themselves done with respect to the civil college? Why, after having been *badgered* on the subject for six or seven years, they were now about

to leave it to the option of the young men, intended for the civil service, whether they would or would not go to Haileybury College. Clever young men were to be permitted to pursue their studies, wherever their friends or parents pleased.—(Hear!) That was the way to bring the efficiency of the college to the test. If this system were adopted, they would either have an empty college or a good one. (Hear!) Either way the Company must benefit: if the college were empty, the expense of keeping it up would be saved—if it were full, it must be hailed as the most complete establishment for oriental instruction. (Hear!) For his own part, he thought they were ruining young men by sending them to that college; they were giving them ideas of the most preposterous nature—ideas of such loftiness as did not comport with the duties they had to perform. They were sent out at a very early age; and it could not be expected that men of twenty-one should have all the knowledge and wisdom of those who were thirty or thirty-five years of age. Yet these young men were appointed to preside in the four zillahs—they were placed on the bench to administer justice to the natives: this was a mockery; talent, intelligence, and experience, were necessary in such important situations. He cared not from what quarter those qualities were derived; if they were once satisfied that the individual brought before them had talent, had intelligence, and some degree of experience in life, he was the man who ought to be preferred. But much stress had been laid on the danger of keeping the young men for a few months in London; there was, however, no soundness in the argument. Was it reasonable for the court to expect, that they would be exposed to no temptation in India? Was there an individual within the bar, who, speaking of the corruption to which the young men were exposed, would not say that one of them, going out to India with money in his pocket, and with no person to guide him, was not more likely to fall into temptation there than here—he having had no previous experience of the world? He maintained, they were doing an injustice to the young men in not allowing them to remain here, for a short time, under the eye of their parents and friends, if possible, instead of letting them loose in Calcutta—many of them just taken from school, without the slightest knowledge of the world, and unprovided with a friend who could advise them. He had already stated the number of cadets that had been sent out from 1814 to 1820. He had prepared that statement from Parliamentary returns, and papers which were laid on the table of the court. Of 2,574 cadets who had been sent out to India during that period, a very small number,

comparatively, had been educated at Addiscombe. He regretted to say, that the young men educated at Addiscombe (and in many points well educated) were sent away too early. They entered at fourteen, and at sixteen they were taken from what he might call the nursery, and sent abroad, before they had had an opportunity of establishing those principles and feelings which were necessary for their guidance in life: because, let gentlemen speak as they would, without a little worldly wisdom, every man was likely to be imposed upon and led astray. (Hear!) The cadets entered, as he already had observed, at fourteen years of age, and unless they proceeded to their destination three months after they had reached the age of sixteen, they would lose their appointment. This part of the system ought to be revised; no young man should proceed to India before he attained his eighteenth year: thus an opportunity would be given to him for the attainment of that knowledge which was necessary for his future successful progress in life. Taking it for granted that, out of the number of cadets sent to India between 1814 and 1820, 236 were educated at Haileybury, and consequently had received instruction in the Hindoostanee tongue; still he had reason to believe, that scarcely one student from that establishment really understood the language. Instead of adopting, as had been recommended in 1817 and 1820, the easy and intelligent system of Dr. Gilchrist, they had introduced and patronized another, of which nothing could be made—which could scarcely be understood; so that, with respect to Hindoostanee, both Haileybury and Addiscombe were next to lost. Then, let the court look at the balance between those who proceeded to India without any knowledge whatever of Hindoostanee, and those who were but superficially acquainted with it. Let them consider it well, and say, whether it was not too much that such an overwhelming number should be suffered to go out, utterly unfit for the performance of their important duties. Of 434 cadets sent out in 1821, 55 were educated at Addiscombe; of 362, sent out in 1822, 52 were educated at that seminary; of 374, sent out in 1823, 60 were educated there; and of 420, sent out in 1824, 79 were educated at that school. So that of the whole number of 1,590 cadets sent out to India, from 1820 to 1824 inclusive, only 246 went to the seminary at Addiscombe. Was it not then a shame, when they had such a fact as this staring them in the face, and when they had the power in their own hands, that they did not apply a remedy to this glaring defect? He did not want the Court of Directors to do any thing extraordinary. He had introduced one line in his

his

his intended motion, for the purpose of reminding the directors of their former resolution, and of inducing them to act up to it. He well recollected that resolution of the Court of Directors of the 4th of November 1818, and he was happy to have their own performance to quote on this occasion. In the course of the debate on that resolution, no men were more highly lauded than the Court of Directors; and he regretted that Mr. Pattison, to whom the credit of the whole arrangement was due, was not now present. He would now read to the proprietors the resolution agreed upon by the Court of Directors, on the 4th of November 1818, and afterwards unanimously approved of by this court, which was as follows:—"Resolved, that this court being of opinion that it is desirable that all persons appointed to the Company's service in India, but more particularly those appointed to the medical service of the Company, should attain a knowledge of Hindoostanee previous to their departure for India; and, with a view of affording encouragement to Dr. J. B. Gilchrist (of whose merits and qualifications, as a teacher of that language, the court entertains the highest opinion,) to persevere in the establishment of lectures of the nature detailed by him in his letter of the 5th of August last, he be allowed £200 per annum, for the term of three years; at the expiration of which period an opinion may be formed how far the advantages stated by Dr. Gilchrist are likely to be realised. That all persons appointed to the Company's medical service be required to attend one course of the said lectures; for admission to which they shall not pay more than three guineas; and that, previous to their order for embarkation being given, they shall produce a certificate from Dr. Gilchrist, of their having attended." This, therefore (continued Mr. Hume) was not a proposition of his. All he wanted was, that the proprietors should compel the Court of Directors to act consistently with their own recorded feelings and opinions. Haileybury College, up to the year 1821, had cost the Company £247,000; £92,000 of that sum was for the erection of the edifice. This gross sum was independent of the amount paid by the civilians towards their education. It was not the matter of expense of which he complained; if the object were fairly accomplished, the benefit was of tenfold value to India. They were bound to protect the natives, and the surest mode of securing that protection was, by imparting a proper education to those who were destined to rule over them. To economize, when such an object was in view, would be to pursue a course of real profusion and waste; but, if they had their civil servants educated at so expensive a rate,—if Haileybury College, up

to the year 1821, had cost the Company £247,000, exclusive of the sum laid out on the establishment in India,—surely they could not justly refuse looking a little to the education of their cadets. Since he had last submitted a motion to the Court on this subject he had inquired into the expense incurred at Madras and Calcutta, on account of education, and he found that the whole expense for the education of their civil servants, in England and in India, amounted to £53,800 a-year. Now, he did not ask £500 a-year to educate every cadet going out to India. He would enter into a contract—he would be bound by it: that for £500 a-year he would impart a knowledge of the Hindoostanee to every cadet annually sent abroad. He did not mean to say, that he would personally instruct them—but his hon. friend, Dr. Gilchrist, would undertake that duty. (*A laugh.*) He and his assistants would easily manage it. Now, was he extravagant in his demand, when he asked the court to add the trifling sum of £500 to the £53,000 per annum, which was at present paid? The small sum which he mentioned would be sufficient to educate, in Hindoostanee, every cadet who went out to India. Five hundred cadets, for £500!! Surely if hon. proprietors wished to have the thing cheap they could not deny that this was cheap enough in all conscience. (*Hear!*) Dr. Gilchrist had educated 1,500 individuals, more or less perfectly, in the Hindoostanee language, since he had established his lectures in London, under the Company's sanction, at an expense not exceeding £350 a-year; £200 for his exertions, and £150 for the building in which he taught and lectured. Now, after what he had stated, would it be believed that the Court of Directors had stopped this pittance of £350, which they had formerly granted? If he had charged £1,500 a-year, no doubt the Directors would have let that stipend remain, because it would have been a good thing, and some person would have been presented with it; whether the Doctor would or would not have been that person, he, of course, did not know. He conceived that the Doctor sold his exertions too cheaply; he often argued with him on this point, because he always wished to see a man paid fairly for his labours; because, in most instances, where this was not the case, the individual was apt to make a subsequent claim, or else he had some point to carry at a future period, which induced him, at the moment, to under-rate the worth of his labour. The Court of Directors, by their resolution of the 8th November 1818, granted a salary of £200 per annum, for three years, to Dr. Gilchrist; and this court, by its resolution of the 26th September 1821, approved of a second resolution of the Court of Directors of the 29th August 1821,

by which the salary of £200 was continued for three years longer, and a further sum of £150 per annum was granted to provide a suitable lecture-room: those grants, however, had been discontinued. Now he should ask, whether the Court of Directors had not come to a resolution, on the 7th of March 1823, to the effect, that "the cadets in India should endeavour, as much as possible, by the study of the Hindoostanee language, to fit themselves for the performance of their future duties in the Company's service; and, in failure of their having made a certain progress, that that they should be liable to be sent back to England?" Here the directors declared, that if the young men were inefficient, they should be liable to be sent back to this country. Now the only difference between him and the directors was, that he (Mr. Hume) would not allow the cadets to be sent out until they had attained some degree of proficiency in the language. Why should they run the risk and expense of sending a cadet out, when, perhaps, in consequence of his ignorance, he would be sent home again, and thus his service be lost to the Company? This could not occur if the young man received a certain degree of instruction before he left this country. Why should they not act on the resolution of this court in 1821, which encouraged the acquirement of the language before the cadet went to India? It was a proposition to which he thought no reasonable man could fairly object. He had illustrated the necessity of adopting this plan, by adverting to the fact, that the government of India, seeing the lamentable state of ignorance which prevailed amongst the European officers there, had been obliged to appoint an interpreter to every regiment. Was it not monstrous to behold interpreters attached to native corps, for the purpose of assisting European officers who were destined to spend their whole lives with those troops? A more absurd proposition was never entertained or agreed to; such a course operated as a premium not to make an effort for the attainment of the language—but such was the system adopted by their worthy masters or authorities in India; and the question was, "Is it not proper to get rid of it immediately?" It was impossible that a man could fill, efficiently, the situation of a soldier, much less of a staff officer in India, without a knowledge of the Hindoostanee. He felt that he had trespassed too long on the time of the court; but, if he had made himself intelligible to those whom he wished to impress with his own feelings on this subject, his object was attained, and he should rejoice that he had not laboured in vain. It was the duty of the Company to give the best possible education to their servants. He considered not the expense: what he

wanted was, that the duties should be properly performed. He blamed not the young men, but their friends and parents, who forced them out in such a state as prevented them from doing credit to themselves, or attending properly to the duties which they owed to the Company. He had now shewn, that one third of the European officers in India held staff situations, of some sort or other, and that they must in consequence have daily correspondence and communion with the natives: now, if they were unable to keep up that communion, it was clear that they were unfit for those situations. He had traced the duties that were to be fulfilled on the line of march, and in the face of the enemy; and he had proved that they could not be performed, unless the individuals entrusted with their execution were acquainted with the native tongue: he had demonstrated, that where officers were ignorant of the language, it was impossible they could do justice to the natives. He had called their attention to Haileybury College, and shewn that the court was at an expense of near £250,000, exclusive of the expenditure in India, for one branch of the service. If this were so, why should they withhold their fostering care from the other branch? All that he wanted to be done would be effected for £500 a year; nay, without any expense at all; for the directors had only to pass a resolution, declaring that no cadet shall be suffered to go out to India, without the requisite knowledge of the language, and that mandate must be obeyed. He had shewn that the resolution of the Court of Directors of 1805, the principle of which was sanctioned and approved in express language by the resolution of 1818, pointed out the necessity of acquiring knowledge of this description; and he had likewise shewn, that by a subsequent resolution, the necessity of the cadets being instructed in the Hindoostanee language was fully recognized by the directors, who had resolved, that such young men as did not qualify themselves in India for the performance of their duties, should be liable to be sent home. Here his plan differed in this respect from that of the directors, that, instead of having the cadets qualified in India, he would not allow them to proceed to that country, unless they possessed the necessary qualifications. If any individual thought him unreasonable in his proposition, he could only say, that he could not consider that individual as a very reasonable man. (*Hear!*) He had no personal interest in this question; but he wished to see the country where he had spent many years very happily, governed in the best manner and by the ablest persons. While that great empire was under the British yoke, it ought to be allowed all the advantages which could be derived

derived from liberal British education ! He looked upon this to be a most important subject, and he really thought there could no longer be any opposition to the motion which he would introduce to the court, which only called on the directors to take the subject into their immediate consideration. The hon. proprietor then read the following resolution:—"Resolved, That this court, considering the great importance of a knowledge of the Hindoostanee language to European officers destined to act with and to command the native troops in India, recommend to the Court of Directors (consistently with their resolution of the 4th of November 1818) to take into their immediate consideration the propriety of making regulations, that no cadet shall henceforth be permitted to proceed to India unless he shall, upon examination, be found sufficiently grounded in the rudiments of the Hindoostanee language." This (continued Mr. Hume) left the degree and extent of knowledge to be acquired in the native language, and the time to be devoted to that object, entirely to the discretion of the Court of Directors. He should now sit down, despairing, if the court refused to support this proposition, of ever being able to submit a motion that would meet the sanction of the proprietors.

Dr. Gilchrist said, that in seconding the motion of his hon. friend, he would be very brief, because he intended to reserve himself for the purpose of answering every objection that might be made to this very reasonable proposition. With respect to one observation which his hon. friend had made, as to the nicety of pronunciation which was required in speaking the Hindoostanee language, he begged leave to make a single remark. He knew that there were behind the bar some Oriental scholars, far more profound than he was: he had studied a popular mode of speech, and certainly a very useful one; but he was willing to admit, that the knowledge of some of the gentlemen behind the bar, in Oriental classics, was greater than his. His hon. friend had stated (so nice was the pronunciation of the Hindoostanee), that a difference in the sound of a single letter might alter the meaning of an entire sentence. He would exemplify this: there was the word "*ghaut*," which, if pronounced in one way, meant an ambuscade, and if in another, a defile. Now, if an officer did not understand the nicety of pronunciation, he might, when a native apprized him of a *ghaut*, suppose that the information related to a defile, of which he might say he had no reason to be afraid; while, in fact, the intelligence might refer to an ambuscade of the enemy. In such a case, the officer would proceed; and thus give the enemy an

opportunity to pounce on him and cut his men to pieces. He should say no more at present; but would reserve himself to answer any objections (which many gentlemen were very able to bring forward) that might be raised against the motion.

Mr. S. Dixon rose to order.—"The hon. gent. in consequence, I suppose, of his not understanding the way in which the business of the court is conducted, says he will reserve himself to answer objections. I must beg leave to inform him that he cannot reserve himself in the way he proposes."

The *Chairman*.—"I was just about to observe that the hon. proprietor could not, as a matter of right, take the course he has intimated his intention of pursuing; although, perhaps, the courtesy of the court may permit it."

Dr. Gilchrist.—"The court always is so courteous to me that I will now throw myself on that courtesy, and, with its permission, reserve myself to answer such objections as may be offered. But I really think I have a right, if I please, to reserve myself."

The *Chairman*.—"The hon. proprietor had better leave it to the courtesy of the court."

Sir J. Sewell said, he went along with the hon. mover in his principal proposition. He admitted the great importance of the subject, and the essential benefits which must accrue from a knowledge of the native language: he thought there could be no doubt of the fact, that persons who understood the language could despatch business in a better and more speedy manner than one who did not. The only question was, "which is the best and fittest mode for the Company to adopt in order to secure the necessary instruction?" The hon. proprietor was of opinion that a knowledge of the native language should be acquired here, but he (Sir J. Sewell) thought that the language would be more easily and more completely attained, in the country where it was spoken. It was possible that a case might be over-argued, of which, in his opinion, an example had been afforded on the present occasion. The hon. mover had related to the court many instances in which he said that ill consequences had resulted from a want of a proper knowledge of the native languages on the part of European officers: some of those instances the hon. member gave on his own authority, and the rest on the authority of others. From those examples, and the observations which the hon. proprietor had founded upon them, those who placed any reliance on his judgment might be led to believe that it was vain to expect any military successes in India. It was not above ninety years ago since we had no authority in India beyond the limits of a factory: since the Black-Hole business at Calcutta they had extended their

their dominion in the East most rapidly; and who were the men who had been fighting their battles in India since that time? He thought no person would hardly venture to say, that among the number there were not those who were perfectly well qualified to discharge their duty to this country, although, in his opinion, they were not so well versed in the language of India as the officers of the present day. The hon. proprietor seemed to think that the native languages were more generally known formerly: he (Sir J. S.), for his part, thought that the European officers were better acquainted with them at the present period than they were thirty or forty years ago. The hon. proprietor had mentioned, on the authority of those who were fortunate enough to escape, the case of a detachment of the army, which in passing through an opening was attacked by the enemy. He represented that the native troops were aware of the danger, but that there was such a lack of knowledge of the native languages among the European officers, that they (the natives) were unable to convey to the mind of the commanding officer that the enemy was waiting to attack them in the opening. The statement, however, overturned itself: it was impossible that the black part of the army could be aware of the danger, and yet be unable to make the commanding officer acquainted with the circumstance. The view which he took of the case was this, and he believed that it was borne out by many examples in military history, that the commanding officer understood that the enemy was waiting for him in the opening, but that he either despised his opponent or disbelieved the information. An instance of a similar nature had, he recollected, occurred in Europe, which in consequence of one of our commanders holding the enemy too cheaply, and not taking the common precautions which prudence dictated, our army sustained considerable loss: such, he had no doubt, was the case in the instance to which the hon. proprietor had alluded. The commanding officer felt himself superior to danger, and the consequence was the loss of his troops, and probably (though the hon. proprietor had not so stated) of his own life. Another case brought forward by the hon. proprietor, was that of a person named Warner, who lived somewhere in the neighbourhood of Arracan, and whom the hon. proprietor seemed to consider as the cause of the present unfortunate war. The hon. proprietor had, however, adduced no evidence to prove that the misfortune arose out of the ignorance of Mr. Warner. It should be remembered, too, that Mr. Warner was not a military man; he acted in a civil capacity only. The case, however, even upon the hon. proprietor's own statement, had nothing to do with a know-

ledge of the native language—it was merely a question of etiquette. What were the facts? It appeared that a native governor required an audience of Mr. Warner, which that gentleman thought it would not be quite proper in him to grant, and he therefore turned him over to an inferior officer: the governor took offence at this, and resorted to force. It was evident that the question of a knowledge of the native language did not enter into this case; it was a mere affair of etiquette, in which both the European and the Indian had been a little too unbending. The third case referred to by the hon. proprietor, was that of a march of bullocks; and he said a great deal about the importance of bullocks to an Indian army. The story, as told by the hon. member, was this: a messenger was sent by the commander of a detachment, to direct the leader of the bullock train to take another direction from that in which he was proceeding, in order to prevent them from falling into the hands of the enemy. It happened, however, that the messenger could not speak English, and the officer at the head of the bullock party did not understand the native language; and the consequence was, that the bullocks went on as they were going, and were captured by the enemy. Now, supposing it to be the fact, as stated, that the messenger and the officer did not understand the language of each other, there could, he thought, have been no difficulty in turning the bullocks round. He (Sir J. S.) had lived in countries where he could not understand the language which was spoken, and he had discovered, that there was a language besides the vernacular, which all persons understood. How easy it would have been for the messenger to make the officer perceive, by his gestures, that the bullocks were not to continue in the route in which they were proceeding! It should be considered, too, that the commanding officer would be very ill-provided indeed, if he was without a pencil; and it was natural to suppose, that when he sent his orders by a native he would write them down. If blame attached to any person, supposing the transaction to have been correctly described, it was to the commanding officer, for not writing down his orders. But, let it be supposed, that the messenger came up with the bullock party: the officer must have known from his appearance, that he was a person belonging to the army; and, therefore, likely to be the bearer of a message. If the messenger found that the officer did not understand his language, he might, by movements of his head and body—by rushing towards the bullocks—have rendered his object intelligible. (*A laugh, and hear!*) It was, after all, extremely improbable, that, even in a bullock party, there should not

be one person who knew enough of the native language, to understand the messenger. (*Hear!*) The hon. mover had observed, that those who differed from him must be very unreasonable. He (Sir J. S.) would not, however, be deterred from stating his objections to the hon. proprietor's proposition, even at the risk of being considered unreasonable by him. In the first place, he would venture to say something on the question of expense. The hon. proprietors' proposition was, that every person, previous to going out to serve in the Indian army, should learn the Hindostanee language; and he stated, that there were thirty establishments in this country for teaching that language. It would seem that those establishments were not very extensive, for, in the same breath, the hon. proprietor told the court that Dr. Gilchrist's was equal to them all. How many persons were educated at Dr. Gilchrist's establishment he did not know; those who did would be able to estimate the importance of the other twenty-nine. It was necessary to consider the class of persons who were usually appointed cadets: they were the sons of clergymen of moderate livings, and of gentlemen burthened with numerous families. In selecting such persons as the objects of their patronage, the directors exercised a sound discretion. The court was well aware, that a young man could not be sent to India without some expense: at the lowest computation, his out-fitting would not cost less than £100; and if his friends could afford it, it might amount to £200 or £250. If to that were added the expense of sending a young man to London for three months to study the Eastern languages (which could not be less than £100) it would be more than the parents of the cadets could afford to pay. Perhaps, some of the young men might not be remarkable for such quick talents as the honourable proprietor was distinguished for; and it would be necessary that they should continue their studies for six months instead of three: that would add to the expense; and after all, the hopes of their friends might be destroyed by their not passing their examination. It remained to consider whether the interest of the Company would be promoted by the arrangement proposed. It was well known that no money was given for the appointment of a cadetship—it could not be made a subject of sale and purchase: still every thing had its reputed value, and the value of a cadetship was in proportion to the advantage which it conferred on the individual who received it. The value of a cadetship was computed at £100: it was clear, therefore, that if £100 should be added to the expense of out-fitting, the value of the appointment would be reduced to nothing. The

consequence would be, that, instead of 500 candidates for cadetships there shortly would not be five. Another objection to the hon. proprietor's proposition was, that young men would be exposed, as he himself admitted, to the temptations and vices of the metropolis. He really was at a loss to understand the hon. gentleman's feelings with respect to morality, when he could propose to bring young men to London and to introduce them to houses of a certain description, in order to initiate them in the more voluptuous vices of India. (*No! and hear!*) He appealed to the court whether the hon. proprietor had not said something to that effect? He had certainly argued that cadets should be brought to London, in order to prepare them for the vices of India. (*Hear!*) The hon. proprietor had asserted over and over again, that it was almost impossible to learn the native language in Hindoostan, and that it was absolutely necessary to its perfect acquirement that some knowledge of it should be obtained in England. The proposition was at variance with all experience, which had proved that a language might be learned with more ease, and in greater perfection, in the country where it was spoken than in any other. Because it had been recommended that persons desirous of learning to swim, should practice on a table before going into the water, it might as well be said, that nobody could learn to swim who went into the water at once—as that no person could learn a language so well in the place where it was spoken, as where it was not. His own experience was directly opposed to the hon. proprietor's theory; he was not aware that he was duller than other people, but he knew that he had spent ten years at school, and seven at college, principally in studying one language, and yet, when he left college he was unable to hold a conversation in it: indeed, he did not know any person in Oxford, however learned, who was competent to hold a conversation in Latin. When he went to France, he knew so little of the language, that he was actually obliged to dine at Rouen on a fowl, because he could ask for nothing else (*a laugh*) and yet, after he had been four months in the country he could hold a conversation in French. He would not longer detain the court; there were some parts of the hon. proprietor's speech which did not at all bear on the question, and, therefore, he did not feel it necessary to allude to them more particularly. There were other parts which he would leave to be disposed of by those who were better acquainted with the subject than himself.

Col. Lushington.—“Mr. Chairman: There can be but one opinion as to the very great importance of the military ser-

vants of the Company possessing a sufficient knowledge of the Hindoostanee language, so as to enable them to perform the duties of their station with ease and credit to themselves, and advantage to their employers. In this principle, all will, I believe, agree, and I fully concur in every argument of the hon. mover which he has adduced in support of this principle; but it is a very different question as to the best mode of imparting the necessary instruction, and the measures most likely to ensure the desired end: and I confess, in the motion of the hon. proprietor, I cannot persuade myself that the benefit to be derived by its adoption will counterbalance the disadvantage and inconvenience. With regard to the expediency of a permanent institution in the metropolis for the instruction of cadets in the Hindoostanee language, the objections that may be urged against such an establishment are so weighty, that I conceive nothing short of an absolute necessity being shewn would induce this court to recommend it. It will be my principal endeavour to prove that no such necessity exists; and that in the metropolis, or elsewhere, the instruction of a cadet in the Hindoostanee language, or his knowledge of it previously to leaving England, is not a matter of such paramount importance as to be the *sine quâ non* of his appointment. I will not occupy the time of the court by entering into any lengthened detail of the objections against the motion; I shall therefore only briefly mention a few that appear to me most evident, and which are nearly the same as noticed by the learned proprietor who has preceded me. The danger to which both the morals and health of young persons just leaving the roof of their parents must be exposed to by a residence, even for a few months, in the metropolis—the difficulty of drawing the precise line as to what shall be considered a sufficient examination—and the impossibility of ascertaining how long it might be before all cadets would be qualified to take up their appointment, depending, as it would do, on their respective dispositions, talents and industry. The bar that such a regulation would prove to many whose situation and circumstances would not admit of their being sent to those seminaries where the Hindoostanee language is taught, but who otherwise might have it in their power to procure a cadetship. I do not mean to say that there would be no advantage in a cadet proceeding to India being sufficiently grounded in the Hindoostanee language, to enable him to study with effect during the voyage out; and if there are so many seminaries, as stated, where that language is taught, it will I think naturally follow, that parents and guardians of cadets will not fail to avail themselves

of any practicable or convenient opportunity that may occur of having them instructed; but it should be recollected that the Hindoostanee language is almost exclusively used for colloquial purposes, and that where there is a disposition on the part of a young man to make himself acquainted with it, it is much more readily and effectually done in India, where he is in the daily habit of hearing that language spoken, and where a very short residence will be sufficient to convince him that his future successful career in the service greatly depend on his knowledge of the native languages.

I will now proceed to notice a few points, which, from my situation as commanding a regiment for several years, will, I trust, be thought entitled by the court to some degree of attention; and though perhaps it may appear presumptuous in me, yet I do feel a confident expectation, before I have finished my observations, I shall have satisfied even those that may be favourable to the motion, that at least there is no necessity for its adoption. From the general tenor of the argument, and the various statements of the hon. proprietor, many would be led to imagine that a want of the knowledge of the native languages existed to a very great degree amongst the officers of the army, and that this dearth of knowledge was altogether overlooked by the authorities in India. So far from this being the case, I can state, from positive and personal knowledge, that the greatest anxiety is evinced by the government in India for the cultivation of the languages by the military servants of the Company, and I am enabled to impress this conviction on the court from facts which, being matter of public record, cannot be doubted, and by which it will be perceived that this desire on the part of the government in India is not merely an expressed opinion, but seconded and aided by such regulations as are thought best calculated to promote the object in view. For several years past, half-yearly reports, specifying the progress and proficiency of each individual officer in the Hindoostanee and other native languages have, by order of the commander-in-chief, been regularly sent in by officers commanding corps. These reports are not mere matters of form, but drawn up with care and impartiality, and generally from previous examination; great attention is paid to these reports at headquarters. The relation of a circumstance which happened to myself, will convince the court of the truth of this assertion. It became my duty in one of these half-yearly reports to mention that one of the young officers under my command paid little or no attention to the orders of his excellency, or my earnest recommendation that he should make him-

self acquainted with the Hindoostanee language. An immediate reply was forwarded from head-quarters, that if, in my next report, I was not enabled to make more favourable mention of the officer in question, the commander-in-chief would consider how far it might be expedient he should be entrusted with the command of a troop. It is almost unnecessary to mention this remonstrance was attended with the best possible effect. There is another regulation by the government, "That no officer shall be appointed to the responsible situation of adjutant, paymaster, and interpreter to a regiment, or indeed any staff appointment, without first passing the ordeal of an examination as to his qualification for the appointment; and this examination is to be conducted by three persons selected for their knowledge and skill in the language." I will take upon myself to say, that not the slightest apprehension need be entertained of any accused person suffering from the ignorance of the interpreter; and, with regard to any attempt on his part to mislead, I know of no better security against such an attempt, than the interpreter being sworn, which is always done. I must be permitted here to observe, that the hon. mover appears to me to have greatly misunderstood the duties of an interpreter. I can assure him, it is no part of his duty to be at the command of every young officer of a company who may feel himself sometimes at a loss, either to understand what is said to him in Hindoostanee, or to explain himself in the same language. The principal duty of an interpreter is to attend at all native courts-martial that may be assembled in the regiment he belongs to, to take care that nothing is put down in the proceedings by the officer conducting them but what is strictly according to the evidence given, and to check any feeling or bias either for or against the prisoner by the members of the court-martial. No native court-martial is complete or legal without an interpreter; and his signature, as well as that of the president or officer conducting the proceedings, is necessary to make those proceedings valid; and I consider it as an appointment principally, and in my opinion wisely, made for the better and more pure administration of justice in all native courts-martial. There is, however, a measure connected with this subject which I take the opportunity of noticing, and which I cannot but believe will meet with every proper attention from the executive body. There is nothing new in its principle; it would, in fact, only be the renewal of a regulation which formerly existed, and which I cannot but regret was ever discontinued. I allude to the encouragement that was held out to the study of the native languages by bestowing on such officers as passed a successful examination a pecuniary reward. Confident as I feel

that such a measure would be attended with the most beneficial effects, that emulation would be excited, that a stimulus of this nature would be the means of many prosecuting their studies with more vigour and perseverance than at present—the natural consequence of enlisting both duty and interest on the same side—surely, it is no very hazardous assertion, that the benefit to be derived would more than compensate the additional expense incurred. It affords me satisfaction indeed to perceive, that the propriety of such a measure appears to be recognized by the Bombay government; for, by an order of the Governor-in-council, dated in April last, the pay of a moonshee, for six months, is allowed to every officer who shall pass an examination in the Hindoostanee or Mahratta languages. Certainly this is doing something, though little; the whole amount to be drawn being about 180 rupees, and simply a reimbursement of cash necessarily expended for paying a moonshee; whereas the former reward was nearly 2000 rupees. Whatever were the motives that led to the abolition of this reward, at the period when it was discontinued, it was considered by the Madras government worthy of a further reference to the authorities in this country; and I cannot refrain from relating an anecdote to the court, which, though I cannot vouch for its accuracy from my own knowledge, yet I have learnt it from a quarter which I believe entitled to every credit. The late military auditor-general at Madras represented to the governor (Sir George Barlow), that the claims by officers to the premium for passing an examination in the Hindoostanee and Persian languages was quite ruinous: no less than twenty had come in, in a very short time. The answer was: "Sir, instead of twenty, I wish it were 200." When I call to mind the munificent reward of 3,500 rupees that is bestowed on such civil servants who distinguish themselves by their skill in the native languages, how can I be otherwise than sanguine in my expectations, that the same reasons, the same liberality, the same sound argument which operate in favour of one branch of the service, will equally apply to the other? Let me not, however, be misunderstood; I desire not to draw any invidious comparison between the two branches of the service. I will at once admit that, in the army, the applications would be too numerous, and the field too extensive to allow of a very high reward; and, even if the former premium was thought extravagant, I feel persuaded that 1,000 rupees given to such officers who might pass an examination in the Hindoostanee, or other native languages, would ensure, with the aid of the regulations at present in force, a considerable number of very superior scholars. I cannot

not, however, conclude without doing that justice to the officers of the Indian army which I am satisfied they merit, notwithstanding the very little credit given to them by the hon. mover, and the state of ignorance he represents them in, that there never was a period in which knowledge of the native languages to a certain extent was more generally diffused, particularly among the junior branches of the army; and, I further must say, I consider this to be mainly attributable to the repeated orders and instructions of the Court of Directors on this subject, and the rules and regulations of the government of India in consequence of those orders. I will not trespass longer on the indulgence of the court. I trust I have satisfactorily proved, that there is no very great necessity for the motion of the hon. proprietor; and I have no hesitation in saying, that I am decidedly adverse to shackling the appointment of cadets with the stipulations recommended, and which, under existing circumstances, are, in my humble opinion, equally unnecessary and uncalled for.

The Hon. L. Stankope thought that the learned Doctor (Gilechrist) had no reason to regret the want of the privilege of replying to the arguments of those who spoke against the motion. The gallant officer who last addressed the court, had, whilst he intended to speak in opposition to the motion, made some very sensible observations in its favour. With respect to what had fallen from the other hon. proprietor, who had opposed the motion (Sir J. Sewell), he must confess that he was surprised to have heard from an individual, who he understood had acted as a judge, such idle, such superficial, such attorney-like arguments in favour of ignorance. He did not think it necessary to detain the court long in referring to the arguments of the hon. and learned proprietor. It must be admitted, that it was necessary to hold communication with men either by speech, writing, or signs; unless the directors were resolved that India should be governed by signs, or the sort of pantomime recommended by the learned proprietor, it was absolutely necessary that the Company's officers should be acquainted with the native languages. The next question was, at what period of life should a knowledge of those languages be acquired? Locke, Rousseau, and all other philosophers who had written on the subject, had recommended that such studies should be entered upon during youth—that the impression should be made whilst the wax was soft. The hon. mover did not say that the cadets who proceeded to India should be perfectly acquainted with the native languages previously to their leaving this country—all he contended for was, that

they ought to be acquainted with the rudiments of them. He had been to many parts of the world, and he had often experienced great inconvenience from being totally unacquainted with the language of the countries in which he was placed. The learned proprietor had introduced a strong instance of this kind of inter-venancy, when he stated that he ran the risk of not getting any thing for his friend France, if he had not been able to ask for a poulet (a laugh)! The question which followed next in order was how was that knowledge to be conveyed to the minds of the young men? Who was the person proper to be employed to teach them on account of his moral qualifications, his intellectual aptitude, and his intimate acquaintance with that particular branch of learning? If it were asked where such a person was to be found, he would point to his honourable friend the learned doctor, who had grown white-headed in the service of the Company, and who, either by his lectures or elementary books, had been the means of instructing almost every European servant of the Company in the native languages. He called upon the Court of Directors as honest and candid persons, having the welfare of India at heart, to take measures for spreading the knowledge of the native languages, and to place the learned doctor at the head of that kind of instruction. It was highly desirable that no cadet should be allowed to proceed to India without having some knowledge of the native languages; while he was sure that the young men would not be so slow to learn as the hon. and learned proprietor who had studied Greek and Latin for so many years, and yet knew nothing about those languages after all.

Sir J. Sewell explained that he did not say that he knew nothing of them, but only that he could not speak them. Mr. R. Jackson said, that there seemed to be an almost universal conviction of the necessity of a knowledge of the native languages to officers serving in India. It was therefore with no small surprise that he heard an hon. and learned proprietor (Sir J. Sewell) put two or three cases to show that this knowledge was of no importance whatever. The hon. proprietor thought that it was only necessary for a man to make signs with his hands to turn a whole baggage train, which perhaps, extended two or three miles. The hon. proprietor had reasoned in the same way with respect to the unfortunate affair in which so many of our troops had been cut to pieces. He regretted that the hon. proprietor made any allusion so what he conceived the market price of a cadetship: nothing could be more hastenable than the conduct of the directors in the distribution of their patronage. For the last fifteen years they had acted in a way

which defied even the imputation of corruption. The court and the public ought to be obliged to the gallant officer (Col. Lushington), for if ever any person established the affirmative of a proposition, he had done so with regard to the motion. The gallant officer had described the anxiety of the local authorities to promote a knowledge of the native languages amongst the officers in India, and had quoted the words of the Company's enlightened servant, Sir George Barlow, to the same effect. All that his hon. friend wished to do, was to extend the knowledge of those languages which the government considered so necessary. That the native languages were not generally known by the officers, was proved by the fact that it had been found necessary to establish interpreters: if every officer understood the languages, there would be no occasion for interpreters. They had been established as a medium of communication between the officers and the natives, the want of which was known to have produced the most calamitous results. The gallant officer said that the interpreters were appointed to aid the due administration of justice in courts-martial, by preventing the operation of unfair bias on the part of the natives. How much better would that object be attained, if each of the officers composing the courts-martial were able to understand all that was said in the native language! Did the gallant officer, however, mean to say that every court-martial had the benefit of an interpreter? Were there not some subordinate courts-martial which had not interpreters to assist them? Was it possible that, divided and subdivided as regiments were, there were not some courts-martial which had not the advantage of a European interpreter to watch over the life of a fellow creature? It was reserved for the hon. and learned proprietor (Sir J. Sewell), who was somewhat novel in that court, (in his own, his estimation was duly weighed) to propose to substitute a kind of pantomime for speech. He seemed to think that a motion of the hands was sufficient to turn a stream of baggage. But did he consider that it might be necessary to perform this pantomime at night? The court might have heard of a night telegraph, but never he thought of nocturnal bodily signals. (*Laughter.*) The great question was, how the object of disseminating the knowledge of the native languages among our officers could be best effected. Here he had the misfortune to differ a little with his hon. friend who had brought the subject forward. One part of the motion, as he understood it, proposed to refer the matter to the Court of Directors; that was well; some time since, he and his hon. friend had come to a sort of honorable

understanding, that it should be proposed to refer the subject to the Court of Directors, and in such terms as would not be likely to meet with discouragement from the other side of the bar. He was sure that his hon. friend, in every thing that he had done, meant all that was respectful to the Court of Directors; but there was one part of the motion which required that young men about to proceed to India should give a proof of their proficiency in the native languages before they left this country. This part of the proposition would not receive the support of those proprietors, who, like the gallant officer (Colonel Lushington), thought that the native languages could be best acquired in India. They would therefore be obliged to reject the motion altogether. Under those circumstances, he thought the best course to adopt would be to leave the whole consideration of the question to the Court of Directors. Much had been said of the danger of bringing young men to London; he doubted whether that would bear any proportion to the danger to which the Company's interests were exposed, from the want of sufficient knowledge of the native languages amongst their officers. Besides, the court had been made acquainted with the fact, that there were thirty considerable seminaries for teaching those languages in different parts of the country; some in Scotland, and others within ten or fifteen miles of London. From what had fallen from a gallant officer, it might be supposed that the object of the hon. mover was to procure a situation for Dr. Gilchrist, by placing him at the head of an establishment for teaching the native languages; that was not the case. Now, as far as facts formed any criterion for a man's judgment, he believed that Dr. Gilchrist had been, to the languages of India, what Joseph Lancaster had been to the language of England. He believed that Dr. Gilchrist had exerted great industry, great ingenuity, and great talent, in creating, by his instruction, masters capable of communicating their knowledge of the language of India to those who wished to learn it; and he thought, that if it should be determined that these young men should, in future, be submitted to some test before they were allowed to proceed to India, the seminaries, which they had been told existed in different parts of the country would do well to avail themselves of the ability and zeal of Dr. Gilchrist, and of those gratuitous and unbought services which constituted so honourable a portion of his history and character. At the same time he was bound in candour to confess, that it appeared to him, that these young men would enjoy many advantages in studying the language of India on the other side of the water, which they could not enjoy in studying

studying it here. Still, though such was his opinion, he thought that they ought not to be allowed to study it in India in the same mode in which they studied it at present. To that mode he had always felt serious objections; and he was happy to say, that the observations which had that day fallen from the gallant general on the other side of the court, fully confirmed him in the view which he had hitherto taken of this important question. At present, when young men arrived in India unacquainted with the language spoken there, they could only acquire a knowledge of it by hiring a native tutor out of the small pay and pocket-money which the Company allowed to them. Some time back a prospective reward had been held out to such as devoted their time, and he might add their money, to the study of the native languages, after their arrival in Hindostan: but that prospective reward had subsequently been taken away from them; and even if it had not would now be unavailing, since the young men were marched off to their regiments, within a week or a month after their arrival at the different presidencies to which they were sent, and were then so much engaged in active exertion as to have no time left for study of any description. Nothing would be able to remedy the evil of the present system on the other side of the water, except the erection of an establishment for the purpose of providing this instruction for the young cadets before they joined their regiments, and the erection of it at the expense of that court—which ought to give that instruction to them which they could not obtain for themselves without a material diminution in their pay and pocket-money. If the motion of his hon. friend could be altered, not indeed in its object, but in the mode of effecting that object, he would make it imperative upon the young men to have instruction in the native languages on one side of the water or the other: and would oblige each of them, before he proceeded to join his regiment in India, to shew that he had attained either in this country, if the best opportunity presented itself here—or in India, if the best opportunity presented itself there—a fair proficiency in those languages. But, instead of taking away from the young men their pay and pocket-money (for in point of fact their pay was but pocket-money), he would recommend to the court to give them the fair means of learning those languages, and to interdict them from joining their regiments, until they had availed themselves of that bounty. There was only one difficulty now remaining, and over that, if his hon. friend was not fastidious, he thought that they might easily triumph. He would advise his hon. friend so to modify his motion, as to leave the whole of this ques-

tion to the Court of Directors, and would suggest to the Court of Proprietors that they should request the Court of Directors as a favour—and; the requests of the Court of Proprietors were always considered by the Court of Directors as binding upon them—to give them their considered opinion upon it. He flattered himself that such a request would not be too much for the Court of Proprietors to make, or for the Court of Directors to concede. It would give the proprietors the opportunity of coming to any future resolution, which might be proposed to them upon this subject, with a perfect knowledge that it had been thoroughly considered, not only as to its policy, but as to the means of carrying it practically into effect. Each proprietor would then understand what he was about, and would be ready to contribute, in his due constitutional share, to the great object which cannot but operate beneficially upon India. He thought that the end which they all had in view would be best attained by a motion of this nature:—“That the Court of Directors be requested to take into their consideration the expediency of requiring from the cadets the attainment of a certain proficiency either here or in India, before they be permitted to join their respective regiments; and that it be desired to report its opinion thereon to the Court of Proprietors.” Now, much as he was disposed to think well of this amendment, because it was his own, he was not inclined to offer it as a distinctive proposition to the court, unless it was also thought well of by others. He made this declaration, because nothing could change the gratitude which he felt to be due to his hon. friend from himself, the proprietors, and the public; for the great exertions which he had made in collecting information on the subject—for the talent with which he had brought it forward—and for the great light which he had thrown upon the necessity of giving this instruction to their young officers. He agreed with his hon. friend, and indeed with the gallant general on the other side of the court, as to the existence of that necessity. He had suggested such means as to him appeared best calculated to bring to a fortunate issue their common wishes; and so anxious was he to see them crowned with success, that, if his own proposition were not acceded to, he should not seek to disturb the projects and views of others. The hon. gentleman then concluded by again returning his thanks to Mr. Hume for having brought this question fairly under the consideration of the Court of Proprietors, and by stating, that the very discussion of it must be attended with beneficial effects to our interests in India.

Colonel *Lushington* rose to make a few remarks in explanation of those which he had before offered to the court, and in which

which he conceived himself to have been misunderstood by the hon. and learned gentleman who had just sat down. The hon. and learned gentleman, by interjecting these young men from joining their regiments, until they had acquired a knowledge of Hindoostanee, would deprive them of the means of subsistence, since it was well known that their emoluments were trifling indeed, until they reached the corps to which they were attached. Besides, the necessity of keeping them away from their military duties was not at all apparent: there was not a single corps in their service in which there were not native seapoys well acquainted with the English language, and capable of giving instruction in their own to such individuals as were anxious to obtain it. Indeed, in his own regiment, he knew that there was one seapoy, who had, at the time when he left India, five young officers learning Hindoostanee from him. There was another error in the speech of the hon. and learned gentleman, which he must be permitted to notice: he alluded to his observations with regard to the native interpreters. The hon. and learned gentleman had asked him whether he meant to say that an interpreter was present at every court-martial; he replied that he did mean to say so; for there was no court-martial, regimental or otherwise, which was legal without an interpreter's presence—his signature was requisite to legalize its proceedings. In all regimental court-martials there must be five officers present, besides the interpreter, or it was not properly constituted. The hon. and learned gentleman had asked him what was the case when an offence was committed in a detachment of a regiment? To that he would answer, that if the detachment had not five officers with it to form a court-martial, the offence remained unpunished till the detachment rejoined the regiment, or until a sufficient number of officers, and an interpreter, could be found at the station in which it was posted. He trusted that they would excuse him for having trespassed again upon them, to state these facts.

Mr. R. Jackson observed, that his proposition would not be offered to their notice, unless it was pretty generally agreed that the whole question should be taken into consideration. All he wanted was, that their officers should attain some proficiency in the Hindoostanee language; if they could be taught it in their respective regiments better than elsewhere, so be it. The Directors would so report, and his object would be fully answered.

Mr. S. Dixon commenced his observations by animadverting, with great severity, on the language which the hon. member for Aberdeen had used in bringing forward the present motion. Such an at-

tack upon the directors he had never heard before in that court, and trusted he should never hear again. There was no question which admitted of being brought into a narrower compass than the present; every person who had yet addressed the court had admitted, that it was necessary that their officers in India should be capable of fully understanding the language of the soldiery whom they were sent to command. The question, therefore, was, as to the best means of communicating a knowledge of the native language to those officers. Now, he was one of those persons who were inclined, upon all occasions, to take the opinion of practical men in preference to that of mere speculative men. The hon. and learned gentleman on the floor was, beyond all doubt, a most excellent special pleader; but as he had never been in India, he must, notwithstanding his eminence as a lawyer, prefer to his opinion the opinion of the gallant general, who had been there. That gallant officer had demonstrated so clearly that the present resolution was uncalled for, that he had not the vanity to suppose that he (Mr. Dixon) could add any thing to it. The resolution stated, in very peremptory language, that no gentleman should be permitted to go to India, until he had passed an examination as to his proficiency in the Hindoostanee language. (A cry of "No!") He was to produce a test of his having received instruction in that language; but how could the value of that test be tried without subjecting the person who produced it to examination? The mover had told them that a knowledge of the language could be acquired at a very cheap rate in this country; and from what he had said, he (Mr. S. Dixon) should not have been surprised if he had told them that Dr. Gilchrist was ready to contract to qualify five hundred persons every year for one guinea each. But would that be all the expense which young men would have to incur in learning Hindoostanee? Must they not be in London? Must they not be in the vicinity of the Doctor? Must they not be exposed to all the temptations of this great metropolis, from which it was so necessary to withdraw young men? (A laugh.) The plan which had that day been submitted to them was one of the most romantic absurdities ever generated in the mind of a reasonable being. He had heard the honourable mover say that there could not be a doubt as to the propriety and expediency of his plan, but the honourable mover did not wait long before he was undeceived upon that point. Though the hon. mover had one Doctor upon his side, there was a rival professor, who had declared himself to be on the other; and, loth as he was to decide when doctors disagreed, he must say, that in this case, the reason of the argu-

gument appeared to be all on the side of the gallant General. For was it not notorious that a man often learned a language grammatically; and yet, from not being accustomed to hear it spoken, found himself at a woful loss when he first went into the country, where it was the only medium of conversation? Suppose a man were to go into Italy—would he not soon discover that the Latin which he had learned at school was not a language understood in that country? So it would be with the Hindoostanee taught by Doctor Gichrist (*cry of No!*). He thought, yes—but if it was not so, so much the better. He was of opinion that one slight fact within the knowledge of them all would settle the question as to whether the Hindoostanee language could be acquired with greater facility in England or in India. If one of their children learned French grammatically at a public school, and another learned it by mixing familiarly in good French society, there could be no doubt as to which of the two would acquire himself best at the end of the same time from the commencement of their studies: Let them only reason from analogy and they would see that the Hindoostanee must be better learned in India than it could by any possibility be learned here; for independently of the advantages which the gallant officer had mentioned to them in his excellent speech, for which the court was infinitely indebted to him, the student would have greater information and intelligence at his command in India, at a cheaper rate than he could possibly acquire, even at the dearest rate, in this country. That was a point which they ought not to forget; for in looking at this question, he could not lose sight of the description of persons, who in general went out as cadets to India; they were principally the sons of clergymen, and of men with small incomes; above the common rank, who were unable to send their children into the world with all the advantages they could wish. A resolution, such as the hon. member for Aberdeen wished the court to pass, would close India to these individuals for ever; for, if no cadet were permitted to embark for that country without being first qualified as a good Hindoostanee scholar, their parents would be prevented from qualifying them for such a situation by the narrowness of their private fortunes. Indeed, when he considered how their army had been constituted for years past, and how successfully every expedition had terminated upon which it had been employed, he began to doubt whether the knowledge of the native languages was so necessary as was represented to the inferior officers, especially on their first arrival in India. He would venture to say that the hon. member for Aberdeen did not understand the lan-

guage when he last uttered the *impossibility* of learning Hindoostanee offensively to Mr. Home. It would have been better for me if I had not told you a Mr. St. Dixon. He would not deny that it might be so, but if the Hindoostanee had been a great matter, how much greater would he have been, if he had received this instruction which he now wishes to impart to others! (*Laughter*) In conclusion, the hon. member observed that he could not, for the reasons he had stated, give his support to the resolution proposed by the hon. member for Aberdeen. Mr. Darby observed that one advantage he had in addressing the court was, that he spoke to those who brought to the subject under their consideration a perfect knowledge of all its details and bearings. They were therefore too wise to be led away by the anger or sophistry of any individuals, however skillfully the words which conveyed it might be put together. He did not know whether the object of the hon. mover of this resolution was to oblige the Court of Directors or not; but if it were his object, it could not have been more effectually answered than by the question which he has given to the discussion of it. The proprietors were told that the Court of Directors had neglected this subject entirely; and the question was put to them in this shape, "is such neglect right or wrong?" Now, how did the fact stand, which was assumed as the ground for this question? Was there neglect on the part of the Directors or not? The gallant officer near him had shewn that there was not, and in so doing, had decisively contradicted every assertion made by the hon. member for Aberdeen. [Mr. Home said "No."] He said "yes." The gallant general had contradicted every one of his assertions, if he understood anything of the force of language. The detail, which the gallant general had made of the services of his own regiment, and of the manner in which the young men who joined it as officers had been induced to study the language of the natives, was sufficient to induce all reasonable persons to put a negative on the present motion; to thank the Court of Directors for what they had already done, and to leave any measures, which it might be still prudent to take, entirely to their discretion. If Mr. Darby had one grain of common sense—he did not say of reason (for he was aware that the hon. member for Aberdeen did not allow those to be possessed of it; who thought differently from himself), he was certain that the present motion was founded upon a very erroneous view of the question. He did not like to say any thing harsh, but it did appear to him that the hon. member for Aberdeen had only brought it forward to give himself an opportunity

portunity of sending a file with the Comd of Directors. He thought however that the Comd of Directors were so free from any blame, that they might safely turn the question out of doors at once. The impression his mind was, that such a motion was a reflection on every officer in their army in India, and that the Comd of Proprietors would acquit themselves best of the debt which they owed to that army by getting quit of it slow and for ever. *Capt. Maxwell* would not have arisen to address the court, but for some observations which had fallen from the hon. and gallant officer on the other side of it. He had understood the gallant officer to admit, that a regimental court-martial could not be legally held without the presence of an interpreter. If such were the case, how did it happen that to the *Siberdy sons*, to whose jurisdiction 25,000 of their native subjects at least were liable, no interpreter was ever seen? *Col. Livingston* said, that he spoke of the military, and not of the civil service of the Company. *Capt. Maxwell*. It might be so; but that he must observe, that unless the interpreters employed in the military service of the Company were much better than those employed in its civil service, they were of no use whatever. He had known a native employed as a Persian interpreter, who, upon examination, was discovered not to know one single syllable of that language. (*Hear!*) Hon. gentlemen seemed to think that the statement of the gallant officer with respect to what had occurred in his own regiment, had rendered all further discussion of this great question unnecessary; but he was of opinion, that all that statement proved was, that the gallant officer was actuated by great zeal for their service, and had applied much of his attention and his influence to the instruction of his officers in the language of the natives. The gallant officer had told them that most of his officers were acquainted with it: he (*Capt. Maxwell*) had no doubt they were; but he knew, of his own personal knowledge, that many officers in high situations were utterly ignorant of it—for instance, their late military surveyor-general did not know a word either of the Persian, the Hindoostanee, or any other oriental language. He could adduce other instances of similar ignorance on the part of eminent public functionaries, if it were necessary. They had, nevertheless, got on very successfully; and the example of their success, without a knowledge of the native language, was not likely to encourage others to learn it. He was convinced, unless some stimulus was given by the authorities at home, their servants would not learn it either. He did not see why they should. He had known magistrates

what were all, but ignorant of the native languages, and yet were in the daily habit of disposing justice to thousands of Hindoos. The scruples into which their ignorance sometimes led them, would be amusing; if it were not for the contempt which it cast upon the general administration of the laws. He would mention one of them at which he had been accidentally present. The magistrate was sitting on the bench, when a man in the crowd before him cried out as if he were hurt; some confusion was created in the court, which induced the magistrate to ask what was the matter; he received an answer in the native language. He replied, "Bring him here, and I will teach him in future not to disturb a court of justice." This reply excited a roar of laughter in the court, which induced the magistrate to demand a further explanation. It then turned out that a dog had bit a man in the crowd;—that on hearing the magistrate demand the reason of the outcry which it occasioned, a native exclaimed, "A dog has bit a man," and that the magistrate had misconstrued the phrase into "Mr. Dog has bit a man," and proceeded to issue his orders accordingly. (*Hear! and a laugh.*) He mentioned this fact to shew that the ignorance of the native language was not confined to one branch of their public service, but was extended to them all, and that it was therefore necessary that it should be made compulsory upon them all to obtain a decent proficiency in it. He thought that their military officers should at any rate be obliged to attain that proficiency before they were allowed to embark for India; because, if they once arrived there, it was easy to foresee that the resolution would be regularly done away with, on the alleged ground of public emergency.

Sir C. Forbes also supported the motion. The instruction in the native languages, which had been given during the last five years by Dr. Gilchrist to persons setting out for India, had been found so truly valuable and beneficial, that it was admitted by all the accounts, that the young gentlemen who had attended his lectures before they commenced the voyage had so improved themselves during their passage out, that their proficiency on their arrival in India was perfectly surprising. He hoped his hon. friend, though he might not succeed in affecting his object by the present motion, would not be deterred by the failure of it, but would persevere with that spirit which he displayed upon every other subject; and sure he was, that if his hon. friend did so persevere, he would ultimately succeed and triumph over all objectors. He hoped that he would follow up his present motion by another, declaring that no man should be allowed to go out to India, either as a barrister or an attorney,

attorney, who had not previously qualified himself by a knowledge of the native languages: he had himself witnessed, in more instances than one, the mischief which arose from the want of it. Was it right that men should be permitted to dispense justice to the natives of India, who were unacquainted with the language which they used? How did they suppose that a trial could be fairly decided in the courts of Bombay, for instance, where, to his knowledge, the judge who sat on the bench, and the barristers and attorneys who were engaged in the examination of the witnesses, too frequently knew nothing of what they said except through the medium of a native interpreter, imperfectly acquainted with the English language, and therefore likely to make gross mistakes? In one instance—he had the authority of a learned judge for stating it—the misinterpretation of a witness's answer had been so unfortunate as to cause the accused to be sentenced to death: a private friend of his own noticed the blunder of the interpreter at the time it occurred, and remarked to a gentleman who was present at the trial, that the words used by the witness could not bear the signification which the interpreter had put upon them. He was called out of court before the trial terminated, and on returning to it, and inquiring the result of it, was informed, to his great surprise and horror, that the prisoner had been condemned to death, in consequence of the very words which he had declared to have been misinterpreted. With the feeling natural to every honest man who does not wish to see an act of injustice perpetrated under the colour of law, he immediately addressed a letter to the judge on the bench, stating his opinion of the way in which the words of the witness had been misunderstood. The judge was so convinced of the error that, though he could not commute the sentence which he had passed on the prisoner, he instantly suspended it, and made such a representation of the whole case to those in power, that he ultimately obtained for him his Majesty's free pardon. He had read the letter of thanks which the learned judge—and he saw no reason why he should conceal his name, it was the late Sir John Newbold—had addressed to his friend for his ready interference on behalf of the unfortunate man; and the existence of such a letter, arising out of such a fact as he had just mentioned, was an imperative reason why some measures should be adopted to prevent the recurrence of similar lamentable mistakes in future. He would only say one word as to the mode of communication by signs, which had been recommended by the hon. and learned gentleman on the floor. By signs! God preserve the unhappy natives of Hindos-

tan from the signs which young gentlemen, on their first arrival in India, were likely to address to them! If the first sign they used to the poor creatures, who understood no word of English, were misunderstood, he knew well that the sign which followed it was a slap on the head, or a cane across the shoulders. (Cries of "No.") Every body, who had been in India, must be aware that it was so; he had repeatedly seen it himself. He would suppose a case, for the sake of argument, and would ask any of his friends who had been in India, whether it was at all an uncommon one. Young officers, on their arrival in India, were unaccustomed to the mode of travelling there. He would suppose that one of them was asked to a party, and from some cause or other was rather too late for it; he would suppose that the officer got into his palanquin, and on finding that his palanquin bearers were not going quite as quick as he wished—and perhaps under the broiling sun of India it was impossible for them to go quicker—called upon them to increase their speed. He would suppose that the men refused; what would the other do? He would first "damn" them and tell them to get on, in English—the men, not knowing what he meant, would stop with him—he would then jump out of the palanquin, knock one down, beat another, and maltreat every one of them. The consequence would be that the bearers would take themselves off with all convenient speed, and would leave the officer to get to his destination as he best could. He had himself frequently seen a palanquin left in this manner in the middle of the road, and the young gentleman, to whom it belonged, obliged to trudge on foot to the end of his journey. He had seen it too with great satisfaction, because it taught the young man that sort of experience which seldom failed to bring him to his senses. These signs, which the hon. and learned proprietor recommended so ardently, were unfortunately too common in India, and had been productive of much individual cruelty and oppression. He thanked God that, owing to the courts of law and to the regulations of the police, they were going out of fashion, with the private floggings, to which they had so often given occasion. ["There are no private floggings," said a proprietor.] He did not know how that might be at present; but, in his time, he knew that it was the fashion to flog in private families, and to apply the rattan as often as the whim and caprice of the master prompted. He believed the custom was somewhat altered at present. Now, if a man was thought likely to complain of such tyrannic and oppressive conduct, he was sent off with a note, which he did not understand, to the superintendent of police, who generally bestowed

education, that flogging for some alleged offence, which his master could not inflict upon him for any real one. He stated this to be fact; and he defied any resident in India to disprove it. He would not pretend to give any opinion as to the mode of carrying the motion into effect, or as to the period of time within which cadets, if they did not qualify themselves in Hindoostance, ought to be rejected. There might be doubts and differences upon that part of the subject; but that no bad consequences, but, on the contrary, great advantages had resulted from the able and disinterested conduct of Dr. Gilchrist, in instructing young men in Hindoostance before their setting out for India, was a point which no person at all acquainted with the merits of the case would have the hardihood to dispute or deny.

