$\therefore$ AS I A.

VOLUME THE THIRD.

CALCUTTA:
PRINTED AND SOLD by T. WATLEY, at the honourable company's printing-office;

And SOLD at LoNDON by P. ELMSLY. m.dcc.xcir.

## ADVERTISEMENT.

A$S$ it feemed proper to exhibit at one view the whole of Lieutenant Wilford's learned Effay on Egypt and the Nile, there was not room in this volume for a Metcorological Journal; and it may be doubted, whether the utility of fo f diaries compenfates for their tedioufnefs, and for the frace, which they occupy: the two fpecimens already publifhed will give a correct idea of the weather in this part of India. Very copious and interefting materials for the fourth volume are now ready for the prefs; but a fhort paper on the Code of Siamefe Laws, which was too haftily announced, has been unfortunately loft; and we cannot expect, that Captain Light, the only Englifhman among us, who underftands the language of Siam, fhould find leifure, in his prefent important fation, to compofe another account of that curious, but abitrufe, work.

\begin{gathered}
\text { Delivered } 24 \text { February i } 791 . \\
\text { BYTHE PRESIDENT. }
\end{gathered}
$$

## GENTLEMEN,

W
E have taken a general view, at our five laft annual meetings, of as many celebrated nations, whom we have proved, as far as the fubject admits of proof, to have defcended from three primitive ftocks, which we call for the prefent Indian, Arabian, Tartarian; and we have nearly travelled over all $A j a$, if not with a perfect coincidence of feritiment, at leaft with as much unanimity, as can be naturally expected in a large body of men, each of whom muft affert it as his right, and confider it as his duty, to decide on all points for himfelf, and never to decide on obfcure points without the beft evidence, that can poffibly be adduced: our travels will this day be concluded, but our hiftorical refearches would have been deft incomplete, if we had paffed without attention over the numerous races of borderers, who have long been eftablifhed on the limits of Arabia,

Perfa, India, China, and Tartary; over the wild tribes refiding in the mountainous parts of thofe extenfive regions; and the more civilized inhabitants of the iflands annexed by geographers to their Afatick divifion of this globe.
$\mathbb{L e t e n}_{\mathrm{E}}$ us take our departure from Idume near the gulf of Elanitis, and", having encircled $A f a$, with fuch deviations from our courfe as the fubject may require, det us return to the point, from which we began; endeavouring, if we are able, to find a nation, who may clearly be fhown, by juft reafoning from their language, religion, and manners, to be neither Indians, Arabs, nor Tartars, pure or mixed ; but always remembering, that any fmall family detached in an early age from their parent ftock, without letters, with few ideas beyond objects of the firft neceflity, and confequently with few words, and fixing their abode on a range of mountains, in an ifland, or even in a wide region before uninhabited, might in four or five centuries people their new country, and would neceffarily form a new language with no perceptible traces, perhaps, of that fpoken by their anceftors. Edom or Idume, and Erythra or Phanice, had originally, as many believe, a fimilar meaning, and were derived from words denoting a red colour; but, whatever be their derivation, it feems indubitable, that a race of men were, anciently. fettled in Idume and in Midian, whom the oldeft and beft Greek authors call Erythreans; who were very difinct from the Arabs; and whom, from the concurrence of many ftrong teftimonies, we may fafely refer to the Indian ftem. M. D'Herbelot mentions a tradition, (which he treats, indeed, as a fable) that a colony of thofe Idumeans had migrated from the northern fhores. of the Erytbrean fea, and failed acrofs the Mediterranean to Europe, at the simefixed by Chronologers for the paffage of Evander with his Arcadiansinto. Itay, and that both Greeks and Romans were the progeny of thore emigrants:

It is not on vague and fufpected traditions, that we muft build our belief of fuch events; but Newton, who advanced nothing in fcience without demonftration, and nothing in hiftory without fuch evidence as he thought conclufive, afierts from authorities, which he had carefully examined, that the Idumean voyagers "carried with them both arts and fciences, among " which were their aftronomy, navigation, and letters; for in Idume, fays he, "t they had letters, and names for confellations, before the days of JOB, who " mentions them." Job, indeed, or the author of the book, which takes. its name from him, was of the Arabian ftock, as the language of that fub. lime work inconteftably proves ; but the invention and propagation of let. ters and aftronomy are by all fo jufly afcribed to the Indiai family, that, if Strabo and Herodotus were not groflly deceived, the adventurous Idumeans, who firft gave names to the ftars, and hazarded long voyages in fhips of their own conftruction, could be no other than a branch of the Hindu race: in all events, there is no ground for believing them of a fourtb diftinct lineage ; and we need fay no more of them, till we meet them again, on our return, under the name of Pbenicians.

As we pafs down the formidable fea, which rolls over its coral bed between the coaft of the Arabs, or thofe, who fpeak the pure language of Ismail, and that of the Ajams, or thofe, who muitter it barbaroufly, we find no certain traces, on the Arabian fide, of any people, who were not originally Arabs of the genuine or mixed breed: anciently, perhaps, there were Troglodyites in part of the peninfula, but they feem to have been long fupplanted by the Nomades, or wandering herdfmen; and who thofe Troglolytes were, we fhall fee very clearly, if we deviate a few moments from our intended path, and make a fhort excurfion into countries very lately explored on the Weftern, or African, fide of the Red Sea.

That the written Abyfinian language, which we call Ethiopick, is a dialeot of old Chaldean, and a fifter of Arabick and Hebrere, we know with certainty, not only from the great multitude of identical words, but (which is a far ftronger proof) from the fimilar grammatical arrangement of the feveral idioms: we know at the fame time, that it is written, like all the Indian characters, from the left hand to the right, and that the vowels are annexed, as in Dévarágari, to the confonants; with which they form a fyllabick fyftem extremely clear and convenient, but difpofed in a lefs artificial' order than the fyftem of letters now exhibited in the Sanfcrit grammars; whence it may juftly be inferred, that the order contrived by $\mathrm{PA}^{\prime}$ NINI or his difciples is comparatively modern; and I have no doubt, from a curfory examination of many old infcriptions on pillars and in caves, which have obligingly been fent to me from all parts of India, that the Nágarì and Ethiopian letters had at firt a fimilar form. It has long been my opinion, that the Abyffinians of the Arabian ftock, having no fymbols of their own to reprefent articulate founds, borrowed thofe of the black pagans, whom the Greeks call Troglodytes from their primeval habitations in naturaP caverns, or in mountains excavated by their own labour: they were probably the firft inhabitants of Africa, where they became in time the builders of magnificent cities, the founders of feminaries for the advancement of fcience and philorophy, and the inventors (if they were not rather the importers) of fymbolical characters. I believe on thie whole, that the Ethiops of Meroë were the fame people with the firf Egypitians, and"confequently, as it might eafily be fhown, with the original Hindus. To the ardent and intrepid Mr. Bruce, whofe travels are to my tafte uniformly agreeable and fatisfactory, though he thinks very differently from me on the language and genius of the Arabs, we are indebted for more important, and, I believe, more accurate, information concerning the nations eftablifhed near
the Nile from its fountains to its mouths, than all Europe united could ber fore have fupplied; but, fince he has not been at the pains to compare the: feven languages, of which he has exhibited a fpecimen, and fince $I$ have not leifure to make the comparifon, I munt be fatisfied with obferving, on his authority, that the dialects of the Gafots and the Gallas, the Agows of both races, and the Falafhas, who muft originally have ufed a Chaldean idiom, were never preferved in writing, and the Ambarick only in modern times: they muft, therefore, have been for ages in fluctuation, and can lead, perhaps, to no certain conclufion as to the origin of the feveral tribes, who anciently fpoke them. It is very remarkable, as Mr. Bruce and Mr. Bryant have proved; that the Greeks gave the appellation of Indians both to the fouthern nations of Africk and to the people, among whom we now live; nor is it lefs obfervable, that, according to Ephorus: quoted by Strabo, they called all the fouthern nations in the world Etbio pians, thus ufing Indian and Etbiop as convertible terms: but we muft leave the gymnofophifts of Ethiopia, who feem to have profeffed the doctrines of Buddia, and enter the great Indian ocean, of which their Afatick and African brethren were probably the firft navigators.,

On the iflands near Yemen we have little to remark: they appear now to be peopled chiefly by Mobammedans, and afford no marks of difcrimination, with which I am acquainted, either in language or manners; but $\mathbb{I}$ cannot bid farewel to the coaft of Arabia, without affuring you, that ${ }_{\xi}$, whata ever may be faid of Ommán, and the Scytbian colonies, who, it is imagined, were formerly fettled there, I have met with no trace in the maritime part of Yemen, from Aden to Malkat, of any nation, who were not either Arabss or Abyfinian invaders.

Between that country and Irán are fome iflands, which, from their infignificance in our prefent inquiry, may here be neglected; and, as to the Curds, or other independent races, who inhabit the branches of Taurus or the banks of Euphrates and Tigris, they have, 1 believe, no written language, nor any certain memorials of their origin: it has, indeed, been afferted by travellers, that a race of wanderers in Diyárbecr yet fpeak the Chaldaick of our feripture; and the rambling Turcmans have retained, I imagine,fome traces of their Tartarian idioms; but, fince noveftige appears, from the gulf of Perfia to the rivers Curand Aras, of any people diftinct from the Arabs, Perfians, or Tartars, we may conclude, that no fuch people exifts in the Iranian mountains, and return to thofe, which feparate Iran from India. The principal inhabitants of the mountains, called Párfci, where they run towards the weft, Parveti, from a known Sanfcrit word, where they turn in an eaftern direction, and Paropamifus, where they join Imaus in the north, were anciently diftinguifhed among the Bráhmans by the name of Deradas, but feem to have been deitroyed or expelled by the numerous tribes of Afgháns or Patans, among whom are the Balójas, who give their name to a mountainous diftrict ; and there is very folid ground for believing, that the Afgbáns defcended from the Jeres; becaufe they fometimes in confidence avow that unpopular origin, which in general they feduloufty conceal, and which other Mufelmans pofitively affert ; becaufe Hazaret, which appears to be the Afareth of Esdras, is one of their territories; and, principally, becaufe their language is evidently a dialect of the fcriptural Cbaldaick.
$W_{E}$ come now to the river $\operatorname{Sind} d u$ and the country named from it: $\ddot{n}$ near its mouths we find a diftrict, called by Nearchus, in his journal, 'Sangada; which M. D'Anville jufly fuppofes to be the feat of the Sangainians, a barlbarous and piratical nation mentioned by modern travellers, and well
known at prefent by our countrymen in the weft of India。Mr. Malet, now refident at Pưna on the part of the Britifl government, procured at my requef the Sanganian letters, which are a fort of Nágari, and a dpecimen of their language, which is apparently derived, like other Indiain dialects, from the Sanfcrit ; nor can I doubt, from the deferiptions, which I have received, of their perfons and manners, that they are Pámeras, as the Bráhmans call them, or outcaft Hindus, immemorially feparated from the reft of the nation. It feems agreed, that the fingular people, called Egyptians, and, by corruption, Gyyfes, paffed the Mediterranean immediately from Egypt; and their motley language, of which Mr. Grellmann exhibits a copious vocabulary, contains fo many Sanferit words, that their Indian origin can hardly be doubted: the authenticity of that vocabulary feems eftablifhed by a multitude of Gypfy words, as angáro chârcoal, cáboth, wood, pár a bank, bhís, earth, and a hundred more, for which the collector of them could find no parallel in the vulgar dialect of Hinduftán, though we know them to be pure Sanfcrit fcarce changed in a fingle letter. A very ingenious friend, to whom this remarkable fact was imparted, fuggefted to me, that thofe very words might have been taken from old Egyptian," and that the Gypfes were Troglodytes from the rocks near Thebes, where a race of banditti ftill refemble them in their babits and fea. tures; but, as we have no other evidence of fo frong an affinity between the popular dialects of old Egypt and India, it feems more probable, that the Gypfes, whom the Italians call Zingaros, were no other than Zinganians, as M. D'Anville alfo writes the word, who might, in fome piratical expedition, have landed on the conft of Arabia or Afica, whence they might have rambled to Egypt, and at length have migrated or been driven into Europe. To the kindnefs of Mr. Malet I am alfo indebted for an account of the Boras; a remarkalle race of men inhabiting chiefly the çities of

Gujarát, who, though Mufelmans in religion, are Feres in features, genius, and manners: they form in all places a diftinct fraternity, and are every where noted for addrefs in bargaining, for minute thrift, and conflant attention to lucre, but profefs total ignorance of their own origin; thougin it feems probable, that they came firft with their brethren the Afgbans to the borders of India, where they learned in time to prefer a gainful and fectire occupation in populous towns to perpetual wars and laborious exertions on the mountains. As to the Moplas in the weftern parts of the Indian em . pire, I have feen their books in Arabick, and am perfuaded, that, like the people called Malays, they defcended from Arabian traders and mariners after the age of Muhammed.

On the continent of India, between the river Vipáfa, or Hypbafis, to the weft, the mountains of Tripura and Cámarúpa to the Eaft, and Himalaya to the north, we find many races of wild people with more or lefs of that priftine ferocity, which induced their anceftors to fecede from the civilized inhabitants of the plains and valleys : in the mof ancient Sanfcrit books they are called Sacas, Cirátas, Cólas, Pulindas, Barbaras, and are all known to Europeans, though not all by their true names; but many Hindu pilgrims, who have travelled through their haunts, have fully defcribed them to me; and I have found reafons for believing, that they fprang from the old Indian fem, though fome of them were foon intermixed with the firt ramblers from Tartary, whofe language feems to have been the bafis of that now fpoken by the Moguls.

We come back to the Indian iflands, and haften to thofe, which lie to the fouth eaft of Silán, or Taprobane; for Silán itfelf, as we know from the ianguages, letters, religion, and old monuments of its various inhabitants,
was peopled beyond time of memory by the Hindu race, and formerly, perhaps, extended much farther to the weft and to the fouth, fo as to include Lancà, or the equinoctial point of the Indian aftronomers; nor can we reafonably doubt, that the fame enterprizing family planted colonies in the other inles of the fame ocean from the Malayadwípas, which take their name from the mountain of Malaya, to the Moluccas, or Mallicás, and probably far beyond them. Captain Forrest affured me, that he found the inle of Bali (a great name in the hiftorical poems of India) chiefly peopled by Hindus, who worfhipped the fame idols, which he had feen in this province; and that of Madburà muft have been fo denominated, like the well known territory in the weftern peninfula, by a nation, who underftood Sanfcrit. We need not be furprized, that M. D'Anville was unable to affign a reafon, why the Fabadios, or Yavadroípa, of Ptolemy was rendered in the old Latin verfion the ifle of Barley; but we muft admire the inquifitive fpirit and patient labour of the Greeks and Romans, whom nothing obfervable feems to have efcaped : Yava means barley in Sanfcrit; and, though that word, or its regular derivative, be now applied folely to Java, yet the great French geographer adduces very ftrong reafons for believing, that the ancients applied it to Sumatia. In whatever way the name of the laft mentioned ifland may be written by Europeans, it is clearly an'Indian word, implying ab:ndance or excellence; but we cannot help wondering, that neither the natives of it, nor the beft informed of our Pandits, know it by any fuch appellation ; efpecially as it fill exhibits vifible traces of a primeval connexion with India: from the very accurate and interefting account of it by a learned and ingenious member of our own body, we difcover, without any recourfe to Etymological conjecture, that multitudes of pure Sanfcrit words occur in the principal dialects of the Sumatians; that, among their laws, two pofitive rules concerning fureties and interefl appear to be taken word for
word from the Indian legiflators $\mathrm{Na}^{\prime}$ red and $\mathrm{Ha}^{\prime}$ ritta; and, what is yet more obfervable, that the fyftem of letters, ufed by the people of Rejang and Lampún, has the fame artificial order with the Dévanágarì; but in every feries one letter is omitted, becaufe it is never found in the languages of thofe iflanders. If Mr. Marsden has proved (as he firmly believes, and as we, from our knowledge of his accuracy, may fairly prefume) that clear veftiges of one ancient language are difcernible in all the infular dialects of the fouthern feas from Madugafcar to the Pbilippines and even to the remoteft iflands lately difcovered, we may infer from the fpecimens in his account of Sumatra, that the parent of them all was no other than the Sanfcrit; and with this obfervation, having nothing of confequence to add on the Chinefe ifles or on thofe of Fapan, Heave the fartheft eaftern verge of this continent, and turn to the countries, now under the government of Cbina, between the northern limits of India, and the extenfize domain of thofe Tartars, who are fill independent.

That the people of Potyid or Tibet were Hindus, who engrafted the herefies of Buddya on their old mythological religion, we know from the refearches of Cassiano, who long had refided among them; and whofe difquifitions on their language and letters, their tenets and forms of worfhip, are inferted by Grorgi iny his curious but prolix compilation, which I have had the patience to read from the firf to the laft of nine hundred rugged pages: their characters are apparently Indian, but their lamguage has now the difadvantage of being written with more letters than are ever pronounced; for, although it was anciently Sanfcrit and polyfyllabick, it feems at prefent, from the influence of Cbinefe manners, to confift of monofyllables, to form which, with fome regard to grammatical derivation, it has become neceffary to fupprefs in common dilcourfe mange
letters, which we, fee in their books; and thus we are enabled to trace in their writing a number of Sanfcrit words and phrafes, which in their fpoken dialeet are quite undiftinguifhable. The two engravings in Giorgi's book, from ketches by a Tibetian painter, exhibit a fyftem of Egyptian and Indian mythology; and a complete explanation of them would have done the learned author more credit than his fanciful etymologies, which are always ridiculous, and often groflly erroneous.

The Tartars having been wholly unlettered, as they freely confefs, before their converfion to the religion of Arabia, we cannot but fufpect, that the natives of Eighúr, Tancút and Kbatà, who had fyftems of letters and are even faid to have cultivated liberal arts, were not of the Tartarian, but of the Indian, family; and I apply the fame remark to the nation, whom we call Barmas,, but who are known to the Pandits by the name of Brabmachinus, and feem to have been the Brachmani of Ptolemy: they were probably rambling Hindus, who, defcending from the northern parts of the eaftern peninfula, carried with them the letters now ufed in Ava, which are no more than a round Nágarì derived from the fquare characters, in which the Paili, or facred language of Buddea's priefts in that country, was anciently written; a language, by the way, very nearly allied to the Sanfcrit, if we can depend on the teftimony of M. Dela Loubere; who, though always an acute obferver, and in general a faithful reporter, of facts, is charged by Carpanius with having mintaken the Barma for the Pali letters ; and when, on his authority, I fpoke of the Bali writing to a young chief of Aracal, who read with facility the books of the Barnas, he corrected me with politencfs, and affured me, that the Palil language was written by the prieftsin a much older character.

Let us now return eaftward to the farthen Afiatick dominions of Rufia, and, rounding them on the northeaft, pafs directly to the Hyperboreans; who, from all that can be learned of their old religion and manners, appear, like the Maffagetee, and fome other nations ufually conffered as Tartars, to have been really of che Gotbick, that is of the Hindu, race ; for I confidently affume, that the Gotbs and the Hindus had originally the fame language, gave the fame appellations to the ftars and planets; adored the fame falfe deities, performed the fame bloody facrifices, and profeffed the fame notions of rewards and punifhments after death. I would not infift with M. Bailuy, that the people of Finland were Goths, merely becaufe they have the word Jhip in their language; while the reft of it appears wholly diftinct from any of the Gotbick idioms: the publifhers of the Lord's Prayer in many languages reprefent the Finnifh and Lapponian as nearly alike, and the Hungarian as totally different from them; but this muft be an crrour; if it be true, that a Ruffan author has lately traced the Hungarian from its primitive feat between the Cafpian and the Euxine, as far as Lapland itfelf; and, fince the Huns were confeffedly Tartars, we may conclude, that all the northern languages, except the Gotbick, hat a Tartarian origin, like that univerfally afcribed to the various branches of Sclavonian.

On the Armenian, which I never ftudied, becaufe I could not hear of any original compofitions in it, I can offer nothing decifive; but am convinced, from the beft information procurable in Bengal, that its bafis was. ancient Perfoun of the fame Indian fock with the Zend, and that it has been gradually changed fince the time, when Armenia ceafed to be a province of Irán: the letters, in which it now appears, are allowed to be comparatively modern; and, though the learned editor of the tract by Carpanius on the literature of Ava, comparcs them with the Pali characters, yet; if they
be not, as Y Mould rather imagine, derived from the Pablavì, they are probably an invention of fome learned Armenian in the middle of the fifth century: Moses of Kboren, than whom no man was more able to elucidate the fubject, has inferted in his hiftorical work a difquifition on the language of Apmenia, from which we might collect fome curious information, if the prefent occafion required it; but to all the races of men, who inhabit the branches of Caucafus and the northern limits of Irán, I apply the remark, before announced generally, that ferocious and hardy tribes, who retire for the fake of liberty to mountainous regions, and form by degrees a feparate nation, muft alfo form in the end a feparate language by agreeing on new words to exprefs new ideas; provided that the language, which they carried with them, was not fixed by writing and fufficiently copious. The Armenian damfels are faid by Strabo to have facrificed in the temple of the goddels Anaitis, whom we know, from other authorities, to be the Na'ríd, or Venus, of the old Perfans; and it is for many reafons highly probable, that one and the fame religion prevailed through the whole em: pire of Cyrus.

Having travelled round the continent, and among the iflands; of $A f a_{i}$, we come again to the coaft of the Mediterranean; and the principal nations of antiquity, who firft demand our attention, are the Greeks and Pbrygians, who, though differing fomewhat in manners, and perhaps in dialect, had an apparent affinity in religion as well as in language: the Dorian, Ionian, and Eolian families having emigrated from Europe, to which it is univerfally agreed that they firf paffed from Egypt, I can add nothing to what has been advanced concerning them in former difcourfes; and, no written monuments of old Pbrygia being extant, I fhall only obferve, on the authosity of the Greeks, that the grand object of myfterious worhip in that
country was the Mother of the Gods, or Nature perfonified, as we fee her among the Indians in a thoufand forms and under a thoufand names. She was called in the phrygian dialect $\mathrm{MA}_{A^{\prime}}$, and reprefented in a car drawn by lions, .. with a drum in her hand, and a towered coronet on her head: her myfteries (which feem to be alluded to in the Mofaick law) are folemnized at the autumnal equinox in thefe provinces, where fhe is named, in one of her characters, $\mathrm{MA}^{\prime}$, is adored, in all of them, as the great Mother, is figured fitting on a lion, and appears in fome of her temples with a diadem or mitre of turrets: a drum is called dindima both in Sanforit and Phrygian; and the title of Dindymene feems rather derived from that word, than from the name of a mountain. The Drana of Epbefus was manifefly the fame goddefs in the character of productive Nature; and the Astarte of the Syrians and Pbenicians (to whom we now return) was, I doubt not, the fame in another form: $\mathbb{1}$ may on the whole affure you, that the learned works of Selden and Jablonski, on the Gods of Syria and Egypt, would receive more illuftration from the Jittle Sanforit book, entitled Cbandi, than from all the fragments of oriental mythology, that are difperfed in the whole compafs of Grecian, Roman, and Hebrew , literature. We are told, that the Pbenicians, like the Hindus, adored the Sun, and afferted water to be the firf of created things; nor can we doubt, that Syria, Samaria, and Pbenice, or the long frip of land on the fhere of the Mediterranean, were anciently peopled by a branch of the Indian fock, but were afterwards inhabited by that race, which for the prefent we call Arabian: in all three the oldeft religion was the Affyrian, as it is called by Selden, and the Samaritan letters appear to have been the farse at firft with thofe of Plenice; but the Syriack language, of which ample remains are preferved, and the Punick, of fwhich we have a clear fpecimen in PLAUTUS and on monuments lately brought to light, were indifputably of a Cbaldaick, or Arabick, origin

The feat of the firt Phenicians having extended to Idume, with which we began, we have now completed the circuit of $A / i a$; but we mult not pafs over in filence a moft extraordinary people, who efcaped the attention, as Barrow obferves more than once, of the diligent ard inquifitive Herodotus: I mean the people of Gudea, whofe language demoriftrates their affinity with the Arabs; but whofe manners, literature, and hiftory are wonderfully diftinguifhed from the reft of mankind, Barrow loads thern with the fevere, but juft, epithets of malignant, unfocial, obftinate, diftruftful, fordid, changeable, turbulent ; and defcribes them as furioufly zealous in fuccouring their own countrymen, but implacably hofile to other nations; yet, with all the fottifke perverfenefs, the fupid arrogance, and the brutal atrocity of their character, they had the peculiar merit, among all races of men under heaven, of preferving a rational and pure fyftem of devotion in the midft of wild polytheifm, inhuman or obfcene rites, and a dark labyriath of errours produced by ignotance and fupported by interefted fraud. Theological inquiries are no part of my prefent fubject; but I cannot refrain from adding, that the collection of tracts, which we call from their excellence the Scriptures, contain, independently of a divine origin, more true fublimity, more exquifite beauty, purer morality, more important hiftory, and finer ftrains both of poetry and eloquence, than could be collected within the fame compafs from all other books, that were ever compofed in any age or in any idiom. The two parts, of which the Scriptures. confift, are connected by achain of compofitions, which bear no refemblance in form or ftyle to any that can be produced from the ftores of Grecian, Indian, Perfian, or even Arabian, learning : the antiquity of thofe compofitions noman doubts; and the unftrained application of them to events long fubfequent to their publication is a folid ground of belief, that they were genuine predictions, and confequently infpired; but, if any thing be
the abfolute exclufive property of each individual, it is his belief; and, $\mathbb{I}$ hope, I thould be one of the laft men living, who could harbour a thought of obtruding my own belief on the free minds of others. I mean only to affume, what, I truft, will be readily conceded, that the firft Hebrese hiftorian muft be entitled, merely as fuch, to an equal degree of credit, in his account of all civil tranfactions, with any other hiftorian of antiquity: how far that moft ancient writer confirms the refult of our inquiries into the genealogy of nations, I propofe to fhow at our next anniverfary meeting; when, after an approach to demonftration, in the frict method of the old analyfis, I hall refume the whole argument concifely and fynthetically; and fhall then have condenfed in feven difcourfes a mafs of evidence, which, if brevity had not been my object, might have been expanded into feven large volumes with no other trouble than that of holding the pen; but (to borrow a turn of exprelfion from one of our poets) " for what I have produc" ed, I claim only your indulgence ; it is for what I have fuppreffed, that I " am entitled to your thanks.

## 11.

## OBSERVATIONS on the Inhabitants of the Garrow

 Hills, made during a Publick Deputation in the Years 1788 and 1789 - By John Eliot, Efq.IN the month of Seprember 1788 I was deputed by Government to in veftigate the duties collected on the Garrow hills, which bound the northeaftern parts of Bengal; and, to conciliate the good will of the people, who had hitherto known no intercourfe with Europeans, fome fcarlet cloth was given me by Government to be diftributed to them.

The mountaineers, who inhabit different parts of India, have been generally confidered Savages, equally unreftrained by law and morality, and watchful to take every opportunity of committing depredations on the low country, pillaging the inhabitants, and deftroying their villages, whenever they could do fo with impunity. At Boglepore however, it has been proved, that the hill people, by good treatment and encouragement, may be in a great degree civilized and rendered at leart peaceable and inoffenfive, if not ferviceable: my obfervation of the character and conduct of the Garrows has induced me to believe the fame good confequences may be expected from encouraging them; but I propofe to relate in plain language what I experienced on my vifit to them, and leave others to form their own judgment; and, as I am the firft European, who has travelled among them, I hall alfo add a few obfervations on the country, and on what attracted my notice as being in any refpect peculiar.

## ON drawing near the hills you have a beautiful fight of three ranges of

mountains, rifng one above another; but on nearer approach they vaniff, except the Gonaffers, the lower range, in appearance infignificantly fmall. The verdure and rich land, however, fully recompence the lofs; and, turn your eye which way you will, you fee fomething to cheer the mind, and raife the fancy, in the numerous fmall villages round about, protected from the heat by a variety of trees interfperfed.

The firft pafs, I went to, was Gbofegong, fituated on the weft fide of the Natie river. Here a great number of Garrows refide at the foot of the. pafs in three villages, Gbofegong, Gbonie and Borack. The head people of: the villages are called Boneabs, a name ufed by the head Rájás in Bengal;, when the king refided at Gour. Whence they derived this name, I could: not learn ; and many other things, which might lead to difcoveries, efcap. ed my knowledge from the want of a good interpreter.

Oodassey Booneah is looked on as the head man of this pafs at prefent, having moft influence with his fect; but the rightful chief is Momee, a woman, and her power being, by eftablifhed ufage, transferable by marriage to her hufbaud, he ought in confequence to prefide; but, from his being a young and filly man, the chiefhip is ufurped by Oodassey, and his ufurpation is fubmitted to by Momee and her hufband. Oodassey however is by no means a violent or artful man. He is far from poffefling a bad difpofition, is a mild man, and by all accounts takes great pains to do juftice, and keep up unanimity with his pcople.

The village Gbojegong is furrounded by a little jungle. On paffing it the village is opened to your fight, confifting of Cbaungs or Houles from about thirty to 150 feet long, and twenty or forty broad,

These Garrows are called by the villagers and upper hill people Counch Garrowes, though they themfelves, if you afk them, of what caft they are, will anfwer Garrows, and not give themfelves any appellation of caft, though there are many cafts of Gerrows, but with what differences I had not time to afcertain.

The foil is of a fine black earth, here and there intermixed with fpots of red earth : its richnefs is plainly feen from the quicknefs of vegetation. The rice is in many places equal to the Benares long rice. The muftard feed is twice as big as any produced in the pergunnahs of Bengal, where I have been, and the oil it produces, is as fuperior to, as the fize of its grain is greater than, any other. The hemp is equally good, but, as to its fuperiority to what may be produced in other pergunnahs, I am unable to fpeak with certainty: as far as I can judge from my own obfervation, the fort brought to the Calcutta market, is not equal to what is produced on the borders of the hills. The pafture for cattle may be claffed next in quality to that of Plafly plain; and this I infer from its being generally known, the Sheerpour and Sufung ghee is nearly as good as that made at Plafy.

There are rivers at the feveral paffes. Thofe of note are the Natie, Mahareefee, Summafierry, and Mabadeo. On the well fide of the Natie is Gbofegong, and on the eaft the Suffor pais. Abrabamabad or Bygombarry is on the eaft fide of the Mabareffee; Augbur, on the eaft of Sunmufferry; and Burradorearrah, on the weft of Mahadeo. Thefe rivers are all of a fandy and gravelly bottom, with much limeftone and iron. The Mabadeo has abundance of coals, the oil of which is efteemed in the hills as a medicine for the cure of cutaneous diforders, and is reputed to have been firft difcovered to the hill people and villagers by a Fakeer. The mode of extracting the
oil is fimple. A quantity of coals are put into an earthen pot, the mouth of which is flopped with lotig grafs by way of ftrainer. This pot is put into a large deep pan perforated at the bottom, fo as $₹ 0$ admit of the neck of the potbeing put through it ; the pan is fupported upon bricks to prevent the neck of the pot from touching the ground, and alfo that a veffel may be placed under the ftrainer as a refervoir for receiving the oil as it drops. The pan is filled with dry cow dung, which is ufed as fuel, and extracts the oil in the courfe of an hour.

There: are but few forts of figh in thefe rivers: turtle are to be had in great numbers, and are always confecrated by facrifice before they are eaten. The hill people are however fully recompenced for the lofs of fifh in the rivers, by the great abundance they get from the neighbouring lakes.

A Garrow is a fout well fhaped man, hardy, aña able to do much work; of a furly look, flat Cáfrz like nofe, fmall eyes, generally blue, or brown, forehead wrinkled, and overhanging eye brow, with large mouth, thick lips, and face round and fhort; their colour is of a light or deep brown; their drefs confifts of a brown girdle, about three inches broad; having in the centre a blue ftripe; it goes round the waift, is paffed between the thighs, and is faftened behind, leaving one end or flap hanging down before, about eight inches; fome times it is ornamented with brafs plates; with rows of ivory or a white fone haped like bits of tobacco, pipes, about half an inch long; the brafs plate is made to refemble a button, or an apothecary's weight, but more indented : fome have it or namented with little bits of brafs, fhaped like a bell; fome wear an orna.. ment on their head about three or five inches broad, decorated in the
fame manner as the flap, ferving to keep their hair off their face, which gives them a wild fierce appearance. Some tye their hair on the crown; in a loofe carelefs manner, while others crop it clofe. The Booneahs or chiefs wear a filk turban; to the girdle they affix a bag containing their money and parens, and alfo a net for holding the utenfils with which they light their pipe hung near to it by a chain.

The women are the uglieft creatures I ever beheld, thort and fquat in their fature, with mafculine faces, in the features of which they differ little from the men. Their drefs confitts of a dirty red cloth, ftriped with blue or white, about fixteen inches broad, which encircles the waift, and covers about three fourths of the thigh. It never reaches to the knee, and being but juft long enough to tie above on the left fide, part of the left thigh, when they walk, is expofed. On their necks they have a ftring of the ornaments above defcribed refembling tobacco pipes, twifted thirty or forty times round, but negligently, without any attention to regularity; their breafts are expofed to view, their only clothing being the girdle abovementioned ; to their ears are affixed numbers of brafs rings, increafing. in diameter from three to fix inches: I have feen thirty of thofe rings in each ear; a flit is made in the lobes of the ear, which increafe from the weight of the rings, and in time will admit the large number ftated. This weight is however partly fupported by a ftring, which paffes over their heads; a tape three inches broad ties their hair, fo as to keep it back from their foreheads, though generally it is tied with a fring on the crown' of the head. The wives of the Booneabs cover their heads with a piece of coarfe cloth, thirteen or fourteen inches broad and two feet long, the end of which, with their hair, hangs down behind, flowing loofe on their backs. The women work as will as the men, and I have feen them cars
as great burthens. Their hands, even thofe of the wives of the Booneabs, bear evident marks of their laborious occupations.

These people eat all manner of food, even dogs, frogs, fnakes, and the blood of all animals. The laft is baked over a flow fire in hollow green bamboos, till it becomes of a nafty dirty green colour. They are fond of drinking to an excefs. Liquor is put into the mouth of infants, almoft as foon as they are able to fwallow; they have various forts of fpirits, but that mofly drunk is extracted from rice, foaked in water for three or four days before ufe. Their cookery is Mhort, as they only juft heat their provifions; excepting rice and guts, the firft of which is well boiled, and the other ftewed till they are black. Indeed excepting thefe, their animal food is eaten almoft raw.

In times of farcity many of the hill people fubfin on the Kebul which in growth is faid to be like the Palmira, and the interior part of the trunk, when pounded, and freeped in water, is an article of food, in fo much as to be the common means of fuftenance during a fcarcity of grain. When boiled it is of a gelatinous fubftance, and taftes when frefh, like a fugar cane: thofe, who can afford it, mix rice with it. They alfo fubfift on the Kutchu, a fort of Yam found in great plenty, about the hills. I faw three forts, though I could not learn they had any feparate name. One has a number of buds on it, is faid to be a cooling medicine, and is eaten boiled or baked. Some of them I brought with me from the hills, and being bruifed in the bafket ufed in bringing them from the hills, I cut off the rotten part, which I found to be of no detriment to their growth, although out of the ground. At Dacca I gave them to Mr. Richard Johnson, who, I underftand, delivered them to Colonel $K y d$, the fuperintendant of the

Company's botanical garden, where, l hear, they have produced a very handfome flower. This plant was cultivated by the Garrowes, nearly in the fame manner, as we do potatoes in England; a bud being broken off to be fown for a plant. The Garrowes fay it yields, after it is dug out of the ground, and laid by for the enfuing feafon of cultivation (commencing im-: mediately on the breaking up of the rains) from three to ten buds. Another fort of Kutchu grows at the tops of the hills, and is found by its fprout, which twifts itfelf round the trunk, and branches of trees. I have feen the fprout from ten to twenty feet high, the leaves have three fegments like a vine leaf; but more pointed : of deep green, and very fmall. The root is found from a foot to two feet and a half below the ground, is in fhape tapering, of a reddifh colour, and in length from five inches to a foot and a half: it is eaten roafted. The other fpecies grows in the fame manner, but is of a dirty yellow colour.

The houfes of thefe Garrows, called Cbaungs, are raifed on piles, about three or four feet from the ground, from thirty to 150 feet in length; and in breadth from ten to forty, and are roofed with thatch. The props of the Cbaung confift of large Saul timbers: in the centre there are eight, and on the fides from eight to thirty : over thele are placed horizontally large cimbers, for a fupport to the roof, and tied faft, fometimes with frings, but Atring is rarely ufed for this purpofe; the tying work being moftly done with flips of grafs or cane. The roof is neatly executed and with as much regularity as any of our Bungalow thatches. When I fay this, however, I fpeak of the Cbaungs of the Booneahs': I went into few of the Cbaungs of the lower clafs. The roof confifts of mats and ftrong grafs. The fides of the houfe are made from the fmall hollow bamboos cut open, flatted; and woven as the common rnats are. The floor is made in the fame man*
ner: but of a ftronger bamboo. The Chaung confift of two apartments, one floored and raifed on piles as defcribed, and the other without a floor, at one end, for their cattle: at the other end is an open platform, where the women fit and work. On one fide alfo is a fmall raifed platform, ufually about fix feet fquare enclofed at the fides and open above: here the children play; in the centre of the Cbaung they cook their victuals, a fpace of about five feet fquare being covered with earth; on one fide a little trap door is made in the floor, for the convenien $-\frac{\text { of the women on certain occafions, }}{\text {, }}$ which creates much filth under their Chaungs. Indeed a great part of their dirt is thrown under the Cbaung, and the only fcavengers I faw, were their hogs; but luckily for them, they have plenty of thofe animals.

Bugs cover their wearing apparel, of the fame fort, as thofe which in feft beds in England: during my journey along the hills I fuffered very much from them.

The difpofition of a Garrow could not be accurately known in the fhort rime, I had to obferve it; yet my intercourfe with them, which was of the moft open nature, will, I think, allow me to fay fomething of it.

Therr furly looks feem to indicate ill temper, but this isfar from being the cafe, as they are of a mild difpofition. They are, moreover, honeft in their dealings, and fure to perform what they promife. When in liquor they are merry to the highelt pitch : then men, women, and children will dance, till they can fcarce ftand. Their manner of dancing is as follows: twenty or thirty men of a row ftanding behind one another, hold each other by the fides of their belts, and then go round in a circle hopping on one foot, then on the other, finging and keeping time with their mulic,
which is animating, though harfh and inharmonious, confifting chiefly of tomtoms, and brafs pans, the firft generally beaten by the old people, and the laft by the children. The women dance in rows and hop in the fame manner, but hold their hands out, lowering one hand and raifing the other at the fame time, as the mufic beats, and occafionally turning round with great rapidity. The men alfo exhbit military exercifes with the fword and fhield, which they ufe with grace and great activity. Their dancing at their feftivals lafts two or three days, during which time they drink and feaft to an exceís, infomuch that it requires a day or two aftere wards, to make them perfectly fober again, yet during this fit of feftivity and drunkemefs they never quarrel.

Marriage is in general fettled amongit the parties themfelves, though fome times by their parents : if it has been fettled by the parties themfelves, and the parents of either refufe their affent, the friends of the oppofite party, and even others unconne气ted, go and by force compel the diffenters to comply ; it being a rule among the Garrows to affift thofe that want their help, on thefe occafions, let the difparity of age or rank be ever fo great. If the parents do not accede to the wifh of their child, they are well beaten till they acquiefce in the marriage, which being done, a day is fixed for the fettlement of the contract, or rather for a complimentary vifit from the bride to the bridegroom, to fettle the day of marriage, and the articles, of which the fealt Thall confift, as well as the company to be invited; and they then make merry for the night. The invitations on thefe occafions are made by the liead man of a Cbaung fending a poun to the inhabitants of another Chaung, as they cannot invite one out of a Cbaung without the reft: the man who carries the paun, ftates the purpofe for which it is fent, and the next day an anfwer is made, if the invitation be accepted, but not
otherwife, as they never wifh to give a verbal refufal ; and therefore, if no body returns the next day, the invitation is underftood to be refufed.

On the nuptial day, the parties invited go to the bride's houfe; it being the cuftom among the Garrowes for the bride to fetch the bridegroom: when the wine, \&c. are ready, and all the company arrived, they begin finging and dancing, and now and then take a merry cup; while a party* of the women carry the bride to the river, wafh her, and on their return home drefs her out in her beft ornaments; this completed, it is notified to" the company, and the mufic ceafes: then a party take up the wine, provifions, drums, pans, and a cock and hen, and carry them to the bridegroom's houfe in proceffion; the cock and hen being carried by the prieft, after which, the bride follows, with a party of women, walking in the centre, till fhe arrives at the bridegroom's houfe, where the and her party feat themfelves in one corner of the Ckaung near the door; the remaining vifiters then proceed to the bridegroom's houfe, and the men fit at the further end of the room, oppofite to the women; the men then again begin. finging and dancing; the bridegroom is called for ; but, as he retires to another Choung, fome fearch is made for him, as if he were miffing, and; as foon as they find him, they give a fhout; they then carry him to the river, wafh him, return, and drefs him in his war-drefs; which done, the women carry the bride to her own Cbaung, where fhe is put in the centre; and, notice of this being brought to the vifiters at the bridegroom's houfe, they take up the wine, \&c. and prepare to go with the bridegroom, when his father, mother, and family cry and howl in the moit lamentable manner, and fome force is ufed to feparate him from them. At laft they depart, the bride's father leading the way, and the company following one by one, the bridegroom in the centre. On entering the bride's Cbaung, they make
general fhout, and place the bridegroom on the bride's right hand, and then fing and dance for a time, till the prieft proclaiming filence, all is rquiet; and he goes before the bride and bridegroom, who are feated, and afk fome queftions, to which the whole party anfwer Nummab or good : this continues a few minutes, after which, the cock and hen being brought, the prieft takes hold of them by the wings, and holds them up to the company, afking them fome queftions, to which they again reply Nummab; fome grain is then brought, and thrown before the cock and then, who being employed in picking it, the prieft takes this opportunity, to ftrike them on the head with a fick, ro appearance dead, and the whole company, after obferving them a few feconds, call out, as before; a knife being then brought, the prieft cuts the anus of the cock, and draws out the guts, and the company repeat Nummaib, after which he performs the fame operation on the hen, and the company give a fhout and again call out Nummah. They look on this part of the ceremony as very ominous; for, fhould any blood be fpilt by the firf blow, or the guts break, or any blood come out with the guts, it would be confidered as an unlucky marriage. The ceremony being over, the bride and bridegroom drinking prefent the bowl to the company, and then they all feaft and make merry.

I dicovered thefe circumfances of the marriage ceremony of the Garrows, from being prefent at the marriage of LUNGREE, youngef daughter of the chief Oodassy, feven years of age, and Buglun, twenty-three years old, the fon of a common Garrow; and I may here obferve, that this marriage, difproportionate as to age and rank, is a very happy one for BugLun, as he will fucceed to the Booneabhbip and eftate; for among all the

[^0]Garrows, the youngef daughter is always heirefs, and if there be any other children, who were born before her, they would get nothing on the death of the Dooneah: what is moreftrange, if Buclun were to die, Lungree would marryone of his brothers; and, if all his brothers were dead, fhe would then marry the father ; and, if the father afterwards fhould prove too old, fhe would put him afide, and take-any one elfe, whom the might choofe.

The dead are kept for four days, burnt on a pile of wood in a Dingy or fmall boat, placed on the top of the pile, and the afhes are put into a hole dug exactly where the fire was, covered with a fmall thatch building and furrounded with a railing: a lamp is burnt within the buidding every night, for the face of a month or more; the wearing apparel of the deceafed is hung on poles fixed at each corner of the railing, which; after a certain time (from fix weeks to two months) are broken, and then allowed to hang downwards till they fall to pieces : they burn their dead within fix or eight yards of their Chaungs, and the ceremony is performed at exactly twelve o'clock at night ; the pile is lighted by the neareft relation: after this they feaf, make merry, dance and fing, and get drunk. This is however the ceremony to a common Garrow. If it be a perfon of rank, the pile is decorated with cloth and flowers, and a bullock facrificed on the occafion, and the head of the bullocie is alfo burnt with the corps: if it be an upper hill Booneab; of common rank, the head of one of his flaves would be cut off, and burnt with him; and, if it happen to be one of the firf rank Booneabs, a large body of his flaves fally out of the hills, and feize a Hindú, whofe head they cut off and burn with their chief. The railed graves of Boonealss are decorated with images of animals: placed near the graves, and the railing is often ormamented with freth flowe cis.

Therr religion appears to approximate to that of the Hindus: they worfhip Mahadeva; and at Baumjaun, a pafs in the hills, they worfhip the fun and moon. To afcertain which of the two they are to worflip upon any particular occafion, their prieft takes a cup of water and fome wheat: firf calling the name of the fun, he drops a grain into the water; if it finks, they then are to worhip the fun; fhould it not fink, they then would drop another grain in the name of the moon, and fo on till one of the grains fink. All religious ceremonies are preceded by a facrifice to their God of a bull, goat, hog, cock, or dog; in cafes of ilinefs, they offer up a facrifice in proportion to the fuppofed fatality of the difemper, with which they are af. flicted; as they imagine medicine will have no effect, unlefs the Deity interfere in their favor, and that a facrifice is requifite, to procure fuch inserpofition.

THE facrifice is made before an altar confructed as follows: two bamboos are erected ftripped of all their branches and leaves, except at the extremity of the main ftem, which is left: a ftick is fixed near the top of each, to which is tied, at each end, a double fring, reaching to two fide bamboos about two feet out of the ground with the tops fplit, fo as to make a kind of crown ; between the frings are placed bits of ficks of about a foot in height, at the diftance of a foot from each other, or more, in proportion to the height of the bamboos. The crofs fticks thus form a fquare, with the perpendicular Atrings ; and in every other fquare, crofs ftrings are tied, beginning with the top fquare: round the bamboos a fpace of fix or eight feet fquare is cleared, and covered with red earth, and in front, at the diffance of about fix or more feet, a fquare of two feet is cleared, in the centre of which a fmall pit is dug, and fpread over with. sed earth; at fome diftance from the altar, on the nie nearent the hills,
two fplit bamboos are bent into an arch, with the ends in the ground, fo as to form a covering; under this, a fmall mound is raifed, and a little thatched building erected over it, open at the fides, under which fome boiled rice is placed. When thus much is prepared, the prieft approaches the little pit; and the people affembled ftand behind him. He then mutters fomething to himfelf; when the animal intended to be facrificed is brought, and the head cut off by the prieft over the pit, fome holding the head by a rope ; and others the body : if the head is not taken off at one blow, it is reckoned unlucky. The blood is collected in a pan, carried to the covered arch, with the head of the animal, and put by the fide of the mound. A lighted lamp is then brought, and put near the animal's head, when the whole company bow to the ground, and a white cloth is drawn over the arch, it being fuppofed their God will then come, and take what he wants; a fire is alfo kept burning during the ceremony between the altar and arch. An hour after, the covering is taken off; the provifions therein placed, with the animal, are dreffed for the company; and they make merry.

When a large animal is to be facrificed, two faves are put by the fide of the pit, fo as to place the animal's neck between them: a bamboo is tied under his neck to the flaves, to prevent his head from falling to the ground: he is then ftretched out by ropes, fixed to his legs; and his head is fevered by the ftrongeft man among them.

Therr mode of fwearing at Gbofegong is very folemn: the oath is taken upon a ftone, which they firf falute, then with their hands joined and uplifted, their eyes fteadfaftly fixed to the hills, they call on Mahade'va in the moft folemn manner, telling him to witnefs what they declare, and
that he knows, whether they feak true or falfe. They then again touch the ftone with all the appearance of the utmoft fear, and bow their heads to it, calling again upon Mahade'va. They alfo during their relation, look ftcadfaftly to the hills and keep their right hand on the ftone. When the firt perfon fwore before me, the awe and reverence, with which the man fwore, forcibly ftruck me : my Moberrir could hardly write, fo much was he affected by the folemnity. In fome of the hills they put a tiger's bone between their teethl, before they relate the fubject to be depofed : others take earth in their hand'; and, on fome occafions, they fwear with their weapons in their hands. I underftand their general belief to be, that their God refides in the hills; and, though this belief may feem inconfiftent with an awful idea of the divinity, thẹfe people appeared to ftand in the utmoft awe of their deity, from their fear of his punifhing them for any mifcon. duct in their frequent excurfons to the hills.

Their punifhments confift moftly in fines: The Booneabis decide on all. complaints, except adultery, murder and robbery, which are tried by a general affembly of the neighbouring chiefs, and are punifhed with inftant death. As the money collected by fines was appropriated to feafting and drunkennefs, I wifhed to fee, if I could induce them to give over this mode of punifhing ; but they told me plainly; they would not allow me to interfere ; yet, as I had been very kind to them, when a man was to be punifh. ed with death, they would let me know.

When any thing particular is to be fettled, they all affemble in their war-drefs, which confifts of a blue cloth, (covering part of the back and: tied acrofs at the breaft, where the four corners are made to meet) a ihield, and a fword: they fit in a circle, the fword fixed in the ground
before them. Their refolutions are put into immediate execution, if they relate to war; if to other matters, they feaft, fing, dance, and get drunk.

Their chiefs debate the fubject of deliberation, and their wives on thefe occafions have as much authority as the chiefs. This I had an opportunity of feeing, when I fettled the revenue they had to pay, having told them, they would be well protected from any oppreffion, while under me, and that no more fhouid be taken from them, than was finally fettled : fome of the chiefs wifhed to pay an inadequate fum, when MOMEE, wife to the principal chief, rofe, and fpoke for fome minutes, after which the afked me if I declared the truth to them, and on my replying in the affimative, they agreed to the revenue I demanded: Sujani, wife of another chief, then came to me, and told me, I had heard what the had fuffered from the oppreffion of the Zemindars, and begged, with tears is her eyes, that I would get jufice done to her. I made a particular inquiry into her corplaint, and made the Darogah of the país refore her cattle; and fo much confidence had they at laft in me, that they requefted I would make a fair divifron of their lands, which they would never fuffer the Zemindar or his people to do.

Their mode of fettling their proportions of payments, \&c. is by fticks : each of the inferior Garrowes places as many fticks in a pan, as he can give of the article required: the whole are then counted, and the deficiences made up by the Booneabs: all their accounts alfo are kept by fticks, as well as their agreements.

Ihave before faid, on occafions of illnefs a facrifice is made to the deity: I endeavoured to find out what medicines they ufe, but I cannot fay I have
been fuccefsful in this material point: I imagine however, they muf have Some valuable plants, from the many great cures that appear to have been effected in wounds. The neem leaf feems to be much ufed in inflammas tions, and blue vitriol is applied to frefh wounds : this laft medicine apo pears to have been introduced by the natives of Bengal: charms and fpells are common among the Garrozes. The tiger's nofe ftrung round a woe man's neck is confidered as a great prefervative in child bith : they aver, it keeps off giddinefs and other diforders confequent on this event. A womar for nearly a month before her time is not permitted to fir out of her Cbaung: fix days after delivery fhe and her child are carried to the tiver and bathed.

The fkin of the fnake called the Burrawar is efteemed a cure for exter: nal pains, when applied to the parts affected.

Inocuiation is common among the Garrores, but this appears to have been only of late years, and was introduced among them by Joynarain Zemindár of Sheerpour, through the interference and recommendation of fome of the hill traders, who, having been in the hills at a time when the Garrows were afflicted with this fatal diforder and dying without being able to affift themfelves, perfuaded the chiefs to fend a deputation to the Zemizdar, and he fent them his family doctor, who is reprefented to:have been very capable, and by his fkill introduced inoculation among the Garrowss and this induced them to provide themfelves yearly with an inaculator, whom they reward in the moft liberal manner, and take as much care of, while he refides among them, as if he were their father. The inoculator is obliged to obtain from the Zemindar a funnud permitting him to go into the hills, and for which he pays a very handfome fee; but the Zosmiair is very
cautious whom he permits to go into the hills to officiate on thefe occafions.

Among the Garrows a madnefs exifts which they call transformation into a tiger from the perfon who is afflicted with this malady walking about like that animal, fhunning all fociety. It is faid, that, on their being firft feized with this complaint they tear their hair and the rings from their ears, with fuch force as to break the lobe. It is fuppofed to be occafioned by a medicine applyed to the forehead; but $F$ endeavoured to procure fome of the medicine thus ufed without effect: I imagine it rather to be created by frequent intoxications, as the malady goes off in the courfe of a week or a fortnight; during the time the perfon is in this fate, it is with the utmoft difficulty he is made to eat or drink. I queftioned a man, who had thus been afflicted, as to the manner of his being feized, and he told me he only felt a giddinefs without any pain, and that afterwards he did not know what happened to him.

The language of the Garrowes is a little mixed with the Bengáli: a few words of it I annex; I had made a tolerable collection for a vocabulary, but unfortunately 1 loft it, by one of my boats finking in the Berbampoorer.

At the foot of the hills refide a caft of people called Hajins; their cule toms nearly refemble the Garrows; in religious matters they partake more of the Hindus, as they will not kill a cow: their habitations are built like the houfes of the ryotts in general, but are better made, enclofed with a court yard, kept remarkably neat and clean, the railing made of bamboos fplit, flatted, and joined together ; the ftreets of their villages, equal the neatnefs of their houfes. The men are of a dark complexion, well made and ftout ; their face nearly refembles the Garrow, though rather of a milder look; their drefs is the fame as that of the head peafants in Bengal, confifting of a Dootee, Egpautah and Pugree, or waift-cloth, mantle, and turband.

The women are remarkably neat and clean: their drefs confifts of one cloth, made to go near twice round the body and to hang in folds, down to the ankle,covers their breafts, and paffes under their arms, and the ends are tucked in as the waift-cloth of the natives of Bengal : their hair is tied on: the crown, and they have ear rings in the fame manner as the Garroze women, but no neck ornament.

THis is the fum of the obfervations, which my fhort fay with the in habitants of the Garrow hills enabled me to make on their manners and cuftoms. I have written feparately an account of my journey at the foot of the hills to the different paffes, where their trade is carried on, from which fome further information may be derived of their conduct and character; bue I am confcious that my remarks defcribe them but imperfectly, and found my only hope of their proving acceptable on the people, to whom they selate, having hitherto been wholly unnoticed: they may alfo perhaps. lead to more accurate inquiries hereafter.

## TOTHE PRESIDENT.

## DEAR SIR,

INOW have the pleafure to inclofe a copy, written with a fylus on five palmyra-leaves, of the engraving on copper-plates preferved in the great pagoda of Conjevaram: the language is the Dévavani; and the character, Dévanágarì. Two perfons only at this place can read and expound them: shey contain an account of the divifion of lands, \&c. in this country -Thus have I taken the liberty to trouble you with matters, which may, or may not, prove of confequence : they, who are able to judge of them, muft dee termine. Should any good arife from thefe conmunications, my merit will be only that of the llave, who digs from a mine the rough diamond, which others, of fuperior fkill and capacity, cut and polifh into its full luftre and value.

遇am, DEAR SIR, .

Your moftobedient humble fervant.

ALEXANDER MACLEOD.

Conjevarams, Abril 7, i79r.

## III.

## A Royal Grant of Land in Carnáta. - Communicaied by

 Alexander Macleod, Efq. and tranflated from the Sanfcrit by the President.Profperity attend you?<br>Adoration to Gane'sa!

$$
S T A N Z A S
$$

"ADORED be the God Sambhu, on whon the city of the three worlds refted in the beginning as on its main pillar, and whofe lofty head is adorned with a crefcent, that kiffes it, refembling the point of a waving Chámara !

$$
N O T E
$$

THe comparion is taken from the image of an Indian prince, fanned by an officer, who ftands behind him; with the tail' of a Chamara; or wild cow, the hairs of which are exquifitely fine and of a pale yellow tint. Sambhu is Maháde'va.
2. May the tulk of that boar, whofe form was aflumed in fport by Heri, when the raifed earth was his gorgeous umbrella with Hémádri (or the golden mountain) for the ornament of its top, be a ftaff to keep you. fecure !

$$
N O \Psi E:
$$

Vishnu, in his third incarnation, is allegorically reprefented as a boar, the fymbol of ftrength, fupporting our globe on his tufk, which is here compared to the ftaff of a Cb'batra, or Indian umbrella. The $C b^{2} h a t r a s$ of rich men have an ornament of gold on their fummits, called a Colofa, to which the soyal bard; who wrote the grant, compares the mountain $S$ annéry, or the Nortir-pole.
3. May the luminous body of that Sod, who, though formed like an elephant, was born of Pa'rvati, and is revered even by Heri, propitioufly difpel the gloom of misfortune:

$$
N O T E
$$

Tre bodies of the Finduy gods are fuppofed to be an ethereal fuffance refembling lighe ; and GANE'sA, or the divine Wifdom perfonified, is reprefented with the head of an eleplayt: his mother was the daughtes of the mountain Eimalaya. This couplet is in the fyle called yamaca, where fome of the woids have different meanings, but are applicable; in all of them, to the reft of the fintence : thus Agaja, or muntaino bofn, may fignify the goddefs Pa'rvati', but it alfo mieans not a femsle clifibant; and Heri, o: Visar Nu, may be tramfated a lion, of which elephants are the natural prey.
4. There is a luminary, which rofe, like freh butter, from the ocean of milk churned by the gods, and feattered the gloom from around it.