Sir J. Sewell complained that he had been misrepresented by the noble baronet who had just sat down, and also by other proprietors who had taken a similar view of this question; he had never said that our communication with the natives of India could be well carried on by signs. On the contrary, he had most fully admitted, that it would be particularly desirable that all their public servants should be instructed in and understand the native languages. What he had said was this, that, in the case which had been referred to, as so pregnant with lamentable circumstances, it appeared to him that a communication, by signs might have prevented all the mischiefs which unfortunately occurred from an ignorance of the language.

Mr. Risby observed that he should be exceedingly sorry if the motion were carried in the affirmative; for great misapprehension would be excited in the public mind, if an impression which this motion was likely to create should once go abroad, that such a question as the present had been passed over without any attention by those who were entrusted with the government of India. The gallant officer, who had spoken with so much good sense, and had afforded them so much information on this subject, had begun by stating, that it could not be denied that a knowledge of the language was a necessary qualification for any officer who was entrusted with the command of a regiment; and that statement had been admitted as correct by every gentleman who had yet addressed them. The present motion could not be understood at all, unless it was understood to convey an intimation that the necessity of such knowledge, paramount as it appeared to every body besides, had never attracted the notice and consideration of the Court of Directors. Now, no one could look to the question whether a knowledge of the native languages was expedient and necessary,

without deciding it in the affirmative; and the real question, therefore, which the proprietors were called upon to examine was this—had the subject met with the attention of the Court of Directors, or not? He had not the slightest doubt on the subject—he believed that it had occupied their attention most deeply, and that belief was founded upon the care with which the native language had been studied abroad by their servants, and the rewards which the Court of Directors had conferred upon those who had made themselves proficient in it. A young relation of his own, from being well acquainted with the language, and therefore qualified to act as an interpreter, had got a very welcome accession to his pay shortly after his arrival in India. That very fact proved that the subject had occupied the attention of the regular authorities, and that they had given stimulants to encourage their servants in pursuing the study of the vernacular language of Hindostan. Under these circumstances, he should very much deplore that this question should pass in the affirmative, as it was calculated to cast a reflection upon the Court of Directors which they by no means merited. There was another point on which he wished to be permitted to say a few words. An hon. and learned proprietor had stated an argument which he thought deserving of consideration. He had asked, if all the evils which had been mentioned by the hon. member for Aberdeen, existed in the melancholy degree which he contended, and arose from our ignorance of the native languages, how it happened that the Company had acquired the magnificent empire which it now possessed in Hindostan? A learned doctor had stated that our dominions there had risen from small beginnings to such an enormous extent, that they reminded him of nothing so forcibly as the miraculous gourd mentioned in Scripture; a proof, if any were wanted, that the hon. member for Aberdeen must have been guilty of some exaggeration in the picture which he had that day submitted to their inspection. For his own part, he trusted that some such modification of the question as had been proposed by the hon. and learned proprietor below him (Mr. R. Jackson) would be acceded to by the Court of Proprietors—that this discussion should cease for the present among them—that the subject-matter of it should be referred to the Court of Directors—and that the motion of the hon. and learned proprietor, that some test of their acquaintance with the Hindoostance language should be demanded from their officers, either here or in India, before they were permitted to join their regiments, should undergo their deliberate consideration: at the earliest opportunity. Such a modification of the question, he should be glad either to propose

pose or to second; but to an affirmative vote on the original motion proposed by Mr. Hume, he could not accede himself, and should be sorry if the Court of Proprietors acceded.

Mr. *Laurie* hoped that, on a question so important as the present, those servants of the Company who had resided in India would give it the benefit of the information which they had acquired there. He trusted that they would place their practical knowledge against the speculative doctrines of wrangling lawyers, who now occupied almost the undivided attention of that court. He was sorry to say it, but say it he must, that of late the court had become more like a meeting of lawyers in Westminster Hall, than a meeting of merchants to look after their concerns. He trusted that those who had practical knowledge of what was most expedient for the meridian of India, would not be kept back by those who had greater fluency of speech than themselves, but not one tith of their information. In saying this, he spoke the sentiments of many hon. proprietors, who had now left the court, because they did not know the meaning of the flowery speeches which had been addressed to them, and could not even guess at the time or the proposition with which they might terminate. He had heard with pleasure the speech of the gallant officer who had addressed them with so much effect and such eloquence; and he was happy to discover from it, that the sum had been withdrawn for some years which had been devoted to reward those officers, who bestowed their time and attention on the native languages: for he should lament the day, when the desire of glory should cease to actuate the members of our army, and when only one stimulant should exercise its powers upon them, and that stimulant—money. He should leave the matter in the breast of the Court of Directors, and should give his strenuous opposition to the motion of the hon. member for Aberdeen.

Colonel *Lushington* begged to be heard again in explanation. Something had been said about the doctrines of rival professors—with these he had nothing at all to do, as he did not pretend to be one of them. He had not spoken with approbation of the resolution which had withdrawn the sum destined to the reward of such of our officers as devoted their attention to the study of the Hindoostanee language: he was too great a friend to our army to say any such thing. Undoubtedly, whenever the Company could get gentlemen to bestow pains upon their service without paying for it, they were right in so doing. What he had said was this—that without that reward, there never was a period in our rule in India, in which the native languages were better understood by our

officers. He would, however, give that reward to the army, because it would induce many to study who at present would not. Military men were naturally fond of glory, but still they were not on that account to be told to look to glory as their only reward.

The *Deputy Chairman* (Sir G. A. Robinson) next addressed the court. He commenced by observing, that, after the long and wide discussion which had been bestowed upon this subject, he trusted that the court would permit him to bring the question back to its original bearings, and those he considered to rest entirely on the expediency of compelling their cadets to acquire the rudiments of the Hindoostanee language before they left England, and not permitting them to receive their appointments until they could pass a certain test, or of trusting to their acquirement of the colloquial languages of Hindoostan, when it was universally in use. For his own part, he believed that the evils which would arise from the compulsory process, would more than counterbalance the advantages which would accrue from it, either to the young men or to the Company, and, on that account, he was inclined to let the matter rest upon the footing it did at present, and upon the sufficiency of those motives which already existed to encourage the study of the oriental languages abroad. In the course of the debate he had heard it stated, that the purpose of the hon. proprietor who had brought this motion forward was, not so much to obtain the object which he professed to have in view, as to lay blame on the Court of Directors for not having done their duty on this important subject. He would do the hon. proprietor the justice to state, that he did not believe him to be actuated by any such unworthy motive, whatever might be the general bias of his mind to throw blame on the court; but at the same time, he must be permitted to observe, that on every occasion when this motion had been brought forward, there had appeared on his (Mr. Hume's) part, a strong anxiety to promote the pecuniary interests of a particular individual. There was another point on which he was particularly anxious to address a few observations to them. Among other things which had been stated in the course of the present debate, one was, that the appointment of native interpreters to the different regiments in their service was a measure which originated with the Marquess of Hastings. He should be the last man to detract from the merits of that illustrious individual, but he was sure that the noble Marquess would also be the last man who would consent to be loaded with merits to which he was not entitled. He therefore took that opportunity of stating, that the appointment of interpreters

posed upon it. (*A cry of "there is no amendment."*)

Mr. Weeding rose for the purpose of advocating the course recommended by the deputy-chairman of leaving the whole question in the hands of the directors and the authorities abroad. When the subject was brought before the court a short time ago, he took the opportunity of stating his opinion, that, if the young men intended for their military service were to be taught the language of India by authority at all, they should be taught it in the country of India in preference to learning it at home; and nothing he had heard that day had tended in the least to shake his conviction on the subject. Let the court consider how extremely inconvenient it would be found, to subject the mass of cadets for their Indian army to an examination and test previous to going to India. At first he thought the hon. gentleman, in the course of his speech, had intended to apply for another college (*"No!"* from Mr. Hume), and that the cadets should learn Hindoostanee by Act of Parliament, as the young civilians did Greek, Latin, and morality, in another place: he was glad to find the mover of the proposition had no such intention. It was a previous examination and a test, then, to which they were to be subjected. If it were a high test, or even a low test in that language, the time required for the qualification, he thought, would be so long, that they would not be able adequately to supply the wants of their military service: the supply would not be equal to the demand. Even at Haileybury and at Addiscombe, where the demand was not one-tenth in the ratio of their general military service, and where the instruction was backed by the force of regulations and statutes, and conducted by a host of professors and teachers acting upon a system which had been established for years, he believed it had lately been found that these institutions could not supply the numbers which were required. If this difficulty had been experienced, and this inconvenience felt, where the numbers required were so few, how much more likely were it to happen where the numbers required were many. If it were a low test, a mere smattering of the language that was required, it would have this disadvantage; that the cadet with the merest possible knowledge of the language would go out qualified by their regulation, so as to render it unnecessary for the authorities abroad, or for the cadet himself, so far as the regulation was concerned, to take any further trouble on the subject. Another great inconvenience, which had been often dwelt upon in that court, would outweigh, in his opinion, the whole advantage, if there were any, to be derived from the proposition of the hon.

gentleman. For very good reasons cadets were appointed at the early age of sixteen; from the uncertain wants of their military service, they could not be appointed before-hand—the directors did not know that they should have the power to bestow these appointments till the time came. Now, any man, having the least observation of human nature, must admit the great indiscretion of allowing youths of such an age the control of their own time for a year or two, or perhaps more, that might be necessary to acquire a knowledge of the test, amidst the allurements and dissipations of a large or small town. The love of indolence and pleasure, natural to man at all periods of life, but more especially at an age when reason and reflection are not very strong, would be likely not merely to divert them from all useful pursuits, but to engage them in others of a very contrary and pernicious tendency. Were these inconveniences, he would ask the court, at all counterbalanced by any necessity of the case, as made out by the mover of the proposition before them. The truth was, there was no necessity at all: a gallant officer (Colonel Lushington) had given them the best possible evidence from matter-of-fact, that no such necessity existed. In listening to the speech of the hon. gentleman (Mr. Hume), one would have supposed that cadets were entrusted with important commands the moment they went to India; but how stood the fact? A month or two often elapsed before they joined their regiments as ensigns. Here they found themselves not only among associates of their own standing, and others their seniors, as ensigns, but among lieutenants, captains, majors, and lieutenant colonels, whose authority and example would incite them to the attainment of the knowledge which was necessary to the due performance of their duty. The progress of their promotion also aided the same object: a year or two often elapsed before the ensign was made a lieutenant; many years, sometimes fifteen or twenty, before he became a captain, and double that number before he attained the rank of lieutenant colonel. Did not this state of things—this progressive preferment, afford the court sufficient assurance, that long before the cadet could attain a rank which would give him a command of any importance, he would have ample opportunity to acquire, and the authorities in India would have ample opportunity to exact from him, a competent knowledge of the language of the soldiery whom he might be called upon to command. Instead, therefore, of consuming his time in this country in acquiring a mere tyro's knowledge of the language, it would be better employed by sending him at once to India, where, on the thea-

tre of his future operations, in the midst of the language which he was to learn, he could best acquire it, and with it his professional knowledge at the same time. For these reasons he should oppose the motion, being quite satisfied with leaving the whole question to the vigilance and care of the Court of Directors, and of the constituted authorities in India.

Dr. *Gilchrist* now rose, and said, he threw himself on the indulgence of the court, while he made a few remarks in reply, as the seconder of the motion.

Mr. *Poynder* rose to order. It gave him pain, he said, to offer an objection to hearing the remarks of any proprietor, but the circumstances under which the learned doctor pressed himself on their attention were such as rendered it necessary to make the objection. The learned gentleman did not urge his claim to be again heard as a matter of right, but as a matter of courtesy. He was aware, that in all cases, this courtesy was extended to the individual making a motion, but not to the seconder; and if it were to be granted in this instance, he could not see on what ground it should be refused in any other. A precedent would thus be established, which would most inconveniently protract the business of the court. The learned doctor had said—

Mr. *Hume* begged to say a word to order. Perhaps it would save some of the time of the court, of which the hon. proprietor (Mr. *Poynder*) seemed so economical, if he were informed that his learned friend (Dr. *Gilchrist*) did not intend to press his claim to a reply. (*Hear! and a laugh.*)

Mr. *Hume* said he would trespass a very short time on the court in reply. Upon the paltry objection to his motion, that it had been brought forward from interested motives in favour of particular individuals, he would not condescend to remark, further than to say, that they were altogether unworthy of his notice. He was above any such conduct; he had brought forward the motion in the discharge of what he considered his duty, being firmly convinced, that if his suggestions were adopted it would be most advantageous for the interests of the Company. To the principle on which his motion rested he had not heard any reasonable answer; the objection of the gallant officer, and his statement respecting the general disposition of the officers to acquire the Hindoo language, did not at all apply to his motion. It might be correct as to the officers of the Bengal establishment; for certainly there was a great difference between them and the officers of the other presidencies as to the knowledge of the native language. In this respect, the officers of the Bengal establishment had the superiority—but it was well known

that in the Madras regiments the native officers were obliged to act as interpreters for the European officers. If this was the case in only one regiment it would be a sufficient ground for his motion, for he would contend, that not one officer ought to be put into a situation where he might be called on to command without being well acquainted with the language of those over whom he was placed. The hon. director (the deputy-chairman) had said, that this was a subject in which the directors had taken a deep interest, and that they had been very diligent and active in promoting a knowledge of the Eastern languages among the officers of the native regiments. He would soon give them an opportunity of letting the proprietors know what they had done in that respect, by a motion which he should submit before the court rose. He would move for copies of all instructions sent out to India on the subject of European officers learning the Eastern language, and what encouragements they held out for the acquisition of that language; but, in the meantime, he would state, that there were fifty Golendauz corps in India without any interpreters at all. He could state, as a fact which had come under his own observation in India, that the Bengal artillery was without any interpreter; and the minute of the Court of Directors which the hon. deputy chairman had read, was an answer to a representation of that fact which had been made five years before. Was this the parental kindness with which it was said the directors regarded India? He would state, that after the experience of the negligence of the directors on this important point, he was not disposed to trust them farther: they had not shewn that it was one in which a reliance might be placed on their promises. The hon. deputy chairman had said, that he would trust to the natural disposition of men to acquire the Hindoo language. Now that was the very thing to which he should not trust: the natural disposition of man was to be idle, and to trust to the exertions of others, unless some inducements were held out to encourage him to active exertion and application. Should they, then, with the experience which they had on this subject, trust so important a point to the natural disposition of men? or were they to adopt the childish plan of coaxing officers into a knowledge of those languages, by holding out a promise of 150 rupees for every lesson they learn? Would it not be better to do away with the necessity of such rewards, by making it imperative on all cadets to acquire a knowledge of the language before their appointment? But, said the hon. director, "leave it to us; we are not interested parties, and we will do what is best to promote a knowledge of the eastern languages among our military officers."

He would answer, that he did not wish to leave it to them; and for this reason, that they were interested parties—that the value of the situations they had to bestow would be lessened by the necessity of the greater preparation which it would be necessary to make in order to fill them. Were the court, then, to trust this important matter to those who had an interest in neglecting or retarding it? If they did so, they would find that the same system would go on, and officers to whom most important commands might be entrusted, would be ignorant of that which it was of such consequence for them to know. He regretted to have heard on this occasion, what he could not help calling the abuse of morality, as if young men would have their morals corrupted by being obliged to reside in London or Edinburgh for a time, while they attended lectures or studies in the Hindoo language. Did not a vast number of children and young men attend the charter schools in this city, and go home every day to board with their parents or others, and without any injury to their morals? Was it meant to be contended, that they would be more exposed to the danger of immorality here than in Oxford or Cambridge? He would contend that no danger of the kind existed, and that the fear of it was a most flimsy argument, when urged as a reason for sending out young lads as cadets before they were fully qualified. There were many places in London and its vicinity where young men about to be sent out as cadets might obtain the necessary instruction in the Hindoo language; and he contended, that the Company ought to avail themselves of those means. But it was said, why not teach them the language in India? He answered, that that experiment had been already tried and failed. A cadet corps had been established in one presidency, on the conviction that most of the cadets sent out were unfit for immediate employment; but, after years of trial, it was found that it would not succeed, and it was at length given up. It was then clearly ascertained, that India was not the best place to learn any thing which ought to have been acquired before the appointment of the cadet took place. It was of the utmost importance, that young men, whose services might be immediately required on their going out, should not have on their arrival to learn that without which it was impossible that they could be fitted for command. This was more particularly the case in a time of war, when young men were sent to join the army within two or three weeks after their arrival out. It was absurd to talk of a period of fifteen or sixteen years before a subaltern could arrive at the command of a company. He himself knew an instance where an ensign, the day after

his appointment to a regiment, took the command of a company; and that must be the case in many instances, as field officers cannot hold a company, and where there are not a sufficient number of captains. He knew that in Cutch, when a number of troops were stationed to meet a rupture of the neighbouring chiefs, there were in the corps only two captains, and the command of four companies was entrusted to an ensign of a few weeks' standing. He did not mean to say that young men thus placed might not display very considerable talent, but if they were without the knowledge of the language of those who were to obey their orders, would not their talents be very much limited in their operation. He would not leave the matter in the hands of the directors, who shewed how unfit they were to be trusted in a case where their own personal favours and patronage were opposed to the best interests of the Company. After having seen that they could sacrifice that interest to their own private views, he would no longer rely on their promises.

The *Chairman* observed, that before he put the question for the decision of the court, he must say, that whatever might be the sentiments of different proprietors on the motion then before them, there was none as to the great importance of the subject to which it referred. That subject had been before gravely discussed, and the steps taken respecting it had, in his opinion, been calculated to reach the end in view. He did not at all deprecate the agitation of the subject at the present day; but he must say, with reference to the very wide range taken in the speech of the hon. mover, that it was rather hard on the army of India to say that its officers were negligent, and did not use common diligence to acquire a language, the knowledge of which was so important to them in the discharge of their military duties: such a charge was, he must say, a very pointed libel on the army of India. If they looked back to the achievements of that army for the last thirty years, they would find a more conclusive answer than he could give to the charge now made against them. Let it be remembered to their honour, that when, in the year 1792, the Company acquired a considerable addition of territory, it was from the officers of the army that the then governor-general, Lord Cornwallis, selected men, who, from their knowledge of the language of the country generally, and their acquaintance with the manners and feelings of the natives, were considered the most fit to take the command of the newly acquired districts. From that period down to the present time, the army had constantly produced men not less distinguished for their bravery

bravery in the field than for their talent in business, and whose knowledge of the language, character, and habits of the natives was productive of the greatest benefits to the company. At this day, it was well known that when situations requiring in the officers who fill them a knowledge of the oriental languages became vacant, there were many candidates; did that shew that the study of the Hindoostanee language was neglected amongst them? Was it not, then, most unfair to pass a general censure on the officers of our eastern army, and to have it go abroad to the world that they were unfit for the duties to which they were called? He had only one word more to say—it was respecting what fell from the hon. proprietor (Mr. Hume) as to the artillery corps. It was only necessary to say in reply to the honourable gentleman's statement, that the artillery, at the time to which he referred, were all Europeans. (*No, no! from Mr Hume.*) He understood that the fact was as he stated it, and this circumstance should induce him to make some allowance for a little remissness in the officers on the point to which the hon. proprietor had adverted. He did not mean to say that he was prepared to sanction any negligence, if it were as was stated; but still the fact of the men whom they commanded being all Europeans, should cause an allowance to be made which might not be made in other cases. To come back to the general question, he would say, that if the court thought proper to agree to the motion before them, the directors would of course pay every attention to their recommendation. He was aware, that when the proprietors gave a recommendation to the directors, it was always with the view that it should be acted upon (*Hear hear!*); but if that was the expectation of the Court of Proprietors in the case before them, candour bade him say, that it could hardly be otherwise than disappointed. It should be borne in mind that the directors were the sworn functionaries of the Company, bound to act to the best of their judgment and ability; and, however much they might collectively and individually be disposed to listen to the suggestion of the proprietors, still, if that suggestion were contrary to what they themselves conceived to be for the Company's advantage, they would be bound to reject it. In every point of view he considered the present motion as unnecessary. (*Hear, hear!*)

Mr. Hume, in explanation, begged to say, that the hon. chairman was mistaken in supposing the Bengal artillery to be all Europeans; the proportion of natives among them was as four to one European.

The Deputy Chairman observed, that the Bengal artillery were, some years ago,

exclusively European; but that since a corps of Golundauz were added, and that, in consequence, interpreters were now attached to that corps also.

Strangers were then ordered to withdraw, and the question was put to a show of hands. Six hands were held up for the motion, and more than double that number against it.

The Chairman declared it to be negatived.

THE SAME SUBJECT CONTINUED.

Mr. Hume, pursuant to the intimation given in the course of his reply, rose to move for certain papers, in order that the Court of Proprietors might have an opportunity of judging how far the directors were sincere in their alleged desire to give encouragement to the study of the native language in India. He wished to see copies of all the instructions sent out to the governments of the several presidencies, for the purpose of encouraging the cultivation among the officers of our army of the study of the eastern language. It was said by more than one gentleman, in the course of the discussion on the last question, that the directors were particularly diligent on this occasion. He believed it would be found that the fact was not so, and it was for this reason that he was anxious to learn how far they had gone on this point; he feared it would be found that their labours on this subject had been much more limited than some gentlemen were disposed to give them credit for. At all events, he hoped on this occasion he should have the votes of those proprietors who had expressed themselves so warmly in favour of all that they (the directors) had done on the subject; for if they had been so active and diligent in promoting the study of the eastern languages among their military officers, there could be no objection to let their instructions to that effect come before the court. No injury could be done by acceding to this motion; here were no secrets to be divulged—no correspondence to be published, which would injure the Company's interest to have made known. He would therefore move that there be laid before the court "Copies of all despatches or orders from the Court of Directors, since 1798, to the several governments in India, enjoining or recommending European officers to acquire a knowledge of the native languages; or expressive of the importance or utility of the eastern languages to the efficient performance of the duties of European officers."

Mr. Weeding thought this a very extraordinary motion. The very moment after the general court had, by its vote, declared its perfect reliance on the vigilance and care of the Court of Directors on the subject before them, the hon. gentleman requested them to concur with him in

giment appeared to be all on the side of the gallant General. For was it not notorious that a man often learned a language grammatically; and yet, from not being accustomed to hear it spoken, found himself at a woful loss when he first went into the country, where it was the only medium of conversation? Suppose a man were to go into Italy—would he not soon discover that the Latin which he had learned at school was not a language understood in that country? So it would be with the Hindoostanee taught by Doctor Gilchrist (*Cry of No?*). He thought, yes—but if it was not so, so much the better. He was of opinion that one slight fact within the knowledge of them all would settle the question as to whether the Hindoostanee language could be acquired with greater facility in England or in India. If one of their children learned French grammatically at a public school, and another learned it by mixing familiarly in good French society, there could be no doubt as to which of the two would acquire himself best at the end of the same time from the commencement of their studies: Let them only reason from analogy and they would see that the Hindoostanee must be better learned in India than it could by any possibility be learned here; for independently of the advantages which the gallant officer had mentioned to them in his excellent speech, for which the court was infinitely indebted to him, the student would have greater information and intelligence at his command in India, at a cheaper rate than he could possibly acquire, even at the dearest rate, in this country. That was a point which they ought not to forget; for in looking at this question, he could not lose sight of the description of persons, who in general went out as cadets to India; they were principally the sons of clergymen, and of men with small incomes; above the common rank, who were unable to send their children into the world with all the advantages they could wish. A resolution, such as the hon. member for Aberdeen wished the court to pass, would close India to these individuals for ever; for, if no cadet were permitted to embark for that country without being first qualified as a good Hindoostanee scholar, their parents would be prevented from qualifying them for such a situation by the narrowness of their private fortunes. Indeed, when he considered how their army had been constituted for years past, and how successfully every expedition had terminated upon which it had been employed, he began to doubt whether the knowledge of the native languages was so necessary as was represented to the inferior officers, especially on their first arrival in India. He would venture so far that the hon. member for Aberdeen did not understand the lan-

guage which he had just criticised therein; (a laugh) and should himself still endeavour to do so. Mr. Home said it would have been better for me if I had not said so much. Mr. S. Dimes said he would not say that it might be so, but if the hon. member was a great man, why did he not receive this instruction which he now wishes to impart to others? (a laugh.) In conclusion, the hon. member observed that he could not, for the reasons he had stated, give his support to the resolution proposed by the hon. member for Aberdeen. Mr. Darby observed that one advantage he had in addressing the court was, that he spoke to those who brought to the subject under their consideration a perfect knowledge of all its details and bearings. They were therefore too wise to be led away by the anger or sophistry of any individuals; however skillfully the words which conveyed it might be put together. He did not know whether the object of the hon. mover of this resolution was to rid the Court of Directors or not; but if it were his object, it could not have been more effectually answered than by the question which he has given to the discussion of it. The proprietors were told that the Court of Directors had neglected this subject entirely; and the question was put to them in this shape, "is such neglect right or wrong?" Now, how did the fact stand, which was assumed as the ground for this question? Was there neglect on the part of the Directors or not? The gallant officer near him had shewn that there was not, and in so doing, had decisively contradicted every assertion made by the hon. member for Aberdeen. [Mr. Home said "No."] He said "yes." The gallant general had contradicted every one of his assertions, if he understood anything of the force of language. The details which the gallant general had made of the services of his own regiment, and of the manner in which the young men who joined it as officers had been induced to study the language of the natives, was sufficient to induce all reasonable persons to put a negative on the present motion; to thank the Court of Directors for what they had already done, and to leave any measures, which it might be still prudent to take, entirely to their discretion. If he, Mr. Darby, had one grain of common sense—he did not say of reason (for he was aware that the hon. member for Aberdeen did not allow those to be possessed of it; who thought differently from himself), he was certain that the present motion was founded upon a very erroneous view of the question. He did not like to say any thing harsh, but it did appear to him that the hon. member for Aberdeen had only brought it forward to give himself an opportunity

potentially standing; and with the consent of the Directors. He thought however that the consent of Directors was as free from any blame, that they might safely turn the question out of doors altogether. The impression which struck him was, that such a motion was a reflection on every officer in their army in India, and that the Courts of Directors would acquit themselves best of the debt which they owed to that army by getting quit of it as soon and for ever. *Captain Maxfield* would not have arisen to address the court; but for some observations which had fallen from the hon. and gallant officer on the other side of it. He had understood the gallant officer to admit, that a regimental court-martial could not be legally held without the presence of an interpreter. If such were the case, how did it happen that to the Sibberdy company whose jurisdiction 25,000 of their native subjects at least were liable, no interpreter was ever seen? *Genl. Lakington* said; that he spoke of the military, and not of the civil service of the Company. *Capt. Maxfield*. It might be so; but that he must observe, that unless the interpreters employed in the military service of the Company were much better than those employed in its civil service, they were of no use whatever. He had known a native employed as a Persian interpreter, who upon examination, was discovered not to know one single syllable of that language. (*Note 1*). How gentlemen seemed to think that the statement of the gallant officer with respect to what had occurred in his own regiment, had reached him; further discussion of this great question unnecessary; but he was of opinion, that all that statement proved was, that the gallant officer was actuated by great zeal for their service, and had applied much of his attention and his intelligence to the instruction of his officers in the language of the natives. The gallant officer had told them that most of his officers were acquainted with it; he (*Capt. Maxfield*) had no doubt they were; but he knew, of his own personal knowledge, that many officers in high situations were utterly ignorant of it—for instance, their late military surveyor-general did not know a word either of the Persian, the Hindoostanee, or any other oriental language. He could adduce other instances of similar ignorance on the part of eminent public functionaries, if it were necessary. They had, nevertheless, got on very successfully, and the example of their success, without a knowledge of the native language, was not likely to encourage others to learn it. He was convinced, unless some stimulus was given by the authorities at home, their servants would not learn it either; he did not see why they should. He had known magistrates

what were all, but ignorant of the native languages, and yet were in the daily habit of dispensing justice to thousands of Hindoos. The scruples into which their ignorance sometimes led them, would be amusing; if it were not for the contempt which it cast upon the general administration of the law. He would mention one of them; which he had been accidentally present. The magistrate was sitting on the bench, when a man in the crowd before him cried out as if he were hurt; some confusion was created in the court, which induced the magistrate to ask what was the matter; he received an answer in the native language. He replied, "Bring him here, and I will teach him in future not to disturb a court of justice." This reply excited a roar of laughter in the court, which induced the magistrate to demand a further explanation. It then turned out that a dog had bit a man in the crowd—that on hearing the magistrate demand the reason of the outcry which it occasioned, a native exclaimed, "A dog has bit a man," and that the magistrate had misconstrued the phrase into "Mr. Dog has bit a man," and proceeded to issue his orders accordingly. (*Hear! and a laugh.*) He mentioned this fact to show that the ignorance of the native language was not confined to one branch of their public service, but was extended to them all, and that it was therefore necessary that it should be made compulsory upon them all to obtain a decent proficiency in it. He thought that their military officers should at any rate be obliged to attain that proficiency before they were allowed to embark for India; because, if they once arrived there, it was easy to foresee that the resolution would be regularly done away with, on the alleged ground of public emergency.

Sir C. Forbes also supported the motion. The instruction in the native languages, which had been given during the last five years by Dr. Gilchrist to persons setting out for India, had been found so truly valuable and beneficial, that it was admitted by all the accounts, that the young gentlemen who had attended his lectures before they commenced the voyage had so improved themselves during their passage out, that their proficiency on their arrival in India was perfectly surprising. He hoped his hon. friend, though he might not succeed in effecting his object by the present motion, would not be deterred by the failure of it, but would persevere with that spirit which he displayed upon every other subject; and sure he was, that if his hon. friend did so persevere, he would ultimately succeed and triumph over all objectors. He hoped that he would follow up his present motion by another, declaring that no man should be allowed to go out to India, either as a barrister or an attorney,

atorney, who had not previously qualified himself by a knowledge of the native languages; he had himself witnessed, in more instances than one, the mischief which arose from the want of it. Was it right that men should be permitted to dispense justice to the natives of India, who were unacquainted with the language which they used? How did they suppose that a trial could be fairly decided in the courts of Bombay, for instance, where, to his knowledge, the judge who sat on the bench, and the barristers and attorneys who were engaged in the examination of the witnesses, too frequently knew nothing of what they said except through the medium of a native interpreter, imperfectly acquainted with the English language, and therefore likely to make gross mistakes? In one instance—he had the authority of a learned judge for stating it—the misinterpretation of a witness's answer had been so unfortunate as to cause the accused to be sentenced to death: a private friend of his own noticed the blunder of the interpreter at the time it occurred, and remarked to a gentleman who was present at the trial, that the words used by the witness could not bear the signification which the interpreter had put upon them. He was called out of court before the trial terminated, and on returning to it, and inquiring the result of it, was informed, to his great surprise and horror, that the prisoner had been condemned to death, in consequence of the very words which he had declared to have been misinterpreted. With the feeling natural to every honest man who does not wish to see an act of injustice perpetrated under the colour of law, he immediately addressed a letter to the judge on the bench, stating his opinion of the way in which the words of the witness had been misunderstood. The judge was so convinced of the error that, though he could not commute the sentence which he had passed on the prisoner, he instantly suspended it, and made such a representation of the whole case to those in power, that he ultimately obtained for him his Majesty's free pardon. He had read the letter of thanks which the learned judge—and he saw no reason why he should conceal his name, it was the late Sir John Newbold—had addressed to his friend for his ready interference on behalf of the unfortunate man; and the existence of such a letter, arising out of such a fact as he had just mentioned, was an imperative reason why some measures should be adopted to prevent the recurrence of similar lamentable mistakes in future. He would only say one word as to the mode of communication by signs, which had been recommended by the hon. and learned gentleman on the floor. By signs! God preserve the unhappy natives of Hindos-

tan from the signs which young gentlemen, on their first arrival in India, were likely to address to them! If the first sign they used to the poor creatures, who understood no word of English, were mistaken, he knew well that the sign which followed it was a slap on the head or a cane across the shoulders. ("Cries of 'No.'") Every body, who had been in India, must be aware that it was so; he had repeatedly seen it himself. He would suppose a case, for the sake of argument, and would ask any of his friends who had been in India, whether it was at all an uncommon one. Young officers, on their arrival in India, were unaccustomed to the mode of travelling there. He would suppose that one of them was asked to a party, and from some cause or other was rather too late for it; he would suppose that the officer got into his palanquin, and on finding that his palanquin bearers were not going quite as quick as he wished—and perhaps under the broiling sun of India it was impossible for them to get quicker—called upon them to increase their speed. He would suppose that the men refused; what would the other do? He would first "damn" them and tell them to get on, in English—the men, not knowing what he meant, would stop with him—he would then jump out of the palanquin, knock one down, beat another, and maltreat every one of them. The consequence would be that the bearers would take themselves off with all convenient speed, and would leave the officer to get to his destination as he best could. He had himself frequently seen a palanquin left in this manner in the middle of the road, and the young gentleman, to whom it belonged, obliged to trudge on foot to the end of his journey. He had seen it too with great satisfaction, because it taught the young man that sort of experience which seldom failed to bring him to his senses. These signs, which the hon. and learned proprietor recommended so ardently, were unfortunately too common in India, and had been productive of much individual cruelty and oppression. He thanked God that, owing to the courts of law and to the regulations of the police, they were going out of fashion, with the private floggings, to which they had so often given occasion. ["There are no private floggings," said a proprietor.] He did not know how that might be at present; but, in his time, he knew that it was the fashion to flog in private families, and to apply the rattan as often as the whim and caprice of the master prompted. He believed the custom was somewhat altered at present. Now, if a man was thought likely to complain of such tyrannic and oppressive conduct, he was sent off with a note, which he did not understand, to the superintendent of police, who generally bestowed

ed upon him that flogging for some alleged offence, which his master could not inflict upon him for any real one. He stated this to be fact; and he defied any resident in India to disprove it. He would not pretend to give any opinion as to the mode of carrying the motion into effect, or as to the period of time within which cadets, if they did not qualify themselves in Hindoostance, ought to be rejected. There might be doubts and differences upon that part of the subject; but that no bad consequences, but, on the contrary, great advantages had resulted from the able and disinterested conduct of Dr. Gilchrist, in instructing young men in Hindoostance before their setting out for India, was a point which no person at all acquainted with the merits of the case would have the hardihood to dispute or deny.

Sir J. Sewell complained that he had been misrepresented by the noble baronet who had just sat down, and also by other proprietors who had taken a similar view of this question; he had never said that our communication with the natives of India could be well carried on by signs. On the contrary, he had most fully admitted, that it would be particularly desirable that all their public servants should be instructed in and understand the native languages. What he had said was this, that, in the case which had been referred to, as so pregnant with lamentable circumstances, it appeared to him that a communication, by signs might have prevented all the mischiefs which unfortunately occurred from an ignorance of the language.

Mr. Risby observed that he should be exceedingly sorry if the motion were carried in the affirmative; for great misapprehension would be excited in the public mind, if an impression which this motion was likely to create should once go abroad, that such a question as the present had been passed over without any attention by those who were entrusted with the government of India. The gallant officer, who had spoken with so much good sense, and had afforded them so much information on this subject, had begun by stating, that it could not be denied that a knowledge of the language was a necessary qualification for any officer who was entrusted with the command of a regiment; and that statement had been admitted as correct by every gentleman who had yet addressed them. The present motion could not be understood at all, unless it was understood to convey an intimation that the necessity of such knowledge, paramount as it appeared to every body besides, had never attracted the notice and consideration of the Court of Directors. Now no one could look to the question whether a knowledge of the native language was expedient and necessary,

without deciding it in the affirmative; and the real question, therefore, which the proprietors were called upon to examine was this—had the subject met with the attention of the Court of Directors, or not? He had not the slightest doubt on the subject—he believed that it had occupied their attention most deeply, and that belief was founded upon the care with which the native language had been studied abroad by their servants, and the rewards which the Court of Directors had conferred upon those who had made themselves proficient in it. A young relation of his own, from being well acquainted with the language, and therefore qualified to act as an interpreter, had got a very welcome accession to his pay shortly after his arrival in India. That very fact proved that the subject had occupied the attention of the regular authorities, and that they had given stimulants to encourage their servants in pursuing the study of the vernacular language of Hindostan. Under these circumstances, he should very much deplore that this question should pass in the affirmative, as it was calculated to cast a reflection upon the Court of Directors which they by no means merited. There was another point on which he wished to be permitted to say a few words. An hon. and learned proprietor had stated an argument which he thought deserving of consideration. He had asked, if all the evils which had been mentioned by the hon. member for Aberdeen, existed in the melancholy degree which he contended, and arose from our ignorance of the native languages, how it happened that the Company had acquired the magnificent empire which it now possessed in Hindostan? A learned doctor had stated that our dominions there had risen from small beginnings to such an enormous extent, that they reminded him of nothing so forcibly as the miraculous gourd mentioned in Scripture; a proof, if any were wanted, that the hon. member for Aberdeen must have been guilty of some exaggeration in the picture which he had that day submitted to their inspection. For his own part, he trusted that some such modification of the question as had been proposed by the hon. and learned proprietor below him (Mr. R. Jackson) would be acceded to by the Court of Proprietors—that this discussion should cease for the present among them—that the subject-matter of it should be referred to the Court of Directors—and that the motion of the hon. and learned proprietor, that some test of their acquaintance with the Hindoostance language should be demanded from their officers, either here or in India, before they were permitted to join their regiments, should undergo their deliberate consideration at the earliest opportunity. Such a modification of the question, he should be glad either to propose

pose or to second; but to an affirmative vote on the original motion proposed by Mr. Hume, he could not accede himself, and should be sorry if the Court of Proprietors acceded.

Mr. *Laurie* hoped that, on a question so important as the present, those servants of the Company who had resided in India would give it the benefit of the information which they had acquired there. He trusted that they would place their practical knowledge against the speculative doctrines of wrangling lawyers, who now occupied almost the undivided attention of that court. He was sorry to say it, but say it he must, that of late the court had become more like a meeting of lawyers in Westminster Hall, than a meeting of merchants to look after their concerns. He trusted that those who had practical knowledge of what was most expedient for the meridian of India, would not be kept back by those who had greater fluency of speech than themselves, but not one tith of their information. In saying this, he spoke the sentiments of many hon. proprietors, who had now left the court, because they did not know the meaning of the flowery speeches which had been addressed to them, and could not even guess at the time or the proposition with which they might terminate. He had heard with pleasure the speech of the gallant officer who had addressed them with so much effect and such eloquence; and he was happy to discover from it, that the sum had been withdrawn for some years which had been devoted to reward those officers, who bestowed their time and attention on the native languages: for he should lament the day, when the desire of glory should cease to actuate the members of our army, and when only one stimulant should exercise its powers upon them, and that stimulant—money. He should leave the matter in the breast of the Court of Directors, and should give his strenuous opposition to the motion of the hon. member for Aberdeen.

Colonel *Lushington* begged to be heard again in explanation. Something had been said about the doctrines of rival professors—with these he had nothing at all to do, as he did not pretend to be one of them. He had not spoken with approbation of the resolution which had withdrawn the sum destined to the reward of such of our officers as devoted their attention to the study of the Hindoostanee language: he was too great a friend to our army to say any such thing. Undoubtedly, whenever the Company could get gentlemen to bestow pains upon their service without paying for it, they were right in so doing. What he had said was this—that without that reward, there never was a period in our rule in India, in which the native languages were better understood by our

officers. He would, however, give that reward to the army, because it would induce many to study who at present would not. Military men were naturally fond of glory, but still they were not on that account to be told to look to glory as their only reward.

The Deputy Chairman (Sir G. A. Robinson) next addressed the court. He commenced by observing, that, after the long and wide discussion which had been bestowed upon this subject, he trusted that the court would permit him to bring the question back to its original bearings, and those he considered to rest entirely on the expediency of compelling their cadets to acquire the rudiments of the Hindoostanee language before they left England, and not permitting them to receive their appointments until they could pass a certain test, or of trusting to their acquirement of the colloquial languages of Hindoostan, when it was universally in use. For his own part, he believed that the evils which would arise from the compulsory process, would more than counterbalance the advantages which would accrue from it, either to the young men or to the Company, and, on that account, he was inclined to let the matter rest upon the footing it did at present, and upon the sufficiency of those motives which already existed to encourage the study of the oriental languages abroad. In the course of the debate he had heard it stated, that the purpose of the hon. proprietor who had brought this motion forward was, not so much to obtain the object which he professed to have in view, as to lay blame on the Court of Directors for not having done their duty on this important subject. He would do the hon. proprietor the justice to state, that he did not believe him to be actuated by any such unworthy motive, whatever might be the general bias of his mind to throw blame on the court; but at the same time, he must be permitted to observe, that on every occasion when this motion had been brought forward, there had appeared on his (Mr. Hume's) part, a strong anxiety to promote the pecuniary interests of a particular individual. There was another point on which he was particularly anxious to address a few observations to them. Among other things which had been stated in the course of the present debate, one was, that the appointment of native interpreters to the different regiments in their service was a measure which originated with the Marquess of Hastings. He should be the last man to detract from the merits of that illustrious individual, but he was sure that the noble Marquess would also be the last man who would consent to be loaded with merits to which he was not entitled. He therefore took that opportunity of stating, that the appointment of interpreters

interference to every native regiment was a subject of the Court of Directors taken up and discussed upon before the noble Marquis arrived in India. This would appear from the military letter of the Court of Directors, dated the 12th of March 1811; if it were not intruding too much on the time of the court, he would proceed to read it to them.

Extract Military Letter to Bengal, dated 12th March 1813.

"We therefore desire that the office of adjutant and quartermaster of regiments of native infantry may be abolished.

"With a view, however, to provide for the due discharge in each native battalion, of those duties which in our regiments of cavalry, artillery, and European infantry, are performed by the quartermasters of those corps, and also with a view to provide for the due discharge of the important duty of interpreters to courts-martial (a subject which is brought to our notice in the 98th para. of your letter in this department, dated 26th of December 1809); we desire that you will take into your early consideration whether it might not be advisable, to appoint from among the subaltern officers of each native battalion, one properly qualified to act as interpreter to all courts-martial that might be held in that battalion, and who should also execute the duties of quarter-master of the battalion.

"Such an arrangement might be expected to operate as a powerful incentive to young officers to perfect themselves in the knowledge of the native languages, particularly of the Hindoostanee language, and thus prove an effectual substitute for the institution lately abolished at Baraset."

"The hon. Bart. then proceeded to say, that independently of that measure, the Court of Directors had also directed that no staff appointment should be held by any officer who was unacquainted with the Hindoostanee language. In January 1810, they sent the following letter to the different presidencies in India.

Extract Military Letter to Bombay, dated 17th January 1810.

"We are decidedly of opinion, that no officer in our service should be appointed to staff situations unless they have previously acquired a competent knowledge of the Hindoostanee language, which is the vernacular language of Hindostan, and more or less spoken and understood throughout the Deccan.

"The means of acquiring this language are now much facilitated, and it is so obviously both the duty and the interest of all our servants at all the presidencies to obtain a knowledge of it, that we desire you will hereafter consider a competent acquaintance with it to be an indispensable

qualification in every candidate for a staff appointment.

"We recognise, for the present, in the appointment of a linguist to each native battalion, and in the salary you have annexed to the office, amounting to sixty rupees (Rs. 60) a month to each linguist competently skilled in Hindoostanee or Malhatta, and ninety rupees (Rs. 90) a month to those who have attained competent skill in both languages."

"Under these circumstances, he made bold to say, that, as far as the Court of Directors were concerned, they had shewn and extended every encouragement to the study of the native languages; and he would further state, whilst upon that subject, that notwithstanding all that had been asserted to the contrary by one who is proprietor, there never was a more correct distribution to these offices than that which existed at the present moment. He conceived therefore that it would be most expedient for the Court of Proprietors, to leave unchecked and uncontrolled to the Court of Directors those further measures, which it might be thought advisable to adopt in prosecution of their present system. The directors, both as a body and as individuals, were as deeply interested in the success of it as any member of the Court of Proprietors; and he might add, that the expediency of promoting the study of the native languages by the rewards that were formerly abolished, was a subject then under their consideration. He had no doubt, that all due encouragement would be extended to proficients in the native language by the Court of Directors; and at the same time he thought it right to announce, that it was the unanimous opinion of that court, that it would not be expedient that young men should be compelled to pursue their studies of the Hindoostanee language in this country under all its attendant risks of detention to the young men themselves, and of serious inconvenience and expense to their parents and friends, or to be subjected to the penalty of being debarred of their appointment. If there were the number of institutions in this country which had been stated, whenever it should suit the convenience of the parents, friends, and guardians of young men to let them be instructed in the Hindoostanee language, he thought it might be safely left to them to obtain for their children or wards that preliminary instruction which circumstances might admit of; especially when it was evident that it might operate much to the advantage of those who wished to obtain staff situations in the Company's service, to qualify themselves to hold them. On these grounds he was inclined to put a decided negative, both upon the original restrictive resolution, and upon the amendment which had been subsequently proposed.

posed upon it. (*A cry of "there is no amendment."*)

Mr. Weeding rose for the purpose of advocating the course recommended by the deputy-chairman of leaving the whole question in the hands of the directors and the authorities abroad. When the subject was brought before the court a short time ago, he took the opportunity of stating his opinion, that; if the young men intended for their military service were to be taught the language of India by authority at all, they should be taught it in the country of India in preference to learning it at home; and nothing he had heard that day had tended in the least to shake his conviction on the subject. Let the court consider how extremely inconvenient it would be found, to subject the mass of cadets for their Indian army to an examination and test previous to going to India. At first he thought the hon. gentleman, in the course of his speech, had intended to apply for another college (*"No!"* from Mr. Hume), and that the cadets should learn Hindoostanee by Act of Parliament, as the young civilians did Greek, Latin, and morality, in another place: he was glad to find the mover of the proposition had no such intention. It was a previous examination and a test, then, to which they were to be subjected. If it were a high test, or even a low test in that language, the time required for the qualification, he thought, would be so long, that they would not be able adequately to supply the wants of their military service: the supply would not be equal to the demand. Even at Haileybury and at Addiscombe, where the demand was not one-tenth in the ratio of their general military service, and where the instruction was backed by the force of regulations and statutes, and conducted by a host of professors and teachers acting upon a system which had been established for years, he believed it had lately been found that these institutions could not supply the numbers which were required. If this difficulty had been experienced, and this inconvenience felt, where the numbers required were so few, how much more likely were it to happen where the numbers required were many. If it were a low test, a mere smattering of the language that was required, it would have this disadvantage; that the cadet with the merest possible knowledge of the language would go out qualified by their regulation, so as to render it unnecessary for the authorities abroad, or for the cadet himself, so far as the regulation was concerned, to take any further trouble on the subject. Another great inconvenience, which had been often dwelt upon in that court, would outweigh, in his opinion, the whole advantage, if there were any, to be derived from the proposition of the hon.

gentleman. For very good reasons cadets were appointed at the early age of sixteen; from the uncertain wants of their military service, they could not be appointed before-hand—the directors did not know that they should have the power to bestow these appointments till the time came. Now, any man, having the least observation of human nature, must admit the great indiscretion of allowing youths of such an age the control of their own time for a year or two, or perhaps more, that might be necessary to acquire a knowledge of the test, amidst the allurements and dissipations of a large or small town. The love of indolence and pleasure, natural to man at all periods of life, but more especially at an age when reason and reflection are not very strong, would be likely not merely to divert them from all useful pursuits, but to engage them in others of a very contrary and pernicious tendency. Were these inconveniences, he would ask the court, at all counterbalanced by any necessity of the case, as made out by the mover of the proposition before them. The truth was, there was no necessity at all: a gallant officer (Colonel Lushington) had given them the best possible evidence from matter-of-fact, that no such necessity existed. In listening to the speech of the hon. gentleman (Mr. Hume), one would have supposed that cadets were entrusted with important commands the moment they went to India; but how stood the fact? A month or two often elapsed before they joined their regiments as ensigns. Here they found themselves not only among associates of their own standing, and others their seniors, as ensigns, but among lieutenants, captains, majors, and lieut. colonels, whose authority and example would incite them to the attainment of the knowledge which was necessary to the due performance of their duty. The progress of their promotion also aided the same object: a year or two often elapsed before the ensign was made a lieutenant; many years, sometimes fifteen or twenty, before he became a captain, and double that number before he attained the rank of lieut. colonel. Did not this state of things—this progressive preferment, afford the court sufficient assurance, that long before the cadet could attain a rank which would give him a command of any importance, he would have ample opportunity to acquire, and the authorities in India would have ample opportunity to exact from him, a competent knowledge of the language of the soldiery whom he might be called upon to command. Instead, therefore, of consuming his time in this country in acquiring a mere tyro's knowledge of the language, it would be better employed by sending him at once to India, where, on the thea-

tre of his future operations, in the midst of the language which he was to learn, he could best acquire it, and with it his professional knowledge at the same time. For these reasons he should oppose the motion, being quite satisfied with leaving the whole question to the vigilance and care of the Court of Directors, and of the constituted authorities in India.

Dr. *Gilchrist* now rose, and said, he threw himself on the indulgence of the court, while he made a few remarks in reply, as the seconder of the motion.

Mr. *Poynder* rose to order. It gave him pain, he said, to offer an objection to hearing the remarks of any proprietor, but the circumstances under which the learned doctor pressed himself on their attention were such as rendered it necessary to make the objection. The learned gentleman did not urge his claim to be again heard as a matter of right, but as a matter of courtesy. He was aware, that in all cases, this courtesy was extended to the individual making a motion, but not to the seconder; and if it were to be granted in this instance, he could not see on what ground it should be refused in any other. A precedent would thus be established, which would most inconveniently protract the business of the court. The learned doctor had said—

Mr. *Hume* begged to say a word to order. Perhaps it would save some of the time of the court, of which the hon. proprietor (Mr. *Poynder*) seemed so economical, if he were informed that his learned friend (Dr. *Gilchrist*) did not intend to press his claim to a reply. (*Hear! and a laugh.*)

Mr. *Hume* said he would trespass a very short time on the court in reply. Upon the paltry objection to his motion, that it had been brought forward from interested motives in favour of particular individuals, he would not condescend to remark, further than to say, that they were altogether unworthy of his notice. He was above any such conduct; he had brought forward the motion in the discharge of what he considered his duty, being firmly convinced, that if his suggestions were adopted it would be most advantageous for the interests of the Company. To the principle on which his motion rested he had not heard any reasonable answer; the objection of the gallant officer, and his statement respecting the general disposition of the officers to acquire the Hindoo language, did not at all apply to his motion. It might be correct as to the officers of the Bengal establishment; for certainly there was a great difference between them and the officers of the other presidencies as to the knowledge of the native language. In this respect, the officers of the Bengal establishment had the superiority—but it was well known

that in the Madras regiments the native officers were obliged to act as interpreters for the European officers. If this was the case in only one regiment it would be a sufficient ground for his motion, for he would contend, that not one officer ought to be put into a situation where he might be called on to command without being well acquainted with the language of those over whom he was placed. The hon. director (the deputy-chairman) had said, that this was a subject in which the directors had taken a deep interest, and that they had been very diligent and active in promoting a knowledge of the Eastern languages among the officers of the native regiments. He would soon give them an opportunity of letting the proprietors know what they had done in that respect, by a motion which he should submit before the court rose. He would move for copies of all instructions sent out to India on the subject of European officers learning the Eastern language, and what encouragements they held out for the acquisition of that language; but, in the meantime, he would state, that there were fifty Golendauz corps in India without any interpreters at all. He could state, as a fact which had come under his own observation in India, that the Bengal artillery was without any interpreter; and the minute of the Court of Directors which the hon. deputy chairman had read, was an answer to a representation of that fact which had been made five years before. Was this the parental kindness with which it was said the directors regarded India? He would state, that after the experience of the negligence of the directors on this important point, he was not disposed to trust them farther: they had not shewn that it was one in which a reliance might be placed on their promises. The hon. deputy chairman had said, that he would trust to the natural disposition of men to acquire the Hindoo language. Now that was the very thing to which he should not trust: the natural disposition of man was to be idle, and to trust to the exertions of others, unless some inducements were held out to encourage him to active exertion and application. Should they, then, with the experience which they had on this subject, trust so important a point to the natural disposition of men? or were they to adopt the childish plan of coaxing officers into a knowledge of those languages, by holding out a promise of 150 rupees for every lesson they learn? Would it not be better to do away with the necessity of such rewards, by making it imperative on all cadets to acquire a knowledge of the language before their appointment? But, said the hon. director, "leave it to us; we are not interested parties, and we will do what is best to promote a knowledge of the eastern languages among our military officers."

He would answer, that he did not wish to leave it to them; and for this reason, that they were interested parties—that the value of the situations they had to bestow would be lessened by the necessity of the greater preparation which it would be necessary to make in order to fill them. Were the court, then, to trust this important matter to those who had an interest in neglecting or retarding it? If they did so, they would find that the same system would go on, and officers to whom most important commands might be entrusted, would be ignorant of that which it was of such consequence for them to know. He regretted to have heard on this occasion, what he could not help calling the abuse of morality, as if young men would have their morals corrupted by being obliged to reside in London or Edinburgh for a time, while they attended lectures or studies in the Hindoo language. Did not a vast number of children and young men attend the charter schools in this city, and go home every day to board with their parents or others, and without any injury to their morals? Was it meant to be contended, that they would be more exposed to the danger of immorality here than in Oxford or Cambridge? He would contend that no danger of the kind existed, and that the fear of it was a most flimsy argument, when urged as a reason for sending out young lads as cadets before they were fully qualified. There were many places in London and its vicinity where young men about to be sent out as cadets might obtain the necessary instruction in the Hindoo language; and he contended, that the Company ought to avail themselves of those means. But it was said, why not teach them the language in India? He answered, that that experiment had been already tried and failed. A cadet corps had been established in one presidency, on the conviction that most of the cadets sent out were unfit for immediate employment; but, after years of trial, it was found that it would not succeed, and it was at length given up. It was then clearly ascertained, that India was not the best place to learn any thing which ought to have been acquired before the appointment of the cadet took place. It was of the utmost importance, that young men, whose services might be immediately required on their going out, should not have on their arrival to learn that without which it was impossible that they could be fitted for command. This was more particularly the case in a time of war, when young men were sent to join the army within two or three weeks after their arrival out. It was absurd to talk of a period of fifteen or sixteen years before a subaltern could arrive at the command of a company. He himself knew an instance where an ensign, the day after

his appointment to a regiment, took the command of a company; and that must be the case in many instances, as field officers cannot hold a company, and where there are not a sufficient number of captains. He knew that in Cutch, when a number of troops were stationed to meet a rupture of the neighbouring chiefs, there were in the corps only two captains, and the command of four companies was entrusted to an ensign of a few weeks' standing. He did not mean to say that young men thus placed might not display very considerable talent, but if they were without the knowledge of the language of those who were to obey their orders, would not their talents be very much limited in their operation. He would not leave the matter in the hands of the directors, who shewed how unfit they were to be trusted in a case where their own personal favours and patronage were opposed to the best interests of the Company. After having seen that they could sacrifice that interest to their own private views, he would no longer rely on their promises.

The *Chairman* observed, that before he put the question for the decision of the court, he must say, that whatever might be the sentiments of different proprietors on the motion then before them, there was none as to the great importance of the subject to which it referred. That subject had been before gravely discussed, and the steps taken respecting it had, in his opinion, been calculated to reach the end in view. He did not at all deprecate the agitation of the subject at the present day; but he must say, with reference to the very wide range taken in the speech of the hon. mover, that it was rather hard on the army of India to say that its officers were negligent, and did not use common diligence to acquire a language, the knowledge of which was so important to them in the discharge of their military duties: such a charge was, he must say, a very pointed libel on the army of India. If they looked back to the achievements of that army for the last thirty years, they would find a more conclusive answer than he could give to the charge now made against them. Let it be remembered to their honour, that when, in the year 1792, the Company acquired a considerable addition of territory, it was from the officers of the army that the then governor-general, Lord Cornwallis, selected men, who, from their knowledge of the language of the country generally, and their acquaintance with the manners and feelings of the natives, were considered the most fit to take the command of the newly acquired districts. From that period down to the present time, the army had constantly produced men not less distinguished for their
bravery

bravery in the field than for their talent in business, and whose knowledge of the language, character, and habits of the natives was productive of the greatest benefits to the company. At this day, it was well known that when situations requiring in the officers who fill them a knowledge of the oriental languages became vacant, there were many candidates; did that shew that the study of the Hindoostanee language was neglected amongst them? Was it not, then, most unfair to pass a general censure on the officers of our eastern army, and to have it go abroad to the world that they were unfit for the duties to which they were called? He had only one word more to say—it was respecting what fell from the hon. proprietor (Mr. Hume) as to the artillery corps. It was only necessary to say in reply to the honourable gentleman's statement, that the artillery, at the time to which he referred, were all Europeans. (*No, no! from Mr Hume.*) He understood that the fact was as he stated it, and this circumstance should induce him to make some allowance for a little remissness in the officers on the point to which the hon. proprietor had adverted. He did not mean to say that he was prepared to sanction any negligence, if it were as was stated; but still the fact of the men whom they commanded being all Europeans, should cause an allowance to be made which might not be made in other cases. To come back to the general question, he would say, that if the court thought proper to agree to the motion before them, the directors would of course pay every attention to their recommendation. He was aware, that when the proprietors gave a recommendation to the directors, it was always with the view that it should be acted upon (*Hear hear!*): but if that was the expectation of the Court of Proprietors in the case before them, candour had him say, that it could hardly be otherwise than disappointed. It should be borne in mind that the directors were the sworn functionaries of the Company, bound to act to the best of their judgment and ability; and, however much they might collectively and individually be disposed to listen to the suggestion of the proprietors, still, if that suggestion were contrary to what they themselves conceived to be for the Company's advantage, they would be bound to reject it. In every point of view he considered the present motion as unnecessary. (*Hear, hear!*)

Mr. Hume, in explanation, begged to say, that the hon. chairman was mistaken in supposing the Bengal artillery to be all Europeans; the proportion of natives among them was as four to one European.

The Deputy Chairman observed, that the Bengal artillery were, some years ago,

exclusively European; but that since a corps of Golundauz were added, and that, in consequence, interpreters were now attached to that corps also.

Strangers were then ordered to withdraw, and the question was put to a show of hands. Six hands were held up for the motion, and more than double that number against it.

The Chairman declared it to be negatived.

THE SAME SUBJECT CONTINUED.

Mr. Hume, pursuant to the intimation given in the course of his reply, rose to move for certain papers, in order that the Court of Proprietors might have an opportunity of judging how far the directors were sincere in their alleged desire to give encouragement to the study of the native language in India. He wished to see copies of all the instructions sent out to the governments of the several presidencies, for the purpose of encouraging the cultivation among the officers of our army of the study of the eastern language. It was said by more than one gentleman, in the course of the discussion on the last question, that the directors were particularly diligent on this occasion. He believed it would be found that the fact was not so, and it was for this reason that he was anxious to learn how far they had gone on this point; he feared it would be found that their labours on this subject had been much more limited than some gentlemen were disposed to give them credit for. At all events, he hoped on this occasion he should have the votes of those proprietors who had expressed themselves so warmly in favour of all that they (the directors) had done on the subject; for if they had been so active and diligent in promoting the study of the eastern languages among their military officers, there could be no objection to let their instructions to that effect come before the court. No injury could be done by acceding to this motion; here were no secrets to be divulged—no correspondence to be published, which would injure the Company's interest to have made known. He would therefore move that there be laid before the court "Copies of all despatches or orders from the Court of Directors, since 1798, to the several governments in India, enjoining or recommending European officers to acquire a knowledge of the native languages; or expressive of the importance or utility of the eastern languages to the efficient performance of the duties of European officers."

Mr. Weeding thought this a very extraordinary motion. The very moment after the general court had, by its vote, declared its perfect reliance on the vigilance and care of the Court of Directors on the subject before them, the hon. gentleman requested them to concur with him in asking

asking for papers on the same subject, to see if they would not contradict their own vote. Was ever any thing more inconsistent and absurd?

Mr. *Hume* said, he wished to see whether what several proprietors had said, as to the diligence of the directors on this subject, was correct. It was boasted by some gentlemen that the directors had done every thing for the encouragement of the study of the eastern languages which could be desired. Now he thought they had not; but that, on the contrary, they had been quite negligent on the affair, and he wished to prove it from documents under their own hands.

The *Deputy Chairman* said, that the hon. gentleman had now distinctly avowed what was his object—that it was to pass a censure on the directors as a body, for what he assumed to be their negligence with respect to the cultivation of the eastern language among its military officers. The hon. gentleman had made an allusion to some remarks which, he said, fell from him (the deputy chairman) while addressing the court that day. He did not pretend to say that he could recollect every thing which passed his lips in the course of his address, therefore he could not say whether he had used the words “the directors had used all diligence in promoting and encouraging the study of the Hindoo language;” but he remembered that the gist of his argument was this—that the Court of Directors had afforded great encouragement to officers to learn the language, by the instructions they sent out—that no staff appointment should be held by any officer who had not a competent knowledge of the Hindoo language. This was the encouragement afforded by the directors on which he meant to insist; and he was prepared to contend, that the directors, having acted upon that principle, ought not to be made the objects of such a censure as it was the intention of the hon. gentleman to cast upon them. He hoped, therefore, that the court, in justice to the directors, would put a negative on the motion.

Dr. *Gilchrist* was about to address the court, when

Sir *J. Sewell* rose to order; and said, that the mover of the question having made his reply, no one outside the bar had, after that, a right to speak on the subject. It would therefore be irregular for the hon. and learned proprietor to press himself, at this period, on the attention of the court.

Mr. *Hume* expressed his regret that the learned judge (Sir *J. Sewell*) had not shewn a disposition to deal out that justice which he had been in the habit of dispensing to others equally to one side of the court as well as to the other, on this occasion. The learned judge said, that after the mover had spoken in reply, no man

had a right to speak on the same subject. If this were true, and that there was any irregularity on the occasion, it was on the part of the hon. chairman, who had spoken after the mover's reply—but the learned judge had forgot to call the chairman to order.

Dr. *Gilchrist* said, that there seemed as great solicitude on the part of some proprietors to prevent him from opening his mouth in that court, as if he were an incendiary. It did not argue much for the cause of the directors, which some proprietors seemed to think so good, that their friends should be anxious to shut out all remarks on their conduct; nor did it speak much in their favour, that the motion of his hon. friend for the production of those papers should be refused. As to the indisposition of some gentlemen to hear him, he would only say, that he was exercising a right which he would not forego in deference to their opinions; and he hoped the time was not far distant when he should submit his own case for the consideration of the court. As to the question respecting the instruction of cadets in the Hindoostanee language, he must say, and he could say it from his own experience, that if they did not learn at least the rudiments of it in England, they would not learn it when they arrived in India. The learned proprietor was entering into the general question, when he was called to order by a proprietor, who observed, that it was quite irregular to go into the discussion of a motion after the mover had been heard in reply.

Sir *C. Forbes* protested against the doctrine which would go to restrict any proprietor from expressing his sentiments on any question before the court, at any period of the debate before the question was put to the vote. It was well known that in the House of Commons, if any member chose to deliver his sentiments, he might do so after the mover's reply, and at any period before the division on it had commenced.

Dr. *Gilchrist* resumed his address, and observed, that the learned judge (Sir *J. Sewell*) had talked, among other subjects, of bullocks; perhaps it would be more natural if he had said jack-asses—(some murmurs of disapprobation).—The learned gentleman again entered into the question of the learning of the Eastern language by cadets, and was proceeding, when

Mr. *Wigram* rose to order. He fully concurred in what had fallen from the hon. bart. (Sir *C. Forbes*), as to the right of every proprietor to speak on the subject, at any period before the division commenced; but he submitted that, in the exercise of that right, the proprietor should confine himself to the subject before the court, and not enter upon one on which the court had just before decided.

Dr. *Gilchrist* again resumed, and again adverted

adverted to the question of the instruction of cadets in the eastern language before their leaving England. He was called to order by

The *Chairman*, who expressed a hope that the learned proprietor would not go again into a subject on which the court had so recently pronounced its opinion. Allusion to the subject generally might be unavoidable, in speaking to the motion before the court; but it might be made without entering upon the discussion of the question which was disposed of.

Dr. *Gilchrist* proceeded. He thought the motion of the hon. gent. (Mr. Hume) was quite necessary, as it was important to the proprietors to know what the directors had done for promoting the study of the Hindoo language among their military officers. He fully concurred with his hon. friend in thinking, that little reliance ought to be placed upon the promises of directors on this subject. He remembered that, about five years ago, mention was made in that court of the necessity of giving proper instruction to the midshipmen engaged in the Company's service. A promise was then made by the directors that the subject should be attended to; but since that time nothing had been done in the matter. How could he, then, place much reliance on the assertions of the directors as to what had been done in the other case? If they had been as active as it was said, if they were really sincere in promoting the knowledge of the Hindoo language among their military officers, why should they wish for concealment? why endeavour to hide their light under a bushel? But he feared that their wish for concealment proceeded from their conviction that the course they had pursued was not that which the court could approve; he feared it was in this case as it was in that of the midshipmen which he had mentioned.

The *Chairman* begged to put to the hon. proprietor himself, whether the course he was pursuing was quite regular. He was proceeding from one irregularity to another.

Mr. *Hume* contended, that the course which the learned gentleman was pursuing was quite correct.

Dr. *Gilchrist* did not resume his remarks, and the *Chairman* put the question.

Six hands only were held up in favour of the motion. The *Chairman* declared that it was carried in the negative.

SALARIES TO PROFESSORS.

Mr. *Hume* said he had one or two other motions to submit to the court. The motion which he was now about to submit was one which would occupy the attention of the court only for a very short time: his object was to obtain an account of the amount of salaries and allowances paid to professors and assistant

professors in the Company's schools in England and India, distinguishing the actual salary from the allowance for house-rent or other necessaries. It was reported, that very considerable additions had been made to the allowances of the professors, so that it was not now known what their salaries were. It was desirable that this should be ascertained; he would therefore move for "an account of the annual amount paid to each professor and assistant professor in each of the colleges or seminaries of education in England and in India, stating the amount of regular or fixed salary, and of allowances, whether for house-rent or otherwise; also, whether a house or quarters are provided for them; for the past year, as far as the same can be made out."

The *Deputy Chairman* said he could not then recollect the particular items of the accounts presented to the court of the expenses of Addiscombe and Haileybury a short time back, but he believed they embraced the accounts which the hon. gent. called for, and if they did, he put it to the court whether the present motion was necessary.

Mr. *Hume* said, that if the accounts for which he called were already before the court in any shape, he had no wish to give any further trouble on the subject; but he believed that on inquiry it would be found that they were not, and that was the reason why he now called for them. If, however, there was any difficulty in coming at any of the documents for which he sought, he would alter his motion so as to suit the convenience of the Court of Directors. He would shape it in this way—that the accounts should be produced as far as the same could be made out.

The *Chairman* asked whether the hon. gentleman's motion embraced the same object which had been mentioned in a request to the Court of Directors signed by him and another hon. proprietor? (Dr. *Gilchrist*.)

Mr. *Hume* replied that they were the same in substance.

The *Chairman* observed, that there might be some difficulty in getting at them in the shape which the hon. proprietor required.

Mr. *Hume* repeated that he had no wish to give any unnecessary trouble, and he would therefore add to his motion the words "as far as the same could be made out."

The *Chairman* said, he had no objection to the motion thus shaped.

It was then put to the vote, and carried in the affirmative.

Mr. *Hume* said, that he had another motion arising out of the same subject, to which he did not anticipate any objection. He was given to understand that certain sums had been paid, as gratuities for extra services, to some professors of the oriental

languages in the Company's service. Those sums could not, he supposed, be very much, but he should wish to know their actual amount. He would therefore move for "a return of all sums, exclusive of fixed salaries and allowances, paid to teachers or professors of oriental languages in India and in England, for extraordinary services of any kind connected with the oriental languages, stating the names of such teachers or professors, the dates on which paid, and the amount of each grant."

The *Chairman* said, he did not see any objection to the information which the hon. gent. desired.

The question was then put, and carried in the affirmative.

ENCOURAGEMENT OF PUBLICATIONS IN THE ORIENTAL LANGUAGE.

Mr. *Hume* said, there was one other motion which he had to submit to the court, to which he hoped there would be no objection. It had been represented to him, that the Company were in the habit of giving encouragement to the publication of works in the oriental language, and on oriental literature and other subjects. This he understood was done by subscribing for a certain number of copies of such works; but, if he was correctly informed, a great degree of partiality was exercised on such occasions. Some of the works thus subscribed for were re-sold, some of them distributed, and others were laid by in the Company's stores. In some cases it was stated that large sums had been paid, while in others, where equal merit existed, their amount had been very trifling. Now, in order to remove any doubt on the subject, he would move for "a return of all sums advanced by the East-India Company at home and abroad, since 1793, for publications or books connected with the native languages of India, stating the name of the books and publications, and their author's name, the number of copies of each book subscribed for, and whether the copies so subscribed and paid for were ever received by the Company, and if received, whether these copies were sold or distributed, or now remain in store."

The *Deputy-Chairman* said that this motion, if the court thought proper to agree to it, ought to be carried with the addition of a tail, "as far as the same could be made out," for he was certain that part of the information sought for it would be impossible to grant. As far as the Company had encouraged and subscribed for works in this country, the account could be given; but there were works published in India which had also been patronized by the government there, but to what extent, and at what expense, there were not any means of ascertaining by the records at home. It would be for the hon. gent. to say whether he would be satisfied with putting his motion in a shape

in which some return could be made to it if it were carried.

Mr. *Hume* did not intend that his motion should embrace any matter of which no satisfactory information could be given by the directors. At the same time that he made this motion, he had no hesitation in stating what was the particular object he wished to obtain. He had heard it said, ever since he came into the court, that a publication called *The Asiatic Journal* was an object of the Company's peculiar patronage; that a great part of the expenses of the reporting for, and printing of that work were paid by the Company. His own opinion was, that this was a calumny altogether unfounded; but, in order completely to remove it, he was anxious to have the account he had mentioned. The motion was now put to a shew of hands, and the *Chairman* declared that it was carried in the negative.

Mr. *Hume* observed, that from the appearance of the hands held up at each side, he was of opinion that the majority had been in favour of his motion. He therefore requested that the *Chairman* would put the question again, and let a division take place.

The *Chairman* consented to this request, and ordered the "ayes" to the right, and the "noes" to the left side of the court.

Tellers were then appointed, and, on counting, the numbers were declared to be

For the motion	8
Against it	39
	—

Majority against it . . . 31

The court then adjourned.

. We are not displeased with the occasion afforded us by Mr. *Hume* of contradicting such a statement as the above, which the *Chair* doubtless omitted to do, regarding it as one of those which are properly treated by them with silent contempt. For our own parts, however, we can assure Mr. H. that the whole expense of printing and conducting the *Asiatic Journal* falls entirely on the proprietors, and that even the same degree of patronage and support which the East-India Company extend to other works relating to East-India affairs is not extended to this. No measures are advocated or defended by us but such as we honestly believe to be right; for we are free to censure as well as to praise: the success of our publication, therefore, we are happy to say, is not owing to secret support, but must rather be ascribed to this cause—namely, that the majority of the public interested in, and conversant with Indian affairs, approve of its principles.—EDITOR.

Burmese War.

London Gazette, Jan. 14.

Copy of a letter from Brig. Gen. Morrison, C. B., to the Adj. Gen. of the Army, dated Arracan, 10th May 1825.

Sir: I have the honour to enclose, in original, two despatches just received from Brig. Gen. M'Bean; one, dated 23d April, announcing the occupation of the island of Ramree, and the other the 5th of May, that of Sandowey, on the Main.

From both places the enemy timely retreated, and though they did not afford an opportunity for the display of British valour, his Excellency will be gratified in learning, that on both occasions such ardour was displayed as gave assurance that the

service would be maintained with honour and credit.

The directions of the Governor-General have now been so far fulfilled, that I may report the Burman arms to be expelled from the Arracan territory, and that the four provinces of Cheduba, Ramree, Arracan, and Sandowey, are now subject to the orders of his Lordship.

I have, &c.

J. W. MORRISON,

Brig-Gen. commanding S. E. Division.

[The despatches above referred to are inserted in our last vol. p. 724.]

HOME INTELLIGENCE.

DECCAN PRIZE MONEY.

A decision has at length taken place upon the points in dispute respecting this important subject.

The details given in an article which may be found in our last volume, p. 59, will afford a concise view of the circumstances of the case. It is merely necessary to premise, that the claims of the Deccan army related to property classed under three heads: 1. The Poonah booty, composed of treasure found at Poonah, gold and jewels dug up at Nussuck in Candeish, treasure found in the Peishwah's forts, and deposits made by that prince for warlike purposes. 2. The Nagpore booty, found in the territories of the Bhoorlah rajah. 3. The Mahidpore booty, being the spoils of the Mahratta camp after the battle, captured by the Mysore cavalry.

The transactions relating to this question were brought, in the article referred to, down to April 1825. On the 2d June the trustees made their report to the treasury, in which they stated, that the nature and amount of the booty captured, and the circumstances of its capture, are

Asiatic Journ. Vol. XXI. No. 122.

very different from what they were represented previous to the minute of 5th February 1823, and warrant of 22d March; that no booty had been captured at Nagpore, that none had been realized at Mahidpore, and that the crown had no claim upon the East-India Company on account of booty captured at those places. They stated that it would be difficult, if not impossible, to ascertain under what circumstances and by what troops the daily captures had been made (which they stated did not exceed the amount of £150,000), that the army of the Deccan did not capture the treasure of Nussuck; that the flight of the Peishwah was caused by the operations of the whole army, and that the deposits of money were not even known till June or July 1818, when the Deccan army was broken up. Before the trustees submitted a scheme of distribution, they therefore prayed the direction of the treasury.

The Lords of the Treasury, Dec. 6, convened the counsel for the respective claimants, and stated to them (see p. 103) the substance of this report; fixing the 6th of January for the day on which they

2 R

would

would hear their arguments on the objections. On that day their Lordships accordingly met.

Before the argument commenced, Lord Liverpool stated that a memorial had been presented on the part of Lord Hastings, praying a reference of the whole case to the privy council. This the Board of Treasury thought impracticable; but wished to know whether both parties would consent that what remained to be decided, as to the application of the warrant, should be heard before that tribunal.

The counsel for Sir Thomas Hislop agreed; but Lord Hastings' counsel objected to a partial reference.

Mr. Harrison and Dr. Jenner were then heard for the Deccan army, on the objections to their claims on the report of the trustees. They denied any misstatement or assumption of facts unwarranted. They were prepared to shew that the booty taken at Nagpore was protected by no capitulation, and that the East-India Company had no right to withhold it. The booty at Mahidpore fell into the hands of the Mysore horse, as was admitted; here was a capture, although the booty was not realized. The trustees laboured under an error in point of law, if they considered no treasure to be actually captured of which the army did not take manual possession. To establish the position that *capture* did not mean *seizure*, but acquisition of dominion over property, several cases were cited, *e.g.* that of Chinsurah, where the Company were compelled to refund the proceeds of a suit instituted upon a contract made by the governor of the conquered place previous to its capture, as prize appertaining to the crown. On this principle, they contended that the army acquired a vested interest in the whole booty, arising from the captures at Nagpore, Mahidpore, and Poonah. If a different principle prevailed in Indian warfare, and possession were essential to the title of the captors, the army could seldom claim; for, on the instant of capture, the civil servants of the Company assumed the control. The difficulties anticipated by the trustees in ascertaining the divisions entitled to participate in particular captures could not exist; for statements of the services of the various divisions had been made out, and could be furnished, which would suffice for a scheme of distribution. If such difficulties did, however, exist, this was no reason for transferring the booty to a third party.

Mr. Adam and Dr. Lushington, for the Marquess of Hastings and the grand army, simply considered whether the booty referred to by the trustees was, under the warrant of his Majesty, prize to the Deccan army, or distributable amongst the whole forces. That instru-

ment gave to the Deccan army all the booty taken at Poonah, Mahidpore, and Nagpore, before March 31, 1818; but they were entitled to nothing else, unless they could shew they were the actual captors. In default of such proof, the booty captured must be distributed, by virtue of the warrant, amongst all the forces. In regard to the doctrine imputed to the trustees, that possession was essential to capture, it was not fairly deducible from their report. Though manual possession might not be essential, the dominion must be clear and absolute, not doubtful. How did the case stand with reference to the several classes of booty mentioned in the report of the trustees? The treasure found at Nassuck could not come under the head of booty taken at Poonah, for at the time of the adjudication their Lordships knew not that any considerable sum had been acquired in that open town. Had the Deccan army proved their title, because some of the divisions passed through Candeish in pursuit of the Peishwah? This capture resulted from the general operations of the campaign. The same principles applied to the deposits and arrears of tribute. If the booty in the Peishwah's territory were referable to the final overthrow of that prince, it could only be the property of the whole army; for Col. Adams, who defeated the Peishwah on the 17th April 1818, and Sir John Malcolm, to whom he surrendered on the 3d June, were both under the immediate orders of Lord Hastings.

Mr. Harrison, in reply, observed that he did not consider that the question now related to the claims of particular divisions, but whether the booty belonged, under the warrant, to any part of the army. The booty was captured by some division or divisions of the army; and this capture, he contended, took place when the Peishwah was expelled from his dominions, and his territories were conquered. All the public property then vested in the crown; and if it so vested, was it not granted to the conquerors?

Although the Peishwah did not surrender till afterwards, the booty taken in his dominions belonged to those who compelled him to fly. But how could the grand army claim to participate on the ground of his personal surrender, when it was dissolved on the 11th February?

After hearing these arguments, their Lordships, on the 16th January, came to the decision recorded in the subjoined documents, which, being highly important, we insert entire.

Treasury-Chambers, Jan. 18.

Sir: I am commanded by the Lords Commissioners of his Majesty's Treasury to transmit to you, for the information of

the Marquis of Hastings and of the Grand Army, on whose behalf you are appointed to act in the matter of the Deccan booty, a copy of a Treasury minute of the 16th inst., containing the decision of their Lordships upon the points therein mentioned; and I have also the honour of conveying to you a copy of their Lordships' minute of the 28th of September, upon the reports from the Duke of Wellington and Mr. Arbuthnot, which induced their Lordships to deem it necessary to hear further arguments on either side, on the subject of this booty. I am also to state, that the trustees have been instructed to prepare a scheme of distribution, in conformity with the decisions contained in the minute of the 16th instant, in order that my Lords may submit the proper instrument to the King for carrying the same into effect under His Majesty's authority. I am, Sir, your most obedient servant,

(Signed) J. C. HERRIES.

Lieut.-Col Doyle, agent for the Marquis of Hastings and the Grand Army.

Copy of Treasury-minute of 16th Jan. 1826.

Present—The Earl of Liverpool, the Chancellor of the Exchequer, Mr. Berkeley Paget, Lord Lowther, Lord Granville Somerset.

My Lords, assisted by the Trustees of the Deccan booty, Lord Bexley and the law officers of the Crown, having heard counsel on behalf of the Marquis of Hastings and the grand army, and also on behalf of Sir Thomas Hislop and the army of the Deccan, upon the subjects of discussion relating to the distribution of the Deccan booty, which have arisen out of the difference between the actual circumstances attending the capture of a large proportion of that booty, as stated by the trustees, and those which were assumed at the hearing before their Lordships in January 1823, and having maturely considered the arguments severally stated by the counsel, and also the whole of the documents upon the subject of this booty now before the board, are of opinion—

1. That with respect to all that portion of the booty now at the disposal of the Crown, which is described as having been "taken in the daily operations of the troops," the distribution thereof should be made to the actual captors, according to the terms and conditions of the minute of this board of the 5th of February 1823, and of the warrant of his Majesty of the 22d March following.

2. That with respect to that part of the booty which consists of the produce of arrears of tribute, rent, or money due to the Peishwah, it appears to my Lords to have been acquired by the general result of the war, and not by the operations of any particular army or division; and they are of opinion that it ought, therefore, to be

distributed in conformity with the alternative stated in their minute of the 5th of February 1823, as being "the only correct or equitable rule, if the principle of actual capture cannot be adopted, viz. amongst the forces of all the Presidencies engaged in the combined operations of the campaign."

3. With respect to the property captured at Nassuck, my Lords are of opinion that the booty recovered at that place cannot be distributed upon the principle of actual capture, and ought, therefore, to be divided amongst the forces of all the presidencies engaged in the combined operations of the campaign.

4. With respect to the booty recovered at Poonah, alleged to have been removed thither from Rai Ghur, my Lords are of opinion that this booty cannot be distributed upon the principle of actual capture to the forces by which Rai Ghur was taken, under the orders of the government of Bombay, unless it can be proved by the captors of Rai Ghur that the property in question was actually in that fort at the time when it was taken: in default of which proof, my Lords are of opinion that this booty also ought to be distributed among the forces of all the presidencies engaged in the combined operations of the campaign.

5. With respect to that portion of the booty which is stated to consist of money recovered on account of deposits made by the Peishwah, my Lords are of opinion that any part of the property which can be proved to have been in Poonah at the time when that place was captured, viz. on the 17th of November 1817, ought to be distributed to the captors of Poonah, according to the terms of the minute of the 5th of February 1823, upon the principle of actual capture; but that with respect to those parts of the above property as to which such proof cannot be established, such monies or effects must be considered as having been acquired by the general result of the war, and, as such, ought to be distributed amongst the forces of all the presidencies engaged in the combined operations of the campaign.

6. With respect to the share of the commander-in-chief in the distribution, under the several heads above enumerated, my Lords are of opinion that the Marquis of Hastings ought to share as commander-in-chief in all those cases in which Sir Thomas Hislop is not entitled to share as such, under the terms of the minute of the 5th of February 1823, wherein it is declared, "That Sir Thomas Hislop, as commander-in-chief of the Deccan army, and all the officers of the general staff of that army, are entitled to participate in the booty which may arise from any capture by any of the divisions of the army of the Deccan, until the said army of the Deccan

was broken up, on the 31st of March 1818."

My Lords are further of opinion, that the general rules of division hitherto adopted in distributing booty to the forces in India, among the several classes and ranks of the army, should be adhered to on the present occasion.

Copy of Treasury Minute of Sept. 28, 1825.

Present—The Earl of Liverpool, the Chancellor of the Exchequer, Lord Lowther, and Mr. B. Paget.

His Grace the Duke of Wellington and the Right Hon. Charles Arbuthnot, as trustees of the Deccan prize money, Lord Bexley, and also the King's Advocate, the Attorney-General, the Solicitor-General, the King's Proctor and Solicitor, attend the board.

My Lords resume the consideration of the papers relating to the Deccan booty, and read a letter received since the last meeting on this subject from Sir Thomas Hislop, dated Sept. 17, 1825, setting forth the peculiar circumstances under which he is placed with regard to the booty captured by the army of the Deccan while under his command, and stating "that the great body of persons interested in the event are extremely urgent to obtain information as to the claims laid before their lordships, and a knowledge of the scheme of distribution which may have been recommended by the trustees, before these important matters are submitted for his Majesty's approbation."

My Lords, after having advised fully with the trustees, and also with the law officers of the crown, upon all the circumstances of this important case, and more particularly upon the very material difference between the facts connected with the capture of the booty as now ascertained, and those which were assumed in the pleadings before their lordships in 1823 by the counsel for the several parties interested, and upon which their minute of the 5th of February 1823 was principally founded, deem it proper that the particular attention of Sir Thomas Hislop should be drawn to the terms of that minute, and that he should be informed that the trustees appointed by his Majesty's warrant to collect the booty, and prepare a scheme of distribution, have reported as their opinion, that, with the exception of certain sums, amounting together to about £150,000, the produce of sales of captures made in the daily operations of the troops of the army of the Deccan, no booty was captured at Nagpoor; that none has been realized that was captured at Mahidpoor; and that the whole of the booty, with the above exception, now at the disposal of the crown, fell into the hands of the officers of the East-India Company after the army of the

Deccan was broken up. That these facts being different from those which appear to have been assumed in the arguments addressed to their lordships in January 1823, they deem it to be indispensably necessary, before they can proceed to submit to his Majesty a scheme of distribution for the purpose of carrying their said minute into effect, to afford an opportunity for any further explanation and remark, with reference to these circumstances, that the parties may be desirous of offering.

My Lords at the same time desire, with reference to those passages in Sir Thomas Hislop's letter of the 17th of September, in which he complains of having been deprived of information on the subject of the claims of the army of the Deccan, that his attention may be recalled to the communication from the trustees to him, dated the 14th of January 1825, (confirmed by another of the 14th of September 1825), in which they informed him, in reply to his application "for permission to inspect the papers and documents furnished by the Court of Directors respecting the booty captured," that they were willing "to submit those documents to his examination, or to that of any number of his brother officers that he might name to them;" and they further desire that it may be stated to Sir Thomas Hislop, that my lords, upon a full consideration of the whole of the correspondence between him and the trustees, have entirely approved of the measures adopted by them, and are fully satisfied that they have pursued the course which was the best calculated to do justice to all the interests concerned in the important trust confided to them, and to lead to the speediest and most satisfactory execution of it.

LORD HASTINGS.

The Marquess presided on the 26th January at a grand Masonic festival, at Freemasons' Tavern, in honour of the birth-day of the Duke of Sussex. His Royal Highness having, in proposing his Lordship's health, adverted to his policy in India; the Marquess, in reply, observed, "I may have committed errors whilst conducting so majestic a vessel; but it should be remembered that I was often obliged to act upon the spur of the moment. Instead of 70 millions (as the royal duke had stated) there were 100 millions over whom I ruled whilst Governor-General of India; and in all that population, there was not one state that did not acquiesce in the supremacy of Great Britain; and that acquiescence arose from a conviction that it was most consistent with their own happiness. And why so? Because they saw that all intercourse with them was conducted upon the principles of immutable justice."

INDIA SHIPPING.

Arrivals.

Jan. 1. *Asia*, Stead, from Bengal 14th Aug.; off Dover—also *Admiral Cockburn*, Cooling, from Batavia and Cape; off Scilly.—2. *Palmyra*, Lamb, from Bengal 9th Aug.; off Margate.—4. *Maria*, Moffat, from Batavia and Mauritius; at Plymouth.—14. *Heighington*, Wilson, from Penang 21st Aug.; at Falmouth.—16. *Crown*, Plnder, from Bengal 21st Aug.; at Liverpool.—18. *Tiger*, Kent, from Bengal 17th Sept.; at Cowes.—19. *Hugh Crawford*, from Singapore and Penang; at Deal—also *Sir Christopher Scott*, Dun, from Batavia 15th Sept.; at Cowes.—20. *H.M.S. Liffey*, from Ceylon—also *Hercules*, Vaughan, from Batavia; at Ports-

mouth.—21. *Bengal*, M'Leod, from Bengal 27th Aug.; at Liverpool—also *Amity*, Johnson, from Bombay; in the Clyde (for Greenock).—22. *Boyne*, Lawson, from Bengal 14th Aug., and Madras 8th Sept.; at Portsmouth.—23. *Lord Amherst*, Lucas, from Bengal 31st July, and Madras 6th Sept.; off Dover—also *Mary*, Steele, from Singapore; at Deal.

Departures.

Dec. 23. *Fortune*, Moore, for Bombay; from Greenock.—27. *Asia*, Stephenson, for Bombay; from Portsmouth.—29. *Castle Forberg*, Ord, for Madras and Bengal; from Portsmouth.—Jan. 3. *Clydesdale*, Rose, for Madras and Bengal; from Portsmouth.—4. *Sisters*, Duke, for V. D. Land and New Zealand; from Deal.—5. *Georgiana*, Haylett, for Madras and Bengal—also *Darius*, Bowman, for Bombay; from Deal.—12. *Edinburgh*, Bax, for Bombay and China—also *Regalia*, Burt, for N. S. Wales; from Deal.—13. *Abercrombie Robinson*, Innes, for Bombay and China; from Deal.—15. *Norval*, Conbro, for Cape and Bengal; from Liverpool.—19. *Berwickshire*, Shepherd, for Bengal and China; *Ganges*, Lloyd, for Madras and Bengal; and *Lord Louther*, Steward, for St. Helena, Bombay, and China; all from Deal.—20. *Thames*, Haviside, for Bengal and China; from Deal—also *Emulous* (steam packet), Williams, for St. Jago, Cape, Ceylon, and Bengal; from Portsmouth.—23. *Circassian*, Douthwaite, for Bengal; from Gravesend.

PASSENGERS FROM INDIA.

Per *Asia*, from Bengal: Capt. Kelly, H.M.'s 54th regt.; Mr. G. R. Paul, civil service; and Mr. H. Thomas.

Per *Admiral Cockburn*, from Batavia: Mr. and Mrs. Shend; and Mr. Vande Zande—(Capt. Elgood and Sergeant, H.M.'s 55th foot, were landed at the Cape).

Per *Heighington*, from Penang: Ens. de la Tany, H.M.'s 87th regt.; and Mr. Dixon.

Per *Lord Amherst*, from Calcutta: Rev. Mr. Sargeant; Mrs. Sargeant; Misses Julia and Helen Sargeant; Master M. Sargeant; Miss G. Sargeant; Mrs. Carroll; Miss Mary Carroll; Master John Carroll.—(Dr. Carroll died at sea 4th Aug.)—From Madras: Lieut. Col. Andrews; Lieut. Col. Kelly, H.M.'s 45th regt.; Mrs. Kelly; Lieut. J. H. Cramer, 4th N.I.; Lieut. Steward, H.M.'s 45th ditto; Lieut. Hodgson, ditto ditto; Lieut. Maloney, H.M.'s 89th ditto; Dr. Piper, H.M.'s 45th ditto; Dr. Baikie, 6th Madras Cavalry; Dr. Stewart; J. H. Marshall, Esq.; Miss Spicer; Ann, female servant to Mrs. Kelly.—From the Cape: Mr., Mrs., and Miss M. Hovill; Ens. Deletaing.

Per *Tiger*, from Bengal: Capt. Waterman, H; M.'s 13th regt.; Lieut. Maline, ditto; Lieut. Coote, H.M.'s 59th regt.; Lieut. King, 89th ditto. Lieut. Mayne, royal artil.; Mr. Wadsworth; Dr. Bell; and Capt. William Fisher, from the Cape.

Per *Bengal*, from Bengal: Mrs. Lister and three children; Lieut. Wilson, artil.; Lieut. M'Donnel, 97th regt.; W. H. Campbell, Esq., cadet; and one native servant.

Per *Harriet* (lately arrived), from N. S. Wales: Capt. and Mrs. Boyce and five Children; Mr. E. Reyner; Mr. Le Burn.

Per *H. M. Tees* (lately arrived), from Cape and Ceylon: Mrs. Marryat and two children; Lieut. Elliott, R.N.; 60 seamen, invalids.

Per *H. M. Liffey*, from Ceylon, &c.: Capt. Blankley and officers of H.M.S. Sophie; Rev. W. G. Boyce, of H.M.S. Boadicea; Lieut. Murray, of H.M.S. Leven.

Per *Boyne*, from Bengal: Capt., Mrs., and Miss Heatley; Miss Smith; and E. Ashley, Esq.—(A. Ponton, Esq. died at sea).

PASSENGERS TO INDIA.

Per *Georgiana*, for Calcutta: Mr. and Mrs. Ashton; Mr. Arbutnot; Capt. and Mrs. Smith, 54th regt.; Miss Moore; Dr. Maxwell; Dr. Spens; Capt. O'Mera, 45th regt.; Messrs. Birley, Reynolds, Bukley, Abbott, Fisher, Ironside, Robley, King, King, jun., Dunlop, Tyffe, and M'Garrel, cadets; one servant.

Per *Abercrombie Robinson*, for Bombay: Mrs. M'Leod; Miss Elliot; Misses Charlotte, Fanny, and Jane Ironside; Capt. Bishop; Cornets Henderson,

was broken up, on the 31st of March 1818."

My Lords are further of opinion, that the general rules of division hitherto adopted in distributing booty to the forces in India, among the several classes and ranks of the army, should be adhered to on the present occasion.

Copy of Treasury Minute of Sept. 28, 1825.

Present—The Earl of Liverpool, the Chancellor of the Exchequer, Lord Lowther, and Mr. B. Paget.

His Grace the Duke of Wellington and the Right Hon. Charles Arbuthnot, as trustees of the Deccan prize money, Lord Bexley, and also the King's Advocate, the Attorney-General, the Solicitor-General, the King's Proctor and Solicitor, attend the board.

My Lords resume the consideration of the papers relating to the Deccan booty, and read a letter received since the last meeting on this subject from Sir Thomas Hislop, dated Sept. 17, 1825, setting forth the peculiar circumstances under which he is placed with regard to the booty captured by the army of the Deccan while under his command, and stating "that the great body of persons interested in the event are extremely urgent to obtain information as to the claims laid before their lordships, and a knowledge of the scheme of distribution which may have been recommended by the trustees, before these important matters are submitted for his Majesty's approbation."

My Lords, after having advised fully with the trustees, and also with the law officers of the crown, upon all the circumstances of this important case, and more particularly upon the very material difference between the facts connected with the capture of the booty as now ascertained, and those which were assumed in the pleadings before their lordships in 1823 by the counsel for the several parties interested, and upon which their minute of the 5th of February 1823 was principally founded, deem it proper that the particular attention of Sir Thomas Hislop should be drawn to the terms of that minute, and that he should be informed that the trustees appointed by his Majesty's warrant to collect the booty, and prepare a scheme of distribution, have reported as their opinion, that, with the exception of certain sums, amounting together to about £150,000, the produce of sales of captures made in the daily operations of the troops of the army of the Deccan, no booty was captured at Nagpoor; that none has been realized that was captured at Mahidpoor; and that the whole of the booty, with the above exception, now at the disposal of the crown, fell into the hands of the officers of the East-India Company after the army of the

Deccan was broken up. That these facts being different from those which appear to have been assumed in the arguments addressed to their lordships in January 1823, they deem it to be indispensably necessary, before they can proceed to submit to his Majesty a scheme of distribution for the purpose of carrying their said minute into effect, to afford an opportunity for any further explanation and remark, with reference to these circumstances, that the parties may be desirous of offering.

My Lords at the same time desire, with reference to those passages in Sir Thomas Hislop's letter of the 17th of September, in which he complains of having been deprived of information on the subject of the claims of the army of the Deccan, that his attention may be recalled to the communication from the trustees to him, dated the 14th of January 1825, (confirmed by another of the 14th of September 1825), in which they informed him, in reply to his application "for permission to inspect the papers and documents furnished by the Court of Directors respecting the booty captured," that they were willing "to submit those documents to his examination, or to that of any number of his brother officers that he might name to them;" and they further desire that it may be stated to Sir Thomas Hislop, that my lords, upon a full consideration of the whole of the correspondence between him and the trustees, have entirely approved of the measures adopted by them, and are fully satisfied that they have pursued the course which was the best calculated to do justice to all the interests concerned in the important trust confided to them, and to lead to the speediest and most satisfactory execution of it.

LORD HASTINGS.

The Marquess presided on the 26th January at a grand Masonic festival, at Freemasons' Tavern, in honour of the birth-day of the Duke of Sussex. His Royal Highness having, in proposing his Lordship's health, adverted to his policy in India; the Marquess, in reply, observed, "I may have committed errors whilst conducting so majestic a vessel; but it should be remembered that I was often obliged to act upon the spur of the moment. Instead of 70 millions (as the royal duke had stated) there were 100 millions over whom I ruled whilst Governor-General of India; and in all that population, there was not one state that did not acquiesce in the supremacy of Great Britain; and that acquiescence arose from a conviction that it was most consistent with their own happiness. PROGRESS OF EDUCATION IN BRITISH INDIA.

IN our last number we briefly treated of British government in India: we noticed the misconceptions which prevailed as to the actual condition of that country, as well as regarding the principles and forms of administration existing there; and we endeavoured to shew that the subjects of the East-India Company enjoyed a just and equitable system of government, comprehending all the securities against oppression or misrule which could be reconciled with the peculiarity of their circumstances, physical, moral, and political.

If it be admitted, as it surely must, that the state of society amongst the natives of Hindustan, their morbid sensitiveness on the subject of religion, their singular institutions, and their vast preponderance in the scale of numbers over the nation which governs them, are facts which bar all appeal to precedent, and constitute an isolated example beyond the contemplation of political theorists; it is clearly incumbent, we apprehend, upon those who are hostile to the present system, to show satisfactorily, not merely that the Government of British India is repugnant to maxims laid down with reference to societies characterized by none of the before-mentioned peculiarities, or even that such maxims are applicable to such societies, but that they can also be immediately acted upon with safety to both parties—the governors and the governed.

Such is the force of prudential considerations in this case—considerations which compose the paramount law of political expediency—that they extend to every species of intercourse with this extraordinary people on the part of aliens. Whatever may be the motive to communication, whether the establishment of reciprocal benefits, by means of commerce, or whether a disinterested and benevolent impulse to diffuse the ameliorating influence of education, the measures adopted should be well considered, and the instruments employed should be strictly supervised and controlled:—these precautions, we repeat, are equally for the benefit of all parties interested; at least for all who

are honestly interested. Such is the reflection which should accompany our inquiries into another branch of policy relating to British India; namely, the steps taken by the Company's government to improve the intellectual condition of their subjects, to enlighten their moral darkness, to dissipate their prejudices, to undermine the monstrous pile of error founded by design, and loaded with the venerable dust of ages.

This part of their duty towards their Hindu subjects, the Company are charged with shamefully neglecting. It has been asserted, with that remarkable proneness to misrepresentation which distinguishes some of the writers on East-India subjects, that this duty was imposed upon the Company, by reason of their previous inattention, in the Act authorizing the last charter, which directed the sum of one lac of rupees to be annually applied to the education of the natives of India. The misrepresentation in this case is of a complex character: it leads the public to believe that the enactment was compulsory, and that it consequently implied a previous neglect on the part of the Company's government; and it is calculated to conceal from the public the fact that this enactment was merely introduced to empower the Company so to apply the surplus of their territorial revenue. We subjoin the words of the Act itself:—

And be it further enacted, that *it shall be lawful* for the Governor-General in Council to direct, that, out of *any surplus* which may remain of the rents, revenues, and profits arising from the said *territorial acquisitions*, after defraying the expenses of the military, civil, and commercial establishments, and paying the interest of the debt, in manner hereinafter provided, a sum of not less than one lac of rupees in each year shall be set apart and applied to the revival and improvement of literature and the encouragement of the learned natives of India, and for the introduction and promotion of a knowledge of the sciences among the inhabitants of the British territories in India.—*Stat. 53 Geo. III, c. 155, § 43.*

We propose in the present number to show how unjustly a charge of indifference to the moral and intellectual concerns of the Hindus is alleged against the Company; and we are enabled to do this effectually by means of the very interesting and valuable work of Mr. Charles Lushington, which has lately reached England, entitled "The History, Design, and Present State of the Religious, Benevolent, and Charitable Institutions founded by the British in Calcutta and its Vicinity." But first we would beg leave to quote the following passage from the pen of M. Sismondi, a writer who has unfortunately been deceived into a strange misconception of facts respecting British India, but who, when reasoning upon abstract principles, is less to be distrusted:—

The English (says he) are really, in respect to their subjects, the Hindus, in the relation in which the absolute governments of Europe pretend to be in respect to their subjects, when they arrogate to themselves the right of judging what is or is not suitable to man; when they speak of the people as if they themselves, instead of being a part of the people, were angels. The English are really of a superior race compared with the Hindus; they know better than the inferior race itself what is suitable to it; they may aspire to be the tutors, the instructors of their subjects; whilst our rulers, taken from amongst ourselves, ought to be content to be our representatives. Nevertheless, the English feel that the sovereign power with which they are invested, does not, and ought not, to extend so far as to control the religious opinions of their subjects. They have respected—they have protected—the national religions; this was their duty as governors, and they have fulfilled it. This duty, however (the writer proceeds justly to observe), is not contrary to their obligation, as men and Christians, of revealing the light to their subjects; of raising them, gently, to a purer religion; of preserving them by public authority

authority from acts contrary to morality and to the progress of civilisation, which the civil law has always the right to repress.*

Mr. Lushington, in his preface, adverts to "the practical refutation, afforded by his work, of the charge of indifference to the interests of the natives, which," he observes, "has oftener than on one memorable occasion, been so precipitately and unjustly urged against the British name in India;" though he laments, as we have often done, the unnatural apathy evinced in England generally with regard to Indian affairs, which renders hopeless every attempt to excite an interest upon this subject.

Mr. Lushington has classed the various institutions under three heads: religious, benevolent, and charitable. We shall adopt what we think a better mode of division (for the distinction between benevolent and charitable institutions is not very apparent, and the latter term may even be extended to religious institutions); we shall distribute them into two kinds: 1st, such as are exclusively supported by the Government; and 2d, such as have originated in private benevolence, though patronized and partly supported by Government.

The first institution we shall notice is the Government Sanscrit College, established in 1821. This was not the earliest instance of such an institution. The Madrisa, or Mohammedan College, had been founded in 1780, and the Hindu College at Benares in 1794. In 1811 the Government had contemplated the foundation of two new Hindu colleges in the districts of Nuddeah and Tirhoot, with the annual provision of 25,000 rupees. But, upon mature inquiry, it was found that provincial seminaries of this description would not ensure the advantages contemplated in their establishment; and that the formation of a collegiate institution in Calcutta was of far more importance in every point of view. Government accordingly allotted about 1,20,000 rupees for the purchase of ground and cost of buildings, and assigned the annual allowance of 30,000 rupees for the support of the college, under the superintendance of a committee. The course of study in the Sanscrit College is comprehended in the following classes: three grammar; one general literature; one rhetoric and prosody; one law; one logic. Provision is likewise made for the attendance of the native pupils of the highest class on a course of lectures on natural and experimental philosophy, and for the cultivation of this branch of study by those who possess inclination and talents. The course comprehends mechanics, hydrostatics, pneumatics, optics, electricity, astronomy, and chemistry. A proficiency in the English language is properly made an indispensable qualification for admission to the highest class.

Conformably to the ancient practice of the Hindus, a portion of the College funds is assigned to defray stipends to one hundred students, who are either strangers or indigent. In order to diffuse throughout the widest circle the advantages of native education, the students are not only not confined to Calcutta and its vicinity, but it is a rule of the College that not more than one-third of the whole number of students on the foundation shall be fixed residents of Calcutta; the remainder are to be the sons of individuals inhabiting the provinces subject to the presidency.

Although the principal object of Government in founding this college was the cultivation of the Sanscrit language and Brahminical literature—a literature held in pious veneration by their subjects, deeply interwoven with their domestic habits and their religion, and comprizing the only records of their history—yet, by the encouragement given to the attainment of the English language

* *Revue Encyclopédique*, Dec. 1824, p. 642.

language and the sciences of Europe, a connexion is established between Hindu and European learning:—

The union being thus effected in one case, says Mr. L., it may hereafter be comparatively easy to carry the combination into other departments, and the improved cultivation of science and literature may be thus successfully and extensively produced. Although, therefore, it may be the immediate object of the institution to cherish Hindu literature, yet, it is not unreasonable to hope that such pursuits, fostered by European encouragement, may awaken curiosity to more enlightened studies, and tend, by the gradual diffusion of European information, to the promotion of useful learning and sound morals.

The Madrissa, or Mohammedan College for the study of the Arabic and Persian languages and Mohammedan law, was founded in 1780 (as before stated) by Mr. Hastings, at whose recommendation the Government assigned lands of the estimated value of 29,000 rupees per annum for its support. This allowance has been since increased to 30,000 rupees; and very great and salutary reforms have been recently introduced into this institution, which, from certain defects in the system of tuition and discipline, and the want of diligence and zeal amongst the native heads of the college, had fallen into disrepute. The college is now rising into vigour, reputation, and usefulness; a new structure is erecting for it in a more convenient spot, and the sum of 1,40,537 rupees has been appropriated for this object. Government, in order to give further encouragement to Mohammedan education, is about to found a school for the tuition of Musulman youth of an earlier age than that at which they are eligible for the Madrissa, and for their instruction, on improved principles, in Arabic and Persian literature. A stipend is allowed for the maintenance of the students in the college, according to the class to which they belong. There are eighty-five students on the foundation, beside out-students, the number of whom is unlimited.

The course of education at the Madrissa comprizes the Arabic language, including general literature, law, philosophy of law, traditions of Mahomed, rhetoric, logic, geometry, arithmetic, astronomy, according to the British system, to which may be added the regulations of the British Government in the Persian language. An English class has recently been established; and in order to promote this branch of study, an allowance is assigned to twenty-five students who may be desirous of acquiring the English language, and a learned native is entertained on the establishment, who is employed in translating English works of science into Persian and Arabic.

In addition to these two noble institutions in the metropolis of British India, the Government, in July 1823, adopted a measure calculated to give a powerful impulse as well as a judicious direction to the ardour felt by all ranks of their servants in promoting education amongst the Hindus. This was the formation of a Committee of Public Instruction, of which Mr. Harington, whose benevolent efforts in the cause of native education is well known, was appointed president. The other members have been selected from the most enlightened servants of the Company, and those best acquainted with the native languages, manners, and habits.

After ascertaining the state of public education under this presidency, the attention of the committee will be engaged in considering, and, from time to time, submitting to Government the suggestion of such measures as it may appear expedient to adopt, with a view to the better education of the people, to the introduction of useful knowledge, including the sciences and arts of Europe, and to the improvement of their moral character. The committee are authorized to exercise, through sub-committees or individual

individual members, as may seem most expedient, the superintendence of all the Government seminaries, the official correspondence of which, with Government, is to be conducted through them.

Though the committee cannot, of course, exert any authority over private schools, they are at liberty to communicate with, and encourage all persons, native and European, who may be engaged in the management of such institutions, and to afford their assistance in providing for the safe custody and improvement of any funds which may be directed to the object of education by individuals.

By a reference to the speech of Lord Amherst, at the visitation of the College of Fort William,* it will be seen that the committee are making the greatest possible exertions "towards the great object of diffusing gradually, but steadily, an improved system of education throughout British India." They assist at the annual examinations at the Madrissa and the Sanscrit College; they are employed in printing correct copies of works for the use of the other native colleges; and they have established a connexion with the conductors of the Vidyalaya, or Anglo-Indian College (established by respectable members of the native community of Calcutta, chiefly for the instruction of Hindu youths in the English language) for the promotion and extension of the plans of that establishment, having taken measures to provide a library at the expense of the Government.

We shall abstain from particularizing the charitable institutions supported by the Government in Calcutta, and proceed to consider the encouragement afforded to education in the interior.

The most important of the Government seminaries in the Bengal provinces, are the Colleges of Benares and Agra. The former was founded, as before stated, in the year 1794. At the recommendation of Mr. Duncan, the Government assigned the annual sum of 20,000 rupees for the endowment of the college, for the cultivation of Hindu literature. The objects of the institution were long frustrated by the dishonesty and incapacity of the native heads of the college; until, by the able efforts of Mr. Wilson and the late Capt. Fell, co-operating with the exertions of a committee of the Company's civil servants on the spot, a spirit of zeal was infused into the preceptors, and of emulation into the students. The system of instruction at this seminary was the model upon which the Sanscrit College at Calcutta was formed.

In 1823, the Government resolved to appropriate the proceeds of certain lands in the Agra and Aligurh districts, to the formation of a collegiate establishment in the city of Agra. The interest on the funds accumulated from those sources is estimated at about 15,000 rupees per annum. This institution, unlike the Sanscrit and Mohammedan colleges, which are more or less confined to particular classes, will be open to all the native population, and will direct its instruction to the general purposes and business of life. Stipends will be allowed to the scholars, as in the two Calcutta colleges. Board and lodging will not be provided for the students; no difficulty will, therefore, attend their association for the purpose of study (through contrariety of habits) within the same walls during the day.

Since the publication of Mr. Lushington's work, this college has been established, and is in full operation. Its students are seventy-three in number, all stipendiary; and the candidates for admission are numerous.

The Government schools at Chinsurah deserve the next notice, not more from the extent of their utility than from their interesting history. In the year 1814, Mr. May, a dissenting minister at Chinsurah, with a very slender income,

* See our last number, p. 220.

income, opened a school in his house for instructing the native boys, gratuitously, in reading, writing, and arithmetic, on the system of Dr. Bell. On the first day sixteen boys attended. By dint of exertion, and with the countenance and aid of Government, in less than a year, he had established sixteen schools, to which 951 pupils resorted. Mr. May met with some slight impediments from the jealousy of the natives, fomented by the artifices of the old teachers. The former he conciliated by his prudent measures; and the latter he took into his service. In 1816, the number of pupils amounted to 2,136; Mr. May then projected the formation of a school for teachers, as necessary to the extension of his plan, which succeeded. After a time, the prejudices of the natives wore away; the higher classes gave the plan encouragement; and the pupils, after a time, became so lax in their religious scruples, that whereas the Brahmin boys and teachers would not at first sit down on the same mat with those of another caste, both have now voluntarily relinquished this scruple.

The first pecuniary aid contributed to these schools by Government was a monthly allowance of 600 rupees; it expressly enjoined, at the same time, the most scrupulous adherence to the condition of not interfering with the religious opinions of the natives. Finding that the latter were disposed to receive instruction, and that these schools were judiciously managed, Government enlarged its allowance to 800 rupees per mensem.

Mr. May died in August 1818; previous to his death he had the satisfaction of seeing his zealous, yet prudent plans, rewarded by the extension of his schools to the number of thirty-six, attended by above 3,000 Hindus and Mohammedans. Subsequently the schools have been further augmented, as well as improved by being assimilated, as far as expedient, to the English national schools. It appears, from Mr. Lushington's statement, that parents of the lower class are accustomed to remove their children as soon as they have acquired sufficient instruction for the ordinary purposes of life; and that the higher order of scholars are also prematurely removed to acquire a knowledge of the English language; but, he adds, "notwithstanding these deductions, it may be safely asserted, that the foundation of more extensive and higher knowledge is securely laid in the establishment of these schools, and that an abundant harvest of intelligence, knowledge, and morality, will ultimately arise from the seed thus judiciously and benevolently sown." The following remark of Mr. Lushington is important:—

The obstacle experienced by Mr. May, in the outset, from an apprehension of an authoritative religious interference, and the great increase in his schools when that apprehension was removed, present a striking proof of the indispensable necessity, which cannot be too often and too strongly inculcated, of divesting all plans for the extension of education among the natives of this country, of any thing calculated to excite the remotest suspicion of such a design. This truth seems to be deeply impressed on the mind of the Government, and almost all persons in authority under them, and it is earnestly to be hoped, that the sentiment is as general as it is undeniably founded on sense and experience.

The Government school at Benares was originally established by two liberal natives of that city, who assigned 200 rupees per month towards its support. This was insufficient: and accordingly Government took upon itself to defray the deficiency, amounting to 252 rupees per month. Besides the common spelling-books employed in learning the English language (which contain passages at variance with polytheism), the New Testament is, in conformity to the will of the founder, used by the first class; and all the Hindu boys who learn

learn the Persian language, read the Persian New Testament as a class-book. It is stated that the scholars prefer the New Testament to any other English book.

The Free-School at Cawnpore is supported by an allowance of 400 rupees per month. The pupils admitted are of all classes, Hindus, Mohammedans, and English, for many of them are children of the European warrant and non-commissioned officers of the different corps and departments of the stations. Some of the English boys have become proficient in the Persian language, and are likely to be of considerable use in teaching English to the Hindus and Mohammedans, who are said to flock to the school with ardour for tuition in that language. The late Major General Thomas officially represented to the Adjutant General in 1823, that "several of our sepoy's from the corps of the station, as well as a number of Mohammedan and Hindu grown-up lads of the most respectable families, had become class-fellows with the English boys in reading the Bible."

In settling the province of Rajpootana in 1818, the Marquess of Hastings conceived that the introduction of schools would be a judicious expedient to wean the rising generation from the ill habits of their parents. Mr. Jabez Carey, one of the Serampore missionaries, was accordingly sent to Ajmere, but met with great difficulties and little success. Three or four schools having at length been established, Government assigned 300 rupees per mensem to Mr. Carey for their support. But it was discovered that the backwardness of the natives to send their children to school proceeded from Mr. Carey's introduction of the Holy Scriptures as school books.

This measure, highly injudicious and objectionable, with reference to local circumstances, was reprobated by the Government, which required Mr. Carey to discontinue the use of all religious books calculated to excite alarm, with regard to our motives in such a state of society as Rajpootana. Whether owing to this salutary prohibition or not, need not be pronounced, but in about a twelvemonth after the issue of these orders, seven schools, attended by above 300 children, were in operation, and applications for the formation of more were received by the superintendent.

The Bhagulpore school was established by Government for the instruction of the recruits and children of the hill corps, and of the hill people in general; and there is every reason to expect, from this institution, the promotion of civilization amongst the rude mountain tribes in this quarter. The Government allowance for the support of this school is 400 rupees per mensem.

To the foregoing list of Government institutions must be added the school for native doctors established at Calcutta in 1822. The students, who are regularly enlisted as soldiers for fifteen years, are supported by Government from the time of their admission, and when qualified, they fill the vacancies for native doctors in the army and civil departments. The system of instruction corresponds with that introduced by Col. Pasley, of the Royal Engineers, for the education of the royal sappers and miners in geometry and mathematics. The students are distributed in the various hospitals and the Company's dispensary. Lectures (in Hindustanee) are delivered to them on particular cases, operations, comparative anatomy, Materia Medica, and the practice of physic; and demonstrations are occasionally given at the general hospital.

The pupils are represented to manifest remarkable zeal and diligence in their studies; even in the least attainable branch, *viz.* anatomy. Even the Hindu students, persuaded that nothing, which has for its object the preservation of human lives, is repugnant to the tenets of their religion, regularly attend and readily assist in dissections, as opportunities offer,

derson, Harvey, and Grumbleton, H.M.'s 4th Lt. Drago; Ensigns Hesse and Lloyd, H.M.'s 2d foot; Ens. Rouse, H.M.'s 90th foot; Mr. Hughes, cadet; Mr. B. Rowland, free mariner; Mr. Charles Parbury, and Mr. James Young, volunteers for the Bombay marines.

Per Edinburgh, for Bombay: Maj. Thompson; Lieut. Gordon, and O'Brien, H.M.'s 6th foot; Capt. L. R. Home; Capt. R. W. Fleming; Messrs. J. Patch, P. J. Douglas, and C. A. Hawkins.

Per Berwickshire, for Calcutta: Col. M'Donald, adj. gen.; Capt. and Mrs. M'Gregor; Maj. and Mrs. Cuff; Mrs. Massingham; Rev. W. Burkett; Dr. J. Lee and Mr. Biden, assist. surgs.; Mr. Napier, for Singapore; Mr. Cullen; Messrs. James, Hall, Carlton, Beck, Ramsay, and Scott, cadets.

Per Lord Louther, for St. Helena: Mr. T. Cole; Mr. S. Cole; Mr. T. Reed, assist. surg.; Mrs. Ann Reed; Misses E. Reed, Maria Reed, Emma W. Reed; Sarah E. Reed; Lieut. John B. Spiller; Rev. B. Vernon, chaplain, returning; T. Green-tree, Esq., counsellor; Mrs. E. Greentree; Miss J. Brabson; Sir W. W. Doveton; Lieut. D. M'Mahon; Messrs. Thomas S. Reed, Thos. B. Knipe, J. R. C. Mason, and Sam. F. Armstrong, cadets.—For Bombay: Misses A. O'Connor, E. Newton, F. Braid, E. Disfountain, and Eliza Reed; Mrs. Miller; Mrs. E. M. Doveton; Ann Bond, European servant; Mr. W. Denman, cadet; Mr. Henry Pritchard, ditto, on the Madras establishment, proceeding *via* St. Helena and Bombay; Mr. J. M. Johnson, free merchant.

MISCELLANEOUS NOTICES.

The Jops (new bark), Capt. Oakley, from Bengal to the Mauritius and the Cape, was lost on the 18th Oct. on Cannon Point, Mauritius; crew and cargo saved.

The Royal Charlotte, Corbyn, from New South Wales to Madras, was lost in Aug. last on Prince Frederick's Shoal.

The Rambler, Graves, from London to the South Seas, was totally lost on the 10th Aug. on the coast of Madagascar.

The Baretta, jun. Webster, which sailed from Saugar 29th Aug., for China, was totally dismantled the 31st Aug., and arrived at Kedgerie, in company with the Meritor, on the 7th sept.

The Duke of York, Lock, from London, was at Anjeer Roads, 17th Sept., and sailed 23d for China.

The William Money has been stationed in Rangoon river as a hospital ship.

The Baroness Vander Capellan, of about 200 tons, was lost on the coast of Java, and only three of the crew saved.

The Elizabeth (Dutch ship) has been seized by pirates on the coast of Java.

The Windoor Castle, Lee, has been condemned at Calcutta as unseaworthy.

BIRTHS, MARRIAGES, AND DEATHS.

BIRTHS.