## NOTE.

Arter the uffalifanzas, called mangala; or aifpicious, we are prefented with the pedigree of the donor, beginning with the Moon, who, in the fecond incarnation of VisHnu, was produced from the fea milk. A comparifon of the moon to butter muft feem ridiculous to Europeans; but they fhould confider, that every thing, which the cow produces, is held facred by the Hindus; and the fimile is confiftent with the allegory of a milky ocean cburned by the deities.
5. The offispring of that luminary was Budha, or the Wiie, with reafon fo named from his unequalled acts of devotion and eminent virtues: the fon of Budha was Puru'ravas, by the force of whofe arm the lives of his foes were deftroyed: his fon was A'yus; his, Nahusha; his, the hero Y'Y ${ }^{\prime}$ 'тI, famed through the world in battle; and from him, by his happy confort Dévayání, came Tu'rviasu equal to a God.

## NOTE.

This pedigree is conformable to the Puránas. Bydaa was probably an oid philoiopher and legillator, highly revered, while he lived, and fuppofed after his death to prefide over the planet Mercury; while his father (if that be not an aftronomical fable) was conceived to be regent of the Moon : he gives his name, like the WODEN of the north, to the fourth day of the week. The original epithet of the lat king, named in this verfe, is Vafunibba, or cqual to a Vafu, but the jingle of fyllables, which the Indian poet meant as a beauty, is avcided in the tranflation: a $V a / u$ is one of the eight divinities, whoform a gana, or affemblage, of Gods; and there are nise of thofe ganaso
6. In his family was born De'vacijfa'ni; and in his, Timma, ero vereign celebrated among thofe of equal defcent, like Vrishnis among the children of YADU.
NOTE

If Tulavinda be the true reading in the fecond hemiftich, it muft be the name of a kingdom: but we muft beware of geographical errcurs, leit the names of countries, which never exifted, fhould find their way into maps. Yadu was another fon of Yayatic; and Crishna defcended from him through Vriouni, whence the Shepherd God is named Yédava, and Várfonéya.
7. From him frang Bhoccama'ja'ne, a ruler, who cherimed the world; a gem on the head of kings, not fpreading terrour around, but gleaming with undiminifhed brightners.
8. He lived with delight; and De'vacínandana, the king who gave felicivy to mankind, frang from him, like the God of Love from the fon of Dévaci:

## NOT\&

Ca'madeya, or the God of Love, was born in one of his incarnations as the fon of Carsara, whofe real parents were De'vaci' and Vasude'va: in that birth Ca'ma took the name of Praddyumaa, and was father of Anizuddat, whofe adventures with Usha' are the fubject of a beautiful tale and a very interefting Crama.
9. In many places, of which Raméforara was the firt, renowned for various exertions of virtue, he diffributed, as the law ordains, with a joyful heart again and again, a variety of gifts around the fhrines of the deities; attaining fuch fame on earth, that the inhabitants of the threc worlds expanded it in triumphant fongs.

$$
N O T E
$$

Ranes'swara near the fouthern extremity of the ladian continent, received ite name and fanctity from
the foentb incarnation of $\mathrm{V}_{1 s \mathrm{AN}} \mathrm{V}$ in the form of RA'ma. This ninth couplet is written in a finguar metre: with rhimes in the middle of each divilion:

> Vividha fucritól dámé rámé fwara pramuc'hé muhur,
> Muditahridaya $f t^{\prime}$ bámés ft'báné vyadhatta yat'há vidai
> Vibuthaperitó nśná dáná niyah bhavi hodáfá,
> 'Tribhuvanajanól ótamn $\sqrt{p}$ '/atam yafah punaruddhayan.

If fánè be the corrcat reading, it means a facred bathing-place; and if foórafa be properly written at: she end of the third line, it may imply, that the royal doanioas were made to fixteen temples; or that the principal donations were fixtcen.
ro. Hz fhone forth confpicuoully, having rapidly bound the Gávérì. by raifing a bridge over that receptacle of tumultuous waters; and having, by the ftrength of his arm, made Jivagra'ha captive in battle, he appointed that kingdom, of which the name begins with Sríranga, as the feudal territory of his prifoner, but fubject to his own dominion paramount : he was praifed, even to the end of his career, by the three peopled worlds, who heard the whole extent of his fame.

$$
N O T E
$$

Jivagraha feems to be the proper name of a prince, whofe dominions lay beyond the Cáverie the word means the Seizer of Life. . Among the many epithets of the god Siva we find Ranga; and Sriranga pattan, or a city dedicated to him, is the capital of Mabeffwar, fo called from another name of the deity. Thofe appellations are in fome meafure preferved to this day; but the ancient name of $T_{\text {ravancers }}$. was Mallára.
11. Having conquered the regions of Cbéra, Chóla; Pánjya, fubdued the king Madhurivallabha, whofe chief ornament was his loftinefs of: mind, taken Vi'ryódagra prifoner, vanquifhed the king Gajapett, of Lord of Elephants, and other fovereigns, he became univerfally celebrated from the northern banks of Gangà to Lancà (the equinoctial point), from the verge of the firt, or eaftern, to that of the laft, or weftern, mountain, and placed his awful behef, like a chaplet of flowers, over the heads of the mightieft potentates.

## $N O T E$.

Two Brábmens, who perufed this couplet, propofed to read Pándja, of which they had before heard, inftead of Pánjya, which appears in the tranfeript. Had Madburá been written inftead of Maíhurí, there could have been little doubt, that it meant one of the fouthern kingdoms : one of my Pandits thinks, that it means Madura.
12. From that chief of lion-like men, by two queens Tipwa'ji' and Nagará, as from Dasarat'ha by the divine Causalya' and SumiTRA',
13. Sprang two valiant, yet modeft, heroes, like the two princes Rama and Lacshmana, named Viranrisinhendra and Crishnaraya, both lords of the earth.
14. The famed Viranrisinha, having taken his feat in Vijayanagar on a throne blazing with gems, far furpaffed in glory and policy the ancient kings Nriga, Nala, Nabusha, and, confequently, all other monarchs on earth : from the fouthern bridge to Suméru, the mountain beautifully extended on this globe, and from the eaftern, to the fartheft extremity of the weftern, hills, he dwelled in the hearts of mankind, and governed his realms with mild fway,

$$
N O T E .
$$

All the kings, named in the three preceding flanzas, are celebrated in the heroick poems of India; and Vijayanagar, or the C:ty of Conquef, is very generally known. The epithet avanifutanutah, which, if, it be the fifth cafe, agrees with Sumeri, may agree, in the firf cafe, with the hero, and fignify applauded by the for of the earth, that is by Mangala, or the planet Mars, who gives his name to the ibird day of the Indiare and Gothick weeks. Trivedi Servo'ru contends, that it means, praifed ty the fons of the cartb, or by all wen born on it.
15. He offered many prefents in the Golden Court, in the temple of the three-eyed God, in the city of him, whom Ca'lahastri owns as her lord,
on the mountain Véncata, in Cáncliz, on the two mountains of $\mathrm{SRI}_{\mathrm{r}}$ and Sóna; in the great Ahrine of Herihera, at Ságarafangama, Sríranga, Cumbbucóna, Niverti, and Mubánandi, that place of pilgrimage, by which the gloom of fin is difpelled,
16. At Gócarna, at $\mathrm{RA}^{\prime}$ 'ma's bridge, and in numberlefs places famed in this world for their virtue: the waters of the fea were dried by the duft fcattered from the hoofs of his galloping fteeds, and the earth herfelf was oppreffed and difturbed by the God, who grafps the thunder bolt, and who. felt pain from the obftruction of the ocean, until multiplied force was refo tored to the world by the abundant ftreams of his immenfe liberality.

NOTE.

The holy places, enumerated in thefe two flanzas, are all well known to the Pandits, exeept Niverti : the correctinefs of the reading may, therefore, be fufpected.. Hábala, which my Nágari.uriter pronounces to be the name of a river; and which one of my three Pandits knows to be a place of pilgrimage, appears on ve palm-leaf, but Ságara is written above it : if two difina places are intended, we find fixteen in all . agreeably to the ninth ftanza. The firft meridian of the Hindus paffes through the city of $U_{j j a y i n i}$, of which we know the pofition; but, as Lanca, therefore, falls to the weft of Sil's, which $\mathrm{Ra}^{\prime} \mathrm{m}_{\mathrm{a}}$ 's bridge feems to mark as the kingdom of Ra'van, the Indians believe, that the ifland had formerly a much larger extent; and it has been afferted, that appearances between St!ar and the Maldives in fome degree juftify that belief: Maldive is, moft probably, a corruption of Malayadwipa, from the promontory of Malaya on the continent. of India.

In the following veries, which I seccived from a venerable Antonomer, Cánchi alfo appears in the firf meridian, and Ujjayini feems, diftine from Abanti, though fene authors infift, that they are one snd the fame city.

> Bhámedhya réc'há canacádrilancía smedhyafthadéfáh cila vatfagulmau, C'ánchí, farah fannihitam, curúnám crhétram tat'há pajjanicápyabantís. Sitáchalaschójjayiní che déva canyá che róhítaca gargarátauu.

[^1]17. Tre gifts, which he fpread around, were 1. a Brabmándia, or Mundane Egg, 2. a Circle of the Univerfe, 3. a Vafe reprefenting the five elements, 4. a Cow formed of gems, 5 . a figure of the feven feas, 6. two fprigs from the Tree of Ages, 7. a golden Ca'madhe'nu, or celeftial Cow, 8. a terreftrial fphere made of gold, 9. a chariot and horfes of the precious. metals, io. a man's weight of gold, ir. a thoufand images of cows, 12. a golden horfe, i3. an image of Brahma', 14. a golden car, 15. a plough of gold complete in its five parts, 16. a car drawn by elephants of the fame metal.

## NOTE.

If all this be not a wild poetical exaggeration, and if fuch prefents were often made by the Hindu princes, the Mogh's, win foon after conguered moft of the fouthern provinces, mull have plundered the Hindz tensples of inanacife treafures.
18. He was eminently wife, and ruled with undiminifhed magnificence ; and, when he afcended, with the cordial acquiefcence of INDRA, to a celefvial manfion, leaving behind him the reputation of a king, who refembled in his great qualities, that ruler of the firmament,
19. Then the king Crishnara'ya, with irrefiftible power; bore the round earth on his arm like a bracelet of gems.

## NOTE.

This prince, the donor of the land, was probably the younge: brother of Vizherpistsiat, who died, it Seems, without male iffue.
20. The Gods had apprehenfions, in the beginning of time', that the glory of fo great a monarch would rapidly diffufe one vaft blaze over the univerle, and leave them without marks of diftinction : thence it was, that

Purári affumed a third eye in his forehead; Pedma'csha, four arms ; Atmabhu four faces; that Ca'lì held a cimeter in her hand; Ramà, a lotos flower; and V.A'ni, a lyre.

$$
N O T E
$$

The fix names in the text are appellations of the Gods Maha'de'va, Vishnu, Brabma', and the Goddefes Durgá, Lacshmi', Sereswati: : they fignify, in order as they occur, the foe of Pura or Trripura, the Lotos-eyed, the Self exiling, Female Time, the Delightful, and Speech.

2I. In the midft of his affembled foes, he darts a confuming fire kindled by his wrath. Oh! what faid I? He dries up the feries of feven oceans with the duft and fand of the whole earth trampled on by the cavalry of his numerous armies, and prefently forms a new range of feas, blazing with his meafurelefs glory, by the unbounded ftreams of thofe noble gifts, among which the firft were a Mundane Egg and a golden figure of Meru.
22. "May you long enjoy entire here below the felicity and wealth " beftowed on you by me!" Thus bleffing mankind, and well knowing the general obftacles to an afcent in the car of the fun towards the manfion of the gods, he diftributed in all regions of the world thofe obelifks, which confer celebrity, and on which encomiaftick verfes are engraved by the goddefs of abundance herfelf, that they might become the lafhes of whips to quicken the horfes of the mountains.

$$
N O T E:
$$

The extravagant imagery in this couplet is connected with the old Indian cuftom of raifing pillars to perpetuate the memory of great events, and with the belief of the Hindus, that the fouls of good men pafs through the fun to their feat of happinefs. Although the Conumns of Viciory, as they are called, were monuments of kingly pride or of courdy adulation, yet the poet infinuates, that the donor intended to facilitate a paffage to heaven for thofe whom he had enriched on earth; and the mountains are animated, to become the horkes of the fun's car and to be lanked by the royal obelifks.

Other columns were erected, perhaps, as Gnomons, and others, poffibly, to reprefent the phallus of Iswa. 3A, but thofe called Gayaftambhas, or Pillars of Vifory, fome of which remain to this day wihh metrical infcriptions, are moft frequently mentioned by the ancient poets of India.
23. He proceeded continually, as the law prefcribes, for the attainment of greatnefs and profperity, to all the terreftrial feats of the Gods and places of pilgrimage, the firft of which were Cánchì, Srífaila, mount Sóna, Canacafabbà, or the Goldè Court, and Véncatadri; where he difpenfed many offerings, as a man's weight of gold, and the like, together with all the fmaller oblations, which are fecified in the $A^{\prime}$ gama.

## NOTE.

Thb $A^{\prime}$ gama is a myfterious book, or fet of books, part of which has been communicated to me by a Sannyási of Mal'bura: : it is fo named, becaufe it is believed to have come from the mouth of $S_{1 v} A_{A}$, as the Vedas proceeded feverally from the four mouths of Brahmá. The fame word means alfo the Véda.
24. When he is enraged, he becomes a rod to puniffi guilty fovereigns: when he affumes the arm of Se'sha, he acts as the chief preferver of this globe: he.fmiles with a placid cheek, when junt princes addrefs him: but rages in battle, when he relieves oppreffed nations who afk his pro. tection.

$$
N O T E_{0} .
$$

$\mathrm{S}_{\mathrm{E} \text { 'sha }}$ is the king of Serpents, the couch of Vishnu, and the fymbol of Eternity. The meafure of this shimed couplet is dactylick, and each of its four divifions begins and ends with a fimilar found; as,

Róba critah pretipárt'hiva danda ${ }_{2}$.
Tójba cridart'hißhu yò rana chanda。.
25. Justly is he ftyled Rájádbiraja, fince he is the fupreme ruler of rulers, cffering a mild cheek to the princes of Muru, but filling other kings with terrour.

The phrafe rásaraganda occurs both in this, and in the preceding, fianza. Ráya means a king, nnt in Sarfcrit, but in a popular idiom; and the whole phrale may be a title in the vulgar dialect of Carnála. It is here preceded by Müru, which we fhall find again towards the end of the grant, and which may, or may not, be the name of a country. Not one of the three Pandits, who were confulted on the meaning of the words Múru and Ragando, could throw any light on them; cxcept that Müru is a territory, of which the derivative is Maurava.
26. He is a deliverer of thofe Hindu princes, who act like beneficent genii, but a deftroyer of thofe, who rage like fierce tigers: thence he receives due praifes, with the title Jirapratapa or the glory of heroes, and other fplendid epithets.

$$
N O T E:
$$

"Tez word Hindti is applied likewife in a verfe of $\mathrm{C}_{A^{\prime} \mathrm{L} 1 \mathrm{D}} \mathrm{A}^{\prime \prime}$, to the original inhabitants of this country; but the Pandits infift, that it is not Sanfcrit. Since the firit letter of it appears to be radical, i: cannot be derived from Indu, or the moon; but, fince a fibilant is often changed into an afpirate, it has been thought a variation of Sindbu or Indus: to that etymology however we may object, that the latt confonant alfo muft be changed, and that Sindlus is the name of a river, not of a propleo.
27. He is revered by the kings of Anga, Benga, Calinga, and others, who exclaim: "Look on us, mighty potentate! Live, and conquer!"

## NOTE.

Anga was the ancient kingdom of Carna, including the diftris of Bhágalapura: to the eait of Gauras or the Land of Sugar, to which we give the name of Bengal, lies Benga properly fo named. Calinga, a word known to the Greeks, is the country watered by the Gbdáverl.
28. Exalted with praifes by the wife, the king Crishnara'ya fits on a throne of gems in Vijayanagar, furpaffing in the practice of moral virtue Nriga and other monarchs: from the centre of the eaftern, to that of the weftern, mountain, and from Hémádri to the fouthern bridge, he thines with tranfcendent glory, difpenfing riches and felicity through the world.
29. One thoufand four hundred and forty eight years of the Sacaibda, or

30. In the year Fyay, in the month of Pufloy, when the fun was entering Macara, in the derk fortnight, on the day of BHrigu, and on that wenerable tit'hi, the tenti. of the moon;

3x. I'NDFR the conftellation $J^{\prime}$ 'sáach $^{2} h a ́$, at a time productive of good fore rune, on he banks of the river Tungabbadrà, near the temple of the God with three eyes;

## NOTE.

THE date of the grant follows the genealogy of the donor, and precedes that of the donee; after which enmes a defeription of the laud granted, and the religious tenure, by which it was to be held. The Sacábda began in Y.C. 78 , and tha grant was made in Y.C. 1526 , the very year, in which BABUR took poffeffion
 to $1 \mathrm{I}^{\text {th }}$. April 1790 Y.C. The cycle of fixty is divided into fets of twenty years, each fet being facred to Dae of the threc divine attributes; and $V$ yaya is the 2oth year of the cycle, or the laft in the part alloted to Vienivu. Macar is the fign of Capricom, and Pufha, the 8ith iunar manfion. Bhrígu was the father of sucra, who prefides over the planet Vesus, and is properly named Bha ${ }^{\circ}$ gava; but the day of Bhricu means friday.
32. That temple, where priefts, who have aimed at piety towards Iswa. RA as their only giandeur, and who fhine only with the fame of eminent holinefs, fix their hearts on the godhead alone ;
33. Him, who is an ornament of Agastya's race, and whofe peculiar £rudies are the Sác'bas, or branches, of the Yajurvéda; whofe father was difinguifhed on earth in this age of Cali, or contention, by the furname of $\mathrm{R}_{\mathrm{A}^{\prime} \mathrm{Y}_{\mathrm{A}} \text {; }}$
34. Born in the family of Tamva, Srí Aillafa Bhatta, furnamed

50 A $\mathbb{R O}$ OALGRANT Of
Sánc'byanáyaca; or chief teacher of the Sáncbya philofophy (thus men opernly declare his name, his race, and his virtue):
35. Him the king has appointed the difpenfer of nectareous food evers here below, to thofe pious ftudents, and, in like manner, his fons and fon's fons to an age without end.

## $N O T E$.

Agasty a was an ancient fages, now believed to prefide over the Rar Canopuso
36. The land called Srijayacunda by the inhabitants of the diftrict of Cbóla, that named Méyitcóta in the principality of Cbandragiri; that known in Ambinári by the name of Malacà ${ }_{2}$.

NO.TE.

The couplets, containing a defcription of the land, are fo indifinetly written, that the grammatical conftruction of them can hardly be traced. The firf letter of Méyitcota may belong to the preceding word ${ }^{\prime}$, and'an entire hemiftich feems in this place to be omitted.

Ir may here be remarked, that this whole grant is conformable to the rules of Xa'Gyawalcy 4 , in whofe work we find the following verfes:

> Datruá bbưimin nibandban và crrit wà lẹc byantu cárayót, ágámibbadranripati perijnyánáya párt'bizuab;
> Patévà támrapáttè và fwamudrópericbibnitan
> abbiléc'byátmand vanfyánátmánancbemabípetib.
> Pretigrabaperinánán dánacb’bédóparwernanan,
> friwabafacálafampannan fáfanan cárayétfł’’birano.

Let a king, having given land, or alligned revenue, caufe his gift to be written, for the informanon of - good princes, who will fucceed him, either on prepared filk, or on a plate of copper, fealed above with his - own fignet : having defribed his anceftors and himfelf, the dimenfions or quantity of the gift, with its
" metes and bounds if it be land, and fer his own hand to it, and fpecified the times. let hirs render his
a donation firm.
37. Land, fituated to tbe eaft of Tirumápéru, Cájómaca, and fo forth, and the two villages Cónáru and Cóbila;
38. Placed to the fouth of Palapurufba and Hulli, and to the weft of the town called Parundar;
39. To the north of Bérupù and Purapácà, including the town, which has the name of Sivabbactapura, or that of Siva's adorers,
40. With another propitious name derived from the four facred hearths (Chaturvédi) of the delightful Chóla; together with the charming town of Góvindapári,

4x. (Where eleven Brábmens are to water one Amra tree, and to worfhip the God Rudra by day and by night after the prefcribed acts of devotion):
42. And the fmaller town, called Cbattupácà, ever abundant in grain, inhabited by men eminently learned, in the great principality of Paraviru,
43. A place to be honoured by all, marked on all fides by four diftinct boundaries; furrounded with rivulets formed by good genii, the pebbles of which are like gems carefully depofited,
44. Viewed with delight by the diftant eye, fit to be enjoyed by deitics; graced with trees exquifitely beautiful; having the advantage alfo of ponds, wells, and pools of water with raifed banks;
45. Frequented by officiating priefts and attendants, with fubdueds paffions and benevolent hearts; by deities of different clafes, and by travellers, who know the Véda and converfe with copioufnefs:
46. All the land before mentioned has the great prince Crishnade: VA, worthy of reverence from the wife, given with ferene joy, having firf: diffufed a fream of gold, filver, and gems.
47. Such was the decree of Crishnara'ya, to whom belongs the whole earth celebrated by the royal bards; that bountiful king, who is the fource of all the wealth poffeffed by the bards of Murit.
48. By the command of the great Ráya Crismnade'va, the prefident of his council proclaimed this donation to Mrira, or Iswara; and this command is here engraved on plates of copper.
49. The artif Sti Virana'chárya, fon of Mallana; wrote on copper this grant of the great prince Crishadadiva.
50. As between a gift of land and the confirmation of it by the fucceffors of the donor, the confirmation is more meritorious than the gift : by the gift, a king attains a feat in heaven; by the confirmation, a feat from which he never can fall.
53. The confirmation of gift by another prince has twice the meit of a gift by himfelf; but the refumption of land granted by another makes even his own gift fruitlefs.
52. He, who refumes land given either by himfelf or by another, be. comes a worm in ordure for fucceffive births through a period of fixty thoufand years.
53. Land, granted for virtuous purpofes, is in this world the only fifter of kings; and confequently mult not be enjoyed by them, not taken by them in marriage.
54. © This is the univerfal bridge of virtue for princes, and muft be 4. repaired by you from time to time:" thus doth RA'machandra exhort again and again the fovereigns of the earth, both thofe who now live, and thofe who are to reign hereafter.

## THEGODWITHTHREEEYES\&

## IV.

## On the Musical Modes of the Hindus: written in 178 , and fince much enlarged.-By the President.

MUSICK belongs, as a Science, to an interefting part of natural philofophy, which, by mathematical deductions from conftant phe-nomena, explains the caufes and properties of found, limits the number of mixed, or barmonick, founds to a certain feries, which perpetually recurs, and fixes the ratio, which they bear to each other or to one leading term; but, confidered as an Art, it combines the founds, which philofophy diftinguifhes, in fuch a manner as to gratify our ears, or affect our imaginations, or, by uniting both objects, to captivate the fancy while it pleafes the fenfe, and, fpeaking, as it were, the language of beautiful nature, to raife corref. pondent ideas and emotions in the mind of the hearer: it then, and then only, becomes what we call a fine art, allied very nearly to verfe, painting, and rhetorick, but fubordinate in its functions to pathetick poetry, and inferior in its power to genuine eloquence.

Thus it is the province of the philofopber, to difcover the true direction and divergence of found propagated by the fucceffive compreffions and expanfions of air, as the vibrating body advances and recedes; to fhow why founds themfelves may excite a tremulous motion in particular badies, as in the known experiment of inftruments tuned in unifon; to demonfrate the law, by which all the particles of air, when it undulates with great quicknefs, are continually accelerated and retarded; to compare the number of pulfes in agitated air with that of the vibrations, which caufe them: so compute the velocities and intervals of thofe pulfes in atmofpheres of dif.
ferent denfity and elafticity; to account, as well as he can, for the affections, which mufick produces; and, generally, to invertigate the caufes of the many wonderful appearances, which it exhibits: but the artif, with out confidering, and even without knowing, any of the fublime theorems in the philofophy of found, may attain his end by a happy felection of melodies and aecents adapted to paffionate verfe, and of times conformable to regular metre; and, above all, by modulation, or the choice and variation of thofe modes, as they are called, of which, as they are contrived and arranged by the Hindus, it is my defign, and thall be my endeavour, to give you a general notion with all the perfpicuity, that the fubject will admit.

Alyhough we muft affign the firft rank, tranfcendently and beyond all comparifon, to that powerful mufick, which may be denominated the fifter of poetry and eloquence, yet the lower art of pleafing the fenfe by a fucceffion of agreeable founds, not only has merit and even charms, but may, I perfuade myfelf, be applied on a variety of occafions to falutary purpofes: whether, indeed, the fenfation of hearing be caufed, as many fufpect, by the vibrations of an elaftick ether flowing over the auditory nerves and propelled along their folid capillaments, or whether the fibres of our nerves, which feem indefinitely divifible, have, like the ftrings of a lute, peculiar vibrations proportioned to their length and degree of tenfion, we have not fufficient evidence to decide; but we are very fure, that the whole nervous fyftem is affected in a fingular manner by combinations of found, and that melody alone will often relieve the mind, when it is oppreffed by intenfe application to bufinefs or ftudy. The old mufician, whe rather figuratively, we may fuppofe, than with philofophical ferioufnefs, declared the foul itfelf to be nothing but barmony, provoked the fprightly remark of Cicero, that be drew bis philofophy from the art, whicb be profefled; but if, without depart-
ing from his own art, he had merely defcribed the human frame as the nobleft and fweeteft of mufical inftruments, endued with a natural difpo fition to refonance and fympathy, alternately affecting and affected by the foul, which pervades it, his defcription might, perhaps, have been phyfically juft, and certainly ought not to have been haftily ridiculed: that any medical purpofe may be fully anfwered by mufick, I dare not affert; but after food, when the operations of digeftion and abforption give fo much employment to the veffels, that a temporary ftate of mental repofe muft be found, efpecially in hot climates, effential to health, it feems reafonable to believe, that a few agreeable airs, either heard or played without effort, muft have all the good effects of fleep and none of its difadvantages; putting the Soul in tune, as Mrlton fays, for any fubfequent exertion; an experiment, which has often been fuccefsfully made by myfelf, and which any one, who pleafes, may eafily repeat. Of what I am going to add, I cannot give equal evidence ; but hardly know how to difbelieve the teftimony of men, who had no fyftem of their own to fupport, and could have no intereft in deceiving me: firf, I have been aflured by a credible eye witnefs, that two wild antelopes ufed often to come from their woods to the place, where a more favage beaf, Sira'juddaulah, entertained himfelf with concerts, and that they liftened to the ftrains with an appearance of pleafure, till the monfer, in whofe foul there was no mufick, fhot one of them to difplay his archery : fecondly, a learned native of this country told me, that he had frequently feen the moft venomous and malignant fnakes leave their holes, upon hearing tuncs on a flute, which, as he fuppofed, gave them peculiar delight; and, thirdly, an intelligent Perfian, who repeated his fory again and again, and permitted me to write it down from his lips, declared, that he had more than once bcen prefent, when a celebrated lutanift, Mirzá Mohammed, furnamed Bulbul, was playing to a large.
company in a grove near Shźráz, where he diftinctly faw the nightingales trying to vie with the mufician, fometimes warbling on the trees, fometimes futtering from branch to brauch, as if they wifhel to approach the inftrument; whence the melody proceeded, and at length dropping on the ground in a kind of extafy, from which they were foon raifed, he affured. me, by a change of the mode.

The aftonifhing effects afcribed to mufick by the old Greeks, and; in our days, by the Chinefe, Perfians, and Indians, have probably been exaggerated and embellifhed; nor, if fuch effects had been really produced, could they be imputed, I think, to the mere influence of founds however combined or modified: it may, therefore, be fufpected, (not that the accounts are wholly ficitious, but) that fuch wonders were performed by muffick in its largeft feafe, as it is now defcribed by the Hindus, that is, by the union of voices, infliuments, and altion, for fuch is the complex idea conveyed by the word Sanigita, the fimple meaning of which is no more than Symphony;; but moft of the Indian books on this art confift accordingly of three parts, gána, vidya, nritya, or fong, percuffion, and dancing; the firt of which includes the meafures of poetry, the fecond extends to inftrumental mufick of all forts, and the third includes the whole compafs of theatrical reprefentation. Now it may eafily be conceived, that fuch an alliance, with the potent auxiliaries of diftinet articulation, gracefut gefture, and well adapted fcenery, muft have a ftrong general effect, and may, from particular affociations, operate fo forcibly on very fenfible minds, as to excite copious tears, change the colour and countenance, heat or chill the blood, make the heart palpitate with violence, or even compel the hearer to ftart from his feat with the look, fpeech, and actions of a man in $x$ phrenfy: the effect mut be yet ftronger; if the fubject be religious, as that.
of the old Indian dramas, but great and fmall (I mean both regular plays in many acts and fhorter dramatick pieces on divine love) feems in general to have been. In this way only can we attempt to account for the indubie table effects of the great airs and impaffioned recitative in the modern Italian dramas, where three beautiful arts, like the Graces united in a dance, are together exhibited in a ftate of excellence, which the ancient world could not have furpaffed and probably could not have equalled : an heroick opera of Metastasio, fet by Pergolesi, or by fome artift of his incomparable fchool, and reprefented at Naples, difplays at once the perfection of human genius, awakens all the affections, and captivates the imagination at the fame inftant through all the fenfes.

When fuch aids, as a perfect theatre would afforä, are not acceffible, the power of mufick muft in proportion be lefs; but it will ever be very confiderable, if the words of the fong be fine in themfelves, and not only well tranflated into the language of melody, with a complete union of mufical and rhetorical accents, but clearly pronounced by an accomplifhed finger, who feels what he fings, and fully undertood by a hearer, who has paffions to be moved; efpecially if the compofer has availed himfelf in his tranfation (for fuch may his compofition very jufly be called) of all thofe advantages, with which nature, ever fedulous to promote our innocent gratifications, abundantly fupplies him. The firft of thofe natural advantages is the variety of modes, or manners, in which the feven harmonick founds are perceived to move in fucceffion, as each of them takes the lead, and confequently bears a new relation the fix others. Next to the phenomenon of feven founds perpetually circulating in a geometrical progreffion, according to the length of the ftrings or the number of their vibrations, every ear muft be fenfible, that two of the feven intervals in the complete feries, or octave, whether we
confider it as placed in a circular form, or in a right line with the firft found repeated, are much fhorter than the five other intervals; and on thefe two phenomena the modes of the Hintus (who feem ignorant of our complicated harmony) are principally confructed. The longer intervals we fhall call tones, and the fhorter (in compliance with cufom) fenitones, without mentioning their exact ratios; and it is evident, that, as the pluces of the femitones admit feven variations relative to one fundamental found, there are as many modes, which may be called primary; but we muft not confound them with our modern modes, which refult from the fyltem of accorls now eftablifhed in Europe: they may rather be compared with thofe of the Roman Church, where fome valuable remnants of old Grecian mufick are preferved in the fweet, majeftick, fimple, and affecting ftrains of the Plain Song. Now, fince each of the tones may be divided, we find treelve femitones in the whole feries; and, fince each femitone may in its turn become the leader of a feries formed after the model of every primary mode, we have feven times twelve, or eighiy-four, modes in all, of which Seventy-feven may be named fecondary; and we fhall fee accordingly that the Perfans and the Hindus (at leaft in their moft popular fytem) have exactly eighty-four modes, though diftinguifhed by different appellations and arranged in different claffes: but, fince many of them are unpleafing to the ear, others difficult in execution, and few fufficiently marked by a character of fentiment and expreffion; which the higher mufick always requires, the genius of the Indians has enabled them to retain the number of modes, which nature feems to have indicated, and to give each of them a character of its own by a happy and beautiful contrivance. Why any one feries of founds, the ratios of which are afcertained by obfervation and expreffible by figures, fhould have a peculiar effect on the organ of hearing, and, by the auditory nerves, on the mind, will then only be, known by mortals, when they fhall know,
why each of the feven colours in the rainbow, where a proportion, analo gous to that of mufical founds, moft wonderfully prevails, has a certain fpecifick effect on our eyes; why the fhades of green and blue, for inftance, are foft and foothing, while thofe of red and yellow diftefs and dazzle the fight; but, without friving to account for the phenomena, let us be fatisfi:d with knowing, that fome of the moles have diftinct perceptible properties, and $m$ be applied to the expreffion of various mental emotions; a fact, which ought well to be confidered by thofe performers, who would reduce them all to a dull uniformity, and facrifice the true beauties of their art to an injudicious temperament.

The ancient Greeks, amono whom this delightful art was long in the hands of ports, and of mathematicians, who had much lefs to do with it, afcribe almof all its magick to the diverfity of their Modes, but have left us little more than the names of them; without fuch difcriminations, as might have enabled us to compare them with out own and apply them to practice : their writers addreffed themfelves to Grecks, who could not but know their national mufick; and mof of thofe writers were profeffed men of fcience, who thought more of calculating ratios than of inventing melody; fo that, whenever we fpeak of the foft Eolian made, of the tender Lydian, the voluptuous Ionick, the manly Dorian, or the animating Phrygian, we ufe mere phrafes, I believe, without clear ideas. For all that is known concerning the mufick of Grecce, let me refer thofe, who have no inclination to read the dry works of the Grecks themfelves, to a little tract of the learned Wallis; which he printed as an appendix to the Harmonicks of ProleMY; to the Dictionary of Mufick by Rousseau, whofe pen, formed to elucidate all the arts, had the property of fpreading light before it on the darkeft fubjects, as if he had writien with pliofghorus on the fides of a caw-
vern; and, laftly, to the differtation of Dr. Burney, who, paffing flightly over all that is obfcure, explains-with perficuity whatever is explicable, and gives dignity to the character of a modern mufician by uniting it with that of a fcholar and a philofopher.

The unexampled felicity of our nation, who diffufe the bleffings of a mild government over the fineft part of $\operatorname{India}$, would enable us to attain a perfect knowledge of the oriental mufick, which is known and practifed in thefe Britifh dominions not by mercenary performers only, but even by Mufelmans and Hindus of eminent rank and learning: a native of Cáßán, lately refident at Murbedábäd, had a complete acquaintance with the Perfian theory and practice; and the beft artifts in Hindufan would cheerfully attend our concerts: we have an eafy acceifs to approved Afatick treatifes on mufical compofition, and need not lament with Chardin, that he neglected to procure at Isfabán the explanation of a fmall tract on that fubject, which he carried to Europe: we may here examine the beft inftruments of $A$ fa, may be mafters of them, if we pleafe, or at leaft may compare them with ours: the concurrent labours, or rather amufements, of feveral in our own body, may facilitate the attainment of correct ideas on a fubject fo delightfully interefting; and a free communication from time to time of their refpective difcoveries would conduct them more furely and fpeedily, as well as more agreeably, to their defired end. Such would be the advantages of union, or, to borrow.a term from the art before us, of barmonious accord, in all our purfuits, and above all in that of knowledge.

On Perfian mufick, which is not the fubject of this paper, it would be improper to enlarge : the whole fyftem of it is explained in a celebrated collection of tracts on pure and mixed mathematicks, entitled Durratu'ltáj,
and compofed by a very learned man, fo generally called Allámi Sbírázi, or the great philofopher of Sbiràz, that his proper name is almoft forgotten; Eut, as the modern Perfans had accefs, I believe, to Prolemy's harmonicks, their mathematical writers on mufick treat it rather as a fcience th:an as an art, and feem, like the Greeks, to be more intent on fplitting tones into quarters and eighth parts, of which they compute the ratios to fow their arithmetick, than on difplaying the principles of modulation, as it may affect the paffions. I apply the fame obfervation to a fhort, but mafo terly, tract of the famed Abu'si'na', and fufpect that it is applicable to an elegant effay in Perfian, called Shamflilálwát, of which I have not had courage to read more than the preface. It will be fufficient to fubjoin on this head, that the Perfians diftribute their eighty-four modes, according to an idea of locality, into twelve rooms, twenty-four receifes, and forty-eight angles or corners: in the beautiful tale, known by the title of the Four Dervifes, originally written in Perfia with great purity and elegance, we find the defcription of a concert, where four fingers, with as many different inftruments, are reprefented " modulating in twelve makáms or perdabs, twen̂ty" " four fiobabs, and forty-eight gúflabs, and beginning a mirthful fòng of " Ha'fiz on vernal delight in the perdub named ráf, or direct." All the twelve perdabs, with their appropriated flobbabs, are enumerated by Ami'n, a writer and mufician of Hinduftan, who méntions an opinion of the learned, that only feven primary modes were in ufe before the reign of Parvizz, whofe mufical entertainments are magnificently defcribed by the incomparable $N_{i z a} \mathrm{~m}_{1}$ : the modes are chiefly denominated, like thofe of the Grecks and Hindus, from different regions or towns; as, among the pcrdabs, we fee Hïáz, Irák, Isfabán; and, among the ßôobabs, or fecond. ary modes, Zábul, NíjJápùr, and the like. In a Sanfcrit bock, which fha!! lwon be particularly mentioned, I find the fcale of a mode, named Hiǰja,
fpecified in the following verfe:

## Máñśagraha fa nyáso̊c’bilò bijẻjafu fáyáhnè.

The name of this mode is not Indian; and, if 1 am right in believing it a corruption of Hijàz, which could hardly be written otherwife in the Nágari letters, we muft conclude, that it was imported from Perfia: we have difo covered then a Perfian or Arabian mode with this diapafon,
where the firf femitone appears between the fourth and fifth notes, and the fecond between the feventh and eighth; as in the natural fcale $\Gamma a$, Sol, la, $f, u t, r e, m i, f a:$ but $t \mathrm{e} C$, , and $G$, or $g a$ and $n i$ of the Indian author, are varioufly changed, and probably the ferics may be formed in a manner not very different (though certainly there is a diverfity) from our major mode of D . This melody muft neceffarily end with the fifth note from the tonick, and begin with the tonick itfelf; and it would be a grofs violation of mufical decorum in India, to fing it at any time except at the clofe of day: thefe rules are comprized in the verfe above-cited; but the fpecies of octave is arranged according to Mr. Fow ines remarks on the Viná, compared with the fixed Swaragrama, or gamut, of all the Hindu muficians.

Let us proceed to the Indian fyftem, which is minutely explained, in a great number of Sanfcrit books, by authors, who leave arithmetick and geometry to their aftronomers, and properiy difcourfe on mufick as an art confined to the pleafures of imagination. The Pandits of this province unanimoufly prefer the Dámódara to any of the popular Sangitas; but I have not been able to procure a good copy of it, and am perfectly
fatisfied with the Nárayon, which I received from Benáres, and in which the Dámódar is frequently quoted. The Perfian book, entitled a Prefent from India, was compofed, under the patronage of Aazem Sha'h, by the very diligent and ingenious Mirza Khan, and contains a minute account of Hindu literature in all, or moft of, its branches: he profeffes to have extracted his elaborate chapter on mufick, with the "affiftance of Panlits, from the Rágárnava, or Sea of Paffions, the Rágaderpana, or Mirror of Modes, the Sabhávinóda, or Delight of Affemblies, and fome other approved treatifes in Sanfcrit. The Sangitaderpan, which he alfo names among his authorities, has been tranllated into Perfian; but my experience juftifies me in pronouncing, that the Mog\%ols have no idea of accurate tranflation, and give that name to a mixture of glofs and text with a flimfy paraphrafe of them both; that they are wholly unable, yet always pretend, to write Sanfcrit words in Arabick letters; that a man, who knows the Hindus only from Perfian books, does not know the Hindus; and that an European, who follows the muddy rivulets of Mufelman writers on India, inftead of drinking from the pure fountain of Hindul learning, will be in perpetual danger of mifleading himfelf and others. From the juft feverity of this cenfure I except neither Abu'lfazl, nor his brother Faizí, nor Mohisani Fa'ni', nor Mirza'khàn himfelf; and I fpeak of all four after an attentive perufal of their works. A tract on mufick in the idiom of Mat'burà, with reveral effays in pure Hinduftánì, lately paffed through my hands; and I poffefs a differtation on the fame art in the foft dialect of Panjab, or Panchanada, where the national melody has, I am told, a peculiar and ftriking character; but I am very little acquainted with thofe diale?s, and perfuade myfulf, that nothing has been written in them, which miy not be found more copioufly and beautifully expreffed in the lingrutge, as the Hindus perpetually call it, of the Gods, that is, of their ancient bards, philufophers, and legillators.

THE mof valuable work, that I have feen, and perhaps the mof valuable that exifts, on the fubject of Indian mufick, is named Rágavibódba, or The Doctrine of Mufical Modes; and it ought here to be mentioned very particularly, becaufe none of the Pandits, in our provinces, nor any of thofe from Cáfi or Calbint, to whom I have fhown it, appear to have known that it was extant ; and it may be confidered as a treafure in the hiftory of the art, which the zeal of Colonel Polier has brought into light, and perhaps has preferved from deftruction. He had purchafed, among other curiofities, a volume containing a number of feparate effays on mufick in profe and verfe and in a great variety of idioms: befides tracts in Arabick, Hindi and Perfan, it included a fhort effay in Latin ${ }^{\circ}$ by Alstedius, with an interlineary Perfan tranflation, in which the paffages quoted from Lucretius and Virgil made a fingular appearance; but the brighteft gem in the ftring was the Rágavibodba, which the Colonel permitted my Nágari writer to tranfcribe, and the tranfcript was diligently collated with the original by my P.m.lit and myfelfo. It feems a very ancient compofition, but is lefs old unqueftionably than the Ratnacára by $S_{A}^{\prime}$ RNGA $D_{E^{\prime} V A}$, which is more than once mentioned in it, and a copy of which Mr. Burrow procured in his journey to Heridzar: the name of the author was So'mA, and he appears to have been a practio cal mufician as well as a great fcholar and an elegant poet; for the whole book, without excepting the ftrains noted in letters, which fill the fifth and and laft chapter of it, conffits of mafterly couplets in the meladious metre called A'ryà; the firf, tbird, and fourth chapters explain the doctrine of mufical founds, their divifion and fucceffion, the variations of fcales by temperament, and the enumeration of modes on a fyftem totally different from thofe, which will prefently be mentioned; and the fecord chapter contains a minute defcription of different Vinás with rules for playing on them.

This book alone would enable me, were I mafter of my time, to compore a treatife on the mufick of India, with affiftance, in the practical part, from an European profeffor and a native player on the Vina; but I have leifure only to prefent you with an effay, and even that, I am confcious, muft be very fuperficial : it may be fometimes, but, I truft, not often, erroneous; and I have fpared no pains to fecure my felf from errour.

In the literature of the Hindus all nature is animated and perfonified; every fine art is declared to have been revealed from heaven; and all knowledge, divine and human, is traced to its fource in the Védas; among which t': S Sámavédu was intended to be fung, whence the reader, or finger of it is called Udgátri or Sámaga: in Colonel Polier's copy of it the ftrains are noted in figures, which it may not be impoffible to decypher. On account of this diftinction, fay the Brábmens, the Jupreme preferving power, in the form of Crishna, having enumerated in the Gítà various orders of beings, to the chief of which he compares himfelf, pronounces, that "among the Védas be was the Sáman. "From that Véda was accordingly derived the Upaveda of the Gandbarbas, or muficians in Indra's heaven; fo that the divine art was communicated to our fpecies by Brahmá himfelf, or by his active power Sereswati', the Goddefs of Speech ; and their mythological fon $\mathrm{N}_{A^{\prime}}$ RED, who was in truth an ancient lawgiver and aftronomer, invented the Vinà, called alfo Cach'bapì, or Tefudo; a very remarkable fact, which may be added to the other proofs of a refemblance between that Indian God, and the Mercury of the Latians. Among infpired mortals the firf mufician is believed to have been the fage Bherat, who was the inventor, they fay, of Nátacs, or dramas, reprefented with fongs and dances, and author of a mufical fydem, which bears his name. If we can rely on Ma'rzakian'n, there
are four principal Matas, or fyftems, the firf of which is afcribed to Iswara, or Osiris; the fecond to Bherat; the third to Hanumat, or Pavan, the Pan of India, fuppofed to be the fon of Pavana, the regent of air ; and the fourth to Callina't'h, a Ryhhi, or Indian philofopher, eminently fkilled in mufick, theoretical and practical: all four are mentioned by So'ma; and it is the third of them, which muft be very ancient, and feems to have been extremely popular, that I propofe to explain after a few introductory remarks; but I may here obferve with So'ma, who exhibits a fyftem of his own, and with the author of the Náráyan, who mentions a great many others, that almoft every kingdom and province had a peculiar ftyle of melody, and very different names for the modes, as well as a different arrangement and enumeration of them.

The two phenomena, which have already been fated as the foundation of mufical modes, could not long have efcaped the attention of the Hindus, and their flexible language readily fupplied them with names for the feven Swaras, or founds, which they difpofe in the following order, Badja, pronounced Jaarja, rịhbabba, gándhára, madhyama, panchama, dbaivata, nifbada; but the firf of them is emphatically named fwara, or the found, from the important office, which it bears in the fcale; and hence, by taking the feven initial letters or fyllables of thofe words, they contrived a notation for their airs, and at the fame time exhibited a gamut, at leaft as convenient as that of Guido: they call it fraragrama or Septaca, and exprefs it in this form:
Sa, ri, ga, ma, pa, dba, ni,
three of which fyllables are, by a fingular concurrence, exactly the fame
though not all in the fame places, with three of thofe invented by David Mostare, as a fubftitute for the troublefome gamut ufed in his time, and which he arranges thus:
Bo, ce, di, ga, lo, ma, ni.

As to the notation of melody, fince every Indian confonant includes by its nature the fhort vowel $a$, five of the founds are denoted by fingle confonatrs, and the two others have different fhort vowels taken from their full names; by fubtituting long vowels, the time of each note is doubled, and other marks are ufed for a fariher elongation of them; the octaves above and below the mean fcale, the connection and acceleration of notes, the graces of execution or manners of fingering the inftrument, are expreffed very clearly by fmall circles and ellipfes, by little chains, by curves, by ftraight lines horizontal or perpendicular, and by crefcents, all in various pofitions: the clofe of a ftrain is diftinguifhed by a lotos-flower ; but the time and meafure are determined by the profody of the verfe and by the comparative length of each fyllable, with which every note or affemblage of notes refpectively correfponds. If I underftand the native muficians; they have not only the ckromatick, but even the fecond, or new, enbarmonick, genus; for they unanimoully reckon twenty-two śrutis, or quarters and thirds of a tone, in their octave : they do not pretend that thofe minute intervals are mathematically equal, but confider them as equal in practice, and allot them to the feveral notes in the following order ; to $f a$, $m a$, and $p a$, four ; to $r i$ and $d h, x$ three; to ga and $n i$, two; giving very fmooth and fignificant names to each śruti. Their original fcale, therefore, ftands thus.

The femitones accordingly are placed as in our diatonick fcale: the intervals between the fourth and fifth, and between the firft and fecond, are major tones; but that between the fifth and fixth, which is minor in our fcale, appears to be major in theirs ; and the two fcales are made to coincide by taking a śuti from $p o$ and adding it to $d b a$, or, in the language of $I n-$ dian artifts, by raifing Servaretnà to the clafs of Sántá and her fifters; for every śruti they confider as a little nymph, and the nymphs of Pancbama, or the fifth note, are Mälinì, Cbapalá, Lólá, and Scrvaretnà, while Sántá and her two fifters regularly belong to Dhaivata : fuch at leaft is the fyrtem of Co'mala, one of the ancient bards, who has left a treatife on mufick.

So'ma feems to admit, that a quarter or third of a tone cannot be feparately and diftinctly heard from the Vinà; but he takes for granted, that its effect is very perceptible in their arrangement of modes; and their $\mathcal{\lambda x}$; Iimagine, is almoft univerfally diminifhed by one śruti; for he only men. tions two modes, in which all the feven notes are unaltcred. I tried in vain to difcover any difference in practice between the Indian fcale, and that of our own; but, knowing my ear to be very infufficiently exercifed, I requefted a German profeffor of mufick to accompany with his violin a Hindu lutanif, who fung by note fome popular airs on the loves of Crisirna and Ra'dhá: he aflured me, that the fcales were the fame; and Mir. Shore afterwards informed me, that, when the voice of a native finger was in tune with his harpfichord, he found the Hindu feries of feven notes to afcend, like ours, by a fharp third.

For the conftruction and character of the Vinà, I murt refer you to the very accurate and valuable paper of Mr . Fowne in the firf volume of your

Tranfactions; and I now exhibit a fcale of its finger board, which I receiv. ed from him with the drawing of the inftrument, and on the correctnefs of which you may confidently depend : the regular Indian gamut anfwers, I be. lieve, pretty nearly to our major mode:

$$
U t, r e, m i, f a, \text { fol } l a, f a, u t
$$

and, when the fame fyllables are applied to the notes, which compofe our minor mode, they are diftinguifhed by epithets expreffing the change, which they fuffer. It my be neceffary to add, before we come to the Ragas, or modes of the Hindus; that the twenty-one múrch'banas, which Mir. Shore's native mufician confounded with the two and twenty srutis, appear to be no more than feven fpecies of diapafon multiplied by three, ac. cording to the difference of pitch in the compafs of three octaves.

RA'cA, which I tranflate a mode, properly fignifies a paffon or affection of the mind, each mode being intended, according to Bherat's definition of it, to move one or another of our fimple or mixed affections; and we learn accordingly from the Naráyan, that, in the days of Crisuna, there were fixieen thorifand modes, each of the Gópìs at Mat'burà chufing to fing in one of them, in order to captivate the heart of their paftoral God. The very leaned So ma, who mixes no mythology with his accurate fyftem of Rágas, enumerates nine bundred and fixty poffible variations by the means of temparament, but felects from them, as applicable to practice, only treenty-tbree primary modes, from which he deduces many others; though he allows, that, by a diverfity of ornament and by various contrivances, the Rágas might, like the waves of the fea, be multiplied to an infinite number. We have already obferved, that cighty-four modes or manners, might naturally be formed by giving the lead to each of our twelve founds, and varying in feven different ways the pofition of the femitones;
but, fince many of thofe modes would be infufferable in practice, and fome would have no character fufficiently marked, the Indians appear to have retained with predilection the number indicated by nature, and to have enforced their fyftem by two powerful aids, the affociation of ideas, and the mutilation of the regular fcales.

Whether it had occurred to the Hindu muficians, that the velocity or flownefs of founds muft depend, in a certain ratio, upon the rarefaction and condenfation of the air, fo that their motion muft be quicker in fummer than in fpring or autumn, and much quicker than in winter, I cannot affure myfelf; but am perfuaded, that their primary modes, in the fyftem afcribed to Pávana, were firf arranged according to the number of Indian feafons.

The year is difributed by the Hindus into fix ritus, or feafons, each confinting of two months; and the firft feafon, according to the Amarcóflsa, began with Márgaśirfba, near the time of the winter folftice, to which month accordingly we fee Crishna cempared in the Gitá; but the old lunar year began, I believe, with $A^{\prime}$ froina, or near the autumnal equinox, when the moon was at the full in the firf manfion: hence the mufical feafon, which takes the lead, includes the months of $A^{\prime}$ Fwin and Cártic, and bears the name of Sarad, correfponding with part of our autumn ; the next in order are Hémanta and Sisíra, derived from werds, which fignify froft and derw; then come Vafanta, or fpring, called alfo Surabbi or fragrant, and Pufopafamaya, or the flower time; Gríhbma, or heat; and Verfba, or the feafon of rain. By appropriating a different mode to each of the different feafons, the artifts of India connected certain frains with certain ideas, and were able to recal the memory of autumnal merriment at the clofe of the
harveft, or of feparation and melancholy (very different from our ideas at Calcutta) during the cold months; of reviving hilarity on the appearance of bloffoms, and complete vernal delight in the month of Madbu or boney; of languor during the dry heats, and of refrefhment by the firft rains, which caufe in this climate a fecond fpring. Yet farther : fince the lunar year, by which feftivals and fuperftitious duties are conftantly regulated, proceeds concurrently with the folar year, to which the feafons are neceffarily referred, devotion comes alfo to the aid of mufick, and all the powers of nature, which are allegorically worfhipped as gods and goddefles on their feveral holidays, contribute to the influence of fong on minds naturally fufceptible of religious emotions. Hence it was, I imagine, that Pa'van, or the inventor of his mufical fyfem, reduced the number of original modes from feven to f.x; but even this was not enough for his purpofe; and he had recourfe to the five principal divifions of the day, which are the morning, noon, and evening, called trifandbya, with the two intervals between them, or the forenoon and afternoon: by adding two divifions, or intervals, of the night, and by leaving one fpecies of melody without any fuch reffriction, So'ma reckons eigbt variations in refpect of time; and the fyftem of Pa'van retains that number alfo in the fecond order of derivative modes. Every branch of knowledge in this country has been embellifhed by poetical fables; and the inventive talents of the Greeks never fuggefted a more charming allegory than the lovely families of the fix Rágas, named, in the order of feafons above exhibited, Bhalrava, Ma'lava, Sri'ra'ga, Hindola or Vasanta, Dípaca, and Mégha ; each of whom is a Genius, or Demigod, wedded to five Ráginis, or Nymphs, and father of eight little Genii, called his Putras, or Sons: the fancy of Sharspear and the pencil of Albano might have been finely employed in giving fpeech and form to this affemblage of new aërial beings, who people the fairy-land
of Indian imagination ; nor have the Hinzu poets and painters loft the advantages, with which fo beautiful a fubject prefented them. A whole chapter of the Náráaan contains defcriptions of the Rágas and their conforts, extracted chiefly from the Dámódar, the Calanncura, the Retnamálín, the Cbandricà, and a metrical tract on mufick afcribed to the Gul Na'roo himfelf, from which, as among fo many beauties a particular telectim would be very perplexing, I prefent you with the firt that occurs, ans have no doubt, that you will think the Sanforat language equal to Italiant in foftrefs and elegance:

> Lillá viháréna vanántarálé,
> Chinvan prafúnáni vadhú faháyah,
> Viláfi véfódita divya múrtih
> Srirága éfha prat'hitah prit'hivyám.
"The demigod Sri'ra'ga, famed over all this earth, Iweetly iports " with his nymphs, gathering frefh bloffoms in the bofom of yon grove; " and his divine lineaments are diftinguifhed through his graceful " vefture."

These and fimilar images, but wonderfully diverfified, are expreffed in a variety of meafures, and reprefented by delicate pencils in the Rágamailas, which all of us have examined, and among which the moft beautiful are in the poffeffion of Mr. R. Johnson and Mr. Hay. A noble work might be compofed by any mufician and fcholar, who enjoyed leifure and difregarded expenfe, if he would exhibit a perfect fyftem of Indian mufick from Sanforit authorities, with the old melodies of So'ma applied to the fongs of Jayade'va, embellifhed with defcriptions of all the modes accurately tranflated, and with Mr. Hay's Rágamálà delineated and engraved by the fcholars of Cirriani and Bartolozzi.

Let us proceed to the fecond artifice of the Hindu muficians, in giving their modes a diftinct character and a very agreeable diverfity of expreffion. A curious paffage from Plutarch's treatife on Mufick is tranflated and explained by Dr. Burney, and ftands as the text of the moft interefting chapter in his differtation : fince I cannot procure the original, I exhibit a paraphrafe of his tranflation, on the correctnefs of which I can rely ; but I have avoided, as much as poffible, the technical words of the Greeks, which it might be neceffary to explain at fome length. "We are inform"ed, fays Plutarch, by Aristoxenus, that muficians afcribe to " Olympus of Myja the invention of enbarmonick melody, and conjecture, " that, when he was playing diatonically on his flute, and frequently " paffed from the highert of four founds to the loweft but one, or converfe" ly, fkipping over the fecond in defcent, or the third in afcent, of that "feries, he perceived a fingular beauty of expreffion, which induced him " to difpofe the whole feries of feven or eight founds by fimilar fkips, and " to frame by the fame analogy his Drian mode, omitting every found " peculiar to the diatonick and chromatick melodies then in ufe, but with" out adding any that have fince been made effential to the new enharmo" nick : in this genus, they fay, he compofed the Nome, or ftrain, cal" led Spondean, becaufe it was ufed in temples at the time of religious " libations. Thofe, it feems, were the firft enharmonick melodies; and " are ftill retained by fome, who play on the flute in the antique fyle st without any divifion of a femitone ; for it was after the age of Olympus, " that the quarter of a tone was admitted into the Lydian and Pbrygian " modes; and it was he, therefore, who, by introducing an exquifite me" lody before unknown in Greece, became the author and parent of the "s moft beautiful and affecting mufick."