Jan. 7. At Mouncoffer House, the lady of Maj. P. Dunbar, of the Hon. E. I. Company's service, of a daughter.

14. The lady of the late Col. W. Cowper, of Montague Place, of a son.

Lately. The lady of Sir William Congreve, of a daughter.

MARRIAGES.

Jan. 10. At Clapham Church, Maj. G. Arnold, 2d Bengal L.C., son of the late Gen. Arnold, to Ann Martinz, daughter of the late Henry Brown, Esq., of the Madras civil service.

Lately. At St.avern, Philip Melville, Esq., of Walthamstow, to Eliza, daughter of Lieut. Col. Sandys, of Lanarth, Cornwall.

— At St. Helena, Capt. F. Mackenzie, Bengal N.I., to Mrs. Ochterlony.

DEATHS.

Dec. 19. At Edinburgh, Maj. Gen. G. Johnstone, of Riggheads, late of the 93d regt.

22. At Gravesend, on board the Lord Lowther Indiaman, Mast. W. A. Clephane, youngest son of the late D. Clephane, Esq., commissioner of excise.

24. At Edinburgh, Mrs. Scott, relict of Alex. Scott, Esq., of Sinton.

29. At Portsmouth, Maj. Gen. Miller, late of the royal marines, aged 72.

31. At his house in Camberwell Grove, Capt. J. L. Edwards, late commander of, and owner of the Golconda Indiaman, aged 34.

Jan. 1. At Glasgow, Mr. John Bell, teacher, aged 32. He was well acquainted with the Arabic, Persic, Chaldaic, Sanscrit, Hindoostanee, and Bengalee languages.

3. At Marseilles, Marshal Suchet, Duke of Abuferra, one of Buonaparte's favourite generals.

9. Miss Jemima Symes, daughter of Col. Symes, late of the 76th regt., and formerly ambassador to the Court of Ava.

10. At Culworth, Northamptonshire, Maj. John Harding, formerly of the Bombay military service, aged 62.

15. At Clifton, James Macnamara, Esq., Senior Rear-Admiral of the Red, a distinguished officer in H.M.'s naval service, which he entered 44 years since.

17. At Worcester, R. Jones, Esq., author of the "Builder's Vade Mecum."

20. At his house in Bryanstone Street, D. W. Ruddiman, in his 70th year, formerly in the service of the Hon. E. I. Company, and physician to his Highness the Nabob of the Carnatic.

Lately. At St. Helena, Capt. Wise, of the ship Sir Charles Scott.

— At sea, Henry H. Sumner, Esq., commander of the Elphinstone, late of the Hon. E. I. Company's naval service.

— At Brussels, the celebrated French painter, David.

— At Paris, the Chevalier Barbie du Bocage, geographer to the Department for Foreign Affairs, in his 66th year. The Atlas of the Voyage of Anacharsis established his reputation.

GOODS DECLARED FOR SALE AT THE EAST-INDIA HOUSE.

For Sale 14 February—Prompt 5 May.

Company's.—Mace—Nutmegs—Cinnamon—Salt-petre.

Licensed.—Cloves—Mace—Nutmegs—Cinnamon—Pepper—Salt-petre—Sago—Cassia Buds—Cassia Lignea.

For Sale 16 February—Prompt 5 May.

Licensed.—Aloes—Senna—Rhubarb—Camphor—Musk—Gall Nuts—Gum Amiri—Gum Arabic—Gum Olibanum—Columbo Root—Cardemom—Yachinea—Munjest—Safflower—Tin.

For Sale 20 February—Prompt 9 June.

Company's.—China and Bengal Raw Silk.
Private-Trade.—Bengal and China Raw Silk.

For Sale 21 February—Prompt 5 May.

Licensed.—Elephant's Teeth—Tortoiseshell—Buffalo Horns and Horn Tips—Lacquered Ware—Japan Ware—Paper—Sapan Wood—Red Saunders Wood.

For Sale 7 March—Prompt 9 June.

Tea.—Bohea, 750,000 lb; Congou, Campol, Pekoe, and Souchong, 5,500,000 lb; Twankay and Hyson

Hyson Skin, 1,000,000 lb; Hyson, 250,000 lb.—
Total, including Private-Trade, 7,500,000 lb.

For Sale 15 March—Prompt 9 June.

Company's.—Bengal and Coast Piece Goods.

The Lords of the Treasury, on application from the Court of Directors, have directed the Commissioners of the Customs to permit the entry for Home Consumption of East-India Coffee imported previously to the 5th July last and remaining in Warehouse at a Duty of Ninepence per Pound, if taken out of Warehouse within Three Months from the 29th Dec. 1825; and of such Coffee as may have arrived subsequently to the 5th July and before the 5th January at a Duty of One Shilling

per Pound;—bond to be given by the parties who may avail themselves of these directions to pay the higher duties, if Parliament should not sanction the arrangement. On Coffee imported subsequently to the 5th Jan. the Duty will be payable according to the Act 6 Geo. IV. cap. 104.

CARGOES of EAST-INDIA COMPANY'S SHIPS lately arrived.

CARGOES of the *Grenada, Palmyra, Lord Amherst, and Boyne, from Bengal.*

Company's.—Sugar.

PROGRESS OF EDUCATION IN BRITISH INDIA.

IN our last number we briefly treated of British government in India: we noticed the misconceptions which prevailed as to the actual condition of that country, as well as regarding the principles and forms of administration existing there; and we endeavoured to shew that the subjects of the East-India Company enjoyed a just and equitable system of government, comprehending all the securities against oppression or misrule which could be reconciled with the peculiarity of their circumstances, physical, moral, and political.

If it be admitted, as it surely must, that the state of society amongst the natives of Hindustan, their morbid sensitiveness on the subject of religion, their singular institutions, and their vast preponderance in the scale of numbers over the nation which governs them, are facts which bar all appeal to precedent, and constitute an isolated example beyond the contemplation of political theorists; it is clearly incumbent, we apprehend, upon those who are hostile to the present system, to show satisfactorily, not merely that the Government of British India is repugnant to maxims laid down with reference to societies characterized by none of the before-mentioned peculiarities, or even that such maxims are applicable to such societies, but that they can also be immediately acted upon with safety to both parties—the governors and the governed.

Such is the force of prudential considerations in this case—considerations which compose the paramount law of political expediency—that they extend to every species of intercourse with this extraordinary people on the part of aliens. Whatever may be the motive to communication, whether the establishment of reciprocal benefits, by means of commerce, or whether a disinterested and benevolent impulse to diffuse the ameliorating influence of education, the measures adopted should be well considered, and the instruments employed should be strictly supervised and controlled:—these precautions, we repeat, are equally for the benefit of all parties interested; at least for all who

are honestly interested. Such is the reflection which should accompany our inquiries into another branch of policy relating to British India; namely, the steps taken by the Company's government to improve the intellectual condition of their subjects, to enlighten their moral darkness, to dissipate their prejudices, to undermine the monstrous pile of error founded by design, and loaded with the venerable dust of ages.

This part of their duty towards their Hindu subjects, the Company are charged with shamefully neglecting. It has been asserted, with that remarkable proneness to misrepresentation which distinguishes some of the writers on East-India subjects, that this duty was imposed upon the Company, by reason of their previous inattention, in the Act authorizing the last charter, which directed the sum of one lac of rupees to be annually applied to the education of the natives of India. The misrepresentation in this case is of a complex character: it leads the public to believe that the enactment was compulsory, and that it consequently implied a previous neglect on the part of the Company's government; and it is calculated to conceal from the public the fact that this enactment was merely introduced to empower the Company so to apply the surplus of their territorial revenue. We subjoin the words of the Act itself:—

And be it further enacted, that *it shall be lawful* for the Governor-General in Council to direct, that, out of *any surplus* which may remain of the rents, revenues, and profits arising from the said *territorial acquisitions*, after defraying the expenses of the military, civil, and commercial establishments, and paying the interest of the debt, in manner hereinafter provided, a sum of not less than one lac of rupees in each year shall be set apart and applied to the revival and improvement of literature and the encouragement of the learned natives of India, and for the introduction and promotion of a knowledge of the sciences among the inhabitants of the British territories in India.—*Stat. 53 Geo. III, c. 155, § 43.*

We propose in the present number to show how unjustly a charge of indifference to the moral and intellectual concerns of the Hindus is alleged against the Company; and we are enabled to do this effectually by means of the very interesting and valuable work of Mr. Charles Lushington, which has lately reached England, entitled "The History, Design, and Present State of the Religious, Benevolent, and Charitable Institutions founded by the British in Calcutta and its Vicinity." But first we would beg leave to quote the following passage from the pen of M. Sismondi, a writer who has unfortunately been deceived into a strange misconception of facts respecting British India, but who, when reasoning upon abstract principles, is less to be distrusted:—

The English (says he) are really, in respect to their subjects, the Hindus, in the relation in which the absolute governments of Europe pretend to be in respect to their subjects, when they arrogate to themselves the right of judging what is or is not suitable to man; when they speak of the people as if they themselves, instead of being a part of the people, were angels. The English are really of a superior race compared with the Hindus; they know better than the inferior race itself what is suitable to it; they may aspire to be the tutors, the instructors of their subjects; whilst our rulers, taken from amongst ourselves, ought to be content to be our representatives. Nevertheless, the English feel that the sovereign power with which they are invested, does not, and ought not, to extend so far as to control the religious opinions of their subjects. They have respected—they have protected—the national religions; this was their duty as governors, and they have fulfilled it. This duty, however (the writer proceeds justly to observe), is not contrary to their obligation, as men and Christians, of revealing the light to their subjects; of raising them, gently, to a purer religion; of preserving them by public authority

authority from acts contrary to morality and to the progress of civilization, which the civil law has always the right to repress.*

Mr. Lushington, in his preface, adverts to "the practical refutation, afforded by his work, of the charge of indifference to the interests of the natives, which," he observes, "has oftener than on one memorable occasion, been so precipitately and unjustly urged against the British name in India;" though he laments, as we have often done, the unnatural apathy evinced in England generally with regard to Indian affairs, which renders hopeless every attempt to excite an interest upon this subject.

Mr. Lushington has classed the various institutions under three heads: religious, benevolent, and charitable. We shall adopt what we think a better mode of division (for the distinction between benevolent and charitable institutions is not very apparent, and the latter term may even be extended to religious institutions); we shall distribute them into two kinds: 1st, such as are exclusively supported by the Government; and 2d, such as have originated in private benevolence, though patronized and partly supported by Government.

The first institution we shall notice is the Government Sanscrit College, established in 1821. This was not the earliest instance of such an institution. The Madrisa, or Mohammedan College, had been founded in 1780, and the Hindu College at Benares in 1794. In 1811 the Government had contemplated the foundation of two new Hindu colleges in the districts of Nuddeah and Tirhoot, with the annual provision of 25,000 rupees. But, upon mature inquiry, it was found that provincial seminaries of this description would not ensure the advantages contemplated in their establishment; and that the formation of a collegiate institution in Calcutta was of far more importance in every point of view. Government accordingly allotted about 1,20,000 rupees for the purchase of ground and cost of buildings, and assigned the annual allowance of 30,000 rupees for the support of the college, under the superintendence of a committee. The course of study in the Sanscrit College is comprehended in the following classes: three grammar; one general literature; one rhetoric and prosody; one law; one logic. Provision is likewise made for the attendance of the native pupils of the highest class on a course of lectures on natural and experimental philosophy, and for the cultivation of this branch of study by those who possess inclination and talents. The course comprehends mechanics, hydrostatics, pneumatics, optics, electricity, astronomy, and chemistry. A proficiency in the English language is properly made an indispensable qualification for admission to the highest class.

Conformably to the ancient practice of the Hindus, a portion of the College funds is assigned to defray stipends to one hundred students, who are either strangers or indigent. In order to diffuse throughout the widest circle the advantages of native education, the students are not only not confined to Calcutta and its vicinity, but it is a rule of the College that not more than one-third of the whole number of students on the foundation shall be fixed residents of Calcutta; the remainder are to be the sons of individuals inhabiting the provinces subject to the presidency.

Although the principal object of Government in founding this college was the cultivation of the Sanscrit language and Brahminical literature—a literature held in pious veneration by their subjects, deeply interwoven with their domestic habits and their religion, and comprizing the only records of their history—yet, by the encouragement given to the attainment of the English language

PROGRESS OF EDUCATION IN BRITISH INDIA.

IN our last number we briefly treated of British government in India: we noticed the misconceptions which prevailed as to the actual condition of that country, as well as regarding the principles and forms of administration existing there; and we endeavoured to shew that the subjects of the East-India Company enjoyed a just and equitable system of government, comprehending all the securities against oppression or misrule which could be reconciled with the peculiarity of their circumstances, physical, moral, and political.

If it be admitted, as it surely must, that the state of society amongst the natives of Hindustan, their morbid sensitiveness on the subject of religion, their singular institutions, and their vast preponderance in the scale of numbers over the nation which governs them, are facts which bar all appeal to precedent, and constitute an isolated example beyond the contemplation of political theorists; it is clearly incumbent, we apprehend, upon those who are hostile to the present system, to show satisfactorily, not merely that the Government of British India is repugnant to maxims laid down with reference to societies characterized by none of the before-mentioned peculiarities, or even that such maxims are applicable to such societies, but that they can also be immediately acted upon with safety to both parties—the governors and the governed.

Such is the force of prudential considerations in this case—considerations which compose the paramount law of political expediency—that they extend to every species of intercourse with this extraordinary people on the part of aliens. Whatever may be the motive to communication, whether the establishment of reciprocal benefits, by means of commerce, or whether a disinterested and benevolent impulse to diffuse the ameliorating influence of education, the measures adopted should be well considered, and the instruments employed should be strictly supervised and controlled:—these precautions, we repeat, are equally for the benefit of all parties interested; at least for all who

are honestly interested. Such is the reflection which should accompany our inquiries into another branch of policy relating to British India; namely, the steps taken by the Company's government to improve the intellectual condition of their subjects, to enlighten their moral darkness, to dissipate their prejudices, to undermine the monstrous pile of error founded by design, and loaded with the venerable dust of ages.

This part of their duty towards their Hindu subjects, the Company are charged with shamefully neglecting. It has been asserted, with that remarkable proneness to misrepresentation which distinguishes some of the writers on East-India subjects, that this duty was imposed upon the Company, by reason of their previous inattention, in the Act authorizing the last charter, which directed the sum of one lac of rupees to be annually applied to the education of the natives of India. The misrepresentation in this case is of a complex character: it leads the public to believe that the enactment was compulsory, and that it consequently implied a previous neglect on the part of the Company's government; and it is calculated to conceal from the public the fact that this enactment was merely introduced to empower the Company so to apply the surplus of their territorial revenue. We subjoin the words of the Act itself:—

And be it further enacted, that *it shall be lawful* for the Governor-General in Council to direct, that, out of *any surplus* which may remain of the rents, revenues, and profits arising from the said *territorial acquisitions*, after defraying the expenses of the military, civil, and commercial establishments, and paying the interest of the debt, in manner hereinafter provided, a sum of not less than one lac of rupees in each year shall be set apart and applied to the revival and improvement of literature and the encouragement of the learned natives of India, and for the introduction and promotion of a knowledge of the sciences among the inhabitants of the British territories in India.—*Stat. 53 Geo. III, c. 155, § 43.*

We propose in the present number to show how unjustly a charge of indifference to the moral and intellectual concerns of the Hindus is alleged against the Company; and we are enabled to do this effectually by means of the very interesting and valuable work of Mr. Charles Lushington, which has lately reached England, entitled "The History, Design, and Present State of the Religious, Benevolent, and Charitable Institutions founded by the British in Calcutta and its Vicinity." But first we would beg leave to quote the following passage from the pen of M. Sismondi, a writer who has unfortunately been deceived into a strange misconception of facts respecting British India, but who, when reasoning upon abstract principles, is less to be distrusted:—

The English (says he) are really, in respect to their subjects, the Hindus, in the relation in which the absolute governments of Europe pretend to be in respect to their subjects, when they arrogate to themselves the right of judging what is or is not suitable to man; when they speak of the people as if they themselves, instead of being a part of the people, were angels. The English are really of a superior race compared with the Hindus; they know better than the inferior race itself what is suitable to it; they may aspire to be the tutors, the instructors of their subjects; whilst our rulers, taken from amongst ourselves, ought to be content to be our representatives. Nevertheless, the English feel that the sovereign power with which they are invested, does not, and ought not, to extend so far as to control the religious opinions of their subjects. They have respected—they have protected—the national religions; this was their duty as governors, and they have fulfilled it. This duty, however (the writer proceeds justly to observe), is not contrary to their obligation, as men and Christians, of revealing the light to their subjects; of raising them, gently, to a purer religion; of preserving them by public authority

authority from acts contrary to morality and to the progress of civilisation, which the civil law has always the right to repress.*

Mr. Lushington, in his preface, adverts to "the practical refutation, afforded by his work, of the charge of indifference to the interests of the natives, which," he observes, "has oftener than on one memorable occasion, been so precipitately and unjustly urged against the British name in India;" though he laments, as we have often done, the unnatural apathy evinced in England generally with regard to Indian affairs, which renders hopeless every attempt to excite an interest upon this subject.

Mr. Lushington has classed the various institutions under three heads: religious, benevolent, and charitable. We shall adopt what we think a better mode of division (for the distinction between benevolent and charitable institutions is not very apparent, and the latter term may even be extended to religious institutions); we shall distribute them into two kinds: 1st, such as are exclusively supported by the Government; and 2d, such as have originated in private benevolence, though patronized and partly supported by Government.

The first institution we shall notice is the Government Sanscrit College, established in 1821. This was not the earliest instance of such an institution. The Madrisa, or Mohammedan College, had been founded in 1780, and the Hindu College at Benares in 1794. In 1811 the Government had contemplated the foundation of two new Hindu colleges in the districts of Nuddeah and Tirhoot, with the annual provision of 25,000 rupees. But, upon mature inquiry, it was found that provincial seminaries of this description would not ensure the advantages contemplated in their establishment; and that the formation of a collegiate institution in Calcutta was of far more importance in every point of view. Government accordingly allotted about 1,20,000 rupees for the purchase of ground and cost of buildings, and assigned the annual allowance of 30,000 rupees for the support of the college, under the superintendance of a committee. The course of study in the Sanscrit College is comprehended in the following classes: three grammar; one general literature; one rhetoric and prosody; one law; one logic. Provision is likewise made for the attendance of the native pupils of the highest class on a course of lectures on natural and experimental philosophy, and for the cultivation of this branch of study by those who possess inclination and talents. The course comprehends mechanics, hydrostatics, pneumatics, optics, electricity, astronomy, and chemistry. A proficiency in the English language is properly made an indispensable qualification for admission to the highest class.

Conformably to the ancient practice of the Hindus, a portion of the College funds is assigned to defray stipends to one hundred students, who are either strangers or indigent. In order to diffuse throughout the widest circle the advantages of native education, the students are not only not confined to Calcutta and its vicinity, but it is a rule of the College that not more than one-third of the whole number of students on the foundation shall be fixed residents of Calcutta; the remainder are to be the sons of individuals inhabiting the provinces subject to the presidency.

Although the principal object of Government in founding this college was the cultivation of the Sanscrit language and Brahminical literature—a literature held in pious veneration by their subjects, deeply interwoven with their domestic habits and their religion, and comprizing the only records of their history—yet, by the encouragement given to the attainment of the English language

* *Revue Encyclopédique*, Dec. 1824, p. 642.

language and the sciences of Europe, a connexion is established between Hindu and European learning:—

The union being thus effected in one case, says Mr. L., it may hereafter be comparatively easy to carry the combination into other departments, and the improved cultivation of science and literature may be thus successfully and extensively produced. Although, therefore, it may be the immediate object of the institution to cherish Hindu literature, yet, it is not unreasonable to hope that such pursuits, fostered by European encouragement, may awaken curiosity to more enlightened studies, and tend, by the gradual diffusion of European information, to the promotion of useful learning and sound morals.

The Madrissa, or Mohammedan College for the study of the Arabic and Persian languages and Mohammedan law, was founded in 1780 (as before stated) by Mr. Hastings, at whose recommendation the Government assigned lands of the estimated value of 29,000 rupees per annum for its support. This allowance has been since increased to 30,000 rupees; and very great and salutary reforms have been recently introduced into this institution, which, from certain defects in the system of tuition and discipline, and the want of diligence and zeal amongst the native heads of the college, had fallen into disrepute. The college is now rising into vigour, reputation, and usefulness; a new structure is erecting for it in a more convenient spot, and the sum of 1,40,537 rupees has been appropriated for this object. Government, in order to give further encouragement to Mohammedan education, is about to found a school for the tuition of Musulman youth of an earlier age than that at which they are eligible for the Madrissa, and for their instruction, on improved principles, in Arabic and Persian literature. A stipend is allowed for the maintenance of the students in the college, according to the class to which they belong. There are eighty-five students on the foundation, beside out-students, the number of whom is unlimited.

The course of education at the Madrissa comprizes the Arabic language, including general literature, law, philosophy of law, traditions of Mahomed, rhetoric, logic, geometry, arithmetic, astronomy, according to the British system, to which may be added the regulations of the British Government in the Persian language. An English class has recently been established; and in order to promote this branch of study, an allowance is assigned to twenty-five students who may be desirous of acquiring the English language, and a learned native is entertained on the establishment, who is employed in translating English works of science into Persian and Arabic.

In addition to these two noble institutions in the metropolis of British India, the Government, in July 1823, adopted a measure calculated to give a powerful impulse as well as a judicious direction to the ardour felt by all ranks of their servants in promoting education amongst the Hindus. This was the formation of a Committee of Public Instruction, of which Mr. Harington, whose benevolent efforts in the cause of native education is well known, was appointed president. The other members have been selected from the most enlightened servants of the Company, and those best acquainted with the native languages, manners, and habits.

After ascertaining the state of public education under this presidency, the attention of the committee will be engaged in considering, and, from time to time, submitting to Government the suggestion of such measures as it may appear expedient to adopt, with a view to the better education of the people, to the introduction of useful knowledge, including the sciences and arts of Europe, and to the improvement of their moral character. The committee are authorized to exercise, through sub-committees or

individual

individual members, as may seem most expedient, the superintendence of all the Government seminaries, the official correspondence of which, with Government, is to be conducted through them.

Though the committee cannot, of course, exert any authority over private schools, they are at liberty to communicate with, and encourage all persons, native and European, who may be engaged in the management of such institutions, and to afford their assistance in providing for the safe custody and improvement of any funds which may be directed to the object of education by individuals.

By a reference to the speech of Lord Amherst, at the visitation of the College of Fort William,* it will be seen that the committee are making the greatest possible exertions "towards the great object of diffusing gradually, but steadily, an improved system of education throughout British India." They assist at the annual examinations at the Madrissa and the Sanscrit College; they are employed in printing correct copies of works for the use of the other native colleges; and they have established a connexion with the conductors of the Vidyalaya, or Anglo-Indian College (established by respectable members of the native community of Calcutta, chiefly for the instruction of Hindu youths in the English language) for the promotion and extension of the plans of that establishment, having taken measures to provide a library at the expense of the Government.

We shall abstain from particularizing the charitable institutions supported by the Government in Calcutta, and proceed to consider the encouragement afforded to education in the interior.

The most important of the Government seminaries in the Bengal provinces, are the Colleges of Benares and Agra. The former was founded, as before stated, in the year 1794. At the recommendation of Mr. Duncan, the Government assigned the annual sum of 20,000 rupees for the endowment of the college, for the cultivation of Hindu literature. The objects of the institution were long frustrated by the dishonesty and incapacity of the native heads of the college; until, by the able efforts of Mr. Wilson and the late Capt. Fell, co-operating with the exertions of a committee of the Company's civil servants on the spot, a spirit of zeal was infused into the preceptors, and of emulation into the students. The system of instruction at this seminary was the model upon which the Sanscrit College at Calcutta was formed.

In 1823, the Government resolved to appropriate the proceeds of certain lands in the Agra and Alighurh districts, to the formation of a collegiate establishment in the city of Agra. The interest on the funds accumulated from those sources is estimated at about 15,000 rupees per annum. This institution, unlike the Sanscrit and Mohammedan colleges, which are more or less confined to particular classes, will be open to all the native population, and will direct its instruction to the general purposes and business of life. Stipends will be allowed to the scholars, as in the two Calcutta colleges. Board and lodging will not be provided for the students; no difficulty will, therefore, attend their association for the purpose of study (through contrariety of habits) within the same walls during the day.

Since the publication of Mr. Lushington's work, this college has been established, and is in full operation. Its students are seventy-three in number, all stipendiary; and the candidates for admission are numerous.

The Government schools at Chinsurah deserve the next notice, not more from the extent of their utility than from their interesting history. In the year 1814, Mr. May, a dissenting minister at Chinsurah, with a very slender income,

* See our last number, p. 220.

income, opened a school in his house for instructing the native boys, gratuitously, in reading, writing, and arithmetic, on the system of Dr. Bell. On the first day sixteen boys attended. By dint of exertion, and with the countenance and aid of Government, in less than a year, he had established sixteen schools, to which 951 pupils resorted. Mr. May met with some slight impediments from the jealousy of the natives, fomented by the artifices of the old teachers. The former he conciliated by his prudent measures; and the latter he took into his service. In 1816, the number of pupils amounted to 2,136; Mr. May then projected the formation of a school for teachers, as necessary to the extension of his plan, which succeeded. After a time, the prejudices of the natives wore away; the higher classes gave the plan encouragement; and the pupils, after a time, became so lax in their religious scruples, that whereas the Brahmin boys and teachers would not at first sit down on the same mat with those of another caste, both have now voluntarily relinquished this scruple.

The first pecuniary aid contributed to these schools by Government was a monthly allowance of 600 rupees; it expressly enjoined, at the same time, the most scrupulous adherence to the condition of not interfering with the religious opinions of the natives. Finding that the latter were disposed to receive instruction, and that these schools were judiciously managed, Government enlarged its allowance to 800 rupees per mensem.

Mr. May died in August 1818; previous to his death he had the satisfaction of seeing his zealous, yet prudent plans, rewarded by the extension of his schools to the number of thirty-six, attended by above 3,000 Hindus and Mohammedans. Subsequently the schools have been further augmented, as well as improved by being assimilated, as far as expedient, to the English national schools. It appears, from Mr. Lushington's statement, that parents of the lower class are accustomed to remove their children as soon as they have acquired sufficient instruction for the ordinary purposes of life; and that the higher order of scholars are also prematurely removed to acquire a knowledge of the English language; but, he adds, "notwithstanding these deductions, it may be safely asserted, that the foundation of more extensive and higher knowledge is securely laid in the establishment of these schools, and that an abundant harvest of intelligence, knowledge, and morality, will ultimately arise from the seed thus judiciously and benevolently sown." The following remark of Mr. Lushington is important:—

The obstacle experienced by Mr. May, in the outset, from an apprehension of an authoritative religious interference, and the great increase in his schools when that apprehension was removed, present a striking proof of the indispensable necessity, which cannot be too often and too strongly inculcated, of divesting all plans for the extension of education among the natives of this country, of any thing calculated to excite the remotest suspicion of such a design. This truth seems to be deeply impressed on the mind of the Government, and almost all persons in authority under them, and it is earnestly to be hoped, that the sentiment is as general as it is undeniably founded on sense and experience.

The Government school at Benares was originally established by two liberal natives of that city, who assigned 200 rupees per month towards its support. This was insufficient: and accordingly Government took upon itself to defray the deficiency, amounting to 252 rupees per month. Besides the common spelling-books employed in learning the English language (which contain passages at variance with polytheism), the New Testament is, *in conformity to the will of the founder*, used by the first class; and all the Hindu boys who learn

learn the Persian language, read the Persian New Testament as a class-book. It is stated that the scholars prefer the New Testament to any other English book.

The Free-School at Cawnpore is supported by an allowance of 400 rupees per month. The pupils admitted are of all classes, Hindus, Mohammedans, and English, for many of them are children of the European warrant and non-commissioned officers of the different corps and departments of the stations. Some of the English boys have become proficient in the Persian language, and are likely to be of considerable use in teaching English to the Hindus and Mohammedans, who are said to flock to the school with ardour for tuition in that language. The late Major General Thomas officially represented to the Adjutant General in 1823, that "several of our sepoy from the corps of the station, as well as a number of Mohammedan and Hindu grown-up lads of the most respectable families, had become class-fellows with the English boys in reading the Bible."

In settling the province of Rajpootana in 1818, the Marquess of Hastings conceived that the introduction of schools would be a judicious expedient to wean the rising generation from the ill habits of their parents. Mr. Jabez Carey, one of the Serampore missionaries, was accordingly sent to Ajmere, but met with great difficulties and little success. Three or four schools having at length been established, Government assigned 300 rupees per mensem to Mr. Carey for their support. But it was discovered that the backwardness of the natives to send their children to school proceeded from Mr. Carey's introduction of the Holy Scriptures as school books.

This measure, highly injudicious and objectionable, with reference to local circumstances, was reprobated by the Government, which required Mr. Carey to discontinue the use of all religious books calculated to excite alarm, with regard to our motives in such a state of society as Rajpootana. Whether owing to this salutary prohibition or not, need not be pronounced, but in about a twelvemonth after the issue of these orders, seven schools, attended by above 300 children, were in operation, and applications for the formation of more were received by the superintendent.

The Bhagulpore school was established by Government for the instruction of the recruits and children of the hill corps, and of the hill people in general; and there is every reason to expect, from this institution, the promotion of civilization amongst the rude mountain tribes in this quarter. The Government allowance for the support of this school is 400 rupees per mensem.

To the foregoing list of Government institutions must be added the school for native doctors established at Calcutta in 1822. The students, who are regularly enlisted as soldiers for fifteen years, are supported by Government from the time of their admission, and when qualified, they fill the vacancies for native doctors in the army and civil departments. The system of instruction corresponds with that introduced by Col. Pasley, of the Royal Engineers, for the education of the royal sappers and miners in geometry and mathematics. The students are distributed in the various hospitals and the Company's dispensary. Lectures (in Hindustanee) are delivered to them on particular cases, operations, comparative anatomy, Materia Medica, and the practice of physic; and demonstrations are occasionally given at the general hospital.

The pupils are represented to manifest remarkable zeal and diligence in their studies; even in the least attainable branch, *viz.* anatomy. Even the Hindu students, persuaded that nothing, which has for its object the preservation of human lives, is repugnant to the tenets of their religion, regularly attend and readily assist in dissections, as opportunities offer,

offer, and the majority of the students, who arrived in Calcutta in 1823, can themselves give a clear demonstration of the abdominal and thoracic viscera, of the brain, and of the structure of the eye; and have distinct notions of other parts of medical science, which have been explained to them.

The school has fortunately had able superintendents. The first was the late Mr. Jameson; the present is Dr. Bretoff, whose "zealous and able" exertions are mentioned in the speech of Lord Amherst at the last visitation of the College of Fort William.

It appears, also, from his Lordship's speech, that it had been determined to establish a college for Mohammedans at Delhi, the arrangements for which object have received the sanction of Government, and are in progress.

To this list of institutions established and supported by Government for the intellectual improvement of their subjects, we have to add those which, though not exclusively maintained, are patronized and aided by the state. These institutions are of various kinds—religious, as well as what are strictly denominated charitable. The enumeration of them occupies the largest and most interesting portion of Mr. Lushington's work; but we shall confine our observations, at present, to those which embrace the object of instructing the people of Hindustan in the elements of secular knowledge.

The Calcutta Auxiliary Church Missionary Society has extensive school establishments within the scope of its plan. They are situated at Agra, Meerut, Chunar, Burdwan, Kidderpore, and Mirzapore. Those at Burdwan seem to be in the most flourishing state. According to the latest report, they consist of nineteen schools for boys, containing 1,674 scholars; and ten schools for girls, containing 243. The judicious caution displayed and inculcated by this society, induced them to withhold, at first, the Scriptures from their pupils at Burdwan; but the avidity of the Bengalees to learn English became so great, that prejudice against the means was absorbed by it, and the boys are now in the habit of reading the Gospel, and even unfolding its doctrines, which they perform with great readiness. The Kidderpore schools contain about 770 pupils; the New Testament is here likewise used without opposition. The total number of children in the schools of the society is computed at 4,000, who, according to their age and capacity, are all receiving Christian instruction. The expense of one of the schools is entirely defrayed by Government.

The Calcutta Church Missionary Association has seven schools in active operation, in which about 130 boys are instructed, of whose progress a very favourable account is given.

The Calcutta Diocesan Committee of the Society for promoting Christian Knowledge, formed by the late Bishop Middleton, directs its exertions primarily to the supply of books. "Disclaiming all views of direct proselytism, they would strive to imbue the Indian youth with at least a knowledge of Christian morality, leaving to the decision of his more mature age the improvement or rejection of the light he may have acquired." With this view they not only import books from England, but print them in India, and for the latter object they have received aid from Government. The secondary object of the Committee is "the gradual conversion of the myriads under the British rule in India, to whom the Gospel is unknown, by the process of Christian education." This object is pursued by the formation of native schools, wherein portions of the Scriptures, of the plainest and least controversial character, are introduced as lessons. This deviation from the plan of
others

other societies excited at first some distrust; but the apprehension was transient; for the native parents sacrificed their prejudices, it is said, to the advantage of obtaining education for their children.

The committee plant their schools by circles, comprizing a few miles in extent; each circle containing five Bengalee schools, and one central school where English is taught. One circle is fixed to the southward of Calcutta, including Russapuglah and Balooonge, and a second to the northward, in the direction of Cossipore. They have also erected a school at Barripore, and propose to extend their labours to the other side of the Hooghly, and establish native schools from Sulkeah to Seebpore.

The Bengal Auxiliary Missionary Society has established schools, though a subordinate object, at some of its stations. Excursions are sometimes made by the missionaries belonging to this society, in order to preach and distribute tracts; in one of which, in December 1822, at Culna, a place said to contain about 10,000 inhabitants, they wished to restrict their donation of tracts to "such as could read;" but they were informed that, "*in consequence of the instruction afforded by the public schools, there was not a youth in the town who could not read.*"

The Calcutta Baptist Missionary Society, like the preceding, includes in its plan the establishment of schools, of which it has several, though not apparently in a very flourishing condition. In one of the annual reports, the society states, that it has been felt as a duty to direct that the elder boys should daily read extracts from the Scriptures, "notwithstanding the probable flight of the scholars in consequence."

The noble establishment of Bishop's College, the project of which originated with Bishop Middleton, is perhaps the germ of an Anglo-Indian university. It was founded and is supported by private contributions, which have already reached a considerable sum.* Its objects are the education of Christian youth (European, country-born, or native) in sacred knowledge, sound learning, the languages of Hindustan, and in habits of piety and devotion; so as to qualify them to preach amongst the heathen, and to act as teachers in the superintendance of schools. The extension of the system to others not destined as teachers, but maintained at their own expense for the purposes of a liberal education, was a branch of the original plan, and will be carried into effect when the substantial part of the scheme shall be in full operation. The College is founded for a principal, and two other professors from the English universities, and as many students as can be maintained.

The Calcutta School-Book Society is an association formed for "the preparation, publication, or cheap or gratuitous supply, of works (English as well as Asiatic) useful in schools and seminaries of learning," excluding works strictly of a religious nature, or which might interfere with the religious sentiments of any person. In 1821, its fourth year, after its progress had been carefully observed, the labours and designs of the society received the unqualified approbation of Government, with the grant of considerable pecuniary aid, namely, a sum of 7,000 rupees for immediate relief, and a monthly contribution of 500 rupees. The works distributed by the society since its formation

* The Incorporated Society for the Propagation of the Gospel in Foreign Parts (which was the mover of the project) placed at the Bishop's disposal £5,000; the Society for Promoting Christian Knowledge, and the Church Missionary Society, subscribed the same sum each; and the latter has since voted an additional £1,000, which donation is expected to be continued annually. The first stone of the college was laid in December 1820, a year previous to which the contributions amounted to £48,000; the British and Foreign Bible Society has since contributed £5,000.

tion amount to 104,182 copies, in the following tongues, *viz.* Sanscrit, 340; Bengalee, 63,347; Hinduwee, 7,622; Ooriya, 50; Arabic, 292; Persian, 7,961; Hindustanee, 6,538; English, 8,551; and Anglo-Asiatic, 9,481. The society's third report speaks of the improved discipline of the native schools, the proficiency of the scholars, the increasing thirst for knowledge, and the growing interest felt by the learned natives to co-operate with us in the diffusion of instruction—as proofs of the success of its exertions. The union of natives and Europeans, as members, attracted the notice of the King of Oude (a Mohammedan) and the Rajah of Bhurtpore (a Hindu) to this society, each of whom has testified his approbation of its views by a donation of 1,000 rupees.

Shortly after the establishment of the preceding, the Calcutta School Society was formed, with the same ultimate object, but without pledging itself to the same exclusive rules. Its design was declared to be, “to assist and improve existing schools, and to establish and support further schools and seminaries, with a view to the more general diffusion of useful knowledge amongst the inhabitants of India of every description; and to select pupils of distinguished talents and merit from elementary and other schools, and to provide for their instruction in seminaries of a higher degree, with the view of forming a body of qualified teachers and translators, who may be instrumental in enlightening their countrymen, and improving the general system of education.” The separation of these two societies, Mr. Lushington states, has produced more extensive advantage than their coalition could have effected, owing to its multiplying the number of active agents in the same cause. Three sub-committees superintend the execution of three distinct designs: 1st, the establishment and support of regular schools; 2d, the aiding and improving indigeneous schools, supported by natives; 3d, the education of pupils in English and in the higher branches of tuition.

The society has been obliged to confine itself chiefly to the two last objects. The improvement of the native schools has been greatly advanced by the distribution of correct books (instead of the old vitiated manuscripts), by the annual examinations of the head boys, and by prizes granted to proficient, as well as pecuniary rewards to the native tutors, as an encouragement to exertion. The third object has been provided for by sending those native boys, who distinguish themselves at the indigenous schools, to the English school at the Vidyalaya, to learn English at the society's expense. This prospect affords a great stimulus to the Hindu youth; and “with a view of forming an intermediate link between the indigenous schools and the native Hindu college, and for the better preparation of the pupils for the course of education there,” the society has established an elementary school, to be filled by pupils selected for proficiency from the indigenous schools; who are, if deserving, to be afterwards removed to the college. The total number of boys in the indigenous schools exceeds 2,800. Several of the youths educated by the society in the Hindu College have obtained respectable situations in life; some of them have established evening schools for gratuitous instruction of their countrymen in the English language.

The funds of the society being incommensurate with its objects, on application to Government, an allowance of 500 rupees per month was granted, accompanied by a recommendation that the society would continue to adhere to its cautious principles.

The Female Juvenile Society took its rise from one of those mis-representations which are by no means uncommon in writers on East-India subjects.

In

In an address by some members of the Calcutta Baptist Missionary Society in April 1819, is the following assertion: "In the province of Bengal alone, at least *ten thousand* widows* are annually sacrificed, and thirty times a day a deed repeated, which ought to call forth our tenderest pity, as well as our most vigorous exertions!" This statement had the effect of prompting the ladies at a boarding-school to form a society, under the above title, for the education of Hindu girls. The number of the society's schools increased to six; that of the pupils to 160. The use of religious school-books was *insisted on*; one of the female instructors evinced some reluctance to employ them; but, it is said, "a little *firmness*" on the part of the committee overruled it.

This society has recently been incorporated with the Bengal Christian School Society, whose object is the promotion of religious knowledge, particularly among the native females of India.

The benevolent design of reclaiming the female part of the population from ignorance was likewise the motive which led to the formation of the Ladies' Society for Native Female Education. The British and Foreign School Society having collected subscriptions in England for sending to Bengal a female teacher to establish schools for native female children, Miss Cooke (now Mrs. Wilson) was selected, and reached Calcutta in 1821. In spite of the prejudices against educating females, and notwithstanding the difficulties of procuring suitable teachers, this lady, in a few months, established ten schools, containing 277 children: the next year the schools increased to twenty-two, the scholars to 400. The unexpected success which attended this project, induced the friends of female education in India to enlarge and extend the plan. Accordingly, Lady Amherst having accepted the office of Patroness of a society of European ladies to superintend and conduct this interesting design, the society above-named was formed in March 1824. The resolutions record the success which has attended the novel and difficult undertaking of Mrs. Wilson, and the eagerness of the females to learn—some of the most respectable caste and station having sent their daughters, it is said, and, in some cases, desired instruction themselves—and approve the intention of the committee of the Church Missionary Society to erect a new school, to be used as the central school.

Mr. Lushington is not sanguine as to the speedy or extensive success of the plan of this society.

It is an arduous, if not a hazardous task (he observes) to effect a revolution in the long-cherished habits and customs of a whole people, proverbially averse to change, and to undermine a usage which, from the practice of ages, has almost acquired the force of a religious obligation. Female seclusion is so interwoven with the first feelings and ideas of the natives, that it has become a second nature with the women themselves. It is a great mistake to suppose that they submit to it through compulsion: none of the more respectable would, after a certain age, appear in public if the option were urged upon them. Their exposure would insure their own disgrace and the degradation of their families.

It is probable, then, that the great majority of the elder pupils will be confined to the inferior classes. Even upon most of these the duty of seclusion operates with considerable strength, and if the restraint be precipitately taken off, very opposite consequences from those to be wished for are likely to result. The prosecution, therefore, of this truly benevolent scheme demands abundant and incessant caution.

This

* The number of suttees in the province of Bengal, in 1819, according to the Parliamentary Returns, was five hundred and one!

This distinguished manifestation of interest in the literary advancement of their females, will no doubt have a suitable effect on the gratitude of the natives. At all events it will evince to our countrymen, that an anxious desire exists to take advantage of every suggestion designed to ameliorate the moral condition of the people under our rule, in every shape which ingenuity or munificence can devise.

The Benevolent Institution for the Instruction of Indigent Children, established by the Baptist Missionaries at Serampore, is the last to be noticed. Though destitute Christian children are the primary objects, Hindus and Musulmans are not excluded from this institution. The aggregate number of children in the schools, at the last report, was nearly 500. It is stated that upwards of 1,000 youths have been thus rescued from vice and ignorance, and are gradually rising to a certain degree of opulence and respectability.

Mr. Lushington, in some judicious "remarks" on the subject of education, admits that it is now established, beyond a doubt, that the natives, to a certain extent, avail themselves of the means of education with great eagerness, without being always deterred from the pursuit of knowledge by its being accessible only through the channel of some religious books; yet he observes that education should commence at the top, and proceed downwards, in order to produce extensive improvement; and that the last mentioned fact is no irrefragable evidence that prejudice against Christianity is abated.

Well meaning people (he remarks) are in far too great a hurry in their anticipation of benefit from the diffusion of instruction, and look for the production of fruit before the seed has had time to issue from the ground. The union of religion with education has occasioned these overweening expectations; it being fondly imagined that, because a pupil can read and explain some chapters in the New Testament, a most essential barrier of opposition has been broken through. But it is unwise to fancy that this transient view of Christianity, unassisted by any subsequent admonition or enforcement, implies a probable liberation from those trammels of superstition, which the habits, the connexions, and idolatrous practices of the Hindu all combine to rivet.

We cannot bring this long article to a close without requesting the reader to contrast the statements contained therein with those given (from reliance on delusive representations) by M. Sismondi, in the article before quoted.

The English (he says) are at the present day animated by a religious zeal, an ardour of proselytism, of which no example can be found in their own history, or in that of other nations. Hence their language is rarely exempt from that affectation of devotion which they denominate *cant*, and which sometimes excites distrust. This national impulse, however, is completely arrested by the interest which the East-India Company think they have in checking the progress of civilization and the development of intellect amongst their subjects. And again: Exclusively occupied in extorting from the country which they govern a tribute they may convey to England, they (the Company) will not permit the least part of the public revenue to be employed for the benefit of the people that pays it.

We shall recur to Mr. Lushington's work next month, when we propose to treat of the attempts at converting the Hindus, and to speak of missionary labours in India.

ON THE PROGRESS OF THE MECHANICAL ARTS IN RUSSIA BEFORE THE ERA OF PETER THE GREAT.

THE ancient state of Russia is known to most readers only through Voltaire's Histories of Charles XII. and Peter the Great; but the idea which must be formed of the state of industry and the mechanical arts in that country, previous to the reign of Peter, may be easily conjectured from the statement of the French author, who tells us, that at that period the Russians did not possess even a pin-manufactory; without hinting at the fact that the country was in a very flourishing condition previous to the Tartar invasion, and again during the reign of the Czar Alexi Michaelowitch, when, perhaps, it was inferior to few European nations of the fourteenth and fifteenth centuries; from which it fell in consequence of the protracted internal troubles and civil wars in which that ill-fated country was plunged, by the struggles between the crown and the nobility. Voltaire, whether through ignorance or from a disingenuous desire to suppress what he knew, has represented the Russians, previous to Peter, as a nation of barbarians, unacquainted with and averse to all the arts of civilization. The object of the present essay is to rectify those erroneous opinions by furnishing a concise historical sketch of the introduction and progress of the mechanical arts in Russia before the reign, of which so interesting an account has been given by Voltaire; and we have no doubt that we shall thereby oblige those readers at least who have no other object in the perusal of history than the search of truth. The facts here recorded have been collected by a Russian writer of eminence, who constantly quotes his authorities, which, although for the most part native, are not, on that account, less unimpeachable.

There is every probability that industry began among the modern European nations as soon as they had settled in the countries they now inhabit, and the narrower limits of their territorial possessions compelled them to have recourse to tillage for part, at least, of their sustenance; and there seems no ground to conclude that the nations of the Slavonic or Sarmatian race were, in this respect, differently situated from those of Teutonic origin—nay, there is a positive testimony in the Arabic, Byzantine, and Norman writers of the eighth, ninth, and tenth centuries, that Slavonic traders brought tanned hides and linen for sale to the mouths of the Dnieper and Volga, and the shores of the Baltic; and, if we may trust the ancient native annalist, not only leather, but even hammered swords were manufactured in Russia as early as the reign of Wolodomir, A.D. 988.

It was from the Byzantine Greeks that the Russians received their religion, at the same time with a taste for commerce and the arts of civilization. The provinces near the Dnieper and Wolochow were the first to receive the impulse to both pursuits; yet as early as the tenth century we find mention made of stone buildings in the northern districts, and, in the eleventh, of splendid churches at Kiev and Novogorod, the walls of which are said to have been adorned with paintings. Unfortunately, however, these bright beginnings were darkened and checked, first, by an oppressive system of vassalage, and subsequently by the invasions of the Tartars.

But, even during this calamitous period, commerce and the arts were not entirely extinct; and we find that, in the thirteenth century, Russian merchants frequented Tauris with cotton goods, which they exchanged for salt, and that during the reign of Simeon the Proud (*i. e.* the beginning of the fourteenth century), Russian artists at Moscow were employed in painting the churches and

and casting bells: such instances, however, were rare; but in proportion as the Tartar yoke was lightened, industry revived. Under Demitrij Donskij the connexions with western Europe were renewed, and carried on with greater facility than before, since silver and copper coin had been introduced by the Tartars, and now formed the circulating medium, instead of skins, which were previously used for that purpose.

In the beginning of the fifteenth century, a Servian monk, named Lazarus, constructed at Moscow the first clock ever made in the country, and which seems to have excited great astonishment. There was, at the same time, some very clever brass-founders in the Russian metropolis, one of whom received from the city of Pskow a present of forty-six roubles, for having taught one of its inhabitants to cast sheets of lead to cover one of their churches. Rubleff, Simeon the black, and Daniel, were then esteemed great painters. At that period, and till the time of John III., the arts were only employed in ornamenting places of worship. The manufactures of that period consisted in the making of leather, soap, potash, hemp and train-oil, caviar, salt, linen, and coarse woollen cloth. It was also about this period that the art of distilling was introduced into the country.

The reign of John III. at length produced a new era for Russia. By his expulsion of the Tartars and his marriage with the daughter of the Greek emperor, he became known to and respected by foreign nations; and crowds of alien artisans settled in a country where honour and wealth promised to crown the efforts of their industry. Aristotle, from Bologna, built temples, cast cannon, and manufactured gunpowder; and the Venetians, Friasin and Aloys, adorned the metropolis with numerous splendid buildings. Iron, silver, and copper were dug and wrought.

John the Terrible was still more anxious for the improvement of his country: he requested the emperor Charles V., and afterwards Ferdinand I., to send him scholars and artists; and, although these requests were not complied with, many men of talent emigrated to Russia, and augmented the national wealth and industry. The trade carried on with the English at Archangel was peculiarly conducive to the prosperity of the country; the English physicians, Standish and Jacob, greatly improved the medical knowledge of the native practitioners, and it is probable that James Frencham was the first who established a chemist's shop in Russia, and taught the natives to collect herbs, &c. Mining and the working of metals were also greatly extended and improved by the English, who enjoyed particular privileges in this respect.

Feodor withdrew some of the privileges granted to the English, and opened the ports of the White Sea to other nations; still, however, the influence of the English on the improvement of the country continued to be extensive. Under the reign of this Czar, the Italian Marco Cenoppi established silk and velvet manufactories in the country; frontier-guards were appointed to prevent the introduction of the plague, the ravages of which, under the preceding reigns, had contributed in a great measure to check the industry of the country; and the first book on medicine was published in the year 1588, which, although only a translation from the Polish, was a harbinger of improvement in the civilization of Russia.

Under the usurper Godunow, Russia suffered many misfortunes, but still commerce and the arts seem not to have retrograded; which is particularly proved by the erection of various public edifices at Moscow, and the casting of the great bell in the year 1601, which weighed 12,000 poods. This monarch died too soon to bestow any lasting benefit on his country; and the civil and foreign

foreign wars which ensued after his death (and in which Moscow was burned by the Poles, and the ancient and flourishing city of Novogorod sacked by the Swedes), again plunged the nation almost into the same state into which they had fallen at the period when they threw off the yoke of the Mongols.

Under these circumstances Michael ascended the throne. Whatever a monarch could do to restore and animate fallen industry amongst his subjects, was accomplished by this great monarch. He united different trades into companies, bestowed privileges on natives and foreigners, and even sent commissioners to Germany for the purpose of engaging miners; in short, we may date from his reign the establishment of manufactories in the empire. He also established mints for the coinage of money, and instituted medical colleges for the examination of young practitioners, and for prescribing rules for the treatment of diseases.

But Alexi performed more than all his predecessors. Michael, having to fulfil the difficult office of healing the wounds under which the country had been so long suffering, could not apply himself entirely to new establishments. But Alexi, having beaten the Poles, and being at peace with the Swedes, the improvement of the nation was his only care, and by his exertion the arts, manufactures and trades, were carried to an extent of perfection unprecedented in Russia.

Silk goods had formerly been an article of transit trade only—the Russian merchants purchasing it at Moscow or Astrakhan, and selling it afterwards to the English and Dutch; but, under this reign, silks and velvets were manufactured in great perfection at Moscow.

Various efforts were made by the Czar to improve the country wool by the introduction of foreign sheep, but with little or no effect; and a broad-cloth manufactory, established by an enterprising merchant, also failed, owing to the predilection of the Russians at that time to the wear of camlets, which they purchased from the Greeks and Dutch.

On the other hand, manufactories of linen, plain, dyed and printed, flourished at Yarosslawl, Valdai, Kargopol, and on the banks of the Dwina and Volga, and, consequently, at the same places where we find them now; and an arshin of linen was bought at Moscow, at from two to six copeks. It was, however, coarse, except that produced at one manufactory established for the use of the imperial family.

The manufacture of leather had been brought to great perfection. Potash was made in Siberia; tar in the government of Archangel; excellent soap in Kostroma; and the melting of tallow was an extensive branch of industry. Salt was prepared in great quantities in the south of Russia, and window-glass and bottles began to be manufactured with success in the vicinity of the capital.

Muskets and other small arms were made near several of the mines; but particularly in the smiths' village near Toola, at the mouth of the Toolitsa, all the inhabitants of which were iron-workers and enjoyed great privileges. There were four iron mines in the vicinity of Moscow, near which—besides muskets, bar and sheet-iron—swords, and even guns were manufactured. Steel was made in different establishments, but was of an inferior quality; for which reason great quantities of this article were annually imported from Sweden. Cannon, mortars, and bells (some of the latter of a very large size) were cast at Moscow and elsewhere; and a German, of the name of Flacken, at the Moscow manufactory, obtained great celebrity even in foreign parts; there were also forged iron-guns of very excellent quality, although too expensive for general use.

Three copper-mines were at work at that period; and there were several powder-mills near Moscow, as well as two paper manufactories—the paper, however, was coarse, owing to a want of fine rags. There was one printing establishment, consisting of eight presses, at Moscow, where Bibles, the works of the Fathers, and Alexi's code were printed: another printing-office was at Kiev. The capital had two apothecary's shops, one in the Kremlin, and another in the city, the former of which, in particular, was kept in excellent condition. To furnish them with the necessary herbs, three botanical gardens were kept up about the city, and some of the boyards had to furnish such as could not be grown there, in lieu of tribute.

This reign was also distinguished for the establishment of regular conveyances of letters and newspapers between Moscow and Vilna, and between that city and Riga; and of quarantine officers on those parts of the frontiers which were most exposed to epidemical diseases.

It is true, that most of the trades and manufactories alluded to were conducted or carried on by foreigners; but the Russians, themselves, also took a great share in them: and the monarchs showed, at least, that they were as anxious about the improvement of their nation as Peter. The difference was that, prevented by circumstances, or less ardent and determined than this monarch, they proceeded less arbitrarily and rapidly; and it would, perhaps, have been happier for the Russian nation, had it been allowed to develop its powers from within, and not been forcibly hurried to a premature civilization.

Y. Z.

MOCADDIMAH.

FROM THE BOUSTAN OF SAADI.

Look not for piety in sordid minds,
 Nor truth in those which weak self-fondness blinds.—
 O thou, whom vast ambition's hopes control,
 Scorn not the man of meek and humble soul!
 Not frowns of arrogance, nor airs of state,
 Mark to discerning eyes the truly great.
 Say, wert thou scorned by others, man of pride,
 Would'st thou not all their tinsel pomp deride?
 Then so much folly as thou mayest see
 In others, others may perceive in thee.—
 Exalt not thine own merit; never boast
 Thyself as fittest for the highest post;
 Nor rush o'er prostrate crowds to grasp the prize:
 For one of those now prone on earth may rise,
 And trample thee, in turn, low sunk where now he lies,

TRAVELS IN THE HIMALAYA COUNTRY.

In the "Transactions of the Royal Asiatic Society," vol. i. part. ii, is a paper On the Valley of the Setlej River, in the Himalaya Mountains, from the Journal of Capt. A. Gerard, with Remarks by H. T. Colebrooke, Esq., which contains so much curious and interesting matter, that we shall lay before our readers an abridgement of it.

Capt. Gerard, with his brother, Mr. J. G. Gerard, has several times explored the terrific Himalaya country. A diary of their journey in 1821 has been transmitted to the East-India Company, by whom it was communicated to Mr. Colebrooke.

These travellers began their journey from the Shátúl pass in June 1818; they had previously travelled the ordinary road, and now determined to strike directly across the ridge, at an elevation of 15,556 feet above the level of the sea.

"The rocks were chiefly mica slate, and gneiss. In the ascent they had noticed a huge granitic rock, in the chilly recess of which they rested; and their route had led them in some places over heaps of angular fragments of gneiss, granite, quartz, and felspar, jumbled together in wild disorder, where every step was dangerous.

"To the east and south-east was seen a low part of the Himálayan range. Its altitude is much less than that of *Shátúl*; but it is rendered impassable by a perpendicular wall of gneiss, that forms an impracticable barrier for several miles.

"The snow became more frequent as they ascended, till they attained the crest of a ridge, at the elevation of 13,450 feet, where it is continuous at that early season. A month later it would be dissolved. Upon the snow, at the greater height of *Shátúl*, were many insects like mosquitoes: at first they were torpid; but sunshine revived them. Some birds were seen, resembling ravens. Mosses were found on the few rocks.

"The travellers halted for the night at *Kaniján*, under the shade of a large rock, at the height of 13,400 feet, whence the steep ascent of the pass begins. There were plenty of flowers where the snow had melted, but no bushes. The firewood was brought from the last camp.

"From this spot the ascent seemed appalling. The crest was nearly 2,200 feet higher. Here and there a rock projected its black head; all else was a dreary solitude of unfathomable snow, aching to the sight, and without trace of a path.

"The travellers found the snow, which was soft at mid-day, afford good footing, and reached the summit with less fatigue than they anticipated. They remained the night and following day at the crest of the pass, and suffered much from head-ache and difficulty of breathing, usually experienced at such elevated positions. It snowed in the evening. The temperature did not rise above 41° at noon: it was 24° and 26° at sunrise (9th and 10th of June).

"On the subsequent day, they descended upon the same side, and proceeded along the dell of the *Andréti*, a branch of the *Pabar* river, rising near *Shátúl*, and halted on the bank of a rivulet called *Dingrú*, at an elevation of 12,300 feet, just above the limit of the forest. The lowest point in the dell was 11,100 feet. Leeks were gathered at the height of 12,000 feet. The ground was here a rich sward, cut up in grooves by a large kind of field-rat, without a tail. (*Spalax*—*Mus typhlus*?)

Asiatic Journ. Vol. XXI. No. 123. 2 U

"Th

"The *Himálayan* glens for the most part run almost perpendicular to the range, or from N.N.E. and N.E. to S.S.W. and S.W. The face exposed to the N.W. is invariably rugged; and the opposite one, facing the S.E., is shelving. The roads to the most frequented passes lie upon the gentle acclivity: the difference of the elevation of forest on either side is remarkable. On the declivity towards the N.W., which, as before observed, is the most abrupt, the trees rise several hundred feet higher than those upon the opposite face, which has a more gentle slope; and in some instances, the difference exceeds 1,000 feet. The general height of the forest on the southern face of the *Himálaya*, is about 11,800 to 12,000 feet above the sea. Oaks and pines reach that elevation; birches extend a few feet higher. Descending from the pass of *Bandáján*, the level of the highest juniper was observed 13,300 feet.

"From *Shéarghal*, at an elevation of 13,720 feet (which the travellers reached by a very steep path, crossing several snow-beds, where it was necessary to cut steps with a hatchet, and passing among gigantic oblong masses of mica slate, disengaged from the impending crags), the prospect is very extensive. Towards the plains appear the *Chúr* mountains, 12,000 feet (one measured barometrically is 12,143 feet); to the S.E., snowy summits of immense altitude, in the direction of *Yamunávatári*, rising one above another in majestic disorder, and presenting mountains of eternal snow; and beyond the source of the *Pabar*, one of the huge *Raldang* peaks, above 21,000 feet. Across the *Pabar*, is the *Chashíl* range, through which are several passes, 13,000 to 14,000 feet high.