This method then of adding to the character and effeet of a mode by diminihing the number of its primitive founds, was introduced by a Greek of the lower Afa, who flourifhed, according to the learned and accurate writer of the Travels of Anacharsis, about the middle of the thirreenth century before Carist ; but it muft have been older fill among the Hindus, if the fyftem, to which I now return, was actually invented in the age of Ra'ma.

Since it appears from the Náráyan, that thirty-fix modes are in general ufe, and the reft very rarely applied to practice, I flall exhibit only the fcales of the fix Ragas and thirty Ráginis, according to So'ma, the authors quoted in the Nárayan, and the books explained by Pandits to Mirza'. дна'n ; on whofe credit I muft rely for that of Cacubbá, which I cannot find in my Sanfcrit treatifes on mufick : had I depended on him for information of greater confequence, he would have led me into a very ferious. miftake; for he afferts, what Inow find erroneous, that the graba is the firft note of every mode, with which every fong, that is compofed in it, muft invariably begin and end. Three diftinguifhed founds in each mode: are called graba, nyafa, ans a, and the writer of the Nóríyan defines them in the two following couplets:

Graha fwarah fa ityuctó yó gítádau famarpitah, Nyáfa fwaraftu fa próctó yó gítádi famápticah: Yó vyactivyanjacò gánè, yafya fervé' nugáminah, Yafya fervatra báhulyam vády ans'ó pi nrŭpótamah.
"The note, called graha, is placed at the beginning, and that named ${ }^{\text {st }}$ nyafa, at the end, of a fong: that note, which difplays the peculiar ${ }^{66}$ melody, and to which all the others are fubordinate, that, which is al"ways of the greateftufe, is like a fovereign, though a mere anśa, or portion".
＂By the word vide，fays the commentator，he means the note，which ${ }^{67}$ announces and afcertains the Raga，and which may be confidered as the ＂parent and origin of the graba and nyifa：＂this clearly flows，I think， that the anoa mut be the tonick；and we fall find，that the two other notes are generally its third and fifth，or the mediant and the dominant．Ins the poem entitled Mágha there is a mufical fimile，which may illustrate and confirm our idea ：

Analpatwát pradhánatwád anśafyévétarafwarảh， Vijigífhórnripatayah prayánti pericháratám．
ar From the greatness，from the transcendent qualities，of that Hero eager for ＂conquer，other kings march in fubordination to him，as other notes are ＂fubordinate to the ans．＂

If the ansi berate tonick，or modal note，of the Find us，we may confident－ ly exhibit the fcales of the Indian modes，according to So＇mA，denoting by an afterifk the omiffion of a note ：

IT is impoffible, that I Mould have erred much, if at all, in the presceding table, becaufe the regularity of the Sanfcrit metre has in general
enabled me to correct the manufcript; but I have forme doubt as to Vélávali, of which pa is declared to be the anśa, or tonick, though it is laid in the fame line, that both $p a$ and $r i$ may be omitted: I, therefore, have fuppofed. $d b a$ to be the true reading, both Mirzaisean and the Náráyan exhibiting that note as the leader of the mode. The notes printed in Italick letters are varioufiy charged by temperament or by flakes and other graces; but, even if I were able to give you in words a diftinct notion of thole changes, the account of each mode would be infuffrably tedious, and farce intel. ligible without the affiftance of a mafterly performer on the Indian lyre. According to the belt authorities adduced in the Náráyan, the thirty-finu moles ate, in forme provinces, arranged in the fe forms:

Défacri:

It may reafonably be fufpected, that the Moghol writer could not havefhown the diftinction, which muft neceffarily have been made, between the different modes, to which he affigns the fame formula; and, as to his inverfions of the notes in fome of the Ráginis, I can only fay, that no fuch changes appear in the Sanfcrit books, which I have infpected. I leave ous fcholars and muficians to find, among the fcales here exhibited, the Dorian. mode of Olympus; but it cannot efcape notice, that the Cbinefe fcale C, $\mathrm{D}, \mathrm{E},{ }^{*}, \mathrm{G}, \mathrm{A}$, , correfponds very nearly with $\mathrm{g} a, m a, p a, * n i, f a$, * or the Maravi of SOMA: we have Iong known in Bengal, from the infore
mation of a Scotch gentleman fkilled in mufick, that the wild, but charming。 melodies of the ancient highlanders were formed by a fimilar mutilation of the natural fcale. By fuch mutilations, and by various alterations of the notes in tuning the Vinà, the number of modes might be augmented inde finitely; and Callina't'ina, admits ninety into his fyflem, allowing /ax nymphs, inftead of five, to each of his mufical deities: for Dípaca, which is generally confidered as a loft mode, (though Mírzákitan exhibits the notes of it) he fubflitutes Panchama; for Hindola, he gives us Vafanta, or the Spring; and for Málava, Natanáráyan or Crishina the Dancer; all with fcales rather different from thofe of Pa'van. The fyftem of Iswara, which may have had fome affinity with the old Egyptian mufick invented or improved by Osiris, nearly refembles that of Hanumat ; but the names and fcales are a little varied: in all the fyftems, the names of the modes are fignificant, and fome of them as fanciful as thofe of the fairies in the Midfummer Night's Dream. Forty-eight new modes were added by Bazerat, who marries a nymph, thence called Bháryà, to each Putra, or Son, of a Rága; thus admitting, in his mufical fchool, an bundred and tbirty-two snamners of arranging the feries of notes.

Had the Indian empire continued in full energy for the laft two thoufand years, religion would, no doubt, have given permanence to fyftems of mufick invented, as the Hindus believe, by their Gods, and adapted to myftical poetry: but fuch have been the revolutions of their government fince the time of Alexander, that, although the Sanfcrit books have preferved the theory of their mufical compofition, the prattice of it feems almoft wholly loft (as all the Pandits and R'jazs confefs) in Gaur and Magao ahia, or the provinces of Bengal and Bchar. When I firfe read the fongs of J.yade'va, who has prefixed to each of them the name of the mode,
mode in which it was anciently fung, I had hopes of procuring the original mufick; but the Pandits of the fouth referred me to thofe of the - weft, and the Brabmens of the weft would have fent me thofe of the north; while they, I mean thofe of Népàl and Cafbiôr, declared that they had no ancient mufick, but imagined, that the notes to the Gítagóvindia muft exift, if any where, in one of the fouthern provinces; where the Poet was born : from all this I collect, that the art, which flourifhed in India many centuries ago, has faded for want of due culture; though fome fcanty remnants of it may, perhaps, be preferved in the pafo toral roundelays of Mat'hurà on the loves and fports of the Indiun Apollo. We muft not, therefore, be furprifed, if modern performers on the Vina have little or no modulation, or change of mode, to which paffonate mufick owes nearly all its enchantment ; but that the old muficians of India, having fixed on a leading mode to exprefs the gencrill character of the fong, which they were tranfating into the mujcal language, varied that mode, by certain rules, according to the variation of fentiment or paffion in the poetical phrafes, and always returned to it at the cibfe of the air, many reafons in duce me to believe; though I cannot but admit, that their modulation muft have been greatly confined by the reftriction of certain modes to certain feafons and hours, unlefs thofe reftrictions belonged merely to the principal mode. The fcale of the Vinà, we find, comprized both our European modes, and, if fome of the notes can be raifed a femitone by a ftronger preffure on the frets, a delicate and experienced finger might produce the effect of minute enharmonick intervals : the conftruction of the inftrument, therefore, feems to favour my conjeCture ; and an excellent judge of the fubject informs us, that " the open wires are from time to time ${ }^{6}$ ftruck in a manner, that prepares the ear for a change of modulation, to ${ }^{6}$ which the uncommonly full and fine tones of thofe notes greatly contrio
bute." We may add, that the Hindu poets never fail to change the metre, which is their mode, according to the change of fubject or fentiment in the fame piece; and I could produce inftances of poetical modulation (if fuch a. phrafe may be ufed) at leaft equal to the mof affecting modulations of our greateft compofers : now the mufician muft naturally have emulated the poet, as every tranflator endeavours to refemble his original; and, fince each of the Indian modes is appropriated to a certain affection of the mind, it is hardly poffible, that, where the paffion is varied; a kilful mufician could avoid a. variation of the mode. The rules for modulation feem to be contained in the chapters on mixed modes, for an intermixture of Mellari with Tcal and Saindbavi means, I fuppofe, a tranfition, however fhort, from one to another: but the quefion muft remain undecided, unlefs we can find in the Sangitas a clearer account of modulation, than I am able to produce, or unlefs we can procure a copy of the Gítagóvinda with the mufick, to which it was fet, before the time of Calidas, in fome notation, that may be eafily decyphered. It is obvious, that I have not been fpeaking of a modulation regulated by harmony, with which the Hindus, I believe, were unacquainted; though, like the Greeks, they diftinguifh the confonant and diffonant founds:I mean only fuch a tranfition from one feries of notes to another, as we fee defcribed by the Greek muficians, who were ignorant of barmony in the modern fenfe of tbe word, and, perhaps, if they had known it ever fo perfectly, would have applied it folely to the fupport of melody, which alone fpeaks the language of paffion and fentiment.

Ir would give me pleafure to clofe this effay with feveral ipecimens of old Indian airs from the fifth chapter of So'ma; but I have leifure only to prefent you with one of them in our own characters accompanied with the original notes: I felected the mode of Vofanta, becaufe it was adapted by

Jayade'va himfelf to the mort beautiful of his odes, and becaufe the number of notes in So'ma compared with that of the fyllables in the Sanforit ftanza, may lead us to guefs, that the ftrain itfelf was applied by the mufician to the very words of the poet. The words are:
-Lalita lavanga latá periṣílana cómala malaya famíré, Madhucara nicara carambita cócila cújita cunja cutíré, Viharati heririha farafa vafanté,
Nrityati yuvati janéna famañ fac'hi virahi janafya duranté.
"While the foft gale of Malaya wafts perfume from the beautiful . 6 clove-plant, and the recefs of each flowery arbour fweetly refounds or with the frains of the Cócila mingled with the nurmurs of the honey " making fwarms, Herr dances, O lovely friend, with a company of od damfels in this vernal feafon; a feafon full of delights, but painful to " feparated lovers. ${ }^{20}$

I have noted So'mA's air in the major mode of A , or fa, which, from its gaiety and brilliancy, well expreffes the general hilarity of the fong; but the fentiment of tender pain, even in a feafon of delights, from the remem. brance of pleafures no longer attainable, would require in our mufick a change to the minor mode; and the air might be difpofed in the form of a rondeau ending with the fecond line, or even with the third, where the fenfe is equally full, if it fhould be thought proper to exprefs by another modula tion that imitative melody, which the poet has manifefly attempted: the meafure is very rapid, and the air hould be gay, or even quick, in exact proportion to it.

The annexed plate contains alfo a ftrain in the mode of Hindo'la, beginning and ending with the fifth note $\int a$, but wanting $p a$, and $r i$, or the

second and firth: I could eafly have found words for it in the Gitagovinda; but the united charms of poetry a droufick would lead me too far ; and $\mathbb{I}$ mut now with reluctance bid farenel to a subject, which I defpair of having leifure to defurie.

## A LETTER from Licut. Col. Browne to the President.

## DEAR SIR,

IIN the courfe of reading hiftory, it is a reflection, which muft, 1 think, have occurred to every one, that, if the actors in the moft material events could have forefeen the importance, which thofe events ould have in the eyes of porterity, they would certainly have preferved̉ fuch detailed and circumftantial relations of them, as would have prevented the general darknefs and uncertainty, which we now experience and lament: but it has probably feldom happened, that their genius, or leifure from more important concerns, has admitted of this; and thus we are from neceffity often compelled to ref fatisfied with imperfect traditions, repeated (or, which is worfe, arbitrarily amended) by fubfequent hiftorians.

With what avidity fhould we now perufe an account written by any of the principal perfons prefent at the battle of Hafings; of Lincoln; of Lewes, of Evefham; of Creffy, of Agincourt; of Towton; or of Bofzeorth! but in thofe days, a general or ftatefman was as unfkilful with his pen, as he was expert with his fword; and the monks, who were almoft the only writers, were feldom participators of fuch active fcenes.

Considering this, as well as the importance, which the wars and polim ticks of Hindofan have now acquired in the opinions of European hiftorians, I cannot avoid believing, that the great events of this country will hereafter be fought for with as much diligence, as thofe of the early part of European hiftory are at prefent: if I am not miftaken in this, the battle of Paniput will be among thofe events, which will claim the graatef attention, both as a military action, and as an era, from which the reduction of the

Nabratta powermay be fixed, who otherwife would probably have long. ago reduced the whole of Hindofan to their obedience.

Ir appeared to me in this light at a time, when a very particular and authentick narrative of that action came into my poffeffion ; and, as the plainnefs of the original led me to believe myfelf competent to the tafk, I was induced to undertake the tranflating it into Englifh, that the difficulty of reading it in the Perfian might not prevent its being as generally known, as its hif.. torical importance merits.

It is almoft fuperfluous to tell you, dear fir, who are fo well verfed in Afatick hiftory, that this battle was fought in the month of January in61, between the united forces of all the Mabratta Chiefs on one fide, commanded by Sedasheo, (commonly called the Bhow) and the combined armies of the Durranies, Robillas, and Findoftary Muffulmans, on the other, under the command of Ahmed Shail Durrany: few battles have been mo:e bloody, or decifive of greater events; for, had the Mabrattas been conquerors, they would have put a final period to the Mufulman dominion in Hindofan, and efablifhed their own in its place; but, as it happened, the power of the Malirattas received a fhock, from which it has never entirely recovered ; and the Durrany Shah, having returned precipitately to his own dominion, left the diftinited Robilla and Hindoftany Muffulnans to carry on, as they could, their difracted government, under a wretched pageant of royalty, and a divided and unprincipled nobility.

The writer of this narrative, Casi Raj Pundit, was a Mutta* fedly in the ferton fitelate Vizier, Shuja-ul-dowlah; and, being by bisth a native os .... Lecan, acquainted with the Mabratta language, and
having fome friends in the fervice of the Bhow, he became the channe. of feveral overtures for peace, which the Bhow endeavoured to negotiate: through SHUJA-UL-DOWLAH: this, together with the accuracy and clearnefs of his narrative, makes it much more interefting than any other which I have feen. The tranflation is however far from literal, as I endeavoured: to make the ftyle as plain and unadorned as poffible.

Such as it is, permit me, dear fir, to offer it to you, and to leave it to, your difpofal: if I am fo happy as to know, that it receives your approbation, as likely to prove ufeful in elucidating the hiftory of this country, fhall think myfelf fufficiently rewarded for the time it has taken up. Believe me to be, with the greateft efteem and refpect,

$$
\text { Dear } S_{i r}
$$

Your very faithful

and obedient Servant

JAMES BROWNE:

Dinapore, February i. 199 .

## V.

An Account of the Battle of Paniput, and of the events leading to it. -Written in Perfian by Ca'sa Raja Pundit, who was prefent at the Battle.

BALA ROW, Pundit pradbản, who fat on the Mufnud of government in the Decan, was confidered by the chiefs and inhabitants of Hindofan as a man of wifdom, circumfpection, and good fortune; but he maturally loved his eafe and pleafure, which did not however lofe him the xefpect and attachment of his people.

As long as harmony prevailed in his family, he left the entire management of all the affairs of government, to Sedasheo * Row Bhow, and gave himfelf up to pleafure.

Sedasheo, from his earlieft years, had ftudied every branch of the art of government, the regulation of the finances and the army, and the conduct of all publick affairs, under the inftruction of Ramchundra Baba Sindbvi, the greateft ftatefman of the age; and from the firft watch of the day till the middle of the night, applied to the publick bufinefs : by his great experience, addrefs, and ability, he brought men over to his opinion, to a co-operation in his meafures, and a perfect reliance upon his wifdom and ability. Several important affairs both in the Decan and the provinces had been brought to a conclufion by his means; and at length an expedition was fitted out for completing the conqueft of Hindofan, under

[^2]the fupreme command of Raghunaut Row. Mulhar Row Hulkur, Junkoogee Sindia, and feveral other chiefs, were ordered to act under him with very powerful forces. They accordingly marched into Hindoftan, and with little difficulty reduced every place to their obedience, until they came to the neighbourhood of Labore and Shabdowla: here they were oppofed by Jehan Kian and the other commanders left in thofe diftricts by Ahmed Shah Durrany, whom they defeated and compelled to repafs the Attock. They kipt poffeffion of that country for fome time, but the army beginning to fall confiderably in arrears, Raghunaut Row thought it advifable to return to the Decan。

Upon thereturn of RAGHUNAUT Row, the accounts of his expedition be ing infpected by the Brow, it was found that a debt of eighty-eight lacs of rupees was due to the arniy, fo much had the expences been allowed to exceed all the collections of tribute, Pibcufb, \&c: the ,BHow, whe was in every refpect fuperior to RAGHUNAUT, reproached him feverely for this, and afked him if that was his good management, to bring home debts inftead of an increafe of wealth to the treafury of the ftate, which RAGHU. na $\quad$ Row replied to, by advifing him to try his own Nkill next time, and fee what advantage he could make of it. Balarow. however interfered, and reconciled them in fome degree, by excufing Raghunaut Row on ace count of his youth and inexperience.

Next year the fcheme of reducing Hindofan being renewed, and the command again offered to Raghunaut Row, he declined it, faying "let " thofe have the command, who are well-wifhers to the ftate, and who will " confult the publick advantage." This fpeech gave great offence to the BHow, and, on many confiderations, he offered himfelf to take the come
mand of the expedition: taking with him Biswas Row, the eldeft for of BALA Row, then feventeen years of age, as the nominal commander in chief, according to the ancient cuftom of the Mabrattas*. The army un. der his command was very numerous, and they fet out on their expedition without delay; but, as foon as they had pafed the Nerbudda $\dagger$, the Bhow began to exercife his authority in a new and offenfive manner, and both in fettling the accounts of the army and revenue, and in all publick bufinefs, he fhowed a capricious and felf-conceited conduct. He totally excluded from his counfel Muliar Row and all the other Chiefs, who were expe rienced in the affairs of Hindigtan, and who had credit and influence with the principal people in that country, and carried on every thing by his own opinion alone.
"Wien he came to Seronga, he difpatched Vakeels with prefents to all the principal Chiefs in Hindofian, inviting them to an alliance and co-operation with him, for the purpofe of fettling the affairs of Hindofan. Among the reft a Vakeel came with the above propofal to the Naváb ShuJa-Ul-DOWLA, bringing with him a prefent of fine cloths and jewels, to a confidcrable amount, and informing him at the fame time, that, whenever the Bhow fhald arrive near him, he would difpatch Naroo Shunker to conduct Shujah-ul-dowla to him. Shuja-ul-dowla anfwered him in the language of profeffion, but determined in hisown mind to keep himfelf difengaged from both parties, and to be a fectator of the expected cono teft, till his future conduct fhould be determined by the event, when he defigned to join the victors.

[^3]Ahmed Shay Durrany, after the defeat of Dettea Jfe Putur Sindia, cantoned his army in the diftrict of Aiffrar upon the banks of the Ganges; and Dattea Jee Patul himfelf having been killed in an action with Nujeib-ul-Dowlah, the latter was apprehenfive of the confequences of the refentment of the Mabrattas, and therefore united himfelf clofely with the Durrany Shait, who was himfelf excited to invade Hindofan by a wifh to revenge the defeat of his General Jehan Khan the preceding year, butitill by the folicitations of Nujeib-Ul-dowe iah, who agreed to bear the extra-charges of the Shah's army and being himfelf a man of great military reputation, as well as an able politician, had perfuaded all the Robilla chiefs and the Patans of Ferokbabad to join the Durrany Shah.

The Bhow, befides his own Decany troops, had brought with him all the auxiliaries that he could collect in Malwa, Fanfye, \&c. under the command of the feveral Aumils, fuch as Naroo Shunker and others; and, as foon as he arrived at the river Chumbul, he fent a confidential perfon to Raja Surja Mul chief of the Fauts, propofing a conference and that Surja Mul fhould enter into alliance with him. Surja Mul fent him word in reply, that his negotiations with the Mabrattas had always been conducted through the mediation of Mulhar Row and the SinDEAS, and that, if they chofe to interfere on the prefent occafion, he was ready to wait on the BHow. The Bhow from neceffity afked thofe Chiefs to affift him in this matter, which they having confented to, as foon as the army of the Mabrattas approached to Agra, Surja Mui paid his refpects to the Bhow, and, the converfation turning on the moft advifable mode of conducting the war, Surja Mul faid: "" You are the mafter of Hindofan, " poffeffed of all things: I am but a Zemiridar, yet will give my advice
or according to the extent of my comprehenfion and knowledge. In the "firf "place, the families of the chiefs and foldiers, the large train of " baggage, and the heavy artillery, will be great impediments to carry" ing on the kind of war, which you have now in hand. Your troops "o are more light and expeditious than thofe of Hindofian; but the Durranies " are fill more expeditious than you. It is therefore advifable, to " take the field againft them quite unincumbered, and to leave the fuperflu" ous baggage and followers, on the other fide of the Cbumbul, under " the protection of $\operatorname{Yanje}$ or Gualiar, which places are under your autho. " rity.
" Or I will put you in poffeffion of one of the large forts in my coun" try, Deig, or Combeir, or Burtpoor, in which you may lodge the baggage " and followers; and I will join you with all my forces. In this arrange" ment, you will have the advantage of a free communication with a. " friendly country behind you, and need be under no apprehenfions ref-. " pecting fupplies to your army; and there is reafon to believe, that " the enemy will not be able to advance fo far, but will by this plan of " operations be obliged to difperfe, without effecting any thing."
" Mulhar Row and the other chiefs approved of this advice, and obferved, " that trains of artillery were fuitable to the royal armies, but " that the Mabratta mode of war was predatory, and their beft way was " to follow the method to which they had been accuftomed, that Hindofan " was not their hereditary poffeffion, and, if they could not fucceed in re" ducing it, it would be no difgrace to them to retreat again. That the " advice of Surja Mul was excellent; and that the plan, which he pro" pofed, would certainly compel the enerny to retreat, as they had no fixed

* poffeffion in the country. That their object for the prefent therefore, ots fhould be to gain time till the breaking up of the rains, when the Dur" ranies would certainly return to their own country."

Notwithstanding that all the Mabraita chiefs were unanimous in recommending this plan, the Bhow, relying on the ftrength of his army, and his own courage and ability, would not liften to it, but faid " that " his inferiors had acquired military reputation by their actions in that " country; and it never Mhould be reproached to him, that he, who was the " fuperior, had gained nothing but the difgrace of acting defenfively." And he reproached Mulhar Row with having oullived his activity and his underftanding: at the fame time faying " that Surja Mul was only a "Zemindar, that his advice was fuitable enough to his rank and capacity, " but not worth the confideration of men fo much his fuperiors."

Men of wifdom and experience were furprifed at this arrogance and obftinacy in a man, who always formerly had hown fo much good fenfe and circumfpection, as the Bhow had done till this expedition; and concluded, that fate had ordained the mifcarriage of their enterprife. Every one became difgufted by his harh and offenfive fpeeches, and they faid. among themfelves: " it is better that this Brahavan fhould once meet with a. "defeat, or elfe what weight and confideration hall we be allowed ?"
'The Bhow pofted a body of troops to prevent Surja Mul from leaving the camp: this alarmed him very much, but, as all the chiefs were of one opinion, Mulaar Row and the reft advifed him not to be hafty, but to act as circumftances fhould direct ; and for the prefent, to remain for the fatisfaction of the BHow.

After this the Bhow marched from Agra to Debly, and at once-laid rege to the Royal Caftle, where Yacoob aly Khan (who was nephew to the Durrany Vizier, Shaf vulli Khan) commanded, and fummoned him to furrender the caftle, after the batteries had played fome days. Yacoob aly Khan finding that refiftance was vain, by the advice of Shaf vulli Khan, capitulated through the other Mabratta chiefs' mediation and delivered the caftle up to the Bhow, who entered it with Biswas Row, and feized upon a great part of the royal effects that he found there: efpecially the ceiling of the great hall of audience, which was .of filver and made at an immenfe expenfe, was pulled down and coined into feventeen lacks of rupees. Many other actions of the fame kind were done, and it was generally reported to be the BHow's defign to get rid of fuch of the principal Hindoftany chiefs as ftood in his way, and, after the Durrany Shah fhould return to his own country, to place Biswas Row upon the throne of Debly. This intelligence was brought to the Navab Shuja ul Doulah, and it is on his authority that I relate it.

In the mean time the rains fet in, and the BHow cantoned his army in Debly and for twelve cofs round it, refiding himfelf in the Caftle; while Ahmed Shah Durrany remained in cantonments near Anuffbair: Nujeib ul Doulaf gave him exact information of every thing that paffed, upon which intelligence the Shay told him, "that, as Shuja ul Doulah " was a chief of great weight and power and Vizier of Hindoftan, it was "s of the greateft importance to fecure him to their intereft, and to perfuade .s him to join them, for that, fhould he be gained by the Mabruttas, the st worft confequences muft arife from it. That it was not neceffary, that st he fhould bring a large army with him: his coming even with a few es would very confiderably ftrengthen their caufe. That on a former occa-
"s fion, when he (Ahmed Shary) invaded Prindofan, Sheja ul Dowzan's "father, Sufdar Jung, had oppoied him and been the principal means " of his failure. That no doubt this would make Shuja ul Doulah ap-. " prehenfive and fufpicious of him, and therefore Nujeib ul Dowlab " muft endeavour by every means to get the better of that obftacle, le $\{$ "Shuja ul dowlab fhould join the oppofite party. That this was "a negociation too nice and important to beconducted by Vakcels or by ". letters, and that therefore Nujeib uli Doulah muft go himfelf with a: " fmall efcort, and in perfon prevail on Shuja vl Dowlah to join them.."

Ahmud Shaf Durrany and his Vizier, Shaf Valli Khan, fentwritten treaties of alliance, and the Koran fealed with their feals, by Nujeib ul Dowlah, who, taking his leave of the Durrany Shah, fet out with an efcort of two thoufand horfe, and in three days gat to Mindy: gaut on the Ganges.

Shuja ul Dowlah, fome time before this, had been encamped on his: frontier near the Ganges; for the protection of his country, and, receiving, information of Nujeib ul Dowlah's fudden arrival, he found himfelf. under the neceffity of giving him a meeting, and fhowing him all the honours, which hofpitality and politenefs demanded. Nujelb ul Dowxah fhowed him the treaties propofed by the Durrany Shab, and gave him every affurance and encouragement poffible both from the Durrans Shat and from himfelf; and explained to him alfo the perils of their own fituation: " for my own part, faid he, I give over every hope of fafety, " when I reflect that the Bhow is my declared enemy, but it behoves you alfo ${ }^{4 s}$ to take care of yourfelf, and to fecure an ally in one of the parties; and ${ }_{0}$; as as you know the Bhow bears a mortal hatred to all Mufulmans, whenever:

* he has the power to fhow his enmity, neither you nor $\mathbb{I}$, nor any other - Muffulman, will efcape. Though after all the deftiny of God will be fule 6. filled, yet we ought alfo to exercife our own faculties to their utmof. "From my friendfhip to you, I have come this diftance to explain things os to you, though averfe from all unneceffary trouble: now confider and os determine. The Begum your mother is capable of advifing us both : * confult her upon the occafion, as well as the reft of your family, ${ }^{66}$ and determine on what you fhall think bet."

After confidering the matter for two or three days, Shuja ul Dowlahi concluded, that it would be very unfafe and improper to join the Mabrato tabs: and to decline the proffered friendfhip of the other party, would be impolitick, efpecially after their deputing a man of Nujeib ul Dowlah's rank to him, and would never be forgiven either by the Shah or the Robilla chiefs. Yet the danger appeared very great, whether the victory fhould fall to the Mahrattas, or to the Durranies. He at length however determin = ed to follow the advice of Nujeib ul Dowlah, and tojoin the Durrany Shah: he accordingly difpatched his women to Lucknow, appointed Raja Beni Behader Naib Subab during his abfence, and, fetting out with Nujib ul Dowlah, and arriving at the Durrany camp near Anufo Bair, was prefented to Ahmud Shah Durrany, who treated him with the greateft confideration and honour, told him that he confidered him as one of his own cbildren; that he had waited for his arrival, and now would thew hin the punifhment of the Mabrattas, with many proofs of his friendhip. He at the fame time proclaimed it through his own camp, that no Dirrany fhould prefume to commit any violence or irregularity in Shuja ul Dowlah's camp: that any one, whodid, fhould be put to immediate death; adding, that Shuja ul Dowlah was the fon of Sufder

Jung the guefl of Ahmed Shan's family, and that he confidered him as dear as his own child. The Grand Vizier Shaf Vulli Khan,' who was a man in the higheft efteem and refpect with all ranks, called Shuja ul Dowlaf his fon alfo, and treated him with the highef diftinction.

As the common foldiers amongft Durannies are fubborn and difobedient, notwithftanding the Shah's proclamation, they committed fome irregularities. in Shuja ul Dowlah's camp: the Shair, hearing of this, had two hundred of them feized upon, and, having had their nofes bored through with arrows, and ftrings paffed through the holes, they were led in this condition, like camels, to Shuja ul Doneah to put to death or pardon as he fhould think proper. He accordingly had them releafed, and from that time none of the Duranay foldiers made the leaft difurbance in SHUIA UL Dowlah's camp.

Soon after this, though the rains were ftill at their height, the SHsirt marched from Anufshair, and cantoned his army at Sbubdera on the bank of the Fumna, oppofite to the city of Debly. Many pofts of the Mabratta army were within fight, but the river was too deep and rapid to be paffed.

The Bhow fent Bowany Shunker: Pundit, a native of Aurungabad, and a man of good fenfe and experience, with fome overtures to ShUJA ul Dowlah; telling him, that there was no ground of enmity between the Mabrattas and his Excellency's family; on the contrary, they had formerly given great fupport and affiftance to Sufder Jung, Shuje ul Dowlah's father. Why then did the Navabjoin their enemies? That their not having long fince defired him to join them in perfon, was folely owing their unwillingnefs to give him inconvenience. That now it was

By all means neceffary for him to join them, or at leaft to feparate himfelf from the other party, and to fend fome perfon of character and rank on his. part to refide within camp.

Accordingly the Navab fent RajaDebydut a mative of Debly, who was in his fervice; a man of great eloquence, (whofe father had been the soyal treafurer during the adminiftration of the Syeds, and he himfelf had been one of the houfehold during the reiga of Mohammud Shah) to accompany Bowany Shunker. The Navab alfo fent Row Casy Raj (the writer of this narrative) who had been in the fervice of Sufder Jung and much favoured by him. His excellency told Bowany Shunker, that I (Casy RAJ) was alfo a Decany; and introduced me to him in his own prefence, where we foon recognized our being of the fame caft and country. Bowany Shunker wrote the Bhow word of my being employed in this affair, upon which the Bhow caufed a letter to be written to me in the Decan language, but, as there was fome deficiency in the form of addrefs, I did not reply to it. The Bhow inquired of Bowany Shunker why I neglected to anfwer his letter, which being explained he was very angry with his Murfly.

When Raja Debydut got to the Bhow's camp, the negociation began, but the Bhow being diffatisfied with this agent, he fent Bowanny Shunker back to tell Shuja ul Dowlah, that Raja Debydut was too unguarded a man to be entrufted with fecrets of fuch importance : he therefore defired the Navab would fend a trufty man entirely to be relied on, and fend word by him precifely what feps were to be purfued.

Ax the fame time other overtures came from Mulhar Row, and Raja,

Surja Mul to know what part they fhould act. All thefe propofals the Navab communicated exactly to Nujeib ul Dowlah and the Grand Vizier, and negotiated with the Mabrattas by their advice.

Nujeib ul Dowlah threw every obftacle that he could in the way of peace; but the Grand Vizier told Shuja ul Dowlah, that, if a peace could be brought about through his means, it would be better; that he was very willing to forward it, and would engage to obtain the Shar's concurrence. In fact he was at this time on but indifferent terms with Nujeid ul Dowlah.

At length it was refolved to fend the Eunuch MohammedYacoob Khan, with their propofals to the Mabrattas, and to tell them from Shuja ul Dowlah, that he acknowledged the friendfhip, which had always fubfifted between them and him; that however it was neither proper nor practicable, for him to join them, but that on every proper occafion he was ready to manifeft his friendhip, by giving them the beft intelligence and advice; and, fince they afked his opinion in the prefent inftance, he would advife them to avoid attempting any other mode of carrying on the war, than the predatory and defultory one, to which they were accuftomed; or that, if they preferred peace, means fhould be devifed for obtaining it.

They at the fame time wrote to Raja Surja Mul, advifing him to quit the Mabrattas, and return to his own country; which advice coincid ing with his own opinion, he promifed to follow it.

The Bhow, in anfwer to Shuja ul Dowlah, acknowledged the kinde nefs of his advice and conduct, and promifed to pay attention to what he
had faid. That as to peace, he had no caufe of quarrel with the DUR= rany Shah, who might march back to his own country, whenever he pleafed; that all the country on the other fide of the Attock, fhould remain in the poffeffion of the SHAн, and all on this fide of it fhould belong to the chiefs of Hindoftan, who might divide and fettle it, as they could agree among themfelves. Or, if this fhould not fatisfy the Shah, he fhould pofo fefs as far as Labore. Lafly he faid, that, if the Shaf infifted on ftill more, he fhould have as far as Sirbind, leaving the remainder to the chiefs of Hindofan, as was faid before. With this anfwer Yacoob Khan rea curned.

Two days after this, Surja Mul, who was encamped at Bidderpoor, fixcofs from Debly, by the advice of Mulhar Row and the other difafe fected chiefs, under pretence of changing the ground of his encampment, fent off all his baggage and camp-followers towards his own country, and, when he received intelligence, that they had got ten cofs ontheir way, he followed them with his divifions of troops, and had got a great diftance, Before the BHow heard of his departure. In a day and awo nights he marched fifty cofs, and reached the frong holds of his own counfryfise.

The Bhow made no account of his defection, only faying that fuch conduct was to be expected from mere Zemindars; that his going was of no importance, but rather to be rejoiced at, fince he did not quit them at any time, when they might have relied on him for material fervice.

Mahommed Yacoob Khan, returning to camp, reported all the Bhow's overtures; but, as neither party were fincere:y in earmen, thenegotiation went on but flowly.

Mean time the rains drawing near to an end, the Bhow determined to reduce the ftrong pof of Kunjpoora, which is fituated on the banks of the Jumna, about fifty cofs above Debly, and at that time occupied by about ten thoufand Robillas, as the poffeffion of that place would fecure his paffing the river to attack the Shaf. He accordingly marched from Debly, and, arriving at Kunjpoora, affaulted it with fifteen thoufand chofen men, and after an obfinate refiftance made himfelf mafter of the place, taking the Governor Duleil Khan, and all the garrifon prifoners, and delivering up the place to plunder. The Durrany Shab had exact intelligence of all this proceeding, and was very defirous of relieving Eunjpoora, but the Fumna was yet impaffable.

Soon after the rains broke up, and the Duffara arrived: the Shis gave orders that the day before the Duffara all the army fhould be affembled for mufter; which being done, he reviewed them himfelf from an sminence inifront of the camp.

ITHE; Durfany army confifted of twenty-four Duftus (or Regiments), each containing towelye hundred horfemen. The principal chiefs in command under the Shaf were, the Grand Vizier Shaf Vulli Khan: -Jehan Khan : Sham Pussund Khan: Nussir Khan Beloche:-Berkhordar Khan:-Vizier Ulla Khan Kizelbafhi:-Morad Khan, a Perjáa Mogbol.-Befides thefe principal chiefs there were many others of inferior rank; and of the twenty-four Dufas above-mentioned, fix were of the Shan's flaves called Koleran.

There were aifo two thoufand camels, on each of which were mounted two mufketecrs, armed with pieces of a very large bore, called Zumburucks"
forty pieces of cannon, and a great number of fhulernals, or fwivels, mounted on camels : this was the ftrength of the Durrany army.

With the NavabShuja-ul-dowlah there were two thoufand horfe, two thoufand foot, and twenty pieces of cannon of different fizes :

With Nujerb ul-dowlah, fix thoufand horfe and twenty thoufand Robilla foot, with great numbers of rockets:

With Doondy Khan and Hafiz Rahmut Khan, fifteen thoufand Robilla foot and four thoufand horfe, with fome pieces of cannon:

And with Aimed Khan Bungash one thoufand horfe, one thoufand foot, with fome pieces of cannon, making altogether forty-one thoufand eight hundred horfe, and thirty-eight thoufand foot, with between feventy and eighty pieces of cannon.

This I know to have been precifely the fate of the MuJulman army, having made repeated and particular inquiries before I fet it down, both from the Dufter (or Office) of Mufters, and from thofe by whom the daily provifions were diftributed. But the numbers of irregulars, which accompanied thefe troops, were four times that number, and their horfes and arms were very little inferior to thofe of the regular Durranies. In action it was their cuftom immediately after the regulars had charged and broken the enemy, to fall upon them fword in hand, and complete the rout. All the Durranies were men of great bodily flrength and their horfes of the Turki breed; naturally very hardy, and rendered fill more fo by contio nual exercife.

Ahmed Shaf Durrany iffued orders to his army to be ready to march two days after the mufter.

On the other fide, the Bhow, having reduced Kunjpoora, returned to Debly and ordered a munter of his army, when the ftrength of it appeared to be as follows:

Under Ibrahim Khan Garder, two thoufand horfe, and nine thoufand Sepoys with firelocks, difciplined after the European manner; together with forty pieces of cannon.

The Kbafs Pagäb, or Houfehold Troops: 6,000 horfe.
Muliar Row and Hulker,
Junkoojee Sindia,
Amajee Guickwar;
Jesmont Row, Powarg. 2,000 horfe.
Shumshere Behader, 3,000 horfe.
Belajee Jadoon, 3,000 horfê.
Rajaif Betul Shudeo, 3;000 horfe.
Bulmont Row, brother-in-law to the Bhow, $\}$
and his great advifer in every thing; $\} \quad 7,000$ horfe.
Biswass Row's own Pāgāh, 5,000 horfe.
Antajee Mankeser,
2,000. horfe.
There were feveral other fmaller bodies, which cannot now be recollected : the whole army amounted to. fifty-five thoufand horfe, and fifteen thoufand foot including Ibrafim Khan's Sepoys.

There were alfo two hundred pieces of cannon, and rockets, and ßurero nals without number.

Besides thefe the Pindary chiefs, Churcory, and Hool Sewar, had fifteen thoufand Pindarries under their authority ; and there were two or three thoufand horfe with the Rbatore and Cutchwa Vakeels. Thefe, with five or fix thoufand horfe more, were left to guard Debly, under command of Bowany Shunker.

Two days after the Dufara, which was the 17 th of OEtaber 1760 , Ahmed Shaf Durrany marched from his camp, ordering his baggage to follow the army ; and marching all night encamped next day at the ford of Baugput eighteen cols above Debly, He fearched in vain for the ford, the river being fill very high, and feveral horfemen, attempting to pafí, were drowned. The Shar having fafted and performed religious ceremonies for two days, on the third a ford was difcovered, but it was very narrow, and on each fide the water was fo deep as to drown who. ever went the leaft out of the proper track.

The troops began to pafs the ford on the 23 d of Oftober, and the Shair himfelf paffed as foon as half of his army was on the other fide. The whole army was completely croffed in two days; but from their nambers and the great expedition ufed, many people Iof their lives.

As foon as the army had croffed, the Shail marched towards the enemy, who alfo moved to meet him, and on the 26 th of OCtober in the afternoon, the Herazeil (or advanced guard) of the two armies, met each other near Sumalkeb Seray, and an action enfued, in which the Mabrattas had the difadvantage, and retreated at fun-fet with the lofs of near two thoufand men, while not more than one thoufand were killed and woundelon the part of Ahmed Shah : the Shah's army returned to sheir camp.

The next day Ahmed Shair moved forward again, and fo on for feveral days fucceffively, conftantly fkirmifhing, but fill gaining ground on the Mabrattas, till they came to Paniput, where the BHow determined: to fix his camp, which he accordingly did, and inclofed that, as well as the town of Paniput, with a trench fixty feet wide and twelve deep, with a good rampart, on which he mounted his carnon. The Shan encamped about four cofs from the Mabratta lines; and, as he had always during his march furrounded his camp at night with felled trees, fo in this camp, which was to remain fixed for fome time, the abattis was made fomething ftrong$\mathrm{er}_{\mathrm{r}}$ and the chiefs encamped in the following order:

> The Shar in the centre.
> On his left, Shuja ul Dowraho.
> On his left, Nujeib ul Dowlaho
> On the right of the Shah, Hafiz Rahmut $\mathrm{R}_{\mathrm{Km}} \mathrm{han}$
> On his right, Doondy Khan.
> On his right, Ahmed Khan Bungus.
> -The fpace occupied by the whole front was near three cofs and a half.

The Bhow had before given orders to Gobind Pundit, who had the command and collections of Korah, Kurrah, Etawa, Shekoabad, and the reft of the Doab, as well as of Kalpee, and other diffricts acrofs the Jumna as far as Sagbur, to collect all the forces he poffibly could, and to cut off all communication for provifions from the rear of the SHan's army. Gobind Pundit having got together ten or twelve thoufand horfe, advanced as far as Mirbet, in the rear of the SiAh, and fo effectually cut off all fupplies, that the Shah's army was in the greatelt diftrefs for provifions coarfe flour felling for two rupees per feer, and the troops confequently
very muchdiffatisfied. The Shaf therefore detached Attai Khan, nea phew to the grand Vizier with a Dufta, confinting of two thoufand chofen horfe, and ordered hinn to march day and night till he fhould come up with Gobind Pundit, and having cut off his head to bring it to the prefence. He fet out accordingly being joined by eight or ten thoufand of the irregulars, and having marched about foity cofs during the night, at day-break they fell like light. ning upon the camp of Gobind Pundit, where having no intelligence of the Durranies approach, they were feized with terror and amazement, and fled on all fides. Gobind Pundit himfelf attempted to effape upon a Turki horfe, but being old, and not a very expert horfeman, he was thrown off in the purfuit, and the Durranies coming up cut off his head and carried it to camp, where it was recognized for the head of Gobind Pundito.

After plundering the enemy's camp, and driving away their fcattered troops on all fides, Attai Khan returned to the Shah's camp, the fourth day from that on which he was detached, and prefented his Majefty with the head of Gobind Pundit. The Shah was highly pleafed with this effectual performance of his orders, and beftowed a very honourable Kbalat on Attai Khan : after this action, the Durrany army was con. ftantly fupplied with provifions.

The Bhow was much affected with this news, efpecially as it was accompanied with other events little favourable to his caufe: but as he was a man of dignity and refolution, he never betrayed any defpondency, but made light of all the adverfe circumftances which occurred.

Soon after the defeat of Gobind Pundit, the Bhow. fent two thoufand horfe to Dchly, to receive fome treafure from Naroo Shunker for the ufe of
the army. Thefe troops were infructed to march privately; by night and by unfrequented roads, and eachmanto have a bag of two thoufand rupees. given him to carry, as far as the fum they thould receive would go. They executed their orders completely, as far as to the laft march on their return to camp, but unluckily for them, the night being dark, they miftook their road, and went ftrait to the Durrany camp inftead of their own. On coming to the outpofts, thinking them thofe of their own camp, they began to call out in the Mabratta language, which immediately difcovering them to the Durranies, they furrounded the Mabrattas, cut them to pieces and plundered the treafures.

From the day of their arrival in their prefent camp, Ahmed Shar Durrany caufed a fmall red tent to be pitched for him a cofs in front of his camp, and he came to it every morning before fun-rife; at which time, after performing his morning prayer, he mounted his horfe and vifited every poft of the army, accompanied by his fon Timour Shafr and forty or fifty horfemen. He alfo reconnoitred the camp of the enemy, and in a word faw every thing with his own eyes, riding ufually forty or fifty cofs every day. After noon he returned to the fmall tent, and fometimes dined there, fometimes at his own tents in the lines; and this was his daily practife.

At night there was a body of five thoufand horfe advanced as near as conveniently might be, towards the enemy's camp, where they remained all night under arms: other bodies went the rounds of the whole encampment; and Ahmed Shah ufed to fay to the Hindofany chiefs, "r do you " fleep, I will take care that no harm befalls you: " and to fay the truth his orders were obeyed like deftiny, no man daring to hefitate or delay one moment in executing them.

Every day the troops and cannon on both fides were drawn out, and a diftant cannomade with many firmifnes of horfe took place: towards the evening both parties drew off to their camps. This continued for near three months : during this time there were three very fevere, though partial, actions.

Tire firf was on the twenty-ninth Nov. 1760, when a body of Mabrat. tas, about fifteen thoufand ftrong, having fallen upon the grand Vizier's poft: on the left of the line, preffed him very hard ; till a reinforcement coming to his affiftance, the action became very obftinate: the Mabrattas, however, gave way about fun-fet, and were purfued to their own camp with grear' flaughter. Near four thoufand men were killed on the two fides in this action:

The fecond action was on the 23 d of December 1760 , when Nujeeb uz Dowlah having advanced pretty forward with his divifion, he was attacked with fo much vigour by Bulmont Row, that his troops gave way, and only fifty horfemen remained with him, with which fmall number, however, he kept his ground till a reinforcement came to his affiftance; the action was then renewed with great fury, and above three thoufand of Nujeeb ul Dowlah's men werc killed. or wounded : among the killed was Khatil ul Rahman, uncle to Nujeib ul Dowlah. In the laft charge, which was at near nine o'clock at night, Bulmont Row was killed by a mulker ball: upon which both parties retired to their own camps.

The third action was much in the fame way; and thus every day were the two armies employed from morning to nine or ten at night, till at length the Hindgfany chiefs were out of all patience, and entreated the Shar to put an end to their fatigues, by coming at once to a decifive action; but his conftant
anfwer was: " ${ }^{6}$ this is a matter of war, with which you are not acquaintee. "In other affairs do as you pleafe, but leave this to me. Military opera"tions muft not be precipitated. You fhall fee how I will manage this "affair, and at a proper opportunity will bring it to a fuccefsful conclufion."

As the Durrany army was vigilant both by day and night to prevent the approach of any convoys, there begañ to be a great fcarcity of provio fions and forage in the Mabratta camp.

One night when about twenty thoufand of their camp followers had gone out of the lines to gather wood in a jungle at fome diftance, they happened to fall in with a body of five thoufand horfe under the command of $\mathrm{SHAF}_{\mathrm{H}}$ Pussund Khan, whohad the advanced guard that night, and who furrounding them on all fides, put the whole to the fword, no perfon coming to their affintance from the Mabratta camp. In the morning, when the affair was reported to the Shah, he went out with mof of his chiefs to the fcene of the flaughter, where dead bodies were piled up into a perfect mountain, fo great had been the deftruction of thofe unhappy people.

The grief and terror which this event fruck into the Mabrattas, is not to be defcribed, and even the BHow himfelf began to give way to fear and defporidence.

There was a newsewriter of the Bhow's called Gonniesh Pundit, who remained in the camp of the Navab Shujah-ul-Dowlah; but not being of fufficient importance to obtain accefs to the Navab, any bufinefs that he had with the Durbar, he tranfacted through my means. Through this channel the Bhow often wrote letters to me with his own hand, defire
ing, that I would urge the Navab to mediate a peace for him, in conjun dion with the Grand Vizier ; that he was ready to fubmit to any conditions, if he could but preferve himfelf and his aimy, and would by every means manifelt his gratitude to the mediators. He alfo fent a handful of faffron, (as is a cuftom with thefe people) and a written engagement, (to which he had. rworn) to abide by this promife; together with a turban with rich jewels, as an exchange for one to be received from the Navab, who alfo returned. proper prefents, and promifed to affit him.

The Navab often fent me to the Grand Vizier upon this bufinefs. He was alfo very well difpoled to liften to the BHow's propofals, and fpoke to the Shah about it. The Shan faid, "that he had nothing to do in the " matter; that he came thither at the folicitation of his countrymen the Robil"las, and othes Mufulnans, to relieve them from their fear of the Mabrattia " yoke; that he claimed the entire conduct of the war, but left the Hindofa " tany chicfs to carry on their negociations, as they pleafed themfelves."

All the other chiefs, Hafiz Rafmut Khan, Doondy Kifan, and Ahmed Khan Bungush, were alfo fatisfied to make peace with the Bhow, but every one fipulated, that Nujeib-ul-Dowlah muft alfo be Gatisfied to do fo, otherwife they could not confent. Accordingly the Navak Shujah-ul-Dowlah font me to talk over the matter with Nujeib-ča Dowlait, and to obtain his confent. I therefore waited upon him, and, in a long private conference, I explained every thing that had paffed, and urged cvery argument, to perfuade him to come into the views of the other chicfs, to all which he replied in nearly the following words:-"ShuJain-"ul-Dowlail is the fon of a man, whom I look up to as my fuperior, and "I confider him alfo in the fame light; but at the fame time, he is young.
"s and unacquainted with the world : he does not fee to the bottom of thingss.
"This bufinefs is a deception: when an enemy is weak and diftreffed, " there is no conceffion that he will not make, and, in the way of negocia. "s tion, will fiwear to any thing ; but oaths are not chains, they are only " words. After reducing an enemy to this extremity, if you let him ef.
"cape, do you think he will not feize the firft opportunity to recover his "c lof honour and power? At prefent we may be faid to have the whole as Decan at our mercy: when can we hope for another conjuncture fo fa${ }^{6}$ vourable? By one effort we get this thorn out of our fides for ever. "Let the Navab have a little patience: I will wait upon him myfelf, and ${ }^{6 s}$ confult what is beft to be done."

After this anfwer, I left Nujeib-ul-Dowlah, and returned to my mafo ter, to whom I repeated all that had paffid, affuring him that Nujeib-ulDowlay would never be brought to agree to any terms of pacification.

As foon as I had left Nujeib-ul-Dowlah, though it was the middle of the night, he went immediately to the Shan, and informed him of what had paffed. "All the chiefs (faid he) are inclined to make peace with the ${ }^{6}$ Mabrattas, but I think it by no means advifable. The Mahrattas are the as thorn of Hindoftan; if they were out of the way, this empire might be a. your Majefty's, whenever you fhould pleafe. Do as feems fit to yourfelf: "for my own part I am a foldier of fortune, and can make terms with "* whatever party may prevail.".

The Shan replied, "You fay truly: I approve of your counfel, and" will ${ }^{66}$ not liften to any thing in oppoition to it. SHUJAB-UL-DOWIAH is
as young and inexperienced, and the Mabrattas are a crafty race, on whofe " pretended penitence no reliance is to be placed. I from the beginning " made you the manager of this affair: act as feems beft to yourfelf: in my " fituation I muft hear every one, but I will not do any thing againft your " advice."

Next day Nujeib-ul-Dowlah came to Shujah-ul-Dowlah's tent, where they confulted till late at night, but without coming to any conclufion.

By this time the diftrefles in the BHow's camp were fo great, that the troops plundered the town of Paniput for grain; but fuch a fcanty fupply gave no relief to the wants of fuch multitudes. At length the chiefs and foldiers, in a body, furrounded the BHow's tent, and faid to him: "it is sc now two days that we have not had any thing to eat; do not let us perifh " in this mifery; let us make one fpirited effort againft the enemy, and st whatever is our deftiny that will happen." The Bhow replied, that he was of the fame mind, and was ready to abide by whatever they fhould refolve upon. At length it was determined to march out of the lines an hour before day break, and placing the artillery in front to proceed to the attack of the enemy. They all fwore to fight to the laft extremity, and each perfon took a betel-leaf in the prefence of his fellows, in confirmation of this engagement, as is the cuftom among the Hindoos.

In this laft extremity, the Bhow wrote me a fhort note with his own hand, which he fent by one of his moft confidential fervants: the words of the note were thefe :
"The cup is now full to the brim, and cannot hold another drop. If "s any thing can be done, do it, or elfe anfwer me plainly at once : hereafter: "there will be no time for writing or fpeaking."

This note arrived about three in the morning, at which time I was with: the Navab: as foon as I had read it, I informed his Excellency of its contents, and called in the man who brought it, who told the Navab all that had happened in the Mabraita camp: while he was doing this, the Navab's harcarrahs brought word, that the Mahratias were coming out of their lines, the artillery in front, and the troops following clofe behind.

Immediately on hearing this his Excellency went to the Shah's tent; and defired the Eunuchs to wake his Majefty that moment, as he had fome: urgent bufinefs with him.

The Sian came out directly, and inquired what news; the Navab replied, that there was no time for explanation, but defired his Majefty to mount his horfe, and order the army to get under arms. The Shay accordingly mounted one of his horfes, which were always ready faddled at the tent door, and, in the drefs he then had on, rode half a cofs in front of his. camp, ordering the troops under arms as he went along.

He inquired of the Navab from whom he had his intelligence, and, he mentioning my name, the Shair immediately difpatched one on a poft camel to bring me. After I had made my obeifance, he afked me the par ticulars of the news. I replied, that the Mabrattas had quitted their lines and would attack his army, as foon as it thould be light. Juft at this time fome Durrany horfemen paffed by with their horfes loaded with plunder
which they faid they had taken in the Mabratta camp, and added that the Mahrattas were running away. The Shaf looked at me, and afked me what I faid to that? I replied, that a very thort time would prove the truth or falfehood of my report. While I was fpeaking, the Mabrattas having advanced about a cofs and a half from their lines, and got their cannon drawn up in a line, all at once gave a general difcharge of them.

Upon hearing this, the Sram, who was fitting upon bis horfe, fmoking a Perfian Kailian, gave it to his fervant, and with great calmnefs faid to the Navab: "your fervant's news is very true, I fee." He immediately fent for the Grand Vizier and Shan Pussund Khan, who came accordingly: he ordered Shaif Pussund Khan to take poft with his divifion on the left of NUJEib-UL-DowLAM, and confequently of the whole line. The Grand Vizier to take poft with his divifion in the centre of the line: and Berkhordar Kitan with fome other chiefs, with their troops, on the right of Mafiz Raimut Kian, and Aimmediman Bungusif, confequently of the whole line: when this was done, he ordered the trumpets and: other infruments to found to battle.

By this time objects began to bie difcernible, and we could perceive the: colvurs of the Malaralia line, advancing flowly and regularly, with their artillery in front. The Shay rode along the front of the line, and examined the order of all the divifions. He then took poft, where his little tent was pitched, in front of his camp, but in the rear of the prefent line of battle, and gave orders for the attack to begin.

The Mabratta army faced towards the eaftward, and their order was as follows, reckoning from the left flank of their line:

Ibrahim Khan Gardee,
Amajee Guickwar, Shu Deo Pateil,
The Bhow, with Biswas Row, and the houfehold troops,
Jeswont Row, Powar,
Shumshere Behader,
Mulhar Row,
Junkoojee Sindea, \&c,

The whole artillery, Suternals, \&c. were drawn up in front of the line.

The Mufulman army faced towards the weftward, and was drawn up as follows, reckoning alfo from the left flank of their line:

> Shah Pussund Khan, Nujeib ul Dowlah, Shuja ul Dowlah, The Grand Vizier Shaw vulli Khan, Ahmed Kifan Bungush, Hafiz rahmat Khan, Doondy Khan, Amir Beg Khan, and other Perfian Moghols, Berkhordar Khan,

All the artillery and rockets were in front of the line. Behind them were the camels mounted by the munketeers carrying Zumburucks, fupporto ed by a body of Perfian mulketeers.

The two armies facing each other rather obliquely, the divifions of Berkhordar Khan, Amir Beg, and Doondy Khan, were very near to that of Ibrahim Khan Gardee. The plan of the battle here annexed will explain this more clearly than any defcription in writing can do.

On the 7 th of $\mathcal{F}$ anuary, 1761 , foon after fun-rife, the cannon, mufketry, and rockets, began to play without intermiffion, yet our army fuffered but little by them; for the armies continuing to advance towards each other, the Mabratta guns being very large and heavy, and their level not eafily altered, their thot foon began to pafs over our troops, and fell a mile in the rear. On our fide, the cannon fired but little, except from the Grand Vizier's divifion.
$\Lambda$ s the armies were advancing towards each other, IbRAHIM KHAN GARe Dee role $u_{p}^{p}$ to the Bhow, and, after.faluting him, he faid: "you have " long been difpleafed with me for infilting on the regular monthly pay "for my people; this month your treafure was plundered, and we have " not received any pay at all ; but never mind that : this day I will convince as you, that we have not been pad folong without meriting it. "-He immediately fpurred his horfe, and returning to his divifion, he ordered the flandards to be advanced, ant, taking a colour in his own hand, he directed the cannon and mufketry of his divifion to ceafe firing ; then leaving two battalions oppofed to BerkhordarKhan, and Amir Khan's divifion, to prevent theirtaking him in flank, he advanced with feven battalionstoattack Doondy Khan and Hafiz Rahmut Khan's divifion, with fixed bayonets. The Rokillahs received the charge with great refolution, and the aca tion was fo clofe, that they fought hand to hand: near eight thoufand Ros
billabs were killed or wownded, and the attack became fo hard upon thens that but few of the people remained with their chiefs, not above five hundred, or at moft a thoufand with each, after the viclence of the firf charge.

Hafiz Rahmut Eifan, being indifpofed, was in his palankin, and feeing the defperate fate of affirs, he ordered his people to carry him to Doondy Khan, that he might expire in his preience: while on the othce hand Doondy Khan was giving orders to foarch for Hafiz Rammut $\mathbb{K}_{H A N}$ : for fo great was the confufion, that no one knew where another was. The two battalions left to oppofe the Shar's flank divifions, as mentioned above, exerted themfelves very much, and repulfed the Durram nies, as often as they attempted to advance. In this action, which lafted three hours, fix of Ibramim Khan's battalions were almoft entirely ruined, and he himfelf wounded in feveral places, with fpears, and with a mulket-ball. Amajee Guickwar, whofe divifion fupported Ibrahim $\mathbb{K}_{\text {han }}$, behaved very well, and was himfelf wounded in feveral places.

In the centre of the line, the BHow with Biswas Row, aud the houfehold troops, charged the divifion of the Grand Vizier. The Mabrattas broke through a line of ten thoufand horfe, feven thoufand Perfan mulketeers, and one thoufand camels with Zumburucks upon them, killing and wounding about three thoufand of them: among the killed was Attai Khan, the Grand Vizier's nephew, who had gained fo much honour by the defeat of Gobind Pundit. The divifion gave ground a little; but the Grand Vizier himfelf food firm, with three or four hundred horfe, and fifty Zumburuck camels: he himfelf, in complete armour, difmounted to fight on foot.

The Navab Shujah-ul-Dowlaf whofe divifion was next, could not fee what was going on, on account of the duft, but finding the found of
men and horfes in that quarter fuddenly diminifh, he fent me to examine ynto the caufe. Ifound the Grand Vizier in an agony of rage and defpair, reproaching his men for quitting him. "Our country is far off, my friends, "faid he, whither do you fly?" Bur no one regarded his orders or exhore tations. Seeing me; he faid: "ride to my fon Shujah-ul-Dowlair, and "tell him that, if he does not fupport me immediately, I muft perifh." Ir returned with this meffage to the Navab, who faid that the enemy being fo near, and likely to charge his divifion, the wort confequences might follow to the whole army, if he made any movement at that time, which might: enable the enemy to pafs through the line.

The Nirvab's divifion confitted of only two thoufand horfe, one thoufand muketecrs, with twenty pieces of cannon, and fome fwivels: but they ftood in clofe crder, and fhowed fo good a countenance that the enemy made no attempt upon it: Once or twice they advanced pretty near, and feemed as if they would charge us, but they did not.

On the left of the Navab's divifion was that of Nujeib-ul-Dowlafro who had about eight thoufand Robilla infan ry with him, and near fix thoufand horfe. They advanced flowly under cover of a kind of breaftworks of fand, which were thrown up by a great number of Bildars who were with them, and who, having finifhed one, advanced the diftance of half a muket fhot in front of that, under cover of their own people, and threw up another; to which the troops then advanced, while a third was thrown up in the fame manner. They had got on above a cofs in this method, and were within a long mulket thot of the enemy, Nujerib-ul-Dowlah faying, " that it behoved him to exert himfelf, as he was * the perion mont deeply interefted in the event of that day, the reft be-
" ing only as vifiters," and, to fay the truth, he was a man of furprifing activity and ability.

He was oppofed by Junkoogie Sindia, and between them, there was a mortal enmity. As the Robillas had a great number of rockets with them, they fired vollies of two thoufand at a time, which, not only terrified the horfes by their dreadful noife, but did fo much execution alfo, that the enemy could not advance to charge them. Befides which, the divifion of Shait Pussund Kifan was on the right flank of Nujetb-ul-Dowlah, and that Durrany chief, being a brave and experienced officer, advanced in fuch good order, that the Mabrattas could make no impreffion on it.

The action continued in nearly this fate from morning till noon, and, though we fuffered leaft in point of killed and wounded, yet, upon the whole, the Marbattas feemed to have the advantage.

About noon the Shan received advice, that the Rohillas and the Grand Viziers divifions had the wort of the engagement, upon which he fent for the Nefuckcbees (a corps of horfé with particular arms and drefs, who are always employed in carrying and executing the Shan's immediate commands) and two thoufand of them being affembled, he fent fiye hundred of them to his own camp to drive out by force all armed people, whom they fhould find there, that they might affirt in the action, and the remaining one thoufand five hundred, he ordered to meet the fugitives from the battle, and to kill every man, who fhould refufe to return to the charge. This order they executed fo effectually, that after killing a few they compelled feven or eight thoufand men to return to the field, fome were alfo found in the camp, and fome the Shay fent from the referve, which was
with him: of thefe he fent four thoufand to cover the right flank, and about ten thoufand were fent to the fupport of the Grand Vizier, with orders to charge the enemy fword in hand, in clofe order, and at full gallop: At the fame time he gave directions to Shar Pussund Khan and Nujeib-ul-Dowlah, that, as often as the Grand Vizier fhould charge the enemy, thofe two chiefs fhould at the fame time attack them in flank.

About one o'clock thefe troops joined the Grand Vizier, who immediately mounted his horfe and charged the body of the Mabratta army, where the Bhow commanded in perfon: Shah Pussund Khan and Nujeib-ul-dowlah touk them in flank at the fame time, the latter ordering his rocket-m ${ }^{\rho} \mathrm{n}$ to fire off two rockets each at the fame time, which produced a terrible effect.

This clofe and violent attack lafted for near an hour, during which time they fought on both fides with fpears, fwords, battle axes, and even daggers. Between two and three o'clock, Biswas Row was wounded, and difmounted from his horfe, which being reported to the BHow, he ordered them to take him up and place him upon his elephant. The BHow himfelf continued the action near half an hour longer on horfeback, at the head of his men; when all at once, as if by enchantment, the whole Mabratta army at once turned their backs and fled at full fpeed, leaving the field of battl: covercd with heaps of dead. The inftant they gave way, the victors purfued them with the utmoft fury, and, as they gave no quarter, the flaughter is fcarcely to be conceived, the purfuit continuing for ten or twelve cofs in every direction in which they fled.

Of every defcription of people, men, women, and children, there were Q 2
faid to be five hundred thoufand fouls in the Mabratta camp, of whom the greateft part were killed or taken prifoners: and of thofe, who efcaped from the field of battle and the purfuit, many were deftroyed by the Zemindars of the country. Antajee Mankeser, a chief of rank, was cut off by the Zemindars of Ferocknagur.

The plunder found in the Mabratta camp was prodigioufly great: you might fee one of our horfemen carrying off eight or ten camels, loaded with valuable effects: horfes were driven away in flocks like fheep; and: great numbers of elephants were alfo taken.

Near forty thoufand prifoners were taken alive; of which fix or feven thoufand took fhelter in the camp of Shujah-ul-Dowlah,who pofted his own people to protect them from the cruelty of the Durranies: but the unhappy prifoners, who fell in the hands of the latter, were molt of them murdered in cold blood, the Durranies faying in jeft, that, when they left their own country, their mothers, fifters, and wives defired that, whenever they thould defeat the unbelievers, they would kill a few of them on their account, that they alfo might poffefs a merit in the fight of God. In this manner, thoufands were deftroyed, fo that in the Durrany camp (with an exception of the SHAH and his principal officers) every tent had heads piled up before the door of it.

As foon as the battle was over, all the chief officers prefented their Nezzurs of congratulation to the SHAH; and his majefty, having taken a flight view of the field of battle, returned to his tent, as all the other commande ers did to theirs, leaving the inferior officers and private foldiers to cone mue the plunder and purfuit at their own difcretion.

Towards morning, fome of Berkhordar Khan's Durranies, having found the body of Brswas Row on his elephant, after taking the elephantand jewels, brought the body to SHUJAH-UL-Dowlah, whogavethem two thoufand rupees for it, and ordered that it thould be taken care of. Ibrahim Khan Gardee, thoughfeverely wounded, hadbeen taken alive by Shujah Koulaz Khane, oneof Shujah-ul-Dowlah's ówn people; which being reported to his excellency, he ordered him to be carefully concealed, and his wounds to be drefied.

The Shah next day ordered Shujah-ul-Dowlah to fend the body of Biswas Row for him to look at, which he accordingly did. The whole camp great and fmall were affembled round the Shah's tent to fee it, and every one was in admiration of the beauty of its appearance: it was not disfigured by death, but looked rather like a perfon whofleeps: he had one wound with a fword on the back of his neck, and a flight one with anc arrow over his left eye, but there was no blood difcoverable on any part of his remaining clothes. Upon fight of this body, many of the Durranies affembled in a tumultuous manner, faying, "this is the body of the king .46 of the unbelievers, we will have it dried and ftuffed to carry back to " Kabul." Accordingly it was carried to the quarter of BERKhordar. Khan, and depofited near the tent of Mooty Lol, a Kettery by caft, who was his Dewoun.

As foonas Shujah-ul-Dow lan heariof this, he waited upon theShar; and, joined with the Grand Vizicr, reprefented to his majefty " that enmity - fhould be limited to the life of our enemy, and it is always the cuftom "s of Hintogl in, that after a victory, the bodics of the chiefs, of whatever "r race or tribe, are given up, that they may receive their proper obfequies,
" according to the rules of their particular religion: fuch conduct, they " faid, does honour to the victors, but an oppofite one difgraces them. " Your majefty is only here for a time, but Shujah-ul-Dowla, and the " other Hindofany chiefs are the fixed refidents of this country, and may " have future tranfactions with the Mabrattas, when their conduct on the " prefent occafion will be remembered; therefore let the body be given up " to them, that they may act, as is cuftomary here.

This matter remained in agitation for near two days, Nujeib-ulDowlah, and indeed all the Hindoftany chiefs, joining in the fame requeft. I was alfo fent on this account, accompanied by Meig Raj, the Vakeel of Nujeib-ul-Dowah, to the tents of Burkhordar Khan and Mooty Lol. A fecond time I went alone, when Mooty Lol afked me if I came on that bufinefs only or would undertake any thing further: I faid, "for os any thing that he chofe to communicate." Accordingly he carried me privately into two inner tents, in one I found Raja Baboo Pundit, the Bhows Vakeel, who was wounded, with whom I converfed for fome time: after which I went into the other tent, where Row Junkoojee Sindia was fitting; he was wounded with a ball, and with a fpear in the arm, which the wore in a fling, and was a youth about twenty years of age. Upon feeing me, he hung down his head, on obferving which I faid to him, "why "d do you do fo, Sir? whatever could be expected from human valour and ${ }^{36}$ exertion, you have done, and the deeds of that day will live for ever ss in the memory of mankind." Upon this, lifting upon his head, he faid, "true, no one can contend with deftiny. I wifh I had died in the - field of battle, but it was my fate to be brought hither; thefe people " now require ranfom from me, nor would it be difficult for me to pay " what they demand, but it is impoffible for me to get it here at this
" time. You were a friend of my father's, and there was always friendflip " between my family and the Navab's, and my father did them confider" able fervices; if his excellency will pay the money required for my "releafe, it is an obligation that I fhall never forget." I affured him, that the Navab would not be backward, and defired to know how much was required: Mooty Lol faid, feven lacks of rupees was the fum mentioned, but that it might probably be fettled for lefs. I immediately returned to the Navab, whom I found fitting with Nujeib-ul-Dowlah, I told him all that had paiffed refpecting the bufinefs he fent me upon, but, as I well knew the enmity which Nujeib-ul-Dowlah bore to the family and perfon of Junkoojee, and thought, that from his good intelligence he might have forme intimation, that Junkoojee was taken alive, I thought it was beft to avoid faying any thing about him to the Navab at that time, and went away to another part of the tent: but Nujeib-ul-Dowlah, who had obferved ${ }^{\text {I }}$ me, faid to the Navab, "from the countenance of " Casr Raja, I perceive that he has fomething elfe to fay which my prefence prevents." Shujah-ul-Dow lat replied, that there were no fecrets between them two, and immediately calling me, made me fwear by the Ganges, to fpeak all that I fhould have done, if Nujeib-ul-Dowlah had not been there, which being thus compelled to do, I did. Nujeib-ulDowlah, who was mafter of the mof profound diffimulation, faid, that it was highly proper, and becoming great men to relieve their enemies under fuch circumftances; he therefore begged,that Shujah-ul-Dowlah would fettl: the ranfom of Junkoojee, and that he himfelf would pay half of it. This was his profeffion; and foon after taking leave, he went to the Grand Vizier, and informed him of all the particulars.

As on one hand Nujeib-ul-Dowlah wifhed to exterminate the family
of Sindea, the Grand Vizier alfo was an enemy to Bermiordar Khan. whom he hoved to injure by difcovering this fecret negociation: they therefore went immediately together to the SHan, and laid the affair before him. His Majefly fent for Berkhordar Khan, and quefioned him about having concealed Junkoojee, but he pofitively denied any knowledge of it. "The Grand Vizier then fent for me to prove the fact, but even after that Berkhordar Kian perfifted to deny it. Upon which the Shah order. ed his Nefuckcbees, to fearch the tents of that chief. Thus driven to extremity, Berkhordar Khanimmediately difpatched orders to his people to put both the prifoners to death, and bury them privately, before thofe fent. by the Shar thould arrive to look for them, which was done accordingly, and thus thofe unhappy people lof their lives.

Ibrahim Khan Gardee had hithertoremained in Shuja-ul-Dowlah's camp, and it was his excellency's intention to fend him privately to Lucnow : but fome of the SuAn's people getting intimation of this, informed. his Majefty of it; who fent for his Excellency, and queltioned him on the fubject; he at firt denied it, but at length the SHAH , by dint of perfuafion and flattery, got him to confefs it. Immediately (as had been preconcerted) a great number of Durranies furrounded the SHAH'S tent, crying our: ${ }^{6 \prime}$ Ibrairm Kifan is our greateft enemy, and has been the deftroyer of ${ }^{\text {ss }}$ multitudes of our tribe; give him up to us, or let us know who is his "s protector, that we mayattack him." Shujah-ul-Dowlah put his hand apon his fword, and faid, "here he is," and things were very near coming to extremity, when the Grand Vizier interfered, and taking ShujahoulDowlah afde, he entreated him to confign Ibrahim Khan to his care for ane week, promifing to reftore him fafe at the end of that time; the Navab expreffed fome apprehenfion of intended treachery, but the Grand Wizier
rwearing on the Koran, that no harm fhould befal the prifoner, Shujahe ul-Dowlaf fent for Ibrahim Khan, and delivered him into the Grand Vizier's hands.

The Shaf ordered him to be brought into his prefence, and infultingly anked him, " how a man of his courage came to be in fuch a condition ?" He anfwered, "that no man could command his deftiny; that his mafter was " killed, and himfelf wounded and prifoner; but that, if he furvived, and " his mijefty would employ him in his fervice, he was ready to fhew "the fame zeal for him, as he had done for the Bhow." The Shaf gave him back in charge to the Grand Vizier, where he was treated with the greatef cruelty; and, as it is faid, they ordered poifon to be applied to his wounds, fo that he died the 7 th day after.

The day after the battle, the Shah, fuperbly dreffed, rode round the the field of battle, where he found thirty-two heaps of the flain of different numbers, moft of them killed near each other, as they had fought; befides thefe, the ditch of the Bhow's camp, and the jungles all round the neighbourhood of Paniput, were filled with bodies. The Shan entered the town of Paniput, and, after vifiting the fhrine of Boo Aly Kalinder, he returned to his tents.

Shujah-ul-Dowlah took fome hundreds of Bibties with him to the field of battle, to wafh the bodies, and look for thofe of the chiefs, efpecially for that of the BHow ; and carried the Mabratta Vakeels Sinadur Pundit, and Gunneish Pundit, and other prifoners, who knew the perfons of all the chiefs, to affift him in finding them out: accordingly they found the bodies of Jeswunt Row Powar, and the fon of Pala Jadoo, and many others.

The fecond day, after the fricteft fearch had been made for the bo iy of Whe BHow, advice was brought, that a body was lying about. fifteen cofs. from the field of battle, which appeared to be that of a chief: SifuJans. UL-Dowtah immediately went to the place, and had the body wafied: fome pearls of the value of three or four hundred rupees each, being found near the body, confirmed the belief of its being that of a perfon of rank. Thefe pearls the Navab gave to Sinadur Pundim the Míabratua Wakel. who, as well as the reft of the Mabrattas, who cante to find outced bodics burft into tears, and dectared this to be the body of the Bionv; 㱜btht they difcovered by feveral natural märks, which the BHow was known to bve about him. Firf, a black fpot about the fize of a rupee on one of his thighs; fecondly, a fcar in his back, where he had been wonn led with a Kuttar by Mazuffer Khan; and thirdly, in his foot the fortunate lines, called by the aftrologers, Puddum Mutch. The body was that of a young man about thirty five years old, and ffrongly made ; and, as it was known, that the BHow every day made one thoufand two hundred profrations before the fun, fo were there the marks of fuch a practice on thie linees and hands of this corpfe.

While we were thus employed, I obferved one of the Durranies. who flood at a diftance and laughed, which I remarked to the Navab, and told him, that perhaps that man might know fomething refpecting the body. The Navab took him afide and queftioned him; to which he he anfwered: "I faw this perfon feveral times during the battle; he was ex. a tremely well mounted, and, in the courfe of the action, two of his horas fes were killed under him; at laft he received feveral wounds, and was " difmounted from his third horfe. About this time the Mabratta army $\because$ Aled on all fides, yet this perion feemed fill to preferve his prefence of

46 mind. He was well dreffed, and had many jewels on, and he retired st. with a fhort fpear in his hand; and with a refolute afpect. I and fome " others purfued him for the fake of his jewels, and, having furrounded " him, we afked him if he was fome chief, or the Bhow himfelf; and .c told him not to be afraid, for we would do him no harm, but carry him " wherever he defired. As he made no reply, one of my companions grew ." angry, and wounded him with a fpear, which he returned, upon which "we killed him, and cut off his head, but not without his wounding two "6 or three of us; the head another perfon has got." This laft circumfance was not true, for the head was afterwards found with this very man.

The Naval carried the body, and that of Suntajee Najah (which had forty cuts of fwords upon it) to the camp upon two elephants, and informed the ShaH of all the circumftances.

The Shan, in complimento SuUjAH-UE-Dowhan, gave orders that thefe *wa bodies, together with the body of Biswas Row, fhould be burned according to the cuftom of their cafts, and fent twenty of his Nefuckchees to attend, and prevent the Durannies from giving any interruption to the ceremony. His Excellency gave the bodies in charge to me, and told me that I was of the fame country and tribe, and therefore he defired that I would burn them wih the proper ceremonials; and he fent Rajab Anurghire with the Nefuckebees to attend me. Accordingly I carried them to a fpot between the Sirar's camp and the Narob's, and, having wafhed them with Ganges water, and perfumed them with fandal wood, I burned them.

About two thoufand of the fugitives from the Bhow's camp, who had efcaped from flawghter by Shujah-vl-Dowlan's protection, were prefent R 2
on this occafion, and all were of opinion, that the headlefs body was the Bhow's; but fill, the head not having been feen, there was fome room for doubt. In the evening, after burning the bodies, we returned to camp. Ar night Shujah-ul-Dowlah went to the grand Vizier, and told him what the Duranny had faid refpecting the head. The Vizier fent for the Duranny, who belonged to Berikhordar Khan, and told him not to fear being obliged to give up his plunder, that he fhould keep it all if he would confefs where the head was: upon this the Duranny brought it wrapped up in a eloth, and threw it down before the grand Vizier. Rajah Baboo Pundit, the Mabratta Vakeel, being fent for to look at the head, immediately faid, "this " is the head of the Bhow : he was my matter, and the care of this is a so facred duty to me; let me beg that this head may be given to me, and s. that I may be permitted to burn it according to the ceremonial of our re= " ligion." The grand Vizier fmiled at this requeft, and gave the head to him, at the fame time fending fome Nefuckchees with him for his protection. RajabBabooPundit carried the head on the out fide of the camp, and burned it ; after which no man doubted that the BHow was actually killed. And this concludes all, that I perfonally know, refpecting this battle and the death of the BHow.

I afterwards learned from other parts of the country, that Muliar Row. Amajee Guickwar, Betal Shu Deo, and fome ather chiefs fled from the battle and efcaped. One of the Bhow's wives efcaped on horfebacks and got fafe to Deig, where Rajab Surja Mul received her with great refpect, gave her money, clothes, and a palankin, and fent her with an efe cort to $\mathcal{F} a n f y$, whence fhe got fafe to the Decan.

Shumshere Behader got to Deig, wounded; Surja Mul had his woundstaken the greateit care of, but he died foon after, and his tomb is at Deig.

The fifth day after the battle, the Shai returned to Debly, which he reached in four marches. He wifhed to feize on the empire of Hindofian; but God difapproved of his defign.

After our return to Dehly, Shujah-ul-Dowlah fent all the fugitives from the Mabratta camp, who had taken fhelter with him, under a guard of his own troops, to the boundary of the Fauts dominions, where they were fafe.

Eight days after this, by the pleafure of God, all the Durranies mutinied in a body, and infifted on the difcharge of their arrears for the two years paft, and alfo that they fhould immediately march back to Kabul. This confufion lafted for fome days, during which time the Durranies quarrelled with Shujait-ul-Dowlah's people, and threatened to attack his camp. His excellency, highly provoked at this, went to the Grand Vizier, and afked him, " if that was the treatment he was to experience after all the fine " promifes, that had been made to him :" the Vizier affured him, that both the Shar and himfelf had the higheft refpect. and attention for his excellency, but that the Durranies were out of all power of controul. "Then " (faid the Navab) I fee the value of your promife ;" and got up to depart. The Vizier embraced him, faying, " we fhall meet again;" but his excel. lency made no reply.

As foon as he returned to his own camp, he confulted with his friends, and all agreed, that it was no longer advifable to remain with the $\mathrm{Sharr}^{\text {'s }}$ army : accordingly in the afternoon he decamped, and marched fifteen cofs that night ; and in this manner by five forced marches, he got to Mindy gaut on the Ganges. He was apprehenfive, that the Shail might be fo provoked at the abruptnefs of his departure, as to order him to be purfued;
but no fuch fep was taken; and the Navab croffed the Gangres, and returned with fafery into his own dominions.

After this, we learned from the news-writers, the Shair finding it impoffible to pacify his army by any other means, was obliged to give up his views in Hindoftan, and to return to Kabul; having received above forty lacs of rupees from NujEib-UL-Dow Lail for the affifance, which he had given him.

Though this narrative is written from momory, and long fince the events happened, I do not believe that I have omitted any circumftance of importances and thofe, who reflect upon thefe tranfactions, will believe that providence made ufe of Ammed Shafy Durrany to humble the uns becoming pride and prefumption of the Malrattas: for in the eyes of GoD pride is criminal.

p. 93. inviting ). This meafure of the Bhow's feems to have been merely a political artifice to difunite the Hindofany chiefs by excitingin fome of them a hope of participating in his conquefts; for the procediag conduct of the Bhow gives little qeafon to believe, that, if the Dur anies and Rebillas had been out of the quefion, be would have allowed the exifence of any power in Hindofinz, but that of the Mahrathes.
p. 99. children). TH1s is a compliment very common among eaftern nations; and, like ment ofther other compliments, means nothing at all.
p. IO1. addrefs). OF this they are extremely tenacious; and it is a thing fovery particularly attended too in the eaft, that thofe, who have occation to correfpond with te Ajatictes, cannot be too well acguainted with every one's addrefs? for any deviation excites either difguif or ridicule.
p. 106. Págáb). The word Pàgàb has the fame fignification among the Mabrattas, as Rifalab has among the Perfians and Mooruls; and, being indefnite in the number of sroops of which in confift, may he rendered pretty fairly by our word brigade: I have known it applied to a cemmand of three hundred horie, and Ihave alfo knownit ufed in the fame fenfe, to defribe one of fome thoufands of horfe and foot with artillery.

## $N O T E$ S。

p. 10\%. Pindarries). The Pindarries are the freebooters of the Mabratto armies, and ufually as numerous as thofe they account their regulars. They are mounted on fmall buit hardy horfes, and ferve for plander only. The chiefs, under whom they engage, enter into certain articles of agreement with the chief commanding the Mabratta army, refpeeting the divifion of plunder; and the Pindarries alfo have particular conditions, on which they ferve under their chiefs. Their principal ufe is in laying wafte an enemy's country, or th-ir own when invaded ; which they do with great alacrity and effect; alfo in attacking the baggage and ca:ap followers of an enemy's army. Another thing, which makes them extremely ufeful to their own army, is, that every Pindorry has a pair of large bags on his faddle, which, after his day's excurfion, he in the evening brings into cam, fillcd with wheat, barley, rice, or fome other ufeful grain, plundcred from the villages, which is fold in the bazar for fomething below the market price; fo that ten thourand Pindaries are at leaft as ufful to the fupply of their own army, as an equal number of Dunneabs with carriage bullocks would be.
p. 107. The trops). This feems to have been the crifis of the Briotw's fortine: had he boldy attacked the $S_{\text {GAH }}$ while he was paifing the Fumna, he would probably have totally defeated him.
p. ro8. bis (amp). Colonel Dowe fays, that the Bhow occupied the lines formerly thrown up by Mahommed Shaf, and that the Durrany Shah pofled himfelf in the more fortunate camporNadir Shah. Kasi Raja does not notice this, but fays, that the Bhow dug a trench round his camp. The point however is of little coniequence.
p. 119. Fanuary). Colonel Dowe fays, it was on the 2011 not the 6h of fennad-ul. Sani: the reader may believe either, without any injury to the fuct of the battle iffelf. Dates are exceedingly inaccurate in all oriental proùutions.
P. 120. dief). This may appear extraordinary to thofe who have never feen a large army of horfe galloping about on a dufty plain in a hot climate, but is a very natural and true defcription to thofe who have.

If Iam notm:faken, Plutarch mentions, as one of the moft crael fufferings of Crassus's army, when defeated in Partbia, that the Partbians galloped round them continually, and almont fuffocated the foldiers with duft.
p. 122. enmity). Datteaju Pateil, the brother of Junkoojef, had been killed the year before In the battle of Badelly, againft Nujeie-ul-Dowlah.
P. 123. crders). These orders of Ahmed Shah evince much military knowledge: perhaps better can farce $y b_{i}$ imagined in that fituation of affairs; and the fuccefs was complete.
p. 123. enciantment'. The Mabratta army fled in confequence of the death of Biswas Row their chief. 'I his is always the cafe with Affatick armies.

$$

p. 124. fouls). This number feems very great, but any perfon, acquainted with the multitudes of followers in an Indian camp, will not difbelieve it. Even in $L n_{\beta} i / j b$ camps in India, three followers, to each fighting man is confidered as a moderate number.
p. 124. merit). This is looked upon as highly beneficial to the fouls of the failhful; and almoft a certain pafs-port to paradife.
p. 127. Ganges). This is one of the many inftances among this people, where abfurd fuperftition is brought in excufe of lax morality: what the author adverts to, is very common both aniong Hindoos and Mufulmans. It is rather an adjuration than any thing that might reafonably be deemed obligatory (even though its object were innocent) on the perfon, on whom it is involuntarily impofed; and is ufually practifed to make men betray fecrets which they are bound in honour to conceal. He who wihes to difcover the fecret, says, "I adjure you by the Ganges, or the Koran, or your fon's head :" this the other pretends to confider a fufficient compulfion for him to betray his truft. I fay pretends, becaufe where the fecret regards their own intereft or fafety, they are very far from allowing an equal force to the adjuration.
p. 129. cruelty). Thecaufe of this extraordinary enmity to Ibrabim $\mathrm{K}_{\mathrm{han}}$, was his having fought on the fide of the infidels againft the true believers.
p. 132. killed). Notwithstanding all this however, in the year 7779 , a man appeared, who called himfelf the BHow, and from many circumftances obtained credit for fome time.

He came firft to Etaiva, and made himfelf known to Lala Balgobind, a merchant with whom the Bhow had been on terms of friendhip. Balgobind was fo far perfuaded of his identity, that he treated and entertained him with greatrefpect : but, though he brought many circumfantial proofs, that he was the Bhow, and his age, perfon, and feveral marks about his body, frongly fupported that beliet, fill there appeared a difference in temper and manner, which excited doubt. BaLGobind having expreffed his wifl to be fatisfied refpecting this, the perfon replied, that after the battle and purfuit, from which he efcaped alive, though wounded, he fled to the hills of Kámáoun, where he lived five years among a fraternity of Fakeirs, conforming to all their aufterities, which muft neceffarily have made a great change in his manners. That after this, he bad refided fome time in Robilcund, and had travelled to many places in the difguife of a Byraghy fakeir. "At length, (faid he) I am arrived here, and we muft devife the beft method for me to "c declare myfelf." Balgobind told him, that, as there were many Mabrattas at Benares to whom the Bhow was known, he had better firft fhow himfelf there; accordingly he went to Cbutterkote, in Bondelcund, from whence he wrote, (as the Bhow) to Morjee Bhut, Ramchund Gotkur, and Gunneish Bhut, at Benores; informing, them that he was arrived at Cbutterkote, and defiring them to come to him immediately.

Upon receipt of this letter, Morjre Bhut, the fon of Ramchund Gotkur, and Doondoo Bhut, who was an old fervant of the Bhow, fet out for Cbutterkote, where they immediately waited upon the

```

```

Tuppofed BHow, and had a long conference with him, after which they retired to a houfe in the towio Next day they waited upon him again, wheu in the courfe of the converfation the fuppofed Brow told them ${ }_{3}$ that as he had left many lacks of rupees as a depofit with them before the battle of Paniput, he defired that they would furnifh him with fome money, to defray the expenfe of the rank whick he meant to affert. On this they inmediately got up and went away, and from that time they began to circulate a report, that this was not the Bhow but an impoftor. When he heard this, he reproached them with ingratitude, and told them that he would come to Berares and eftablih his claims upon them: they however perffifed to deny them, and seturned to Benares. The fuppofed Buow followed them, and arriving at Benares went to reo fide at the houfe of Donndoo Bhut who all along acknowledged him. Here feveral Mabrattas, and other confiderable inhabitants of that town went to fee him, and were fo far convinced of his identity, that they gave and lent him large fums of money. Several of the Mabrattas alfo ate with him, in proof of theis belief of his ftory. But four or five of the principal merchants, whom he had afferted to be his debtors, would not vifit him, at which he was fo much provoked that he fent word to Morgee Bhut, Ramchunder Gotkur, and Gunnsfi Buyt, eitherto pay him what they owed him by fair means, or that he would compel them by force : at the fame time he begen to raife fome troops in the town, and foon got together fome hundreds of the kind of foldiery procurable in every town in Hindofan. He alfo got a palkey, and two or three horfe for himfelf, with which cavalcade he ufed to come inso the town, and pafs in terrour round the houfes of his debtors, who were much alarmed left he should feize upon them and carty them off.

Mr. Thomas Grabam, who at this time was refident on the part of the company at Benares, hearing of thefe proceedings, inquired of feveral perfons of character, whether in their opinion this man was the Bhow or not, who all replied that he certainly was an impofor. While this inquiry was going on, it was difovered that Doondoo Bhut, a confidential friend of the Bhow (as has been faid before) was carrying on fome fecret negociacion with Raja Cheyt sing, who had fent him money at different times. Mr. Graham was led to believe from many circumfances, that one object of this negociation was to have him deftroyed under cover of fome popular infurrection; the Raja having at that time conceived a jealoufy of him, on account' of his knowledge in the affairs of that diffrict, which the Raja wifhed as much as pofible to conccal. As the Englifb were then at war with the Mabrattar, and Raja Cheyt Sing thought to be rather diffatisfied with the Government, Mr. Grabam was very naturally alarmed at this intelligence, and fent a meflage to the Raja, requefing that he would explain himfelf. In reply Raja Cheyt sing affured him that he was perfectly ignorant of the matter in queftion, and defired that Mr. Grabam would fend for the perfon himfelf and inquire. Mr. Graham accordingly did fend for himo but he peremptorily refufed to come, with expreflions of contempt for the refident's authority.

Mr. Graham having advifed the Raja of this, and called upon him for affifance, as the perfon in whore hands the government of the cuuntry was, as to its police, the Raja immediately fent the Ameer and Cutual of Brna es with a detachment of Sepoys to feize upon the fuppofed Bnow, and confine him. They accordingly furrounded the houfe in which he refided, and, after fome little refiftance, thiey took him prifoncr and carried him to Mr. Graham, who afred him fome queftions, to which his anfwers were not fatisfactory, and rather tending to confirm the fufpicions already conceived of Raja Cheyt Sing.

## $N O$ T゙ES.

The fuppofed Brow remained a prifoner in the Aumeins Cutcherry at Benaris, till Mr. Grabtare has ving confulted the board at C. lutta, received their orders to fend him to Giburargbur, and deliver him in ch rge to the commanding officer there; and they at the faree time direced him to inquire particu. Iarly into the truth or falfehood of his fory. This perfon was accoidingly confined at Cbunargbur where $\operatorname{Mr}$. Craham went feveral times, and fent for the prifuner, whom he quertioned particularly refo pelting his whole flory; the refult of which was, his feeling fome difpofition to credit his being the Bhow, and occafionally affiting him with money. Soon after Mr. Grahame went to Cakutha carryo ing with him an agent on the part of the fuppofed Beow; but in a faort time after, be hinfelf going to Madras as Secretary to Sir Eyre Coote, nothing was determined refpenting that affair, and the unfortun. atc man remained a prifonertill Augut 1781, whea Mr. Hastings the Governor General came to Benao res, and the troubles with Raja Cbeyt Sing commenced. During the time of Nit. Hastings's re。 fidence at Cbunargbur, he fent for the prifoner, and, after hearing his iory, ordered himito be releafeds the man returned to Benaris, where-he died foon after.

Among others, Kassi Rajh Pundit; the author of this book, being at Benariswhen the funpofed Bhow refided there, went to fee him, and faid (as BALGobind had done) that the perfon exdetly refembled the real BHow, and that the marks upon him (the fame as mentioned in his Narrative of the Battle of Paniput) exactly correfponded, but that the manner and temper were different.

Thข the affair flands at prefent, a fubject for unbounded conjectures, and the Benares Brow will generally beclaffed with Lambert Stmebi, Perkin Wardegk, the Rujumbembtrifa and many others whom ill fuccefs has tranfmitted to poiterity as impoftors, when better fortune in the precarious appeal to the fword, would perhaps have ftamped them the real much injured heirs of their domains reflozed by the hand of heaven, to blefs theiz fubjects by the benign exercife of legitimate aisoshority:
at The vanquifhed rebel like a rebel dies:
se The vicior rebel plumes him on a throne."
This man had writion a Hiftory of himfelf in the Porfan Language, which he gave to Mr. Thomas Graham, who would have indulged me with the perufal of it, but having left it behind him when ho went to the coaft with the late Sir Eyse Cootz, in a place not fufficiently dry; it was unfortunstely defo sroyed by vermin.
 Tokojez Hulker:
p. 133. He rwiped.) Thrs is the only hiftorical intimation that I remember to have met with of this fact, yet it is extremely probable, and I was told by people of the firt authority, when I was at Debly, that the connection, which Ahmed. Shab Durrany formed with the Houfe of Timur when he was. in Hindostan, was with that view. He himfelfmarried a Daughter of Mohammed Shah, and gave a young Daughter of Alumghire Sani (confequently a fifter or half fifter of Shab Alumy to his fon Tbmur Shab who has fince fucceeded himin the throne of Kabul , \&cc. But his conftant apprehenfions on the fide of $P \operatorname{cr} f_{a}$, and a difpofition void of enternrife, have hitherto presented Tamud

$$

3иAH from attempting any ẗing in Hindofan; and, as hegrows older, it is probable that hiv pacifick conduet will fill continue.

- P. 134. Navab.) It camnot fail to ftrike every reader, that though $\mathrm{K}_{\mathrm{Assi}}$ Risy f PuNDit was a fervant, and evidently agreat admirer, of SHUJAH-UL-DONLAH, omitting no fairoccafion of praifing him, yet he fays nothing of what DOwE and fome others tell us of SHUJAH-U L-DowLAH's being highly inftumental to gaining the victory at. $P$ aniput by wheeling round upen the fink of the Mabrattas at a critical part of the battle. On the contrary, by his very clear and minute detail, it appears that SHUfAK-ULu Dowlan's divifion never moved from their firf poft, but thought themfelves fortunate in not being attack ed where they were. As, independent of hiforical truth and his mafter's credit, Kassi Ray m wouldhime felf have derived fome fhare of reputation from the gallant actions performed by that divifion, it does not feem likely, that be would have pafisd fuch a circumfance cver in filence, if ithad ever happened.

## An EXPLANATION of the PLAN.

A. Paniput with the Mabratra Camp.

1. Divifion of IerabimKhan.

2 Divifion of Amajee Gwickwar.
3 Divifion of SHU Deo Patul.
4 Divifion of the Bhow \& Biswas Row.
5 Divifion of Jeswont. Row.
6 Divifion of Shumshere Behader-
7 Divifion of Mulhar Row.
8. Divifion of Junkoogee Sindia.
B. The Durrany Camp.
$\therefore$ C. The Shah's advanced Tent.
1 Divifion of BERKHORDAR KBABF。
2 Divifion of Amir Beg, \&c.
3 Divifion of Doondy Khan.

- 4 Divifion of Hafiz Rahmut Khas.

5 Mivifica of Ahmed Khan Bungush.
6 Divifion of the Grand Vizier.
7 Divifion of Shuja-ul-Dowla,
. 8 Ditifion of Nujeie-ul-Dowla.
: 9 Divifion of Shah Puesund Khano

- 20. Perfan Müteteers.

## REMARK by the PRESIDENT.

FHE preceding narrative brings to my mind an anecdote, which I received from Bahmen of Yezd, whofe father Bahra'm had been a confidential fervant of Cari'm Kifa'n, and heard it at Sbiráz from the lips of the Kha'n himfelf. Both Carim Zend, and Ahmed Abdáli were officers of NA'dir Sbáb, and, having difpleafed him at the fame time for a little neglect of their duty, as commifiaries, were put under arref, and confined for fome days in the fame guard room ; but fuch are the vicifitudes of life in unfettled countries, that, a fhort time after, Na'dir was aftalfinated by one of his own kinfmen ; CARIM became, at length, fovereign of all Irán, where he reigned near thirty years univerfally beloved; and Ahmed, having founded a new kingdom at Cábul, obtained the victory at Pánipat'h, without which the Mabrátas would, perhaps, at this day have been the mof powerful nation of India.

## To COLONEL PEARSE.

## Dear Sir.

* THE following is an extract from a paper written in 1782 , and in tended for a periodical Mathematical publication, which I then had the care of: as it mofly relates to a fubject, of which no perfon is a better judge than yourfelf, if you think it worthy of a place in the Tranfactions of the Afarick Socicty, I requeft you will tranfmit it.

> Iam, Dear Sir,

* No. VI.

Your moft obedient and moft humble fervant,

REUBEN BURROWF。
Fort William, Yune 10, 1787.

## V1.

## A Specimen of a Method of reducing Practical Tables and

 Calculations into more general and compendious forms.THOUGH practices ufual in one fcience may often be transferred with advantage to another, yet the general clafs of writers are fo much more intent upon making books than improvements, that it very feldom happens to be the cafe ; and therefore, though the following hints can have little claim to ingenuity, they are certainly valuable on account of their ufe.

IT is common in Aftronomy, when there are two feries of quantities, whofe refpective terms dypend on each other, to find a general expreffion for an intermediate term, by what is called the method of interpolation: that is applied by Newton to Comets, and by De La Cailie to Ecliffes; and I fhall here, as a fpecimen, apply it to fome few examples in artillery and fortification.

Let $g+h x$ be an expreffion by which the quantity $a$ is derived from $m$, and $b$ from $n$; then if $N$ is any tcrm in the feries $m$, $n$, the term derived from it in the feries $a, b$, will be $(a n-b m):(n-m)+N(b-a):(n-m)$.

In p. 174 of Muller's artillery, the Iength of a battery for two pieces of cannon is forty feet ; and for four pieces fifty-eight feet: now if N be the number of cannon, a general expreffion for the length of the battery, may be found by fubflituting two for $m$, and four for $n$; forty for a and fifty-eight for $b$, in the foregoing form, which then tecomes $22+9 \mathrm{~N}$; and therefore for twenty pieccs of cannon, the length of the battery is 202 feet.

By a fimilar fubftitution, if fifty men are required to make the battery for two pieces, and feventy for that of four pieces, as in Muller's Table; then $30+10 \mathrm{~N}$, is the expreffion for the men required for any number N of pieces in general.

Ingtead, therefore, of Muller's 'Table, the following general one may be inferted for the number of men, tools, \&c. for making a battery for any number of cannon in one night.

| $\begin{aligned} & \text { Number } \\ & \text { Pofes. } \end{aligned}$ | $\begin{array}{\|c\|} \hline \text { Largtb of } \\ \text { ste } \\ \text { Bateryy. } \end{array}$ | $\frac{\text { Mcn to make tbe }}{\text { Battery. } 1 \text { Fafcines. }}$ |  | Tools. | $\|$Fafcines in feet  <br> $10: 8$ 6 |  | Pickets. | Mellets. | Mivaid | $\left\|\frac{\text { Platforms. }}{\text { Planks. }}\right\| \text { Slepers. } \mid \text { Pickets. } \mid$ |  |  | Bavins. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 战 | 10 <br> 0 <br> + <br> 0 <br> 7 | $\begin{aligned} & \omega \\ & 0 \\ & + \\ & - \\ & o \\ & z \end{aligned}$ | $\begin{aligned} & v_{2} \\ & y_{1} \\ & v_{2} \\ & Z_{1} \end{aligned}$ | $\begin{aligned} & n \\ & 0 \\ & + \\ & w_{2} \\ & z \end{aligned}$ | $N$ $N$ <br> 0 0 <br> + + <br> $N$ m <br> 07 + <br> $Z$ $Z$ | $\infty$ <br> c <br> 1 | $\begin{gathered} -1 \\ 0 \\ 0 \\ + \\ N \\ 0 \\ -z \end{gathered}$ | $\begin{aligned} & N \\ & + \\ & + \\ & \underset{Z}{\prime} \end{aligned}$ | $\infty$ + $n$ 2 |  | v | $\omega$ $N$ $z$ | 10 7 7 |

TN the fame manner, from having a few particular cafes in other kinds of rules, general ones may be found; for example if N be a number whofe $r$ root is required; and if $x^{r}$ be its neareft complete power; then we know already, that
$\mathrm{x}: \mathrm{N} \sim \mathrm{x}: \therefore \mathrm{x}: \mathrm{N}_{\frac{1}{1}}$ os x for the I root. $\frac{3}{2} \mathrm{x}^{2}+\frac{1}{2} \mathrm{~N}: \mathrm{N} \infty \mathrm{x}^{2}:: \mathrm{x}: \mathrm{N} \frac{1}{2} \infty \mathrm{x}$ for the fquare root. $2 x^{3}+N: N \infty x^{3}:: x: N \frac{1}{3}$ is $x$ for the cube root.
Now the general form of the three laft terms is evident ; and to find thofe of the firft term, let one and two be put for $m$ and $n$; and one and threehalves for a and b : and by fubftituting in the foregoing expreffion, the general coefficient of $x^{r}$ is found to be $(r+1)$; again if we put o and one-half for $a$ and $b$, we find the coefficient of $N$ to be ( $r-r$ ).

IF we ufe the fecond and third proportions, putting two and three for $m$ and $n$, and for $a$ and $b$, three-halves and two; in the firft cafe ; and one-half and one, in the fecond we get the fame valuess: Hence in gencral; $\frac{r+1}{2} x+\frac{r-r}{2} N: N$ or $x:: x: N^{\frac{1}{r}}$ in $x$.

Another example of the advantage of transferring practices from one fubjeft to another is this. Dr. Halley has applied a method fimilar to that of interpolation to find the time of the tropicks: now the fun's meridian ainiude may be found in the fime way from altitudes taken near the meridian, and if the obferver begins a little before noon to take altitudes and the times, and continues to do fo till a little after noon, a number of meridian. altitudes may be deduced from thefe, and the latitude found much more exactly from them, thian can be expected from a fingle meridian altitude, by . ufing the expreffion for the maximam, or otherwife.

Analogous to thêe, are methods of generalizing " properties from particular cafes : thus, if Ab Ac be tangents to a circle, and if any lines $B C$, bc, be alfó drawn to touch thecircle; then the perimeters of all the triargles $A B C$, will be confant, and alfo the dif. ference between the fum of $A b$ and $A c$ and the bafe $b c:$ this property is of uncommon ufe in the conftruc
 tion of problems relative to plain triangles and trapeziums; and if lines be fuppofed drawn from the centre, or a point in the circumference of a feherc', to cach: part of the figure, it will be found, that the projection of the figure upon the fphere will have analogorss properties, and that the theorem is alfo true in fpherical triangles. By a. like mode of confideration, problems fimilar to thofe of Apollonfus
on tangencies may be confructed on the fphere ; for inftance, having three circles given upon a fphere, a fourth may be found to touch them; for their politions on the fphere being given, their projections will alfo be given on a plane ftereographically; and as a circle may be found in Vieta's method to touch them on that plane, the fituation of that circle may be found upon the fphere, and hence properties may be found for conftructing the problem independent of the fereographic projection: and if we fuppofe the centre of projection to be the centre or focus, \&x. of a fpheroid or other folid, innumerable properties may be found relative to their tangents, curvatures, \&c. regard being had to the pofition of the plane, \&c.

To give a fpecimen of the aforefaid method in fortification, let h (fee pp. 22, 23, 24, and 25 of Derdier's Perfect French Engineer) reprefent the height of a wall; then according to VAUBAN's meafures, if five feet be the thicknefs at the top, $\frac{I}{5} h+5$, will be the thicknefs at the bottom; and according to. Belidor's method $\frac{1}{20} \mathrm{~h}+3,5$, will be the thicknefs at the top, and $\frac{1}{4} h+3,5$, that at the bottom. The length of the counterfort (according to Vauban), will be $\frac{1}{5} h+2$; alfo $\frac{1}{10} h+2$ is the thicknefs next the wall, and, $\left(\frac{1}{3} h+4\right)$ the thicknefs at the other end of the counterfort. If part of the wall is gazoned, let $e$ be the height of that part and $h$ that of the wall ; then $\frac{1}{5}(\mathrm{~h}+\mathrm{e})+5$ is the thicknefs at the bottom ; $\frac{1}{5} \mathrm{e}+5$, is the thicknefs at the top: $\frac{\mathrm{T}}{5}(\mathrm{~h}+\mathrm{e})+2$, is the length of the counterfort; $\overline{-1}(h+e)+2$ its thicknefs next the wall, and $\frac{I}{3}\left(\frac{1}{5}(h+e)+4\right)$ its thicknefs fartheft from the wall. When there are cavaliers, let c be their height in feet; then $\frac{1}{20}(2 c+c+50)$ is the thicknefs of the revêtement at the top, and $\frac{7}{50}(2 h+2 e+c+50)$ is the thicknefs at the bottom.

## A Demonstration of ote of the Hindoo RULES of ARITHMETIC. - By Mr. REUBEN BURROW.

THE Art of Invention being in a great meafure dependent on the doctrine of combinations; every additional improvement in the laft muft of confequence be ufeful in the former; and as the following ancient Rule for "finding the fum of all the different permutations of a given numeral quantity, confifing of a given number of places of figures" is not, I believe extant in any European Author, and is befides very ingenious; I take the liberty to infert it, and alfo to add the demonftration.

Rule. Place an Arithmetical progreffion over the figures beginning with unity at the Units place and increafing by unity: divide the product of the terms of this progreffion by the number of places of figures in the given quantity: Multiply the fum of the figures in the given quantity by the quotient, and fet down the product as often as there are places in the given quantity; removing it each repetition one place to the right hand, and the Sum of thefe lines is the Sum of all the permutations.

EXAMPLE. Required the Sum of the different permutations of 893

$$
\begin{equation*}
x_{3} x_{2} x_{3}=2 ;(8+9+3) 2=40 ; \tag{893}
\end{equation*}
$$839

40 $9^{8} 3$
$3 \quad 21$
893
40 938
40 389
398
4440
4440

46 A DEMONSTRATION OF ONE OF THE

DEMONSTRATION.

First, it is evident that if all the permutations of any number of letters exprefing figures be put down; and thofe in the firt place to the right hand be multiplied by unity; thofe in the fecond place by ten; thofe in the third place by 100 , and fo on; then the Sum of all thefe, will be the Sum of the permutations required.

Secondiy; fuppofing the different permutations to be put down one under another, it w 11 realy ap pear, from the manner in which permutations are generated, that all the letters occur an equal number of times in each perpendicular column; and alfo that the number of times of occurrence in the permutations of $n$ letters, is equal to the permutations of $n-1$ letters; but the permutations of $n-1$ letters is equal to $1.2 .3 \ldots(n-1)$, or $1 \times 2 \times 3$ carried to $n-1$ terms; and confequently if there be $n$ letters in the given number, each letter in the Columns aforefaid will occur 2.2.3... ( $\mathrm{n}-\mathrm{I}$ ) times.

Thirdey; Let 1.2.3.. $(\mathrm{n}-\mathrm{i})=\mathrm{m}$ then,
$m(a+b+c+\ldots n) 1=$ Sum of numbers in the units place or firf Column. $m(a+b+c+\ldots n) 10=$ Sum of numbers in the tens or fecond Column. $m(a+b+c+\ldots n) 100=$ do. third Column. $m(a+b+c+\ldots n) 100 \ldots$ to $(n-1)$ Cyphers $=$ ditto in the $n$ Column; and the Sum of thefe is evidently equal to $m(a+b+c+\ldots n) \cdot(1+10+100+\ldots$ to n terms) ; and putting for $(1+10+100+\ldots n)$ its value $111 . . . n$, the expreffion becomes ( $1.2 \cdot 3 \cdot .(n-1)) \times(a+b+c+. . n) \times(111 . . . n)$; but $1.2 .3 \ldots(n-1)$ is equal to $\frac{1.2 .3 \ldots n}{n}$ and therefore the expreffion for the Sum of all the permutations is $\left(\frac{1.2 .3 .3 n}{n}\right) \times(a+b+c+\ldots n) \times(111 \ldots n)$, which is the Hindoo rule when the figures of the given number are all unlike.

Lastly, it is evident that $1.2 .3 \ldots n$ is the number of permutations of $n$ different things ; but if feveral fets of figures are alike, as $r$ figures of one kind, $s$ figures of another, for inftance ; then let (1.2.3...n):(1.2..r) $\times(1.2 \ldots s)$ \&c. the number of permutations in that cafe be called $N$; then the Sum of the permutations is $N: n \times(a+b+c+\ldots n) \times(111 \ldots n)$ in general.

EXAMPLE. Required the Sum of the permutations of 11335 ?

$$
\frac{1.2 \cdot 3 \cdot 4 \cdot 5}{1 \cdot 2 \cdot 1 \cdot 3}=30 ; \frac{30}{5}=6 ; 6 \times 13=78 ; \quad 78
$$

## VIr.

## On the NICOBAR ISLES and the Fruit of the MELLORI, By NICOLAS FONTANA, Efq*

THE fouth weft monfoon having ftrongly fet in on the Malabar coaft, it was deemed unfafe to remain there any longer; we therefore rook our departure from Mangalors on the 2oth May, 1778, directing, our courfe towards the gulph of Bengal, and in lefs than ten days, we came in fight of the Carnicobar Iflands; the appearance of which at feven or eight leagues difance, is much like a chain of mountains covered with woods: we anchored to the N. E. of one of them, in five fathoms with a good fandy bottom; fupplied ourfelves with water and wood, and proceeded in queft of the other Nicobars or Nancaveris, as they. are called, fituated between eight and nine ds. N. L. to the northernmoft point of the Inland of Sumatra. They were defcried on the 4th Fune to the S. W. $\frac{1}{2} \mathrm{~W}$. at the diffance of ten leagues: the pofition of three of thofe Mlands forms one of the fafeft harbours in India; where flips of all fizes. may ride with the greateft fecurity, fheltered from all winds, about half a mile from fhore; with the additional advantage of two entrances, that may ferve for getting in and out, both with a N. E. and S. W. Monfoon, having a clear decp channel on each fide.

In one of the bays formed within thofe iflands, we moored in twelve fathoms, and there femained until the S. W. monfoon was quite over, which was in the beginning of September. The largef of thofe iflands is called Nincaveri or Nancowry about five or fix Ls. in circimference; and better inhabited, than any of the other two. The fecond is called Soury ors

Chowry, and the other Tricit, all clofely fituated: about ten leagues to the N. E. of them is another called Catchoul. *

Almost the whole of thofe iflands is uncultivated, though there are a number of large valleys, that might be rendered very fruitful, with little trouble, the foil being naturally fertile, where the cocoanut, and all other tropical fruits come fpontaneoully to the higheft perfection, together with yams and fweet potatoes, to obtain which it is only neceffary to fcratch the earth fuperficially, and the feeds fo planted come forth in a few days. $t$

The furrounding fea abounds with exquifite fifh, fhell-fifh, as cockles, and turtles; and a moit fplendid difplay of beautiful fhells of the rareft fort are to be met with on the fhore. Thebirds nefts, + fo much efteemed in Cbina, are alfo to be found among the rocks: ambergris is likewife to be met with, but the inhabitants have learned a mode of adulterating it, and it is therefore feldom to be found in a genuine ftate: if adulterated with any heterogeneous matter fuch as wax, or refin, the mode of difcovery is fimply by placing a fmall bit of it upon the point of a knife when hot, and if it evaporates without leaving any calx or Caput Mortuum, and diffufes a ftrong fragrant fmell, it is certainly genuine.

[^4]Tue inhabitants of the Nicobar Illands are of a copper colour, with fmall eyes obliquely cut, what in ours is white being in theirs yellowifh; with fmall flat nofes, large mouths, thick lips, and black teeth; well proportioned in their bodies, rather fhort than tall, and with large ears, in the lobes of which are holes, into which a man's thumb might be introduced with eafe : they have black frong hair, cut round ; the men have little or no beard; the hinder part of their head is much flatter and compreffed than ours; they never cut their nails, but they fhave their eye-brows. * A long narrow cloth made of the bark of a tree round their waift and between their thighs, with one extremity hanging down behind, $t$ is all their drefs. The women and men are of the fame copper colour, and very fmall in ftature : a bit of cloth made with the threads of the bark of the cocoanut tree faftened to the middle and reaching half way down the thigh, forms all the covering of the women.: Both fexes are, however, very fond of drefs; and, when the men go into the prefence of ftrangers, they put on hats and old clothes, that had been given them by Europeans; but among themfelves they are almoft naked.

Tirey live in huts made of cocoanut leaves of an oval form, fupported on bamboos, about five or fix feet high from the ground; the entrance into the huts is by a ladder; the floor is made partly of planks, and partly of fplit bamboos. Oppofite to the door in the furthermof part of the

[^5]lut, they light their fire and cook their victuals : fix or eight people gene. rally occupy one hut, and a number of fkulls of wild boars forms the moft valuable article of furniture.

The occupation of the men coaffts in building and repairing their huts, which affords them an annual employment for fix months at leaft, and in fifhing and trading to the neighbouring iflands. The women are employed in preparing the victuals and cultivating the ground, they alfo paddle in the canoes, when the men go out. They unite in matrimony through choice ; and, if the man is not fatisfied with the conduct of the woman, either from her inattention to domeftic concerns, or fterility, or even from any diflike on his part, he is at liberty to difcharge her, and each unites with a different perfon, as if no fuch connection had taken place. Adultery is accounted highly ignominious and difgraceful; particularly with perfons not of the fame caft: fhould it be proved, the woman would not only be difniffed with infamy, but on fome occafions, even put to death ; although by the intervention of a fmall token given publickly, and confifing of nothing more than a leaf of tobacco, the reciprocal lending of their wives of the fame caft is exceedingly common.