"The *Yúsú* pass, at the head of the *Sípon* river, which is called *Yúsú*, in its upper course, above *Bandáján*, is 15,877 feet high. The dell, between this and *Bandáján* pass (14,854 feet above the sea), is shut in towards the N.E. by snow-capped mountains, upwards of 17,000 feet high, amongst which the river has its source. The rocks at *Bandáján*, and on the bank of the river, where the travellers encamped at the height of 13,650 feet, were gneiss; and the adjoining mountains the same, and clay slate. The descent was over broken slate, from *Bandáján*.

"The ascent of *Yúsú* pass was extremely fatiguing: Messrs. Gerard describe themselves as having been so exhausted at first, that they rested every hundred yards; and, had they not been ashamed, before so many people, some of whom they had induced to accompany them after much intreaty, they would have turned back.

"The *Yúsú* river is divided into several streams, all of which, but the principal one, were crossed by arches of snow. The largest, which was forded, was forty feet broad, and six inches deep: the bed full of pebbles, and the margin snow-washed by the stream. With the exception of that principal channel of the river, and some openings partially disclosing the smaller branches, the rest is a bed of snow six or eight inches thick.

"The glen becomes more and more contracted, till at last it is bounded by mural rocks of granite, with the *Yúsú* forcing its passage between them in impenetrable obscurity, under immense heaps of indestructible ice, running in ridges, and studded with mounds of snow.

"The *Búrendo*, or *Bruüing* pass, near the *Pabar*, was again visited. It had been measured barometrically in 1818: the measurement now taken exceeded the former one (which was 15,095 feet) by 153 feet. To that extent the barometric measurements must be considered uncertain. They halted two days on the summit of the pass; and, as is usual at so great elevations, were troubled

troubled with head-aches and difficulty of respiration. The nights were calm; but the solemn stillness was now and then interrupted by the crash of falling rocks.

“ They descended into the valley of the *Baspá*; sliding down the declivity of a snow-bed by seating themselves upon a blanket on the snow. This mode is invariably practised by the mountaineers, where there are no rocks nor precipices. They had then a dreadfully dangerous footpath along the rugged sides of the dell: it crossed many snow-beds, inclined at an angle of 30° or more; which delayed them much, as they had to cut steps in the snow.

“ The *Nalgún* pass, the lowest pass through the *Himálaya* which had been yet visited, is 14,891 feet above the sea. From this pass they descended to the confluence of the *Nalgún* and *Bakti* rivers, and thence proceeded along the *Bakti*, and across the *Baspá* river to *Sangla*, where they halted several days (23d to 29th of June), and whence they despatched their collection of plants and geological specimens; but the paper envelopes of the latter were rendered illegible, and the whole of the former destroyed, by the heavy rain which overtook the despatch in the following month.

“ Messrs. Gerard, resuming their journey, ascended the valley of the *Baspá* to *Chétkúl*, the last, and highest village in it, crossing the first day two large branches of the *Baspá*, the *Chuling*, and *Gór*, from the *Cailás* range on the north; and the second day, two other considerable streams, the *Mangsa* and *Shúti*. They first passed over tremendous blocks of coarse-grained granite, the decomposition of which seems to have formed the sand in the river; it gives the water a turbid appearance. The granite is white, and from a distance looks like chalk.

“ The first part of the valley has the same general character with most others in the *Himálaya*; but it is considerably broader. The face of the mountain exposed to the S.W., which is part of the *Cailás*, or *Raldang* group, presents abrupt precipices and threatening cliffs, with little soil, and but few trees; the opposite face again is more gently sloped, and thickly wooded with pines, which are overtopped by a belt of birches. Near the top of this chain there is a good deal of snow. The last half-mile to the village of *Rákchám*, situate in the western corner of the glen (and 10,500 feet above the sea), is a rugged descent upon enormous masses of granite. The dell has here a pleasing appearance, and it expands to three furlongs in breadth: half of it is laid out in thriving crops of wheat and barley, and the rest is occupied by sand-beds, which form many small islands, with the river winding among them. Just above the village, huge piles of black rock, composed of black mica (fine grained) with a little oxide of iron, rise abruptly in numerous black spires to about 9,000 feet higher, or nearly 20,000 feet above the level of the sea. Approaching *Chétkúl*, the dell becomes more contracted; the right bank becoming very precipitous, and almost mural to the *Baspá*. The altitude of the village is about 11,400 feet, and the highest fields are scarcely 200 feet more. The valley continues about 800 yards wide for two or three miles; the *Baspá* then makes a bend to the southward, and the view is shut up by snowy mountains of great height.

“ From *Chétkúl* the travellers attempted the *Kimliá* pass, at the head of the valley of the *Rúsú* river, a large stream, derived from a double source, one branch rising in the snow of *Saglá* pass, which bears nearly south; the other, or smallest, in the *Kimliá*, about S.W. Above the elevation of 13,300 feet, the level of the highest birches, the *Rúsú* is increased in rapidity and turbu-

lence to a torrent, and foams in dreadful agitation and noise. Still higher up, the road ascends gradually, upon snow of immense thickness in the channel of the current, which now and then shows itself in deep blue lakes. The travellers passed along the margin of one 150 feet in diameter: the way was extremely dangerous, upon ice sloping abruptly to the water; in this there was no footing, till notches were cut with a hatchet, an operation which long delayed their progress. Latterly, they travelled over mounds of unfathomable snow, so loose as scarcely to be capable of supporting them at the depth of three feet. The guides had snow-shoes, which were at least five or six inches in breadth. They said, that early in the morning, before the sun had power, the snow would bear the weight of a loaded person; and in May and June, when the pass is most frequented, it does not sink at any time of the day.

“The travellers reached the elevation of 15,500 feet, where the pass appeared to be 1,400 or 1,500 feet higher, over vast fields of snow.

“The dell is broad (half a mile wide), and covered with snow in high wreaths. The mountains, which have a S.E. exposure, are nearly bare, a few patches of snow only appearing at great heights. The line of cliffs may be 17,500 feet. On the other side, the mountains are nearly of the same height, and they present a chain of mural precipices, eaten away by frost into forms like towers and steeples. Much of the rock near the summits is exposed; and snow, having lost its hold on their steep craggy sides, has accumulated below.

“Messrs. Gerard proceeded by the *Chárang* pass (17,348 feet high) to the valley of *Nangallí*. The inclemency of the weather rendered it very arduous. They were detained three days at *Shalpiá* (a resting-place for travellers) by incessant rain; on the fourth day their guides consented to proceed. Many snow-beds were crossed; and, about the height of 16,300 feet, continuous snow-beds commenced; at first, a gentle acclivity, and latterly a very steep slope, surpassing in terror and difficulty of access any thing which the travellers had yet encountered. The acclivity was at an angle of $37\frac{1}{2}^{\circ}$ of loose stones, gravel and snow, which the rain had soaked through and mixed together, so as to make moving laborious, and all but impracticable. The stones gave way at every step, so that it became necessary to use hands as well as feet. The travellers reached the crest of the pass at noon, in a state of exhaustion and numbedness of hands and feet, from continued exposure to snow and sleet, with a violent freezing wind.

“The dell leading to the pass is very much contracted; and the ridges on each side are almost bare. The rock is generally a sort of slaty gneiss, sometimes in large masses, but more commonly tumbling in pieces, with little soil and less vegetation.

“Here, as at *Shátíl*, Captain Gerard noticed the circumstance of the mercury appearing quite pure [perfectly fluid?], when they left camp; but, at the pass (when used for filling a barometer) it had lost its lustre, and adhered to the fingers and cup as if it were amalgamated.

“The descent from the pass for half a mile was at an angle of 33° upon gravel and snow, with a sharp pointed rock occasionally projecting through it. Some of the loaded people slid down this declivity at the greatest risk. Travelling was rendered laborious on the easier slope of snow, from its sinking one and a-half to two feet. The fissures were beginning to appear, and the guides picked their steps with much caution, leaping over whatever had the least appearance of a rent. The snow fell fast; and a piercing wind blew with fury down the dell.

“The

“The principal branch of the *Nangaltí* has its source much further to the west; a rivulet joins it from the pass. The mountainous range having a N.W. aspect, is very rugged; and the snow (often of a reddish colour) presents enormous banks of sixty or eighty feet thick, as shown by the part towards the dell having fallen down where it cracked. This is always the case on the precipitous sides of the vallies, because the ridges for a considerable way down are too abrupt for the snow to rest upon them: it therefore accumulates in large quantities, where the inclination is more gentle; it then cracks and tumbles down by its own weight, during the rainy season, and leaves a perpendicular wall of eighty to a hundred feet in depth. The mountains on the other side were less steep, and the snow lies in continuous fields.

“The travellers proceeded over heaps of loose stones, snow, and slush, at the point of congelation. They passed by several deep blue lakes, with their banks of frozen snow: these are always to be dreaded; and they made a circuit by a seemingly more arduous road, to avoid the danger. Two avalanches descended opposite to them: one of rock, which spent its force in distance, the smaller fragments just reaching them; the other of snow, but arrested by intervening rocks.

“Recommencing their journey, the travellers followed the course of the *Nangaltí* river, to its junction with the *Tidúng*, and explored the valley of this last-mentioned river, ascending to the village of *Charang* (12,000 feet), amidst mountains 18,000 feet high; and proceeding thence to *Thangi*, and afterwards to the confluence of the same river with the *Setlej*. The principal branch, retaining the name of *Tidúng*, flows from the E.S.E., having its source in Chinese Tartary.

“The valley of the *Tidúng* is very narrow; in parts so much so, as scarcely to afford a passage for the river. The stream is furiously rapid, the declivity very great, and the rumbling of large stones, carried down with velocity by the force of the water, was incessant. For six or seven miles the fall of the river is 300 feet per mile, and in some places almost double: where it presents an entire sheet of foam and spray, thrown up and showered upon the surrounding rocks with loud concussion, re-echoed from bank to bank with a noise like thunder.

“The dell of the *Tidúng*, at *Húns*, a Tartar village, is confined by towering cliffs of white granite and mica slate. The mountains in the neighbourhood of *Charang* are all of blue slate, naked to their tops, and exhibiting decay and barrenness in the most frightful forms. They tower in sharp detached groups to about 18,000 feet. No vegetation approaches their bases, whilst their elevated summits offer no rest to snow.

“Where the dell was narrowest, there was so little space for the stream, that the road continued but for a small distance on the same side, and crossed the river repeatedly by *Sangas*; one was inclined at an angle of 15°. The travellers had to pick their way: one while upon smooth surfaces of granite, sloping to the raging torrent: at another, the route led among huge masses and angular blocks of rock, forming capacious caves, where fifty or sixty people might rest: here the bank was formed of rough gravel, steeply inclined to the river; there the path was narrow, with a precipice of 500 or 600 feet below, whilst the naked towering peaks, and mural rocks, rent in every direction, threatened the passenger with ruin from above.

“In some parts of the road there were flights of steps; in others, framework, or rude staircases, opening to the gulph below. In one place is a construction

struction still more frightful to behold ; it is called *Rápiá*, and is made with extreme difficulty and danger. In the instance, it consisted of six posts driven horizontally into clefts of the rocks, about twenty-feet distant from each other, and secured by wedges. Upon this giddy frame a staircase of fir-spars was erected, of the rudest nature ; twigs and slabs of stone connected them together. There was no support on the outer side, which was deep, and overhung the *Tidung*, a perfect torrent.

"After surmounting this terrific passage, they came to another, where the footpath had been swept away. It would have been impracticable, but, from previous intimation, thirty people had been despatched the preceding night from *Thangí* ; and had just completed two tolerable *sangas* by the time the party arrived, so that they passed in safety.

"The route from *Thangí* to *Marang* lies through a forest of pine (*Ri*), upon the slope of a hill composed entirely of blue slate, often crumbling in pieces.

"From the confluence of the *Tidung* with the *Setlej*, the town of *Ribé*, or *Ridang*, has a charming appearance : yellow fields, extensive vineyards, groves of apricots, and large well-built stone houses, contrast with the gigantic *Raldang* mountains. These are scarcely four miles from the town.

"*Marang* is a large town, surrounded by high mountains. Although 8,500 feet above the sea, it enjoys a mild climate. During eight days' halt, the temperature varied from 58° to 82° ; and flies were very troublesome. The sun, even at this season (July), does not appear more than nine hours : was scarcely visible above the mountains before 8, a.m., and disappeared behind them at 5, p. m. There were alternate light clouds and sunshine, and now and then a little rain, which in this valley never falls heavy : the height of the outer chain of the *Himálaya* being sufficient to exclude the rains which deluge *Hindustán* for three months.

"Having collected from the surrounding villages supplies for ten days, Messrs. Gerard proceeded to examine the valley of the *Táglá* river, which has its source in Chinese Tartary. They travelled to *Nisang* (on the *Táglá*), a Tartar village, already visited both in 1818 and 1820 ; crossing the *Túngrang* pass, which was again measured, and the previous measurement (13,739 feet) confirmed.

"The pass leads over a spur, which runs down to the *Setlej* river, from a cluster of snowy mountains, upwards of 20,000 feet high. The rocks are slate : it easily splits into large even slabs, which are well adapted for carving the sacred Tartar sentences upon them. Across the *Setlej* the mountains are of white granite, breaking into gravel, and more abrupt than on the hither side.

"They proceeded along the banks of the *Táglá* to *Urchá*, and thence to *Rakor*, through the *Ruthingí* pass, and near the source of a rivulet of that name, after passing the *Khátí*, which descends very steeply from the *Himálaya* on the south, in which direction a peak of vast altitude is visible. The elevation of the pass is 14,638 feet ; that of the resting-place at *Rakor*, 14,100 feet. A few birches are growing 200 or 300 feet lower.

"Upon the left bank of the *Táglá*, the height of the mountains is upwards of 16,000 feet, and no snow appears. The rocks are brown clay slate, and mica slate. Upon the right bank of the river, the mountains appear to be all clay slate, crumbling into soil, and forming a natural declivity. The summits seem to be 18,000 feet high, at least ; and there is very little snow in streaks. Farther to the east is a large mountain, white with snow, and near it a naked ridge of rocks, ending in a number of sharp points, apparently formed of
slate.

slate. In the vicinity of the source of the *Ruthingí*, several conical points are seen covered with snow.

"The travellers continued along the banks of the *Táglá* to *Zongchen*, passing several streams which fall into it, and a larger one named *Kegóche*, which comes from the south (S. by W.), and one less considerable, called *Langúrge*, from the S.E., both very muddy. The *Táglá* itself is quite clear, and its course is from the N.E. They crossed at once by a *sango*.

"The path lay upon broken slate and slippery soil, then upon inclined faces of rock; at one time ascending steeply upon loose stones; at another, descending abruptly upon rude steps and scaffolding, projecting over the stream, and between cliffs that subtend an angle of 60° or 65° on either side. Now and then these crags are perpendicular for 200 or 300 feet, and they even overhang the pathway. Large snowbeds conceal the river for several hundred yards: an immense load of stones and gravel lies above the snow. In one place the accumulation of rocks, which have fallen from the surrounding peaks, is sixty or seventy feet thick; and the river is seen rushing from beneath a large vault, whose under surface is frozen snow.

"The height of *Zoncheng* is 14,700 feet, which, in lat. $31^\circ 36'$, according to received theory, should be buried under everlasting snow. The situation, however, is far different. On every side of the glen, which is a bowshot broad, appeared gently-sloping hills, for the most part covered with *Támá* (Tartaric furze). The banks of the river were covered with grass turf, and prickly bushes. Around, the land was covered with verdure; flocks of sheep were browsing, and deer leaping: altogether it was a romantic spot, wanting but trees to make it delightful.

"During the march the sun was found at times powerful; but the temperature was evidently decreasing with the elevation. The highest observed in the day (23d of July) was 68° .

"The rocks were limestone; the soil a stiff yellow clay, rent in every direction by small fissures, and seeming to have been under water. The surface was ground to dust.

"The next stage was to *Zamsí*, by the *Kéúbrang* pass: after tracing the *Táglá* (crossed frequently by snow-beds), until it was reduced to an inconceivable rivulet at the foot of the pass.

"The ascent of the pass is by no means steep, the angle being only nineteen or twenty degrees. But the difficulty of breathing, and severe headaches, which all the party, not excepting their Tartar guides, experienced more or less, rendered the exertion of walking very laborious. As they advanced, vegetation became more scarce, till at length it wholly disappeared; and the last mile presented a scene of solitude and desolation.

"The elevation was found by barometric measurement to be 18,313 feet above the sea. The pass is reckoned the boundary between *Kunúwar* and that part of Chinese Tartary which is under the authority of the Grand Lama of *Lahasa*.

"*Zamsí*, a mere halting place for travellers, on the banks of the *Shéltí*, to which they proceeded from *Kéúbrang*, is 15,600 feet above the sea, a height equal to that of the passes through the outer range of snowy mountains; yet there is nothing to remind one of the *Himálaya*. Gently sloping hills and tranquil rivulets, with banks of turf and pebbly beds, flocks of pigeons, and herds of deer, would give one the idea of a much lower situation. But nature (Capt. Gerard remarks) has adapted the vegetation to that extraordinary

nary

nary country; for, did it extend no higher than on the southern face of the *Himálaya*, Tartary would be uninhabitable by either man or beast.

"It seems surprising (he goes on to observe) that the limit of vegetation should rise higher the further we proceed, but so it is;—on ascending the southern slope of the snowy range, the extreme height of cultivation is 10,000 feet; and even there the crops are frequently cut green. The highest habitation is 9,500 feet; 11,800 feet may be reckoned the upper limit of forest, and 12,000 that of bushes: although in a few sheltered situations, such as ravines, dwarf birches and small bushes are found almost at 13,000 feet.

"In the valley of the *Baspá* river, the highest village is at 11,400 feet; the cultivation reaches to the same elevation; and the forest extends to 13,000 feet at the least.

"Advancing further, you find villages at 13,000 feet, cultivation at 13,600 feet, fine birch trees at 14,000 feet, and *támá* bushes, which furnish excellent fire-wood, at 17,000 feet.

"To the eastward, towards *Mánassaróvar*, by the accounts of the Tartars, it would appear that crops and bushes thrive at a still greater height.

"The travellers descended the valley of the *Shélti* river to its confluence with the *Súmdó* river, and ascended to the crest of the *Húkéo* pass, of which the elevation is 15,786 feet. The soil is reddish, apparently decomposed limestone, with no large stones. The ground is thickly covered with green sward and beds of prickly bushes. No rocky points are seen, the whole being gentle slopes of gravel, much resembling some of the Scotch highlands; the *támá* at a distance seeming like heath. *Yaks* and horses were feeding on the surrounding heights; and the climate was pleasant; the temperature being 57°.

"Three of the people, who were attending the cattle, watched the party for some time, until being convinced there were Europeans, they mounted their horses, and set off at a gallop. The travellers quickened their pace, determined to advance as far as practicable; but two miles further they were stopped by the Chinese, after they had crossed a rivulet with swampy banks, winding among rich turf, near which, they found many ammonites, at the height of 16,200 feet, on the elevated land between *Húkéo* and *Zinchin*.

"The Tartars under Chinese authority were encamped, awaiting their arrival, of which previous intimation had been received, and pointed out a spot for their camp, and a line beyond which they should not pass. Their manners were polite, and their civility was requited by presents of tobacco, the only thing for which they seemed to have any, the least desire.

"The height of *Zinchin* is 16,136 feet, and the eminences in the vicinity rise many hundred feet higher. In every direction, horses were seen galloping about, and feeding on the very tops of the heights; altogether there were about 200. Kites and eagles were soaring in the air; large flocks of small birds, like linnets, were flying about, and locusts jumping among the bushes.

"Immediately across the *Setlej*, the mountains are abrupt; but, more to the east, there is a succession of gentle slopes. Beyond them again, appeared a lofty snowy range. It seemed to run N. 50° W. to S. 50° E. Clouds hang about it.

"At this altitude the atmosphere exhibited that remarkable dark appearance which has been often observed in elevated situations. The sun shone like an orb of fire, without the least haze. At night, the part of the horizon where the moon was expected to rise, could scarcely be distinguished before the

limb

limb touched it; and the stars and planets shone with a brilliancy never seen, unless at great heights.

“With a transit telescope of 30 inches, and a power of 30, stars of the fifth magnitude were distinct in broad day; but none of less size were perceptible. At *Súbáthú*, 4,200 feet above the level of the sea, stars of the fourth magnitude require a power of 40 to make them visible in the day.

“The temperature was greater than expected: the thermometer rose to 60° in the shade, and at sunset was 42°. It sank to 30½° before sunrise. About nine in the forenoon a wind from the S.W. began; it was at its greatest strength at 3 p. m., and subsided at sunset.

“The climate is very different from that which is experienced in crossing the outer range of the *Himálaya* at the same season. Here, at the height of 16,000 and 17,000 feet, is abundance of fuel (*metóh*, bearing a beautiful yellow flower, and no prickles), good water, and a serene sky; there, at an inferior elevation, no firewood is nearer than five or six miles, the clouds hang around the mountains, the sun is rarely visible, and showers of rain are frequent.”

(The remainder next month.)

FROM A RISALLAH OF SAADI.

HELL's doors to him on easy hinges roll,
 Whose spotless raiment hides a spotted soul.—
 Meekness, not bigotry or self-conceit,
 At the dread hour of doom, most grace shall meet.—
 Let not the hero boast his warlike deeds;
 Heaven may condemn the cause for which he bleeds.—
 Devotion, prayer, and penitence alone,
 Can in the sight of God for sins atone:
 Not the contortions of the devotee,
 Ascetic fasts, and mock humility;
 But goodness, temp'rance, charity and zeal,
 More than all forms, the righteous heart reveal.—
 Let not fanaticism thy thoughts withdraw
 From social duties, and the holy law;
 Nor aim at dazzling purity,—too bright
 For earth, where black pollutes the fairest white.
 The holy hermit Hell's dark pathway trod—
 Unjust to erring man, though just to God.*

* This distich refers to an apologue, of which the above lines form the Khatimah, or peroration, wherein a holy hermit, in the presence of our Saviour, is represented as spurning a penitent sinner, whom the Almighty receives into Paradise; whilst the hermit, for placing his trust in mere forms of worship, is consigned to Hell.

THE CASE OF CURSETJEE MANACKJEE.

We have received, from Bombay, the following communication, in answer to what has appeared, respecting the case of the individual above named, in a contemporary publication.

Cursetjee Manackjee had a contract for the supply of provisions for one year, "for the Company's Military Establishment at Bombay." An indent from Sir A. Wellesley, for various articles for the Madras army to be lodged at Poona, was confidentially sent to the Governor of Bombay, and Capt. Moor was as confidentially employed to furnish the supplies: he was garrison store-keeper at the time, an office merely of receipt and issue, debarred from making purchases. Among a variety of articles included in the indent, rice was the only one that fell within the contract in question. Capt. Moor entertained doubts how far Cursetjee Manackjee, by the terms of his contract, had a right to make the supply of the rice required for *Madras* troops. "He informed the contractor that the purpose for which he was procuring the article was *unconnected with his contract*; that native (as that officer reported) agreed to abide by my advice—it was, at all events to wave it, and as a further inducement to him to do so, I determined to purchase, through him and his agent, the other articles required for the Madras army. In the hope and expectation that his claims, in other points, would be favourably considered, Cursetjee Manackjee did not scruple to offer to wave the subject of remuneration on that in question, although he submitted how far his contract would, in an attentive perusal, warrant his making it."

Here there was a fair compact between two individuals, each reposing in the honour of the other. Doubts were entertained of the Bombay contractor's right to furnish a supply of rice for the troops of the Madras presidency—the contractor agrees to wave his right for certain considerations.

Had Capt. Moor told the contractor that the rice was required "for a private and altogether distinct purpose," and under that pretence obtained the rice at a rate below the contract price "for the military establishment at Bombay," it would have been a gross fraud—a robbery. The purpose for which the rice was required could not, "from motives of policy," be immediately divulged; but the communication was sufficiently candid; the secret was not long maintained—in the course of two months it was known that the rice was for the Madras troops; for the bills sent in under the signature of Cursetjee Manackjee were headed "for General Wellesley's army."

The inducement held out to Cursetjee Manackjee to wave a doubtful claim under his contract, was a promise by Capt. Moor to allow Cursetjee Manackjee the advantage of supplying the various other articles included in Sir A. Wellesley's indent, which his contract did not embrace. Capt. Moor determined to employ Cursetjee in the provision of this rice also, not at the contract, but at the market price. Was this an adequate consideration to the contract or for the compromise of a doubtful claim? Moor's evidence is the best on this point.

Capt. Moor adverted "to the advantages that Cursetjee Manackjee assuredly derived from having been employed in making the purchase of this rice for Gen. Wellesley's army: first, by keeping others out of the market in the purchase of an article, for the supply of which he had two extensive contracts with Government, by my allowing him to be the channel of purchase of grain and wheat also, on which he has, in some instances, received brokerage—in others,

not.

not. He had, further, a mercantile advantage in the *éclat* attending the disbursement of several lacs of rupees of Government money; and, finally, he had my assurance, if his conduct was such as I had reason to expect, that I should not only favourably recommend him, but make him a pecuniary compliment out of any remuneration that Government might be pleased to award me for the service in which I was employed and employed him." The pecuniary compliment, being 5,000 rupees, was offered—but declined. Was not Cursetjee Manackjee, then, here voluntarily acting in his own wrong, admitting that he had a right, with his eyes open?

Was this agreement binding on honourable men? if not, was not Capt. Moor deceived in the character of his agent? Had that officer adopted the simple precaution of indorsing on the contract Cursetjee's relinquishment of whatever right he possessed to supply the troops of another presidency with rice, we should have heard nothing more of this transaction; or had that officer referred the question to the Military Board, the immediate controlling authority over the contractor, or to Governor Duncan—there were those belonging to that Board, and about the Governor, as much in his confidence as Capt. Moor, who knew Cursetjee Manackjee better than to trust to any agreement to which he only verbally pledged himself.

Upon what principle, then, of fair dealing between individuals, who had confidence in each other, has such an agreement been departed from? "*From a hope that though wrong in point of equity, the law would bear him out.*" Capt. Moor had been too confiding; the contractor saw that he had not legally committed himself. Having made the most of a verbal agreement with Capt. Moor, this native turns to his bond, sealed and signed—

My deeds upon my head! I crave the law—
I'll have my bond—
I'll not be made a soft and dull-eyed fool
To shake the head, relent, and sigh, and yield
To Christian intercessors.

He applied to Government for redress for a breach of contract; and the following was the resolution: "That the contract entered into with Cursetjee Manackjee was for the supply of rice, doll and ghee for the military department of this presidency, and not for that of Madras; for which this Government acted merely as agents in the purchases of the rice made by Capt. Moor, which, it followed of course, ought to be made on the best terms that the local market and other available means afforded, at the period of the receipt of the commission confidentially committed to the president, and by him to Capt. Moor; without having any connexion with a provision contract respecting a distinct supply that could not, from its nature, have been in contemplation at the period of the engagement with Cursetjee being entered into; of which the said Cursetjee appears, by Capt. Moor's report, to have himself been satisfied at the period when that gentleman employed him to make part of the purchases for the purpose in question, which, he was then informed, was unconnected with his existing contract."

Renewing his application, the Advocate-General was consulted, whose opinion was as follows:—"The question is, whether, by the terms of his agreement with the Company, the contractor has a right to furnish supplies, not only for the military department belonging to Bombay, but also for the army of a different presidency, provided the supplies were issued from this place."—"On this part of the subject I agree entirely in the sentiments so accurately expressed in the minute of council of the 23th of July 1804. The words of

the second and eighth clauses of the contract are, no doubt, general; the contractor is to supply whatever rice, &c. may be wanted for the military department, without any words to specify and define the establishment referred to. But, besides the plain intent of the parties, and its being impossible to suppose that the supply of a Madras army was in contemplation of either of them, a reference to *the preamble of the contract puts the limitation beyond the possibility of doubt*; for it is there said, the contractor is to supply such rice, &c. as may be wanted for the service of *the Company's military department at Bombay*, by which is clearly meant, the troops belonging to Bombay, and them alone."

On that advice the claim for the supply of rice to the Madras troops was rejected, and has been repeatedly so since 1805. The sum of about 43,000 rupees was offered to him on account of issues from the public stores of rice (not purchased of Cursetjee Manackjee) to the military department of Bombay, which ought to have been furnished by him.

Cursetjee Manackjee allowed a period of twenty years to pass over without prosecuting his claim. He at length instituted a suit in the Court of Recorder: the decision was confirmatory of that adopted by the Bombay Government. He applied for a new trial, and obtained, under the glorious uncertainty of the law, what the former court had denied to him. Are there not, under such circumstances, just grounds for an appeal to the King in Council?

The cause of so great a difference between the contract and the price at which Cursetjee Manackjee supplied this rice is a most important consideration, and seems to have escaped the sagacity of those who conducted and decided this case. Sir A. Wellesley expressly indented for Mangalore or Canara rice—a cheap commodity, compared with the description of rice contemplated in the contract, which was Bengal or Vergole. There is a material difference in quality and in price between the two descriptions of rice: the judgment of the court has lost sight of the difference, and awarded for an inferior, the value fixed for a superior article.

I N D O L E N C E .

HARK at yonder murmuring rill,
Trickling idly down the hill,
Wearying echo to prolong
Its uniformity of song!
Let rude storms augment its store,
Its murmurs then are heard no more.

Thus when life unruffled flows,
Free from care and free from woes;
Languid ease, we often find,
Sows with discontent the mind.
Then, if o'er the restless soul
Floods of real trouble roll,
Or dark tempests cloud the sky,—
Hushed is every peevish cry!

Man was never born to be
Blest in still serenity;
For his spirit and his form
Prove he's made to face the storm.

LAND TENURES OF INDIA.

TELINGANA.

Less is known concerning the ancient system of tenures in Telingana than of those in any other part of the peninsula; which circumstance is perhaps chiefly to be ascribed to the long subjection of these provinces to a Mohammedan government. The Bhamanee, Adilshahee, Khootubshahee and Nizamshahee dynasties had firmly established their power in these countries long before they were subdued by the princes of the house of Delhi; the Musulman power, accordingly, endured here long enough to subvert entirely the Hindoo institutions, leaving scarcely a vestige by which they can now be traced.

There is little doubt, however, that the tenures of Telingana were originally very similar to those in the southern or Tamil provinces.* In regard to internal constitution, and the community of interest which unites the inhabitants, a Telinga village is precisely the same as one in the Tamil country. Its lands are similarly divided into waste and cultivated; the latter are also subdivided into *mauniums*, or lands the government tax on which has been alienated; *khundregas*, or lands on which a portion only of the tax has been alienated; and lands liable to the full tax. The nature of the tax payable on land seems likewise to have varied originally with the nature of the crop. On the *maganee*, or lands cultivated with a wet crop (*i. e.* paddy lands), the *koroo*, or government-share of the produce was taken; on the remainder, being the ryot's share, or *madepaloo* (share of the plough-handle), and on lands with dry crop, or gardens and plantations, a fixed money-rent was generally paid, as in the southern provinces, though sometimes the revenue was rendered in kind.

On condition of the due payment of these taxes and the office-meerassy fees, as in the Tamil country, the exclusive right to the hereditary possession and usufruct of the soil in each village seems originally to have been vested in certain classes of Hindoos of Sudra caste, whose descendants are now known by the appellation of *cadeems*,† or representatives of the ancient inhabitants, and who continue to be the principal cultivators in every village of Telingana.

From the distinction still existing between these *cadeems* and the *pyacarry* ryots of the Tamil provinces; from the pottail *mauniums* of the Ceded Districts, and those of the head Reddies and Naicks, or Pedda Caupoons, in the northern circars, being often held in shares (like the *grama maunium* of Tondei Mandalam); from the general resemblance of the village institutions of the two countries; and from the term *cawniatchy* being employed in Telingana to denote private landed property (though this sort of property is now unknown there); it may be assumed that *meerassy*, or a very similar tenure, once prevailed throughout the northern districts.‡ Private property in land, however, had ceased to exist long before our acquisition of the country: there has not been discovered a single deed of sale of landed property in any of the provinces throughout Telingana. The *cadeems*, on the cession of the Telinga provinces to the British Government, were found to be in possession of no other rights than those of the *oolcoody pyacarrys* in the Tamil country. They continued the *permanent* hereditary farmers of their villages, and so long as the dues were paid, their lands (from the possession of which they could not be ousted), though not saleable, descended from father to son. This hereditary right

* See p. 170.

† *Cadeem* signifies ancient.

‡ For an explanation of the above terms, see the article referred to in the preceding note.

right seems to have been the only distinction remaining between them and the pyacarry ryots: for the public dues had here been raised higher than in any other part of the peninsula.* One-half (in some cases only one-third) of the wet crop; two-thirds (or even one-half) of the dry; and from three-fourths to seven-eighths of the garden crop, has been calculated as the nominal share of the ryot; but, in fact, the demand on him was limited only by the supposed extent of his means: his share was often reduced to a fifth, or even a sixth of the produce; and over assessment had every where levelled the cadeem to the condition of the pyacarry.

“It does not appear to have been customary,” says the Madras Board of Revenue,† “for the cultivators in the northern circars to take the Government portion of the produce at a fixed price. The cadeem inhabitants have seldom been renters of their villages, and a difficulty is now experienced in prevailing on the cadeem inhabitants of the Chicacole estates to rent their villages even for a grain-rent. The public revenue has very generally, and for a long period, been paid through intermediate renters, not only in the havelly lands, but in the zemindarries. These renters take the Government portion of the crop in kind, and make the most of it, paying an equivalent in money to the zemindar or collector, as the case may be.”

Where the ancient system subsisted, each ryot occupied and cultivated the lands which had been ploughed by his fathers, rendering to the Government, or its representative, a portion of the wet crop, and a fixed money tax on the dry and garden lands. But long anterior to the date of British authority, a species of arrangement known in the northern circars by the name of the *veesabudy* settlement had been introduced, either by some of the great revenue-officers under the native governments, as an improved system of administration, or by the ryots themselves, in order, in some degree, to elude the undefined and oppressive exactions of the Mohammedans. According to this system, a fixed sum of money was assessed on the whole village, for one or more years. A certain number of the most respectable ryots became responsible for this amount, each for his own separate portion, and all for each other; and the lands were divided by lot, as in the *Samadayem* ‡ villages of the Tamil country; the portion of land, to be occupied by each individual, being determined by the proportion of the rent for which he was answerable. Thus, if ten ryots obtained their village for a certain period at a *veesabudy* rent of one hundred pagodas, the first binding himself as security for twenty, the second for forty, and the other eight for five pagodas each; the lands of the village would be divided into ten equal shares, of which the first would be entitled to two shares, the second to four, and each of the others to half a share: from hence the settlement took its name of *veesabudy*, which implies a village-settlement by shares in ready money.

Owing to the obscurity which prevails in Telingana as to private property in the land, it has happened that the class of actual labourers, which, in the Tamil country, are in a state of bondage, being villeins, attached to the soil, and sold or mortgaged therewith, are here considered free. In Telingana, however, a labourer cannot remove from one village to another, pending engagements which he has not fulfilled; but he is free to make his own terms, and, after performing the engagements into which he voluntarily enters, becomes again the master of his own labour. It is believed, however, that the labourers

† Minute 5th January 1818. Selection of Papers, &c. vol. 1, p. 910.

‡ This term, in Sanscrit, implies a collective proprietary right.

in Telingana generally remain in the same village, and attached to the same family, from generation to generation. "It is a curious circumstance," as remarked by the Madras Board of Revenue,* "that in these provinces, where the severe and arbitrary system of the Musulman Government was established at the most early and for the longest period, where consequently the public assessment on the land is the most high, and private property in the soil the most rare and least valuable, the labourer should also be the most free; while his condition is the most abject in those countries (*e. g.* Malabar and Canara) where the ancient institutions of the Hindoos have been the least disturbed, where the public demand on the soil is the most light, and private property in the land is universal and of the highest value."

When British authority was first introduced into this country, much was necessarily left to the discretion of the different local authorities deputed to take possession, and to regulate each district on its transfer to our possession; but from the uncertainty as to the nature of the rights possessed by the cultivators, and from other causes, the arrangements were various, fluctuating, and ill-defined. At length a regular system of revenue administration was adopted, by the introduction, successively, of the zemindarry, the ryotwar, and the village settlements.

SUTTEES.

To the Editor of the Asiatic Journal.

SIR: I am not aware that any writer upon the custom of voluntary immolation amongst the widows of the Hindoos has noticed, that it is mentioned as a practice sanctioned by the law of India in the time of Alexander the Great, or at least of his successors (about B.C. 300), by Diodorus Siculus in his history, *lib.* xix. As the incident which leads this author to advert to the fact is not uninteresting, I have extracted the narrative from Rollin's translation of it, in his history, *tom.* ix. *sec.* 5. After the battle between Antigonus and Eumenes, the latter obtained permission from the former to bury his dead.

"During this ceremony, a singular dispute occurred. Among the dead was an Indian officer, who had brought with him his two wives, one of whom he had but recently espoused. The law of India permitted no woman to survive her husband; if she refused to be burned with him on the pile she was for ever dishonoured, and obliged to remain a widow during the rest of her life, not being allowed to be present at sacrifices or any other religious ceremony. The law mentioned only a single wife; here were two, each of whom claimed the preference. The eldest alleged her right from antiquity; the youngest replied that the law itself excluded her rival from the pile, because she was pregnant: and so it was decided. The former retired in grief, bathed in tears, rending her clothes and tearing her hair, as if some great calamity had befallen her; the other, on the contrary, in triumph, attended by a numerous body of relatives and friends, decked in her richest ornaments, as on her wedding day, advanced with firmness to the place of the ceremony. There, after distributing her jewels and trinkets among her relations and friends, and bidding them a last farewell, she was placed upon the pile by her own brother, and expired in the midst of the applause and acclamations of nearly all the spectators: some of them, however, adds the ancient historian, regarded this strange custom as inhuman and barbarous."

The fidelity of the details is remarkable.

I am, &c.

MALAYAN PHILOLOGY.*

THE Government of Java, since the restoration, has given a liberal and enlightened encouragement to investigations into the natural history of the varied and extensive regions subject to its authority, as well as to the study of the native language; a branch of knowledge which, whether as an object of philosophical curiosity or practical utility, can no where be pursued with greater advantage than in the Eastern Islands. In the department of philology, the first fruits of this patronage is a translation of the valuable and laborious Malay Grammar of Mr. Marsden into the Dutch and French languages. This work, which required a critical acquaintance with four different languages, a gift rarely to be found in one individual, appears, as far as we can judge, to have been executed with infinite skill and fidelity. We are indebted for it to Capt. Elout, A. D. C. to His Exc. Baron Vander Capellen, Governor-General of the Dutch Indies, and son of the present acute and experienced colonial minister of the Netherlands.

We shall take the present opportunity of offering a few remarks upon the Malay language, in elucidation of the valuable labours of Mr. Marsden and Capt. Elout. A knowledge of the Malayan language is indispensably requisite to every person who visits the eastern Archipelago, either for purposes of profit or curiosity, or who is charged with the details of any branch of its government within the European settlements. It is not only the speech of a numerous race of inhabitants, but, to a singular degree, extensively diffused over the coasts of the different countries and islands. It always forms the medium of intercourse between strangers and the native inhabitants, and very generally between those strangers amongst themselves.

The character and genius of the Malay language have greatly contributed to its diffusion and its utility. For the purposes of a *lingua Franca* it is perhaps more suitable than any other known tongue, being of a structure simple to nakedness itself, and of enunciation liquid and easy beyond example. The Malay, in fact, possesses naturally the character of a conventional dialect, invented, like the jargon of the Levant, by two races of men, strangers to each other, for the convenience of occasional communication on ordinary matters; and has all the look, as far, at least, as the oral tongue is concerned, of a selection of useful words, despoiled of the terminations which mark the tenses and the cases. It is impossible to conceive a language less complex or less artificial. Juxta-position is every thing with it; and so loosely does it hang together, that, in writing, it is scarce possible to compose an intelligible period of the length of ten words. Of these—nay, even of the clauses of a sentence, it is often necessary to mark the beginning and end by expletives, almost exclusively appropriate to this particular purpose. There is no inflection of any part of speech to express relation, number, gender, time, or mood; a word will often be used, without change, as a noun, an adjective, a verb, or an adverb. The tenses of a verb are sometimes expressed by auxiliaries, sometimes by adverbs; but not unfrequently both are omitted, and the reader is left to collect the sense, as he may, from the context. In this language, in short, sentiments and ideas are rather hinted at than fully expressed; and more is left to be understood than in any other. No doubt a good deal of this is attributable to the uncultivated state of the language, but much, we think, also must be ascribed to its inartificial and unskilful structure, if such expressions be allowable.

The

* Extracted from the *Singapore Chronicle*.

The real grammatical changes which take place in the Malayan, differ widely from those which characterize the languages of Europe and Western Asia, especially those of complex structure. There are known, established, and constant rules (in the written language at least) for changing nouns into verbs, verbs into nouns, and both into adjectives; for converting neuter into transitive verbs, and active verbs into passive; but after those few principles are known, a few plain rules of syntax laid down, and some anomalies of no great extent explained, Malayan grammar has not much to teach.

On this view of the genius and character of the Malayan language we are inclined to consider that, in Mr. Marsden's grammar, abounding as it does in sensible and judicious observations, the subject is, upon the whole, too much laboured, and, in fact, made too much of. Mr. Marsden's rules of orthography and syntax are indeed lucid, instructive, and accurate. Many of his rules of etymology are also judicious; but there are others which appear to us mere labour to supererogation; and in this last light we are inclined to consider the greater part of what he has said on the subject of prosody.

On the question of etymology, our objections chiefly apply to the account given of the verb. Mr. Marsden, not indeed without some misgivings on his own part, treats the verb of this naked dialect under all the classical heads of imperative, assertive, conditional, and infinitive moods; and with present, past, indefinitely past, and future tenses. The Malayan verb, however, never expresses either mood or time by inflection, properly so called, nor by prefixing or affixing a particle. It has no means, at all, indeed, of expressing a mood, and when it does express time, it recognizes but two tenses, a simple past and a simple future, expressed by an auxiliary, or indicated by an adverb. In short, to describe this dialect in the phraseology applicable to the complex languages of Greece, Rome, Arabia or Hindustan, appears to us like describing a Malayan distaff with all the technicalities requisite to explain one of Arkwright's cotton-machines.

Of the opinions entertained by Capt. Elout on the question now treated of, we have but one example, but of this we consider favourably. The inseparable particle *di*, one of very frequent occurrence in the Malayan language, both oral and written, is considered by Mr. Marsden to partake of "the nature of the Greek aorist." Capt. Elout views it as expressing simply a passive verb; and in this explanation, corroborated as it is by the uniform analogy of the cognate language of Java, we entirely coincide.

We shall take the present opportunity of noticing that there is one other specimen of Capt. Elout's etymological skill of which we do not think so favourably. He praises Mr. Marsden for an opinion which the latter has hazarded, that in the Malay language "the noun, in its simple state, without any accompanying term to limit or extend its signification, is more properly to be considered as plural than singular." Capt. Elout calls this—" *Cette idée lumineuse, et qui paraît fondée sur le génie de la langue.*" Now, for our own parts, we do not consider the idea in question to be either luminous, or founded upon the genius of the Malay, or of any other language. In the progress of speech, individual names are used before appellatives, objects considered separately before they are considered collectively, and the singular number naturally invented before the plural. A savage is surely acquainted with the river, on the banks of which he was born, before he knows the second, or third, or all the rivers of the island or continent he inhabits. This is indicated by all languages that are sufficiently varied in their structure to afford evidence of it; the plural being generally a formation from the singular by the addition of a letter or syllable.

syllable. Ought the matter to be supposed otherwise in the Malay, merely because the poverty of the language withholds the proof of it?

Our objections to Mr. Marsden's rules of prosody are founded on the same grounds as our objections to his treatment of the Malay verb. He analyzes Malay metre on the principles of Greek and Latin prosody, and speaks (although, indeed, with diffidence, modesty and discretion, according to his custom) of *daetyl*, of *trocheus*, and of *amphibrachys*; but the bare and meagre language of the Malays, still less [more] than the modern languages of Europe, is a stranger to what is called *quantity* in verba. In Malay metre, the ear cannot detect what syllables are long and what are short, and the *feet* of the languages of antiquity can, therefore, have no existence in it. The essentials of the Malayan measures are rhyme, and the *cæsura*, or point of rest, in the middle of the line, always clearly determined by the sound and sense. Even the number of syllables is not regarded, as in the modern languages of Europe; for the same poem will be found to contain lines of eight, and lines of thirteen syllables, with every intermediate number.

Considering the great simplicity of the Malayan language, what appears to us to be chiefly required towards its successful study, either with a view to philosophical curiosity, or the common business of the world, is a copious and accurate dictionary. Mr. Marsden has effected a great deal, but probably, after all, not embraced above one-half of the language. Even in what he has done there are many errors—the necessary consequence of compiling his work in Europe, without native assistance. For this reason, with all the care, discretion, and sagacity bestowed upon its composition, it is greatly inferior, in accuracy, comprehensiveness, and utility, to the Hindustanee dictionaries of Gilchrist and Hunter. A valuable and nearly perfect dictionary of the Malay would be composed, by a man gifted like Mr. Marsden, sitting down in an European establishment within the Archipelago, and enjoying all the necessary leisure and requisite assistance. He would require, besides Malayan teachers, and an ample collection of manuscripts, the aid of a native well-skilled in the Arabic language, of one skilled in the Sanskrit, of one skilled in Javanese, with occasional assistance in the Telinga, the Persian, the Bugis, the Chinese, and the Portuguese. We are not quite sure that the Malayan words would not be written with more advantage in the Roman than in the Arabic character. All the languages of the Indian islands are composed of few elementary sounds, not exceeding in all, consonants, vowels, and diphthongs, twenty-seven in number; and these are expressed, with great precision, by an appropriate selection of Roman letters. The Arabic character, on the other hand, is very ill-suited to this purpose; for it leaves the vowels and diphthongs in a state of perfect ambiguity, of which inaccuracy we shall give one or two examples. Four distinct words, pronounced very differently in Malay, and which would be accurately expressed in any native alphabet of the islands, or in the Roman character, and expressing such distinct meaning as “to upbraid”—“a certain weight of gold”—“a knob or excrescence from a tree,” and “the country of Bengal,”—will, very generally, be all written in the same way in the Arabic character. The words which express “to spread or extend,”—“a star,”—“a rampart,” and “pregnant, or with young,” are all commonly expressed by the Arabic alphabet exactly in the same manner.

Whether the Roman character be adopted or not, to render the work valuable to a scholar, each derivative word should be written in its native character, as so satisfactorily effected in the dictionary of Hunter. We should certainly be for rejecting all quotation as unnecessary, since there are no beauties

in

in this barbarous and uncultivated language to transcribe, and since the paltry scraps which are likely to be admitted will tend much more to overlay and incumber the work, than to serve the purposes of illustration. According to our conception, quotations tend to throw an air of ridicule over the labours of the most respectable scholars. Even the fine varnish of Sir Wm. Jones's translations is not always capable of hiding the deformity of his originals; as, for example, when he makes known to us that the mistress of a Hindu bard walked as "gracefully as a young elephant, or a *pheneopteros*" (the flamingo, a species of stork!). Of what consequence is it to a civilized reader how the puerile imagination of some unknown Malay scribe made *Dewa Indra* and *Sita Dewi* express themselves upon some topic of love or murder; or what Meer, or Suoda, or Tupish, or Taban, or any other equally well known writer, may have said on the suspicious question of Hindu morality; or even how the poets of Persia themselves may have described the loves of roses and nightingales, or sung the praises of tulips and bad wine? It is far from our object in these remarks to decry the study of eastern literature, which is indispensably necessary towards the acquisition of the native languages; but we think the time is gone by when eastern writers, even in their own style, are to be held up as objects of admiration or imitation; and we think, in the present day, few will be prepared to deny that the real treasures of Moore and Byron are not to be preferred to the fanciful pearls of Hafiz and Ferdousi.

A dictionary, upon a more comprehensive scale than that to which we have now alluded, might, we think, be composed with much advantage, and without any extraordinary difficulty; we mean a combined dictionary of the principal insular languages. The dialects of the Archipelago are indeed innumerable, but those spoken by powerful and populous tribes, and which have received a considerable share of cultivation, are but three—the Malay, the Javanese, and the Bugis. These, which have the same elementary sounds, and which contain a vast number of words in common, might as easily and as conveniently be united in one work, as Meninski joined the Arabic, Persian, and Turkish in his lexicon—or as Hunter and Shakespear have, in a great measure, combined the Arabic, Sanscrit, Persian, and Hindee in their Hindustanee dictionaries. Such an undertaking will be worthy of the present Government of Java, whose means and situation afford them the best opportunities for patronizing it.

A HINDU SONG.*

I'VE wandered over sandy plains,
Where dreary desolation reigns;
Yet whereso'er my footsteps rove,
I bear the piercing thorn of love.

Life's various torments well I know,
Familiar with the face of woe;
Condemned, perhaps till death, to roam,
Far from my love and far from home.

Just as the shuttle's forced to fly,
For other's pastime,—so am I.

* The original words are in Sir Wm. Ouseley's *Oriental Collections*.

JOURNEY TO KHOKAND.

IN the first number of M. Klaproth's *Magazin Asiatique* is an account of a journey from the frontiers of Siberia to the capital of Khokand, performed by Philip Nazaroff, who accompanied some envoys from that country on their return from Russia. Nazaroff, who was an interpreter in the service of the Russian Government, states that he could speak the dialect of Khokand as readily as his mother-tongue; the facilities he possessed for acquiring a knowledge of the imperfectly known state of Khokand were, consequently, considerable.

A brief notice of this journey, extracted from the Russian, in which language the author composed and published his narrative, under the patronage of Count Romanzoff, appeared some time back in the *Quarterly Review*.* A more copious abstract of the work, with some illustrations, furnished from the extensive philological researches of M. Klaproth, may be acceptable.

Nazaroff and the envoys left Omsk in May 1813, with a detachment of Cossacs, entrusted with the protection of a caravan of merchants, whose object was to open a commercial intercourse with Khokand. Passing by Petropaulovsk, a Russian fortress, they entered the steppes of the Kirgheeze. This extensive country is a sandy plain; few parts of it are susceptible of cultivation, and still fewer adapted for the growth of trees. The climate in the north is humid; the winter lasts about six months; the summer season is almost always hot. The inhabitants are of a middle height, and a swarthy complexion; they live continually in the air, and bear cold and heat extremely well. Their food is coarse: koumiss and milk in summer; in winter, horse-flesh dressed with meal. Their chief employment is rearing cattle. The Kirgheeze nation is divided into three hordes, each subdivided into tribes, consisting of from 3,000 to 5,000 tents: each horde is under the command of a sultan; the tribes are again distributed into villages of from thirty to seventy tents each. They pay no tribute, but are entirely independent; they profess the Musulman religion. Marriages take place amongst them at a tender age. The father of the intended bridegroom sends proposals to the father of the intended bride, with the promise of a *kalum*, or marriage present, consisting of Calmuc slaves, horses, or oxen. If the latter consents, he receives a part of the *kalum* in advance, and when the parties arrive at the age of puberty, a mollah performs the ceremony of marriage.

Hunting is one of the amusements of the Kirgheeze: they hunt wolves, foxes, and badgers in the forests near Tchoubar-Aigr. They are mounted on horseback, accompanied by dogs and large eagles, called *berkout*, which are hood-winked, and placed on the pommel of the saddle. When an animal is perceived, the hood is removed, and the bird darts rapidly upon its prey, which it holds in its talons till its owner arrives. The Kirgheeze prize the *berkouts* so highly, that they will give several horses, and even Calmuc prisoners, for a single bird.

Kirgheeze cemeteries were met with in the steppes; the tombs were of wood, and of a square form. Upon the mounds which covered some of the graves, lances were observed stuck into the earth, and eagles carved in wood. The travellers were told, that the lances indicated the graves of renowned warriors; the eagles those of expert bird-catchers. The devout amongst the wealthy Kirgheeze convey the remains of their parents into Turkestan, for

interment

interment near the tombs of the saints. As these journeys, however, cannot be performed in winter, owing to the want of pasture, they hang the corpses on trees till the spring. In traversing these steppes during winter, says the writer, one is sometimes shocked by the hideous aspect of these suspended bodies, covered with snow and agitated by the wind.

Although theft is not, generally speaking, a crime amongst the Kirgheez, they may not steal from individuals of their own tribe. Nazaroff was present at the trial and execution of a criminal guilty of stealing two sheep from a man of his tribe. The oldest chiefs of villages, assembled by order of the khan, were gravely seated on carpets stretched upon the grass. Their decision having condemned the culprit to death, the sentence was carried into execution in the twinkling of an eye. A rope was thrown round his neck, and fastened to the tail of a horse; and the animal being immediately set on a gallop, the wretched criminal was dragged about till dead.

As the party advanced beyond the boundaries of Russian influence, they became exposed to attacks from these tribes. They endeavoured to procure guides and a safe conduct from the sultan of the Koput tribe, but in vain. The travellers were the *property* of the Kirgheez amongst whom they then were, and the chief was afraid of displeasing them: they were consequently constrained to send back for a reinforcement of Cossacs.

In the course of their subsequent journey, the men and beasts belonging to the caravan were seized with weakness, want of appetite, and disorders of the head and stomach, occasioned by the bad water they had been compelled to drink. They were all cured, however, by mixing some earth brought from the Russian frontier with the water, and boiling it.

Crossing the river Tchoui, they traversed parched and sandy deserts till they reached Souzak, the frontier town of Turkestan, formerly an independent state, but since 1814 subject to the khan of Khokand.

The course of the Tchoui, according to M. Klapproth, is very badly described in our charts. It originates from the western angle of the great lake Touz-koul, and proceeds towards the north-west, receiving a considerable number of small rivers, the chief of which is the Khorkhotou. It continues its course in the same direction as far as the 46th degree of latitude, when it turns to the west, forms a chain of lakes, and ends by discharging itself into lake Kabak Koulak. The upper part of the Tchoui, as represented in the charts, is not that river, but the Adji Bak-boulan, or Khar-khaitou.

Souzak consists of about 500 houses, built of stone, close to each other. It is situated on high ground, and surrounded by a wall also of stone. The inhabitants are industrious; they are employed either in agriculture, or in commerce with the Kirgheez who inhabit the banks of the Sary-sou and the Tchoui.

The caravan proceeded, by the way of Tchoulak-achi and Tchimket (a town situated on the river Bodam or Boulat, and then recently taken by the Khokanians) to Tachkend, formerly called Tchatch or Tchadj. This territory, which is bounded to the north and west by Bokhara, to the south by a chain of mountains called Kyndyr-tau, and to the east by the black ultramontane Kirgheez, was formerly independent, but now forms part of Khokand. The climate is delightful, producing whatever can contribute to luxury and enjoyment; vines, orange-trees, peach-trees, and fig-trees are found in profusion. The inhabitants are vigorous and polished, but indolent and sensual. The city is full of bustle; its streets are crowded with passengers; some of the people dance before their houses—others have music in their gardens: it is, as it were, a continued scene of gaiety. Artizans are few in number; most of

the

the people live without work on the produce of their gardens. Their religion is Islamism. A sight of the women is forbidden, under severe penalties: a man is not even allowed to enter the chamber of his parents. Each house has apartments for receiving visitors.

By the treachery of the governor, Nazaroff was compelled to leave the caravan at Tachkend, and to proceed to Khokand with a diminished escort. They crossed with difficulty the Tchirchik, a rapid river issuing from the lofty Kyndyr-tau, and passed Khodjand (a *mountain*, in the original—a *town*, according to M. Klapproth); they perceived, around the *mountain*, excavations dug by the inhabitants of Turkestan in search of turquoises. They crossed the Syr-daria at a place where this river was 500 toises wide. They were conveyed in large *bateaux* capable of containing seventy camels each, which were urged across by horses swimming, two before and two behind, whilst a fifth was employed as a helm. Each horse was guided by a man, who held the animal by a bridle. Notwithstanding the rapidity of the stream, and the great weight of the cargo, the horses drew it across without fatigue.

Twenty versts from this river, the road passing over sandy and naked mountains, they reached the village of Karapoli, and next day arrived at Khokand, the capital.

The Russians and the envoys were conducted through the city; the former were lodged in a garden, with strict injunctions not to leave it, and a guard of fifteen men was placed over them. The aged vizir visited Nazaroff to inquire the objects of his visit; and in the course of a few days the Russian envoy was permitted to attend the Amir Vali-miani,* and deliver the letter and presents from the Emperor of Russia. The cavalcade was preceded by an officer, in a coat of mail, accompanied by a man beating kettle-drums, and the streets were lined with troops. At 150 toises from the palace the Russians dismounted, and marched to the gate of the great wall which surrounded the residence of the sovereign. After waiting for half an hour, amidst a vast concourse of people, two officers appeared at the gate, and conducted Nazaroff into the court, and shewed him a window of the palace, where the prince was placed, whom he saluted according to the European mode. The vizirs and nobles sat upon raised seats covered with carpets.

The envoy was then conducted into the royal apartment. The prince was seated on an elevated throne to which there was an ascent by steps: he appeared to be but twenty-five years of age. On reaching the throne, Nazaroff was directed to kneel, and the Amir took the letter, which the envoy held over his head, and gave it to a vizir near him: he then rose from the throne, and held out his hand, which Nazaroff, agreeably to etiquette, pressed gently between his own. All this passed in profound silence. The two vizirs, who had conducted him, then took the Russian envoy by the arms, and made him retire backwards to the door. The prince then addressed him, inquiring after the Emperor's health, &c.

Besides the Russian, there were present ambassadors from China (M. Klapproth thinks they were not deputed from the Emperor of China, but from Mandarins, respecting objects connected with their local governments), and also from Khiwa, Bokhara, &c.

The prince, to testify his particular satisfaction, gave a splendid entertainment

* "The author wrote *Amir Valliani*, and took the two words for the name of the prince of Khokand; they are in fact merely his title, which ought to be written *Amir Vali-miani*, prince protector (or lord) of the middle."—Klapproth.

ment to the Russian and the other ambassadors, as well as the most distinguished persons of his court. The repast consisted of rice stained a rose-colour, and horse-flesh, "which we," says Nazaroff, "refrained from eating, alleging that our religion forbade us."