A woman, who bears three children, is reckoned very fruitful; few bear more than four; the caufe may be attributed to the men, from a debility occafioned by the early intrufion of the tefticles into the abdomen, the hard compreffion of them and the penis by the bandage round thofe parts, from premature venery, and hebetation brought on by the immoderate ufe of fpirits; and from the very inactive and fedentary life thefe people lead,

[^6]it will not be difficult to account for that want of longevity, which feems to prevail much in thofe iflands, more efpecially amongft the men, where none were to be feen older than forty or forty-eight years. The women, on the contrary, feem to live much longer.

They are themfelves fo fenfible of the fcanty population of their iflands, that they fudy to increafe it by inviting, and even feducing, fome Malabars or Bengalefe to remain amongft them when brought thither by the country fhips, and of whom there are in almoft all villages fome to be found, who may be eafily difcerned fiom the natives, by their figure, features, colour, and language. The natives encourage their ftay by grants of land with plantations of cocoa trees and arecas, and, after a certain number of years, they are permitted to make choice of a female companion.

Thetr indolence is not to be equalled by any other people of the Eaft. They go out a filhing in their canoes at night ; and with harpoons, which they dart very dextroufly at the fifh, after having allured them into thallow water with burning ftraw, a fuficient number is foon caught to ferve the family for a meal : they immediately return home; and, if by chance they catch a very large fifh, they wiil readily difpofe of one half, and keep the remainder for their own ufe.

They entertain the higheft opinion of fuch as are able to read andi write : they be lieve, that all Europeuns by this qualification only are able to perform acts more than human, that the power of divination, controlling the winds and ftorms, and directing the appearance of the planets, is entircly at. ous command.

This people like other favage nations dread the evil genius ; fome among them give themfelves the air of divination and prefume to have fecret confabulations with him : fuperfition muft ever be in its full dominion, where ignorance is fo grofs.

SOME of the natives, having begun to fabricate earthen pots, foonafter died ; and, the caufe being attributed to this employment, it has never been relumed; fince they prefer going fifteen or twenty leagues to provide them, rather than expofe themfelves to an undertaking attended, in their opio nion, with fuch dangerous confequences.

Whenever they vifit one another, no fort of compliment or falutation takes place between them ; but when the vifitors take leave, they are profufe in good wifhes, that laft for fome minutes, with different inflections of woice, to which the other co fantly anfwers, by repeating the words Callá callá condì condi quiagé, which may be rendered in Englỉh thus: "very well. very well ; go, go and return foon."

Bealnd or clofe by their huts the dead are buried: all the relations and acquaintance cry for fome hours before the corpfe is put into the grave, where it is interred with all pofible folemnity, and in the beft drefs they can mufter, and with abundance of food. After the body is covered with earth, a pontis raifed and fixed in the ground over the head of the deceafed, about four feet high, to the top of which they fufpend frips of cloth with meal and areca nuts, and ftrew cocoa nuts all around. This fupply of food for the deceafed is ever after continued; a cocoa tree is alfo cut down for every perfon that dies. As foon as a man is dead his name is never mentioned, even if repeatedly afked; every one of the
mourning vifitors brings a large pot of toddy. The women fit round the corps, howling and crying, and by turns they go and put their hands on the breaft and belly of the deceafed, who is covered with ftriped cloth; the men are feated at a little diftance, drinking andinviting all the vifitors to do the fame ; endeavouring thus to difpel their grief by a complete genea ral intoxication, which never laftslefs than acouple of days after the intere ment.

Thz different changes of the moon are productive of great feftivity and mirth among the Nicobarians, when the doors of their huts are decorated with branches of palms and other trees: the infide is alfo adorned with feftoons made of flics of plantain leaves. Their bodies are, in like manner, decorated with the fame ornaments ; and the day is fpent in finging and dancing, and eating, and drinking toddy, till they are quite fupefied.
$X_{h e}$ idea of years and months and days is unknown to them, as they reckon by moons only, of which they number feurteen, feven to each monfoon. At the fair feafon, or the beginning of the N. E. monfoon, they fail in large canoes to the Car Nicobars called by them Cbampaloon. The object of this voyage is trade ; and for cloth, filver coin, iron, . tobacco, and fome cther articles, which they obtain from Eurobeans together with fowls, hogs, cocoa and areca nuts, the produce of their own inland, they receive in exchange, eanoes, fpears, ambergris, birds nefis, tortoife。 shell, and fo forth.

Ten or twelve huts form a village. The number of inhabitints. on- any one of thefe iflands does not exce:d feven or eight hundred. Every village has its $H$ Cad $M a n$, or Coptain, as they term him, wio is genis ally the olde $\Omega$. Ferw
difeafes are known amongtt them ; and the venereal not at all: the finall pox vifits them occalionally, but not of the confluent kind: what is more prevalent amongt them, is the cedematous fwelling of one or both of the legs, known in the weft of India under the name of the Cocbin Leg, from the place where this diforder generally prevails. This endemial difeafs may be imputed to the following caufes; ill chofen and badly prepared diet, the bad choice of habitations, and an extremely indolent inactive life. Fevers and colicks are alfo frequent among them: when a perfon falls fick, he is immediately removed to the houle of one of their priefts, or conjarers, who orders the patient to be laid in a fupine pofture for fome time; then friction with fome oily fubftance is applied to the upper part of the body, and often repeated ; which remedy they indifcriminately wefe for all com plaints, never adminiftering medicines internally.

The only quadrupeds on thefe iflands are hogs and dogs: of the former however, only the fows are kept, and they are fed principally with the milk of the cocoa nut and its kernel, which renders the meat of a firmnefs and delicious tafte, even fuperior, both in colour and flavour, to the beft Englifh veal. It may be worthy of remark, that, although the neighbouring Car Nicobar woods abound with monkeys of different fpecies, none are to be feen in thefe illands, notwithfanding their having been repeatedly brought over: they neither propagate, nor do they live for any time.

Among the feathered tribe wild pigeons are pretty abundant from $\mathcal{F}$ une to September, on account of a berry which is then ripe, and on which they feed with great eagernefs : at the fame time pheafants and turtle doves are frequently found, the conftant inhabitants of the woods are a fpecies of
the green parrot, or parroquet, with a black bill and collar: no other birds are to be found in them.

The climate is pure, and might, with little trouble, be rendered very falubrious: conftant fea-breezes fan their fhores, thus preferving them from oppreffive heat: vegetation continues without intermiffion, the woods are very thick, and the trees bound together by a kind of twig or creeping thrub, that renders them almoft impervious.

The Nicobar dance is as dull and inanimate as can be conceived, as well for the flownefs and heavinefs of its motions, as fur the plaintive monotonous tune that accompanies it : with no inftrument but their mournful low voices, which are in perfect unifon with the motion of their bodies. Men and women form a circle, by putting their hand on each others fhoulders: they move flowly, backwards and forwards, inclining, fometimes to the right, and fometimes to the left.

The whole of their mufic confifts of the few following notes

The bafis of the language fpoken by thefe iflanders, is chiefly. Malay, with fome words borrowed from Europeans, and other ftrangers, as will appear by the following fpecimen:

| Cbia - - - Father, | Ocbiá - - - Uncle, |
| :--- | :--- |
| Cioum - - Grand Father, | Encognee - - Man, |
| Cbia Encbīna - Mother, | Covon - - - Son |

IT feems that they have no expreffion for the numbers beyond forty, exw cept by multiplication.

Thees of great height and fize are to be feen in their woods of a compact texture, well calculated for naval confructions: * but the productions, of which they are more particularly careful, are the cocoa and areca trees, the laf being chiefly for their own confumption; as they chew it all day long with tobacco, betel-leaf, and fhell-lime: the former is not only ufeful for their own, and their hogs', nourifhment, but alfo an object of trade. Moft of the country fhips, that are bound to Pegu from either of the coafts a Onz of thefe trees our people cut down, that meafured nine fathoms in circumference or
fifty-four fect.
$\Delta$
of India, touch at the Nicobar Iflands, in order to procure a cargo of cocoa-nuts, which they purchafe at the rate of four for a tobacco leaf, and one-hundred for a yard of blue cloth, and a bottle of cocoa-nut oil for four leaves of robacco. The tropical fruits grow in thofe iflands exquifitely flavoured, the pine-apple in particular: wild cinnamon and faffafras grow there alfo; the coffee tree in two years yields fruit; yams are to be found for thrce or four months in the year only, and are eaten by the natives inftead of the Larum a nutritive fruit; in the defcription of which and the tree that projuces it, we fhall here endeavour to be very particular.

The tree, that bears this nutritive fruit, is a fpecies of Palm, called by them Larum, by the Portugucfe, Mellóri; and is very abundant in thofe iflands, as well as in Carnicobar: it grows promilcuoully in the woods among other trees, but it delights more particularly in a damp foil. The trunk is often ftraight, thirty or thirty-five feet high, and ten or twelve inches (the oldeft even two feet) in circumference: the bark is fmooth, afhcoloured, with equidiftant interfections, of a compact hard texture in its interior part, but fort and quite hollow in the centre from the top of the trunk ; the leaves grow difpofed like a calyx about three feet long and four inches broad, enfiform and aculeate, of a dark green hue, and of a tenacious hard fubftance: the roots are out of the ground, and inferted at eight or ten feet on the trunk, accorling to, its age, being not quite two feet in the earth : the fruit, which las the Chape of a pine, and the fize of a large Faca, comes out of the bottom of the leaves: the age of man is feldom fufficient to fee the trees bearing fruit: its weight forces it out of the leaves, and, when it is nearly ripe, which is known by the natives on the change of its colour from green to ycllowifh, it is gathered and weighs from thirty to forty pounds. The drupcs are looreaed by thrufting a piece of iron
between their intertices: the exterior furface is cut off, and this put into earthen pots covered with leaves, then boiled on a flow fire for feveral hours together: the fruit is fufficiently boiled, when the medullary part of it becomes foft and friable; it is then taken from the fire and expofed to the cold air; when cold, the drupes are feparated from the ftalk, and the medullary part preffed out by means of a thell forced into them. Within the woody part of the drupes, there are two feeds in fhape and tafte muck like almonds : the foft part is then collected into a fpherical mafs, and, in order to extract all the ftringy fragments remaining in it by the compreffion of the fhell, a thread is paffed and repaffed, untill the whole is extracted, and it comes out perfectly clean : it is then of a pale yellow colour, much refembling polenta, or the dreffed meal of the Zea Mays, and in tafte much like if: when not newly prepared, it has an acidity, to which it tends very flrongly, if long expofed to the atmofphere ; but it may be preferved a long time, if well covered.

Ir is certain, that the Nicobar bread-fruit tree differs very effentially from the palm defcribed by Mr. Masson, and found in the interior parts of Africa, which bears a fort of bread-fruit. On my fhowing to Mr. Masson, in March 1790, the drawing of the tree here defcribed, he was pleafingly furprized at the novelty, and declared he had never before feen it. It differs alfo from the bread-tree found in Otabeite and defrribed by Capt. Cook in his Voyage round the World, as will appear very evident on a reference to the notes of that work Some fhrubs, whofe leaves refemble much thofe of the Nicobar bread-fruit tree, are to be feen on the Coromandel Coaft, and in the Ine of France, where they thrive in fome degree, but never attain the height of thofe at Nicobar: imperfect fmall fruits are feen once a year fprouting out, and the inhabitants derive an

advantage from the leaves of the tree, which they convert into mats and bags to hold coffce.

## NOTE by the PRESIDENT.

As far as we can determine the clafs and order of a plant from a mere delio neation of its fruit, we may fafely pronounce, that the Léram of Nicobar is the Cádhi of the Arabs, the Cétaca of the Indians, and the Pandanus of ous botanifts, which is defcribed very avokardly (as Koenig firft obferved to me) in the Supplement to Linnexus: he had himfelf defcribed with that elegant concijenefs, which conftitutes the beauty of the Linnean method, nas only the wonderful fructification of the fragrant Cétaca, but moft of the flowers, which are celebrated in Sanfcrit, by poets for their colour or fcent and by phyficians for their medical ufes; and, as he bequeathed his manufcripts to Sir Joseph Banks, we may be fure, that the publick fpirit of that illuftrious naturalift will not fuffer the labours of his learned friend to be funk in oblivion. Whether the Pandanus Léram be a new Species, or only a variety, we cannot yet pofitively decide ; but four of the plants have been brought from Nicobar, and feem to flourifh in the Company's Botanical Garden, where they will probably bloffom; and the greateft encouragement will, I truft, be given to the cultivation of fo precious a vegetable. A fruit weighing twenty or thirty pounds, and containing a farinaceous fubftance, both palatable and nutritive in a high degree, would perhaps, if it were common in thefe provinces, for ever fecure the natives of them from the horrors of famine ; and the Pandanus of Bengal might be brought, I conceive, to equal perfection with that of Nicobar, if due care were taken to plant the male and female trees in the fame place, inftead of leaving the female, as at prefent, to bear an imperfect aud unproductive fruit, and the diftant male to fpread itfelf only by the help of its radicating branches.

## NOTE ON P. ${ }^{15} 0^{\circ}$

Frizover little can be added to M. Posvre's defeription of the Salangane, or Hirundo nidis edulibus, yet, as Captain Forrest was a perfect mafter of the Malay tongue, and defcribed only what he had feen, it will not be amifs to fubjoin his account of that fingular bird. "The bird with an edible neft is called, er fays he, Faimaláni by the natives of the Moluccas, and Layang-layang by the Malays: it is black as os jet, and very much like a marten, but confiderably fmaller. Its neffs, which the Malays call Sarang, are of found in caves, and generally in thofe, to which the fea has accefs; and, as they are built in rows on as perpendicular rocks, from whiek the young birds frequently fall, thofe caves are freguented by fifh and ac often by fnakes, who are hunting for prey: they are made of a flimy gelatinous fabftance found on the os fhore, of the fea weed called agal agal, and of a foft greenifh fizy matter often feen on rocks in the fhace ${ }^{66}$ when the water cozes from above. Before a man enters fuch a cave, he flould frighten out the birds, *s or keep his face covered. The faimaláni lay's her eggs four times a year, but only two at a time : if ac her neft be not torn from the rock, fhe will ufe it once more, but it then becomes dirty and black: a neft, os nfed but once before it is gathered, maft be dried in the fhade, fince it eafily abforbs moifture, and, if ${ }^{66}$ expofed to the fun, becomes red. Such edible nefts are fometimes found in caves, which the fea never ${ }^{66}$ enters, but they are always of a dark hue, inftead of being, like that now produced, very nearly pellies cid: they may be met with in rocky iflands over the whole eafern Archipelago, (by far the largeft in * the world) but never, I believe, on the coaft of Cbina, whither mulcitudes of them are carried from:
" Batavia. The white and tranfparent nefts are highly efteemed, and fold at Batavia for feven, eight, "s nine, or teu dollars a catty of $1 \frac{\pi}{3} \mathrm{lb}$. but the crafty Cbinefe at that port, who pack up the nefts, one in as another to the length of a foot or eighteen inches, that they may not eafily be broken, feldom fail by 2 es variety of artifices to impose on their employers."

## VIII.

## On the MYSTICAL POETRY of the PERSIANS and HINDUS. - By the President.

AFIGURATIVE mode of expreffing the fervour of devotion, or the ardent love of created fpirits toward their beneficent creator, has prevailed from time immemorial in Afa; particularly among the Perfian theifts, both ancient HúlJangis and modern Súfis, who feem to have borrowed it from the Indiun philofophers of the Védénta fchool; and their doctrines are alfo believed to be the fource of that fublime, but poetical, theology, which glows and fparkles in the writings of the old Acadenicks. " Plato travelled into Italy and Egypr, fays Claude Fleury, to learn " the Theology of the Pagans at its fountain-head:" its true fountain, however, was neither in Italy nor in Egypt, (though confiderable ftreams of it had been conducted thitherby Pythagoras and by the family of Misra) but in Perfaa or India, which the founder of the Italick fect had vifited with a fimilar defign. What the Grecian travellers learned among the fages of the eaft, may perhaps be fully explained, at a feafon of leifure, in another differtation; but we confine this effiay to a fingular fpecies of poetry, which confifts almoft wholly of a myffical religious allegory, though it feems on a tranfient view to contain only the ientiments of a wild and voluptuous libertinifm : now, admitting the danger of a poetical fyle, in which the limits between vice and enthufiafm are fo minute as to be hardly diftinguifhabie, we muft beware of cenfuring it feverely, and muft allow it to be natural, though a warm imagination may carry, it to a culpable excefs; for an ardently gratcful piety is congenial to the undcpraved nature of man, whofe mind, finking under the magnittede of the fubject, and ftruggling to
exprefs its emotions, has recourfe to metaphors and allegories, which it fometimes extends beyond the bounds of cool reafon, and often to the brink of abfurdity. Barrow, who would have been the fubliment mathematician, if his religious turn of mind had not made him the deepeft theologian, of his age, defcribes Love as " an affection or inclination of the foul to. " ward an object, proceeding from an apprehenfion and efteem of fome ex" cellence or convenience in it, as its beauty, worth, or utility, and pro"s ducing, if it be ablent, a proportionable defire, and confequently an ${ }^{64}$ endeavour, to obtain fuch a property in it, fuch poffeffion of it, fuch " an approximation to it, or union with it, as the thing is capable of; with " a regret and difpleafure in failing to obtain it, or in the want and lofs of it ; "، begetting likewife a complacence, fatisfaction, and delight in its pre" fence, poffeffion, or enjoyment; which is moreover attended with a good " will toward it, fuitable to its nature; that is, with a defire, that it " fhould arrive at, or continue in, its beft frate; with a delight to per" ceive it thrive and flourifh; with a difpleafure to fee it fuffer or decay ; "، with a confequent endeavour to advance it in all good and preferve it "from all evil." Agreeably to this defcription, which confifts of two. parts, and was defigned to comprize the tender love of the creator towards created fpirits, the great philofopher burfs forth in another place, with his ufual animation and command 'of language, into the following panegyrick on the pious love of human fouls toward the author of their happinefs: " Love is the fweeteft and mof delectable of all paffions; and, when by "، the conduct of wifdom it is directed in a rational way toward a worthy, "c congruous, and attainable object, it cannot otherwife than fill the heart " with ravifhing delight: fuch, in all refpects fuperlatively fuch, is God; "6 who, infinitely beyond all other things, deferveth our affection, as moft " perfectly amiable and defirable; as having obliged us by innumerable
** and ineftimable benefits; all the good, that we have ever enjoyed, or can " ever expect, being derived from his pure bounty; all things in the world, "، in competition with him being mean and ugly; all things, without him, " vain, unprofitable, and hurtful to us. He is the moft proper object of " our love; for we chiefly were framed, and it is the prime law of our na" ture, to love him ; our Soul, from its original infinct, vergeth toward him " as its centre, and can bave no reft, till it be fixed on bim: he alone can " fatisfy the vaft capacity of our minds, and fill our boundlefs defires. " He, of all lovely things, moft certainly and eafily may be attained; for, " whereas commonly men are croffed in their affection, and their love is " embittered from their affecting things imaginary, which they cannot reach, " or coy things, which difdain and reject them, it is with God quite " otherwife: He is moft ready to impart himfelf; he moft earnefly defir" eth and wooeth our love; he is not only moft willing to correfpond in " affection, but even doth prevent us therein : He dotb cheriblo and encour". age our love by fweeteft influences and moft confoling embraces, by kindeft " expreffions of favour, by moft beneficial returns; and, whereas all other "o objects do in the enjoyment much fail our expectation, he doth ever far " exceed it. Wherefore in all affectionate motions of our hearts toward " God; in defring him, or feeking his favour and friendfhip; in em" bracing him, or fetting our efteem, our good will, our confidence on him; * in enjoying him by devotional meditations and addreffes to him; in a re" flective fenfe of our intereft and propriety in him ; in that myfferious union " of Spirit, wbereby we do clojely adbere to, and are, as it weere, inferted in " bim ; in a hearty complacence in his benignity, a grateful fenfe of his " kinanefs, and a zealous defire of yielding fome requital for it, we can" not but feel very pleafant tranfports: indeed, that celeftial flame, kind" led in our hearts by the firit of love, cannot be void of warmth; we.
" cannot fix our eyes upon infinite beauty, we eannot tane infinite fweetnefs, " we cannot cleave to infinite felicity, withoat alfo perpetual'y rejoicing " in the firf daughter of Love to GOD, Charity toward men; which, in " complexion and careful difpofition, doth much refmble her mother; " for fhe doth rid us from all thofe gloomy, keen, turbalent imaginations "s and paffions, which cloud our mind, which fret our heart, which dif"compofe the frame of our foul; from burning anger, from forming con" tention, from gnawing envy, from rankling fpite, from racking fufpi"cion, from diftracting ambition and avarice; and confequently doth " fettle our mind in an even temper, in a fedate humour, in an harmonious " order, in that pleafant fate of tranquillity, whith naturally doth refult from "the voidance of irregular pafkons." Now this paffage from Barkow (which borders, I admit, on quietifm and enthufifitick devotion) differs only from the myftical theology of the Sufis and Yógis, as the flowers and fruits of Europe differ in fcent and flavour from thofe of Aju, or as European differs from Afalick eloquente: the fame frain, in poctical meafure, would rife up to the odes of Spenser on Divine Love and Beauity, and, in a higher key with richer embellifhments, to the fongs of Hafiz and JAYADE'VA, the raptures of the Mafnavi, and the myfteries of the Bhágavat.

Before we come to the Perfians and Indians, let me produce another fipecimen of European theology, collected from a late excellent work of the illuftious M. Necker: "Were men animated, fays he, with fublime " thoughts, did they refpect the intellectual power, with which they are " adorned, and take an intereft in the dignity of their nature, they would " embrace with tranfport that fenfe of religion, which ennobles their facul"t ties, keeps their minds in full Atrength, and unites them in idea with " him, whofe immenfity overwhelms them with aftonifhment : confidering
"themfelves as an emanation from that infnite being, the fource and " caufe of all things, they would then difdain to be mifled by a gloomy " and falfe philofophy, and would cherifh the idea of a God, who " created, who regenerates, who preferves this univerfe by invariable laws, " and by a continued chain of fimil r caufes producing fimilar effects; who " pervades all nature with his divine fpirit, as an univerfal foul, which " moves, directs, and reftrains the wonderful fabrick of this world. The " bliffful idea of a God fweetens every moment of our time, and embel" lifhes before us the path of life; unites us delightfully to all the beauties " of nature, and affociates us with every thing that lives or moves. Yes; " the whifper of the gales, the murmur of waters, the peaceful agitation of " trees and flirubs, would concur to engage our minds and affect our fouls " with .tendernefs, if our thoughts were elevated to one univerfal caufe, if " we recognized on all fides the work of Him, whom we love; if we marked "t the traces of his augult fteps and benignant intentions, if we believed "ourfelves actually prefent at the difplay of his boundlefs power and the os magnificent exertions of his unlimited goodnefs. Benevolence, among "6 all the virtues, has a character more than human, and a certain amiable " fimplicity in its nature, which feems analogous to the firf idea, the " original intention of conferring delight, which we neceffarily fuppofe in " the creator, when we prefume to feek his motive in beftowing exiftence: " benevolence is that virtue, or, to fpeak more emphatically, that primor" dial beazty, which preceded all times and all worlds; and, when we re"flect on it, there appears an analogy, obfcure indeed at prefent, and to " us imperfectly known, between our moral nature and a time yet very " remote, when we fhall fatisfy our ardent wifhes and lively hopes, which " confitute perhaps a fixth, and (if the phrafe may be ufed) a diitant, fenfe. ar It may even be imagined, that love, the brightef ornament of our na-

## 170 Onthe Mysticai Poetryof

*s ture, love, enchanting and fublime, is a myfterious pledge for the affur ${ }^{25}$ ance of thofe hopes; fince love, by difingaging us from ourfelves, by ${ }^{66}$ tranfporting us beyond the limits of our own being, is the firft ftep in st our progrefs to a joyful immortality ; and, by affording both the notion of and example of a cherifhed object diftinct from our own fouls, may be "confidered as an interpreter to our hearts of fomething, which our intel" lects cannot conceive. We may feem even to hear the Supreme Intelli${ }^{36}$ gence and eternal foul of all nature, give this commiffion to the fpirits, os which emaned from him: Go; admire a fnall portion of my works, and "fudy them; make your firft trial of bappinefs, and learn to love bim, who "beflowed it; but feek not to remove the veil fipread over the fecret of your ex"s iftence: your nature is compofed of thofe divine particles, whbich, at an infinite "s diftance, confitute my own effence; but you would be too near me, were you ${ }^{6}$ permitied to penetrate the myftery of our Separation and union: wait the mo${ }^{66}$ ment ordained by my zoifdom; and, wintil that moment come, bope to approach ${ }^{66}$ mie only by adoration and gratitude.".

If thefe two paffages were tranflated into Sanfcrit and Perfian, I am confident, that the Védántis and Súfis would confider them as an epitome of their common fytem; for they concur in believing, that the fouls of men differ infinitely in degree, but not at all in kind, from the divine 1pirit, of which they are particles, and in whieh they will ultimately be abforbed; that the fpirit of GOD pervades the univerfe, always immediately prefent to his work, and confequently always in fubftance, that he alone is perfect benevolence, perfect truth, perfect beauty ; that the love of him alone is real and genuine love, while that of all other objects is $a b f u r d$ and illufory, that the beauties of nature are faint refemblances, like images in a mirror, of the divine charms; that, from eternity with-
out beginning to eternity without end, the fupreme benevolence is oscupied in beftowing happinefs or the means of attaining it; that men can only attain it by performing their part of the primal covenant between them and the Creator ; that nothing has a pure abfolute exifence but mind or Spirit; that material fubfiances, as the ignorant call them, are no more than gay pictures prefented continually to our minds by the fempiternal artift; that we muft beware of attachment to fuch phantoms, and attach ourfelyes exclufively to God, who truly exifts in us, as we exift folely in him; that we retain even in this for lorn ftate of feparation from our beloved, the idea of beavenly beauty, and the remembrance of our primeval vows; that fweet mufick, gentle breezes, fragrant flowers, perpetually renew the primary $i d e a$, refrefh our fading memory, and melt us with tender affections; that we muft cherifh thofe affections, and by abfracting our fouls from vanity, that is, from all but God, approximate to his effence, in our final union with which will confift our fupreme beatitude. From thefe principles flow a thoufand metaphors and other poetical figures, which abound in the facred poems of the Perfans and Hindus, who feem to mean the fame thing in funfance, and differ only in expreffion, as their languages differ in idiom! The modern Su"Fis, who profefs a belief in the Koran, fuppofe with great fublimity both of thought and of diction, an exprefs contract, on the day of cternity without beginning, between the affemblage of created fpirits and the fupreme foul, from which they were detached, when a celeftial voice pronounced thefe words, addrefled to each fpirit feparately, " Art thou " not with thy Lord ?" that is, art thou not bound by a folemn contract with him? and all the fpirits anfwered with one voice, " Yes:" hence it. is, that alif, or art thou not, and beli, or yes, inceffantly occur in the myftical verfes of the Porfans, and of the Turkifla poets, who imitate them, as
the Romans imitated the Greeks. The Hindus defcribe the fame covenant under the figurative notion, fo finely expreffed by Is imaif, of a nuptial contract: for confidering God in the three characters of Creator, Regenerator and Preferver, and fuppofing the power of Prefervation and Benevolence to have become incarnate in the perfon of Crishna, they reprefent hims as married to RA'DHA', a word fignifying atonement, pacification, or fatisfaction, but applied allegorically to the foul of man, or rather to the whole affemblage of created fouls, between whom and the benevolent creator they fuppofe that reciprocal love, which Barrow defcribes with a glow of expreffion perfectly oriental, and which our moft orthodox theologians believe to have beenmyftically foadowed in the fong of Solomon, while they admit, that, in a literal fenfe, it is an epithalamium on the marriage of the fapient king with the princefs of Egypt. The very learned a thor of the prelections on facsed poetry declared his opinion, that the canticles were founded on hiftorical truth, but involved an allegory of that fort, which he named myfical; and the beautiful poem on the loves of Laili and Majnúa by the inimitable Niza'mi (to fay nothing of otherpoems on the fame fubject) is indifputably built on true hiftory, yet avowedly allegorical and myfterious; for the introduction to it is a cono tinued rapture on divine love; and the name of Laili feems to be ufed in: the Majnavi and the odes of Hafiz for the omniprefent firit of God.

It has been made a queftion, whether the poems of Hariz muft be taken in a literal or in a figurative fenfe; but the queftion does not admit of a general and direct anfiwer; for even the moft enthufiaftick of his commentators, allow, that fome of them are to be taken literally, and: hiseditors ought to have diftinguifhed them, as our Spenser has diftinguilhed his four Odes on Love and Beauty, inftead of mixing the profane
with the divine, by a childifh arrangement according to the alphabetical order of the rhymes. Hafiz never pretended to more than human virtues, and it is known, that he had human propenfities; for in his youth he was paffionately in love with a girl furnamed Sbákbi Nebàt, or the Brancb of Sugarcane, and the prince of Shiraz was his rival: fince there is an agreeable wild nefs in the flory, and fince the poet himfelf alludes to it in one of his odes, I give it you at length from the commentary. There is a place called Pirifebz, or the Green old man, about four Perfian leagues from the city; and a popular opinion had long prevailed, that a youth, who fhould pafs forty fucceffive nights in Pirifebz without fleep, would infallibly become an excellent poet : young Hafiz had accordingly made a vow, that he would ferve that apprenticefhip with the utmoft exactnefs, and for thirty nine days he rigoroufly difcharged his duty, walking every morning before the houfe of his coy mifferfs, taking fome refrefhment and ref at nom, and paffing the night awake at his poetical ftation; but, on the fortiet'l morning, he was tranfported wih joy on $f$ eing the girl bec. kon to him through the lattices, and invite him to enter: She received him with rapture, declared her preference of a bright genius to $t$ e fon of a king, and would have detained him all night, if he had not recollected his vow and, refolving to keep it inviolate, returned to his poft. The people of Sbiraz add (and the fiction is grounded on a couplet of Hafiz) that, early next morning an old man, in a green mant's, who was nolefs a perfonage than Khizr himfelf, approached him at Piri cbz with a cup brimful of nectar, which the Greeks would have called the water of Aganippe, and rewarded his perfeverance with an infpiring draught of it. After his juvenile paffions had fubfided, we may fuppofe that his mind took that religious bent, which appears in moft of his compofitions; for there can be no doubt that the following diftichs, collected from different odes, relate to the myftical theology of the Sufis:
"In eternity without beginning, a ray of thy beauty began to gleam; "s when Love fprang into being, and cart flames over all nature;
${ }^{66}$ On that day thy cheek fparkled even under thy veil, and all this " beautiful imagery appeared on the mirror of our fancies.
or Rise, my fouil; that I may fourthee forth on the pencil of that fu" premeartif, who comprized in a turn of his compafs all this wonderful of fenery!
"From the moment, when Iheard the divine fentence, I bave breatbed "into man a portion of my fpirit, I was affured, that we were His, and He ce ours.
${ }^{6}$ Where are the giad tidings of union with thee, that I may abandon oc all defire of life? I am a bird of holineís, and would fain efcape es from the net of this world.
"SHED, O Lord, from the cloud of heavenly guidance one cheering "fhower, before the moment, when I mult rife up like a particle of dry "dun!
"The fum of our tranfactions in this univerfe, is nothing: bring us "the wine of devotion ; for the poffeffions of this world vanifh.
"The true object of heart and foul is the glory of union with our belove "ed : that object really exifts, but without it both heart and foul would or have no exiftence.

46 Othe blifs of that day, when I fhall depart from this defolate man" fion; fhall feek reft for my foul; and fhall follow the traces of my " beioved :
" Dancing, with love of his beauty, like a mote in a fun-beam, * till I reach the fpring and fountain of light, whence yon fun derives all " his luftre!.

The couplets, which follow, relate as indubitably to human love and fenfual gratifications:
" MAy the hand never fhake, which gathered the grapes! May the foot a" never flip, which preffed them!
"That poignant liquor, which the zealot calls the mother of fins, is as pleafanter and fweeter to me than the kiffes of a maiden.
" Wine two years old and a damfel of fourteen are fufficient fociety © for me, above all companies great or fmall.
"How delightful is dancing to lively notes and the cheerful melody of os the flute, efpecially when we touch the hand of a beautiful girl!
"Call for wine, and Scatter flowers around: what more canjt thou afk froms. "*- fate? Thus fpoke the nightingale this morning: what dayft thou, fweet "rofe, to his precepts?
"Bring thy couch to the garden of rofes, that thou mayft kifs the "cheeks and lips of lovely damfels, quaff rich wine, and fmell odorifer 6r ous bloffoms.
© OBRANCH of an exquifite rofe-plant, for whofe fake doft thou grow? ${ }^{68} \mathrm{Ah}$ ! on whom will that fmiling rofe bud confer delight?
${ }^{\text {ct }}$ The rofe would have difcourfed on the beauties of my charmer, but es the gale was jealous, and flole her breath, before fhe fpoke.
se In this age, the only friends, who are free from blemifh, are a flafk of or pure wine and a volume of clegant love fongs.

8* The joy of that moment, when the felf-fufficiency of inebriation "rendered me independent of the prince and of his minifter!"

Many zealous admirers of $\mathrm{Ha}_{\mathrm{A}} \mathrm{fiz}$ infift, that by wine he invariably means devotion: and they have gone fo far as to compofe a dictionary of words in the language, as they call it, of the Súfis: in that vocabulary fleep is explained by meditation on the divine perfections, and perfume by bope of the divine favour; gales are illapfes of grace; kiffes and embraces, the raptures of piety; idolaters, infidels, and libertines are men of the pureft religion, and their idol is the creator himfelf; the tavern is a retired oratory, and its keeper, a fage inftructor; beauty denotes the perfection of the fupreme being; treffes are the expanfion of his glory; lips, the hidden myftries of his effence s down on the cheek, the world of fpirits, who encircle his throne; and a black mole, the point of indivifible unity; laftly, wantonnefs, mirth, and ebriety mean religious ardour and abftraction from all terreftrial thoughts. The poet himfelf gives a colour in many paffages to fuch an interpretation; and without it, we can hardly conceive, that his poems, or thofe of his numer--us imitators, would be tolerated in a Mufelman country, efpecially at Conflantinople, where they are venerated as divine compoftions: it muft be admitted, that the fublimity of the myfical allegory, which, like mes
taithors ind comparifons, fhould be general only, not minutely exact, is diminifhed, if not détroyed, by an attempt at particular and difinct refemblances; and that the ftyle itfelf is open to dangerous mifinterpretation, while it fupplies real infidels with a pretext for laughing at religion itfelf.

On this occafion I cannot refrain from producing a moft extraordinary ode by a Süfi of Bokhárà, who affumed the poetical furname of Ismat : a more modern poet, by prefixing three lines to each couplet, which rhyme with the firft hemiftich, has very elegantly and ingenioufly converted the Kafidab into a Mokbammes, but I prefent you only with a literal verfion of the original diftichs:
"Yesterday, half inebriated, I paffed by the quarter, where the "s vintners dwell, to feek the daughter of an infidel, who fells wine.
"At the end of the freet, there advanced before me a damfel with a "fairy's cheeks, who, in the manner of a pagan, wore her treffes defhe"t velled over her fhoulder, like the facerdotal thread. 1 faid: 0 thou, to "the arch of whofe eye-brow the new moon is ajave, what quarter is tbis, and "where is thy manfion?
"SHe anfwered: Caft tby rofary on the ground; , bind on thy Sboulder the " thread of paganifm; throw fones at the glafs of piety; and quaff wine from " a full goblet;
"After that come before me, that I may whifper a zoord in thine ear: thou . -6 wilt accomplifi thy journey, if thou lifen to my difcourse.

178 On the Mysticax Poetry of
"Abandoning my heart and rapt in exftafy, I ran after her, till I " came to a place, in which religion and reafon forfook me.
"Ar a diffance I beheld a company, all infane and inebriated, who "s came boiling and ruaring with ardour from the wine of love;
"Without cymbals, or lutes, or viols, yet all full of mirth and melody; ${ }^{6}$ without wine, or gobet, or flak, yet all inceffantly drinking.
"When the cord of r.ftraint llipped from my han', I defired to afk her " one queftion; but fhe faid: Silence!
"This is no Square temple, to the gate of whicb thou canft arrive precipi" tately: this is no mofque, to which thou canft come with tumult, but without " knowledge. This is the banquet-boufe of infidels, and within it all are intox"icated; all, from the dawn of eternity to the day of refurrection, loft in afton= ${ }^{6}$ ifhment.
"Depart then from the cloyfter and take the way to the tavern; caft off the "cloke of a dervife, and wear the robe of a libertine.
"I obeyed; and, if thou defireft the fame ftrain and colour with Ismat, " imitate him, and fell this world and the next for one drop of pure wine.

Sucr is the ftrange religion and ftranger language of the Súfis; but moft of the A fatick poets are of that religion, and, if we think it worth while to read their poems, we muft think it worth while to underftand them: their great Maulavi affures us, that "they profefs eager defire, but with no "carnal affection, and circulate the cup, but no material goblet ; fince all
" things are fpiritual in their fect, all is myftery within myfery;" confiftently with which declaration he opens his aftonifhing work, entitled the Mafnavi, with the following couplets:

Hear, how yon reed in fadly-pleafing tales
Departed blifs and prefent wo bewails!

- With me, from native banks untimely torn,
- Love-warbling youths and foft-ey'd virgins mourn.
- Oh! let the heart by fatal abfence rent
- Feel what I fing, and bleed when I lament:
- Who roams in exile from his parent bow'r,
- Pants to return, and chides each ling'ring hour.
- My no:es, in circles of the grave and gay,
- Have hail'd the rifing, cheer'd the clofing, day:
- Each in my fond affections claim'd a part,
- But none difcern'd the fecret of my heart.
- What though my ftrains and forrows flow combin'd!
- Yet ears are flow, and carnal eyes are blind.
- Free through each mortal form the fpirits roll,
- But fight avails not. Can we fee the foul ?'

Such notes breath'd gently from yon vocal frame :
Breath'd faid I? no; 'twas all-enliy'ning flame.
'Tis love, that fills the reed with warmth divine;
${ }^{3}$ Tis love, that fparkles in the racy wine.
Me, plaintive wand'rer from my peerlefs maid,
The reed has fir'd, and all my foul betray'd.
He gives the bane, and he with balfam cures;
Aflicts, yet fooths; impaffions, yet allures.
Y ${ }_{2}$

Delightful pangs his am'rous tales prolong;
And Laili's frantick lover lives in fong.
Not he, who reafons beft, this wifdom knows:
Ears only drink what rapt'rous tongues difclofe.
Nor fruitlefs deem the reed's heart-piercing pain:-
See fweetnefs dropping from the parted cane.
Alternate hope and fear my days divide :
Il courted Grief, and Anguifh was my bride.
Flow on, fad ftream of life! I fmile fecure:
Thou livef; Thou, the pureft of the pure!
Rife, vig'rous youth! be free; be nobly bold :
Shall chains confine you, though they blaze with gold?
Go; to your vafe the gather'd main convey:
What were your flores? The pittance of a day!
New plans for wealth your fancies would invent:
Yet fhells, to nourifh pearls, muft lie content.
The man, whofe robe love's purple arrows rend,
Bids av'rice reft and toils tumultuous end.
Hail, heav'nly love! true fource of endlefs gains !
Thy balm reftores me, and thy fkill fuftains.
Oh, more than Galen learn'd, than Peato wife!
My guide, my law, my joy fupreme arife!'
Love warms this frigid clay with myftick fire :
And dancing mountains leap with young defire.
Bleft is the foul, that fwims in feas of love,
And long the life fuftain'd by food above.
With forms imperfect can perfection dwell ?
Here paufe, my fong; and thou, vain world, farewell:

A volume might be filled with fimilar paffages from the Súfi poets; from Sa'ib; Orfí, Mír Khosrau, Ja'mi, Hazi'n, and Sa'bik, who are next in beauty of compofition to $\mathrm{HA}^{\prime} \mathrm{FIz}$ and $\mathrm{S}_{A D I}$, but next at a confiderable diftance ;-. from Mesi'hi, the moft elegant of their Turkifh imitators; from a few Hindi poets of our own times, and from Ibnul Fa'red, who wrote myftical odes in Arabick; but we may clofe this ace count of the Súfis with a paffage from the third book of the Bustan, the declared fubjeet of which is divine love; referring you for a particular detail of their metaphyficks and theology to the Dabiftan of Mohsani Fanr, and to the pleafing effay, called the Function of two Seas, by that amiable and uns. fortunate Prince, $\mathrm{Da}^{\prime}$ ra' Shecu'h:
"The love of a being compofed, like thyfelf, of water and clay, defo " Atroys thy patience and peace of mind; it excites thee, in thy waking hours " with minute beauties, and engages thee, in thy fleep, with vain ima" ginations: with fuch real affection doft thou lay thy head on her foot, " that the univerfe, in comparifon of her, vanifhes into nothing before " thee; and, fince thy gold allures not her eye, gold and mere earth ap" pear equal in thine. Not a breath doft thou utter to any one elfe, for " with her thou haft no room for any other ; thou declareft, that her abode " is in thine cye, or, when thou clofeft it, in thy heart ; thou haft no fear " of cenfure from any man; thou haft no power to be at reft for a moment ; " if fhe demands thy foul, it runs inftantly to thy lip; and if the waves a " cimiter over thee, thy head falls immediately underit. Since an abfurd " love, with its bafis on air, affects thee fo violently, and commands with " a fway fo defpotick, canft thou wonder, that they, who walk in the true " path, are drowned in the fea of myfterious adoration? They difregard " life through affection for its giver; they abandon the world through re.
" membrance of its maker: they are inebriated with the melody of amor" ous complaints; they remember their beloved, and refign to him both " this life and the next. Through remembrance of God, they thun all
" mankind: they are fo enamoured of the cup-bearer, that they fpill the "s' wine from the cup. No panacea can heal them, for no mortal can be ap" prized of their malady; fo loudly has rung in their ears, from eternity " without beginning, the divine word aleft, with beli, the tumultuous ex" clamation of all fpirits. They are a fect fully employed, but fitting in " retirement; their feet are of earth, but their breath is a flame: with a " fingle yell they could rend a mountain from its bafe; with a fingle cry " they could throw a city into confufion: like wind, they are concealed " and move nimbly; like flone, they are filent, yet repeat God's praifes. "At early dawn their tears flow fo copioully as to wath from their eyes the " black powder of fleep: though the courfer of their fancy ran foiflly all " night, yet the morning finds them left behind in diforder: night and day " are they plunged in an ocean of ardent defire, till they are unable, through " aftonifhment, to diftinguifh night from day. So enraptured are they " with the beauty of Him, who decorated the human form, that with the " beauty of the form itfelf they have no concern; and, if ever they behold "s a beautiful hape, they fee in it the myftery of God's work.
" The wife take not the hufk in exchange for the kernel; and he, who ${ }^{66}$ makes that choice, has no underftanding. He only has drunk the pure " wine of unity, who has forgotten, by remembering GOD, all things elfe ${ }^{66}$ in both worlds.

Let us return to the Hindus, among whom we now find the fame emblematical theology, which Pytbagoras admired and adopted. The loves of Crishna
and Radha, or the reciprocal attraction between the divine goodnefs and the human foul, are t ld at large in the tenth book of the Bbaggavat, and are the fubject of a little $P$ foral Drama, entitled Gítagóvinda: it was the work of Jayadeva, whoflourifhed, it is faid, before Calidas, and was born, as he tells us himfelf, in Cenduli, which many believe to be in Calinga; but, fince there is a town of a fimilar name in Berdroan, the natives of it infift that the finen lyrick poet of India was their countryman, and celebrate in honour of him an annual jubilee, paffing a whole night in reprefenting his drama, and in finging his beautiful fongs. After having tranflated the Gitagovinda word for word, I reduced my tranflation to the form, in which it is now exhibited; omitting only thofe pallages, which are too luxuriant and too bold for an European tafte, and the prefatory ode on the ten incarnations of Vishnu, with which you have been prefented on another oce cafion: the phrafes in Italicks are the burdens of the feveral fongs; and you may be affured, that not a fingle image or idea has been added by the ranflator.

## 

OR,

## THE SONGS OF JAYADEVA.

- $\quad \mathrm{HE}$ firmament is obfcured by clouds; the woodlands are black with Tamála-trees; that youth, who roves in the fore, will be - fearful in the gloom of night : go, my daughter; bring the wanderer - home to my ruftick manfion.' Such was the command of NANDA, the fortunate herdfman; and hence arofe the love of $R_{A^{\prime}}$ dh $^{\prime}$ and $\mathrm{Ma}^{\prime}{ }^{\prime}$ drava, who ported on the bank of Camuna , or hastened eagerly to the fecret bower.

If thy foul be delighted with the remembrance of Herr, or fenfible to the raptures of love, lifter to the voice of JAYade'va, whole notes are both fret and brilliant. О тнои, who reclineft on the bofom of CAMAle', whole ears flame with gems, and whore locks are embellifhed with fylvan flowers; thou, from whom the day far derived his effulgence, who fleweft the venom-breathing $\mathrm{C}_{A^{\prime}}$ LIYA, who beamed, like a fun, on the tribe of Yadu, that flourifhed like a loos; thou, who fitteft on the plumage of Garura, who; by fubduing demons, gaveft exquifite joy to the affembly of immortals; thou, for whom the daughter of Janice was decked in gay apparel, by whom Dúshana was overthrown; thou, whole eye fparkles 1 ke the water-lily, who calledft three worlds into exiftence; thou, by whom the rocks of Mandar were eafily fupported, who
fippeft nectar from the radiant lips of PEDMA, as the flutering Cbacora drinks the moonbeams; be vithrijus, OHEri, lord of conquef!

Radida fought him long in vain, and her thoughts were confounded by the fever of defire : the roved in the vernal morning among the twining Váfantis covered with foft blofioms, when a damfel thus addreffed her with youthful hilarity: • The gale, that has wantoned round the beautiful - clove-plants, breathes now from the hills of Mulaya; the circling ar-- bours refound with the notes of the Cócil and the murmurs of honey-- making fwarms. Now the hearts of damfels, whofe lovers travel at - a diftance, are pierced with anzuifh : while the bloffoms of Bacul ase - confpicuous among the flowerets covered with bees. The Tanaía, with - leaves dark and odorous, claims a tribute from the mufk, which it van-- quifhes; and the cluftering flowers of the Palifa refemble the nals of - Ca'ma, with which he rends the hearts of the young. The full blown. - Céfara gleams like the fceptre of the world's monarch, Love; and the - pointed thysfe of the Cétaca refembles the darts, by which lovers are - woundd. See the bunches of Patali-flowers filled with bees, like the - quiver of Smara full of fhafts; while the tender bloffom of the Carunas - fmiles to fee the whole world laying fhame afide. The far-fc. nted Mäde

- bavi beautifies the trees, round which it twines; and the freif Mallicis
- feduces with rich perfume even the hearts of hermits; while the Amra-
- tree with blooming treffes is en.braced by the gay creeper Atimucta, and - the blue ftreams of Yamunà wind rcund the groves of Vrindávan. In tbis - cbarming feafon, wbicb gives pain to Siparated lovers, young Heri fiorts - and dances with a company of damfels. A breeze, like the breath of love, - from the fragrant fllwers of the Cétaca, kindles every heart, whilf it per-- fumes the woods with the duft, which it fhakes from the Mallicá with
- half-opened buds; and the Cócila burfs into fong, when he fees the blof-- foms gliftening on the lovely Rafála.'

The jealous Ra'dhá gave no anfwer; and, foon after, her officious friend, perceiving the foe of Mura in the foreft eager for the rapturous embraces of the herdfmen's daughters, with whom he was dancing, thus again addreffed his forgotten miffrefs: ' With a garland of wild flowers - defcending even to the yellow mantle, that girds his azure limbs, diftin' guifhed by fmiling cheeks and by ear-rings, that fparkle, as he plays, - Heri exults in the afemblage of amorous damfels. One of them prefles him - with her fwelling breaft, while fhe warbles with exquifite melody. Ano-- ther, affected by a glance from his eye, ftands meditating on the lotos - of his face. A third, on pretence of whifpering a fecret in his ear, ap-- proaches his temples, and kiffes them with ardour. One feizes his man-- tle and draws him towards her, pointing to the bower on the banks of - Yamunà, where elegant Vanjulas interweave their branches. He applauds ' another, who dances in the fportive circle, whillt her bracelets ring, as - fhe beats time with her palms. Now he careffes one, and kiffes another, - fmiling on a third with complacency ; and now he chafes her, whofe beau-- ty has moft allured him. Thus the wanton Heri frolicks, in the feafon - of fweets, among the maids of Vraja, who ruh to his embraces, as if he - were Pleafure itfelf affuming a human form; and one of them, under a ' pretext of hymning his divine perfections, whifpers in his ear: "Thy " lips, my beloved, are nectar."

Ra'dha' remains in the foreft; but, refenting the promifcuous paffion of Heri, aild his negleet of her beauty, which he once thcught fuperiour, fhe retires to a bower of twining plants, the fummit of which refounds
with the humming of fwarms engaged in their fweet labours; and there, talling languid on the ground, the thus addreffes her female companion. - Though be take recreation in my abfence, and finile on all around bim. - yet my foul remembers Him, whofe beguiling reed modulates a tune fweet-- ened by the nectar of his quivering lip, while his ear fparkles with gems, - and his eye darts amorons glances ; Him, whofe locks are decked with the " plumes of peacocks refplendent with many-coloured moons, and whofe - mantle gleams like a dark blue cloud illumined with rain-bows; Him, - whofe graceful fmile gives new luttre to his lips, brilliant and foft as a - dewy leaf, fweet and ruddy as the bloffom of Bandhujiva, while they - tremble with cagernefs to kifs the daughters of the herdfmen; him, who - difperfes the gloom with beams from the jewels, which decorate his bofom,

- his wrifts, and his ankles, on whofe forehead thines a circlet of radal ${ }^{6}$ wood, which makes even the moon contemptible; when it fails through - irradiated clouds; Him, whofe ear-rings are formed of entire gems in the - Mape of the fifh Macar on the banners of Love; cven the yellow-ro ed - God, whofe attendants are the chiefs of deities, of holy men, and of de-- mons; him, whoreclines under a gay Cadamia-rree; who formerly de-- lighted me, while he gracefully waved in the dance, and all his foul fpark-- led in his eye. My wreak mind thus enumerates his qqualities; and, - though offended, frives to banith offence. What elfe can it do? It - cannot part with its affection for Crisina, whofe love is excited by "other damfels, and who forts in the abfence of RA"dHa". Bring, O "friend, that vanquifher of the demon CE'si, to fort with me, whe s am repairing to a fecret bower, who look timidly on all fides, who me${ }^{6}$ ditate with amorous fancy on his divine transfiguration. Bring him, - whofe difcourfe was once compofed of the gentleft words, to converfe - With me, who am bafhful on his firft approach, and exprefs my thoughts
- with a fmile fweet as honey. Bring him, who formerly flept on my bofom,
- to recline with me on a green bed of leaves jutt gathered, while his lip
- fheds dew, and my arms enfold him. Bring him, who has attained the per-
* fection of fkill in love's art, whofe hand ufed to prefs thefe firm and deli-
- cate fpheres; to play. with me, whofz voice rivals that of the Cócil, and
\& whofe treffes are bound with waving bloffoms. Bring him, who formerly
- drow me by the locks to his embrace, to repofe with me, whofe feet tinkle,
; as they move, with rings of gold and of gems, whofe loofened zone
- founds, as it falls; and whofe limbs are flender and flexible as the creeps ing plant. That God, whofe cheeks are beautified by the neftar of his - fmiles, whofe pipe drops in his extafy, I five in the grove encircled - by the damfels of Vraja, who gazed on him afkance from the ' corners of their cyes: I faw himin the grove with happier damfels, yet - the fight of him delighted me. Soft is the gale, which breathes over yon - clear pool, and expands the cluftering bloffoms of the voluble $A$ fóca; foft, - yet grievous to me in the abfence of the foe of MIADHU. Delightful are the - flowers of Amra-trees on the mountain-top, while the murmuring bees - purfue their voluptuous toil; delightful, yet afflicting to me, Ofriend, in " the abfence of the youthful Ce'sava.'

Meantime, the deftroyer of Cansa, having brought to his remembrance the amiable RA'DHA', forfook the beautiful damfels of Traja: he fought her in all parts of the foreft; his old wound from love's arrow bled again; he repen= ted of his levity, and, feated in a bower near the bank of Yomuna, the blue daughter of the fun, thus poured forth his lamentation.

- She is departed-fhe faw me, no doubt, furrounded by the wanton fhep-- herdeffes; yet, confcious of my fault, I durf not intercept her flight. Wo - is me! Joe feels a fenfe of injured bonour, and is departed in wrath. How
- willfhe conduct herfelf? How will fhe exprefs her pain in fo long a fepara-- tion? What is wealth to me? What are numerous attendants? What are the - pleafures of the world? What joy can I receive from a heavenly abode? I - feem to behold her face with eye-brows contracting themfelves through - her juft refentment: it refembles a frefh lotos, over which two black bees - are fluttering: I feem, fo prefent is fhe to my imagination, even now to - carefs her with eagernefs. Why then do I feek her in this foreft ? Why do I - lament without caufe? O flender damfel, anger, I know, has torn thy - foft bofom ; but whither thou art retired, I know not. How can I in-- wite thee to return ? Thou art feen by me, indeed, in a vifion; thou feem-- eft to move before me. Ah! why doft thou not rufh, as.before, to my em-- brace? Do but forgive me: never again will I commit a fimilar offence. - Grant me but a fight of thee, O lovely Ra'dhicá; for my paffion torments - me. I am not the terrible MAHE'SA: a garland of water lilies with fubtil - threads decks my fhoulders; not ferpents with twifted folds: the blue - petals of the lotos glitter on my neck; not the azure gleam of poifon: powdered fandal-wood is fprinkled on my limbs; not pale afhes: O God - of Love, miftake me not for Mahádéva. Wound me not again; appro' ach me not in anger; I love already but too paffionately; yet I have loft - my beloved. Hold not in thy hand that fhaft barbed with an Amra flower! - Brace not thy bow, thou conqueror of the world! Is it valour to flay one - who faints? My heart is already pierced by arrows from RA'DHA"s eyes, - black and keen as thofe of an antelope; yet mine eyes are not gratified with - her prefence. Her eyes are full of fhafts ; her eye-brows are bows; and the ' tips of her ears are filken ftrings : thus armed by Anang a, the God of De-- fire, the marches, herfelf a goddefs, to enfure his triumph over the vanqui-- Thed univerfe. I meditate on her delightful embrace, on the ravifhing glan${ }^{6}$. ces darted from her eye, on the fragrant lotos of her mouth, on her nectar-
- dropping fpeech, on her lips ruddy as the berries of the Bimba; yer - even my fixed meditation on fuch an affemblage of charms encreales, in-- Itead of alleviating, the mifery of feparation.'

The damfel, commiffioned by Ra'dia', found the difconflate God under an arbour of fpreading Vániras by the fide of Yamunà; where, prefenting herf.lf gracefully before him, fhe thus defcribed the affliction of his: beloved:

- Sire defpifes effence of fandal-wood, and even by moon-light fits brood-* - ing over her gloomy forrow; the declares the gale of Malaya to be venom, - and the fandal-trees, through which it has breathed, to have been the - haunt of ferpents. Thus, О $\mathrm{Ma}^{\prime} \mathrm{Dhava}$, is Jhe aflifted in thy abfence with, - the pain, zohich love's dart has occafoned: her Soul is fixed on Thee. Frefh - arrows of defire are continually affailing her, and fhe forms a net of lotos-- leaves as armour for her heart, which thou alone fhouldft fortify.. She. - makes her own bed of the arrows darted by the flowery-fhafted God; but, . - when fhe hoped for thy embrace, the had formed for Thee a couch of. - foft bloffoms. Her face is like a water-lily veiled in the dew of tears, and. - her cyes appear like moons eclipfed, which let fall their gathered neetar. - through pain caufed by the tooth of the furious dragon., She draws thy - image with mulk in the character of the Deity with five fhafts, having , - fubdued the Macar, or horned fhark, and holding an arrow tipped with - an Amra-flower; thus fhe draws thy picture, and worhips it.r At the . - clofe of every fentence, "O Ma"dhava, fhe exclaims, at thy feet am " I fallen, and in thy abfence even the moon, thougb it be a vafe full of " nectar, inflames my limbs." • Then, by the power of imagination, fhe - figures thee ftanding before her; thee, who art not eafily atta:ned: fhe
${ }^{6}$. fights, fhe fmiles, fhe mourns, fhe weeps, fhe moves from fide to fide,
- Ahe laments and rejoices by turns. Her abode is a foref; the circle of
- her female companions is a net; her fighs are flames of fire kindled in a - thicket; herfelf (alas! through thy abfence) is become a timid roe; ${ }^{6}$ - and Love is the tiger, who fprings on her like Yama, the Genius of
- Death. So emaciated is her beautiful body, that even the light garland, - which waves over her bofom, fhe thinks a load. Suebs, obrìgbt-baired
- God, is Ra'Dhá, when thou art abfent. If powder of fandal-wood fismely
- levigated be moiftened and applied to her breafts, fhe farts, and miftakes
- it for poifon." Her fighs form a breeze long extended, and burn her like
- the flame, which reduced CandARPa to afhes. She throws around her
${ }^{6}$ eyes, like blue water-lilies with broken falks, dropping lucid ftreams.
- Even har bed of tender leaves appears in her fight like a kindled fire. The
- palm of her hand fupports ber aching temple, motionlefs as the crefecnt ' rifing at eve. "Heri, Hert,", thus in filence flie meditates on thy - name, as if her wifh were gratified, and fhe were dying through thy as-- fence. She rends her locks; fhe pants; fle laments inarticulately; fhe - trembles; fhe pines; the mufes; the moves from place to place; the ${ }^{6}$ clofes her eyes; the falls, fhe tifes again; fhe faints : in fuch a fever of - love, fhe may live, O celefial phyfician, if Thou adminifter the remedy; ' but, fhouldf Thou be unkind, her malady will be defperate. Thus, O - divine hiealer, by the nectar of thy love muft $\mathrm{RA}^{\prime} \mathrm{DHA}^{\prime}$ be reftored to - health; and, if thou refufe it, thy heart muft be harder than the thunder. ${ }^{6}$ ftone. Long has her foul pined, and long has the been heated with ${ }^{6}$ fandal-wood, moon-light, and water-lilies, with which others are cooled; ' yet fle patiently and in fecret meditates on Thiee, who alone canft relieve - her. Shouldft thou be inconftant, how can fhe, wafted as fhe is to a fha-- dow, fupport life a fingle moment? How can fhe, who lately could not

Endure thy abfence even an inftant, forbear fighing now, when fhe looks ' with half-clofed eyes on the Rafúla with bloomy branches, which remind ' her of the vernal feafon, when the firlt beheld thee with rapture?
'Here have I chofen my abode: go quickly to Ra'dha'; foothe her 's with my meffage, and conduct her hither.' So Poke the foe of Madhu to the anxious damfel, who haftened back, and thus addreffed her companion: ' Whilst a fweet breeze from the hills of Malaya comes wafting - on his plumes the youug God of Defiee; while many a flower points - his extended petals to pierce the bofom of feparated lovers, the Deity - crowned with fylwan bloffoms laments, O friend, in thy abfence. Even the - dewy rays of the moon burn him ; and, as the fhaft of love is defcending, - he mourns inarticulately with increaing diftraction. When the bees - murmur foftly, he covers his ears; mifery fits fixed in his heart, and

- every returning night adds anguifh to anguifh. He quits his radiant pa-- lace for the wild foren, where he finks on a bed of cold clay, and fre' quently mutters thy name. In yon bower, to which the pilgrims of love ' are ufed to repair, he meditates on thy form, repeating in filence fome ' enchanting word, which once dropped from thy lips, and thirfing for - the nectar, which they alone can fupply. Delay not, O lovelieft of we6 men ; follow the lord of thy heart: behold, he feeks the appointed - fhade, bright with the ornaments of love, and confident of the promifed - blifs. Having bound bis locks with foreft-flowers, be baftens to yon arbour, - where a foft gale breathes over the banks of Yamunà: there, again pro' nouncing thy name, he modulates his divine reed. Oh! with whut ' rapture doth he gaze on the golden duft, which the breeze fhakes from ' expanded bloffoms; the breeze, which has kiffed thy cheek! With a - mind, languid as a dropping wing, feeble as a trembling leaf, he dubit.. * fully expecis thy approach, and timidly looks on the path, which tnou
- muft tread. Leave behind thee, $O$ friend, the ring which tinkles on thy
"delicate ankle, when thou fporteft in the dance; hatily caft over thee ' thy azure mantle, and run to the gloomy bower. The reward of thy
- Speed, O thou who fparklef like lightning, will be to fhine on the blue
- bofom of Murári, which refembles a vernal cloud, decked with a
"ftring of pearls like a flock of white water-birds flutering in the air.
- Difappoint not, O thou lotos-eyed, the vanquifher of Madiu ; accom-
"plifk his defire; but go quickly: it is night, and the night alfo will " quickly depart. Again and again he fighs; he looks around; he re" enters the arbour; he can fcarce articulate thy fweet name; he again
- fmooths his flowery couch; he looks wild; he becomes frantick: thy
' beloved will perifh through defire. The bright-beamed God finks in the - weft, and thy pain of feparation may alfo be removed: the blacknefs of - the night is increafed, and the paffionate imagination of Go'vinda has
* acquired additional gloom. My addrefs to thee has equalled in length 6 and in fweetnefs the fong of the Cócila: delay will make thee miferable, - O my beautiful friend. Seize the moment of delight in the place of ' affignation with the fon of Dévacr', who defcended from heaven to s remove the burdens of the univerfe; he is a blue gem on the forehead of s the three worlds, and longs to fip honey, like the bee, from the fragrant * lotos of thy cheek."

But the folicitous maid, perceiving that RA'DHA was unable through debility to move from her arbour of flowery creepers, returned to Go'vinda, who was himfelf difordered with love, and thus defcribed her fituation:
-SHe mourns. O fovereign of the world, in ber verdant bower; the looks. ${ }^{6}$ eagerly on all fides in hope of thy approach; then, gaining frength from.

- the delightful idea of the propofed meeting, fhe advances a few fteps, - and falls languid on the ground. When fhe rifes, fhe weaves bracelets - of frefh leaves; fhe dreffes herfelf like her beloved, and, looking at her-- felf in fport, exclaims, "Behold the vanquifher of Madhu!" Then - fhe repeats again and again the name of Heri, and, catching at a dark - blue cloud, frives to embrace it, faying : "It is my beloved, who ap" proaches." Thus, while thou art dilatory, fhe lies expecting thee; fhe ' mourns; fhe weeps; fle puts on her gayeft ornaments to \{receive her ' lord; fhe compreffes her deep fighs within her bofom; and then, medi' tating on thee, O cruel, fhe is drowned in a fea of rapturous imagina' tions. If a leaf but quiver, the fuppofes thee arrived; fhe fpreads her ' couch; fhe forms in her mind a hundred modes of delight: yet, if thou ' go not to her bower, fhe muft die this night through exceffive anguifh.'.

By this time the moon fpread a net of beams over the groves of Vrindávan, and looked like a drop of liquid fandal on the face of the fky, which fmiled like a beautiful damfel ; while its orb with many fpots betrayed, as it were, a confcioufnefs of guilt, in having often attended amorous maids to the lofs of their family-honour. The moon, with a black fawn couched on its difc, advanced in its nightly courfe; but Ma dhava had not advanced to the bower of $\mathrm{RA}^{\prime} \mathrm{DHA}^{\prime}$, who thus bewailed his delay with notes of varied lamentation.

- The appointed moment is come; but Heri, alas, comes not to the ' grove. Muft the feafon of my unblemifhed youth pafs thus idly away ? ' Ob! wohat refuge can I Seek, deluded as I am by the guile of my fentale ad-- vijer? The God with five arrows has wounded my heart ; and I am de-- ferted by Him, for whofe fake I have fought at night the darkeft recefs

6 of the foreft. Since my beft beloved friends have deceived me, it is my ' wifh to die: fince my fenfes are difordered, and my bofom is on fire, 6 why ftay I longer in this world? The coolnefs of this vernal night gives

- me pain, inftead of refrefhment: fome happier damfel enjoys my belo-- ved; whilf I, alas! am looking at the gems in my bracelets, which - are blackened by the flames of my paflion. Ny neck, more delicate - than the tendereft bloffom, is hurt by the garland, that encircles it: - flowers are, indeed, the arrows of Love, and he plays with them cruelly. - I make this wood my dwelling : I regard not the roughnefs of the Vétas-- trees; but the deftrojer of Madiuu holds me not in his remembrance! - Why comes he not to the bower of bloomy Vanjulas, affigned for our ' meeting ? Some ardent rival, no doubt, keeps him locked in her embrace : - or have his companions detained him with mirthful recreations? Elfe - why roams he not through the cool fhades? Perhaps, the heart-fick lover - is unable through weaknefs to adwance even a ftep!'-So faying, fhe raifed her eyes; and, feeing her damfel return filent and moumful, unaccompanied by Ma'diava, fhe was alarmed even to phrenfy; and, as if the actually beheld him in the arms of a rival, the thus defcribed the vifion, which overpowered her intellect.
- Yes; in habiliments becoming the war of love, and with treffes - waving like flowery banners, a damfel, more alluring than $\mathrm{RA}^{\prime} \mathrm{DHA}^{\prime}$, enjoys s the conqueror of MADMU. Her form is transfigured by the touch of her - divine lover ; her garland quivers over her fwelling bofom; her face like - the moon is graced with clouds of dark hair, and trembles, while the - quaffs the nectareous dew of his lip; her bright ear-rings dance over her - cheeks, which they irradiate ; and the fmall bells on ber girdle tinkle as the - moves. Bafhful at firt, fhe fmiles at length on her embracer, and ex-
"preffes her joy with inarticulate murmurs; while fhe floats on the waves - of defire, and clofes her eyes dazzled with the blaze of approaching - CA'mA : and now this heroine in love's warfare falls exhaufted and van' quifhed by the refiftefs MURa'RI; but alas! in my bofom prevails the - flame of jealoury, and yon moon, which difpels the forrow of others, in-- creafes mine. See again, where the foe of Mura forit's in yon grove ori - the bank of the Yamunà ! Sec, how he kiffes the lip of my rival, and im-- prints on her forehead an ornament of pure mutk, black as the young ' ant lope on the lunar orb! Now, like the hufband of Kerr, he fixes - white bloffoms on her dark locks, where they gleam like flafhes of light-- "ning among the curled clouds. On her breafts, like two frmaments, he - places a Rrisg. of gems like a radiant confellation: he binds on her arms, " graceful as the thalks of the water-lily, and adorned with hands glowing - like the petals of its flower, a bracelet of fapphires, which refemble a - clutter of bees. Ah!fee, how he ties round her waift a rich girdle - illumined with golden bells, which ferem to laugh, as they tinkle, at the ' inferiour hrightnefs of the leafy garlands, which lovers hang on their - bowers to propitiate the God of Defire. He places her foft foot, as he - reclines by her fide, on his ardent bofom, and fains it with the ruddy - hue of Yávaca. Say, my friend, why pafs I my nights in this tangled - foreft witho joy, and without hope, while the faithlefs brother of - Haladhera clafps my rival in his arms? Yet why, my companion, - fhouldn thou mourn, though my perfidious youth has difappointed me? - What offence is it of thine, if he fport with a crowd of damfeis happier " than I? Ma:k, how my foul, attracted by his irrefiftible charms, burfts - from its mortal frame, and rufhes to mix with its beloved. She, whom - the God erjoys, crowned with Syloan flowers, fits carelefly on a bed of leaves - with Him, whofe wanton eyes refemble blue water-lilies agitated by the
- breeze. She feels no flame from the gales of Malaya with Him, whofe ${ }^{6}$ words are fweeter than the water of life. She derides the fhafts of foul-- born Ca'ma with Him, whofe lips are like a red lotos in full bloom. - She is cooled by the moon's dewy beams, while fhe reclines with Him, - whofe hands and feet glow like vernal flowers. No female companion - deludes her, while fhe fports with Him, whofe vefure blazes like tried ' gold. She faints not through excefs of paffion, while the careffes that ' youth, who furpaffes in beauty the inhabitants of all worlds. O gale, - fcented with fandal, who breatheft love from the regions of the fouth, be " propitious but for a moment: when thou hall brought my beloved before ' my eyes, thou mayft freely waft away my foul. Love, with eyes like ' blue water-lilies, again affails me and triumphs; and, while the perfidy © of my beloved rends my heart, my female friend is my foe, the cool - breeze fcorches me like a flame, and the nectar-dropping moon is my ' poifon. Bring difeafe and death, O gale of Malaya! Seize my fpirit, - O God with five arrows! I afk not mercy from thee: no more will I \& dwell in the cottage of my father. Receive me in thy azure waves, O s fifter of Yama, that the ardour of my heart may be allayed!'

Pierced by the arrows of love, fhe paffed the night in the agonies of defpair, and at early dawn thus rebuked her lover, whom fhe faw lying. proftrate before her and imploring forgivenefs.

- Alas! alas! Go, Ma'dhava; depart, 0 Césava; Jpeak not the lan'guage of suile; follow Her, O lotos-cyed God, follow Her, who diftels iby - care. Look at his eye half-opened, red with continued waking through * the pleafurable night, yet fmiling ftill with affection for my rival! Thy s seeth, O cerulean youth, are azure as thy complexion from the kiffes,
- which thou haft imprinted on the beautiful eyes of thy darling graced - with dark blue powder; and thy limbs marked with punctures in love's - warfare, exbibit a letter of conqueft written on polifhed fapphires with - liquid gold. That b oad bofom, flained by the bright lotos of her foot, - difplays a vellure of ruddy leaves over the tree of thy heart, which trem-- bles within it. The preffure of her lip on thine wounds me to the foul.
- Ah! how canf thou affert, that we are one, fince our feníations differ ' thus widely? Thy foul, O dark-limbed God, fhews its blacknefs exter' nally. How couldft thou deceive a girl, who relied on thee; a girl, who - burned in the fever of love? Thou roveft in woods, and females are thy ' prey: what wonder? Even thy childifh heart was malignant; and thou ' gaveft death to the nurfe, who would have given thee milk. Since thy - tendernefs for me, of which thefe forefts ufed to talk, has now vanifhed, - and fince thy breaft, reddened by the feet of my rival, glows as if thy ar-- dent paffion for her were burfting from it, the fight of thee, O deceiver ${ }_{r}$. ' makes me (ah! muft I fay it?) blufh at my own affection.'

Having thus inveighed againft her beloved, fhe fat overwhelmed in grief, and filently meditated on his charms; when her damfel foftly addrefo fed her.

- He is gone: the light air has wafted him away. What pleafure now, - my beloved, remains in thy manfion? Continue not, refentful woman, thy - indignation againft the beautifu? Ma'dhava. Why fhouldt thou render s vain thofe round fmooth vafes, ample and ripe as the fweet fruit of yon "Taila-trec? How often and how recently have I faid: "forfake not the - blooming HiRI?" Why fitteft thou fo mournful? Why weepeft thou - with difuaction, when the damfels are laughing around thee? Thou haft
- formed a couch of foft loos-leaves: let thy darling charm thy fight, 6 while he repofes on it. Affict not thy foul with extreme anguifh; but ' attend to my words, which conceal no guile. Suffer Ce'sava to approach:
${ }^{6}$ let him fpeak with exquifite fweetnefs, and diflipate all thy forrows. If
' thou art harfh to him, who is amiable; if thou art proudly filent, when 6 he deprecates thy wrath with lowly profrations; if thou fhoweft aver$\varepsilon^{\prime}$ fron to him, who loves thee paffionately; if, when he bends before thee, - thy face be tumed contemptuoufly away; by the fame rule of contrariety, - the duit of fandal-wood, which thou haft fprinkled, may become poifon; - the moon with cool beams, a fcorching fun; the frefh dew, a confuming 'flame; and the fports of love be changed into agony.'

Ma'diava was not abfent long: he returned to his beloved; whofe cheeks were heated by the fultry gale of her fighs. Her anger was diminifhed, not wholly abated; but the fecretly rejoiced at his return, while the fhades of night alfo were approaching. She looked abafhed at her damfel, while He , with faltering accents, implored her forgivenefs.

- Speak but one mild word, and the rays of thy fparkling teeth will - difpel the gloom of my fears. My trembling lips, like thirfty Cbacóras, - long to drink the moonbeams of thy cheek. O my darling, wobo art natu-- rally fo tender-bearted, abandon thy caufelefs indignation. At this moment - the flame of defire conjumes ny beart: ob! grant me a draught of boney from - the lotos of thy mouth. Or, if thou beet inexorable, grant me death from " the arrows of thy keen eyes; make thy arms my chains; and punifh me - according to thy pleafure. Thou art my life; thou art my ornament; - thou art a pearl in the ocean of my mortal birth: oh! be favourable now, 6 and my heart flall eternally be grateful. Thine eyes, which nature for-
- med like blue water-lilies, are become, through thy refentment, like pe-- tals of the crimfon lotos: oh ! tinge with their effulgence thefe my dark - limbs, that they may glow like the fhafts of Love tipped with flowers. - Place on my head that foot like a frefh leaf, and flade me from the fun c of my paffion, whofe beams I am unable to bear. Spread a firing of gems - on thofe two foft glob:s; let the golden bells of thy zone tinkle, and pro-- claim the mild edied of love. Say, O damfel with delicate fpeech, fhall - I dye red with the juice of alactaca thofe beautiful feet, which will make - the full-blown land-lotos blufh with fhame? Abandon thy doubts of my - heart, now indeed fluttering through fear of thy difpleafure, but hereafter - to be fixed wholly on thee ; a heart, which has no room in it for another : - none elfe can enter it, but Love, the bodilefs God. Let him wing his - arrows; let him wound me mortally : decline not, O cruel, the pleafure - of feeing me expire. Thy face is bright as the moon, though its beams - drop the venom of maddening defire: let thy nectareous lip be the char-- mer, who alone has power to lull the ferpent, or fupply an antidote for his ${ }^{-6}$ poifon. Thy filence aflicts me: oh! fpeak with the voice of mufick, - and let thy fweet accents allay my ardour. Abandon thy wrath, but aban-- don not a lover, who furpaffes in beauty the fons of men, and who kneels before thee, O thou molt beautiful among women. Thy lips are a Bandbu-- jiva-flower; the luftre of the Madbuca beams on thy cheek; thine eye - outfhines the blue lotos; thy nofe is a bud of the Tila; the Cunda-blof-- fom yields to thy teeth : thus the flowery-fhafted God borrows from thee - the points of his darts, and fubdues the univerfe. Surely, thou defcen-- dedift from heaven, O flender damfel, attended by a company of youth-- ful goddeffes ; and all their beauties are collected in thee.'

He fpake; and, feeing her appeafed by his homage, flew to his bower B b
clad in a gay mantle. The night now veiled all vifible objects; and the damfel thus exhorted RA'DH A', wiile the devked her with beaming ornaments.
' Follow, gente Ra'dhica', follow the foe of Madhu: his difcourfe - was elegantly compofed of fweet phrafes; he profrated himflef at thy - feet; and he now hattens to his celightful couch by yon grove of bran-- ching Vanjulas. Bind round thy ankle rivgs beaming with gems; and - advance with mincing fteps, like the pearl-fed Marála. Drink with a ravifhed ears the foft accents of Heri; and featt on love, while the ${ }^{5}$. warbling Cocilas obey the mild ordinance of the flower-darting God. - Abandon delay: fee, the whole affembly of flender plants, pointing to. - the bower with fingers of young leaves agitated by the gale, make fignals c. for thy departure. Afk thofe two round hillocks, which receive pure - dew-drops from the garland playing on thy neck, and the buds on whafe - top fart aloft with the thought of thy darling; afk, and they will tell, B that thy foul is intent on the warfare of love: advance, fervid warriour,
" advance with alacrity, while the found of thy tinkling waift-bells fhall

- reprefent martial mufick. Lead with thee fome favoured maid; grafp
" her hand with thine, whofe fingers are long and fmooth as love's arrows : *- march; and, with the noife of thy bracelets, proclaim thy approach to a the youth, who will own himfelf thy flave: "i She will come; fhe will "f exult on beholding me; the will pour accents of delight; the will enfold "3. me with eager arms; fhe will mele with affection:" fuch are his thoughts " at this moment; and, thus thinking, he looks through the long avenue; - he trembles; he rejoices; he burns; he moves from place to place; he - faints, when he fees thee not coming, and falls in his gloomy bowera
" The night now dreffes, in habiliments fit for fecrecy, the many damfels,
" who haften to their places of affignation: fhe fets off with blacknefs their - beautiful eyes; fixes dark Tamála-leaves behind their ears; decks their - locks with the deep azure of water-lilies, and fprinkles munk on their - panting bofoms. The nocturnal fky, black as the touchftone, tries now - the gold of their affection, and is marked with rich lines from the flafhes " of their beauty, in which they furpafs the brightef Cuffimirians.' "

RA'dHA', thus incited, tripped through the foreft; but fhame overpowered her, when, by the light of innumerable gems, on the arms, the feet, and the neck of her beloved, fhe faw him at the door of his flowery manfion: then her damfel again addreffed her with ardent exultation.
"Enter, fweet Ra"dha', the bower of Heri: feek delight, O thou, - whofe bofom laughs with the foretafte of happinefs. Enter, fweet - Ra'dha', the bower graced with a bed of $A$ fóca-leaves: feek delight, O ' thou, whofe garland leaps with joy on thy breaft. Enter, fweet Ra'dha', ' the bower illumined with gay bloffoms: feek delight, O thou, whofe - limbs far excel them i.s foftnefs. Enter, O Ra'dia', the bower made - cool and fragrant by gales from the woods of Malaya: feek delight, O ' thou, whofe amorous lays are fofter than breezes. Enter, ORa'dha', ' the bower fpread with leaves of twining creepers: feek delight, O thou, " whofe arms have been long inflexible. Enter, O Ra'dha', the bower, - which refounds with the murmurs of honey-making bees: feek delight, - O thou, whofe embrace yields more exquifite fweetnefs. Enter, O - Rádha', the bower attuned by the melodious band of Cócilas: feek de-- light, O thou, whofe lips, which outhine the grains of the pomegranate, - are embellifhed, when thou fpeakeft, by the brightnefs of thy teeth. Long - has he bornc thee in his mind; and now, in an agony of defire, he pants
' to 'a te nectar from thy lip. Deign to refore thy flave, who will bend - before the lotos of thy foot, and prefs it to his irradiated bofom; a flave, - who ackzowlelges himfelf bought by thee for a fingle glance from thy: - eye, and a tofs of thy difdainful eyebrow..

She ended ; and Ra'dha' with timid joy, darting her eyes on Go'vinda, while the mufically founded the rings of her ankles and the bells of her zone, entered the myftick bower of her only beloved. There foe bebeld ber MA'dhava, wobo deligbted in ber alone; who fo long bad figbed for ber embrace; and whole countenance then gleamed with exceffeve rapture: his heart was agitated by her fight, as the waves of the deep are affected by the lunar orb. His azure breaft glittered with pearls of unblemithed luftre, like the full bed of the cerulean Yamuna interfperfed with curls of white foam. From his graceful wail flowed a pale yellow robe, which refembled the golden duft of the water-lily fcattered over its blue petals. His paffion was infla。 med by the glances of her eyes, which played like a pair of water-birds with azure plumage, that fport near a full-blown lotos on a pool in the feafon of dew. Bright ear-rings, like two funs, difplayed in full expanfron the flowers of his cheeks and lips, which glifened with the liquid radiarce of fmiles. His locks, interwoven with bloffoms, were like a cloud variegated with moon beams ; and on his forehead fhone a circle of odorous oil, extracted from the fandal of Malaya, like the moon juft appearing on the dulky horizon; while his whole body feemed in a flame from the blaze of unnumbered gems. Tears of tranfport gufhed in a fream from the full eyes of RADHA', and their watery glances beamed on her bef beloved. Even thame, which before had taken its abode in their dark pupils, was itfelf afhamed and departed, when the fawn-eyed Ra'dhal gazed on the brightened face of Crishna, while the paffed by the foft edge of his
couch, and the bivy of his attendant nymphs, pretending to frike the gnats from their cheeks in order to conceal their finiles, warily retired from his bower.

Go'vinda, feeing his beloved cheerful and ferene; her lips fparkling with fmiles, and her eye fpeaking defire, thus eagerly addreffed her; while the careleflly reclined on the leafy bed frown with foft bloffoms.

- Set the lotos of thy foot on this azure bofom; and let this couch be - victorious over all, who rebel againft love. Give fort rapture, fivect - Ra'dia', to Na'ra'yán thy adorer. I do thee homage; I prefs with my - blooming palms thy feet weary with fo long a walk. O that I were the - golden ring, that plays round thy ankle! Speak but one gentle word; - bid nectar drop from the bright moon of thy mouth. Since the pain of - abfence is removed, let me thus remove the thin veft, that envioully hides - thy charms. Bleft fhould I be, if thofe raifed globes were fixed on my - bofom, and the ardour of my paffion allayed. Oh! fuffer me to quaff - the liquid blifs of thofe lips; reftore with their water of life thy flave, - who has long been lifelefs, whom the fire of feparation has confumed. - Long have thefe ears been afflicted in thy ablence by the notes of the - Cóczla: relieve them with the found of thy tinkling wait-bells, which s yield mufick almoft equal to the melody of thy voice. Why are thofe - eyes half clofed? Are they afhamed of feeing a youth, to whom thy care. - lefs refentment gave anguifh? Oh! let affliction ceafe; and let extafy - drown the remembrance of forrow.

In the morning the rofe difarrayed, and her eyes betraced a night with out flumber; when the yellow-robed God, whe gazed' on her with tranf.
port, thus meditated on her charms in his heavenly mind: "Though her - locks be diffufed at random, though the luftre of her lips be faded, - though her garland and zone be fallen from their enchanting fations, and 6 though the hide their places with her hands, looking toward me with - bafhful filence, yet even thus difarranged, fhe fills me with extatick de-- light。' But Ra'dha', preparing to array herfelf, before the company of nymphs could fee her confufion, fpake thus with exultation to her obfequious lover.

- Place, O fon of Yadu, with fingers cooler than fandal-wood, place a a circlet of mufk on this breaft, which refembles a vafe of confecrated " water crowned with frefh leaves, and fixed near a vernal bower to propistiate the God of Love. Place, my darling, the glofly powder, which - would make the blackeft bee envious, on this eye, whofe glances are kee' ner than arrows darted by the hufband of Reti. Fix, O accomplifhed - youth, the two gems, which fcrm part of love's chain, in thefe ears, e whence the antelopes of thy eyes may run downwards and fport at pleac fure. Place now a frefh circle of mulk, black as the lunar fpots, on the " moon of my forehead; and mix gay flowers on my treffes with a peae cock's feathers, in graceful order, that they may wave like the banners of - Ca'ma. Now replace, O tender-hearted, the loofe ornaments of my e vefture ; and refix the goilden bells of my girdle on their deftined ftation, ' which refembles thofe hills, where the God with five Chafts, who deftroyed - Sambar, keeps his elephant ready for battle.'. While fhe fpake, the heart of YADAVA triumphed; and, obeying her fporeful behefts, he placed mulky fpots on her bofom and forehead, dyed her temples with radiant hues, embellifhed her eyes with additional blacknefs, decked her braided hair and her neck witb frefh garlands, and tied on her writs the loofened
bracelets, on her ankles the beamy rings, and round her waift the zone of bells, that founded with ravifhing melody.

Whatever is delightful in the modes of mufick, whatever is divine in meditations on Vishnu, whatever is exquifite in the fweet art of love, whatever is graceful in the fine ftrains of poetry, all that let the happy and wife learn from the fongs of Jayade'va, whofe foul is united with the foot of Náráyan. May that Heri be your fupport, who expanded himfelf into an infinity of bright forms, when, eager to gaze with myriads of eves on the daughter of the ocean, he difplayed his great character of the all-pervading deity, by the multiplied reflexions of his divine perfon in the numberlefs gems on the many heads of the king of ferpents, whom he chofe for his couch; that Heri, who, removing the lucid veil from the bofom of Pedmá, and fixing his eyes on the delicious buds, that grew on it, diverted her attention by declaring that, when the had chofen him as her bridegroom near the fea of milk, the difappointed hufband of Parvati drank in defpair the venom, which dyed his neck azure!

## THENEN

Note on Vol. II. page 391.

By the President.

A desire of tranflating the couplets of Vara'hamihira with minute exactnefs, and of avoiding the Sanfcrit word ayana in an Engligh phrafe, has occafioned a little inaccuracy, or at leaft ambiguity, in the verfion of two very important lines; which may eafily be corrected by twice reading ádyát in the fftb cafe for ádyam in the firft; fo that they may thus be tranflated ward for word: " Certainly the fouthern road of the fun was, or began, once "from the middle of Aléflà ; the northern, from the firft of Dbanifht'bà. "At prefent the fouthern road of the fun begins from the firlt of Carcata; s6 and the other from the firt of Mriga, or Macar."

## ON THE INDIANCYCLE

- F

$$
\begin{gathered}
\text { SIXTY YEARS, } \\
\text { By. } \quad S A M U E L \quad D A V I S, \quad E / q_{0}
\end{gathered}
$$

IN the Philofophical Tranfactions publifhed for ${ }_{1790}$, there is an account given of the Hindu cycle of fixty*, which being in many particulars deficient, and in fome erroneous, I hall endeavour to fhow the true nature and computation of that cycle, from the explanation which is given of it by the Hindus themfelves.

The following two fócas, extracted from the laft fection of the Súrya Siddbánta, enumerate the feveral diftinctions of time in aftronomical ufe among the Hindus:

[^7]Bráhmañ daivain tat"hà pitryan̉ prájápatyañ guróftat'hà, Saurar̊ che fávanañ chándram árcfhań mánáni vai nava: Chatuř̉̉hir vyavaháró'tra faurachándrárcfha fávanaih, Várhafpatyéna fhalh’tyabdan jnééyan nányaiftu nityaśah:
and the tranllation of them is as follows: "The Brábma, the Daiva, the "Pitrya, the Prájápatya, that of Gurru, the Saura, the Sávana, the Cháno "dra, the Nác/batra, are the nine diftinctions of time. Four of thofe "diftinctions are of practical ufe to mortals; namely, the Saura, the Cbáno "dra, the Nághatra, the Sâvana. That of Vriob Jpoti (Guru) is formed " into fixty years. The other diftinctions occur but fuldom in aftoinomicall " practice."

Brahma's-year is that, whereof the Calpa is one day. The Daiva year confifts of 360 revolutions of the fun through the ecliptick. The Pitrya day is from lunation to lunation. The Prajápati-mana is the manzantura. The cycle of Guru or Vribajpati, which is the fubject of this paper, will be explained further on. The Cbándra is lunar, and the Nác/batıa, fidereal time. The Saura and Sávan, are the fame folar-fidereal year differently divided; the fun's paffage through eacli degree of the ecliptick being acs. counted as a day of the firft, and the time contained between fun-rife and fun-rife as a day of the laft; confequently, there are 360 days, or divifions;
the Hindoos. This is a cycle or revolving period of fixty folar years, which has no further correfpondence with the aras above mentioned [of Bikramajit and Salaban] than that of their years refpectively commen. cing on the fame daj," \&sc.

Parlo. Transo Vol. LXXX, Partini
in the former year; whereas, the latter year is determined, according to the aftronomical rules of the ben authority, as containing $\begin{array}{cccccc}\text { D. } & \text { D. } & \text { P. } & \text { V.P. A.Ps } \\ 36 & 15 & 3^{1} & 31 & 24\end{array}$ of Hindu, or $36_{j} 61235^{\prime \prime} 33^{\prime \prime \prime} 33^{\prime \prime \prime \prime}$ of our, time.

The Sávan year may, as the IIindus obferve, be meafured by the following method, which is little more than a tranflation from the Sanforit.

Upon a large horizontal circle, note the point whereon the fun rifes, at any time near the equinox, or, when his motion in declination is the moff perceptible; and count the number of Sávan days, or of his fucceffive rifings, from that time; until, having vifited the two folftices, he fhall be returned near to the original mark : then, repeat the operation, until he rifes next after paffing over that original or firft-made mark, and compute the proportion which the face, whereby he fhall have fallen fhort of it, in the laft obfervation but one, bears to the whole fpace contained between the marks made of his two laft rifings, accounting that Space to contain 60 Dandas, cr one Sáran day: the refult will be the fraction of a day, and it will be the excefs of the year over 365 days, or number of times that the fun will have been found to rife above the horizon duing fuch an obfervation of his prog eefs th ough the ecliptick. This fraction the Súrya Siddbanta

> D. D. P. V.P. A.P. D. D. P. VP. A.Po ftates as $0.153^{1} 3^{1} 21$, and the Siddbanta Siromani as 015302230 ; but it is not probible, that either quantity was determined by fo fimple and mechanical a method alone, or without recourfe to a feries of obfervations made at diftant periods.

The Vrihafpati mana, of which the cycle of fixty years is compofed, is thus defcribed in the comment on the foregoing lócas:
Cc.

## 

Vrihafpetérmánan madhyamaráfíbhógénóEtañ.
"It is his (Vribafpati's) mean motion (madhyama) through one fign."*

To explain what is meant by the madhyama, in contradiftinction to the fighra, motion of Fupiter, and the other planets, and to fhow that, by compounding them in excentrick circles and epicycles, the Hindus compute the apparent places of the planets on the principles of the Ptolemaick aftonomy, is not the object of this puper: I fhall, therefore, only defire it may be underfood, that the madbyanz of Fupiter anfwers to his mean motion in his orbit, and the amount of it computed for any particular interval, to his mean heliocentrick longitude in the FIindu ecliptick. The rule then for computing his mána, or year, of which the cycle of fixty years is formed, is evident; and, it is thus given in the $55^{\text {th }}$ תóca of the finf fection of the Súrya Siddbánta.

Dwádafághná guró yáta bhagáná vertamánacaih Ráfibhih fahitáh fúddháh Malhtŷá fyurvijáyádayah
"Multiply by 12 'Jupiters' expired bhagunas, (revolutions) and (to the ${ }^{26}$ product) add the fign he is in; divide (the fum) by 60; the remainder or

[^8]" fraction, Jhows his current year counting from Tijaya as the firf of the " feries."

To apply this rule in finding the Vribafpati year for a given time, as for the commencement of the current year of the cali yug, or when 4892 years of that era were expired, correfpondent with the roth of laft April, we have the following data.* The revolutions, or mean motion of Fupiter, $3^{54220}$ in 4320000 folar years; and the term expired of the cali yug 4892 years, which, for the reafon given in Vol. II. page 244, may in this cafe be ufed to fave trouble, inftead of the period expired of the Calpa: then, as 4320000 to 364220, fo 4892 to $41251021^{\prime} 12^{\prime \prime}$, which hows Jupiter's madbyame or mean heliocentrick longitude to be $5^{10} 21^{\prime} 12^{\prime \prime}$ after 412 complete revolutions through his orbit. But, as in the inftarce of the moon's node, (Vol. II. page 275) a correction of bija is here to be applied to Fupiter's mean place at the rate of 8 revolutions in the mabá yug fubftractive. But 8 revolutions in 4320000 years are as $1^{\circ}$ to 1500 years; therefore, by a Morter procefs, the term expired of the cali yug, divided by 1500 , quotes the bija in: degrees; and $\frac{4802}{1500^{\circ}}=3^{\circ} 15^{\prime} 41_{\text {R. }} 48^{\prime \prime \prime}$ s. os the correction fubftractive, which reduces Fupiter's mean place to (412) $575^{\prime}: 3^{\prime \prime \prime}$ : then, $412 \times 12=4944$, to which add 6, Fupiter being in the 6th fign; the fum 4950 is the number of the Vribafpati years elapfed fince the beginning of the cali yug; which, divided by 60 for cycles, quotes 82 cycles expired, leaving a fraction of $\frac{3}{6} \frac{\circ}{9}$ to find his current year, which, counted as the rule directs from Vijaya as the firt, falls on Dundubini, which is the 5 Sth of the cycle; and, of this year, the fraction $7^{\circ} 5^{\circ} 30^{\prime \prime}$ reduced at the rate of $2^{\circ} 30^{\prime}$ to a month, fhows M. D. D. P.

225 6, 12 to have been expired on the ift of Vaifacth, or the 10 th of April,

[^9]for which time the computation is mad: ; and likewife, that the next year Rudhiródgari will commence in the enfuing folar month of Mágha.

A Nadiya almanack for the prefent year ftates, that, on the it of aft Vaifach, there were expired of the Vribafpati cycle 55 years, 2 months, $2: 3$ days, and 10 dandas; and, that the current year Dundubbit will continue until the 7 th day of the folar month of Magb: the difference of 1 day, and $5^{6}$ daridas, between this and the foregoing refalt, is too great to be accounted for by the difference of longitude between Nadiya and Ujjein, for the meridian of which later place computations by the Súrya Siddhanta aie made; but it is of no confequence to the intended purpofe of this paper.

There is another rule for computing the Vribajpaii year given in an afto logical book named Fyautifatva. us The faca years note down in two is places. Multiply (one of the numbers) by 22. Add (to the produrt) ${ }^{66}$ 4291. Divide (the fum) by $1875^{\circ}$. The quotient add to the fecond . 6 number noted down, and divide (the fun) by 60 . The remainder or of fraction will how the yearlaf expired, cou ting from Prabbavaas the ${ }^{66}$ firtt of the cycle. The fraftion, if any, left by the divifor $18 / 5$ may "s be reduced to months, days, \&c. expired of the current year."

The fäca years expired on the ift of laft Vaifách, correfponding with the expired years 48 j 2 of the cali yug , were 1713 : then, by the rule, $1713 \times 22+4291=22 \frac{727}{2855}$, and $2713+22=28 \frac{55}{658}$ which hows 2875 60
the laft expired year of Vribafpati to have been the $55^{\text {th }}$ of the cycle, named Durmait; and the fraction $\frac{72}{187} \frac{7}{5}$, when reduced, that 4 months, 19 days, and 35 dandas were expired of the current year Dundubbi when laft Vaijache began.

The numbers 22 and 1875 ufed in this computation are evidently derived from the planetary periods, as given by A'ryabhatta, which according to. Wara'hamihira are, of fupiter, 364224 mean revolutions in 4320000 folar years: but 364224 revolucions of Fupiter contain 4370688 of his. years, which exceed the correfpundent folar years 4320000 by 50688 , and thofe two numbers reduced to their loweft terms are 1875 and 22 ; or $r_{r}$ in 1875 folar years, there is an excefs of 22 Vribafpati years; and hence the ufe of thofe numbers is obvious. The additive number 4.892 , by the Hindre aftronomers termed c/eépa, adjufts the computation to the commencement of the era Saca, which began when the 317 , th year expired of the cali yug, and it hows that 2 years, 3 months, and 3 days were then expired of the current cycle of $\mathcal{F u p i t e r}$, or 3 m nths and 13 days of the year Sucla, which is the thirl of that cycle. A computation by the Súrya Siddbanta for the fame period,: with a correction of bija, as in the foregoing example, makes 2. months, 9 days, $5^{6}$ dandas, and 12 palas to have been elapfed of that year, and that confequently there were 57 years, 9 months, 20 days, 3 dandas, and 12 palas thin wanting to complete the cycle, instead of 40 years; as it is ftated in the Philofophival Tranfactions; and, by the fame rule, the year of Christ 1784, correfponded with the 48 th and 49 th of the cycle, or Ananda and Rás/hafa..

THis mode of computation difagrees with the date of a grant of land : mentioned in Vol. I. page $3^{6} 3$ of the Aniatick Refearches; for fáca 939 muft have ended in the 3 d month of the 53 d year of the Vribafpati cycle; but, as the grant in queftion appears to have been made in the vicinity of Bombay, the difference may be accounted for in a manner, that will equally explain the difagreement noticed by Mr. Marsden between his authorities and-the Banáres almanack. We learn from Vara'hamimira's com-
mentator, there were fome who erroneounly fuppofed the folar and Vribafpati years, to be of the fame length: a memorial fóca known to moft Pandits, furnihing a concife rule to find the $V$ ribafpati year, mentions aftronomers in countries fouth of the Nermadá to be in their reckoning of it ten years behind thofe fituated north of that river ; by the foregoing comparifon of the date in the Afiatick Refearches with a computation by the Sii ya Siddbánta, the difference is found to be 2 years; and the Banáres almanack for the prefent year mentions that fouth of the Nermadá the 45 th year of the cycle named V̈iródbacrit was accounted to begin in laft Mágh, in which month, it is further obferved, began at Banáres the prefent year Dundubbi, which is the 56th of the cycle. This difference then increafes, and from the fáca year 939 when it was 2 years, it had to laft Mágh become 1 I years. Now, in the interval of 773 folar years between thofe points of time, the Tribafpati reckoning muft have gained upen the folar reckoning about 9 years, which, added to the former difference of 2 years, is equal to the difference now actually noticed in the Banares almanack; and we may thence conclude, that the erroneous notion mentioned and refuted by Vara'hamihira's commentator, fill prevails to the fouth of the Nermada, from which part of India Mr. Marsden's information on the fubject feems to have been originally procured. But there is no reafon to fuppofe, that the Tribafpati year is any where confidered as " commencing on the fame day "s with the years of Vicrama'ditya and Sa'liva'han," nor is it poffibic, thai it flould; becaufe the latter, which is folar-fidereal, commences with the fun's entrance of Aries in the Hindu ecliptick, and the former, which is luni-folar, with the preceding new moon in the month of Cbaitra.

It may not be deemed fuperfluous here to add Vara'faminira's explanation of Fupiter's two cycles of 12 and 60 ; more efpecially as he cites
certain particulars with a reference to the pofition of the colures as defribed by Para'sara, and explained in the preceding volume of this work.

Text: "OfVribajpati's 12 years. The name of the year is determined s6 from the Nac/batra, in which Vriba/pati rifes and fets (heliacally) and "they follow in the order of the lunar months."

Commentary: "But if, as it may happen, he fhould fet in one and "r rife in another Nac/batra, which of the two, it may be afked, would st give name to his year? Suppofe him, for example, to fet in Róbini and " to rife in Mrigafiras:-I anfwer, that in fuch a cafe, the name muft be " made to agree with the order of the months; cr, it muft be that name, "s which in the regular feries follows the name of the year expired. Ac" cording to Sasiputra and others, the Naçatra in which fupiter rifes " gives the name to his year. Casyapa fays, the names of the Samvatfara, " $\begin{array}{r}\text { ugat, and the years of the cycle of } \int x x t y \text {, are determined from the Nac- }\end{array}$ "Jhatra in which he rifes; and Garga gives the fame account. Some " fay, that Cartic, the firft year of the cycle of 12, begins on the firt day " of the month of Cbaitr, whatever may be the Nac/hatra which Fupiter " is then in; and that Prabhava likewife, the firft year of the cycle of "d fixty, begins in the fame manner; and fome fay that Jupiter's years " are coincident with the folar years; but that cannot be true, becaufe the "folar year exceeds in duration the Vribafpati year," \&c.

Text: "The years beginning with Cartic commence with the Nac/ba"Ira Criticà, and to each year there appertain two Nac/batras, except the " 5 th, 11th, and 12 th years, to each of which appertain three Nacßatras."

It may be remarked, that, in the foregoing arrangements of the Vrikafpati years, Cártic is always placed the firft in the cycle of twelve; and, fince it is a main principle of the Hindu aftronomy to commence the plinetary motions, which are the meafures of time, from the fame point of the ecliptick, it may thence be inferred, that there was a time, when the Hindu folar year, as well as the Vribafpati cycle of twelve, began with the fun's arrival in, or near, the Nacfratro Criticà. That this year has had different beginnings is evinced by the practife of the Cbinefe and Siamefe, who had their aftronomy from India, and who fill begin their years, probably by the rule they originally received, either from the fun's departure from the winter follnice, or from the preceding new moon, which has the famerefe-
rence to the winter folftice, that the Hindu year of Vicramáditya has to the vernal equinox. The commentatoron the Surya Siddbánta exprefsly fays, that the authors of the books generally termed Sanbitás accounted the Déva day to begin in the beginning of the fun's northern road: now, the Déva day is the folar year ; and the fun's northern road begins in the winter folftice; and hence it fhould feem, that fome of thofe authors began the folar year exactly as the Cbinefe do at this time. This might moreover have been the cuntom in Para'sara's time; for the phenomenon, which is faid to mark the beginning of the Vribafpati cycle of fixty, refers to the beginning :of Dbanifht'bà, which is precifely that point of the erliptick, through which the folftice paffed when he wrote.

There are, benide thefe apparent changes made by the Hindus in their mode of commencing the year, abundant inftances of alterations and corrections in their aftronomy, an inquiry into which might, by fixing certain chronological data, throw confiderable light on their hiftory; and it is fcarcely neceffary to obferve, with how much more advantage an inveftigation of this kind would be made with the affiftance of fuch aftronomical books, written in the Déva Nagari character, as might eafily be had from Haidarábád and Púna, if the Englifh Refidents there would intereft themfelves to procure them. Copies of the aftronomical rules, followed at Bombay and in Gujarat, might alfo prove of ufe, if Niebuhr * was not mifinformed, who fays the natives there begin the year with the month of Cártic, which has an evident reference to the auturnnal epuinox, and may perhaps be computed by the 'Arfha Siddbánta mentioned in Vol. I. p. 261, as accounting the day to begin at funfet; for funfet with the Dévas is the

[^12]fun's departure from the autumnal equinox, and it is invariably obferved in their aftronomy to account the different meafures of time as having begure originally from the fame inftant.

But of all the places in India, to which Europeans might have accers, Ujjein is probably the beft furnifhed with mathematical and aftronomical productions; for it was formerly a principal feminary of thofe fciences; and is fill referred to as the firf meridian: almoft any trouble and expenfe: would be compenfated by the poffeffion alone of the three copious treatifes* on Algebra, from which Bha'scara declares he extracted his Bija Ganita, and which in this part of India are fuppofed to be entirely loft. But the principal object of the propofed inquiry would be, to trace as much as pofs. fible of that gradual progrefs, whereby the Hindu aftronomy has arrived at its prefent ftate of comparative perfection, whence might be formed more probable conjectures of its origin and antiquity, than have yet appeared : for, I imagine, there are few of M. BAILly's opinion that the cali yug, or any. yug, had its origin, any more than our Juilian period, in an actual obfer vation, who have confidered the nature and ufe of thofe cycles, of the relative bbaganas, or revolutions, of the planets, and the alterations*, which the latter have at different times undergone; concerning which feveral particulars M. Bailey, it muft be acknowledged, had but‘little informacion + . What was the real pofition of the planets and the ftate of aftronomy

[^13]when the cali yug began, or 4892 years ago, will probably never be known; but the latter muft certainly have undergone confiderable improvement, fince the laft quoted fóca of Vara'mamihira was received as a rule; for it fuppofes the mean motion of Fupiter to be to that of the fun, as 60 to fome integer; apparently to 720 ; as 5 to 60 , or as 1 to 12 ; without which, the beginning and fucceffive returns of the cycle of fexty could never be denoted by the heliacal rifing of Fupiter in Dhanifte'bà, or in any conftant point of the zodiack; and, at a time when the mean motion of Fupiter was fo much miftaken, it may reafonably be fuppofed, that the more difficult parts of aftronomy were very imperfestly underftood. If the ratio were as 1 to 12 , which is implied by the yuga of twelve, (for the term juga means conjunction, or coincidence,) then, a conjunction of the fu: and Fupiter would happen at the end of every period of 12 years in the fame point of the zodiack, and the cycle of fixty might begin in the manner defcribed: but this muft long fince have ceafed to be the rule, or at leaff fince the time of $A^{\prime}$ ryabhatta; for, if the cycle be fuppofed to begin with the fun and $\mathcal{F u p i t e r}$ in Dhanifht'bà, then, in fixty of Fupiter's years that planet will again be in Dhanifte'bà; but, in fixty of fuch years there are, by the data afcribed to Áryabhatta, on!y 59 years, 3 months, and fome days of folar time ; the next cycle, therefore, could not have the fame beginning, becaufe the fun would be found more than 90 degrees diftant from Fupiter's mean place, and in 60 years more that diftance would be doubled. As this difagreement with the rule could not have been unknown to Vara'hamihira, who gives the bbaganas from A'ryabhatta as 364224 in 4320000 folar years, he may be fuppofed to have only cited
fixed by retrofpective computation; which might ftill have happened although aftronomy bad originated, which is not at all improbable, in much higher antiquity.
what he had learned from other treatifes merely as an aftrological maxim, his Sanhità being a treatife on afrology not on practical aftronomy; and this' conjecture will appear the mare reafonable, when it is confidered, that notions wholly inconfiftent with the latter, and which muft have originated in remote ages, when fcience of any kind had made but fmall progrefs, are ftill preferved in different Sáftras; as in the Bhágavat, which, treating on the fyftem of the univerfe, places the moon above the fun, and the planets above the fixed fars.

To render this paper more intelligible, I have fubjoined a diagram of the Hindu ecliptick, which may alfo ferve willuftrate fome aftronomical papers: in the preceding volume. Its origin is confidered as diftant 180 degrees in longitude from Spica; a ftar, which feems to have been of great ufe in regulating their aftronomy, and to which the Hindu tables of the beft authoxity, although they differ in other particulars, agree in affigning fix figns of longitude counted from the beginning of Afwiní their firf Nac/batra. From the beginning of Afwini, (according to the Hindu preceffion, now $19^{\circ} 22^{\circ}$

[^14]$$
\mathrm{E}
$$
but which is in reality fomething further difant from the vernal equinox) the ecliptick is divided into twenty-feven equal parts, or Nac/hatrar, of $13^{\circ} 20^{\prime}$ each; the twenty-eighth, named $A$ Bbijijit, being forme 1 out of the $^{\prime}$ laft quarter of Uttarafaira, and as much of Sravanà as is neceffary to complete the moon's periodical month. The years of Jupiter's cycle are expreffed in their order with numerals: $a$ is the former pofition of the co lures as explained in Vol. II, and $b, c$, mark the limits of the preceffon refulting from the Hindu method of computing it. The outer dotted circle is the European ecliptick, in which is noted the beginning of the Hindu, and likewife of the European, year: for want of room the figns are diflinguifhed in both with the ufual characers. The two flars, pointed out by the moft fkilful Pandit I have yget met with, as diftinguifhing Afwimi, are B and $\gamma$ Arieztis, which diftinguif allo al /baratán, the firft Arabian menzil, and the latter is faid to be the yóga, whofe longitude and latitude are fated certainly with great incorrectnefs, as $8^{\circ}$, and noo north,s but the error, if it be not owing to tranfcribers, is inexplicable.

The folar months, it may be obferved, correfpond in name with the like number of Nac/Batras: this is afcribed to the months having been originally lunar, and their names derived from the Nachatras, in which the moon, departing from a particular point, was obferved to be at the full; for, although the full moon did not always happen in thofe particular NacSatras, yet the deviation never exceeded the preceding or the fucceeding Nachatra; and whether it fell in Hofa, Cbitra, or Swátit, fill that month was named Cbaitra; and fo of the ref. This is the explanation of the month given by Nrisinha, who in the fame manner explains foupiter's cycle of twelve years, the names of which could not always correfpond with thofe of the Nochatras, in which he rofe heliacally.

Of the Hindu method of intercalating the lunar month M. Bailly conceived a right idea from what P. du Champ had faid on the fubject; but he has omitted to mention a curious circumftance confequent to it, which is, that fometimes there happen two intercalary months in the fame ycar; or, to be more precife, two lunar months are named twice over: thus, as was actually the cafe in 1603 Sáca, there may be two lunar Afwinas and two Chaitras; but then fome one intervening month, as Agrahayan, would be omitted, becaufe the change of the moon would not happen at all during the folar month of that name. During the prefent pofition of the fun's apfis, this cb'che (cfhaya?) or difcarded month is limited to Agrabáyan, Paufb or Mágh, thofe being the three fhorteft folar months; and, by the Hindu: computation, the difcarded month will again fall on Agrabáyan in 1744 Sáca。 Bhágalpur a Dec. 179 I.

## An Account of the Method of catching wild ELEPHANTS at Tipura.

$$
\text { By } \mathcal{F} O H N C O R S E, E / \mathbb{H}_{0}
$$

IN the month of November, when the weather has become cool, and the fwamps and marfhes, formed by the rains in the five preceding months, are leffened, and fome of them dried up, a number of people are employed to go in queft of elephants.

At this feafon the males come from the receffes of the foreft into the borders and outkirts thereof, whence they make nocturnal excurfions into the plains in fearch of food, and where they often deftroy the labors of the hufbandman, by devouring and trampling down the rice, fugar canes, \&c. that they meet with a herd or drove of elephants, from what I can learn, has never been feen to leave the woods: fome of the largeft males often ftray to a confiderable diftance, but the young ones always remain in the foreft under the protection of the Palmai, or leader of the herd, and of the larger elephants. The Goondabs, or large males, come out fingly or in fmall parties, fometimes in the morning, but commonly in the evening, and they continue to feed all night upon the long grafs, that grows amid? the fwamps and marfhes, and of which they are extremely fond. As often however as they have an opportunity, they commit depredations on the rice ficlds, fugar cancs and plantain trees, that are near, which oblige the farmers to keep regular watch, under a fmall cover, eretted on the tops of a few long bamboos, about 14 feet from the ground : and this precaution is
neceffary to protect them from the tigens, with which this province abounds. From this lofty ftation the alarm is foon communicated from one watchmn to another and to the neighbouring villages, by mans of a rattle with which each is provided. With their fhouts and cries, and the noife of the rattles, the elephants are generally fcared and retire. It fometimes however happens, that the males advance even to the villages, overturn the houfes, and kill thofe who unfortunately come in their way, unlefs they have had. time to light a number of fires: this element feems to be the moft dreaded by wild elephants, and a few lighted wifps of frraw or dried grafs feldom fail to ftop their progrefs. To fecure one of the males a very different me, thod is employed from that which is taken to fecure a herd: the former is taken by Koomkees, or female elephants trained for the purpofe, whereas the latter is driven into a frong enclofure called a Keddab.

As the hunters know the places where the elephants come out to feed; they advance towards them in the evening with four Koomkees, which is the number of which each hunting party confifts : when the nights are dark, and thefe are the mof favorable for their purpofe, the male elephants aredifcovered by the noife they make in cleaning their food, by whifking and friking it againft their fore-legs, and by moon light they can feeithem diftinctly at fome diftance.