After the repast, the cavalcade returned to their garden in the same manner they came. In passing along the line of troops, some of the Khokand horse-men amused themselves by giving a blow now and then to the Cossacs of the escort, whose strange dress excited their wonder. One of the Cossacs took umbrage at this mark of politeness, and gave his aggressor a violent blow in the stomach with his musket, which knocked him off his horse. The troops, instead of feeling resentment, applauded the Cossac's courage, and laughed heartily at their fallen comrade.

They were now allowed to leave their garden, and to visit the bazar. Two days after, the prince directed the return of the Cossacs (except four and a subaltern), and intimated to M. Nazaroff that he must remain till the spring, when he should return with the caravan, accompanied by deputies from Khokand, to ascertain more fully the cause of the death of two envoys in Russia.

This appeared to be a trick on the part of the government; for as soon as it was known that the detachment had repassed the frontiers of Khokand, the governor summoned Nazaroff into his presence, and inquired how he proposed to make satisfaction in respect to the envoy who had been assassinated in Russia. "Are you willing," said he, "to pay the parents of the envoy the sum they demand? or do you consent to embrace our religion? Choose one of these alternatives; or you must die:" and he pointed to a gibbet. Nazaroff boldly replied that he was not in a condition to pay the ransom; that he would not betray his religion nor his emperor; and that he did not fear death, knowing that his sovereign would soon avenge it. This spirited reply, and the firmness of the Russian, induced the government to treat him not only without rigour, but with some civility. Yet fearing he would attempt to escape, the prince invited him to a hunting party near a city called Marg-liand, according to M. Nazaroff, but which M. Klapproth states should be written Marghilan, about 250 versts from Khokand. The real object of this invitation was to remove him from Khokand; he knew this, but was obliged to comply.

On the journey he learned that the officer who attended the Russians had orders to lodge them in the fortress of Yarmazar, on the eastern frontier of Persia. After skirting the mountains of Kachkar-divan (the western part of the lofty chain called by the Chinese Thsoun-ling, according to M. Klapproth) which extend from China towards Samarcand, they reached a vast steppe, about forty versts in extent. Here M. Nazaroff seized the officer who conducted them, and drawing his sabre, made him confess where he was carrying them, and consent to alter their course to Marghilan. Throughout this sandy steppe, populous villages were seen; the inhabitants were contented, their countenances expressing perfect satisfaction. Their employment consists in cultivating their fields and vineyards, manufacturing cotton cloths and rearing silk-worms.

On arriving at Marghilan, they were so incommoded by the throng of the multitude, to whom they were objects of great curiosity, that they were almost suffocated. A Chinese envoy, who was in the city, recommended Nazaroff to employ the four Cossacs in beating the people off—an office which they executed with great alacrity. They were placed under guard, but were allowed to pay a visit to the *Dat-khan*, or viceroy, *Moulla-Chai*, who expressed his regret that they had come thither contrary to the wishes of the government of Khokand.

kand. The viceroy, however, interposed in their behalf with the Annir, and procured permission for their return to Khokand by a different route from that by which they came to Marghilan. In the mean time, they were allowed to walk in the city; but the people, finding them unaccompanied by the officers of government, followed them in a mob, pelting them with stones, crying out "*cafirs! cafirs!*" i. e. *infidels*.

This city is about thirty versts in circumference; it is not fortified, but is protected by the fortress of Yarmazar, about five versts distant, which is garrisoned by 20,000 men. The houses of Marghilan are built of earth, without windows; the streets are narrow. Numerous remains of antiquity are found in it, some in a fine style of architecture. In the centre of the city is an edifice resembling an open temple, within which is placed a standard of red silk, which tradition tells belonged to the Padishah Iskander (Alexander the Great), who, it is said, on his return from India, died in these steppes, and was buried here! This colour is carried round the city in procession at the inauguration of a new governor.

There are several manufactures of gold and silver cloths, velvets, and stuffs of various kinds, which are sent for sale to Bokhara and Cashgar. The latter province supplies Marghilan with tea, porcelain, silver in ingots, dyes, damasks, and Chinese fabrics of the first quality.

On their return, the travellers were first conducted to Andudjan, on the Syr-daria, near the Chinese frontier, and about fifty versts from Marghilan. On the road, in a narrow valley of the Kachkar-divan, were seen two ancient edifices, beneath which there was a vast cavern, called, as their guide informed them, the Takht-i-Souleiman, or throne of Solomon. The mountain so denominated, however, according to M. Klapproth, is situated near a populous city called Och, or Ochi, in the Chinese charts. Upon the summit of the mountain is a building with a cupola, to which many pilgrims resort in the spring.

Andudjan adjoins the Cashgar territory; the inhabitants follow agriculture, rear silk-worms, and manufacture cotton cloths. It is ill defended: the garrison consisted of 10,000 men. Each soldier is housed along with his wife and his horse: the latter occupies the first chamber; the wife has the second, which is less convenient. From hence they proceeded to Namangan, about 120 versts distant; and thence, 100 versts further, to Yana-kourgan, at ten versts beyond which town, they reached the Syr-daria, which they crossed, and passed for twelve versts the habitations of the Karakalpaks, a nomade tribe, when they again arrived at Khokand.

M. Nazaroff had, on this occasion, a better opportunity of observing the place. The climate is mild: on their first arrival it was the winter, but the leaves were on the trees, and the meadows were verdant. The city is very large and populous; but the streets are narrow and unpaved. It is built upon a plain, and without fortifications; it contains about 400 mosques; many ancient monuments are standing in various parts of the city. Cotton-trees and mulberry-trees are common in the fields and villages adjoining. The inhabitants make cotton cloths, which they barter in Bokhara for Russian commodities. The mode in which the silk-worms are reared is as follows: the women purchase the eggs in the bazar, wrap them in moistened linen, and place them in small heaps for twelve days; as soon as the worms are hatched, they are put into baskets covered with wet linen, and exposed to the sun, with some mulberry-leaves for food.

Judicial proceedings are very compendious at Khokand. Writing is not employed therein; the evidence of two witnesses on oath is sufficient to establish

a fact. The judges are priests assembled by order of the governor, who presides. The iman of the mosque to which the accused belongs examines the affair, administers the oath to the witnesses, and pronounces the sentence, which, if approved by the other imans, the governor orders to be carried into execution. Adultery is capitally punished. Nazaroff was present at an execution of a female for this crime. She had been married by her parents, at the age of seventeen, to a man she disliked. She left her husband, quitted the female habit, shaved her head, and lived with her lover as his male servant. The husband discovered her, and acquainted the governor; the lover fled; but the poor woman was taken, and confessed her guilt. The prince had not the power to save her life; yet, touched with her youth and beauty, he secretly advised her to withdraw her plea of guilty, and declare that she had lost her hair through disease. She replied to this suggestion, that, separated from the object of her love, existence had no charms. A vast concourse of people attended her execution. A hole was dug, in which she was buried up to the chest; the executioner threw the first stone upon her head; the people followed his example, till the head of the unhappy woman was crushed to pieces.

The Government also punishes with great severity dealers who are guilty of fraud in their weights and measures. The punishment is as follows, according to the testimony of our traveller, who was present at its infliction. The culprit is conducted naked into the streets, where he is flogged—being forced to exclaim, at the same time, in a loud voice, that he had used false measures.

M. Nazaroff and his companions were at length permitted to return home, by a circuitous route, apparently (in the opinion of M. Klaproth) that the Russian might perceive the extensive territorial conquests of the Amir of Khokand. They set off in the month of May. The heat was then excessive; the thermometer of Reaumur was at 40°; equal to about 120° of Fahrenheit.

In the month of March, vegetation springs up, flowers of various hues and of delicious fragrance overspread the earth; three months later every vegetable is burnt up by the heat and dissipated by the wind, so as to leave no trace behind: all is dreary sand. Hence but a very small number of cattle is reared in the country; the horses are fed with straw and plants carefully cultivated for that purpose, and frequently watered to prevent their decay.

On arriving at Tachkend, our traveller was witness to a political revolution there. The inhabitants, taking advantage of the absence of the governor, who was at Khokand, revolted in favour of their legitimate sovereign, Rustam-beg, who had concealed himself, after the subjugation of Tachkend by the Khokanians, in the steppes of the Kirgheez Kaissaks. The conspiracy became known at Khokand; the governor, returning with a reinforcement of troops, seized and hanged the conspirators. Rustam-beg himself, who had gone to Bockhara to obtain succours, was arrested on the frontiers, imprisoned, and condemned to death. M. Nazaroff, however, by dint of entreaties, and presents supplied by the friends of Rustam-beg, procured his release. War took place between Khokand and Bockhara through this event, which delayed the Russian travellers some time. They at length resumed their journey, and arrived on the Siberian frontier in October 1814.

THE VOYAGE TO INDIA.

[Continued from page 178.]

PASSAGE TO MADEIRA.

I think, as Horace thought—and thousands more—
 Hard was his heart, in triple brass encased,
 Who first invented ships, and from the shore
 Launched the frail fabrics on the watery waste—
 A liquid desert, by Heav'n's arms embraced !
 What are a sea-life's joys ?—Hear seamen tell :—
 To feed on past delights by memory traced ;
 On distant scenes and future hopes to dwell—
 The present is a blank, as seamen know too well.
 Ne'er with impunity gregarious man
 Can court seclusion from the kindred herd :
 The social compact with the world began
 When the Omnipotent pronounced the word—
 (Which to the sole the social life preferred)
 " It is not good for man to be alone."
 This law, by our progenitor first heard,
 All tribes, all races, all conditions own,
 The tenant of the wood, the hovel, and the throne.
 Durst monarchs frankly all their grief reveal,
 Did shame not quell the risings of complaint,
 And check tormenting thoughts, that else would steal
 Upon their festive scenes with harpy taint,
 They'd tell us, though a monarch were a saint
 (And few are such), a palace is a gaol—
 A king a wretched exile ;—they would paint
 A sovereign's joys as shewn in Crusoe's tale :
 Monarchs are, like him, sole—and solitude is bale.
 A ship's a gaol, guarded by grinning Death
 With arms of fearful potency ; the air,
 The sky, the shore, the sea, the rocks beneath—
 His ministers—their implements prepare
 To gorge the monster's maw with human fare.
 The growling thunder and the shrieking wind,
 Like jackals rousing lions from their lair,
 Are Death's vaunt-couriers—he stalks behind,
 Pleased with the vent'rous madness that tempts weak mankind.
 Who, that has seen the horrors of a storm,
 Can e'er forget them ?—when the yawning deep
 Discloses ruin in its ghastliest form ;
 When o'er the toppling waves the whirlwinds sweep,
 With blustering rage ; when the soft hand of sleep
 Forgets its needful office ; when despair
 Reigns in each face, and makes the bravest weep :
 The idiot-smile and maniac-yell' are there,
 The cry of blasted hope—the long-neglected prayer.

Such

Such is a storm!—But lo! what dingy speck
 Is that beheld to leeward?—"Land!" they cry.—
 The cabins pour their tenants on the deck,
 Each with a throbbing pulse and straining eye.
 From restless ocean's bed upshooting high,
 It seems a rock o'erhung with frowning mist:
 But, as the dancing ship approaches nigh,
 Its aspect lovelier grows; fears are dismissed,
 And dismal doubts and dreams—like ghosts by exorcists.
 Madeira! how we hail thy welcome port,
 Fair even to the practised eye of taste!
 Thy lofty mountain-range appears to court
 Acquaintance with the heavens; its broad waist
 By vines in countless multitude embraced,
 Or mounting up its steep acclivities,
 All tangled, intertwined, and interlaced,
 With human habitations mixed, which rise
 High up the soaring hills, that seem to kiss the skies.
 Ah! who can tell, when the dull scene is changed,
 The joy that fills the soul, the ecstasy,
 Of those whose gaze for dismal weeks has ranged,
 Daily and nightly, over sea and sky
 Alone! What sweet relief it is to fly
 From such monotony, to hill and dale,
 Where nature's verdant garb salutes the eye!
 To hear the lark—the zephyr's breath inhale—
 Safe from the perils of the deep, and stormy gale!

TO A MOTHERLESS INFANT.

IN that bright eye, so soft and fair,
 Methought the mother's look was there;
 And on that open brow serene,
 Was stamped her mild and gentle mien.
 Young bud of promise! may the ray
 Of joy beam on thy opening day;
 And when thy riper growth is seen—
 O, come no envious frost between,
 To nip thee in thy brightest hour,
 Thou scion of a much-loved flower!
 Ah, yes;—may happier days betide
 Than did the stem that nursed thy pride!
 Let not the fury of the storm
 Come in its terrors to deform
 This only solitary flower
 That blooms to deck a father's bower!
 Long may'st thou live to picture o'er
 The worth of her who is no more—
 To give thy joyful friends to trace
 Thy mother's image in thy face,
 And thus, at least in part, restore
 What ne'er shall glad our vision more!

O. G.

HINDU ASTRONOMY.

MR. COLEBROOKE'S REPLY TO THE ATTACK OF MR. BENTLEY.

To the Editor of the Asiatic Journal.

SIR: Mr. John Bentley, of Calcutta, in a posthumous work, which I heard of some time since, but have had only recently an opportunity of seeing, made an unjust and virulent attack on me, which, averse as I am from controversial writing, I think it nevertheless right to notice; and shall do so, as briefly as the nature of the subject will permit.

Mr. Bentley was, as his writings evince, a good hater. He bore animosity to me, and to every one who did not implicitly adopt his opinions concerning Hindu astronomy, nor concede to the authority of his conclusions respecting it. In early communications, before he had manifested his hostility towards me, I was enabled to convince him, upon evidence to which he yielded reluctant and ungracious assent, that he was wrong in regard to some of his positions. He has in a former publication (an essay in the eighth volume of the Asiatic Researches) made an acknowledgment of the evidence in one instance; and he has used other information which he derived from me in the first part of his posthumous work. Several points of difference, however, remained to the latest period at which I had any communication with him: but he has not stated them correctly in the concluding section of his work, where a direct and personal attack is formally opened against me.

In many instances Mr. Bentley has altered his opinions, but without the candour of acknowledging the change. On the contrary, he continues to manifest unrelenting animosity towards those who controverted positions which he himself has now relinquished. In not a few cases, he has abandoned error; but in some he appears to be still more wrong than he was before. I shall, however, for the most part confine my remarks to those matters in which my name has been introduced, or in which I am pointedly marked.

In his treatise on the antiquity of the *Súrya Siddhánta*, inserted in the sixth volume of the Asiatic Researches, Mr. Bentley affirmed that *Varáha Mihira* was author of that *Siddhánta*. He insisted that the astronomical period, which he said was expressly called "the Calpa of *Varáha* the fair," derived its name from this author. He deemed it probable that the name of *Varáha Mihira* must have been affixed to the *Súrya Siddhánta* when it was first written. These positions he supported by asserting, that, in the commentary on the *Bhásvati* it is declared that *Varáha* was the author of the *Súrya Siddhánta*. The *Bhásvati*, Mr. Bentley said, was written in the year 1021 *Saca*, by *Satánand*, who, according to Hindu accounts, was a pupil of *Varáha*, and under whose directions he acknowledges he wrote that work. Consequently *Varáha* must have been then alive, or a short time before it. That *Varáha* was the real author of the *Súrya Siddhánta* is still further confirmed (as Mr. Bentley argued) by one of his works entitled *Játacárnava*, the age of which comes out by computation 739 years (before 1799). The age of the *Súrya Siddhánta* itself Mr. Bentley determined, by computation on the same principles, to be 731 years nearly. It evidently appeared, he said, from a comparison of the two works, that one person must have been the author of both.

In an essay on the Hindu systems of astronomy, inserted in the eighth volume of the Asiatic Researches, Mr. Bentley again affirmed; that the system contained in the *Súrya Siddhánta* was originally invented by *Varáha Mihira*, and now called from him the *Calpa* of *Varáha*. In the same essay Mr. Bentley strenuously

strenuously maintained, that there is not a Hindu astronomer, who has the smallest pretension to the knowledge of the history of astronomy in India, that does not know that *Varáha* was the real author of the *Súrya Siddhánta*; and not only of that work, but also of the *Brahma*, the *Rómaca*, the *Vasishtha*, and the *Paulastya* (should be *Paulisa*) *Siddhántas*, which are called the five *Siddhántas* of *Varáha Mihira*.

Observe, that Mr. Bentley had given a different account of the *Brahma*, the *Rómaca*, and the *Vasishtha*, amongst other *Siddhántas* in his former essay.

The passage which Mr. Bentley relied upon in the *Bhásvatí*, or its commentary, did not appear to me conclusive: nor could I find any other sufficient evidence that *Varáha* was the real or reputed author of the *Súrya Siddhánta*, nor of the rest of the five *Siddhántas* attributed to him by Mr. Bentley.

In my treatise on the notions of the Hindu astronomers concerning the precession of the equinoxes, I shewed that *Varáha Mihira* was not reputed to be the author of those five works: but of a treatise concerning them; one of several single works, so Mr. Bentley describes them, written under the title of *Pancha Siddhántas*, as supposed to contain the essential parts of those five treatises.

Nor could I find any evidence that the *Calpa* of *Varáha* was so called, with allusion to the astronomer of that name. It rested on a bare surmise or conjecture, for which Mr. Bentley never adduced any proof.

All these positions are abandoned in Mr. Bentley's posthumous work. *Varáha Mihira* is now not the author of the *Súrya Siddhánta*, nor of any other of the five *Siddhántas*. The *Pancha-siddhanticá* of *Varáha Mihira* is an unseen and unheard-of work, which he is disposed to think never existed. The *Calpa* of *Varáha* may not have taken its name from this astronomer; who did not flourish at the age assigned by Mr. Bentley to the *Súrya Siddhánta*, but so recently as twenty-six years before the accession of the Emperor Akber, an interval of nearly five centuries.

The *Játacárnava*, which was proved by the same train of computation which determined the age of the *Súrya Siddhánta*, and that of *Brahmagupta*, to have been composed 739 years before A.D. 1799, is still maintained to have been the work of *Varáha Mihira*, but written 300 years ago, instead of 750. Consequently, all the evidence and reasoning to which Mr. Bentley had trusted for determining the age of any Hindu astronomical work, falls to the ground. It is of no more validity to determine the age of the *Súrya Siddhánta*, than that of the *Játacárnava*; which he maintained to have been contemporary, but which he now affirms to have been 450 years distant.

The *Bhásvatí*, which he considered to have been written about A.D. 1099, is now brought down to the reign of the Emperor Akber.

Bháscara, who was stated in Mr. Bentley's first essay to have been born in 1036 *Saca*, and to have written or compiled his great work, the *Sirómani*, in 1072, is now a contemporary of Akber. The *Carana Cutuhala* of the same author, in which the epoch for the position of the planets is given for the year 1105, is also a fabrication of the same period.

The *Graha lágharn*, which, in his first essay, Mr. Bentley said was written by *Ganása*, son of *Césava*, in the year 1442, is now considered as merely feigned to have been written by him.

Lacshmidásá is a feigned grandson of *Césava*. The calculations of places of planets, and cosmical and heliacal risings of stars for A.D. 1500, as found in his commentary, were done with a view to make it believed that he lived and wrote at the epoch for which he made the calculations.

The date of *Gangādharā's* commentary on *Bhāscara* (A.D. 1420), is equally rejected as incompatible with the age newly assigned by Mr. Bentley to *Varāha Mihira* (A.D. 1528).

In short, all is a heap of fabrication and forgery. Every thing is imposture which opposes Mr. Bentley's new hypothesis; for which, however, he has no sort of evidence, nor any other foundation but vague conjecture, as fanciful and groundless as the story he has invented of a pretended forgery passed on my credulity.

All is confusion worse confounded. Every thing which Mr. Bentley had before done, all which he had achieved in two laboured essays, goes in the general wreck. Every thing has passed away, except his wrath against his opponents.

I now proceed to Mr. Bentley's direct attack on myself in the sixth section of the second part of his posthumous work.

His position is that the longitudes of stars reckoned from the beginning of the Hindu sphere must be the same whether given by an astronomer who lived a thousand years ago, or by one who only lived fifty years since; because they are reckoned from the same point.....Hence he affirms "Mr. Colebrooke's notions are altogether unfounded."

I have shewn in my treatise on the Indian divisions of the Zodiac (*As. Res.* vol. ix.), that the longitudes given in the Indian tables are the longitudes of the stars' circles of declination, and not of the stars themselves. It is distinctly so said by the Hindu writers cited by me in that essay. The manner in which they direct observations to be made confirms the conclusion; for the intersecting circle, which they use on an armillary sphere to make the observation, is a circle of declination. I have repeatedly and explicitly so affirmed. I never maintained that tables of true longitudes would vary with the time for which they are prepared. But surely tables of the longitudes of circles of declination are affected by precession, and require correction accordingly.

Mr. Bentley was aware of the distinction drawn by me, and has more than once noticed it in his posthumous work; but he suppresses that essential distinction in this place. I again assert, that the tabular longitudes and latitudes, given in the *Sūrya Siddhānta* and certain other Hindu works, are not the true longitudes and latitudes of stars; nor did I speak of the stars' true longitudes in the passage in question. The computation which Mr. Bentley has himself exhibited from a Hindu author (at page 176) evidently shows, that the tabular longitude is that of the star's circle of declination; and not the star itself, which must be deduced from it by computation.

In fact, I have no where endeavoured to deduce the age of any Hindu work from longitude of stars. The passage, which I presume Mr. Bentley questions, is one contained in my essay on the Indivision of the Zodiac, where "I suppose the original observations, of which the result is copied by successive authors, to have been made about the time when the vernal equinox was near the first degree of *Mēsha*;" adding, in a note, that "*Brahmagupta* wrote soon after that period, and that the *Sūrya Siddhānta* is probably a work of nearly the same age. Mr. Bentley considers it more modern. It cannot be more ancient; for the equinox must have past the beginning of *Mēsha*, or have been near it, when that work was composed."

This I take to be what gave offence to Mr. Bentley. But it certainly does not express, nor hint, that the antiquity of a Hindu work may be deduced from the longitude of stars given in it.

Mr. Bentley (p. 199) pretends that "I was determined to adopt a new mode
(by

(by the longitudes of the fixed stars from the beginning of *Aswini*) for determining the age of the *Sūrya Siddhānta*." I did not do so: and as there is no reference to any particular passage, I can only conjecture that the one just now quoted is that to which he alluded.

Mr. Bentley misrepresents the question when he takes cor leonis for an example. This star (the *Maghā* of the Indian zodiac) has no latitude in Hindu tables; and consequently the longitude of this star and that of its circle of declination are the same, and invariable according to those tables. But in the instance of stars which are distant from the ecliptic, the Hindu tables differ notably as to the longitude of stars' circles of declination.

In the instance of *Brahmagupta* I drew an inference as to the age when this author flourished, from his placing *Révati* (ζ Piscium) precisely in the equinoctial point, without latitude or declination, and with no longitude. If Mr. Bentley had an eye to this passage (Notes and Illustrations, p. xxxv), he has misrepresented my meaning; for it is not from the longitude of the star, but from the coincidence of the tropical and sidereal spheres, according to *Brahmagupta*, that I here deduce the author's age.

Mr. Bentley comes next to what he terms Mr. C.'s other point; viz. the inference of *Varāha Mihira* having lived 1,300 years ago, because he stated one solstice in *Careata*, and another in *Macara*. Mr. Bentley says that "Mr. Colebrooke has drawn a most incorrect conclusion."

I did not, as Mr. Bentley pretends, confound the tropical and sidereal spheres. My position was, that the passage of *Varāha Mihira* implied the actual coincidence of the two in his time. "At present," he says, "one solstice is in the beginning of *Careata*, and the other in the beginning of *Macara*."

Mr. Bentley, after quoting the words, says, by this passage of *Varāha Mihira*, the solstices were *always* at the beginning of Cancer and Capricorn. Are they not so now?

By that passage the solstices were *not always* at the beginning of Cancer and Capricorn. They are expressly said to be so *at present*: and a different form or position of them is distinctly affirmed in the context of that very passage. See Sir William Jones's supplement to his essay on Indian Chronology, *As. Res.*, vol. ii, p. 391.

In another passage of the same author, similar terms occur (*As. Res.*, vol. xii, p. 222). The solstice is then said to have formerly been in the middle of *Aslēsha*; but, *now* the return of the sun takes place from *Punarvasa*. Here, then, it is clear that the sidereal, not the tropical, sphere is meant.

Mr. Bentley has imputed to me as an error, that which, were it any error at all, was Sir William Jones's, but was never impugned by Mr. Bentley, until I used the same argument. He had himself employed it to determine the age of *Brahmagupta* (*As. Res.*, vol. viii, p. 233 and 235), who flourished about A.D. 527. When the solstitial colure cut *Punarvasa* in the tenth degree, as is affirmed by *Brahmagupta*.

When it suits his purpose, Mr. Bentley was ready enough to admit, that the Hindu sphere is sidereal. He distinctly stated it to be so at p. 163.

If the tropical sphere were intended by any Hindu astronomer in a passage relative to the position of the colures, it must be by *Brahmagupta*, who has not noticed any former different position of them; nor spoken of the precession of the equinoxes. Yet Mr. Bentley proposed the same argument, in relation to *Brahmagupta*, which he rejects, where it is more forcible, in reference to *Varāha Mihira*. The one made for, the other against, the assumed ages of those astronomers respectively.

Mr.

Mr. Bentley charges, as a mistranslation, when I put 8th for *ashtemi*, and 15th for *panchadesi*. He says these terms refer to the moon's age, and never to the day of the month. My answer to this piece of hypercriticism is, that the moon's age is the day of the month, reckoning by lunar time, which is the ordinary Hindu mode.

Another point, which Mr. Bentley has made the ground of an attack levelled at me, though I am not named by him, concerns the precession of equinoxes. The Hindu notion, as Mr. Bentley describes it, is represented by an epicycle: but it is not the less true that a libration, or oscillatory change, is meant. For what else but libration is that change which advances at an uniform rate to a certain limit, then decreases at the same uniform rate to the like limit on the other side; and so on, backwards and forwards, alternately affirmative and negative, or additive and subtractive? Now, whether this change be represented by an epicycle or an oscillation, matters little: it is but a dispute about words, whether it should be termed a revolution in an epicycle, or trepidation in longitude, or libration. Mr. Samuel Davis termed it libration. I followed him in using the same term, which had been unquestioned. I shewed that the same notion was to be found in the writing of Arabian astronomers.

The Hindus have not contended that their epicycles represent truly the *theory* of the celestial motions. In this instance, in particular, an epicycle does not well show the uniformity of the motion. For, the annual precession being uniform in the case of the great circle, the motion is not uniform in the epicycle by which it is represented.

Mr. Bentley objects (p. 192) to *Vishnu Chandra's* number of revolutions of the equinoxes in a *Calpa*, concerning which, he says, I altered my opinion; and stated it to be right, having previously questioned it: if tried with the years now elapsed of any of the known *Calpas*, Mr. Bentley remarks, it will not give the quantity of the precession for the present time. The answer is very simple: the *Calpas*, by which Mr. Bentley tried the rule, are not *Vishnu Chandra's*. The expired years of that cycle, by him admitted, are yet unascertained. The system of one author is not to be tried by the numbers of another's.

Concerning Mr. Bentley's story of the fabrication of a spurious *Brahma Siddhanta* to impose on my credulity, I need only say, that it is an idle guess, destitute of the smallest probability, and untrue in all particulars. The manuscript, which he treats as a fabrication, has been long deposited with the whole of my collections in the East-India Company's library, where it may be inspected and examined by any Sanscrit scholar, who will pronounce, without difficulty, on the likelihood of its genuineness or imposture.

I might retort on Mr. Bentley that the *Arya Siddhanta*, described by him in the third section of the second part of his posthumous work, is not improbably a fabrication. No one but himself has yet seen it: the manuscript of it is not forthcoming: he did not understand Sanscrit, and therefore he was very liable to imposition: his notions, not to say prejudices, were well known to the natives who attended him; and he was as likely as his friend Col. Wilford to have fabrications imposed upon him. According to the quotations of authors, *Aryashtaca* and *Dasagiticā* were the titles of *Aryabhata's* works, and not *Arya Siddhanta*. It is, in all likelihood, pseudonymous.

In reference to this matter I should here add, that, after the essay in which I quoted the *Brahma Siddhanta* had been presented to the Asiatic Society of Calcutta, and while the question of its insertion in the Society's volume was yet

yet under consideration, Mr. Bentley submitted to the committee of papers the sketch of an intended answer. There was in that sketch a gross error concerning the mean motions of planets; which I noticed in a short reply. The answer has never appeared: it was suppressed, as I infer, in consequence of that confutation of one of its main arguments.

The next important point regards the question whether the heliacal or cosmical rising of Canopus be intended in rules delivered by Hindu astronomers for the computation of the *Agastya Udaya*, which governs certain religious ceremonies that are to be performed when the star appears.

Mr. Bentley says, the rules give the cosmical risings of Canopus, and not the heliacal: and this, he adds, is evident from the authors themselves, who only state that, when the sun is in the longitude given by the rule, then the star rises with the sun; and not a syllable about its being visible.

The words in my translation, which is what Mr. Bentley uses (he himself was ignorant of Sanscrit), are, "when *Agastya* rises or appears in the south at the close of the night." Surely it cannot be said, that there is nothing about the star being visible; for what else does its appearance in the south intend?

Varáha Mihira's rule of computation, as Mr. Bentley acknowledges, relates to the heliacal rising of Canopus; the instance which he exhibits of a computation by *Lacshmidása*, gives the heliacal rising of the star. It is the heliacal rising, not the cosmical, which governs certain religious rites, for the sake of which the computation is instituted. Yet, in the face of all this, and much more, Mr. Bentley chooses to understand the rule given in the *Bhávath*, and other works, as relative to the cosmical rising, that he may strain it into an argument for his new hypothesis of extensive forgeries in the time of Akber.

The truth is, that the observations of Hindu astronomers were ever extremely coarse and imperfect, and their practice very inferior to their theory of astronomy. An improved theory, or the hint of it, was borrowed from the west: but they did not learn to make correct observations. They were content, in practice, with a rude approximation.

Varáha Mihira teaches two rules, which give results widely different for the rising of Canopus; yet he marks no preference for one above the other.

The Hindu observations of this star are so discordant, that the longitude of its circle of declination differs 10° , as given in various tables. It is 90° in one, 87° in two others, and 80° in a fourth. We are not to try their rules by the test of their agreement with accurate observation at any assignable moment, and thence conclude that the rule and its correct application are contemporaneous.

This has always been the point at issue between Mr. Bentley and me. He mentioned, in his first essay, that the age of an astronomical Hindu treatise can be so determined *with precision*; I have always contended, that their practical astronomy has been too loose and imperfect for the application of that test, unless as an *approximation*.

In one instance, by the rigorous use of his test, he would have had to pronounce that the work under examination is of an age yet to come (1454 years after A.D. 1799): see *As. Res.*, vol. vi, p. 570. To avoid so monstrous an absurdity, he rejected this case, and deduced a mean from the whole of the other results, varying from 340 to 1105 years. He should have done the same with *Varáha's* two rules for the heliacal rising of Canopus: he should have taken the mean of the two; or, what would be more consonant with his own method of proceeding, he should have deduced the mean of all the data which any one work (*Varáha's*, for example) furnished, and not garbled it by

selecting the case of Canopus singly, and drawing an inference from one out of two rules given.

The absurd conclusions at which Mr. Bentley has arrived by the limited and exclusive application of his test, the utter confusion which ensues, sufficiently demonstrate that it is not to be safely and implicitly trusted.

He pretends (p. 199) that I saw this mode of determining the antiquity of astronomical books by the positions of the planets sufficiently correct, when it suited my purpose, in the case of *Brahmagupta*, but would not admit it to be so with respect to the *Súrya Siddhánta*. This is utterly untrue: I never admitted it (though I am ready to do so as an approximation) in the case of *Brahmagupta*. I explicitly did so admit it, in the instance of the *Súrya Siddhánta*. (As. Res., vol. xii, p. 226). I distinctly there said that "I accede to the position, that the date of a system for the computation of the places of planets is deducible from the ascertainment of a time when the system gave results nearest to the truth." Mr. Bentley then has, contrary to truth, represented me as indisposed to admit that, which I expressly acceded to, explicitly declaring that I did so.

I have been no favourer nor advocate of Indian astronomy. I have endeavoured to lay before the public, in an intelligible form, the fruit of my researches concerning it: I have repeatedly noticed its imperfections; and have been ready to admit that it has been no scanty borrower as to theory.

The Hindus, as I have elsewhere remarked, cultivated astronomy for the sake of astrology, and for the regulation of their religious feasts. They have been content with a very inaccurate practice of it; which, however, was sufficient for the purposes of divination and a festal calendar.

Mr. Bentley concludes forgery and imposture where I only infer carelessness and inaccuracy.

I here take leave of Mr. Bentley. I am precluded by his death from saying all which I might say were he living.

I never spoke nor wrote of him with disrespect; and I gave no provocation for the tone of his attack on me.

I am, &c.

H. T. COLEBROOKE.

THE JOYS OF LIFE.

(Imitated from the Latin.)

THESE are the genuine joys of life :
 A virtuous, kind and cheerful wife ;
 An income not procured by toil ;
 A small estate in fruitful soil ;
 An ever-blazing hearth ; no jars ;
 No Chancery-suits, nor legal wars ;
 A healthy frame ; a quiet mind,
 Where frankness is to prudence joined ;
 Friends like one's-self ; a sprightly guest ;
 A table furnished with the best ;
 Evenings consumed in harmless sport ;
 Sleep which makes night seem wondrous short ;
 Content, that courts not wealth or power,
 Nor fears, nor seeks the dying hour.

POLITICS OF SIND AND CUTCH.

THE marauding system which has been for some time past pursued by certain tribes which inhabit the territories situated on the extreme western frontier of British India, has at length attained such a serious height, as to render it indispensable to the interests of our Government to give an effectual check to these destructive inroads, and establish tranquillity in this quarter. The countries which are the scene of these transactions are so little known, and their political relations to each other and to the British Government are so little understood, that it may be desirable to furnish our readers with such information on these subjects as we have been able to collect.

The country called Cutch seems to be divided into two provinces or principalities, named, from their respective capitals, Cutch Gundava and Cutch Bhooj. Cutch Gundava, the northernmost, is considered as a division of Beloochistan, and is subject to that government, under the immediate control of the Khan of Kelat, who resides here in the cold season. Its utmost length, from north to south, is about 120 miles, and the habitable part of its breadth is little more than sixty. It confines immediately upon Sewestan on the north, Sind on the south, the Brahoock mountains on the west, and a desert tract, lying between it and the river Indus, on the east. The great bulk of the population consists of Juts, descended from the aboriginal Hindus, but who have embraced the Mohammedan faith; they reside in villages and cultivate the soil, which is rich and productive, under conditions prescribed by the Beloochee and Brahoohie chieftains, to whom the government has granted the lands in fief. There are also a few Hindu settlers in the town of Gundava, who carry on a trade by barter with the cultivators, who raise grain, cotton, indigo, and other articles. The climate during the summer is oppressively hot.

Cutch Bhooj, which comprehends the southern part, including the sea-coast on the gulf of Cutch, adjoins Sind on one side, and Guzerat on the other. This is an independent state connected by a subsidiary alliance with the British Government.

The Rao or Rajah of Cutch Bhooj is nominally an absolute and despotic sovereign; but seems in reality possessed of but little authority. There is a body of powerful and almost independent nobles, termed the Bhyauts or Bayauds, who acknowledge indeed the supremacy of the Rao, but are able to overawe him; and there is a warlike tribe in the country, the Meyannas, to whom the sovereigns of Cutch have been obliged to concede privileges of a humiliating nature (such as a right to plunder with impunity), altogether inconsistent with absolute authority. This exemption from restraint is said to have been granted to the Meyannas in consequence of services rendered to one of their princes, named Khingur, who reigned about four centuries back. These authorized plunderers, who may be assimilated to the Bhills so well described by Sir John Malcolm, have long harassed our military posts on the borders of Guzerat, from the territory of Sind—whence their predatory incursions originate.

In 1819, the Rao, having become obnoxious to the Bhyauts, he was deposed by them, and his son, a minor, was raised to the throne; the sovereign authority was vested in a regency composed of four of the nobles, with the concurrence of the East-India Company, with whom the Cutch Government then entered into a treaty, which was renewed in 1822. A subsidiary British force is, we believe, stationed at Bhooj, the capital.

The country is described as naturally strong, abounding with hills and impenetrable jungles; and it has many hill-forts and fortified villages in the interior which are assailable only by artillery. The country is also, in a great measure, isolated by the Run, or Erun, an extensive swamp, impassable during a great portion of the year. Their peculiar natural advantages for defence, therefore, somewhat countenance the assertion of the inhabitants, who are a warlike race of people, that their country has withstood all attempts at invasion since the creation of the world. They are Hindus of so scrupulous a temper, that in the treaty with the Company in 1819, a stipulation was inserted that cows, bullocks, and peacocks, should not be slaughtered in the territories of Cutch.

The neighbouring state of Sind, which has long been regarded with a jealous eye, not only by the British Government, but by that of Cutch—on which country it has been, with good reason, suspected to entertain designs—is subject to a very peculiar and anomalous form of government.

This state is bounded on the north by Cutch Gundava, the district of Skirkapore, and Daood Putra; on the south by the Indian ocean, and a part of Cutch Bhooj; eastward by the desert; and westward by the provinces of Lus and Jhalawan. The population now consists of a medley of Hindus, Juts, and Beloochees, with their mixed races. The Government manifests such an extraordinary jealousy towards strangers, that little can be known of the internal character of the country. The territory of Sind, under the Moghul emperors of Hindustan, was governed by Nawaubs, who, in the convulsions of that empire, frequently enjoyed an independence, till the death of Nadir Shah, and the dismemberment of his vast conquests, when it became a dependent province of Cabul. The Nawaubs of Sind were at this time chiefs of the Kulora tribe, a religious sect, sprung from the Abasside dynasty. In 1779 a tribe of Beloochees, called Talpoories, headed by four chieftains, who were brothers, expelled the Kulora Nawaubs, and though the former were obliged to retire in their turn, they eventually succeeded in establishing their authority; by a treaty with the Cabul Government in 1786, the eldest of the Talpoorie chiefs, Meer Futteh Alee, was recognized as the Ameer or ruler of Sind, on condition of his discharging arrears of tribute, and of paying thirteen lacs per annum to Cabul. This chief, however, in less than three years, refused to pay tribute, and although portions have been discharged, the stipulated payment has been long withheld, and the disorder in Cabul, and the weakness of its Government, effectually prevent the enforcement of the claims.

After the decease of Meer Futteh Alee, the other three brothers made a division of their revenues, and entered into the singular compact of governing the province conjointly, under the designation of Ameers of Sind. On the death of Meer Gholam Alee, the next senior brother, in 1812, his eldest son succeeded him, taking the lowest rank in the triumvirate.

The Ameers, by the accumulation of treasure through the non-payment of the tribute, by the long internal tranquillity of Sind, and by the annexation of a part of the territories of the Rajah of Joudpore to their own, have reached a high pitch of power and arrogance. They once made preparations for the invasion of Cutch Bhooj, in which project they would probably have succeeded, but for the firm interference of the British Government.

The East-India Company once had a factory at Tatta, the ancient seat of Government (which the Ameers have removed to Hyderabad, some distance higher up the Indus on the opposite bank); but in 1801-2 the commercial resident was expelled, and a vast quantity of public property was seized by the Ameers.

Ameers. In the year 1808, the Bombay Government deputed an envoy to Sind to establish a good understanding betwixt the two Governments; the envoy (who seems to have exceeded his instructions, by concluding an offensive and defensive alliance with Sind) was treated by the Ameers with great haughtiness. In the following year, the Supreme Government of British India despatched a mission under Mr. Nicholas Hankey Smith, the objects of which were to annul that treaty, as well as to debar the agents of France from getting footing in Sind, and to re-establish the proper relative rank of the British and Sindian Governments. An account of the incidents attending this mission has been published by Lieut. Pottinger,* one of the assistants.

Upon the arrival of the mission at the port of Kurachee, the envoy met with great incivility from the local authorities, and were addressed in a strain of arrogance and superiority by the Ameers. As he had pointed instructions to resist any mark of disrespect towards the British Government, and any assumption of superiority, the authorities, and the Ameers themselves, eventually adopted a more endurable style of behaviour. The envoy was introduced to the princes in full durbar; and the scene is described as splendid and gorgeous. The brothers were habited alike, in fine muslin tunics, with costly loongees, and were covered with jewels.

Since this period, further intercourse has taken place between the two Governments, and in 1820 a treaty was entered into by the Company, on the one part, and a deputy appointed by the Ameers, on the other, whereby the Sindian Government stipulated to prevent inroads upon the territories of the Company or of its allies.

The predatory warfare in Cutch and its vicinity is supposed to be now carried on by fugitive Meyannas, resident in Sind, and by a rebellious Bhyaut who has taken refuge in the same country, where he has collected a large body of followers. The hostilities cannot, therefore, be expected to bring the British and Sindian Governments into collision, unless, as it is conjectured, the latter has connived at and encouraged the insults upon the territory of the former, or of its allies. The Bombay Government seems to have prepared for the worst; the force assembled for taking the field is estimated at 7,000 strong.

The features of the Government of Sind are darkly drawn; but the traces of individual character amongst the people are still less pleasing. The Sindians are described as avaricious, deceitful, cruel, ungrateful—and such strangers to veracity that, amongst the people of the countries bordering on Sind, “Sindian dog” is an opprobrious term, synonymous with “treacherous liar.” They are brave, abstinent, active, and submissive to their rulers. Their manners are forward and unpolished; they are dull in intellect, and as deficient in hospitality as in fidelity.

The majority of them are Soonnee Mohammedans; but the Ameers, and some of the great men about the court, are of the Sheeah persuasion.

* Travels in Beloochistan and Sindh: 1816.

EDUCATION OF CADETS.

To the Editor of the Asiatic Journal.

SIR: It was with extreme concern and surprise I read the statements in Mr. Hume's speeches, in the debates on the subject of "Education of Cadets," as published in the *Asiatic Journal* of this month—statements so contrary to fact, and so exaggerated, that I consider it a duty to offer my information on the subject, to prevent the very wrong impressions which such extraordinary assertions might make on the public mind.

With deference to Mr. Hume's military services with a native regiment, I must think that that gentleman has been a long while from India, since he exhibits such ignorance of the present economy and discipline of the native army by such a series of mistakes; and that his zeal for the public good has warmed him into those eloquent exaggerations—for I believe him to be a staunch friend to our Indian interests. I shall perhaps serve the cause of truth best, by answering categorically the successive assertions made by that gentleman.

Mr. Hume notices a pamphlet, recently published, which states the inconveniences suffered by King's officers in India, in consequence of their ignorance of the language; but what have we to do with King's officers, I ask?—troops who are employed a few years in this country, and a few years in that; for they do not properly belong to India: moreover, they command English soldiers, and generally keep servants who speak English; their court-martial are all conducted in English, and they have no need to know Hindoostanee but for the rare duty of mounting an occasional gate-guard with only sepoy. I shrewdly conjecture, the said pamphlet is intended to stir up a feeling against the Company's officers, to rob them of their right to fill all staff appointments—a right which I hope will never be disturbed; for who so deserving as that class of men who are exiled for life, as it were, from relatives and native country? But if it be attempted to prove that "the Company's officers are those who suffer inconvenience in consequence of their ignorance of the Hindoostanee language," I shall show that the contrary is the fact; and that such an assertion can only arise from envy. As to the King's officers filling staff appointments, I trust the day is very distant which shall see such a dangerous experiment tried; it would not only fill the native army with discontent, and be an injustice to our body, but it would place in situations a class of men whom the sepoy, and natives generally, feel no attachment for; and on the other side they must acknowledge they care as little for the sepoy and natives. Those only who are identified as *Kompanee officers* by the natives will be regarded with confidence by them, and their orders or instructions fulfilled with alacrity.

Mr. Hume says, "nine out of ten of them (oriental scholars) had made some progress in the language before they left this country." I marched with nearly thirty cadets, who all landed from the same fleet, and not one knew a word of Hindoostanee, and joined a body of two hundred cadets, who had been in the same predicament, but were, at the time I allude to, acquiring that language by regular study.

If one-third of the Madras officers are employed on the staff, they have obtained their situations by the very qualification which Mr. Hume accuses them of not possessing, *viz.* a competent, and more than that, an extensive and perfect, knowledge of the Hindoostanee; for the Government of the

Madras

Madras Presidency issued an order or regulation, that the acquirement of the native language should be a *sine quâ non* with the aspirers for such promotion. I will not echo Col. Lushington's speech, but will here simply mention, that our officers are obliged to stand the ordeal of an examination also, before they are entitled to any situation they may afterwards be appointed to.

Interpreters to regiments appointed by the Marquess of Hastings are not "interpreters between the native troops and their European officers," as construed by Mr. Hume: a misconception so extraordinary is almost incredible in a gentleman who has served in India. I can inform Mr. Hume how that new rank arose in the army. The duties of adjutants had become so multifarious and slavish in a native corps (an adjutant having to conduct the proceedings of all native courts besides his other duties), that, by the appointment of interpreters to regiments, the whole and sole conducting of courts-martial was entirely given to them, and adjutants were relieved from that fatiguing duty. It served also as an additional reward or excitement to young officers to learn the language.

As to "some officers who had been nearly fifty years in India, and not acquainted with the native tongue," perhaps they were such men as one or two of my young acquaintances, who always made it a matter of boasting, "that they never would learn Hindoostanee." But, I am happy to say, few such perverse and foolish characters disgrace our army; I may say, not one in a hundred.

All the young officers who joined at different times the regiment I served with, were severally attached to such companies as had an experienced subaltern with them, which I know is the custom throughout the service, and not "entrusted with the command of a company, although he might then be only sixteen or seventeen years of age." They are necessarily posted to command companies at drill and parade, in order to learn the battalion movements, &c.; but in the course of my service I do not recollect a detachment being sent from head-quarters under any other than an experienced subaltern, though a young officer has been permitted occasionally to do duty with it.

It is true that either the native commissioned or non-commissioned have to report every occurrence twice a day to their officer, but I have seldom known him "incapable of understanding the report as the statue in that niche;" on the contrary, when I first arrived in India, and had made myself fluent in Hindoostanee (for I passed a severe examination), it constantly excited my admiration to hear the long conversations in that language between every officer in the 2d regiment and their native reporters; and occasionally I had opportunities of making the same observation in other native corps which were encamped with ours.

The Madras officers are generally very able to attend to all complaints; and when they appear on parade, they are equally able to inquire into all the details connected with their corps or company, and never was an army more happily efficient in respect to a mutual intercourse between the superior and inferior ranks, through the very general knowledge of Hindoostanee possessed by the former,

It is a very common thing for a native officer to come and sit with a Madras subaltern for an hour or two, when off duty, and to keep up a conversation in the native language upon almost every topic in the world, except the abstruse sciences. Every one knows how interested and inquisitive the natives are; and details respecting our king and country, government, climate, ships, and even

even religion, are never tiring subjects to them. One of my native officers would sit with me a whole morning, and converse about the Christian religion; and another used to be as much interested in my description and plans of European fortification, and the art of attacking forts: they were both Rajapoots. I have served with two native regiments, and been on intimate terms with the officers of above twenty others, and yet never knew above one or two officers in any corps who were not able to converse in Hindoostanee on all subjects connected with duty. It is also more usual for officers to keep servants who do not know English, for the purpose of talking in Hindoostanee to them; they are preferred on many accounts; in fact I know there is a general dislike to having spies over our own conversation at the mess. The acquaintance with English by the natives is not so general, up the country, as it may be thought to be: if a private in a native regiment understands a little English and writing, he is sure to be selected for a "sepoj writer."

Our disciplined officers and sepoys do not require more checks than our praiseworthy Governments abroad have instituted, nor are "bodies of armed men let loose on the natives." The British Governments of the three presidencies are as paternal as the state of our Indian empire will admit, and a stranger need only travel through India to be convinced of it by the natives themselves. I will venture to say there is not a more happy class of human beings, individually and collectively, on this globe, than the millions under the rule of the East-India Company: nor dare an officer or sepoj inflict an injury on any one without being visited with condign punishment. In fact, I almost think the native inhabitants are beginning to lose a little of their ancient respect for us, from the *attention and partiality* shewn to them by the civil courts whenever any case of aggression comes before them.

European officers are always obliged to give up a private, or any individual in their corps or company, on presentation of a magistrate's summons. It is useless for Mr. Hume to say they "wished to keep their men under their own exclusive jurisdiction, and they are very unwilling to bring them before a civil court." It is not a matter of option or choice with us, for we have no control whatever over matters not purely military.

In a case of military crime, a court-martial is assembled for the trial of the culprit; but I must inform Mr. Hume, that no English is required in these courts-martial, and therefore no "false version" can be given of the case. All the members of the court, including the president, are natives; all the witnesses are natives—unless, indeed, a European officer or soldier is the accuser; the priests who administer the oaths, the attendants and spectators, are all natives. It is the officer who holds the new rank of interpreter who sits at these courts-martial and conducts the proceedings, giving instructions occasionally during the trial to the president and members, and writing down the whole proceedings in the English language. I said there was no English used at these courts, nor is there, except that of the interpreter writing in English what he listens to in Hindoostanee; and the interpreters all know that language nearly as well as their mother-tongue, otherwise they could not have passed their severe examination. This is the whole and sole use of an interpreter to a regiment, and a most arduous and destructive duty it is, to sit, day after day, bound and swaddled in full uniform, from eleven o'clock until three, in a crowded court, the atmosphere heated to 100 or 120 degrees. I have conducted the proceedings of several native courts-martial, and well know what the duty is. The office of quarter-master is united in the same officer

officer who is interpreter, a more pleasing and active situation than the latter, and a-kind of "set off" against the sedentary hours passed in the trial of prisoners.

Mr. Hume mentions "European serjeants who had acquired considerable intelligence in the Hindoostanee;" but if Mr. H. had ever heard these serjeants stammer out their smattering of the native tongue, I am sure he would laugh. Men who do not even know the thirty-two characters of the alphabet, and use one word for another, should not be ranked before a body of officers who have acquired the language grammatically, and in the Persian character, which is the way it is taught in India, and the way it ought to be taught every where.

When I went to France, at the age of fifteen, I scarcely knew a word of French, although I had been learning it seven years in England, so different did it sound when spoken on the continent: but I was able to comprehend a Frenchman in three months there. And thus, I conceive, it will be with all those who learn Hindoostanee in the English character: when they arrive in India, notwithstanding the acknowledgments of some, who profess to be well acquainted with it by means of the latter.

There never was such a fact, as that "the Government of India, seeing the lamentable state of ignorance which prevailed among the European officers there, had been obliged to appoint an interpreter to every regiment." The new rank of interpreter was instituted, as I have already said, as a relief to adjutants of regiments, as a reward to our distinguished army, as an additional staff appointment to excite industry and emulation among the junior officers, as an extra emolument to help those poor fellows who were in debt and backward in promotion, and last, but not least, as a highly necessary office in the present enlarged and improved state of the British native army. Such were some of the reasons adduced in the "general order" which established that rank.

Mr. R. Jackson is in as great an error on the subject as Mr. Hume. Mr. J. says, "if every officer understood the language, there would be no occasion for interpreters." The truth is, the officers have nothing to do with the interpreters now they are established, nor are they in any way "a medium of communication between the officers and the natives." And "each of the officers composing the courts-martial are able to understand all that is said in the native language," because they are native soobadars and jemadars. "Every court-martial has the benefit of an interpreter," because, as I have already shewn, he sits in and conducts every regimental court.

There are subordinate courts, called "detachment courts-martial," which are assembled at out-posts when the interpreter is at head-quarters; but the experienced subaltern conducts them agreeably to the established rules of the service. Thus, when I was on command, and in a case of emergency, I received a special order from head-quarters to try a prisoner in a court composed of my own native officers, viz. a soobadar and two jemadars. I wrote the proceedings in English, and forwarded them to head-quarters for confirmation, when two additional drummers were sent from thence to assist mine at the punishment, at which a native doctor attended.

So far from our Government not "watching over the life of a fellow-creature," even the most trifling sentence of a court must not be inflicted until the proceedings have been confirmed at head-quarters, and sometimes, instead of an order for punishment, a pardon comes back.

It is so generally known, "that the native language can be best acquired in India," that I should not have noticed it here, but to advert to a pecuniary reward which the Madras Government formerly granted to young officers for passing an examination. I believe it was 500 rupees for each language, and it was the only resource many officers had of wiping off their debts, and I, for one, sincerely regret that Government ever did it away; for although the officers of the army could converse fluently in Hindoostanee, yet "there never was a period in our rule in India, in which the native languages were so superiorly understood by them." An honourable desire to pay their debts was what induced numbers to study several languages, nor did the stimulant—money, quench the natural desire for that glory which "actuates the members of the Madras army."

I think Mr. Hume is under a great error when he says, "but it is well known that, in the Madras regiments, the native officers were obliged to act as interpreters for their European officers." If such has been the case with one regiment, I must infer that that regiment was unusually long in garrison at the presidency, where the natives may pick up a little English; but I do not know a corps of native officers who understand English sufficiently to assist an ignorant ensign. I know that our young men, on joining the corps, had the usual reports made to them, and when they did not perfectly understand the reporters, their own native officer, or any other present, would take pains to explain it in Hindoostanee, more deliberately than a havildar or writer; but there was not a native officer in our corps who knew a word of English except the words of command at drill.

I am much inclined to think that Mr. Hume's information comes from a King's officer, among which class there is a good deal of ill-feeling towards the Company's service, on the score of not sharing the staff appointments; but he who would foment discord between the two services is no patriot. If the King's officers must share, let it be in such staff appointments as have no connexion with the native troops or commissariat.

The sebandy corps belongs to the civil service, and I believe their privates are not under martial law, but are punished at the discretion of their own soobadars and jemadars; they are not officered by English officers, and consequently cannot require interpreters. The battalion of kolkars, and many other irregular troops, are governed in the same manner: the golandauze and artillery are regular troops, subject to the Articles of War, and cannot be tried without an interpreter or judge-advocate.

In the Madras army there are always several candidates (who are well acquainted with Hindoostanee) for every vacant staff appointment that occurs. This is one great stimulus to the junior officers; and I wish Mr. Hume would exert his influence for the restoration of the pecuniary rewards abroad; it would be another stimulus, and a humane one.

I fear I have already extended my information to too great a length; I forward it, however, for insertion in the *Asiatic Journal*, and remain,

Sir, your's, &c.

Colchester, Feb. 15, 1826.

A MADRAS RETIRED OFFICER.

Review of Books.

Transactions of the Royal Asiatic Society of Great Britain and Ireland.
Vol. i, Part ii. 1826. Pp. 155—382.

THIS second pledge of the labours of the Royal Asiatic Society, we have no doubt, will be as cordially welcomed by oriental scholars, both at home and abroad, as the first part, which made its appearance at the beginning of last year. It is, as the reader will perceive, considerably larger in bulk, and it possesses, in our opinion (without meaning the least disparagement to the valuable contents of the preceding part), a superior degree of interest. As we cannot afford space for any prefatory remarks, we shall proceed at once to give an epitome of its contents.

The initial article is an "Analytical Account of the Pancha Tantra, illustrated with occasional translations," by Horace Hayman Wilson, Esq., Secretary to the Asiatic Society of Bengal. This very excellent article, which affords an elucidation of the ancient manners of the Hindus by an analysis of some of their most entertaining and popular stories, we have already made our readers acquainted with,* and laid under contribution; we shall therefore confine our extracts, on the present occasion, to some of the introductory observations of the author, on the origin of fabulous composition.

It is now too late to inquire, whether we are to consider Persia as the birth-place of fictitious narrative: for, if such narrative was cultivated there, it must have been clad in the *Pahlevi* language; and both body and dress are irrecoverably lost. We must, therefore, be content to admit the claims of the Hindus, amongst whom we may trace the original of much that has interested, and amused, our forefathers and ourselves.

The oldest collection of fables and tales, of the class here intended, is the work that passes by the title of the Fables of *Bidpai*, or *Pilpay*. The history of this work is too well known to require any elucidation. Mr. Wilkins, and Sir William Jones, brought to light its original, from amongst the hidden stores of Sanscrit literature; and Mr. Colebrooke gave the text itself of the *Hitôpadésa* to the public. The learning and industry of the Baron de Sacy have finally traced the work through all its stages; and there are few subjects of investigation, the history of which has been more successfully ascertained, than the bibliographical adventures of the salutary instructions of *Vishnu-sarmâ*, or *Fables of Pilpay*.

Although the stories of the *Hitôpadésa* are undoubtedly identical with most of those, which are found in all the forms of *Pilpay's* fables, yet it has been clearly shewn by Mr. Colebrooke, that it is not the source from which its successors have been directly derived. It is, in fact, itself but a scion of the same parent stock, and in common with the rest, originates, as it indeed admits, from an older collection, the *Pancha Tantra*. The text of this work is not very rare in India, and it were therefore to have been wished, that it had been selected for translation, in preference to the *Hitôpadésa*; but the opportunity has passed. The identity of the two works, for the greater part, renders the translation of both a work of supererogation: and, fully as the topic has been developed, it is likely that the main defect will long continue to mutilate it, at the very outset. The deficiency has, in some measure, been supplied by the sketch, given by Mr. Colebrooke, of the contents of the *Pancha Tantra*; but, as his chief object was only to substantiate the greater affinity between it and the *Kalila Damana*, than between the Arabic work and the *Hitôpadésa*, he has not prosecuted its details farther than was sufficient to effect his purpose. In the want, therefore, of a full analysis, and in the little likelihood that exists, of a translation of the entire work being now published,

* See the article, p. 189.

published, it has been presumed that a more minute account of the *Pancha Tantra*, than has yet been given to the world, will not be an unacceptable communication to the Royal Asiatic Society of London.

The second article is entitled "Inscriptions upon rocks in South Bihár, described by Dr. Buchanan Hamilton, and explained by Henry Thos. Colebrooke, Esq." These inscriptions are found amongst the fac-similes collected, with other antiquities, by Dr. Hamilton, whilst engaged in statistical researches in the Bengal provinces. The first inscription is taken from a rock named Tarachandi, near Sahasram, in South Bihár, dated 1229 Sanvat (A.D. 1173); and is the same appealed to by Mr. St. George Tucker as an evidence that the people of Bengal not only possessed private property in land, but resisted their sovereign's attempt to usurp their possessions.* The inscription contains the protest of a chieftain named Pratapa Dhávála Deva, bearing the title of Raja of Japila, against the usurpation of two villages by certain Brahmins, under colour of a grant surreptitiously obtained from the Raja of Canouj, the celebrated Vijaya Chandra, or Jaya-Chaud. The denunciation or protest is first expressed in verse (in two stanzas of the *Vasanta-tilaca* metre) and is then repeated in prose. The following is Mr. Colebrooke's translation:—

"Pratápa dhavala, wholly divine (*déva*), possessor of happily risen and celebrated glory, addresses his own race. In these villages, contiguous to *Calahandi*, that contemptible ill copper [grant], which has been obtained by fraud and bribery, from the thievish slaves of the sovereign of *Gádhinagara*, by priests sprung from *Suvalluhala*: there is no ground of faith to be put therein by the people around. Not a bit of land, so much as a needle's point might pierce, is theirs.