As foon as they have determined on the Goondab they mean to fecure, three of the Koomkees are conducted filently and flowly by their Mabotes (drivers) at a moderate diftance from each other, near to the place where he is fecding; the Koomkees advance very cautioully, feeding as they go along, and appear like wild elephants that had ftrayed from the jungle. When the male perceives them approaching, if be takes the alarm and is vicioufly
inclined, he beats the ground with his trunk and makes a noife, fhowing evident marks of his difpleafure, and that he will not allow them to approach nearer ; and if they perfift, he will immediately attack and gore them with his tufks: for which reafon they take care to retreat in good time. But fhould he be amoroufly difpofed, which is generally the cafe, (as thefe males are fuppofed to be driven from the herd at a particular period by their feniors, to prevent their having connection with the females of that herd) he allows the females to approach, and fometimes even advances to meet them.
"Wrien from thefe appearances, the Mabotes judge that he will become their prize, they conduct two of the females, one on each fide clofe to him, and make them advance backwards, and prefs gently with their pofteriors againft his neck and fhoulders: the 3 demale then comes up and places herfelf directly acrofs his tail; in this fituation fo far from fufpecting any defign againft his liberty, he begins to toy with the females and carefs them with his trunk. While thus engaged, the fourth female is brought mear, with ropes and proper affiftants, who immediately get under the belly of the $3^{d}$ female, and put a night cord (the Cbilkah) round his hind legs: mould he move, it is eaflly broken, in which cafe, if he takes no notice of this flight confinement, nor appears fufpicious of what was going forward, the hunteas then proceed to tie his legs with a ftrong cord (called Bunda) which is paffed alternately, by means of a forked frick and a kind of hook ${ }_{b}$ from one leg to the other forming the figure of 8 , and as thefe ropes are fhort, for the convenience of $b$ ing more readily put around his legs, 6 or 8 are generally employed, and they are mate faft by another cord (the Daga bearce) which is paffed a few turns perpendicularly between his legs, where rhe folds of the Bundabs.interfect cach other, A ft:ong cable (the Phand)
with a running noofe, 60 cubits long, is next put round each hind leg immediately above the Bundahs, and again above them, 6 or 8 additional Bundabs, according to the fize of the elephant;, are made faft, in the famte manner as the others were: the putting on thefe ropes generally takes up about 20 minutes, during which the utmoft filence is obferved, and the Mabotes, who keep flat upon the necks of the females, are covered with dark coloured cloths, which ferve to keep them warm, and at the fane time do not attract the notice of the elephant. While the people are bufly employed in tying the legs of the Goondah, he carcffes fome times one, and fome times another, of the feducers, (Kootnee) examining their beauties and toying with different parts, by which his defires are excited and his attention diverted from the hunters, and in thefe amorous dalliances he is indulged by the females. But if his paffions fhould be fo roufed, before his legs are properly fecured, as to induce him to attempt leaping on one of the females, the Mabote, to enfure his own fafety and prevent him gratifying his defires any further, makes the fentale run away, and at the fame time, by raifing his voice and making a noife, he deters the Goondab from purfuing. This however happens very feldom; for he is fo fecured by the preffure of a Koomkee on each fide and one behind, that he can hardly turn himfelf, or fee any of the people, who always keep fnug under the belly of the third female, that fiands acrofs his tail, and which ferves both to keep him fteady and to prevent his kicking any of the people, who are employed in fecuring him; but in general he is fo much taken up with his decoyers, as to attend very little to any thing elfe. In cale of accidents, however, flould the Goondah break loofe, the people upon the firft alarm can always mount on the backs of the tame elephants, by a rope that hangs ready for the purpofe, and thus get out of his reach. When his hind legs are properly fecured, they leave him to himfelf, and retire to a fmall diftance: as foon
as the Koomkees leave him, he attempts to follow, but finding his legs tied, he is roufed to a proper fenfe of his fituation, and retreats towards the jungle: the Mabotes follow at a moderate diftance from him on the tame elephants, accompanied by a number of people that had been previoufly fent for, and who, as foon as the Goondab paffes near a ftout tree, make a few turns of the Pbands, or long cables that are trailing behind him, around its trunk; his progrefs being thus ftopped, he becomes furious and exerts his utmoft force to difengage himfelf, nor will he then allow any of the Koomkees to come near him, but is outrageous for fome time, falling down and goring the earth with his tufks. If by thefe exertions the Phands are once broken, which fometimes is effected, and he efcapes into the thick jungle, the Mabotes dare not advance for fear of the other wild elephants. and are therefore obliged to leave him to his fate; and in this hampered fituaa tion, it is faid, he is even ungeneroufly attacked by the other wild ele. phants. As the cables are very frong and feldom give away, when he has exhauited himfelf by his exertions, the Koomkees are again brought near and take their former pofitions, viz. one on each fide and the other behin.d. After getting him nearer the tree, the people carry the ends of the lang cables around his legs, then back and about the trunk of the tree, making, if they can, two or three turns, fo as to prevent even the poffibility of $h$ is efcape. It would be almof impoffible to fecure an elephant in any other manner, as he would tear up any ftake, that could at the time be driven int o the ground, and even the noife of doing it would frighten the elephant : for thefe reafons as far as I can learn, nothing lefs than a ftrong tree is eve $r$ trufted to by the hunters. For fill farther fecurity, as well as to confine e him from moving to either fide; his fore-legs are tied exactly in the fam e manner as the hind-legs were, and the Phands are made faft one on eacl 1 fide, to trees or ftakes driven deep into the earth. During the procefs of
tying both the hind and fore-legs the fourth Koomkee gives affitance where meceffary, and the people employed cautioully avoid going within rach of bis trunk; and when he attempts to feize them they retreat to the oppofite fide of the Koomkees, and get on them, if neceffary, by means of the rope abovementioned, which hangs ready for them to lay hold of. Although by thefe means, he is perfectly fecured and cannot efcape, yet as it would be both unfafe and inconvenient to allow him to remain in the verge of the jungle, a number of additional ropes are afterwards put on, as fhall be mentioned, for the purpofe of conducting him to a proper ftation. When the Goondah has become more fetcled, and eat a little food with which he is supplied as foon as he is taken, the Koomkees are again brought near, and a ftrong rope (Phara) is then put twice round his body clofe to his fore-legs Hike a girth, and tied behind his fhoulder; then the long end is carried back clofe to his rump and there faftened, after a couple of turns more have been made round his body. Another cord is next fafiened to the Pbara and from thence carried under his tail like a crupper (dooblab) and brought forward and faftened by a turn os two, to each of the Pbaras or girths, by which the whole is connected, and each turn of thefe cords ferves to keep the reft in their places. After this a frong rope (the Tooman) is put round his buttocks and made faft on each fide to the girth and crupper, fo as to confine the motion of his thighs and prevent his taking a full ftep. Thefe fmaller ropes being properly adjufted, a couple of large cables (the Dools) with running noofes are put around his neck, and after being drawn moderately tight, the noofes are fecured from running clofer, and then tied to the ropes on each fide forming the girth and crupper already mentioned; and thus all thefe ropes are connected and kept in their proper places, without any rifk of the noofes of the Dools becoming tight, fo as to endanger the life of the elephant in his exertions to free himfelf. 'The ends of thefe cables are
made faft to two Koomkees, one on each fide of the Goondah, by a couple of turns round the belly, clofe to the fhoulder, like a girth, where a turn is made, and it is then carri d acrofs the cheft and faftened to the girth on the oppofi.e fide. Every thing being now ready, and a paffage cleared from the jungle, all the ropes are taken from his legs and only the Tooman remains round his buttocks to confine the motion of his hind legs: the Koomkees pull him furward by the Dools, and the people from behind urge him on. Inftead of advancing in the direction they wifh, he attempts to retreat farther into the jungle, he exerts all his force, falls down, and tears the earth with his tuiks, fcieaming and groaning, and by his violent exertions often hurts and bruines himfelf wery much, and inftances happen of their furviving thefe violent exertions only a few hours or at moft a fewdys. In general however, they foon become reconciled to the fate, will eat immediately after they are taken, and, if neceffary, may be conlucted from the verge of the jungle as foon as a paffage is cleared. When the elephant is brought to his proper ftation and made faf, he is treated with'a mixiture of feverity and gentlenefs, and in a few months (if docle) he b-cones it Etable and appears perfect'y reconciled to his fate. It aspars fomewh it extraordinary, that though the Goondah ufes his utmatt force to difengage himfelf when taken, and would kill any perfon coming within his reach, yet he never or at leaft folcom attempts to hurt the females that have enfnared him, but on the contrary feems pleafed (as cften as they are brought near, in order to adjuft his harneffing, or move and flacken thofe ropes which gall him) foothed and comforted by them, as it were, for the lofs of his liberty. All the elephants, foon after they are taken, are led out occafinally for exercife by the Koome kees, which attend fur that purpofe.

Having now related, partly from my own knowledge and partly from Ffer
comparing the accounts given by different people employed in this bufinefs, the manner in which the male elephants, called Geondabs; are fecured, I Thall next entirely from my own knowledge defcribe the methods I have feen employed for fecuring a herd of wild elephants: Female elephants are never taken fingly, but always in the herd, which confifts of young and old of both fexes. This noble, docile, and ufeful animal; feems naturally of a focial difpolition, as a herd in general conffifs of from about 40 to 100 , and is conducted under the direction of one of the oldeft and largef females called the Palmai, and one of the largeft males. When a herd is difcovered, about 500 people are employed to furround it, who divide themfelves into fmall parties, called Chokeys, confilting generally of one Mabote and two Coolies, at the diftance of twenty or thirty yards from each other, and form an irregular circle in which the elephants are enclofed: each party lights a fre and clears a footpath to the flation that is next him, by which a regular communication is foon formed through the whole circumference from one to the other. By this path reinforcements can immediately be brought to any place where an alarm is given; and it is alfo neceffary for the fuperintendants, who are always going round, to fee that the people are alert upon their ports. The firft circle (the Dawkee) being thus formed, the remaining part of the day and night is fpent in keeping watch by turns, or in cooking for themfelves and companions. Early next morning, one man is detached from each ftation to form another circle in that direction, where they wifh the elephants to advance. When it is finifhed, the people, flationed nearef to the new circle, put out their fires and file off to the right and left to form the advanced party, thus leaving an opening for the herd to advance through, and by this movement both the old and new circles are joined and form an oblong. The people from behind now begin Chouting and making a noife with their rattles, tomtoms, \&c. to caufe
the elephants to advance; and as foon as they are got within the new circle ${ }_{2}$ the people clofe up, take their proper fations, and pafs the remaining part of the day and night as before. In the morning the lame procefs is repeated, and in this manner the herd advances flowly in that direction, where they find themfelves leaft incommoded by the noife and clamour of the hunters, feeding, as they go along, upon branches of trees, leaves of bamboos, \&c. which come in their way. If they fufpected any fnare, they coulit eafily break through the circle; but this inoffenfive animal, going merely in queft of food, and not feeing any of the people who furround him, and who are concealed by the thick jungle, advances without fufpicion, and appears only to avoid being peftered by their noife and din. As fire is the thing elephants feem molt afraid of in their wild ftate, and will feldom venture near it, the hunters always have a number of fires lighted and particularly at night, to prevent the elephants coming too near, as well as to cook their victuals and kıep them warm. The fentincls fupply thefe fires with fuel, efpecially green bamboos, whick are generally at hand, and which, by the crackling and loud report they make, together with the noife of the watchmen, deter the elephants from coming near ; fo that the herd generally remains at'a diftance near the centre of the circle. Should they at any time advance, the alarm is given, and all the people immediately make a noife and ufe their rattles, to make them keep at a greater diftance. In this manner they are gradually brought to the Keddah, or place where they are to be fecured. As the natives are extremely flow in their operations, they feldom. bring the herd above one circle in a day, except on an emergency, when they exert themfelves and advance two circles. They have no tents or covering but the thick woods, which during the day keep off the rays of the fon; and at night they fleep by the fires they have lighted, upon mats fpread. on the ground, wrapt up in a piece of coarfe cloth. The feafon is then fo
mild that the people continue very healthy, and an accident feldom happens except to frragglers about the outfkirts of the wood, who are fometimes though very rarely carried off by tigers. The Keddah, or place where the her is to be fecured, is differently conftrucied in different places: here it confifts of three enclofures communicating with each other by means of narrow openings or gateways. The outer enclofure or the one next to the place, where the elephants are to enter, is the largeft; the middle ore is ge. nerally, though not always, the next in fize, and the third or furthermoft is the fmalleft : thefe proportions however are not always adhered to in the making of a Keddab, nor indeed does there appear to me any reafin for making three enclofures; but as my intentions are merely to relizte facts, I fhall proceed to obferve, that, when in the third or laf enciofure, the eleq hants are then only deemed fecure : here they are kept fix or eight days, and are regularly though fcantily fed from a fcaffold on the outfide, clofe to the entrance of an outlet called the Romee, which is ahout fixty feet long and very narrow, and through which the el phants are to be taken out one by one. In many places this mode is not adopted; for as foon as the herd has been furrounded by a ftrong palifade, Koornkees are fent in with proper peopie, who tie them on the fpot, in the fame manner as was menticned above of the Goondabs or male elephants that are taken fingly. Thefe enclofures are all pretty frong, but the third is the ftrongeft, nor are the elephants deemed fecure, as already obferved, till they have entered it. This enclofure has, like the other two, a pretty deep ditch on the infide; and upon the bank of earth, hat is thrown up from the excavation, a row of ftrong palifades of middle fized trees is planted, frengthened with crofs bars, which are tied to them about the diffance of fourteen inches from each other; and thefe are fupported on the outide by frong pofs like buttreffes, having one end funk in the earth and the other preffing againf the crofs bars to which they are faftened. Whens
the herd is brought near to the fint enclofure or Baigcote, which has two gateways towards the jungle, from which the elephants are to advance, (thefe as well as the other gateways are difguifed with branches of trees and bamboos ftuck in the ground, fo as to give them the appearance of a natural jungle) the greateft difficulty is to get the herd to enter the firft or outer enclofure ; for notwithfanding the precautions taken to difguife both the entries as well as the palifade which furrounds this enclofure, the Palmai or leader now appears to fufpect fome fnare, from the difficulty and hefitation with which in general the paffes into it; but, as foon as fhe enters, the whole herd implicitly follows. Immediately, when they are all paffed the gatew $y$, fires are lighted round the greateft part of the enclofure, and parm ticularly at the entries, to prevent the elephants from returning. The hunters from without then make a terrible noife by fhouting, beating of tom toms (a kind of drum), firing blunt cartridges, \&c. to urge the herd on to the next enclofure. The elephants finding themfelves enfnared, fcream and make a noife; but, feing no opening except the entrance to the next enclofure, and which they at firft generally avoid, they return to the place through which they lately paffed, thinking perhaps to efcape, but now find it ftrongly barricaded, and, as there is no ditch at this place, the hunters, to prevent their coming near and forcing their way, keep a line of fire confantly burning all along where the ditch is interrupted, and fupply it with fuel from the top of the palifade, and the people from without make a noife, fhouting and ballooing to drive them away. Whenever they turn they find themfelves oppofed by burning fires or bundles of reês, and dried grafs, which are thruft through the opening of the palifades, except towards the entrance of the fucond enclofure or Dobbraze-cote. After traverfing the Baigcore for fometime, and finding no chance of effaping but through the gateway into the next enclofure, the leader enters and the reft follow: the gate
is inftantly fhut by people, who are ftationed on a fmall fcaffold immediately above it, and ftrongly barricaded, fires are lighted and the fame difcordant din made and continued, till the herd has paffed through another gateway into the laft enclofure of Rajecote, the gate of which is fecured in the fame manner as the former was. The elephants, now being complet $f$ ly furround ed on all fides, and perceiving no outlet through which they can efcape, appear defperate, and in their fury advance frequently to the ditch in order to break down the palifade, inflating their trunks, fcreaming louder and fritiller than any trumpet, fometimes grumbling like the hollowmurmur of difpant thunder, but, wherever they make an attack, they are oppofed by lighted fires, and by the noife and triumphant houts of the hunters. As they muft remain fometime in this enclofure, care is always tak $n$ to have part of the ditch filled with water, which is fupplied by a fmall fream, either natural or conducted through an artificial channel from fome meghbouring refervoir. The elephants have recourfe to this water to quench their thirft and cool themfelves after their fatigues, by fucking the water into their trunks, and then fquirting it over every part of their bodies. While they remain in this enclofure, they continue fulky and feem to meditate their efcape, but the hanters build huts and form an encampment, as it were, around them clofe to the palifade; watchmen are placed, and every precaution ufed co prevent their breaking through. This they would foon effect, if left to themfelves, notwithftanding the palifade is made of very ftrong ftakes funk into the earth on the outfide of the ditch, and atrengthened by crofs bars and buttreffes, as already mentioned.

When the herd has continued a few days in the Kedaab, the door of the Romee is opened, into which fome one of the elephants is enticed to enter, by having food thrown firf before, and then gradually further on into
the paffage, till the elephant has advanced far enough to admit of the gates being thut. Above this wicker gate or door, two men are flationed on a fmall fcaffold, who throw down the food. When the elephant has paffed beyond the door, they give the fignal to a man, who from without thuts it by pulling a ftring, and they fecure it by throwing two bars that ftood perpendicular on each fide, the one acrofs the other, thus $\times$, forming the figure of St. Andrew's Crofs, and then two fimilar bars are thrown acrofs each other behind the door next to the Keddah, fo that the door is in the centre : for farther fecurity, horizontal bars are pufhed acrofs the Roomee through the openings of the palifades, both before and behind thofe croffes, to prevent the poffibility of the doors being broken. The Roomee is fo narrow, that a large elephant cannot turn in it ; but as foon as he hears the noife that is made in fhutting the gate, he retreats backwards, and eadeavours to force it; being now fecured however in the manner already noticed, his efforts are unavailing: finding his retreat thus cut off, he advances and exerts his utmoft force to break down the bars, which were previoully put acrofs a little farther on in the outlet, by running againft them, fcreaming and roaring, and battering them, like a ram, by repeated blows of his head, retreating and advancing with the utmoft fury. In his rage he rifes and leaps upon the bars with his forefeet, and frives to break them with his huge weight: In February 1788 a large female elephant dropt down dead in the Roomee from the violent exertion the made. When the elephant is fomewhat fatigued by thefe exertions, frong ropes * with running noofes are placed in the outlet by the hunters; and as foon as he puts a foot within the noofe, it is immediately drawn tight and faftened to the palifades. When all his feet have been made pretty faft, two men place themfelves behind fome bars?

[^15]that are run acrofs the Roomee to prevent his kicking them, and with great caution tie his hind-legs together, by paffing a cord alt rnately from the one to the other like the figure 8, and then faftening there turns as above defcribed. After this, the Pharah, Dools, \&c. are put on in fucceffion in the fame manner as on the Goondab, only that here the people are in greater fecurity. While thefe ropes are making faft, the other hunters are careful not to go too near, but keep on the outfide of the palifide, an 3 divert his attention, as much as they can, from thofe employed in fafteni g them, by fupplying him with grafs and fometimes with plantain leaves and fugar canes, of which he is remarkably fond, by prefenting a fick, giving him hopes of catching it, or by gently ftriking or tickling his probofcis. He frequently however feizes the ropes with his trunk, and endeavours to break them, particularly thofe with which his feet are tied, and fometimes tries to bite them through with his grinders (as he has no incifors or front teeth) but the hunters then goad him with fharpened bamboos or light fpears, fo as to make him quit his hold. Thofe, who are employed in putting the ropes around his body and over his head, ftand above him on a fmall kind of platform, confiting of a few bars run acrofs through the openings of the palifades, and, as an elephant cannot fee any thing that is above and rather behind his head, they are very little incommoded by him, although he appears to fmell them and endeavours to catch them with his trunk. When the whole apparatus is properly fecured, the ends of the two cables (Dools) which were faftened round his neck, are brought forward to the end of the Roomee, where two female elephants are waiting; and to them thefe cables are made fant. When every thing is ready, the door at the end of the outlet is opened, the crofs bars are removed, and the paffage left clear. The ropes, that tied his legs to the palifades, are loofened, and, if he does not advance readily, they. goad him with long poles fharpened at the ends or pointed with iron, and.
urge him on with their noife and din, and at the fame time the females pull him gently forward: as foon as he has cleared the Roomee, his conductors feparate, fo that, if he attempts to go to one fide, he is prevented by the elephant, that pulls in the oppofite direction, and vice verfa. The Bundabs which tie his hind-legs, though but loofely, yet prevent his going faft ; and thus fituated, he is conducted like an enraged bull, that has a cord faftened to his horns on each fide, fo that he cannot turn either to the right or left, to avenge himfelf. In like manner is this noble anim 1 led to the next tree, as the Goondahs before mentioned were. Sometimes he becomes obftinate and will not advance, in which cafe, while one of his conductors draws him forward, the other comes behind and pufhes him on: fhould he lie down, fie puts her fnout under and raifes him up, fupporting him on her knee, and with her head pufhes him forward with all her ftrength. The hunters likewife affint by goading him, and urging him forward by their noife and din : fometimes they are even obliged to put lighted torches near; in order to make him advance. In conducting fmall eltphants from the Roomee, only one cable and one Koomkee are made ufe of. As foon as each elephant is fecured, he is left in charge to the Mahote or keeper, who is appointed to attend and inftruct him; and under him there are from two to five Coolies according to the fize of the elephant, in order to affift and to fupply food and water, till he becomes fo tractable as to bring the former himfelf. Thefe people erect a fmall hut immediately before him, where the Mabote, or one of the Coolies, conftantly attends, fupplies him with food, and foothes and careffes him by a variety of little arts. Sometimes the Mabote, threatens and even goads him with a long fick pointed with iron, but more generally coaxes and flatters him, fcratching his head and trunk with a long bamboo fplit at one end into many pieces, and driving away the flies from any fores occafioned by the hurts and bruifes he got by his efforts to efcape from the

Rooniee. This animal's $\mathfrak{k k i n}$ is foft confidering his great fize, and is extremely fenfible, is eafily cut or pierced, more fo than the ikin of moft large quadrupeds. The Mabote likewife keeps him cool, by fquirting water all over him, and fanding without the reach of his trunk; in a few days he advances cautioufly to his fide, and ftrokes and pats him with his hand, fpeaking to him all the while in a foothing tone of voice, and in a little time he begins to know his keeper and obey his commands. By degrees the Mahotebecomes familiar to him, and at length gets upon his back from one of the tame elephants, and, as the animal becomes more tractable, he advances gradually forward towards his head, till at laft he is permitted to feat himfelf on his neek, from which place he afterwards regulates and directs all his motions. While they are training in this manner, the tame elephants lead out the others in turn for the fake of exercife, and likewife to eafe their legs from the cords with which they are tied, and which are apt to gall them moft terribly, unlefs they are regularly flacked and fhifted. In five or fix weeks the elephant becomes obedient to his keeper, his fetters are taken off by degrees, and generally in about five or fix months he fuffers himfelf to be conducted by the Mabote from one place to another: care however is always taken not to let him approach his former haunts, left a recollection of the freedom he there enjoyed, fhould induce him again to recover his liberty. This obedience to his conductor feems to proceed partly from a fenfe of generofity, as it is in fome meafure voluntary; for, whenever an elephant takes fright or is determined to run away, all the exertions of the Mahore cannot prevent him, even by beating or digging the pointed iron hook into his head, with which he directs him : on fuch an occafion the animal totally difregards thefe feeble efforts, otherwife he could fhake or pull him off with his trunk and dafh him in pieces. Accidents of this kind happen almoft every year, efpecially to thofe Mabotes, who attend the large Goondabs, bus
fuch accidents are in general owing entirely to their own careleffenefs and heglect. It is neceffary to treat the males with much greater feverity than the females, to keep them in awe; but it is too common a practice among the Mubotes, eithcr to be negligent in ufing proper meafures to render their elephants docile, or to truft too much to their good nature; before they are thorcughly acquainted with their difpofitions.. The iron hook; with which they direct them, is pretty heavy, about fixteen inches long, with a ftraight fpike advancing a little beyond the curve of the hook, fo that altogether it is cxactly like that, which ferrymen or boatmen ufe fafened to a long pole

In this account of the procefs for catching and taming elephants, I have ufed the mafculine gender to avoid circumlocution, as both males and females are treated in the fame manner: the former are feldom fo docile, but, like the males of other animals, are fiercer, ftronger, and more untractable, than the females.

Before I conclude, it may be proper to obferve, that young elephants. fuck conftantly with their mouths, and never with their trunks, as BuFfon has afferted; a conclufion he made merely from conjecture, and the great and various ufes, to which they are well adapted and applied by every elephant.

I have feen young ones from one day to three years old fucking their dams, but never faw them ufe their trunks except to prefs the breaft, which by natural inftinct they feemed to know would make the milk flow more readily. The mode of connection between the male and female is now afcertained beyond the poffibility of a doubt; as Mr. Buller, Lieut. HAWKINs, and many others, faw male copulate with a female, after they
were fecured in the Keddabs in a manner exactly fimilar to the conjunction of the horfe with a mare.

This fact entirely overturns what has been fo often related concerning the fuppofed delicacy of this ufeful animal, and a variety of other hypothefes, which are equally void of foundation. As far as I know, the exact time, an elephant goes with young, has not yet been afcertained, but which cannot be lefs than two years, as one of the elephants brought forth a young one twenty-one months and three diys after the was taken. She was obferved to be with young in April or May 1588, and fhe was only taken in fanuary preceding; fo that it is very likely the muft have had connection with the male fome months before the was fecured, otherwife they could not have difcovered that the was with young, as a fætus of lefs than fix months cannot well be fuppofed to make any alteration in the fize or fhape of fo large an animal. The young one, a male, was produced Octob:r 16 th 1789 and appeared in evary refpect to huve arrived at its full time. Mr. Harris, to whom it belongs, examined its mouth a few days after it was brought forth, and found that one cfits grinders on each fide had partly cut the gum. It is now alive and wall, and begins to chew a little grafs.

1 mave further to remark, that one of the tufks of the young elephant has made its appearance, fo that we can now afcertain it to be of that fpecies called Mucknab, the tufks of which are always fmall, and point nearly ftraight downwards. He was thirty-five inches high at his birth, and is now thirty-nine, fo that he has grown four inches in nearly as many months. Elephants are always meafured at the fhoulder; for the arch or curve of the back, of young ones particularly, is confiderably higher than any other part, and it is a fure fign of old age, whenever this curve is found
flatened or confiderably depreffed, after an elephant has once attained his full growth.

Though thefe remarks, as well as feveral others in the above relation, do not come within the plan I propofed, which was merely to defcribe the methods of taking wild elephants in the province of Tipura, yet I hope they will not be deemed impertinent or fuperfluous, efpecially as feveral of them tend to eftablifh fome important facts in the natural hiftory of this animal, that are not known or not attended to at leaft, in any accounts that I have had an opportunity of feeing.

Explanation of feveral words ufed by the natives, who catch elephants.
Bundah-a middle fized cord, fix or eight cubits long, which is put round either the hind or fore legs of elephants, in order to fecure them. From ten to twenty are employed.

Cbilkâb-is a very flight foft cord, which the hunters at firft put around the hind-legs of a Goondab, before they begin to tie him : this is not ufed for Keddab elephants.

Dáugbearee-is generally a continuation of every fecond Bundah that is put on, a few turns of which are paffed round; where the folds of the Bundabs interfcit each other, in order to faften and keep them firm. When the Bundah is not long enough, another cord is made ufe of.

Dooblab-is that rope, which is made faft on one fide to the aftermof Pharab, then carried under the tail and faftened to both the Pharabs on the oppofite fide, fo as to anfwer the purpofe of a crupper, and to keep the Pharahs in their places.

Dool-is a large cable about fixty cubits long, with a running noofe. "Two of them are put round the neck of the elephant and faftened to the foremof Pbarab or girt, one on each fide, in fuch a manner, as to prevent the noofes from being drawn too tight or coming too far forward, and this is effectually done by the Dooblab; for whenever the elephant draws back, the Dools pull the crupper forward, which muft gall him very much and prevent him from ufing all the force he might otherwife exert, in order to free himfelf.

Phand-is a cable nearly the fame fize as the Dool, the noofe of which is put round each leg of the Goondahs, and then it is tied to trees or ftakes. The Phands, ufed for the Keddab elephants, are only about thirty cubits long.

Phárab-a rope that is put round the body of an elephant like a girt, and to which the Dooblab and Dools are connected.

Tooman-is the rope that is paffed round the buttocks of an elephant and prevents his ftepping out freely: it is fantened to the girth and crupper, that it may not flip down.
Tipura*, March 29, IFgo.

## OFA

## COMMON-PLACE BOOK.

## By F. Ho HARINGTON, Efg.

MR. LOCKE efteemed his Method of a Common-place book "fo "s mean a thing, as not to deferve publifhing in an age full of ufeful " inventions," but was induced to make it publick at the requeft of a friend. This perhaps fhould have deterred me from offering a paper of the fame de ${ }_{-}$ nomination to a Society inftituted for inquiring into the more effential parts of literature; yet, fince Mr. Locke bears teftimony to the utility of his. method after five and twenty years' experience, and fince whatever may tend. to affif the acquifition of knowledge, cannot, I conceive, be deemed undeferving of attention, I venture to fubmit the plan of a Common-place book, which has occurred to me, founded on Mr. Locke's, but calculated, If think, to obviate an inconvenience, to which his is fubject.

On confidering the Method defcribed and recommended by Mr. Locke; it appeared to me, that the number of words, having the fame initial leto ters and following vowels, might frequently make it tedious to find a particular head, if noted in the Index by a numerical reference to the page only; and that the fame caufcmisht render it difficult to afcertain, whether any particular head had been entered. For inftance, balm, bark, bard, bat, Hh
baron, having, with numerous other words, the fame initial letter and fucceeding vowel, feveral references to the pages pointed out by Mr. Lorke's numerical Index might be neceffary, before any one of them, in particular, could be found; or before it could be afcertained, whether any one of them had been previoully entered in the Book. An Index, of which the following is a fpecimen, would, it is prefumed, remedy thefe apparent difadvantages: how far it is free from others, will be known from experience.

A short explanation of the method adopted for this book will be fufficient. One and twenty pages, divided each into five columns, and fubdivided in the feveral columns for the number of the folios, the letters of the alphabet written at he head of each page, and the five vowels inferted in the columns under each letter, will form a fufficient Index, provided the letters $J, Q, V, X$, and $Z$, inftead of having diftinet pages appropriated to then, ke writen in the fame pages with $I, P, U, W$, and $Y$, which they may be without inconvenience.

1. THE INDEX, thus prepared, is ready to receive the heads of whatever fubjeats may be enterd in the book, under their correfponding initial letters? and fillowing vowels, or under their inixial leters and fimilar vowels, whenthe read is a monofyllable and begins with a vowel : it is hardly neceffary to repeat Mr. Locke's remark, that "every head ought to be fome im"portant and effential word or term." If a fmall margin be left in each folio of the book, and the indicative word or head be written on it, it will be confpicuous, although feveral heads hould be included in the fame folio: brit; until it become neceflary, from there being no remaining folios wholly blanks, it is advifable to appropriate a feparate folio to each head, as, by this: means, the feveral fubjects entered are kept more diftinet, and any additions.
may be made to the fame head without the trouble of reference to other folios; for which purpofes it is alfo advantageous to place the folio numbers on the left pages only; leaving the right hand pages for a continuation of the fubjects entered on the left or for remarks thiereon, until it become neceffary to appropriate them to new heads in order to fill the book.

To thefe remarks, which may appear more than adequate to the occafion, it will be fufficient to add, that, if the heads in the Indes ifvellitunder any letter, beyond the dimenfions of the fingle page "affigned to them (whictis however in a book of moderate fize is not probable) they may be continued on a fecond page, to be prepared for the fame letter at the end of the origig? nal Index, for which purpofe ten or twelve blank leaves may be left between the Index and the commencement of the book; and laftly, that, if the entries in the book, under any head, fill more than the two pages firt appropriated to it, the fame head may be continued in any fubfequent blank folio, by obvious notes of reference at the foot of the former and top of the latter, without any new entry in the Index, which would then be unneceffarily filled.

The Afatick Society was infituted for inquiring into the antiquities, arts, fciences, and literature of $A f a$; and the humble plan of a Commonplace book cannot claim admiffion among any one of thefe objeCts: it may however be confidered as connected with all, fince it may affift inquiries concerning the whole of them. If it be afked, whether fuch a plan be within the local limits of this fociety, it may be anfwered, that it is in its nature univerfal; but if any particular plan be defigned in $A f a$, fuch plan may, with p-opriety, be tendered to the $A /$ /atick Society for the benefit either of publication in their Tranfactions, if deemed worthy of it, or of fuppreffion, for
the Author's fake, if deemed uelefs. A fimilar inders with thirty pages and ten columns, according to the number of the Nágari confonants and vowo els, which are motly in ufe, would fuit a Common-place book intended to comprife the whole extent of Afatick literature.

Each of the figures $A, B, C$, muft be confidered as reprefenting a large folio page; and it feemed unneceffary to exhibit the fpecimen on a more extenfive fale: the numbers of the folios are fuppoied to be thofe of the Common-place book. The names Arabia, Bahmen, Cámpilla, and the reft. are given by way of example, but were not fet down with any particular felections

COMMON-PLACE BOOK.
A.

B.

c.

Aso'ca: This is the true name of a charming tree, inaccurately named Afjegam in the Hort. Malab. vol. 5. tab. 59. It is a plant of the eigbth clafs and firf order, bearing flowers of exquifite beauty; and its fruit, which Van Rheede had not feen, is a legume, comprefled, incurved, long, pointed, with fix, feven, or eight feeds: it will be defcribed very fully in a paper intended for the Society. The Bráhmens, who adore beautiful objects, have confecrated the lovely Afóca: they plant it near the temples of Siva, and frequently mention a grove of it, in which Ra'van confined the unfortunate $S i t a^{\prime} A^{\prime}$. The eigbti day from the new moon of Cbaitra inclufive is called Afócáfbtami.

Crishna: Properly black or dark blue, an epithet of the Hindu God, whofe youthful exploits refemble thofe of Apollo Nomius: he was particularly worfhipped by the Suraféna, or people of Mat'hura. and Arrian fays, that the Suraceni adored Hercules; but the deity, whom he means, was Hercules Múfagetes, or Gópinát'ba, who was the patron of fcience, according to Mr. BRyANT, or the - God of eloquence with the Mufes in his train.' See Anal. Anc. Mythoi. vol. 2. p. 74. The Gopyab were the patroneffes of mufick and poetry.

Bhu champac: So the Hindus call a beautiful plant defcribed by Rheedeg and admitted by Linnetus under the names of Kømpferia rotunda: the Indian appellation is yery improper; as the flower has no refemblance to the Cbampac, except in the richefs of its odour. Bhk means ground, from which the bloffoms kife with a fhort fcape, and fcarce live a whole day.

Ce'sarte $\mathbb{A}$ lion in Sanforit, fo named from his mane: Céfa and Céfara fignify hair. Etymologifts will decide, whether Coefaries and Ces ar had an affinity with thofe Indian words.

Ahilya': The celebrated confort of an old Indian Sagev named Go'taMA: hence it is the name of a rich Mabráta lady, who employs her wealth in works of devotion 20 Baráress; and Gayà, as weell as in

Borax: A corruption of the Arabick word burak, or brillignt. It is found in its native fate both in Tibet according to Giorg i, and in Népál according to Father Giuseppe.

Cusha : Pronounced more conrectly Cusaunth a palatial śt; a grafs held facred by the Brabmens from time immemorial: it is the PoA Cynoe furoïdes of Dr. Koenig.

Beli: The Belus, frobably, of the Greeks; for though bâl fignify lord, in moft eaftern dialect:, yet in Cbaldaick, according to Selden, it was written Bel, exactly as the name of the Hindu monarch is vulgarly pronounced.

Chorrapushpi: Or Thief-flowered; the corymbed Scirpus with awled fpikes, fo troublefome in our Indian walks.

Campilla: Commonly called Camalá-guri, a plant ufed by dyers, of a new genus; defcribed by Dr. Roxburgh.

Bahmen : An old Perfan month and the Genius prefiding over it; the name alfo of a celebrated king and hero.

Bilva: The Crateva Marmelos, but certainly mifplaced in Linneus: its fruit has lately been found very beneficial in diarrhæas.

AmREMEN: So HAFIZ writes the vowels in this name of the evil genius: but, in fome Arabian books, it is written Ahermen.

Arabia: In this celebrated peninfula the richeft and molt beautiful of languages was brought to perfection: the Arabick dictionary by Golius is the moft elegant, the moft convenient, and, in one word ${ }_{0}$ the beft, that was ever compiled in any language.

AGURU: The true name of the fragrant aloe-wocd: the tree grows in Silhet, but has not bloffomed in gardens near Calcutta.

## [257]

## XII.

## TIIE LUNAR YEAR

## OF THE

## II I N D U S.

## By the PRESIDENT.

HAVING lately met by accident with a wonderfully curious aract of the learned and celebrated Raghunandana, containing a full account of all the rites and ceremonies in the lunar year, Itwice perufed it with eagernefs, and prefent the fociety with a correct outline of it, in the form of a Calendar illuftrated with focrt notes: the many paffages quoted in it from the Védas, the Puránas, the Saftras of law and aftronomy, the Calpa, or facred ritual, and other works of immemorial antiquity and reputed holinefs, would be thought highly inter.fting by fuch as take plefure in refearches concerning the Hindus; but a tranflation of them all would fill a confiderable voe lume, and fuch only are exhibited as afpeared mof ditinguifted for elegance or novel:y. The lunar year of three h ndred and fixty days is apparently more ancient in India than the folar, and began, as we may infer from a verfe in the $N^{\prime}$ itfor with we month $A^{\prime}$ fivin, fo called $b$ caufe the moon was at the full, when that name was impofed, in the firft lumar ftation of the I'indu ecliptick, ihe origin of which, being diametric.illy oppofite to the bright flar Chitia, may be afccrtained in our fphere with exactncfs; but,
although moft of the Indimn fafts and feftivals be regulated by the days of the moon, yet the moft folemn and remarkable of them have a manifeft reference to the fuppofed motions of the fun; the Durgotfava and Hotica relating as clearly to the autumnal and vernal equinoxes, as the fleep and rife of Vishnu relate to the folftices: the fancrantis, or days on which the fun enters a new fign, efpecially thofe of Tuláa and Mếha, are great fertival's of the folar year, which anciently began wih Parfha near the winter folftice, whence the month Márgasivflha has the name of $A^{\prime}$ graháyana, or the year is next before. The twelve months, now denominated from as many flations of the moon, feem to have been formerly peculiar to the lunar year; for the old folar months, beginning with Choutra, have the following very different names in a curious text of the Véda on the order of the fix Indian icafons, Madbu, Mádbava, Sucria, Sucỉz, Nabhas, Nabbafya, I'Ja, Uria, Sabas, SabdSya, Tapas, Tapafya. It is neceffary to premife, that the muc'byr cbándra, or primary lunar month ends with the conjunction, and the gauna cbandra, or Secondary, with the oppofition: both modes of reckoning are authorized by the feveral Puranas; but, although the aftronomers of Cäf have adopted the gauna month, and place in Bbadra the birth day of their "paftoral God, the muc'hya is here preferred, becaufe it is generally ufed in this province, and efpecially at the ancient feminary of Bráhmens at Máyápur, now called Na a vadwípa, becaufe a new ifland has been formed by the Garges on the fite of the old Academy. The Hindus define a tith hi, or lunar diy, to be the time; in which the moon paffes through twelve degrees of her path; and to each pac/ba, or half month, they allot fifteen iti'bis, though they divide the moon's orb into $\AA$ 亿xteen phafes, named calás, one of which they fuppofe conftant, and compare to the fring of a necklace or chaplet, round which are placed moveable gems and flowers: the Mabácalá is the day of the conjunction, called Amá, os Amáváfá, and defined by Gobiris the day of the nearefor
approach ro the fun; on which obfequies are performed to the manes of the Pitris, or certain progenitors of the human race, to whom the darker fortnight is peculiarly facred. Many subtile points are difcuffed by my author concerning the junction of two or even three lunar days in forming one faft or feftival; but fuch a detail can be ufeful only to the Brábmens, who could not guide their flocks, as the Raja of Crifbanagar affures me, without the affffance of Raghunandan. So fond are the Hinduis of mythological perfonifications, that they reprefent each of the thirty tit'bis as a beautiful nymph; and the Gáyatrítantra, of which a Sannyási made me a prefent, shough he confidered it as the holieft book after the Véda, contains flowery defcriptions of each nymph, much refembling the delineations of the thirty Ráginis in the treatifes on Indian mufick.

In what manner the Hindus contrive fo far to reconcile the lunar and folar years, as to make them proceed concurrently in their ephemerides, mighe reafily have been fhown by exhibiting a verfion of the Nadíya or Varánes almanack; but their modes of intercalation form no part of my prefent fubject, and would injure the fimplicity of my work, without throwing any light on the religion of the Hindus. The following tables have been very diligently compared by myfelf with two Sanfcrit almanacks, with a fuperficial chapter in the work of Abu'lfazl, and with a lift of Indian holidays publifhed at Calcutta; in which there are nine or ien fafts called $\mathcal{F}_{\text {ayantis, }}$ diftinguifhed chi fly by the titles of the Avatáras; and twelve or thirteen days marked as the beginnings of as many Calpas, or very long periods, an hundred of which contlitule Brahma"s age; but having found no authority for thofe hol:days, I have omitted them: fome feftivals, however, or fafts, which are paffed over in filence by Raghunandan, are here printed in Italick letters ; becaufe they may be mentioned in other books, and kept ho-
ly in other provinces on by particular feets. I tannot refrain from adding ${ }^{-3}$ that buman facrifices were aciently made on the Mahanavami; andit is declared in the Bhawibya Purana, that the head of a fitugbtered man gives, Durga' a shoufand times more fatisfastion than: that of a ffalos

Náréna sirajà víra ₹ủjitè sidhiceunnripa, tripiá bbazvéd bhrísam Durgì verkani lachamévacbac
But in the Brábma every neramédba, cr fucrifice of a man, is exprefsly: forbidden; and in the fifth book of the Bhayareat are the following emphatical words: "Yé twiba vsìpurujbáb purußaméwéna yajanté, yáfcha " Arivó nrüpafín c'bádanti, tánfcha táfcba tè "fafava iha nibatà, yamus "Jádanè yátayantón raçhógana funicá iva : fudbiaitiná 'vadáyafrüc pivan" $t i_{3}^{3}$ that is, "Whatever men inzhis world facrifice himan victims, and, - " whatever women eat the flefh of male catile, thofe men and thofe wo. ${ }^{\text {st }}$ men thall the animals here flain torment in: the mafion of YAMA, and, as like flaughtering giants; having cleaved their timbs with axes, fhall as quaff their blood:" It may feem Atrange, that a buman facrifice by a man thould be no greater crime than eating the flefh of a male beaft by: a womans but it is held a mortal offence to kill any creature, except-for facrifice, and none but males mut ever be facrificed, nor muft women, except after the performance of a fraddbà by their hufbands, tafte the fleh even of victims. Many frange ceremonies at the Durgotfara ftill fubfft among the Hindus both male and female, an account of whici might elucidate fome very obs fcure parts of the Mofaid law; but this is not"a place-for fuch difquitions. The ceremony of fringing with iron hooks through the mufcles, on the day of the Cherec, was introlucel, as 1 am credibly informed, in modern times, by a fuperfitious prince, named $V$ ána, who was a Saiva of the mott auftere fect: but the cuftom is bitterly cenfured by learned Hindus, and the day is therefore ${ }^{\text {a }}$ omitted in the following abridgement of the Tut'it tatwa.

Having poured water into a fea-fhell, let the votary fill it with white flowers and unground rice: then, turning to the fouth, let him offer it with this incantation: 'Hail, Cumbhayo'ni, born in the fight of Mítra and - Varuna, bright as the blofom of the grafs cáfa; thou, who fprangeft - from Agni and Maruta.' Coja is the Spontaneous Saccharum.

## Nárafinba.

This is proper'y a feftival of the folar year, in honour of the fage Agastya, fuppofed, after his death, to prefide ovcr the far Canopus.
b. Some begin on this day, and continue till the ninth of the new moon, the great feftival, called Durgótfava, in honour of Durga', the goddefs of. nat!are; who is now aroakened with fports and mufick, as fhe was waked in the beginning by Brahma' during the night of the Gods.

Cálicá purána.
Note on p. 255.
Utt hánaicádasí. $g$.
In one almanack I fee on this day Tulusívivába, or the Marriage of Tulasi', but have no other authority form entioning fuch a feftival. Tulasi was a Nymph beloved by Crishna, but transformed by him into the Par náfa, or black Ocymum, which commonly bears her name.

## General Note.

If the fenivals of the old Grecks, Romans, Perfans, Egyptians, and Goths, could be arranged with exactneis in the fame form with thefe Indian tabl s, there would be found, I an perfuadel, a ftriking refemblance among them; and an attentive comparifo, of them all might throw great light on the religion, and, perhaps, on the hillory, of the primitive world.

## [ 295 ]

## XIII.

## On EGYPT and other COUNTRIES

> Adjacent to the $\mathrm{Ca}^{\prime} \mathrm{li}^{\prime}$ River, or Nile of Ethiopia, from the Ancient Books of the Hindus.

By Lieutenant FRANCIS WILFORD.

Section the First.

MY original defign was to compofe a differtation, entirely geograpbical, on Egypt and other countries bordering upon the Nile; but, as the Hindus have no regular work on the fubject of Geography, or none at leaft, that ever came to my knowledge, I was under a neceffity of extracting my materials from their hittorical poems, or, as they may be called more properly, their legendary tales; and in them I could not expeet to meet with requifite data for afcertaining the relative fituations of places: I was obliged, therefore, to fludy fuch parts of their ancient books, as contained geographical information, and to follow the track, real or imaginary, of their Deities and Heroes; comparing all their legends with fuch accounts of holy places in the regions of the Weft, as have been preferved by the Greck Mythologifts, and endeavouring to prove the identity of places by the fimilarity of names and of remarkable circumfances; a laborious, though neceflary, operation, by which the progrefs of my work has been greatly retarded.

The Miythology of the Hindus is often inconfiftent and contradictory; and the fame tale is related in many different ways: their Phyfiology, Afronomy, and Hiftory are involved in allegories and enigmas, which cannot but feem extravagant and ridiculous; nor could any thing render them fúpportable, but a belief that mof of them have a recondite meaning, though many of them had, perhaps, no firmer balis than the heated imagination of deluded fanaticks, or of hypocrites interefted in the worfhip of fome particular deity. Sliould a key to their eighteen Puránas exift, it is more than probable, that the wards of them would be too inticate, or too fiff with the ruft of time, for any ufful purfofe : yet, as a near ccincidence between proper names and circumfiances, could fcarce have been accidental, fome light might naturally be expected from the comparifon, which $\mathbb{I}$ refolved to make. It is true, that an accurate krowledge of the old northern and wefern Mythology, of the Coptick and o.her dialects now ufed in countries adjacent to the Nile, of eafern languages, and, above all, of Saufcrit, may be thought effentially neceffary for a work of this nature; and unfortunately, I poffefs few of thofe advantages: yet it will not, I hope, be confidered as prefumpiuous, if I prefnt the Afatick fociety with the refult of my inquiries; defiring them to believe, that, when I feem to make any poftive affertion, I only declare my oun humble opinion, but never mean to write in a dogmatical flyle, or to intimate an idea, that my own conviction thould preclude in any degree the full exercife of their judgement.

So friking, in my apprehenfion, is the fimilarity between feveral Hindt legends, and numerous paffages in Greck authors concerning the Nile and the coun/ries on its borders, that, in order to evirce their identisy, or at Jeaft their affinity, little more is requifte than barely to exhibit a comparasive viev of them. The Hindus have no ancient civil hifory; nor had
the Egyptians any work purely hiftorical ; but there is abundant reafon to believe, that the Hindus have preferved the religious fables of Egypt, though we eannot yet pofitively fay, by what means the Brábmens acquired a knowledge of them : it appears, indeed, that a free communication formerly fubfifted between Egypt and India; fince Ptolemy acknówledges himfelf indebted for much information to many learned Indians, whom he had feen at Alexandria; and Lucian informs us, that pilgrims from India relorted to Hierapolis in Syria; which place is called in the Puránas, at leaft as it appears to me, Mahábbágá, or the ftation of the goddefs Dévì with that epithet; even to this day the Hindus occafionally vifit, as I am affured, the two Fwálá-muc'bís, or Springs of Naphtha in Cuśba-dwípa within, the firf of which, dedicated to the fame goddefs with the epithet Anáyásá, is not far from the Tigris; and Strabo mentions a temple, on shat very fpot, infcribed to the goddefs Anaïas.

The fecond, or great, jwálá-muc'bi, or fpring with a flaming mouth, is mear Báku; from which place, I am told, fome Hindus have attempted to vifit the Sacred I/ands in the Weft; an account of. which from the Puránas will (if the publick approve this effay) be the fubject of a future work. A Yogi, now living, is faid to have advanced, with his train of pilgrims, as far as Mofcow; but, though he was not ill ufed by the Ruffans, they flocked in fuch crowds to fee him, that he was often obliged to interrupt his devotions in order to fatisfy their curiofity : he, therefore, chofe to return; and, indeed, he would probably have been expofed to fimilar inconvenience in the Sacred Ifles, without excepting Ereta-ftban, or the place of religious duty. This weftern pilgrimage may account for a fact mentioned, I think, by Cornelius Nepos, (but, as printed books are fearce in this country, I fpeak only from recollection) that certain Indi, or Hindus, were mip-
wrecked on the fhores of the Baltick: many Bribmens, indeed, affert, that a great intercourfe anciently fubfifted between Indiu and countries in the weft ; and, as far as $I$ have ex mined th ir facred books, to which they appeal as their evidence, I frongly incli.e to believe their aff.rtion.

The Sanfrit books are, both in fize and number, very confuerable: and, as the legends relating to Egypt lie difperfed in them without order or connexion, I have fpared neither labour nor expenfe to collect them; but, though I have in that way done much, yet much remains to be done, and muft be left, I fear, to others, who can better afford to make a collection fo voluminous and expenfive: I had the happinefs to be ftationed at Banares, the centre of Hindu learning; and, though my laborious duties left me very little time for literary purfuits, yet my appointment fupplied me with means to defray the neceflary charges, which I could not otherwife have afforded. To the friendihip of Mr. Duncan 1 am deeply indebted: his encouragement and fupport had a'grcat effect on the Eráhmens; nor hould I, without his affiftance, have met with that fuccefs, which has rewarded my labours.. It will appear in the courfe of my effay, that I have derived infinite advantage from the Travels of Mr. Bruce, to which I fo frequently refer, that it was hardly poffible to cite them conftantly; and I make this general acknowledgement of my obligation to Him : even the outline of the Map prefixed to this differtation is borrowed from his. elaborate Chart. Thofe, who may follow me in this path, will add confio derably, no doubt, to the materials which I have amaffed, and may poffiebly correct fome errors, into which I may have fallen: happy fhall I be to have led the way to difcoveries, from which very important conclufions may be deduced.

The Findus, I believe, have no work profeffedly written on popular geography, that is, on the face of this globe according to the fyftem of their Aftronomers : they have large charts of the Univerfe according to the Pauránicas, with explanatory notes, and, perhaps, with treatifes to elucidate their fables; and fome of the Puránas contain lifts of countries, rivers, and mountains, wih a general divifion of the known world; which are allo to be found in a few of their Aftronomical books. The Bauddbas, or followers of Jina, have a fmall tract on geography, entitled Trilóca derpan, or The Mirror of Three Worlds, which Mr. Burrow was fo kind as to lend me: it is a moft extravagant compofition; and fuch is the antipathy of the Brábmens to the Fainas, that no explanation of it can be expe民ted from them ; but, fhould I have leifure and opportunity to examine it, the tafk may be attended with fome advantage; though the proper names are in general changed and accommodated to the heterodox fyftem.

According to the orthodox Hindus, the globe is divided into two he mifpheres, both called Méru; but ti.e fuperior hemifphere is diftinguifhed by the nane of Suméru, which implies beauty and excellence, in oppofition to the lower hemifphere, or Cuméru, which fignifies the reverfe: by Méru, with,out any adjunct, they generally mean the higher, or northern, hemifphere, which they defcribe with a profufion of poctical imagery as the feat of delights; while they reprefent Cuméru as the dreary habitation of demons, in fome parts intenfely cold, and in others fo hot, that the wad ters are cominally boiling. In ftrict propriety, Méru denotes the pole and the polar regions; but it is the cele\{tial north-pole, round w'ich they place the gardens aid metropolis of INDRA, while YAM a holds his court in the oppofite polar circle, or the ftation of Afiras, who wa.red with the Swas, or Gods of the firmament. There is great reafon to belicve, that
the old inhabitants of the fouthern hemifphere, among whom were the Etbiops and Egyptians, entertained a very different opinion of their own climate, and of courfe reprefented the fummit of the northern hemifphere as a region of horrors and mifery: we find accordingly, that the Greeks, who had imported mof of their notions from Egypt; placed their hell under the north-pole, and confined $\mathrm{C}_{\text {ronos }}$ to a cave in the frozen circle. In the Puránas we meet with ftrong indications of a terrefrial paradife, different from that of the general Hindu fyftern, in the fouthern parts of Africa; and this may be connected with the opinion adopted by the Egyptians, who maintained it againft the Scytbians with great warmth (for the ancient inhabitants of the two hemifpheres were perpetually wrangling on their comparative antiquity) that the Etbiopians were the oldeft nation on earth.

Several divifions of the old continent were made by different perfons at different times; and the modern Brabmens have jumbled them all together: the moft ancient of them is mentioned in the Puránas, entitled Wáyu and Brahmánda; where that continent is divided into feven droipas, or countries with water on two files, fo that, like jazírab in Arabick, they may fignify either iflands or peninfulas. They are faid to be wholly furrounded by a vaft ocean, beyond which lie the region and mountains of Atala; whence mof probably the Greeks derived their notion of the celebrated Allantis, which, as it could not be faund after $h$ ving once been difcovered, they conceived to have been deftroyed by fome fhock of nature; an opinion formed in the true Hindu fpirit; for the Bráhmens would rather fuppofe the whole economy of the uiverfe difurbed, than queftion a fingle fact related in their books of authority. The names of thofe iflands, or peninfulas,"are Fambu, Anga, Yoma, Yamala or Malaya, 'Saricisa, Cuśba, and Warába.

In the centre is JAMbU, or the inland part of $A \rho ;$; to the eaft of it are Anga, Yama and Yamala, reckoned from nurth to fouth; to the wefl, Sanc'ba, Cufha, and Varabba, reckoned from fouth' to north': Yama and' Cufha are faid to be duc eaft and weft in refpect of India; and this is indubitably proved by particular ciscumftances.

SANC'HA dwip is placed in the fouth weft," fuppofed to be connected" with Yamala, and with it to embrace an immenfe inland fea : between them the Hindus place Liancà, which they conceive extended to a confiderable diftance as far as the equator ; fo that Sanciba muft be part of Africa, and Yamala or Malaya; the peninfula of Malacca with the countries adjacent. This notion of a vaft inland fea Ptolemy feems to have borrowed from the Hindus, whom he faw at Alexanuria; for, before his time, there was no fuch idea among the Greeks: he calls it Hippados; a word, which feems derived from $A b d h i$, a general name for the fea in the language of the Brahmens. We may colléct from a variety of circumftances, that Cufba droip extends from the fhore of the Mediterranean, and the mouths of the Nile, to Serbind on the borders of Indus,

In a fubfequent divifion of the globe, intended to fpecify fome diftant countries with more particular exactnefs, fix dwipas are added; Plac/ha, Sálmali, Crauncha, Sáca, Pufhcarr, and a fecond Cu/ha, cal ed Cifhadwíparoithout, in oppofition to the former, when is fiid to b witin; a diftinction ufed by the Brabmens, and countenanced in the Puir anas, though, not pofitively expreffed in them: the fix new dreípas are fuppofed to be contained within thofe before-mentioned; and the Pu, anas differ widcly in their accounts of them, while the geography of the former divifion is uniform,

Six of the ancient divifions are by fome called upadivipas, becaufe they are joined to the large dwipa named fambu; and their names are ufuaily omitted in the new enumeration: thus Cufha-dwip within is included in Fambu-dwíp, and comprifes three out of feven c'bandas, or fections, of Bbárata-verhba. Another g ographical arrangement is alluded to by the poet CA"LIDA"s, who fays, that "RAGHU erected pillars of conqueft in eacb of the eighteen dwipas;" meaning, fay the Pandits, feven principal, and eleven fubordinate, ifles or penin fulas: upa, the fame word originally with bypo and Jub, always implies inferiority; as upavéda, a work derived from the Véda itfelf; upapátaca, a crime in a lower degree; upadberina, an inferiour duty; but great confufion has arifen from an improper ufe of the words upadzuipa and dwipa.

Cushadwípa without is Abyffinia and Ethiopia; and the Bráhmens account plaufibly enough for its name, by afferting, that the defcendants of Cusha, being obliged to leave their native country, from them called Cu/ha= dwípa within, migrated into 'Sanc'ba-dwíh, and gave to their new fettlement the name of their anceftor; for, though it be commonly faid, that the dwipa was denominated from the grafs Cuśba, of the genus named Poa by Linneus, yet it is acknowledged, that the grafs itflf derived both its appellation and fanctity from Cusia, the progenitor of a great Indian family: fome fay, that it grew on the valmica, or hill formed by Termites or white ants, round the body of CuSha himfelf, or of CaUSHICA his fon, who was performing his tapafya, or act of auftere devotion; but the ftory of the ant-hill is by others told of the firft Hindu poet thence named Vácmíca.

The countries, which I am going to defcribe, lie in Sancha-dwh, accor-
ding to the ancient divifion; but, according to the new, partly in Cufbandwíp witbout, and partly in Sancha-dwíp proper; and they are fometimes named Cálitata, or kanks of the Cáli, becaufe they are fituated on both fides. of that river, or the Nile of Etbiopia. By Callitata we are to underftand Ethiapi.2, Nubia, and Egvpt: it is cven to this day called by the Brábmens the country of Dévatás; and the Greek Mythologifts afferted, that the Gols were born on the banks of the Nile. That celebrated and holy river takes its rife from the Lakc of the Gods, thence named Amara, or Déva, Sarówera, in the region of 'Sharma, or SJarma-fl'bán, between the mountains of Ajágart and Sítánta, which feem part of Sóma-giri, or the mountains of the Moon, the country round the lake being called Chíndri-ft'bán, or Moono land: thence the Cálí flows into the marfhes of the Padma-roan, and through the Ni/badba mountains, into the land of Barbara, whence it paffes through the mountains of Hémacúta in Sanc'ba-dwíp proper; there entering the foretts of Tapas, or Thebais, it runs into Cantaca-défa or Misra-ft'ban, and through the woods, emphatically named Arańya and Atavi, into Sanc'bábdhi, or our Mediterranean. From the country of Pufhpa-verßa it receives the Nandá or Nile of Abyl/ $\sqrt{2}$ ia; the Af bamati, or fmaller Crifßná, which is the Tacazzè or little Alay; and the Sanc'ba-nágá, or Mareb. The principal tribes or mations who lived on its banks, were, befides the favage Pulindas, it the 'Shármicas, or 'Sbámicas, 2. the Shepherds, called Palli, 3. the 'Sanc'háyanas or Troglodytes, named alfo Sánc'háyani, 4 . the Cutila-céfas, or Cutitilálacas, 5. the 'Syama-muc'bas, 6. the Dinavas, and 7. the Yavanas: we find in the Lame region a country denominated Strí-rajya; becaufe it was governed by none but Queens.