"*Samvat 1229. Jyêsh't'ha badi 3d Wednesday.*

"The feet of the sovereign of *Japila*, the great chieftain, the fortunate Pratápa dhavala *déva*, declare the truth to his sons, grandsons, and other descendants sprung of his race: this ill copper [grant] of the villages of *Calahandi* and *Badayitá*, obtained by fraud and bribery, from the thievish slaves of the fortunate Vijaya Chandra, the king, sovereign of *Canyacubja* by *Swalluhantya* folks: no faith is to be put therein. Those priests are every way libertines. Not so much land, as might be pierced by a needle's point, is theirs. Knowing this, you will take the share of produce and other dues; or destroy."

"[*Signature*] of the great *Rájaputra* (king's son), the fortunate SATRUGHNA."

This inscription, it appears, was strangely interpreted by the Pundit attached to the survey in which Dr. Hamilton was engaged. He supposed the chieftain, Pratapa Dhavala, to premise an intention of commemorating his descendants, and to proceed to the mention of Vijaya Chandra, proprietor of Canyacubja, or Canouj, and Satraghna, son of the Maharaj: whence Dr. Hamilton was led to infer that Vijaya Chandra was son of Pratapa Dhavala! This circumstance should teach Europeans not to rely implicitly upon the versions which even pundits give of what is written in their sacred language.

Mr. Colebrooke observes that the style of the protest is singular; and he adds that it serves to show that the paramount dominion of Canouj extended to the mountains of South Bihar, and presents an instance of the characteristic turbulence of Indian feudatories.

There are two more inscriptions which possess no other chronological value, but as they corroborate one, possessing more historical interest, noticed in the *Asiatic Researches*, vol. ix, p. 441.

The third and fourth articles may be classed together: they relate to an inscription

* See *Asiatic Journ.*, last vol., p. 823.

inscription upon marble at Madhucarghar, and three grants inscribed on copper,* found at Ujjayani, or Ujein. The communication is from Major Tod; to which are added notes and translations of the grants by Mr. Colebrooke. Fac-similes of the three copper-plates, beautifully printed from stone, are appended to the volume.

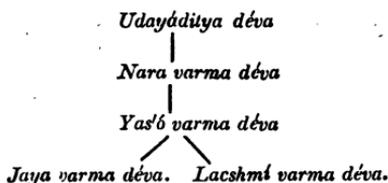

These documents are of material importance to history, as they fix, it appears from the comments of Major Tod, the period of the celebrated Pramara or Puar dynasty, one of the most distinguished of the royal races of India, and including the celebrated Chandragupta, or Sandracottus of the Greek historians. Some writers have even identified the name of *Porus* with that of *Puar*, but this rests alone upon the very uncertain basis of slight etymological resemblance.

The historical dissertation with which Major Tod has accompanied this communication, discovers great diligence of research and extensiveness of reading. Mr. Colebrooke's account of these inscriptions, prefixed to his translation, we here insert, to show more distinctly the result to which these documents have led :

One of these grants or patents, records a donation of land made by the reigning sovereign of *Dhárá*, on the anniversary of the death of his father and predecessor, in 1191 of the *Samvat* era; confirmed by the prince, his son, at the time of an eclipse of the moon, in *Srávána* 1200 *Samvat*. It appears from calculation that a lunar eclipse did occur, at the time; viz. on the 16th day of July A. D. 1144, about 9½ p.m. apparent time, at *Ujjayani*.

This date, so authenticated, becomes a fixed point, whence the period, in which the dynasty of sovereigns of *Dhára* flourished, may be satisfactorily computed. The series of four princes, whose names are found in these patents, two of them anterior to A. D. 1134 (1190 *Samvat*), and two of them subsequent to that date (for the anniversary of *Nara varma's* funeral rites in 1191, determines his demise in 1190 *Samvat*;) may be taken to extend from the latter part of the eleventh century of the Christian era to near the close of the twelfth. It is carried retrospectively, through a line of three more princes, to *Sindhu*, grandfather of *Rójá Bhója*, by the marble at *Madhucara-ghar*, and other evidence; as shown by Major Tod.

The earliest of the three patents inscribed upon copper, which were procured by Major Tod at *Ujjayani*, bears the date of 3d *Mágha sudi* 1192 *Samvat*, answering to January A. D. 1137. It has the signature of *Yasóvarma déva*, who, in the preceding year, 1191 *Samvat*, had made a donation of land on the anniversary of the demise of his father, *Nara varma déva*, which was confirmed (apparently in *Yasóvarma's* lifetime), by his son, *Lacshmi varma déva*, in 1200 *Samvat*: as above noticed. The latest of the three grants is by his successor *Jaya varma déva*, and, being incomplete, exhibits no date. Both these patents agree in deducing the line of succession from *Udayáditya déva*, predecessor of *Nara varma*. There is consequently this series perfectly authenticated :

The fifth article is entitled "Some Account of a Secret Association in China, entitled the *Triad Society*." By the late Dr. Milne. This paper contains

* This is a practice conformable to the Hindu law, which directs that such grants should either be written on silk, or inscribed on copper.

contains some particulars respecting the name, object, initiatory ceremonies, secret signs, and seal, of a singular association existing amongst the Chinese, not merely in their own country, but extending to almost every colony of that nation in the east. The name, or title, of this association, is not known with certainty, but seems to be *San-hö-hwuy*, or The Society of the Three United, or the Triad Society. The three referred to are *T'heen*, *te*, and *jin*, i. e. heaven, earth, and man, the three great powers in nature, according to the Chinese doctrine of the universe. This, or a similar society, had, by its secret machinations, nearly produced a revolution in the Government during the reign of Kea King, by whom it was persecuted, and the principals were seized and put to death. The seeds of this association still survived, and the objects of it continue, though the operations of the members are conducted more secretly than before. The design of this association, at first that of mutual assistance, degenerated, at length, into theft, and the overthrow of regular government: it seems, in fact, to have been of a decidedly revolutionary character. It includes amongst its fraternity the idle part of the community, who aid each other in the perpetration of crimes, and in escaping from the hands of justice. What they obtain by plunder is divided amongst the members according to rank. They are well known in Java, Singapore, Malacca, and Penang, where, when a Chinese stranger arrives, he is either laid under contribution, or exposed to their annoyance. The direction of the society is vested in three persons, called *Ko*, or elder brothers; the members are called *Heung-té*, or brethren. The rules of the association are said to be contained in a book, and written on *cloth*, with ink of peculiar quality, so that the writing is not obliterated by being concealed in a well or pond.

The initiatory ceremonies are secret, and therefore little known. They are said to consist of thirty-six oaths, or imprecations, to secrecy; and there is a ceremony called "crossing the bridge." This bridge is formed of swords, held in a peculiar manner, under which a new member takes an oath, sanctioned, in the usual form, by the decapitation of a cock.

The signs consist of mystic numbers, particularly *three* and its multiples: they also prefer odd to even numbers. The peculiarity of the language, which admits of analysis of individual characters, assists this object. For example, the word *Hung*, in the title of *Hung-kea*, or Flood family, another name by which the society is distinguished, contains the number *three hundred and twenty-one*, and is often used by the members for particular purposes. Certain motions of the fingers constitute a second class of signs; and odes and pieces of poetry are employed as a third.

The seal of the society is of *quinquangular* shape, and the characters engraved upon it are supposed to contain some occult or mystic sense. This seal it is impossible to explain without reference to the engraved representation given at the end of the volume, and which (as well as the other specimens of Chinese writing there) exhibits a fine specimen of calligraphy.

Dr. Milne institutes a comparison between this society and that of the Freemasons, though we are bound to say the points of resemblance are not very striking; they consist, 1st, of their pretensions to antiquity; 2d, their mutual benevolence and assistance rendered to each other; 3d, the oath, the arch of steel and bridge of swords, used at initiation; 4th, the three ruling brethren, like the three masonic orders of apprenticeship, fellow craft, and master; 5th, the signs, particularly motions with the fingers; 6th, the dogma of liberty and equality, in which "some have affirmed," says Dr. Milne, "that the grand secret of free-masonry consists," and which the Chinese term *Heung-té*, may be

The followers of this sect are called *Dhamians*; and their dress is after the Hindu fashion, to favour their interpretation of that passage of the Koran which says that *Imâm Mehedi* will appear in disguise. They are to be found in the *Panjâb*, in *Gujera*, *Delhi*, *Lucknow*, *Benares*, *Muthra*, *Faizabad*, and *Nagpur*; but *Pannâ* is their Mecca. Latterly they are said to have made some progress; but their whole number does not exceed 1,500, of which about twenty are employed at their place of worship at *Pannâ*, and the remainder are engaged in trade. The present establishment was endowed by *Râja Hindupati* with a small portion of the diamond mines, which affords subsistence to the devotees employed in their temple, and at the shrine of their founder at *Pannâ*.

The ninth Article consists of Dr. Whitelaw Ainslie's "Observations on the *Lepra Arabum*, or *Elephantiasis* of the Greeks, as it appears in India." This is a very full and excellent account of the history, character, varieties, and modes of treatment, of this frightful malady, which, it appears, "is by no means of rare occurrence in the Indian peninsula, and spares no caste nor sect, though it is more commonly found amongst the poor than the rich, owing, no doubt, to their manner of living, and consequent languid circulation." In Upper India it is supposed to be inflicted as a punishment for sins committed in this world, and that any person dying of it is liable to a return of the disease in his next birth; an evil which, it is imagined, may be averted by a voluntary death.

The tenth article is by John Francis Davis, Esq., and entitled "Eugraphia Sinensis; or, the Art of Writing the Chinese Character with Correctness: to which are prefixed some Observations on Chinese Writing." The rules prescribed by Mr. Davis are ninety-two in number, including every possible class of written character, and are exemplified by means of specimens, very beautifully engraved, appended to the volume. Skill in writing is much prized in China; but of the two points, correctness and elegance, the first only is absolutely required of students, at their public examination; and Mr. Davis mentions an anecdote, current amongst the Chinese, of a candidate who was absolutely rejected for omitting the horizontal line at the bottom of the character of a *horse*, with the remark that "it was impossible for a horse to walk without legs."

Mr. Davis makes the following judicious reflections on the necessity of cultivating the study of the Chinese language, in all its departments:

No reasonable person, at the present day, will deny the necessity that there is, for some few, at least, of our countrymen being possessed of a competent and practical knowledge of the Chinese language. He who ever carries his thoughts back to the past, will allow how ill we should have fared without it, on many critical discussions with a people, of all others the most extravagant in their assumptions, and the most difficult to manage; and he who can look beyond the present day to the future, may not only foresee (as long as our government neglects to make some sort of provision against such contingencies) the possibility of discussions still more embarrassing, and more difficult, than ever yet occurred at Canton; but when he takes into consideration the extension of our Indian frontier to the northward and eastward, he may easily anticipate the chance of our being, some day, unavoidably placed, with respect to the Chinese empire, in relations of a far more weighty and important nature, than such as are simply commercial.

The Chinese, themselves, are cunning enough to know that "knowledge is power;" and though they have, of late years, gradually relaxed in their vigilance, and may at length be considered to have relinquished the point,* the jealousy with which they, not very long ago, regarded the attainment of their language by Europeans, sufficiently shewed the importance that they attached to it, and the consequences that they foreboded, from such knowledge, to their selfish interests.

Every

* It was insisted upon by the British factory, in the discussions of 1814, and at length yielded to them.

A.D. 1633, to fly into Gondwáná, and the power of the Bundéla dynasty was broken. The struggles of succeeding chiefs of that dynasty were at length rewarded by the restoration of its representative, Pchár Singh, to the possessions of his ancestors. From this period, the rajas of Bundelkhund became the feudatories of the Mohammedan government, until Brikramajít, who, in 1812, concluded a treaty with the British, by which his territories are protected by that government from molestation.

Such is the history of the country termed Bundelkhund Proper, situated to the west of the Désán river. But during the contests with the Mohammedans, subsequent to the flight of Jajhár Singh into Gondwáná, a Bundéla chieftain, named Chhatrasál, succeeded in wresting from them a portion of territory to the east of the Désán, and assumed the title of raja. He was defeated and deprived of his conquests; but by the aid of the Peshwa, Sewai Bájiráo, was enabled to recover them, and he bequeathed his extensive territories to his posterity, with the exception of a large portion which he ceded to the Peshwa; this was the earliest territorial acquisition of the Mahrattas in Hindustan, and which, in after times, was transferred to the British. The other portions of the territories, divided between his two sons, after a long series of domestic troubles and civil wars, were parcelled out into a multitude of sub-divisions, which eventually gave rise to the numerous petty states now existing, the progress of which Capt. Franklin minutely traces.

The rest of the paper is devoted to details regarding the geographical features of Bundelkhund, as well as its mines, minerals, and manufactures, its soil, productions and mode of husbandry, its remarkable buildings, ruins and natural curiosities, and its inhabitants and religious establishments. The superior classes consist of the descendants of Yaduvansi Ahírs, the descendants of the Chandéla race, the Raghuvansi tribe, the Bundéla race (who are always in the capacity of chiefs), the Püár tribe, a tribe called Dhandélas, the Gujer tribe of Lampthír, the Mahratta Pundits of Jaláwan, and lastly the Chóbés. Of the inferior tribes, the most common are the Lód, Cúrmi, Cúlí, Canghán, Ahír, Chamár, and a caste called Banáférs.

The Bundélas have been generally allowed to be a brave race of men; and there is something rudely haughty about them to the present day. They are certainly attached to the soil they inherit, and have a term, *Bhúmiyádi*, which may be translated patriotism, and which they use to express their exertions in behalf of their country.

The principal Hindu religious establishment is at *Chitracote* on the *Paisuní* river, where *Ráma Chandra* is said to have rested on his way to *Lancá*. There are also some Jain temples at *Senáwal* and *Kandalyur* for the worship of *Buddha* (*Jina*). But the most singular religious establishment is at *Panná*, and was founded by an enthusiast named *Jí Sáheb*, who emigrated from the *Panjáb* in the time of *Rájú Chhatrasál*.

This man assumed the appellation of *Pránanúl'h*, or Lord of Life, and declared himself to be the promised *Imám Mehedi*, mentioned in the Koran. His first attempts to set up his new religion were in the *Panjáb*, that fertile spot for religious innovation. Afterwards he removed to *Delhi*; and finally, to avoid the persecution of the Mohammedans, he fled into Bundelkhund, where he found protection under the rising power of *Rájú Chhatrasál*.

None but converts to his religion are allowed to read his book, which is entitled *Kúlcam*; but having procured some extracts from it, and other information concerning it, I ascertained that his principal arguments for the necessity of this new religion are founded on the discrepancy which exists between the practice of Muhammedans and the precepts of the Koran; and he professes to promulgate in his book the remaining 30,000 words, which Muhammed, on the occasion of his miraculous ascent into heaven, was told should be reserved for the coming of *Imám Mehedi*.

The

The followers of this sect are called *Dharmians*; and their dress is after the Hindu fashion, to favour their interpretation of that passage of the Koran which says that *Imâm Mehedi* will appear in disguise. They are to be found in the *Panjab*, in *Gujera*, *Delhi*, *Lucknow*, *Benares*, *Muthra*, *Faizabad*, and *Nagpur*; but *Panná* is their Mecca. Latterly they are said to have made some progress; but their whole number does not exceed 1,500, of which about twenty are employed at their place of worship at *Panná*, and the remainder are engaged in trade. The present establishment was endowed by *Rája Hindupati* with a small portion of the diamond mines, which affords subsistence to the devotees employed in their temple, and at the shrine of their founder at *Panná*.

The ninth Article consists of Dr. Whitelaw Ainslie's "Observations on the *Lepra Arabum*, or *Elephantiasis* of the Greeks, as it appears in India." This is a very full and excellent account of the history, character, varieties, and modes of treatment, of this frightful malady, which, it appears, "is by no means of rare occurrence in the Indian peninsula, and spares no caste nor sect, though it is more commonly found amongst the poor than the rich, owing, no doubt, to their manner of living, and consequent languid circulation." In Upper India it is supposed to be inflicted as a punishment for sins committed in this world, and that any person dying of it is liable to a return of the disease in his next birth; an evil which, it is imagined, may be averted by a voluntary death.

The tenth article is by John Francis Davis, Esq., and entitled "Eugraphia Sinensis; or, the Art of Writing the Chinese Character with Correctness: to which are prefixed some Observations on Chinese Writing." The rules prescribed by Mr. Davis are ninety-two in number, including every possible class of written character, and are exemplified by means of specimens, very beautifully engraved, appended to the volume. Skill in writing is much prized in China; but of the two points, correctness and elegance, the first only is absolutely required of students, at their public examination; and Mr. Davis mentions an anecdote, current amongst the Chinese, of a candidate who was absolutely rejected for omitting the horizontal line at the bottom of the character of a horse, with the remark that "it was impossible for a horse to walk without legs."

Mr. Davis makes the following judicious reflections on the necessity of cultivating the study of the Chinese language, in all its departments:

No reasonable person, at the present day, will deny the necessity that there is, for some few, at least, of our countrymen being possessed of a competent and practical knowledge of the Chinese language. He who ever carries his thoughts back to the past, will allow how ill we should have fared without it, on many critical discussions with a people, of all others the most extravagant in their assumptions, and the most difficult to manage; and he who can look beyond the present day to the future, may not only foresee (as long as our government neglects to make some sort of provision against such contingencies) the possibility of discussions still more embarrassing, and more difficult, than ever yet occurred at Canton; but when he takes into consideration the extension of our Indian frontier to the northward and eastward, he may easily anticipate the chance of our being, some day, unavoidably placed, with respect to the Chinese empire, in relations of a far more weighty and important nature, than such as are simply commercial.

The Chinese, themselves, are cunning enough to know that "knowledge is power;" and though they have, of late years, gradually relaxed in their vigilance, and may at length be considered to have relinquished the point,* the jealousy with which they, not very long ago, regarded the attainment of their language by Europeans, sufficiently shewed the importance that they attached to it, and the consequences that they foreboded, from such knowledge, to their selfish interests.

Every

* It was insisted upon by the British factory, in the discussions of 1814, and at length yielded to them.

Every step that renders us independent on native aid, in acquiring and making use of the language, may be considered as something gained: not to mention, that such aid is hardly procurable by the student in Europe. The Chinese might, at a future period, revise and greatly increase the penalties against such of their people, as give instruction to Europeans, at Canton; and the very occasions, on which the use of the language was most required, would be those on which the assistance of natives was most likely to be cut off. Besides, as experience has shewn that the local government, notwithstanding its pretended pride and indifference, has condescended to employ spies upon our actions and intentions, these persons, being necessarily acquainted, in some measure, with our counsels, would be the most convenient that it could select for the purpose.

“An Account of Greek, Parthian, and Hindu Medals found in India,” forms the subject of the eleventh paper in this collection. It is from the pen of that indefatigable orientalist, Major James Tod, and is accompanied by fine simile engravings of some medals, two of which, of Apollodotus and Menander, fill up a chasm in the numismatic series of the Greek kings of Bactria. The epigraph on each of the two medals is in the Greek language; the inscription on the reverse is in the Zend or Pehlavi character, which affords a decisive proof, as Major Tod remarks, “that both these princes held Bactria, or Balk’h, as the seat of empire; for although the discovery of these coins gives validity to the reported extent of conquest of these princes, yet had they held the seat of government within the Indus, they would have adopted the ancient Nágari character on the reverse, not that of Parthia.”

The coin of Apollodotus,* which is extremely scarce (as well as “some rare medals of a Parthian dynasty, probably yet unknown to history”) Major Tod obtained from the site of an ancient capital, named Súrapura, on the Yamuná, between Agra and Etawah. The Menander† was found at Mat’hurá supposed to be the Methoras of Arrian. The history of these two princes, and the geographical details illustrative of their conquests, form the bulk of this very elaborate and erudite essay, which we should mutilate and disfigure by an attempt to compress or epitomize. It contains, as the author observes, matter for others to expatiate upon, who may thereby throw new light upon Indian history.

The concluding article is that, the importance and curiosity of which have induced us to select it for publication (in an abridged form) in this journal. It contains the particulars of one of the attempts of Capt. A. Gerard and his brother, Mr. J. G. Gerard, to penetrate across the stupendous Himalaya, extracted from the journal of the former, condensed in a masterly manner by the learned director of the Society, Mr. Colebrooke. Any remarks of ours upon this most interesting article would be superfluous.

The mass of information, which is shewn by these papers to be accumulating on every subject connected with India and the east in general, will be available by the historian, the philosopher, and the philanthropist. Our efforts at improving the intellectual condition of our Indian fellow-subjects, and our researches into their history, literature, and manners, will go hand in hand, and mutually aid each other. The tendency of both is to bring into closer approximation nations which have hitherto been more widely removed from each other, in many respects, than they ought to be.

* The name of Apollodotus has been obscured by the mistake of Trogus Pompeius (adopted by Justin and Strabo), who confounded it with that of Apollodorus, the historian of Bactria.

† Plutarch says of this king, that he reigned over the Bactrians with such equity, that the cities had, in common, the care of his funeral rites; that they afterwards contended for his ashes, and at last divided his remains equally amongst them, erecting monuments to him in all.

PROCEEDINGS OF THE ROYAL ASIATIC SOCIETY OF
GREAT BRITAIN AND IRELAND.

February 4, 1826.—The Society met this day, at the usual hour. The Director, H. T. Colebrooke, Esq., in the chair.

The minutes of the last meeting were read and confirmed.

A donation was presented from Mr. Huttman, consisting of a Chinese painting on glass (the portrait of a female); two scrolls, with inscriptions, from the *She-king*; and a set of coins of the *Ta-tsing* dynasty.

Thanks were ordered to be returned to Mr. Huttman.

The three following gentlemen were elected members of the Society, *viz.*—Lieut. Col. William Farquhar; John Frost, Esq.; Alexander Russell, Esq.

The reading of Capt. Delamaine's paper on the Srawacs, or Jains, was continued; the portion which was read consisted principally of the History of *Párswanát'ha*; tracing him through all his various transmigrations, till at length, having attained the age of 100 years, upon *Samét Sikhara* (which is situated among the hills between Behar and Bengal), under a *chironjí* tree, he obtained *mócsa*, or final absorption. *Párswanát'ha* is stated to have been born at *Jambu dwípa* (Benares), in the house of *Rájá Asusina*. His mother was *Brámá ráni*, who, awaking from a dream, found a snake entwined around her loins, and, after a ten months' pregnancy, was delivered of a beautiful child marked with a snake. The astrologers then announced the birth of a *Chacra-varli Tirt'hancara*, who, from the circumstance of the snake being folded round the side or flank (*párswa*) obtained the name of *Párswa Nát'ha*.

February 18.—The general meeting of the Society was held this day at 2 o'clock, instead of 3, P. M.; and, in future, they will always take place at that hour.

H. T. Colebrooke, Esq., in the chair.

The minutes of the last meeting were read and confirmed.

The following donations were presented:—

From the Rev. Robert Morrison, D.D.; two specimens of lava, received from the Sandwich Islands.

From César Moreau, Esq., his new work, entitled "Rise and Progress of the Silk Trade in England, from the earliest Period to the present Time."

Lieut. Col. Farquhar, and John Frost, Esq., both elected at the preceding meeting, were introduced, and admitted members of the Society.

Mr. W. Huttman, and Robert Birks Pitman, Esq., were elected members of the Society.

Capt. Delamaine's paper, on the Srawacs, or Jains, was brought to a conclusion by the reading of a note of brief explanation, on the Eight Carmas.

Thanks were ordered to be returned to Capt. Delamaine, and also to Sir John Malcolm, by whom the memoir was communicated.

The Director then commenced the reading of the third and concluding part of his Essay on the Philosophy of the Hindus. Four of the six systems of Hindu Philosophy have been already noticed by Mr. Colebrooke in the first and second parts of his essay, which were published in Part. I. of the Society's Transactions. That to which the present portion is devoted, is the practical *Mímánsá*. Should it appear expedient to pursue the subject, the theological *Mímánsá*, usually called *Védánta*, is reserved for a future disquisition; but much on this subject being already before the public, no expectation is held out that this will be the case. The object of the *Mímánsá* is the interpretation of the *Védas*.

VARIETIES;

PHILOSOPHICAL, SCIENTIFIC, AND LITERARY.

ASIATIC SOCIETY OF PARIS.

Meeting of 7th December.—The following persons were admitted members: M. François Erdman, professor at Casan; M. Julius Rosenstock, doctor in philosophy and philology at the university of Erlang; M. Stahl; M. Guill. Stan. Trebutien of Caen; Mr. Orr.

M. Chezy wrote to the council to request that the text of the drama of *Sacotala* might be printed at the expense of the Society. An estimate of the cost of printing was annexed to the letter; and two of the seven books of the work are to be ready against the next general meeting. The proposition was referred to the consideration of a committee consisting of Count Lanjuinais and Messrs. Amedée Jaubert, and Kieffer.

M. Feuillet, librarian of the institute, was nominated by the council a member of the finance committee, in the room of the late M. Boulard.

M. Stanislas Julien presented the text and translation (printed) of the second part of his *Mencius*.

M. Klapproth stated that the Georgian and French Vocabulary was printed, and that the French and Georgian part would go to press this week.

M. Abel Rémusat, in the name of the committee nominated last meeting, read a report on the manuscript work of Messrs. E. Burnouf and Lassen, entitled "Essay on the Pali."

Conformably to the report, the work will be printed at the expense of the Society.

M. E. Coquebert de Montbret communicated two chapters of his translation of the prolegomena of Ibn Khaldoun.

M. Dumoret read a translation of the Turkish account of the embassy of Derwish Effendi to Petersburg in 1754.

The council of the Society intimated to the Baron d'Altenstein, minister of public instruction at Berlin, a wish to offer to his majesty the King of Prussia the *Journal Asiatique*, and the annual reports; his majesty has not only condescended to accept the present, but has been pleased to add to the other motives of gratitude, with which he has inspired the members of the Society, by addressing the following letter to the president of the council.

"I have received the journal and report which the Asiatic Society of Paris has been pleased to transmit to me through you. I am sensible of the mark of attention which your illustrious Society has afforded me on this occasion; though I

have no need of these proofs to give me an idea of the importance of the labours which engage its attention. The name of its president alone would suffice to guide my opinion in this respect. Continue, you and your associates, to enrich the world by your discoveries, and may heaven grant you, for a long time to come, the health and strength which your researches require!

(Signed) "FREDERIC WILLIAM."
"Berlin, October 26, 1825.

HULL LITERARY AND PHILOSOPHICAL SOCIETY.

The second meeting of the Hull Literary and Philosophical Society was lately held, when a paper was read by Mr. T. J. Buckton "On the Origin of the Americans." The object of Mr. B. was to prove that the American tribes originally proceeded from the north-east of Asia. He founded this hypothesis chiefly on proofs derived from physiology and languages. He showed, from a number of independent authorities, that the varieties observable in the physiological characters of the American tribes are so inconsiderable, that no reasonable doubt can be entertained of their identity; and that the general character of the Americans strikingly indicates their close affinity to the Mongols, or to a mixture of the Mongols and Tartar races of the north-east of Asia. After observing that the American languages possessed great variety of inflections, and an intricate syntax, he concluded, that the American tribes are the remnants of one or more nations who had attained a considerable degree of civilization; and he introduced a number of proofs of the extensive cultivation of the arts in the new continent. He produced comparative tables of the American languages, and also of the Coptic, Japanese, Malay, Sanscrit, African, Basque, Celtic, and Caucasian, which he considered, however, too limited in the number of affinities to afford any satisfactory result. But he established the *identity* of the languages spoken by the Tshutshi in the north extremity of Asia, by the inhabitants of the north-west coast of America, and of the Aleutian islands, the Greenlanders, and the Esquimaux. He also showed that striking affinities subsist between the languages of the Samoyedes, the Tongoose, the Yakutes, the Calmucs, the Mantchoos, the Ainos of the Curile islands, the Ost-racks, and the Tartars and Mongols generally, and also those of the various tribes of

of America, from Nootka Sound and Greenland, through Mexico, to Peru and Chili. He then alluded to the traditions of the American tribes, and to the Mexican histories; and concluded, that America was peopled from Asia, by wandering tribes of Mogul race, who passed thither by Behring's Straits, by the Aleutian islands, and probably by some northern course yet unknown to Europeans.

BOTANICAL COLLECTION FROM MADRAS.

A most valuable and extensive collection of the vegetable materia medica of India has been presented to the University of Edinburgh by his Excellency Sir Thomas Munro, K.C.B., Governor of Madras. Its selection evinces both intimate acquaintance with the subject, and very great industry on the part of Dr. Shuter, naturalist and botanist at Madras, to whom it was entrusted; and the whole was received in such excellent condition, that a portion of many of the seeds, and some of the roots, have been given to the professor of botany, with every prospect of their vegetating and increasing the fine collection of tropical plants already in the royal garden. Besides this extensive addition to the museum of materia medica, it has lately been enriched by curious and valuable specimens presented by John Crawford, Esq., resident at Singapore; the late lamented Dr. Schetky, from Sierra Leone; and other *alumni* of this university.—[*Caledonian Mercury*.]

EGYPTIAN MARINE.

The Ptolemies kept up a formidable marine in the Red Sea and Mediterranean to protect the Egyptian merchants. Theophrastus affirms they had ninety-seven first-rate ships, several of which were 200 feet long, besides a multitude of small vessels, and 4,000 barks to bear orders throughout the Empire.

Under the reign of the fourth Ptolemy were built vessels of so enormous a size that they have never since been equalled. Plutarch describes one of his vessels with 40 benches of rowers, 373 feet long, and 64 high at the poop. This enormous ship, beside which our three-deckers would seem small frigates, contained 400 sailots to work her, 4,000 rowers, and about 3,000 fighting men.—[*Savary's Letters on Egypt*.]

FOG-COMPASS.

Lieut. Lindesay, R.N., has discovered a simple method of ascertaining the situation of a ship in a fog, when the sun can be seen, but no horizon, by means of an instrument he terms a *fog compass*, which entirely abolishes the use of false horizons at sea, particularly that of the spirit-level. Lieut. Lindesay's invention has, we under-

stand, been submitted to the Admiralty and Board of Longitude.

INDIAN GYPSIES.

The Nuts, or Tumblers, are a people totally distinct from all the other inhabitants of the country, and correspond in a number of instances with the gypsies of Europe. This caste or tribe generally affect to follow the Mahomedan faith. They have so few religious ceremonies as to render it doubtful whether they profess more than may save them from the imputation of atheism. They inter their relations in a very slovenly manner, and are often found lying drunk about the grave. Their marriage forms are extremely simple: the bride and bridegroom mutually mark each other's faces with red ochre, after which they lock their little fingers together, and avow their union. Regular debauchery, added to violent exercise during their early years, reduce the period of life among these people to a very short compass. Few live beyond the age of forty, and by far the larger portion die before their thirtieth year. The women generally fall victims, after having borne four or five children.

CLIMATE OF ARRACAN.

According to a register published in the *India Gazette*, the fall of rain at Arracan, in the month of July, was nearly 60 inches; in August it was rather more than 43½. There was a "good deal of rain in April, and much more in May and June;" but the rain gauge was not ready before the end of June, and the actual fall was not measured in consequence. The greatest height of the thermometer in July, as given in the register, appears to have been 89; and the least height 77: in August the greatest height registered was 94°; the least 77°.

FECUNDITY OF THE COTTON PLANT.

One stalk of black seed cotton, planted on the 15th May last, by a gentleman for ornament in a garden, in a rich soil, to which no hoe was ever used: height of the plant eight feet; commenced picking 25th October and ended 9th January; gathered 420 pods, 56 pods injured by the frost and remain on the plant; produce 7½ oz. of clean, and 2 oz. stained; hand picked; weight of seed 19½ oz. There were a number of flowers plucked off early in the season, or the produce would have been more.—[*Charleston Paper of Jan. 11*.]

SARACENIC REMAINS.

Fragments of Arabian armour have been dug up in a field near Tours in France. These remains are described as being of very beautiful workmanship, in steel and silver, and are conjectured to be of the time

time of the Sultan Aberame, defeated by Charles Martel.

MAJOR LAING.

Accounts from Tripoli announce that Major Laing had reached Gadamas in November, and calculated on being at Timbuctoo by the 10th of December.

THE SNAKES OF SINGAPORE.

Among the novel objects which the natural history of this island offers to the scientific observer, snakes are amongst the most curious and interesting. From forty to fifty distinct species have already been collected, among which many are believed to be entirely new. The Malays, who are particular to redundancy in small matters, have a name for every one of them. Among them is the python, or ular sawah, improperly called the boa constrictor, although we have met with none of extraordinary magnitude, and two curious species of hooded snake. In so great a variety six poisonous species only have been found; nor is the bite of these in the highest degree venomous, as the worst of them seldom destroy a fowl in less than half an hour, and we have not yet heard of a death from their bite among the inhabitants. The mischievous or worthless part of the creation is not less numerous than various in Singapore, so that a naturalist is presented with daily opportunities of observing their habits and manners. We may notice two examples of these habits which fell under our own observation. The most poisonous of the whole is a green snake, spotted black and yellow, with a triangular shaped head, and a pair of formidable fangs on each side of the mouth. This animal, in its habits, is so sluggish and so little irritable, that we have seen the Malays sport with it in their naked hands, without the fangs being extracted. We have seen the same animal die in three hours from the bite of a hooded snake, to which it had offered no resistance, although the most poisonous of the two. Two days ago a Malay brought to a gentleman a couple of snakes of different species, tied by the neck and body to one pole, the largest about six feet long, and the smallest about four. In this situation the former took the head of the latter in its mouth, and there held it fast, being unable to swallow his prey from the tightness of the ligature round the neck. As soon as this was undone, however, he commenced the process of deglutition, and by slow means swallowed the whole in about half an hour, not in the least disturbed from its purpose by the presence of a number of persons, nor by being frequently handled and moved, his whole beastly existence being apparently absorbed in the one appetite of satisfying his hunger.—[*Singapore Chron.*, June 23.

RECIPT FOR THE CURE OF CHOLERA MORBUS.

The *Bengal Hurkaru* contains the following mode of treatment for the cholera, communicated by one of the missionaries at Serampore. "I now send you the receipt for the cholera medicine, which, if properly administered, will always be found effectual. Not one had died out of sixty to whom I have administered it, except one woman who had previously received poison from a Bengalee doctor. The receipt is this:—take 80 drops of laudanum, a wine glass of brandy, and two table spoonfuls of castor oil, mix them together in a small bottle, and give it if possible at once, if not, in succession, one desert spoonful after the other, until it is all given. This is the dose for a man; but for females, girls, and boys, 60 drops of laudanum, the brandy and oil the same quantities as for men. Should not this be effectual, give a second dose of 40 drops of laudanum, and one wine glass of brandy, but no oil. With children you will give, consequently, less. In case of this medicine failing, a wine glass of *Droguè-a-mère* will be very effectual; we have tried and found it very useful.

"You can administer this medicine in almost all stages of the disease; even when the limbs were already cold, and death had taken hold on them, I have known it to be effectual. As soon as the vomiting, &c. ceases, give them some warm rice water, or congee, and after that, either boiled sago, or *soogee* (flour). The patients ought to be kept on a dry place and warm."

CHINESE METAL TYPES.

Some metal types of the Chinese character have been cast in Paris, and specimens, we understand, have reached this country. They cannot be intended to supersede the use of blocks (either wooden or metal), as from the number and complicated form of the characters (the component parts of which vary in size and shape according to circumstances), moveable types could not be substituted. The only practical substitute for blocks, in printing Chinese, would be lithography; but this expedient (it is remarked by Dr. Morrison) can only be employed when the work is entirely in the Chinese language.

GENDER OF THE EAST-INDIA COMPANY.

Writers indiscriminately employ both the masculine and neuter gender (*they* and *it*) with reference to the Company. In some parts of the East the feminine gender is used. Capt. Pottinger relates that in Beloochistan it is believed that the Company is an *old woman*, and that he was plagued with questions as to her age, &c. It is curious that there is an officer of the Company in London, who is styled the Company's husband.

ASIATIC INTELLIGENCE.

Calcutta.

COURTS-MARTIAL.

LIEUT. H. T. XIMENES.

Head Quarters, Calcutta, Sep. 1st 1825.
—At an European general court-martial, assembled in Fort William, on Tuesday the 16th Aug. 1825, of which Lieut.-Col. W. Collyer, 67th regt. N. I., is president, Lieut. H. T. Ximenes, hon. Company's 20th regt. was arraigned upon the under-mentioned charge, viz.

"For gross and wilful neglect of duty, in having absented himself, without permission, from the garrison of Fort William, on the 29th inst. (July), he having been duly warned in garrison and reserve orders of the 28th inst. (July), as subaltern officer for the main guard on the following day."

Upon which charge the court came to the following decision:

Finding and Sentence.—"The court, having maturely considered the evidence adduced in support of the prosecution, together with all that the prisoner has urged in his defence, are of opinion, that he, Lieut. H. T. Ximenes, 20th regt. of N. I., is guilty of all and every part of the charge preferred against him.

"The court, having found Lieut. H. T. Ximenes, 20th regt. of N. I., guilty of all and every part of the charge preferred against him, do sentence him to be suspended from rank, pay, and allowances for the space of six calendar months."

"Approved,
(Signed) "EDW. PAGET, General,
"Com.-in-chief in India."

Remarks by his Excellency the commander-in-chief.

"Lieut. Ximenes is to be suspended from rank, pay and allowances for the space of two calendar months.

"The Commander-in-chief, in consideration of his youth and the expression of his contrition, is induced to remit the remainder of the punishment so justly awarded by the court.

"Lieut. Ximenes' suspension from rank, pay, and allowances is to commence from the date of the publication of the above orders in Fort William."

CAPT. J. LANE.

Head Quarters, Calcutta, Sept. 13, 1825.
—At an European general court-martial re-assembled in Fort William, on Monday the 22d of Aug. 1825, of which Lieut.-Col. W. Collyer, 67th regt. N. I., is president, Capt. John Lane of the 7th regt.

L. C., was arraigned upon the following charge, viz.

"In having, on the 24th of June 1825, at Calcutta, on the high road leading from the course, where Capt. Eckford was taking his evening drive, having his wife in the buggy with him, rode upon horseback close to the side of the carriage where Mrs. Eckford was seated, and there addressed Capt. Eckford in the most brutal and indecent language.

"Such conduct being disgraceful to the character of an officer and a gentleman."

Upon which charge the court came to the following decision:—

Finding.—"The court, having maturely deliberated upon the evidence adduced for and against the prisoner, together with the substance of his defence, are of opinion, that he, Capt. John Lane, of the 7th regt. L. C. is guilty of all and every part of the charge preferred against him."

Sentence.—"The court, having found Capt. John Lane, of the 7th regt. L. C. guilty of all and every part of the charge preferred against him, do sentence him to be discharged from the service of the hon. Company."

"Approved,
(Signed) "EDW. PAGET, General,
"Com.-in-chief in India."

Remarks by his Excellency the Commander-in-chief.

"The Commander-in-chief approves the finding and sentence of the court; but there are circumstances in Capt. Lane's case, which, coupled with his former good conduct in the field, and with his having been wounded in the service, have determined his Excellency to submit to Government his recommendation that he may be placed on the pension list."

CIVIL APPOINTMENTS.

Judicial Department.

Sept. 8. Mr. C. Barwell, superintendent of police for divisions of Calcutta, Dacca, Moorshedabad and Patna, and chief magistrate of town of Calcutta.

Mr. S. T. Cuthbert, judge and magistrate of Sarun.

Mr. John Master, ditto ditto of suburbs of Calcutta, and superintendent of gaol at Allypore.

Mr. H. Moore, judge and magistrate of 24 Peggannahs.

Mr. W. Benson, register of Civil Court in northern division of Bundelcund.

ECCLESIASTICAL APPOINTMENTS.

Sept. 8. The Rev. Thomas Robertson, district chaplain at Bareilly.

The Rev. James Whiting, ditto at Cuttack.

MILITARY

MILITARY APPOINTMENTS, PROMOTIONS, &c.

Fort William, Aug. 26, 1825.—Assist. surg. C. Renney to be surg., v. Napier dec., with rank from 22d July, v. Proctor dec.

Lieut. Kinshaw, H.M.'s 13th L.I., permitted to resign situation of assist. surveyor with Sir A. Campbell's force in Ava.

Sept. 2.—Political Department. Maj. W. G. A. Fielding, 8th L.C., to be first assist. to resident at Gwallor, and superintendent of Dowlut Rao Scindiah's contingent. Capt. J. D. Dyke, 4th L.C., to be second assist. to resident at Gwallor. Capt. O. Stubbs, 44th N.I., to be second officer with contingent.

Capt. Wilkie, 8th N.I., to officiate as army clothing agent, 1st div. at Futtighur, during absence of Maj. Sackville.

Mr. J. V. Law admitted to infantry, and promoted to ensign.

Head-Quarters, Aug. 29.—Lieut. Woodward to officiate as interp. and quart. mast. to 2d N.I.; date 16th Aug.

Lieut. T. B. Mitchell, 9th N.I., permitted, in consideration of state of his health, to rejoin his regt. at Bareilly.

Assist. surg. Harlan directed to place himself under orders of superintend. surg. at Cawnpore.

Aug. 30.—Appointed to do duty. Cornet. T. Fraser with 5th L.C. at Sultanpore, Benares. Ens. Nunn with 35th N.I. at Meerut. Ensigns Vicary and Peers with 20th do. at Barrackpore. Ens. Evans with 68th do. at Barrackpore.

Aug. 31.—Lieut. Ramsay to act as adj. to 62d regt., v. Smith app. to officiate as sub-assist. com. gen.; date 27th July.

Lieut. M'Grath to act as adj. to 62d N.I., v. Ramsay permitted to resign acting adjtcy.; date 7th Aug.

MISCELLANEOUS

DISPOSITION OF THE GRAND ARMY.

The following statement of the disposition of the forces under Sir Archd. Campbell, appears in the Calcutta Government Gazette.

1st or Bengal Division, commanded by Brig. M'Creagh, c. b., H. M. 13th Lt. Inf.—Artillery. Lt. Col. Pollock commands.

1st Brig. H.M. 13th Lt. Inf.; H.M. 38th reg. Major Evans, H.M. 38th reg. Brig.

2d Brig. H.M. 47th reg.; 38th reg. Madras N. Inf.:—Lt. Col. Elrington, H.M. 47th Brig. Capt. G. F. Saldier, H.M. 47th Major of Brigade.

The Governor General's Body Guard, Bengal Rocket Troop—1st Troop Horse Artillery, and Bengal Foot Artillery.

2d or Madras Division, commanded by Brig. Gen. Willoughby Cotton, H.M. 47th reg.

Artillery—Lt. Col. Hopkinson, Brig. commanding the Artillery with the Expedition. Capt. P. Montgomerie, M. B.

1st Brigade—12th reg. Madras N. Inf. H.M. 41st reg.; 18th reg. Madras N. Inf.:—Lt. Col. Godwin, H.M. 41st reg. Brig.:—Capt. A. Wilson, 10th M.N. I., M. B. (employed with Brig. Smelt, at Rangoon.)—Lt. J. Cochran, H.M. 41st, acting.

2d Brigade—1st Madras European

reg.; 9th reg. Madras N. Inf.; 26th reg. Madras N. Inf.:—Lt. Col. C. M'Dowall, 1st Madras E. R. Brig.; Lt. N. Johnson, 26th Madras N. I., M. B.

3d or Light Brigade—3d reg. or P. L. I.—34th reg. or C. L. I.—Lt. Col. H. H. Pepper, 34th Madras N. I. Brig.—Capt. H. Kyd, 2d Madras E. R., M. B.—Capt. G. H. Budd, 43d Madras N. I., acting.

4th Brigade H.M. 89th reg.—7th reg. Madras N. Inf.—43d reg. Madras N. Inf.—Lt. Col. Smelt, H. M.'s 41st Brig. commanding at Rangoon—Lt. Col. T. H. Smith, 43d Madras N. I. in charge—Capt. P. Young, H.M.'s 89th M. B.

6th Brigade, 28th reg. Madras N. Inf. 30th reg. Madras N. Inf.—Lt. Col. J. Brodie, 28th Madras N. I. Brig.; Capt. E. Brisco, H.M.'s 41st reg. M. B.

7th Brigade, H.M.'s Infantry or Royal reg. 22d reg. Madras N. Inf.; Lt. Col. R. Armstrong, c. b., Royal reg. Brig.—Lt. C. Lewis, H.M. Royals, M. B.

1st Bat. Madras Pioneers. The Troops are at present stationed as follows:—

Head Quarters—Prome. Murtaban. 3d. reg. or Palamcottah Light Inf. under Lt. Col. E. Conry.

Tavoy and Mergui. 7th reg. Madras N. Inf. under Lt. Col. Court, Capt. T. G. Bishop.

MR. TROTTER'S AGENCY SCHEME.

The question, whether the Company's civil servants can legally join the concern projected by Mr. Trotter, and detailed in our last volume, p. 613, seems to be set at rest by the following opinion, which has been published at Calcutta, and which it is desirable should be known in this country.

Case.—Counsel is requested to peruse the accompanying prospectus, and to give an opinion on the legality of a company established for the purposes there described, particularly with reference to the Company's civil servants, employed in the judicial and revenue department; and counsel is informed that it may be necessary to make a public use of his opinion.

Opinion.—I can see no difficulty in the case, which has been submitted to my consideration. I find, by the prospectus, that the new society is to be composed of persons, holding certain employments under

der the India Company, and the various objects of the society are distinctly stated. I also find by the acts of parliament that the legislature has prohibited a portion of this class of persons from doing certain acts: and when I have thus ascertained what is proposed to be done, and what is prohibited from being done, the legality or illegality of the plan becomes an obvious deduction.

First as to the objects of the new society, they are thus enumerated in the prospectus. "The banking business—the accommodation of persons with an open cash account—the management of estates—the disposal of consignments—the purchase and sale of bullion, and also of real property—discounting bills—granting loans—insuring and agency—and a division of the profits arising from the various transactions among the proprietors." Now the language of acts of parliament is the language of the law, and there are multitudes of decisions to shew what the law defines to be trading and trafficking. With certain statutable exceptions, no man can be made a bankrupt who is not engaged in trade or traffic; and I have no hesitation in saying, that any man engaged in the various acts, detailed in the prospectus, would be amenable to the bankrupt laws, as a person engaged in trade or traffic.

Having arrived at the conclusion that persons engaged in the occupations proposed by the prospectus would, in legal language, be taken to be persons engaged in trade or traffic, I now come to the second point—which is the prohibition by the legislature. By the 33d of Geo. III. c. 52, sec. 137, it is declared "that it shall not be lawful for any Governor-general, or any member of council, or any person employed in the collection of revenue, or administration of justice, in the provinces of Bengal, Bihar, or Orissa—or their agents, or servants, or any person or persons in trust for them, to carry on, or be concerned in, or to have any dealings or transactions, by way of traffic or trade, at any place within the provinces of India, or other parts."

This clause appears to me to be decisive; for it distinctly prohibits this class of persons from being engaged in trade or traffic. The language in which the prohibition is given is legal; and, by the decisions in bankruptcy cases, trading and trafficking has been defined in legal language to be those very acts, in which it is proposed that the members of the new society shall be engaged, or, in the words of the statute, "THEIR AGENTS, OR PERSONS IN TRUST FOR THEM."

But if it is possible to entertain a doubt after this, the 95th section of the same act sets the question at rest; by which it is declared, that "it shall and may be lawful for any persons residing in India

in the civil service of the said Company, or by their leave or license, not being restricted by their covenants with the said Company, or otherwise specially prohibited by them or their governments from so doing; and not being in any judicial or military capacity, to act as commercial agents, managers or consignees, on the behalf of such persons as shall think fit to employ them." Here then we have persons in the judicial and military capacities prohibited from acting as consignees, and yet, by the prospectus, it is proposed that they shall act as consignees.

It is evident that the legislature has put the foregoing constructions on the 33d Geo. III. by the 47th Geo. III. c. 68, sec. 9, by which it is enacted, after giving power to the Company to establish banks, that, "it shall and may be lawful to and for all persons whomsoever, in the service of the Company to become members, and be elected directors of the banks—(with an exception as to the judges) any thing in the said act of the 33d of Geo. III, or any other act of parliament to the contrary thereof in any wise notwithstanding."

This shews the construction, which has been put on the 33d of Geo. III. by the legislature itself; and bears me out in giving my unqualified opinion, that it will be illegal for the military servants of the Company, or their civil servants engaged in the judicial or revenue departments, to be shareholders in a society formed for the purposes detailed in the prospectus.

LONGUEVILLE CLARKE.

DISORDERS IN THE UPPER PROVINCES.

Preparations are now making for the reduction of Bhurtpore, Alwur, and several other places, where disorder and disorganization have for some time been prevailing. The followers of the Bhurtpore usurper are said to be committing many ravages in that neighbourhood, and the treatment of our authority, by the Ranees of Jeypore, has been such as to demand notice. It is therefore more than probable that part of India will be the scene of important operations as soon as circumstances permit.—[*Cal. John Bull*, Sept. 19.

TREASURE FROM CHINA.

The Elizabeth, which may be soon expected, brings a large quantity of silver from China consigned to the different houses of agency.—[*Calcutta John Bull*, Sept. 20.

SUTTEES.

In our paper of the last week we read, under the head of local news, of no less than seven widows who have burned themselves on the funeral pile of their husbands, and of these three were the wives of

one man! If no other voice be raised against these cruelties, we will not suffer them to pass without pointing them out to public execration.

Tolerance has limits, and those limits are clearly defined. The practices of superstition ought to be as free as the speculative tenets and opinions upon which they are founded, provided they do not outrage public decency, or break through the fundamental laws of what we may call natural morality: but no religion that demands power over the life of man, and insists on human sacrifices in order to satisfy religious pride or propitiate priestly avarice, can or ought to be endured by a government anxious for the welfare of its subjects.—[*Beng. Hurk. Sept. 4.*

SEIZURE OF AN AMERICAN SHIP.

The American brig, Governor Endicott, has arrived at Saugor, detained by H. M. ship Larne for a breach of the convention between Great Britain and America. She was boarded off the port of Singapore, and found to be bound to that port for the purposes of traffic. By the convention, it is alleged, the Americans are allowed to touch at Singapore only for refreshments; and consequently the captain of the Larne has detained the vessel and has sent her to Calcutta for adjudication.—[*Cal. John Bull, Sept. 15.*

ARRACAN MASONIC INTELLIGENCE.

Friday last, the 24th July, being the anniversary of St. John the Baptist, the masonic festival was celebrated with unexpected brilliancy in this heretofore darkened corner of the globe, and recent addition to the territories of our British Indian empire. Brother Colonel Lindsay of the artillery having obligingly lent the large floored room of his bungalow for the purpose, the brethren, to the number of eight, sat down at 7 P. M. to a sumptuous dinner, prepared for the occasion, and consisting of excellent beef, fowls, ham, claret, beer, &c.; and were thus enabled, agreeably to ancient custom, to do honour to the mystic rites, with a degree of fervency and spirit of convivial unanimity, rarely exceeded, and certainly never excelled. Brother Lindsay presided in the east, and received able support from brothers Tytler and Dyke, in the west and south; brother Robertson, political agent, honoured the meeting with his presence, as did also brother C. Paton, recently arrived in Arracan. Numerous toasts were drank with the honours, and speeches uttered in a first rate style of glowing eloquence, upon this most important and gratifying occasion of the admission of light into the Burmah provinces: a striking allusion to which was

admirably depicted, by a rich and chaste transparency, placed in the east, the production of the well known elegant pencil of the worthy brother who presided in the oriental chair, and representing a radiant morning star, bursting forth in a blaze of dazzling glory, from surrounding darkness, and tranquillizing the turbulent elements with soft lambent rays of unsullied light. The decoration proceeding from the same quarter, which adorned the circular, inviting the brethren to partake of those festivities, was equally a subject of admiration. It consisted of a beautiful vignette, painted at the head of the car, and exhibiting the sun rising from darkness in the east, and dispelling with his genial beams the tempestuous clouds, and Erebean gloom which for ages have obscured the fanes of Buddah, with the motto, "*Lux ab Oriente surgens.*"*

The evening of the festival, it may be truly said, was passed at Arracan in the utmost harmony and social glee, and the brethren, it will doubtless be learned with satisfaction by the fraternity in Calcutta, separated with the determination of re-assembling on an early day, with the intention of drawing out a petition, to be transmitted to the Provincial Grand Lodge, for the purpose of obtaining a warrant, and being thus enabled to meet the wishes of their brethren and friends, by the constitution of the "*South Eastern Star*"—the Arracan lodge of "*Light and Victory.*"—[*Hurk.*

PICTURE AND STATUE OF LORD HASTINGS.

At a meeting of the committee for procuring the equestrian picture and marble statue, voted by the British inhabitants of Calcutta to the Most Noble the Marquess of Hastings, held at the house of Mr. Holt M'Kenzie, this 24th day of Sep. 1825.

MR. HOLT M'KENZIE in the chair.

1. The committee, finding that Mr. Chinnery has failed to furnish the equestrian picture of Lord Hastings, within the stipulated period of two years, from August 1823, and learning that Mr. Chinnery has left India, to be absent for an indefinite period,—Resolve, that it is impracticable to procure the equestrian picture voted to the Most Noble the Marquess of Hastings by the British inhabitants of Calcutta.

2. The committee further resolve, that the funds formerly set apart to meet the expense of the picture be devoted, along with the surplus in the treasurer's hands, to procure a marble statue of his Lordship, to be placed in some public and conspicuous situation in the metropolis of India.

3. Resolved that the treasurer be authorized

* The British Army escalated from the East, and entered Arracan by the Eastern gate.

thorized to transfer the sum now in his hands, under the head of "Picture Account," to the "General Subscription Account"—and that he be further authorized to remit to the amount of two thousand pounds sterling to London, to meet the necessary expenditure in procuring the statue.

4. Resolved, that the minute of this day's proceeding be forwarded to the absent members of the committee for their signature, and published in the newspapers for the information of the subscribers, along with the treasurer's account of the money in his hands.

SIR DAVID OCHTERLONY.

A meeting of the inhabitants of Calcutta, convened by the sheriff, was held this morning in the town-hall, to take into consideration the propriety of paying some appropriate tribute of respect to the memory of Sir David Ochterlony, Bart. The chair was taken by Sir C. Metcalfe, Bart. who opened the proceedings of the meeting in a speech, in which he paid a well merited tribute of applause to Sir David, as a soldier and a statesman, dwelling on his services to his country in the field and in the cabinet, as alike entitling him to the highest honours that can be paid to the public officer. In alluding to the private virtues which distinguished Sir David Ochterlony, the chairman was peculiarly happy; and, in a strain of very warm and feeling eloquence, spoke of his own experience of the illustrious hero's worth in private life, and appealed to all who had ever had the happiness of knowing him to bear their testimony to the amiable and endearing qualities, that never failed to win, and when won, to preserve, the affections of all who knew him.

It was moved by Maj. Gen. O'Halloran, and seconded by Dr. Gibb, that a monument to the memory of Sir David Ochterlony be erected in St. Paul's, or Westminster Abbey, and that a columnar trophy be also raised to him in the capital of India. A committee was appointed to carry these measures into effect; and to

procure subscriptions towards their accomplishment.—[*Cal. John Bull, Sept. 26.*

* * * *Erratum.*—By an unfortunate typographical error in our last Number, p. 233, the price of the Sicca Rupee (in the article "New Loan") was stated at 2s. 6d. instead of 2s.

— Isabella, the wife of Mr. J. Walter, aged 41.

16. In Chowringhee, the lady of Maj. W. S. Beatson, dep. adj. gen., aged 28.

— On board the Hydery, Maynard Varden, son of Capt. Varden, of the brig Guide, aged about 12 years.

17. Of a fever, R. Meiselbach, Esq.

18. Master L. F. Meiselbach, aged 16.

19. At Allipore, Helen Mackenzie, infant daughter of John Moore, Esq.

— Mr. John Gresham, late 2d mate of the ship David Clark, aged 22.

20. Thos. Brae, Esq., of Kishenaghur, aged 69.

21. Rosalind Maria, infant daughter of Mr. J. Greenway.

22. At Barrackpore, Lieut. J. R. Brown, 27th regt. Bengal infantry.

— Mrs. A. P. Aubert, aged 57.

23. C. J. Fox, Esq., merchant, aged 34.

24. William Trower, Esq., of the civil service, aged 42.

25. Capt. J. L. Garrick, of the ship Hero of Malown, aged 34.

Madras.

GOVERNMENT GENERAL ORDERS.

OFF-RECKONING FUND.

Fort St. George, July 8, 1825.—With reference to G. O. under date the 17th ult., and under instructions from the hon. the Court of Directors, the hon. the Governor in Council is pleased to declare, that the amount of the annual advance to be made to officers who may succeed to half shares of off-reckonings between the 1st of May 1824, and the 1st of May 1826, shall be the same as they would have received on the old system, viz. £543 from the fund, so long as they would have continued on the junior list, and that £750 shall be the amount of the advances from the date when they would have passed through this list.—Of the last advance £400 is to be made from the fund: and £350 from the hon. Company's treasury.

Those officers, who may succeed to half shares after the 1st of May 1826, and who will not be entitled to the benefits of compensation for the difference between a half and a full share, are to receive an advance from the fund, at the rate of £400 per annum.

ALLOWANCES OF BRIGADIERS.

Fort St. George, July 26, 1825.—The hon. the Governor in Council is pleased to attach the allowances of first class brigadiers to the commands of the second class, enumerated in the 18th para. of the G. O. of 3d Dec. last. The allowances attached to the command of the light field division of the Hyderabad subsidiary force and of all field brigades, and other commands, remaining as at present. The above increase of allowances to have effect from the 1st of March last.

ALLOWANCES OF THE ARMY.

Fort St. George, July 26, 1825.—1. Circumstances having led to a reconsideration of the instructions of the hon. the Court of Directors, published in G. O. of 3d Dec. last, regarding the pay and allowances of the army: the Hon. the Governor in Council has determined, pending a reference to the hon. Court, that commanding officers of corps, under the rank of regimental colonel or lieut. col. commandant, shall not be entitled to full batta, except when the whole of the troops under their command receive that allowance.

2. It has also been determined that when officers commanding corps may be detached or in any manner separated from them by duty, they shall not be entitled to the regimental staff allowances attached thereto

thereto during their absence, unless specially selected for the detached duty, which in each case will be specially considered by government, it being a principle of the hon. Court's orders that the regimental staff allowances shall be payable to the officers in actual command only.

3. In the cases of absence on duty, referred to in the preceding paragraph, when the parties may not come under the special exception alluded to, they are to receive, in common with the officers serving under them when similarly circumstanced, travelling batta and court martial allowance, or full batta, according as they may be detached from garrison or the field.

4. The Governor in Council has further determined, with reference to the pay table published in G. O. of 3d Dec. last, that officers of European infantry, serving regimentally with their corps within the limits of the centre division of the army, at the depôt at Poonamallee, at St. Thomas's Mount, and within the presidency command, shall receive only half tent allowance; but when marching they are in all cases to receive full tent allowance.

5. The above provisions to have effect from the 1st proximo.

PAY OF ADJUTANTS.

Fort St. George, July 29, 1825.—The hon. the Governor in Council deems it expedient to rescind the 56th para. page 310, of the code of pay regulations by which an allowance of 17½ rupees per month was authorized to be drawn by adjutants of native corps, when no serjeant-major should be attached. The continuance thereof is considered unnecessary, in consequence of the subsequent reduction of the duties of adjutants and the increase to their office allowances.

ORGANIZATION OF THE ARTILLERY.

Fort St. George, Aug. 5, 1825.—With reference to the G. O. of 28th May 1824, the hon. the Governor in Council is pleased to direct, that the corps of artillery shall be organized and composed as follows, and shall consist of two brigades of horse artillery, *viz.*

1st or Europ. brigade, and 2d or native brigade—four troops each.

Four bats. of foot artillery, *viz.* 1st, 2d and 3d bats. of Europeans, 4 companies, with 4 companies of gun lascars each; and 4th or golundauze bat. 10 companies, with 10 companies gun lascars.

The officer, commanding the army in chief, will issue the necessary subsidiary orders for completing the organization of the artillery by drafts from the present corps, and for fixing the head quarters of the brigades and battalions as follows:—

1st or Europ. brigade of horse artillery, Mount; 2d or native ditto, Bangalore; 1st bat. of artillery, Nagpore; 2d ditto, Secunderabad; 3d ditto, Mount; 4th or golundauze ditto, Mount.

The artillery being considered as one corps, officers commanding the artillery, with subsidiary field forces and divisions, are likewise to exercise the regimental command of their respective corps, and are to draw, in lieu of their commanding allowance of 400 rupees per mensem,

Rupees per month.	
In the field and full batta stations	600
In garrison or cantonment ...	500

The commandant of artillery, being in general command, is not to command regimentally.

Eight field guns, with eight ammunition tumbrils, are to be considered the established proportion of ordnance attached to a company of foot artillery, whether Europeans or natives.

Each troop of horse artillery, when detached, is allowed an adjutant to act as staff officer.

Each officer, holding a general artillery command, is to be allowed a brigade major in the field, and an adjutant in garrison or cantonment, with a serjeant major, and quarter-master serjeant in the former case, and a serjeant major in the latter.

The hon. the Governor in Council is further pleased to direct that the 1st and 2d regts. of Europ. inf. shall each consist of the following establishment formed into five companies, *viz.* 1 grenadier, 1 light and 3 bat. companies, with reference to the establishment of officers assigned to them, the complement of each company to be 6 serjeants, 7 corporals, 3 drummers, 100 privates, and 2 puckallies.

The head-quarters of the 1st Europ. reg. is on foreign service, and that of the 2d Europ. reg. is fixed at Nagpore until further orders.

The following staff is allowed to each regiment, *viz.* 1 adjutant, 1 quarter-master and paymaster, non effective; 1 surgeon, and 1 assistant surgeon; 1 serjeant major, 1 quarter-master serjeant, 1 drill corporal, 1 drum major, 1 life major, 1 pay serjeant, and 5 colour-serjeants; non effective on the usual rates of staff and pay.

MILITARY APPOINTMENTS, PROMOTIONS, &c.

Head-Quarters, July 1, 1825.—Lieut. W. S. Hele removed from horse brigade to 4th bat. of artil.

Lieuts. W. Gompertz, 44th, and J. S. Sherman, 13th N.I., appointed to 1st bat. pioneers.

Lieuts. M. Stephenson, 36th, and R. Blanch, 44th N.I., appointed to 2d bat. pioneers.

Assist.surg. R. Wright posted to 33d N.I., and Assist.surg. D. Vertue removed from 33d to 42d N.I.

July 6.—Ens. A. Brady removed from 6th to 33d N.I., and will rank next below Ens. H. Marshall.

July

July 13.—Ens. H. T. Ogilvie, 23d, or W.L.I., to do duty with 22d N.I. at Rangoon.

Cornets G. Dunsmore and H. Welsh (recently arrived) to do duty with 2d L.C.

July 14.—Lieut. Osborne declared qualified to perform duties of a regimental staff officer.

July 16.—Ens. R. Scott removed from 1st Europ. regt. to 3d, or Palamcottah L.I., and will rank next below Ens. G. T. Pinchard.

Assist.surg. W. Browne removed from 21st N.I. to 1st Nat. Vet. Bat.

Fort St. George, July 8.—Lieut. J. R. Sayers, 5th N.I., to be quart. mast., interp., and paymast. to inf. recruiting depôt, v. Ely.

Cadets admitted. Messrs. J. Grant, C. C. Cotterell, G. Dunsmore, and H. Welsh, for cavalry, and prom. to cornet.—Messrs. A. J. Begbie, M. Watts, and J. C. M'Nair for artil., and prom. to 2d-lieut.—Messrs. C. T. Kynaston, C. Taylor, G. De Blaquiere, T. G. Silver, J. F. Kellett, J. J. G. Congdon, and G. Forster, for inf., and prom. to ensign.

July 12.—Lieut. G. J. Richardson to be adj. to 2d bat. pioneers, v. Bevan resigned.

July 15.—Lieut. Gen. E. Traupad, from engineers, placed on senior list, v. Laland dec.

Engineers. Sen. Lieut. Col. W. Farquhar to be lieut. col. com., v. Traupad placed on sen. list; date 8th Sept. 1824. Maj. J. Cotgrave to be lieut. col. in suc. to Farquhar prom.; date 8th Sept. 1824. MISCELLANEOUS.

TEMPER OF THE SEPOYS.

The 1st and 32d regts. of N. I. now at the presidency cantonment are about to proceed on foreign services to Rangoon, and

and are expected shortly to embark. We understand the whole of the sepoy's belonging to the 1st reg. volunteered to a man, and in a manner which could not fail of being in the highest degree gratifying to those who witnessed it. The 32d reg. also came forward in the most handsome manner; and only a few, not exceeding 20, including all ranks, stated their inability to go on foreign service, from age, great length of service, wounds, &c. The two regiments we understand will be ready to embark in 10 or 12 days, or sooner if required.—[*Mad. Gov. Gaz. Sept. 29.*]

PUBLIC ASSEMBLY.

The assembly on Monday evening was crowded, and the dancing kept up with great spirit: the new arrangement of placing the supper in the lower rooms appeared to give general satisfaction.—[*Mad. Gov. Gaz., Oct. 6.*]

WESLEYAN MISSIONARY SOCIETY.

The sixth anniversary of the Wesleyan Missionary Auxiliary Society for Madras was held on the 29th Sept. at the chapel, Popham's Broadway; and the weather being favourable, the general meeting was numerously attended. Preparatory sermons were delivered on the evening of the 28th. The report stated the whole number of missionaries, employed by the society in the four quarters of the world, to be 167; the number of members under their charge 32,540, and upwards of 12,000 children in the schools.

The subscriptions, &c. in Madras have increased annually since the formation of the society: the total amount for five years, ending December 31, 1824, 10,846 rupees: from that date to the present, near 3,000 rupees.—[*Mad. Gov. Gaz., Oct. 6.*]

SUPREME COURT.

Mr. William Harris was on Tuesday last sworn in as an attorney, and his name entered on the roll of the court.

Mr. Charles Philip Gordon was on Friday last duly admitted and enrolled an attorney, solicitor, proctor, and notary, in pursuance of his license from the hon. Court of Directors.—[*Mad. Cour., Sept. 20.*]

FALL OF RAIN AT CANANORE.

Statement of the fall of rain at Cananore, from the 22d of May to the end of July: thermometer, during the interval, ranging between 77 and 83 degrees.

May	5.50 inches.
June	38.35 do.
July	28.80 do.
Total	72.65 inches.

NEW MEMBER OF COUNCIL.

On Friday last the Hon. James Taylor took the oaths and his seat as a member of council at this presidency, under a salute of 15 guns from the fort battery.—[*Mad. Gov. Gaz., Sept. 20.*]

PIECE OF PLATE TO CAPT. POWELL.

The society at Hyderabad have voted a piece of plate, value £200, to Capt. Powell, H. M.'s 30th regiment, for his conduct as secretary for many years to the committee of management for public amusements at Secunderabad, which was announced to him in a very handsome letter, signed by Major Dalrymple, Dr. Meikle, Capt. Hall and Macarthur, and H. B. Wray, Esq. the secretary.

SHIPPING.

Arrivals.

Sept. 8. *Malcolm*, Eyles, from London.—10. *Caldstream*, Hall, from London.—14. *Woodford*, Chapman, from London.—23. *Africa*, Skelton, from Ceylon.—24. *Earl Kellie*, Edwards, from Calcutta.—25. *Hope*, Flint, from Calcutta.—26. *Mediterranean*, Gibson, from Muscat and Ceylon.—28. *Rockingham*, Beach, from Calcutta, and *Golconda*, Young, from Rangoon.—29. *Broxbornebury*, Tewson, and *William Miles*, Beadle, from London.—10. *Commodore Hayes*, Moncrief, from London.—13. *Maria*, Thomson, from London.

Departures.

Sept. 7. *John*, Poppellwell, and *Lady Flora*, M'Donnell, for Calcutta.—12. *Eliza*, Sutton, for Calcutta.—14. *Atlas*, Hunt, for Ceylon and London.—15. *Guildford*, Johnson, for Calcutta.—20. *Woodford*, Chapman, for Calcutta.—24. *Africa*, Skelton, for Calcutta.—25. *Caldstream*, Hall, for Calcutta.—27. *Mediterranean*, Gibson, for Calcutta.—Oct. 2. *William Miles*, Beadle, for Calcutta.—5. *Broxbornebury*, Tewson, for Calcutta.—9. *Hope*, Flint, and *Rockingham*, Beach, for London.

 Lately, At Raza, near Aurungabad, Maria Martha, infant daughter of J. R. Alexander, Esq., medical establishment.

Bombay.

GOVERNMENT GENERAL ORDERS.

ALTERATIONS IN THE ENGINEER DEPARTMENT.

Bombay Castle, Aug. 20th 1825.—The Hon. Court of Directors having approved of a proposition made by this Government for rendering the duties of field officers of engineers strictly of a controlling nature, the Governor in Council is pleased to sanction the appointment of an inspecting officer of engineers to each of the three divisions of the army of this presidency, viz., the Presidency, Poona, and Surat.

The executive engineer at Baroda is placed under the control of the inspecting engineer of the Surat division.

The duties of these officers are to be purely of check and control.

To frame survey reports for annual and special repairs, as well as full and explanatory instructions for all other works that may at any time be required, thereby doing away the necessity and expense of committees.

To visit from time to time the different stations under their command, and afford any advice or assistance that may appear to them necessary.

To examine and report on all plans and estimates previous to the transmission to Government, through the prescribed channel, according as the work may relate to the civil or military department.

The inspecting officers will draw the personal salary of their rank, with the addition of field allowances.

A suitable establishment is allowed to each division.

The following officers are appointed inspecting engineer officers: Lieut.-Col. Drummond, Surat division; Maj. Dickenson, Presidency do.; and Capt. Nutt, Poona do.

When the want of field officers, or other cases of emergency, may render necessary the appointment of captains of engineers to be inspecting officers, as in the case of Capt. Nutt, they will be allowed to draw the personal salary and field allowances of the rank next above them.

The following further appointments are made: Capt. Remon, to be superintending engineer at Bombay; Capt. Frederick to be civil engineer at do.; and Capt. Tate to be revenue surveyor at do.

The chief engineer will regulate the period for the several officers receiving charge of their new duties according to the

the convenience of the public service, and will report to the audit department (civil or military, as the case may be) the dates of the respective transfers.

Officers appointed inspecting engineers will complete such works as they may have on hand, on estimate, within their respective divisions.

ALLOWANCES TO ACTING ADJUTANTS, &c.

Bombay Castle, Sept. 8, 1825.—The Hon. the Governor in Council having had before him frequent applications for staff allowances on the part of the officers nominated to act as adjutants to detachments of corps, and considering that the selection of officers for such duties should be viewed rather as affording them opportunities of recommending themselves for permanent staff employ, than as sources of immediate pecuniary emolument, claims of this description are not admissible unless the detachments shall equal the strength hereafter enumerated.

2d. Horse and foot artillery, when mixed on duty, to the extent of, European and native, rank and file, 150.

Cavalry, European, 200, or 2 troops.

Do. Native.....300, or 3 troops.

Infantry, European.....200, or 2 companies

Do. Native.....300, or 3 companies

3d. The acting adjutants of such detachments are to perform the duties of the quar. master's department.

4th. Acting adjutants will be allowed a monthly salary of 70 rupees, with which they must meet the charges for writer, stationery, and other expenses incidental to such temporary staff duties.

5th. Acting adjutants will be nominated by commanding officers, subject to the usual courses of confirmation.

6th. When it is found necessary to separate wings of a regiment for the purpose of giving to each a permanent station, an acting adjutant will be allowed for the detached wing; also an "acting quartermaster" when the corps is European, and an "acting interpreter" when it is native; all three on the full allowance of their respective functions.

7th. The above number (6) is not meant to apply to the wing of a regiment employed on active service until it shall have been three months in the field, after which two staff officers will be allowed.

8th. When a general of division or officer commanding a field force may find it necessary to nominate an officer to perform general staff duties, such officer will be designated "staff officer." The appointment to be submitted for the confirmation of Government, who will decide, according to the strength of the force, whether he shall be considered as coming under the above provisions specified in No. 4, or recognized as entitled to

the staff pay of brigade major or line adjutant. It is however to be understood, that when the public service cannot suffer from the delays, the previous authority of Government is to be obtained for the appointment of "staff officers" of the description specified in No. 8.

CIVIL APPOINTMENTS.

Junior civil servants Mr. T. H. Binning, who arrived in India on 7th June 1824, and Mr. E. G. Fawcett, who arrived on 6th June 1825, have been reported qualified to undertake the transaction of public business.

Judicial Department.

Sept. 15. Mr. T. H. Binny to be assistant register to Court of Adawlut of Surat.

ECCLESIASTICAL APPOINTMENTS.

Aug. 19. The Rev. E. Mainwaring to have charge of clerical duties of harbour of Bombay.

Sept. 5. The Rev. C. Jackson, to officiate as chaplain of Kaira and Ahmedabad, in the room of the Rev. A. Goode, removed to Poona.

MILITARY APPOINTMENTS, PROMOTIONS, &c.

Bombay Castle, Aug. 15, 1825.—Messrs. J. Pope, C. S. Geddes, F. Mayor, and H. W. Budden admitted to inf., and prom. to ensign.—Mr. C. F. Owen admitted an assist. surg.

Aug. 16.—Sub-Assist.surg. Dickson appointed to charge of medical duties of H.C.'s cruiser Amherst.

Aug. 18.—Lieut. H. G. Roberts, 14th N.I., to command escort of resident in Cutch.

Ensigns permanently posted. E. A. Guerin, to 6th N.I. J. Macdonell, do. W. Chambers, 13th do. C. H. Brown, 23d do. G. Richardson, 7th do. F. D. Bagshawe, 6th do. N. H. Thornbury, 8th do. H. S. Bouchier, 4th do. C. G. Calland, 14th do. P. H. Skinner, 11th do. S. J. Stevenson, 21st do. H. James, 20th do. G. B. Lloyd, 19th do. G. Sparrow, 21st do. B. Mitchell, 1st Europ. Regt. A. Hamilton, 1st do. G. D. Wilson, 2d Europ. regt. M. Smith, 19th regt. N.I. T. Jackson, 10th do. C. B. Raitt, 1st Gr. Bat. N.I. W. Goddes, 2d do. S. Parr, 23d N.I.

Aug. 23.—2d Gr. N.I. Ens. E. Neville to be lieut., v. Lascelles dec.

14th N.I. Lieut. C. Spence to be adj. in suc. to Lieut. H. G. Roberts, app. to command resident's escort in Cutch.

Portuguese Militia. Mr. J. J. Simoens to be lieut. in suc. to M. de Cruz dec.

Aug. 31. Assist.surg. C. F. Owen permitted, at his own request, to resign service of Hon. Company.

Sept. 6.—Lieut. Bartlett, 17th N.I., to be staff officer to a detachment under Lieut. Col. Salter, ordered to Rajcote on duty; dated Mow 24th July.

Sept. 9.—*Engineer Branch.* Capt. Pouget to be executive engineer in Deccan. Capt. Waddington to be ditto at Surat and Broach. Lieut. Outram to be ditto in Southern Concan (without prejudice to his present employments). Lieut. Peat to be ditto in northern districts of Guzerat. Lieut. Grant to be ditto in Northern Concan. Lieut. Forster to be assist. to ditto in Deccan, to be employed at Ahmednuggur. Lieut. Harris to be assist. superintending engineer at presidency.

MARINE APPOINTMENT.

Sept. 5.—Lieut. J. J. Robinson, H.C.'s marine, to officiate as assist. to superintendent of marine.

FURLOUGHS.

To Europe.—Aug. 29. Ens. P. H. Skinner, 11th N.I., for twelve months, for health.—Sept. 10. Lieut. H. Stone, 17th Bengal N.I., for health.

MISCELLANEOUS.

VACCINATION.

The following statement which we have procured may perhaps possess some interest, not merely on account of the simple facts it contains, but as it perhaps elucidates in some degree the effects of vaccination. During the months of January, Feb. March, April and May, which embrace nearly the whole period of the epidemic, out of 4,150 European soldiers, taking the average number for the five months at the different stations of the army, at all of which small-pox prevailed, only nine were affected, three of whom died. During the same period only 7 out of 30,000 sepoys, or at least enlisted men, were attacked with small-pox, nine of whom died; so that though 33,000 men were exposed for five months, in situations where this disease was at one time or another epidemic, only 1 in 400 was affected, and only 1 in 2,600 died. As Europeans are generally all vaccinated, and as we believe native recruits also undergo the operation on joining their regiments, it is but reasonable to conclude that this comparative immunity of the army from small-pox, during its prevalence in an epidemic form, was owing to the preventive powers of vaccine inoculation.—[*Bom. Cour.*

DAMAUN.

The cholera morbus has in a great measure subsided, since the following method has been adopted by order of the governor, for arresting its progress. Wood and tar were burned, and gunpowder moistened with vinegar, in those parts most afflicted with the disorder. All the trees were cut down, and the ditches containing stagnant water filled up. Hospitals have also been erected for the sick, to whom every care and attention has been paid.

All waste lands have been cultivated with flax at the governor's expense, and no personal exertions have been spared to encourage the improvement of lands.

The crops at present are in a very flourishing state; and hopes are entertained that the produce will afford a considerable supply for mercantile speculation. It is the intention of the Governor to make an extensive plantation of coffee and cotton; and there is little doubt but the energy displayed will ultimately raise the territories of Damaun to a state of opulence, from the obscurity in which they have so long been immured.—[*Bombay Gaz. Aug. 24.*

CRICKET REVIVED.

We at all times feel infinite pleasure in announcing amusements, which tend to counteract the effects of this enervating

climate, by rousing the spirits from apathy, and the physical powers from that feminine indolence, which is generally rewarded with premature old age, "skin hanging in drapery, and muscles reduced to pack-thread."

The cricket players are now preparing to resume their exercise for the cold season, and several grand matches between men in the Queen's Royals, from the famed counties of Hampshire, Sussex, and Kent, are on the tapis, &c. &c.

A meeting will take place to-morrow at four o'clock, on the ground near the Racket Court, and the play will continue at the same hour, on every succeeding Thursday throughout the cold weather.

Tents, it is understood, are to be pitched for the accommodation of ladies, and as the cricketers are all to be dressed in an appropriate uniform, we anticipate one of the most gay and animated scenes that has ever graced our island.—[*Bom. Gaz. Sep. 17.*

STATUE OF LORD WELLESLEY.

We observe that preparations are commenced on the triangular piece of ground on the esplanade, opposite the church gate, for the purpose of erecting the statue of the Marquis Wellesley.—[*Bom. Cour. Sep. 3.*

SOCIETY FOR THE PROPAGATION OF THE GOSPEL.

It is highly gratifying to learn that the Society for the Propagation of the Gospel experiences the warmest support at the out-stations, as well as at the presidency, The Rev. Samuel Payne has transmitted to the district committee from the Southern Concan a list of contributions exceeding seven hundred rupees, and which, according to a resolution at the general meeting, will be remitted towards the completion, in the first instance, of Bishop's College, Calcutta.—[*Bom. Cour. Sep. 10.*

THE MEYANAS.

We have frequently mentioned the depredations committed by bands of Meyanas in Cutch and on the borders of Guzerat, where our military establishment has been constantly harassed, by rapid movements, to check the progress of these numerous predatory gangs towards the interior; and we are now happy to find that effectual measures are about to be adopted for the better securing tranquillity in that part of the country, and enforcing a higher respect to the British flag, as also the treaties which have been formed under its influence.

For this purpose, we hear that a detachment is shortly to embark, consisting of the 6th King's and flank companies of the 2d European and 3d N. I. regiments, with

with a suitable train of artillery, which, when joined by a body of cavalry from Kaira and other troops in the vicinity, will form a force near 7,000 strong, to be commanded, report says, by Col. Napier, as Brigadier. The Amherst H. C.'s Cruiser, and Palinurus will proceed to Mandivie; and the Bombay Castle, Glorioso, Simpson, and Caledonia, are taken up as transports for the troops.

By a letter from Perdanah, we have received information of a skirmish on the Run between 300 Meyanas, and a small party of 75 troopers and 47 infantry under the command of Lt. Fawcett; in which the banditti were completely routed, and compelled to retreat through the swamp, after losing a considerable number of men. The hurried fire of the enemy was so badly directed that no lives were lost on our side, and only one havildar wounded.—[*Bombay Gaz.* Sep. 17.

SHIPPING.

Arrivals.

Aug. 31. *Simpson*, Simpson, from London.—16. *Sept. 2. Calcutta*, Stroyan, from Liverpool.—18. *Bombay Castle*, Durant, from China and Manilla.

Departures.

BIRTHS, MARRIAGES, AND DEATHS.

BIRTHS.

July 12. At Broach, the lady of R. Boyd, Esq., collector and magistrate of that zillah, of a son.
Aug. 12. At Poonah, the lady of Capt. Bolton, H.M.'s 20th regt., of a daughter.
19. At Girgaum, the lady of W. G. Bird, Esq., civil service, of a son.
— The lady of V. C. Kembal, Esq., of a son.
26. At Ridgway Cottage, the lady of Capt. J. H. Dunsterville, assist. com. gen., of a daughter.
Sept. 2. At Matoongha, the lady of Capt. Barton, artillery, of a daughter.
5. At Mhow, the lady of Capt. R. S. Sutherland, 13th regt., of a daughter.
6. At Hurnee, the lady of the Rev. J. Stevenson, of a daughter.
7. At Chanda, near Nagpore, the lady of Assist. surg. A. Montgomery, Bombay establishment, of a daughter.
18. At Poonah, the lady of Capt. A. W. Browne, of a daughter.
20. The lady of W. C. Bruce, Esq., civil service, of a son.

MARRIAGES.

Aug. 18. At St. Thomas's Church, Capt. C. S. J. Grant, Madras establishment, to Miss A. M. Treasure, eldest daughter of the late S. Treasure, Esq., London.
Sept. 22. At St. Thomas's Church, Lieut. R. Lewis, H.M.'s 4th Light Drags., to Sarah, fourth daughter of the late Capt. Cotgrave, R.N.

DEATHS.

July 26. At Bhooj, Maria, infant daughter of Capt. W. H. Waterfield, 13th regt. N.I.
Aug. 3. At Tellicherry, James, the infant son of Thomas Crawford, Esq.
4. At Rajcote, of a bilious fever, Lieut. J. G. Lascelles, 2d Gr. Regt. N.I.

8. At Kaira, James Hestry, only son of Capt. Roe, commanding 4th extra bat., aged 4 months.
14. At Bhooj, Miss Thorpason, aged 18.
26. At Surat, Juliana Elizabeth, eldest daughter of J. Vibart, Esq., aged 2 years.
30. At Surat, Ellen, second daughter of J. Vibart, Esq., aged 14 months.
— At Cambay, Margaret Elizabeth, infant daughter of Lieut. W. Reynolds, Goojurat survey department, aged 11 months.
Sept. 1. At Mazagon, Robert, son of Capt. J. Key, commander of the ship Elizabeth, of Bombay, aged 1 year.
2. At Baroda, Charles Robert, son of the Rev. R. Y. Keays, chaplain there, aged 1 year.
11. At Bandora, Mr. B. de Mello, second son of the late Mr. A. de Mello, aged 21.
18. At Poonah, Ellen Eliza, infant daughter of Lieut. Col Taylor, commanding 9th regt.
21. G. A. Bax, Esq., in his 24th year.
Late. At Colaba, of dysentery, Ens. W. Torrrens, H.M.'s 2d (or Queen's Royals) reg., aged 17.

Ceylon.

CIVIL APPOINTMENTS.

Sept. 9. T. Eden, Esq., dep. sec. to government, to be secretary to council and registrar of High Court of Appeal, in room of G. Lusignan, Esq., dec.

C. E. Layard, Esq., to be collector of Colombo, v. T. Eden, Esq.

H. R. Scott, Esq., assistant to collector of Colombo, to be sitting magistrate of Negombo in room of J. Barnett, Esq., removed.

J. Bone, Esq., to be an extra assistant in office of chief secretary to government.

T. H. Twynham, Esq., master attendant of Trincomalle, to be master attendant at Galle, in room of F. Dickson, Esq., deceased.

R. Brook, Esq., to be master attendant at Trincomalle, v. T. Twynham, Esq.

MISCELLANEOUS.

LORD BISHOP OF CALCUTTA.

The Bishop of Calcutta arrived in Galle Roads on the 21st August, in the armed surveying ship *Discovery*, accompanied by Mrs. and Miss Heber, Rev. Mr. Robinson, Dr. and Mrs. Smith. After holding a confirmation at Galle the following day, his lordship arrived at Colombo on the 30th, passing through the fort to his residence at St. Sebastian's, under the usual salute. On Sunday, the 11th September, the bishop preached a sermon at St. Peter's Church, Colombo, in behalf of the Society for the Propagation of the Gospel in Foreign Parts, and with especial reference to the establishment of Bishop's College near Calcutta. His lordship chose for his text Acts ii. 39, and in a powerful and impressive discourse, uniting in a remarkable degree strength of argument with beauty of illustration and energy of Christian feeling; after remarking the universal and diffusive character of Christianity, proceeded to demonstrate the obligation of all to whom the light of revelation has been given, to communicate to others what they have themselves so freely received. He answered, largely and satisfactorily, most of the prevailing objections against missions, and concluded with a forcible appeal to his audience for the support of the venerable

venerable Society for the Propagation of the Gospel in immediate connexion with the established church. On the 14th his lordship accompanied the governor and suite on a tour to Kandy, attended by the acting archdeacon, Mr. Glenie and Mr. Robiison, whence they returned on the 20th, and on the 22d. his lordship left Colombo for Galle, on his return. Previous to leaving the island, his lordship was to consecrate the church at Badagamme.

BIRTHS.

Aug. 23. At Quilon, the lady of W. Huxham, Esq., of a son.

Sept. 8. At Colombo, the lady of Capt. Duvernet, of a son.

20. At Colombo, the wife of Mr. J. Sansoni, of a son.

MARRIAGE.

Sept. 22. At St. Peter's Church, Capt. H. Forbes, 45th regt., to Margaret Flyndman, youngest daughter of Major Audain, 16th regt.

DEATHS.

Aug. 28. George Lusignan, Esq., deputy secretary to government.

Sept. 3. At the Grand Pass, Mrs. A. W. Vanderputte, widow of the late Mr. A. Thomasz, aged 66.
6. At Point De Galle, F. Dickson, Esq., master attendant, aged 56.

Penang.

Extract of a Letter from Penang, 19th June, 1825.—"The promises of his Siamese Majesty respecting free trade, it now appears, are as little to be depended on as those of his predecessors. He has refused permission to M. H. & c. to form a permanent establishment, and I learn that Mr. G., who has been here a short time, is about quitting it."—[*Cal. John Bull.*]

The late accounts from Prince of Wales's Island represent the intentions of the Rajah of Ligore to have entirely subsided. The Rajah had disbanded the force collected for attacking Salangore, and had relinquished his design of engaging in hostilities with that state. It was expected that Captain Burney, political agent of the Supreme Government with the Siamese states, would proceed shortly to Bangkok, under an invitation from thence, for the purpose of entering into explanations regarding the existing war, and of discussing measures connected with the improvement of political and commercial relations between the British Government and that of Siam.—[*Ibid.* Sept. 19.]

TAVOY AND MERGUI.

We understand that the charge of the conquered districts on the Tenassarim coast, including Tavoy and Mergui, has been transferred to the hon. the Governor of Prince of Wales's Island, who will proceed to that quarter in person, during

the present month, to ascertain the condition and resources of the country, and to arrange measures for its future management. A commissioner and two assistants had been appointed to conduct the details of the civil administration, subject to Mr. Fullarton's orders.—[*Ibid.*]

BIRTH.

July 18. The lady of E. Wilkinson, Esq., of a daughter.

DEATH.

Aug. 30. Capt. H. Davidson, 33th regt. Bengal N.I.

Singapore.

WARLIKE STORES.

In the Penang Gazette of the 21st of May there occur two or three errors, inserted no doubt under mistake, which it may be proper in us to correct. It is stated that very large quantities of arms and ammunition had been recently sent from this port to Siam. No arms or ammunition whatever have been sent to Siam for more than eight months, and those sent previously were sent with the express sanction of the highest authority in India to answer a particular object, of which it may be supposed, without impugning the judgment of any other person or persons, that that authority was the only legitimate judge. The second assertion made is, that the ship Harriet, to shew the benefits of free trade, had imported into Singapore 1,600 barrels of gunpowder. The Harriet imported only 200 barrels. The third assertion made is, that ships resorting to this port, and bringing warlike stores from Rotterdam, had been furnished with two sets of papers. We had certainly never heard a whisper of any British merchant directly or indirectly connected with this port having been guilty of any thing so base or fraudulent, and which we presume to think is fitter subject for the cognizance of a court of justice than the conjectures of a newspaper.—[*Sing. Chron.*, June 9.]

BENCÖOLEN.

According to our latest accounts from Java, the Dutch authorities do not appear to be disposed to appreciate adequately the value of the cessions which we have made to them on the west coast of Sumatra, albeit assured by a writer in the Calcutta newspapers, that the countries in question were the true Oplir of King Solomon. It is stated, that the first thought of the Dutch Government was to abandon Bencöolen and its dependencies altogether, after concluding an arrangement with the native chiefs of the country for the payment of a trifling annual tribute. This arrangement has not been carried into effect,

effect, in consequence of the representations of the proprietors of spice gardens; and it is now determined to place Bencoolen under the residency of Pedang—to be administered by a civil assistant. Such is the value attached by the Dutch Government to possessions which, independent of their own revenue, it cost our nation from 80 to £90,000 per annum to maintain, and the loss of which, notwithstanding some persons have taken it into their heads to bemoan most piteously, and according to our conception, most irrationally!!—
[*Ibid.*]

BIRTHS.

Aug. 10. The lady of D. S. Napier, Esq., of a daughter.

Netherlands India.

NEW DUTCH COMPANY.

The agents of this association have arrived in Batavia, and if report be true, their operations are to be of a nature not very likely to relieve the present commercial embarrassments of the country. It is stated that they come from Europe vested with a recommendation to have the exclusive purchase of the Government monopoly of coffee, spices, tin, &c. The matter is bad enough in the hands of the Government alone, but must be infinitely more mischievous if shared with a joint-stock company. It was one of the most palpable oversights of the British administration of Java and the Moluccas, both as far as respects the interests of the native inhabitants and of general commerce, not to have extirpated these nuisances, which admit neither of defence nor extenuation. They not only strike at the roots of industry and production, as common sense, as well as the most obvious principles of political economy, clearly demonstrate, but as objects of revenue are utterly delusory, as may be shewn in half a dozen words from the example of the coffee hitherto considered the most profitable of them. The quantity of coffee annually disposed of by the Dutch government is ordinarily about 100,000 piculs per annum, for which, about four years ago, when the import trade was free from the oppression of excessive duties, a fraction above 30 Sp. drs. per picul was obtained. The price which it now fetches is a fraction above 10 dollars a picul, so that the defalcation in the public revenue amounts to the enormous sum of TWO MILLIONS of dollars per annum. Such a fluctuation is itself sufficient to condemn the whole system, but it would not be difficult to shew that the matter is much worse, and that the two millions in question are in fact a clear

and permanent loss to the Government while it perseveres in its monopolies. The present prices will hardly be sufficient to pay the cultivators, even the pittance which they receive, and defray the heavy establishment necessary to maintain the monopoly, while the price of coffee having at length found its level in Europe, supplied through a hundred different free channels, there is not the slightest chance of any considerable rise in price ever taking place. At the same time, it must not be alleged that a country capable of paying a revenue of millions in coffee, would not be equally capable of paying it from other sources, were its industry unshackled. That industry, however, is locked up in the fetters of the monopoly, so that the government itself is the real source of the fiscal loss which it sustains.—[*Singapore Chron.*]

HOSTILITIES IN JAVA.

The accounts from Batavia, received in Holland, are to the 17th September. The Dutch authorities claim great advantages over the natives. In one action 1,700 were stated to be killed. General De Kock is reported to be pursuing them into the interior.

[We have received a communication which gives us reason to believe that the statements respecting the transactions in Java have been much exaggerated. We have no room for it this month.—*Ed.*]

Persia.

MURDER OF SIMON HYRAPIET.

An atrocious murder has been committed at Julpha, a suburb of Ispahan, by Haji Hashim Khan, head of the Shirhoo-nees, and brother-in-law of the governor, on Mr. Simon Hyrapiet, a respectable Armenian, who was taken from the Armenian convent, and shot. The murderer appears by the following letter to have received condign punishment:—

Julpha, May 20, 1825.

“His Majesty the King of Persia has visited Ispahan, and I am happy to inform you of the punishment of Hadji Hashim Khan, to whose fury our poor Mr. Simon fell a victim. After a series of the most severe and unparalleled tortures, which could only be equalled by his crimes, the offender was executed soon after the festival of the Ramazan, by royal order, on the main road called Alaghapi. The body was divided into four pieces, and suspended at the four principal gates of the city. Terror and consternation are created among the people by the example of Hadji Hashim, which will probably insure the public safety, and prevent future injuries.”

SCARCITY.

By a letter of July, from Ispahian, it appears that great distress prevailed amongst the inhabitants, from scarcity of provisions. — [*Bom. Gaz. Sept. 7.*]

INTELLIGENCE FROM THE PERSIAN GULF.

The Tigris, swelled by the melting of the snow, has inundated the level country on the left bank of its stream. The Pacha of Bagdad had directed public prayers to be offered up in all the mosques, churches, and synagogues, for the purposes of averting the destruction which was threatened to the city from the inundation. He had even offered expiatory sacrifices, by the slaughter of two buffaloes, which were consigned to the swelling stream.

The French consulate general in the Pachaic of Bagdad had been abolished, and Monseigneur, the Bishop of Babylon, acted as chargé d'affaires.

The public discontent increased daily at Bagdad, and it was supposed, that had it not been for the inundation, a civil war

would have been the consequence. Provisions were very dear, which was attributed to the measures of the Pacha, who has few partizans.

St. Helena.

At a meeting held at this island on 13th October last, an address to the Government was voted, the purport of which was "That the proprietors of slaves on the island were willing to emancipate their slaves, provided an equivalent, to be named by the proprietors themselves, was given by the hon. East India Company."

The Court of Directors have issued instructions to the Government of St. Helena to abolish all port charges at that island, and to limit the demand upon private ships touching there, whether British or foreign, to such sum as may reimburse the expense actually incurred in supplying water, and with the use of boats.

Postscript to Asiatic Intelligence.

Despatches have been received at Calcutta, from Sir A. Campbell, dated at Prome, 18th August, the substance of which has been published in the *Government Gazette*, as follows:—

It appears that Sir A. Campbell, having obtained accurate information of the enemy's advance, and actual arrival at Meeaday, about forty miles above Prome, Brigadier General Cotton was despatched on the 13th August, in the steam vessel, with fifty men of the royal regiment, as far as that place to reconnoitre. The Brigadier General found the enemy in considerable force, probably about 20,000 men, apparently well armed, and with a large proportion of artillery, busily entrenching his position, already tolerably strong by water. The following is the substance of the report made by that officer:—

The enemy were discovered on the morning of the 15th ultimo, at Meeaday, on the left bank of the river. A large Nulla runs into the Irawaddy, immediately below Meeaday, from the mouth of which the Burman force was ranged to the extent of a mile and a half up the bank of the great river. This bank has several Pagodas upon it, for the most part near

the Nulla, all of which the enemy were stockading and had entrenched; and they had thrown a ditch and breast-work between them and the river, to protect their boats, which were ranged underneath.

During the progress of the reconnoitring party along their line of defence, the Burmese opened a battery of sixteen guns, of different calibre, from four to six pounders, upon the steam vessel, but the width of the river being at least 1500 yards, their shot fell short.

The force displayed by the enemy was estimated, by Brigadier General Cotton, at between 16,000 to 20,000, who appeared to be all armed with muskets, and twenty golden chattas were counted. They had also a small force on the right bank, with Jinjals, opposite to the right of their line, as it faced the river. On the return of the party, the gun boats which the steam vessel had in tow were disengaged to cannonade the enemy's line, and made them develop their whole force, and it was then ascertained that they had an advanced party across the Nulla, already mentioned, thrown on the road leading to Prome, and occupying some pagodas which overlook it, and which they were stockading. This party were

working also on a breastwork, on the side of the hill, which would also command the road.—Three golden chattas were visible with the latter force.

About 400 boats were seen at Meeaday, but only one regular war boat.

The chief command of the force thus collected to oppose the advance of the British troops is said to be vested in a half brother of the king, named Meana Bo. The court of Ava was reported to be making other preparations of considerable magnitude for the approaching campaign.

The *Gazette* observes: "We have great satisfaction in adding, that the accounts of the situation of Brigadier-General Sir A. Campbell's force, in regard both to health and supplies, are decidedly favorable. According to to the latest official return, the sick at present in hospital scarcely amounts to one-sixth of the whole army, and the proportion of Europeans sick does not exceed one-eighth of the number present. A large proportion of the cases also were of a mild nature."

More interesting intelligence has been received by the way of Madras. It appears that a negotiation has at length been opened, and an armistice has been concluded between the British commander and the chief minister at the court of Ava, which was to continue in force until October 15, to give time for the completion of the negotiation. At an interview between the minister and Col. Tidy (which took place on the 2d, at a village twenty-five miles above Prome), the former used much conciliatory language, and observed that "the English had run away with the hearts of the inhabitants, and that none would oppose them." A conference was arranged between Sir A. Campbell and the minis-

ter; each party was to bring 1000 men, and to encamp within 1000 yards of each other: the conference to be held in the intervening space. The next arrivals from India will be important.

The sickness in Arracan does not appear to abate. The mortality is heavy; but the sepoy do their duty cheerfully, and without a murmur.

Extract of a Letter from Arracan, dated 26th August, 1825:—"Sickness still continues, but not to such an extent as formerly. The mortality daily is very heavy, yet not a murmur is heard; the men do their duty cheerfully, and the general routine of business is conducted with the greatest regularity. The Chittagong and Ramoo Mugs do not escape the general malady. It appears that every body requires a seasoning before the climate agrees with the constitution. Notwithstanding all the sickness and complaints against the place, I am convinced that, should it remain in our possession, by clearing the little hills round the town, and the fortified heights from jungle, draining the streets properly, and dressing the banks of the nullah, Arracan might be made certainly one of the most beautiful, and I have no doubt, as healthy a station as any of Bengal. You will be astonished when I tell you, that within the fortifications of this city we have a concatenation of low hills, covered with thick jungle and abounding with leopards, the prints of whose feet are often seen close to our houses. They keep quiet all day, but prowl during the night in search of prey."

In Assam and Cachar the troops have been generally healthy during the whole rainy season.

DEBATE

DEBATE AT THE EAST-INDIA HOUSE.

East-India House, Feb. 8.

A General Court of Proprietors of East-India Stock was this day held at the Company's house in Leadenhall Street, for the special purpose of taking into consideration the "Oude Papers," which had been lately laid before the court, in consequence of the vote of a former court.

COMPANY'S SHIPPING.

The minutes of the last having been gone through, the *Chairman*, (C. Marjoribanks, Esq.) acquainted the court, that there has been laid before it an account of the Company's Shipping, up to the 21st of December last. This account included the number of ships in the Company's service of every description, the tonnage of each, the rate of tonnage, and the number of voyages for which they were engaged, the names of the owners, and the period for which they had been engaged,—also a list of the Company's ships, purchased for India and China, since 1813, the number of voyages they had made and the expense of each voyage, the gross sum paid for them, and the amount of the expenses incurred for repairs.

Capt. *Maxfield* wished to know whether he could have access to those papers, and whether they were to be had in the Proprietors' room?

General *Thornton* suggested that the papers should be printed for the use of the proprietors.

Capt. *Maxfield* submitted a motion to that effect.

Dr. *Gilchrist* seconded this motion.

The *Chairman* begged to call to the recollection of the hon. proprietors, that this was a Special Court, and that a motion could not now be made, unless special notice of it had been given in the usual way.

Capt. *Maxfield* said he made the motion in order to save time, and that was the only reason why he pressed it. If it were not made now, it could not be till the next quarterly court, and this would be losing too much time.

The *Chairman* said all that might be as the hon. proprietor had stated it, but regularity in the forms of their proceedings was necessary to the despatch of business, and the course the hon. proprietor was now pursuing was quite irregular. If this subject had been properly noticed in the last court, it could now be moved.

General *Thornton* said it was the common practice of the House of Commons, that motions for printing documents were made at the time when those documents were presented.

Asiatic Journ. Vol. XXI. No. 123.

The *Chairman* said that might be the practice of the House of Commons, but the practice was different in this court.

Dr. *Gilchrist* could not see why the motion should be objected to. It was made with the view to save future trouble. There was no doubt that a special court could be called within a short time for the purpose of making this motion, but that trouble might be spared if the motion were now put.

The *Chairman* said he had no doubt whatever of the spirit in which the motion was made, but the course proposed would be irregular, and he could not sanction it.

Here the matter dropped.

OUDE PAPERS.

The *Chairman* said, "I have to acquaint the proprietors that this court is made special for the purpose of taking into consideration a proposition signed by nine proprietors duly qualified, which would be read."

The clerk then read the following requisition:—

"To the Chairman and Deputy Chairman of the Honourable Court of Directors.

"We the undersigned Proprietors of East-India Stock, duly qualified, request that you will be pleased to call a General Court upon an early convenient day, for the purpose of taking into consideration the Oude Papers, published by the vote of the General Court of Proprietors.

"DOUGLAS KINNAIRD,

"C. J. DOYLE,

"W. MAXFIELD,

"JOHN BORTHWICK GILCHRIST,

"JOSEPH HUME,

"WILLIAM THORNTON,

"JAMES PATERSON,

"J. DOYLE,

"J. ADDINELL."

Sir *John Doyle* then rose and said that, before he proceeded to the business of the day, he wished to relieve the minds of gentlemen from those apprehensions which might naturally arise from the feeling, that such an immense volume of papers being made the subject of a motion would of course tend to a very protracted debate. Seeing such a mass of papers before them, gentlemen would by a very natural association call to mind the voluminous collection of Hyderabad papers which had occupied the court so long in the last year, because they resembled the present collection in number and size. There was however this distinction between them: that, on the former occasion, there was a great difference of opinion

in the court; whereas on the present, there could be believed be but one sentiment among the proprietors, and for that reason he would trespass on the attention of the court as shortly as possible.

On a former day, he hinted at the circumstances under which the present huge collection had made its appearance before the proprietors; but in order to the more full understanding of his motion, it would be necessary for him to recall those circumstances to their recollection.—When the Marquess of Hastings was on his return to England, after having resigned his high office in India, he thought the leisure time which the voyage placed at his disposal a good opportunity for throwing together the leading features of his administration, in order to render to his honourable employers an account of the manner in which he had discharged the important trust reposed in him. This he did while most of the circumstances were fresh in his recollection, but without having access to the original documents. This "Summary" was sent to the Court of Directors, but they (and he did not now intend to impute any blame to them on that account) not thinking it an official document, as the noble lord had ceased to be in the Company's employment, did not attach any official importance to it, or at all receive it as an official document. The noble marquis afterwards shewed it to some friends of his, who requested that he would allow it to be published: this the noble lord declined to do, but as he was then about to depart for a distant state, he gave it to those friends, leaving it to their discretion to publish it or not as they should see occasion. The individuals to whose care it was left were afterwards induced to publish it, by circumstances to which it was not necessary for him to allude. It happened after this that the hon. director (Col. Baillie) made a statement in giving his evidence before a committee of the House of Commons, on the subject of the Oude Loan, which was found to be so much at variance with part of that of the noble lord, that an hon. bart. over the way (Sir G. A. Robinson), who was a member of that committee, was induced to call for explanation, and afterwards moved for the production of some paper; with the kind view as it appeared to him of enabling the gallant colonel (Baillie) to establish a case in support of his statement: other hon. members had also called for the production of documents, and the result was the immense mass of documents contained in the volume now before them. The question now is "whose book is this?" The hon. director (Col. Baillie) rejected it—in the last, or the preceding court, he disavowed the production. The Court of Directors as a body would not acknow-

ledge it as theirs. It could not be said to belong to the Marquess of Hastings, as he was out of the country when it was called for and published. In fact he found no one willing to acknowledge it. The hon. bart. (Sir G. A. Robinson) had some share at least in its production; he would therefore now beg to ask him if it were his?

Sir G. A. Robinson. "If the question of the hon. and gallant officer means to include the whole of the book, I answer—no: but I will admit that it was on my motion that a part of the documents were produced. My only object in moving for them was, to get an explanation of the statements made respecting the loans by the Nawaub Vizier. In the Summary of the noble lord (Hastings), I found it stated, that the first loan was a voluntary mark of the Nawaub's gratitude to the Governor-General, for having rescued him from the thralldom in which he had been kept. There was a statement from another quarter contradictory of this, and I wished for certain papers in order to have the matter cleared up; to those papers only did my motion refer: as to the other parts of the volume, they are not of my asking, nor would I have put the Company to the expense of printing them. I have now answered the gallant officer's question, and do not think it necessary to say more at present, but I shall be ready in the course of this discussion, should occasion require, to state more fully the grounds on which I felt myself justified in calling for some of these papers.

Sir John Doyle begged to assure the hon. deputy chairman (Sir G. A. Robinson) that he had already acquitted him in his own mind of having given his sanction to the printing of the whole of those papers. At the same time he must say, he was not sorry that they had been printed. The publication would have the effect of shewing in a more clear light the excellent system of government adopted by his noble friend the Marquess of Hastings. He would now come to the papers, and state to the court that, in order not to mix up matters not necessarily connected, he would divide the subject into two parts. The first would embrace the circumstances connected with the loans from the Nawaub of Oude, and the second would apply to the removal of Col. Baillie from his situation as resident at Lucknow. On the first part he would submit some resolutions to the court, and when they should be disposed of, he would then submit his resolution on the second part. The papers to which he should have to allude were those sent by the Marquess of Hastings, and those written by the hon. colonel (Baillie). There was a third point (the responsibility of which would attach to that gentleman); he meant the exposing

exposing to public view of certain documents given to him, not in his character of a private individual, but in his official capacity; such conduct was, to say the least of it, unusual in public men. The publication of some of these official documents by the gallant col., which in his opinion were calculated to excite unpleasant feelings in the minds of all who saw them, was he was sorry to find approved by one gentleman, and he the private friend and confidential secretary of the noble lord to whom they had reference. He (Sir J. Doyle) did not wish to say any thing against the gentleman to whom he alluded (the late Mr. J. Adam): he did not approve of his politics connected with Indian affairs, but in private life he had ever held his character in estimation, and he deeply regretted that he had to speak of him in the past tense; but however much he respected that gentleman, he must say that the letter to which he alluded, if written by him, was a drawback on his high character, nor was it much less so, if the letter had only been seen and approved by him. He must express his regret, that as the gallant col. (Baillie) had thought it necessary to publish certain papers, he had not published certain other documents equally in his power, by which some parts of the former might be explained. As to the whole book, he must repeat that, though he disapproved of its size and of the time of its publication when Mr. Ricketts and Capt. M'Leod had left the country, yet on the whole he was glad it had appeared, because he felt convinced, that the more the acts of the Marquess of Hastings' administration were made public and examined, the more satisfied would all parties become, that whether viewed as a statesman, a financier, or a soldier, no governor-general of India had ever stood so deservedly high as that nobleman. However, he did not pretend to enter upon the consideration of those papers with any intention of defending the noble lord's system of government, or his character as a governor. That character needed no defence, but if it had, the defence was placed in much abler hands in those of the directors, who were his natural protectors. It was not, he repeated, on behalf or in support of the noble Marquess that he now stood forward; he came forward on behalf of the proprietors of whom he was one, and to uphold the decisions to which the Court of Directors had already come on the subject to which his motion would particularly refer,—namely the loans from the Nawaub: to these he would now come. It was well known that when the Marquess of Hastings left the seat of government to prosecute the Nepal war, he found the Company's finances in a most

embarrassed state. On this point he (Sir J. Doyle) would appeal to many gentlemen then in his hearing, who were well acquainted with the Company's finances, and ask whether serious fears were not at that time entertained, that the drafts of the Company could not be satisfactorily met? Under this state of embarrassment a suggestion was made, that some assistance might be derived from the new Nawaub of Oude. The Marquess of Hastings approved of this suggestion, but thought the subject was one of considerable delicacy, as the Nawaub had but recently succeeded to the Musnud; however, he would be determined on the matter by what he should see on his arrival at Cawnpore. He did arrive at Cawnpore on the 8th of September (we think). On that and the next day visits of ceremony were exchanged between the Nawaub and the noble marquess, and of course no business was then introduced; but on the third day, the Nawaub in the presence of Mr. Ricketts, Mr. Swinton, and Mr. Adam, but not of Col. Baillie, made an offer to the Governor-General, for the use of the Company, of a crore of rupees. He added that he would most willingly give the money, and he hoped the Company would accept it as a free gift. He (Sir J. Doyle) did not state this on the authority of either of the gentleman whose names he had mentioned, as having been present at the time the offer was made: he would rather give it on the authority of the hon. col. (Baillie) himself; and for this purpose he would beg to read as part of his speech, an extract from a letter addressed by col. Baillie to Mr. Ricketts, and dated at Lucknow the 10th of Jan. 1815.—By the way, before he read this letter, he must state, that the point at issue between the account of the noble marquess and the statement of the gallant col., on the subject of the first loan, was this: the noble marquess described it as a voluntary offering made to the Company by the Nawaub Vizier, while the gallant col. (Baillie) mentioned it as obtained with great difficulty, and that in fact it came from him like drops of blood. On the one side it was described as the voluntary act of the Vizier; on the other it was set forth as exactly the reverse. He would now read the extract:—"I have had the pleasure of receiving your communication dated the 2d inst. and I shall take the first favourable opportunity of having it suggested to his excellency the Vizier, that another crore of rupees as a loan to the hon. Company would be an acceptable offering to Lord Moira, whose pleasure and convenience I am persuaded that his excellency is disposed to consult to the utmost extent of his power.

"Of the delicacy of a negotiation of this nature his lordship and yourself must be aware; and I shall therefore say no more, than that my best and most zealous exertions shall be employed to ensure its success, and to accomplish his lordship's purpose."

"By the way, I have no recollection of the circumstance of his excellency's former offer of a second crore of rupees. It was certainly not made to me, nor to his lordship distinctly in my presence. The Nawaub made a general observation in the true oriental style, that his *Ián Mál* (life and property) were at his lordship's command, and an expression to the same effect was contained in one of the papers of requests which he recalled. You told me I also remember, and so did Swinton and Adam, that, at a conference from which I was absent, his excellency had offered the first crore as a gift instead of a loan, and as much more as might be wanted."

Sir J. Doyle continued. The court had it now from under the gallant Colonel's own hand, that an offer was made by the Vizier to the Governor-General in the presence of Messrs. Adam and Swinton, that he would advance a crore of rupees by way of gift; but he added, that the Vizier held a very different tone to him on the subject. It was immaterial to his (Sir J. Doyle's) argument what tone the Vizier held afterwards—all he contended for was, that he did make the offer, which justified the description given of the first loan by the noble Marquess. In the letter, he (Col. Baillie) said, "you mentioned a second crore instead of one." Why, was he the sole person who mentioned it? The first crore was the only sum that Lord Hastings had spoken of as a voluntary offer on the part of the Nawaub; the second was admitted by him, as it was by all parties, to have been the result of negotiation. He would now read an extract of a letter from the Vizier to the Marquess of Hastings, containing the offer of the second crore, in order to let the court judge how far it was probable that the first was or was not a voluntary transaction. In that letter (received on the 18th of March 1815) the Vizier said:—

"As no separation of interests exists between this state and the British government, under this conviction, every succour and assistance which may be seasonably offered, or afforded by me and my government to the hon. Company is, in every respect, fitting and proper; and I regard it as my good fortune to have an opportunity in such times of evincing my friendship for your lordship. Impressed with this sentiment, and having heard from Major Baillie and from other quarters, that in consequence of the new levies of troops, and of the military preparations connected with the war in Nepal, and

with other measures in progress, a heavy pressure is experienced in the finances of the hon. Company, which cannot but occasion some anxiety to your lordship's mind; it has occurred to me in the spirit of the intimate union which has, from of old, subsisted between the two governments, to devise and contribute something more in the same way as on a former occasion. After maturely considering what my government was capable of doing, I have determined to afford another crore, should it be required; and I accordingly write with the pen of friendship to say, that it is forthcoming when your Lordship shall intimate a wish to receive it."

This, let it be recollected, was the letter of a man who, it was said, had most unwillingly granted the first crore. Did the extract he had read look like the opinion of a man from whom the first loan had been forced, or at least wrung with a most reluctant consent? But he would put this matter beyond a doubt, by reading another extract of a letter from the Vizier to Col. Baillie, the resident at Lucknow (received the 10th of May 1815). It was to this effect:—

"I have received the translation which you have sent to me of a letter from Mr. Adam, to your address, dated the 23d of March last, expressive of the wishes and sentiments of my respected uncle the Governor-General, with regard to the loan and repayment of a crore of rupees, &c. &c.

"The truth of the matter is this; that as I have all along made his Lordship's wishes on this subject the rule of my conduct, so also now and in future it is my intention to cultivate his Lordship's pleasure, and to do nothing contrary to his wishes. The money which I have promised to give shall be paid whenever his Lordship thinks proper, and in any manner which he may prescribe. My reliance on the friendship and kindness of the Governor-General is unbounded, and as you know that, on the occasion of the former loan, I considered an acknowledgment under the seal of the Governor-General to be unnecessary, so, in the present instance, your giving a receipt for the money till the arrival of an acknowledgment signed and sealed by the Governor-General is totally unnecessary, and my taking it would seem to indicate distrust."

Sir J. Doyle continued. Here then was the offer of a million sterling, not only without reluctance, but even such was his confidence in the government, that he was willing to lend it without any acknowledgment from the resident, but chose rather to wait until that of the Governor-General was sent to him on the receipt of the money. Did the letter he had read betray any unwillingness to comply with the request of government? On the contrary,

trary, was there not a great readiness to afford his assistance when he was made aware of the exigency of the Company? But it appeared from part of the hon. director's statement, that the Nawaub expressed some reluctance to lend a crore, for that before this he had wished to confine his offer to fifty lacs. This might be true; if a man thought that he could assist his friend as well by the offer of fifty lacs as by double that sum, why there was little doubt he might (generally speaking) prefer the advance of the smaller amount: but, it should be recollected, that this was after he had made the first voluntary offer of a crore, and when the loan of a second was requested. Now he begged the attention of the court to the manner in which the gallant Colonel (Baillie) spoke of this same offer of fifty lacs of rupees. In page 1034, in his letter to Mr. Secretary Ricketts, dated February 11th, 1815, he thus speaks:—"And now, dear Ricketts, pray inform me whether these fifty lacs will do your business or not; you may have them as a gift, I conceive; or at all events you may pay them when you please, and the interest will be rejected if you wish it." This was the offer of a man who was described to be most reluctant to make any advance at all. Now, either this was true or it was not: if it was true, could the person by whom such offer was made (having already advanced one million) be justly said to be unwilling to accommodate the Company? If it were not true (which he Sir J. Doyle could not believe), the gallant Colonel would have to explain to the court, the circumstances under which the communication was made. In order to shew the manner in which this assistance was offered, and the impression as to its character on the mind of Lord Hastings, he hoped he might be allowed to have read, as part of his speech, an extract from his Lordship's political letter to the directors, dated 15th of August 1815, beginning at page 846 (paragraph 9). The clerk then read as follows:—

"His Exc. the Vizier having, at a conference which I held with his Exc. at Cawnpore on the 11th October, tendered to me, as a proof of his friendship and of the cordial interest which he feels in the prosperity of the affairs of the hon. Company, an accommodation of one crore of rupees in the way of loan, I deemed it to be my duty, in consideration of the actual state of the public finances, and the probable demands arising out of the prosecution of hostilities with the Nepaulese and the eventual necessity of supporting, by military preparations, our political views with relation to Saugor and Bhopaul, to accept the offer with due acknowledgments of the cordial and friendly spirit in which it was made. At a subsequent conference, his Exc. solicited my acceptance of the sum

as a free gift to the hon. Company; but for reasons which will be obvious to your hon. court, I declared, with suitable expressions of my sense of the additional proof of his Exc.'s friendship, my inability to receive the accommodation except as a loan.