The river Cálí took its name from the goddef $\mathrm{MAHA}^{\prime}-\mathrm{CA}^{\prime} \mathrm{LI}$, fuppofed to have made her firft appearance on its banks, in the character of Rajan.
rájéfwari, called alfo IS $A^{\prime} N \mathrm{Na}$ and IsI; and, in the character of SATI', fhe was transformed into the river itfelf s the word Cála fignifies black, and, from the root cal , it means alfo devouring, whence it is applied to Time; and, from both fenfes in the feminine, to the Goddefs in her defructive capacity ; an interpretation adopted, as we hall fee hereafter, in the Puranas. In her character of Maha'ca'li' fhe has many other epithets, all implying different Thades of black or dark azure; and, in the Cálica-purán, they are all afcribed to the rivẹr: they are Cálí or Cálá, Nilá, Aflià, 'Sbyámà, or 'Shyámalà, Méchacà, Anjanábbà, Crŭbnà. The fame river is alfo called Nábu/bì, from the celebrated warriour and conquerour, ufually entitled De'vaNahusha, and, in the fpoken dialects, Deo-naush: he is the Dionysus, I believe, of the ancient Europeans.

By the Greeks, Romans, and Hebrews, the Nile (which is clearly a Sanferit word) was known alfo by the following names: Melas, Melo, 压gyptos, Sikhor, or Sibor, Nous or Nús, Aëtos, Siris, Oceanus, Triton, Potamos. The word Nous (a) is manifeftly corrupted from Nabu/h, or Naush; Aëtos from king I't or Ait, an avántara, or inferiour incarnation, of Mafa'deva; IEgyptos from 'Agupta, or on all fides guarded; and Triton, probably, from Trituni, as the Ethiops, having no fuch letter as $p$, and generally fubfituting $t$ in its room, would have pronounced Tripuni, which is a common' Indian corruption of Trivéni.

The Sanfcrit word Triveni properly means with three plaited locks; but it is always applied to the confluence of three facred rivers, or to the branching of a river into three ftreams : 屈Thicus, in his Cofmography, inftead of

[^17]faying, that the Hydafpes flows from a place named Triveni, ufes the phrafe three bairs; or three locks of bair, which is a literal verfion of the Sanfcrit. Now the Cailì confifts of tbree facred freams; the Nịlà, or Nile of Ethiopia, the Nandà, or Nile of Abyfenia, and the little Crifliná or Afibimati. The junction of the Great Crifbna with the Nandd was held peculiarly facred, as it appears from the following couplets in the $A t^{\prime}$ barva-veda, which are cited in the original as a proof of their authenticity:

> Bbadrá bbagavati Crithnă grahanachatra málini, Samvésanì Sañyamaǹ̀ viśwafya jagató nišá;
> Agnicbaura nipátéhu Jerva graba nivárané, Dachá bbagavati dévi Nandayá yatra Sangata':
> Serva pápa praśamani bbadré páramaśi mabí. Sitá fitafamáyógát param yá na nivertaté.

That is word for word:
" Crishna' the prolperous, the imperial, the giver of delight, the re" Arainer of evil, decked, like the night of the whole world, with a chap. " let of planets and ftars; the fovereign goddefs tranfcendently beneficial in ${ }^{\text {st }}$ calamities from fire and robbers, in checking the bad influence of all planets, " where fhe is united with the NANDA": fhe it is, who expiates all fin. O pro" pitious river, thou art the mighty goddefs, who caufes us to attain the cind of ${ }^{46}$ mortal births, who, by the conjunction of black with white watcrs, never "ceales to produce the higheit good."

Potamos, or the river, in Theophrastus, is commonly fuppofed to be only an emphatical appellative denoting fuperiority; but I cannot
help thinking it derived from the Sanfcrit word Padma, which I have heard pronounced Padam, and even Patam, in the vulgar dialects: it is the Nympboa of LinNeus; and, moft certainly, the Lotos of the Niles on the pericarp of which a Frog is reprefented fitting in an Egyptian emblem engraved by Montfaucon. (a) That river and the marhes near it abound: with that lovely and ufeful plant; and we fhall fee prefently, that Cáli herfelf is believed to have made its beautiful flower her favourite place of refidence in the character of Padmá-dévì, or the Goodefs in the Lotos: moft of the great rivers, on which the Nymphoea floats in abundance, have theepithet of Padmavatí or Padmematí ; and the very word Potamos, ufed as an appellative for a large river, may be thence derived; at leaft the common etymology of that word is far lefs probable.

We before obferved, that the fource of the $\mathrm{Nr}^{\prime} \mathrm{LA} A^{\prime}$ is in the extenfive region of Sharma, near the mountains of Sóma, in the mafculine, or Dei Luni; and that it iffues from the lake of the Gods, in the country of Cban$d r i$, in the feminine, or Dece Luna: to the word Saróvara, or confiderable lake, is prefixed in compofition either Amara, Sura, or Déva; and the compound Déva-faróvara is generally pronounced, in common fpeech, Deo-faraur. It lies between two ranges of hills; one to the eaft, called Ajágara, or not wakeful; and the other to the weft named Sitanta, or end. of cold, which implies that it may have fnow on its fummit, but in a very fmall quantity:

Sharma-Sthan, called alfo the mountainous region of Ajágara, is faid in the Brabmánda-purán, to be 300 Yojans, or 1476.3 , Britifh miles, ins

[^18]length, and 100 in breadth, or 492.12 miles. The mountains were named Ajágara, or of thofe, wobo watch not, in oppofition to the mountains of Abyfinia, which were inhabited by Nifacharas, or night-rovers; a numerous race of Yachas, but not of the moft excellent clafs, who ufed to fleep in the day time and revel all night : Mr. Bruce fpeaks of a Kowas, or watching $d o g$, who was worlhipped in the hills of Aby/finia.

The mountains of So'ma, or the Moon, are fo well known to geographers, that no farther defcription of them can be required ; but it may be proper to remark, that Prolemy places them too far to the South, and M. D'Anvilese too far to the North, as it will hereafter be fhown : according to Father Lobo, the natives now call them Toroa. The Ajágara mountains, which run parallel to the eaftern fhores of Africa, have at prefent the name of Lupata, or the backbone of the world: thofe of Sitanta are the range which lies weft of the lake Zambre, or Zaire, words not improbably corrupted from Amara and Sura. This Lake of the Gods is' believed to be a vaft refervoir, which, through vifible or hidden channels, fupplies all the rivers of the country: the Hindus, for mythological purpofes, are fond of fuppofin.g fubterranean communications between lakes and rivers; and the Greeks had finiltr notions. Mr. Bruce, from the report of the natives, has placed a refervoir of this kind at the fource of the White River, (a) which (though the two epithets have oppofite fenfes), appears to be the Cálí of the Puráns: it may have been called white from the Cumuda, which abounds in its waters; at leaft the mountains near it are thence named Cumudádri, and the Cumuda is a water-flower facred to the Moon, which Van Rheede has exhibited, and which feems to be either
(a) III Bruce 719.

$$

a Menianthes, or a fmall white Nympbea. The lake of the Amará, or Immortals, was not wholly unknown to the Greeks and Romans, but they could not exactly tell, where it was fituated; and we are not much better acquainted with its true (a) fituation: it is called Nilides by Juba; Niliducus and Nufaptis, in the Peutingerian Table. It is the Oriental Mar/he of Prolemy, and was not far from Rapta, now Quiloa; for that well-informed geographer mentions a certain Diogenes, who went on a trading voyage to India, and on his return, was overtaken near the Cape, now called Gardefan, by a violent ftorm from the N. N. E. which carried him to the vicinity of Rapta, where the natives affured him, that the nar/hes or lakes, whence the Nile iffued, were at no confiderable diftance.

The old Egyptians themfelves, like the prefent Hindus; (who are apt. indeed, to place refervoirs for water; of different magnitudes, on the high grounds of moft countries) had a notion of a receptacle, which fupplied the Nile and other great Africarz rivers; for the Secretary of Minerva's temple informed Heropotus, that the holy river proceeded from deep lakes between the mountains of Cropbiand Mophi; that part of its waters took their courfe toward the north, and the reft to the fouth through Etbiopia: but cither the fecretary himfelf was not perfectly mafter of the fubject, or the hiftorian mifunderftood him ; for Herodotus conceived, that thofe lakes were clofe to Syene (b), and, as he had been there himfelf without feeing any thing of the kind, he looked upon the whole account as a fiction. It is not improbable, however, that the lakes were faid by the fecretary to be near the zountry of Azania or Azan, which was miftaken for Syene, in Egypt called Ufwàn or A/wán.

[^19]From this idea of a general refervoir the ancients concluded, that the Niger alfo had its origin from the farne lakes with the Nile; but Jubn acknowledged, that the channels ran under ground for the fpace of twenty days march, or about 300 miles (a): in conformity to the relation of DIOGE。 nes, the mrfhy l.kes were faid by Juba to lie near the Ocean; but he afferted pofitively, that the Nile did not immediately rife from them; adding, that it flowed through fubterraneous paffages for the fpace of feveral days journey, and, on its ré-appearance, formed another marthy lake of fill greater extent in the land of the Mafferyli; who were perhaps, the Mabá háfyasilas of the Puräns. The fecond lake correfponds in fituation with the extenfive marlhes, from which the Nalíu'labyad of the Arabs, or the white river, has it fource according to Mr. Bruce, who places the lake about the 3 d or 4 th degree of north latitude : it is named Cowir in the Maps ; and is noticed by the Nubian geographers.

The word Nufaptis, which is applied, as before mentioned, to the firft lake, may be derived from Niśapait, or the Lord of Nig'bt, a title of the God Lunus: the whole country, indeed, with its mountains and pioft of its rivers, had appellations relating to the Moon; and we find in it feyeral fmaller rivers, which we cannot now afcertain, with the names of Rajamiz or Night, Cuhú or the day after the conjunction, Anumatì or that after the oppofition, Raca or the full orb of the moon, and Siniváli, or firit: vifible crefcent. The inhabitants of that region are by Ptolemy called Mafitce; by Juba, as we before obferved, Maffefyly; and in the Maps, Mafi or Maffigueios: in all thofe denominations the leading root Maffa, whaterer be its meaning, is clearly diftinguifhable; and, as there were people with a fimilar name in Mauritania, PLiny and his followers make Juba alledge;

[^20]that the lakes juift mentioned were in that country ; but it is hardly poffible, that Juba could have made fuch a miftake with refpect to a country fo near his own; nor can we refrain from obferving, that Pliny was an indifferent geographer, and that his extracts and quotations are in general very inaccurate.

The fecond lake, or marfh, appears to be the Padmavana of the Sanfcrit legends ; and that word implies, that it abounded with the Nymplscea; but it was probably the Padma, diftinguifhed by the epithet of Cóti-patra, or with ren millions of petals, which I conceive to be the Enfete of Mr. Bruce, who mentions it as growing there in the greateft abundance : it is true, that the Enfere has no botanical affinity with the Nymphoea, but the Hindus were fuperficial botanifts and gave the fame appellation to plants of different claffes, as the word Lotos, indeed, was applied by the Greeks to the common Padma, or water lily, and to the celebrated fruit of the Lotophagi which had no relation to it. The ufual number of petals on the Nyniphea Lotos is fifteen; but fome have only eigbt: the character of the genus, indeed, is to have numerous petals, and the Sanfcrit epihet Sabafra-patra, or thoufand-petaled, is applied in dictionaries to the common Iadma; but nothing could have juftified fuch an epithet as Cóti-patra. On fume Egyptian monuments we find Isis reclined among the leaves of a plant fuppofed to be the Cadali, or Mauza, which has been changed into Mufa by Linneus; but Mr. Bruce has exploded that error, and fhown that the plant was no other than his Enfete: the Indian goddefs, indeed, fits, in the character of $\mathrm{Y}_{\mathrm{ACSHINI}}$-dévì on the leaves of the Mauza; but in that form, which was an avántara or lower incarnation, the never has the majefty or the title of Padma'. It is expreflly faid in the Puranas, that, on the banks of the Caly river, PADMA refides in the Córipatra, क
nower unknown in India, and confequently ill defcribed in the Sanfcrit books: where Pliny mentions the Lotos of the Nile, he ufe's a phrafe very applicable to the Enfete, "foliis denfâ congerie ftipatis;" and though he adds a few particulars not agreeing with Mr. Bruce's full defcription of that plant, yet Pliny, being a carelefs writer and an inaccurate botanift, might have jumbled together the properties of two different flowers.

The before-named country of Cbandry-fthán was thus denominated from a fable in the Purans: The God Cbandra, or Lunus, having loft his fex in India, became Cbandrí, or LUNA, who concealed herfelf in the mountains near the lakes, of which we have been treating: the was there vifited by the Sun, and by him had a numerous progeny called Pulindas, from pulina an iflot or fandbank, who dwelt near the rivers that ran from thofe mountains, and acknowledged no ruling powers but the Sun and the Moon.

Sharma-isthán, of which we cannot exactly diftinguifh the boundaries, but which included Ethiopia above Egypt, as it is generally called, with part of Aby/finia and Azan, received its name from Sharma, of whom we fhall prefently fpeak: his defcendants, being obliged to leave Egypr, retired to the mountains of Ajagar, and fettled near the lake of the Gods. Many learned Brahmens are of opinion, that by the Children of Sharma we muft underftand that race of Dévatas, who were forced to emigrate from Egypt during the reigns of SAni and RAhu or SATURN and Typhon: they are faid to have been a quiet and blamelefs people, and to have fubfifted by hunting. wild elephants, of which they fold or bartered the teeth, and even lived on the flefh. They built the town of Rupavati or the beautiful; which the Greek's called Rapta, and thence gave the name of

Raptii or Rapsii to its inhabitants: it is generally fuppofed, that only one rown in that country was named Rapla; but Stephanus of Byzantium pofitively afferts, that there were two of the name ; (a) one, the capital of Ethiopia, and another a fmall town or village, confifting of huts inhabited by fea-faring men, near a harbour at the mouth of the river Raptus. The former is the Rúpavati of the Puranas, in which it is declared to have to ftood near the Calz': we cannot perfectly afcertain its pofition; but it was, I think, fituated near the fouthern extremity of the divine Lake, now called Zambre or Maravi; for Ptolemy places the Raptii about the fources of the Nile: that is, thirteen or fourteen degrees from the city, whence, as he fuppofess that people was named. No further defcription can juftly be expected of a country fo: little known; but we may obferve, that the Nubian geographer mentions a mountain near the Lake of the Gods, called the Mount of the Painted Temple; becaufe, probably, it contained hierogly phicks cut on ftone and painted, fuch as are to be feen at this day in fome parts of Egypt: he adds, that, on the bank of the fecond lake, was the ftatue of a certain $M a f n a_{3}$ fuppofed to be his body itfelf petrified, as a punifhment for his crimes.

1. It is related in the Padma-puyan, that Satyavrata, whofe miraculous prefervation from a general deluge is told at length in the Mátfya, had three fons, the eldeft of whom was named JYA'PETI, or Lord of the Earth; the others were C'HARMA and SHARMA, which laft words are, in the vulgar diallects, ufually pronounced C'bam and Sham; as we frequently hear Kifbn for Crishna. The royal patriarch, for fuch is his character

[^21]in the Purans, was particularly fond of Jyápeti, to whom he gave all the regions to the north of Himálaya, or the Snowy Mountains, which extend from fea to fea, and of which Caucafus is a part: to Sbarma he allotted the countries to the fouth of thofe mountains; but he curfed C'barma; becaufe, when the old monarch was accidentally inebriated with a ftrong liquor made of fermented rice, C"barma laughed; and it was in confequence of his father's imprecation, that he became a flave to the flaves of his brothers.

The Children of Sharma travelled a long time, until they arrived at the bank of the Nilá or Cäli; and a Brabmen informs me, (but the original paffage from the Purán is not yet in my poffeffion) that their journey began after the building of the Padmá-mandira, which appears to be the Tower of Babel, on the banks of the river Cumudvati, which can be no other than the Eupbrates. On their arrival in Egypt, they found the country peopled by evil beings and by a few impure tribes of men, who had no fixed habio tation: their leader, therefore, in order to propitiate the tutelary divinity of that rerion, fat on the bank of the Nile, performing acts of auftere de. votion, and praifing PAdmá-dévz̀ or the Goddefs refiding on the Lotos. PADMA at laft appeared to him, and commanded him to erect a pyramid, in honour of her, on the very fpot, where he then ftood: the affociates began the work, and raifed a pyramid of earth two crós long, one broad, and one high, in which the Goddefs of the Lotos refided; and from her it was called Padmámandira and Padma-mat'ba. By mandira is meant a temple, or palace, and by mat'ha, or mer'ba, a college, or babitation of fudents; for the goddefs herfelf inftructed Sharma and his family in the moft ufeful arts, and taught them the Yacfla-lipi, or voritung of the Y.uc/bas, a race of fuperior beings, among whom CuVE'RA was the chief. It does not clearly appeat on what occafion the Sharmicas left their firft fettlement, which had
fo auficious a beginning; but it has before been intimated, that they probably retreated to Ajaggara in the reigns of SANI and RAHU, at which time, according to the Puráns, the Dévatás, among whom the Sbarmices are reckoned, were compelled to feek refuge in the mountains: a fimilar flight of the Dévatás is, however, faid to have been caufed by the invafion of DevaNahusi or Dionysius.

The Padmá-mandir feems to be the town of Byblos in Egypt now called Babel; or rather that of Bábel, from which original name the Greeks made Byblos: it Atood on the canal, which led from the Balbitine branch of the Nile to the Pbatmetic; a canal, which is pretty well delineated in the Peutingerian table; and it appears, that the moft fouthern Ifeum of that table is the fame with the Byblos of the Grecks. Since this mound or pyramid was raifed but a thort time after that on the Cum duati, and by a part of the fame builders, and fince both have the fame name in Sanfcrit, whence it fhould feem, that both were infcribed to the fame divinity, we can hardly. fail to conclude, that the Padma-mandiras were the two Babels, the firf on the Euphrates, and the fecond on the Nile. The old place of worfhip at Byblos was afterwards much neglected, being fcarce mentioned by ancient authors: Stephanus of Byzantium fays it was very frong; and it was there, according, to Thucydides, and to the Perficks of Ctesias quoted by: Photius, that Inarus, king of Lybia, with his Atbenian auxiliaries and the Egyptions, who were attached to him, fuftained a fiege of a year and a half againft the whole Perfan army under Megabyzus; but, as it ftood in low marfhy ground, it probably owed its chief frength. to the vaft mound of earth mentioned in the Puranas, the dimenfions of which are, however, (as it is ufual in poetical defcriptions) much exaggerated. One of three grand branches of the Nile, in the vicinity of Padmá-mat'b, is calleds

Patbmeti by Ptolemy, and Phatini by Diodorus the Sicilian: both feem derived from the Sanfcrit corrupted; for Padma is in many Indian dialects pronounced Padm or Poutn, and in fome, Patma. To the fame root may be referred the appellation of the nome Pbthembuthit or Phtbenimutbi, as it is alfo written; for the Padnä-nat'b was in the nome Profopi= tis, which once made a part, as it evidently appears', of the nome Pbthembuthi, though it was afterwards confidered as a feparate diffrict in conféquence of a new divifion : Profopitis, moft certainly, is derived from a Greek word, and alludes to the fummit of the Delta feen on a paffage downthe Nile from the city of Meimpbis; but Potamitis, which was applied to Egypt itfelf, can hardly mean any more, than that the country lies on both fides of a arge river, which would not be a fufficient difcrimination to juftify that common etymology ; and we have already hazarded a conjeđture that Potamos, as a proper name of the Nile, relates to the holy and beautiful Padma.

Of the Yacha letters before-mentioned, I fhould wifh to give a particu. lar account ; but the fubject is extremely obfcure; Crinitus afferts, that the Egyptian letters were invented by Isss; and Isis on the Lotos was no other, moft certainly, than Padma'-de'vi', whom the Puránas mention as the inftructrefs of the Sbarmicas in the Yac/ha mode of writing. According to the Bráhmens, there are written characters of three principal forts, the Dévanágari, the Paifáchi, and the Yáçhi; but they are only variations of the fame original elements: the Dévanárari characters are ufed in the northern, the Paífáchi in the fouthern parts, of India, and the Yachi, it is faid, in Butan or in Tibet. The Pandits confider the Dévanagari as the mof ancient of the threc; but the beauty and exquifite perfection of them renders this very doubtful ; efpecially as Atri, whom they fuppote to have
received them from the Gods, lived a long time, as they fay, in the coun. tries bordering on the Cálí, before he repaired to the Dévánica mountains near Cábal, and there built the town of Dévanagar, from which his fyftem of letters had the name of Dévanágari. As to the Paifácba characters they are faid to have been invented by the Pális, or Shepherds, who carried them into Ethiopia: the Yac/ba-writing I had once imagined to be a.fyftemof hieroglyphicks; but had no authority from the Puránas to fupport that opinion, and Idropped it on better information; efpecially as the Bráhsens appear to have no idea of hieroglyphicks, at leaft according to our conception of them.

The Sbarmicas, we have obferved, rank among the Dévatais or demigods; and they feem to have a place among the Yaçhas of the Puráns, whom we find in the northern mountains of India, as well as in Etbiopia: the country, in which they finally fettled, and which bore the name of their anceftors, was in Sanc'ba-droip, and feems to comprife all that fubdivifion of it, which, in the Bbágavat and other books, is called Cufha-dwip without.

Several other tribes from India or Perfia fettled afterwards in the land of Sharma: the firf and moft powerful of them were the Palis, or Sbepberds, of whom the Puránas give the following account.
II. I'rs'inu, furnamed Pingáça, the fon of Ugra, lived in India to the fouth weft of Cábi, near the Naravindbyà river, which flowed, as its name implies, from the Vindbya mountains : the place of his refidence to the fouth of thofe hills was named Palli, a word now fignifying a large town and its diftrict, or Páli, which may be derived from Pála, a herds;
man or Shepherd. He was a prince mighty and warlike, though very religious; but his brother Ta'ra'c'hya, who reigned over the Vindhyan mountaineers, was impious and malignant; and the whole country was infefted by his people, whom he fupported in all their enormities: the good king always protected the pilgrims to Cáfí or Varánes in their paffage over the hills, and fupplied them with neceffaries for their journey; which gave fo great offence to his brother, that he waged war againft Irshu, overpowered him, and obliged him to leave his kingdom; but Maháde'va, proceeds the legend, affifted the fugitive prince and the faithful Palis, who accompanied him; conducting them to the banks of the Cali in Sancha-dwif, where they found the Sbarmicas, and fettled among them. In that country they built the temple and town Punyavati or Punya-nagarì; words implying holinefs and purity, which it imparts, fay the Hindus, to zealous pilgrims: it is believed at this day to fland near the Cáli on the low hills of Mandura, which are faid in the Puranas to confift of red earth; and on thofe hills the Pallis, under their virtuous leader, are fuppofed to live, like the Gandharvas on the fummit of Himálaya, in the lawful enjoyment of pleafures; rich, innocent, and happy, though intermixed with fome Mlécl'bas, or people who Jpeak a barbarous dialect, and with fome of a fair complexion. The low hills of Mandara include the tract called Meroë or Merhoë, by the Greeks; in the centre of which is a place named Mandara in the Jesuits' Map, and Mandera by Mr. Bruce, who fays, that of old it was the refidence of the Shepherd, or Palli, kings : in that part of the country the hills confift of red earth; and their name Mandara is a derivative from manda, which, among other fenfes, means /harp-pointed, from the root mand, which may have the fenfe of bbid to cut; fo that Mandaraparvata fignifies a mountain dividing the waters and forcing them to run different ways; an etymology confirmed by Mr. Bruce in his defcription
of Meroe, where he accounts for its being called an ifland. The compound Punya-nagari, or City of Virtue, feems to imply both a feat of government and a principal temple with a college of priefts: it was, therefore, the celebrated city of Meroë; a word which may be derived from Merha (vidyart'binọm grĭbam, the manfion of fudents, as it is explained in the dictionaries) or from Mrara, of whom we fhall prefently fpeak.

To the king of the Pailis, named alfo Palli from thofe, whom he governed, Mahadéva gave the title of Nairrita, having appointed him to guard the nairriti, or fouthweft ; and, though he was a Pijácha by birth, or naturally bloody-minded, yet he was rewarded for his good difpofition, and is worlhipped in India to this day among the eight Dic-palas, or guardians of as many quarters, who conftantly watch, on their elephants, for their fecurity of Cási, and other holy places in $\mathcal{F}$ ambu dwípa: but the abode of his defcendants is declared in the Puranas to be fill on the banks of the Cálí or Nílá. One of his defcendants was Lubdhaca, of whom an account will be given in a fubfequent fection; and from Lubdhaca defcended the unfortunate Lina'su, not the bard Heridatta, who had alfo that name, and who will be mentioned hereafter more particularly, but a prince whofe tragical adventures are told in the Rajaniti, and whofe death was lamented annually by the people of Egypt: all his misfortunes arofe from the incontinence of his wife Yo'ga Bhrast'a' or Yo'Ga' cashta; and his fon Maha'sura, having by miftake committed inceft with her, put himfelf to death, when he difcovered his crime, leaving iffue by his lawful wife. May we not reafonably conjecture, that Lubdiaca was the Labdacus, Lina'su, the Laius and Yo'gacashta the jocasta, of the Greeks? The word Yadupa, from which Edipus may be derived, fignifies king of the Yadu family, and might have been a title of the unhappy Maha'sura.

IHis account of the Pallis has been extracted from two of the eighteen Puránas, entitled Scanda, or the God of War, and Brammánda, or che Mundane Egg. We mult not omit, that they are faid to have carried from Indianot only the At'barva-véda, which they had a right to poffefs, but even the three others, which they acquired clandeftinely, fo that the fourbooks of ancient Indian fcripture once exifted in Egypt; and it is remarkable, thatthe books of Egyptian fcience were exactly four, called the books of Harmoniz or Hermes, which are fuppofed to have contained fubjects of the higheft antiquity $(a)$ : Nonnus mentions the firft of them as believed to be cceval with the world ; and the Brubmens affert, that their three firf. Védas exifted before the creation.

The Pallis, remaining in India, have different names; thofe, who dwell to the fouth and fouthweft of Benáres, are, in the vulgar dialects, called Palis and Bhizls; in the mountains to the north-eaft of that city, they are in Sanfcrit named Cirátas; and, toward the Indus, as I am informed, a tribe of them has the appellation of Harita: they are now confidered as outcafts, yet are acknowledged to have poffeffed a dominion in ancient times from the Indus to the eaftern limits of Bengal, and even as far as Siam. Their anceftors are defcribed as a moft ingenious people, virtuous, brave; and religious; attached purticularly to the worfhip of Maha'déva under the fymbol of the Linga or Pballus; fond of commerce, art, fcience; And ufing the Paifachi letters, which they invented. They were fupplanted by the Rajaputras; and their country, before named Páliftbán was afterwards called Rájaputana in the vulgar dialect of their conquerors. The hiftory of the Puillis cannot fail to be interefting, efpecially as it will be found much connected with that of Europe; and I hope foon to be fupplied

[^22]with materials for a fuller account of them: even their miferable remains in India muft excite compaffion, when we confider how great they once were, and from what height they fell through the intolerant zeal and fuperitition of their neighbours. Their features are peculiar; and their language dif. ferent, but perhaps not radically, from that of other Hindus: their villages are fill called Palli; many places, named Palita or, more commonly, Bhilata, werc denominated from them; and in general Palli means a village or town of fepherds or herdfmen. The city of Irshu, to the fouth of the Vindbya mountains, was emphatically ftyled Palli, and, to imply its difinguifhed eminence, Sri-pulli: it appears to have been fituated on or near the fpot, where Bopál now ftands, and to be the Sari-palla of Proo eemy, which was called Palibotbree by the Greeks, and, more correctly in the Peutingerian table, Palifotra; for the whole tribe are named Paliputras in the facred books of the Hindus, and were indubitably the Palibotbri of the ancients, who, according to PLINY, governed the whole country from the Indus to the mouth of the Ganges; but the Greeks have confounded them and their capital city with the Baliputras, whofe chief town, deo nominated from them, had alfo the name of Rajagriba, fince changed into Rajamaball: as it was in the mandala, or circle, of the Baliputras, it is ime properly called by Ptolemy, who had heard that expreffion from travellers, Palibotbrce of the Mandalas.

We have faid, that I'rsifu had the furname of Pingácfha, or yellow-eyed, but, in fome dictionaries, he is named Pingáfá or yellowe as fine gold; and in the track of his emigration from India, we meet with indications of that epithet: the $\mathcal{T u r k i / b}$ geographers confider the fea-coaft of Yemen, fays Prince Kantemir, as part of India, calling its inhabitants yellow Indians; the province of Gbilán, fays Texeira, has alfo the appellation of Hindu'b

Asfar, or Yellow India; and the Cafpian itfelf is by the Turks called the Yellow Sea (a). This appears to be the origin of the Panchoean tribes in Arabia, Egypt, and Etbiopia, whofe native country was called Pancbcea; and the iflands near it, Pancbcean: though DroDOrus of Sicily, attempting to give a defcription from Euhemerus of Panchcea or Pingáa, has confino ed it to an inconfi derable ifland near Dwáracà, yet it was really India itfelf, as his defcription fufficiently fhows; and the place, which he names Oceanida, is no other than old Sagar at the mouth of the Ganges; the northern mountain, which he fpeaks of, is Méru; and the three towns near it are defcribed in the Purans with almoft the fame appellations.

Orus the fhepherd, mentioned in ancient accounts of Egypt, but of whom few particulars are left on record, was, moft probably, Irshu the Palli; whofe defcendants, the Pingác/has, appear to have been the Phenician fhepherds, who once eftablifhed a government on the banks of the Nile: the Phenicians firft made their appearance on the fhores of the Erythrean, or Red fea, by which we muft underftand the whole Indian ocean between Africk and the Malay coaft ; and the Puránas thus reprefent it, when they defcribe the waters of the Arunódadbi as reddened by the reflection of folar beams from the fouthern fide of mount Suméru, which abounds with gems of that colour: fomething of this kind is hinted by Pirny (b). It is afferted by fome, (and from Several circumftances it appears moft probable), that the firf fettlements of the Pbenicians were on the Perfian gulph, which is part of the Erythrean fea: Justin fays, that, having been obliged to leave their native country (which feems from the context to have been very far eaftward) they Seitled near the Affyrian lake, which is the

[^23]Perfan guiph; and we find an extenfive diftrict, named Patefine; to the eaft of the Euphrates and Tigris. The word Palefine feems derived from Palliftbán the feat of the Pallis, or fhepherds (a) : the Samaritans, who before lived in that country, feem to have been a remnant of the Pallis, who kept themfelves diftinct from their neighbours, and probably removed for that reafon to the Palefine on the fhore of the Mediterraiean; but, after their arrival in that country, they wifhed to ingratiate themfelves with the Ferws and Phenicians, and, for that purpofe, claimed affiaity with them; alledging fometimes, that they were defcended from JACOB, and at other times, that they fprang from Pinkifas; a word pronounced alfo Phineas, and fuppofed (but, I think, lefs probably) to mean the fon of Aaron. Certainly, the fews looked upor the Samaritans as a tribe of Philifines; for mount Garizim was called Palitan and Peltan. Tre: mellius, in the wifdom of the fon of Sirach, writes Palifchtbca, but in the Greek we find the Philiftines, wobo refide on the nount of Samaria; (b). but let us return to Palefine in Adyria.

Whether the pofterity of Pingacfla, or the yellow Findus, divided themfelves into two bodies, one of which paffed directly into Pbenice, and the other went, along the Arabian fhores, to Aby/finia, or whether the whols nation firf entered the fouthern parts of Arabia, then croffed over to Africk, and fettled in the countries adjacent to the Nile, I cannot determine ; but we have ftrong reafons to believe, that fome or all of them re mained a.confiderable time on the coaft of Yeinen: the Pancbean tribes in that country were confidered as Irdians; many names of places in it, which' ancient geographers mention, are clearly Sanfrrit, and moft of thofe names
(a) Plin. 1ib. 6. cap. 70,
(c) See Reland De Monte Garizimo
(b) Chap. 50.0. 36.
(d) Odyis. 4. 568.
are found at prefent in Indic. The famed Rbadamantbus, to whom Homer gives the epithet yeiloze, and his brother Minos, were, it feems, of Phenician extraction: they are faid to have reigned in Arabia, and were, probably, Pallis defcended from Pinga'csifa, who, as we have obferved, were named alfo Cirátas, whence the weftern ifland, in which Minos or his progeny fettled, might have derived its appellations of Curetis (a) and Crete. In fcripture we find the Pcbeti and Kerethi named as having fettled in Palcfine; but the fecond name was pronounced Krethi by the Grcek interpreters, as it is by feveral modern commentators: hence we meet with Krita, a diftrict of Palefine, and at Gaza with a Jupiter Cretcus, who feems to be the Critéfwara of the Hindus. In the fpoken Indiun dialeats, Palita is ufed for Palli, a herdfman; and the Egyptians bad the fame word: for their priefts told Herodotus, that their country had once been invaded by Pirilitius the Shepherd, who ufed to drive his cattle along the Nile, and afterwards built the pyramids. (b) The Phyllito of Ptolemy, who are called Bulloits by Captain R. Covert, had their name from Bbilata, which in India means a place inhabitel by Pallis or Bbils: the ancient Shepherds made fo confpicuous a figure in Egypt, that it is needlefs to expatiate on their hifory ; and for an account of the Shepherds in or near Abyfinia, I refer to the Travels of Mr. Bruce. Let us return to Meroë.

The writers of the Puranas, and of other books efteemed facred by the IFindus, were far from wifhing to point out the origin of mere cities, how diftinguihed foever in civil tranfactions: their object was to account for

[^24]the foupdation of temples and for places of plorimage; but it ofen happened, that feveral places of worfip were in different periods erected at a fmall diftance from each other; and, as the number of inhabitants increafed round each temple, an immenfe town was at length formed out of many detached parts; though we are never told in the Puranas, whether thofe confecrated edifices were contiguous or far afunder. This happened to Mem phis, as we fhall prefently fhow; and it feems to have been the cafe with Punyavati and with Merba or Mrira: thofe words are written Met'ha and $M r i d \dot{a}$, but there is fomething fo peculiar in the true found of the $N a a_{e}$. gari letters $t a, t^{\prime} h a, d a, d l^{\prime} b a$, that they are generally pronounced, efpecially when they are placed between two vowels, like a palatial ra; the vowel rühas likewife a great peculiarity, and, as we before obferved on the word $K j b i n$ for Crifina, is frequently changed : now the whole Troglodytica was named Midoë or Mirhoe; and he who Thall attentively confider the paffage in Pliny, where the towns of Midoë and Afal are mentioned, will perceive, that they can be no other than Meroë and IEJar. This inters change of da and ra fo exactly refembles the Sanfcrit, that the name of Meroé feems more probably derived from Mridd, than from Metha, or a: college of priefts: efpecially as the Pallis were almoft exclufively attached to the worthip of Mrira, or Maha'de'va: a place in Pegu, called Mrĭra from the fame deity, has in Ptoxemy the name of Mareura, and is now prow nounced Mero by the natives.

According to the Purains, the refidence of king I't (who formerly ruled over Egypt and Ethiopia) was on the banks of the Cáli river, and had thename of Mrĭra, or Mrira-fibán, becaufe its principal temple was dedicated to Mrira and his confort Mrirání, or Párvatí: now, when we read in Stepranas of Byzantium, that the fort of Merufum near Syracues
was believed by fome to have taken its name from Meroë in Ethiopia, we mult underfand, that it was named from a place of worfhip facred to Mrira, the chief Etbiopian divinity ; and the fame author informs us, that Merceffa Diana, or Mrire'swarí De'vi, who is reprefented with a crefcerit on her forehead, was adored at Merufium in Sicily. We may conclude, that her hufband Mríre'swara, was the God of Meroé, called a barbarous deity by the Greeks, who, being themfelves unable to articulate his name, infifted that it was concealed by his priefts. It has been imagined, that Cambyses gave the name of his fifter and wife to Meroë; but it is very dubious, in my opinion, whether he penetrated fo far as that city : in all events he could have made but a fhort ftay in the diftrict; where, as he was abhorred by the Egypiians and Ethiops, it is improbable, that a name impofed by Him, could have been current among them; and, whatever might have been his firft intention as to the name of his wife, yet, when he had killed Her, and undergone a feries of dreadful misfortunes in thofe regions, it is moff probable, that he gave himfelf nofurther trouble about Her or the country,

IN the book, entitled Saiva-ratnácara, we have the following fory of king $1^{\circ} \mathrm{T}$, who is fuppofed to have been $\mathrm{Mrǐi}_{\text {ra }}$ himfelf in a human fhape, and to have died at Meroë, where he had long reigned.
$\mathrm{O}_{\mathrm{N}}$ the banks of the Nilá there had been long contefts between the Dévatás and the Daityas; but the latter tribe having prevailed, their king and leader Sanc'ha'sura, who refided in the ocean, made frequent incurfions into the country, advancing ufually in the night and retiring before day to his fubmarine palace : thus he deftroyed or made captive many excellent princes, whofe territories and people were between two fires; for, while

Sanc'ha'sura was ravaging one fide of the continent, Cracacha, king of Crauncha-dwip, ufed to defolate the other; both armies confinting of favages and cannibals, who, when they met, fought together with brutak ferocity, and thus changed the moft fertile of regioas into a barren defert. In this diftrefs the few natives, who furvived, raifed their hands and hearis to Bhagava'n, and exclaimed: 'Let Him, who can deliver us from thefo s difafters be our king,' ufing the word I'r, which re-echoed through the whole country. At that inftent arofe a violent form, and the waters of the Cálí were ftrangely agit:ted, when there appeared from the waves of the river a man, afterwards called I'T, at the head of a numerous army, faying abhayam, or there is no fear; and, on his appearance, the Drityas defeended into Pátála, the demon Sancera'sura plunged into the ocean, and the favage legions preferved themfelves by precipitate flight. The king Yr, a fubordinate incarnation of Mrira, re-eftablifhed peace and profperity through all Sanchadweípa, through Barbara-défa, Mif a-fibán, and Arva $\Omega^{\prime}{ }^{\prime} a^{\prime}{ }^{n}$, or Arabia; the tribes of Cutila-céfas and Hájyasilas returned to their former habitation, and juftice prevailed through the whole extent of his dominions: the place, near which he fprang from the middle of the Nela, is named Ita, or I'т $-\Omega^{\prime} b b^{\prime} n$, and the capital of his cmpire, Mrazra or Mryo vá- $e^{3} b a_{n}^{\prime} n$. His defcendants are called Ait, in the derivative form, and their country, Aitéya: the king himfelf is generally denominated A.IT, and was thus erroneoufly named by my Pandit and his friends, till after a long fearch they found the paffage, in which his adventure is recorded. The Greeks, in whofe language 'aëtos means an Eagle, were very ready, as ufual, to find an etymulogy for Ait: they admit, however, that the Nile was firt called Aëtos, after a dreadful fwelling of the river, which greatly alarmed the Etbiopians (a); and this is conformable to what we read in the Saiva-ratná,

[^25]cara. At the time of that prodigious intumefcence in the river it is faid, that Prometheus was king of Egypt; but Prometheus appears to be no other than Pramat'he'sa, a title of Mrira, fignifying Lord of the Pramat'has, who, are fuppofed to be the five fenjes; and, in that character, he is believed to have formed a race of men, Stephanus of Byzantiume and Eustathius(a) affert, that Aetus was an Indian or Hindu; but, as no* thing like this can be collected from the Puranas, they confounded, I imagine, It or Ait with Yadu, of which I fhall inftantly fpeak. The chief ftation of IT, or Aitam, which coull not have been very diffant from Mria rafthan, I take to be the celebrated place of worhip, mentioned by STRAba (b), and by Drodorus called Avatum (c), which was near Meroë: it was the fame, I believe ${ }_{r}$, with the Tuthis of Prolemy and Tatu of Pliny; fituated in an ifland, which, according to Mr. BRUCE, is at prefent known' by the name of Kurgos, and which was fo near Mreeö as to form a kind of harbour for it.

Tife origin of the Yátic is thus related. UGRASE'NA, of UGRA, was father of De'vaci', who was Crishna's mother; his foncansa, having impr foned him, and ufurped his throne, became a mercilefs tyrant, and fhowed a particular animofity againt his kinfmen the Yádavas, or defcendants of Yadu, to whom, when any of them approached him, he ufed to fay yatu, or be gone, fo repeatedly, that they acquired the nickname of Yátu, inftead of the refpectable patronymick, by which they had been diftinguifhed. Cansa made feveral attempts to deftroy the children of De'vaci'; but Crishna, having been preferved from his machinations, lived to kill the tyrant and refore Ugraséna, who became a fovereign of the world. Du:

[^26]ring the infancy however, of Crishna, the perfecuted Yadavas emigrated from India, and retired to the mountains of the exterior Cushaddrôt or Aby/finia: their leader Yatu was properly entitled Ya'davéndra, or Prince of Yádavas; whence thore mountains acquired the fame appellation. They are now called Our'ímidr'́, or Arwemidré, which means, we are told, the Land of Arve, the firet king of that country (a); but, having heard the ${ }_{t r u i}$ Sanfcrit name pronounced, in common fpeech, Yarevindra, I cannot but fufpect a farther corruption of it in the name of the Abyffinian mountains. Thofe Indian emigrants are defcribed in the Puráns as a blamelefs, pious, and even facred, race; which is exactly the character given by the ancients to the genuine Etbiopians, who are faid by Stephanus of Byzantium, by Eusebius, by Philostratus, by Eustathius, and others, to have come originally from India under the guidance of Aetus, or Yátu: but they confound Him with king Ait, who never was there: Y $\mathrm{Y}^{\prime} \mathrm{D}_{\mathrm{A}}=$ be'ndra (for fo his title is generally pronounced) feems to be the wife and learned Indian mentioned in the Pafchal Cbronicle by the name of Andubarius (b). The king or chief of the Yátus is correctly named $\mathrm{Y}_{A^{\prime}}$ tupa, or in the weftern pronunciation, J $\mathrm{A}^{\prime}$ TUPA; and their country would, in a derivative form, be called Fátupéya: now the writers of the Univerfal Hiftory affert, that the native Ethopians give their country, even at this day, the names of Iiopia and Zaitiopia. There can be little or no doubt, that Ya'tupa was the king 压thiops of the Greek Mythologifts, who call him the fon of Vulcan; but, according to the Puráns, that defcent could not be afcribed to $\mathrm{Y}_{\Lambda^{\prime} \text { 't }}$, though it might, perhaps, to king I'x ; for it will be fhown, in a fubfequent part of this effay, that the Vurcan of Egypt was alfo confidered by the Hindus as an avántara, or fubordinate incarnation, of Maha'de'va。

[^27]Not only the land of Egypt and the countries bordering on the Nile, but even Africa itfelf, had formerly the appellation of Aetria; from the numerous fettlements, I fuppofe, of the Ahirs or Shepherds, as they are called in the fpoken Indian dialects: in Sanfcrit the true word is Abbir, and hence, I conceive, their principal fation in the land of Gófhen, on the borders of Egypt, was named Abaris and Avaris ; for Ghofheñà itfelf, or Ghößßáyana, means the abode of Jhepherds, or herdfmen; and Ghofha, though it alfo fignify a gópal, or Cowherd, is explained in Sanforit dictionaries by the phrafe Abhio rapalli, a town or village of Abbiras or Pallis.

The mountains of Abyfinia have in Sanjcrit the name of Nifhadba; and from them flowed the Nandà, (which runs through the land of $P_{u} / /{ }^{2}$ paverJham about the lake Dembea) the Little Cry̆/hná, or Tacazzè, and the Sanc'hanágá, or Mareb; of which three rivers we fhall hereafter fpeak more particularly. Since the Hindus place another Méru in the Southern Hemifphere, we muft not be furprized to find the Nilá defcribed by them as rufhing over three ranges of r antains, which have the fame names with three fimilar ranges, over which the Gangá, in their opinion, forces its way, before it enters the plains of India: thofe mountains are the Himálaya, or Seat of Snow, the Nilhadha, and the Hémaciita, or with a golden peak. The Hino dus believe, that a range of African hills is covered with fnow: the old Egyptians, Greeks, and Romans believed the fame thing; and modera travellers affert, that fnow falls here and there in fome parts of Africa; but the fouthern Himálaya is more generally called Sitánta, which implies the end, or limit, of cold. On the northern Himálaya is the celebrated lake Mánafa-faras or Mánafaróvara, near Suméru, the abode of Gods; who are reprefented fometimes as reclining in their bowers, and fometimes as making aërial excurfions in their $Y^{\prime}$ mánas, or beaven'y cars: thuson, or within, the
fouthern Himálaya we find the lake of the Gods, which correfponds with that in the north; with this difference, that the exiftence of the fouthern lake cannot be doubted, while that of the northern may well be called in queftion (unlefs there be fuch a lake in the unknown region between Tibet and the high plains of Bokbára); for what the Sannyáfis call Mánufaióior is in truth the Vindbyafaras of the Puráns. Beyond the fouthern lake of the Gods is another Me'ru, the feat alfo of divinities and the place of their airy jaunts, for it is declared in the Puráns, as the Bráhmens inform me, that, within the mountains towards the fource of the N.lí, there are delightful groves inhabited by deities, who divert themfelves with journeying in their cars from hill to hill: the Greeks gave to that fouthern Méru the appellation of © Eqư öxuus in allufion to the Vimáns, or celeftial cars; but they meant a range of hills, according to Pliny and Agathemerus (a), not a fingle infulated mountain. Pliny, who places that mountainous tract in the fouth of Etbiopia, makes it project a great way into the fouthern ocean: its weftern limit is mentioned by Prolemy; and the Nubian geographer fpeaks of all the three ranges. By the Cbariot of the Gods we are to underftand the lofty grounds in the centre of the African peninfula, from which a great many rivers, and innumerable rivulets flow in all directions: fires were conftantly feen at night on the fummit of thofe highlands; and that appearance, which has nothing very frange in it, has been fully accounted for by modern travellers.

We come now to the Háfyasilas or Habafhis, who are mentioned, I am told, in the Puranas, though but feldom; and their name is believed to have the following etymology: C'Harma, having laughed at his father Satyavrata, who had by accident intoxicated himfelf with a fermented liquor,

[^28]was nicknamed Háfyasila, or the Laugher; and his defcendants were called from him Háfyasilas in Sanfcrit, and, in the fpoken dialects, Háfyas, Hanfelis, and even Habafhis; for the Arabick word is fuppofed by the Hindus to be a corruption of Háfya. By thofe defcendants of C'harma they underftand the African negros, whom they fuppofe to have been the firft inhabitants of Abvifinia; and they place Aby/finia partly in the dwipa of Culba, partly in that of Sanciba Proper. Dr. Pocock was told at the Cataracts, that beyond them, or in the exterior Cufha-dwip, there were feven mountains; and the Brábmens particularly affect that number: thus they divided the old continent into feven large iflands, or peninfulas, and in each ifland we find feven diftricts with as many rivers and mountains. The following is the Pauránic divifion of Cuha-dwip called exterior with refpect to that of $\mathcal{F a m b u}$ :

| Districts. | Mountains. | Rivers. |
| :--- | :--- | :--- |
| 'Apyáyana. | Püfhpaverfha. | Nandá. |
| Páribhadra. | Cumudádri. | Rajaní. |
| Dévaverfla. | Cundádri. | Cubü. |
| Ramanaca. | Vámadéva. | Sarafuati. |
| Sumanafa. | Satasringa. | Siniváli. |
| Suróchana. | Sarafa. | Anumati. |
| Avïjnyáta. | Sabafrafruit. | Rácá. |

IT feems unneceffary to fet down the etymologies of all thefe names; but it may not be improper to add, that 'Sataśringa means with a bundred peaks; and Sabafrafruti, with a thoufand Freams.

Between the interior Cufta-droip and Sinc'ba proper lies, according to the Purans, on the banks of the Níha, the country of Barbara; which in-
cludes, therefore, all the land between Syene and the confluence of the Nie with the Tacazzè, which is generally called Barbara and Barbar to this day; but, in a larger fenfe, it is underfood by the Pauranics to comprize all the burning fands of Africa. Barbara-défa, which anfwers to the loca arida et ardenicia mentioned by Pliny as adjacent to the Nile, was a fertile and charming country, before it was burned, according to the Hindu legends, which will: be found in a fubfequent fection, firf by the approach of Surya or the Sun, and afterwards by the influence of SANi or Saiurn. Its principal city, whereBarbaréfwara had a diftinguifhed temple, was called Baxbara-fthan, and ftood. on the banks of the Nile: the Tamóvanfa, or Children of TAmAs, refided in it; and it is, moft probably, the town of TAMA, which Pliny places on the eaftern banis of the Nile, an hundred and twenty nine Roman miles above. Syere (a).

The crude noun Tamas, in the firft cafe Tamah, and Tamó before certain. confonants; means darkne/s, and it is alfo a title of SANI; whofe defcendants are fuppofed to have lived in Barbara, and are reprefented as an ill-clothed half-ftarved race of people, much like the prefent inhabitants of the fame country. The following fables appear to be aftrological, but might have had fome foundation in hiftory, as the Hindu regents of planets were in truth old philofophers and legiflators, whofe works are fill extant.

Tamah, or Saturn, had two wives St'havira' and Jarat'ha' whoferames imply age and decrepitude: by the former he had feven fons Mrityu, Ca'la, Da'va, Ulca', Ghóraz Admama, Cantaca; by the latter, only two; Ma'ndya and Guifica. The fons of Ma'ndya were As'ubha, Arisht'ha, Gulma, Pli'fargithofe of Guifca were Gad'ha and Gra-

HiLA : they were all abominable men, and their names denote every thing, that is horrid. It is exprefly faid in the Puranas, that TAmaH was expelled from Egypt exactly at the time, when Arama, a grandfon of Satyavrata, died ; that his children retired into Barbara; and that his grandfon Gulma reigned over that country, when it was invaded by Cape'nasa, who will prefently appear, beyond a doubt, to be Cepheus. The Tamóvanfas, are defribed as living in Barbara Proper, which is now called Nubia, and which lay, according to the Indian geography, between the dwipas of SANC'HA and of Cusha zeithout: but the other parts of Barbiara toward the mouths of the Nile were inhabited by the children of $\mathrm{RA}^{\prime} \boldsymbol{H} U^{\prime}$; and this brings us to another aftronomical tale extracted from a book entitled Chintámazii.
$\mathrm{RA}^{\prime} \boldsymbol{H U}$ is reprefented, on account of his tyranny, as an immenfé riverdragon, or crocodile, or rather a fabulous monfter with four talons, called Grábaz from a root implying violent $\int$ eizure : the word is commonly interpreted hänger, or fhark, buts in fome dictionaties, it is made fynonymous to nacra, or crocodile; and in the Puranar, it feems to be the creature of poetical fancy. The tyrant, fowever, in his human hape had fix children, Dhwaja, Dhúmra, Sinha, Laguda, Dand'a, and Cartana, (which namesare applied to comets of different forms) aill equally mifchievous with their father, in his allegorical chasacter he was decapitated by Vishnu; his lower extremity became the Cétu, or, dragon's taill and his head, fill called Ráhus, the afcending node; but the head is fuppofed, when-it fell on earth, to have
 (to which the Greeks gave the name of Heroöpolis), where it was workipped and gave oracular anfwers; which may be the origin of the fpeaking heids, mentroned by Jerwifh writers as prepared by magick. The pofterity of R.A'HU were from him denominated Grabas; and they might have been the an-
ceftors of thofe Graii, or Greeks, who came originally from Ezyft : it is remarkable, that Hesiod, -in his Theogony, mentions women in Africa named Graiai, who had fine complexions and were the offspring of Phorcys and Ce'to. The Grábas are painted by the writers of the Puránas in moft unfayourable colours; but an allowance muft be made for a fpirit of intolerarance and fanaticifm: RA'HU was worfhipped in fome countries, as Hallal, or Lucifer (whom in fome refpects he refembles) was adored in the eaftern parts of Egypt and in Arabia the Stoiny and the Defert, according to Jeroni in the Life of Hilarion; but, though we muft fuppofe, that his votaries had a very different opinion of the Gráhas from that inculcated by the Hindus, yet it is certain, that the Greeks were not fond of being called Graioi, and very feldom gave themfelves that appellation.

The fandy deferts in Egypt to the eaft and weft of the Nile are confidered in the Puráns as part of Barbaras and this may account for what Herodotus fays of the word Barbaros, which, according to Him, was applied by the Egyptiand to all," wobo weire unable to speak their language, meaning the in habitants of the defert, who were their only neighbours: fince the people of Barbara, or children of SATURN, were looked upon as a cruel and deceiffuil race, the word was afterwards transferred to men of that difpofition; and the Greels,s, who had lived in Egypt, brought the appellation into their new fettlements, but feem to have forgotten its primitive meaning.

On the banks of the Nila we find the Ciřlbna-giri, or Black Mountain of Berbaxa; which can be no other than the black and barren range of hills, which Mr. Bruce faw at a great diftance towards the Nile from Tarforvey: in the caves of thofe mountains lived the Tamavatfas, of whom we fhall fpeak fhereafters. Though the land of Barbara be faid in the Puráns to lie between
the dwipas of Cusha and SANc'Ha, yet it is generally confidered as part of the latter. The Nile, on leaving the burning fands of Barlara, enters the country of SANC'HA proper, and forces its way through the Héma-cuita, or Golden Mountains ; an appellation, which they retain to this day: the mountain called Panchryfos by the Greeks, was part of that range, which is named Ollaki by the Arabs; and the Nubian geographer fpeaks of the Golden Mountains, which are a little above Ofwán. Having paffed that ridge, the IVila enters Cardama-fi'bán, or the Land of Mud; which obvioully means the fertile Egyptian valley, fo long covered with Mud after every inundation: the Puranas give a dreadful idea of that muddy land, and affert that no mostal durft approach it ; but this we muft underftand as the opinion formed of it by the firft colonifts, who were alarmed by the reptiles and monfters abounding in it, and had not yet feen the beauty and richnefs of its fertile ftate. It is exprefly declared to be in Miśra-fl'bán, or the Country of a mixed People; for fuch is the meaning in Sanfcrit of the word Alisra: fometimes the compound word Misra- $f^{\prime}$ bán is applied to the Lower Egypt, and fometimes (as in the hiftory of the wars of Capénafa) to the whole country ; in which fenfe, I am told, the word Gupta-fi' bán is ufed in ancient books, but I have never yet feen it applied fo extenfively. Agupta certainly means guaráed on all fides; and Gupta, or gruarded, is the name of a place reputed holy; which was, I doubt not, the famed Coptos of our ancient Geographers; who mention a tripartite arrangement of Egypt exactly conformable to the three divifions of Miśra-fibán particularly recorded in the Puránas: the firf of them was Tapovina, the woodlands of Tapas, or aufere devotion, which was probably Upper Egypt, or Thebais; the fecond, Miśra Proper, called alfo Cantaca-désa, or the Land of Thorns, which anfwers to the Lower Egypt or Heptanomis; and the third, Aranya and Atavi, or the Forefts emphatically fo named, which were fituated at the months of the Nilde, and formed what we call the Deltc.

The firt inhabitants of Egypt found, on their arrival, that the whole country about the mouths of the Nile was an immenfe foreft; part impervious, which they called Alavì, part uninhabited, but practicable, which had the name of Aranya

Tapóvana feems to have been always adapted to religious aufterities; and the firf Cbriftian anchorets ufed to feclude themfelves in the wilds of Thebes for the purpofe of consemplation and abftracted piety: thus we read, that the Abbot Расномius retired, with his difciples, to the wildernefs of Tabenna, and there built a Monaftery, the remains of which are ftill vifible, a day's journey below Dendera, near an ifland now called Tabenna, and, according to Sicard, a little below the fite of Thebes: The country around Dendera is at this day covered with forefts of Doum; a tree, which fome defribe as a dwarf palm, and others as a Rbamnus: thence Dendera was called by Juvenal the Joady Tentyra.

There can be no doubt, that Tapovana was Upper Egypt, or the Thebais; for feveral places, the fituation of which will be clearly afcertained in the courfe of this effay, are placed by the authors of the Purans in the forefts of Tapas: the words Thebaius and Thebinites are both faid to be derivatives of Thebai; but the fecond of them feems rather derived from Tapóvan or Tabenna. So fond are nations of accommodating foreign words to their own language, that the Arabs, who have changed Tapofiris into Abü'Sair, or Fatber of Travel, have, in the fame fpirit, converted Tabenna into Medinatabiná, or the Town of our Father; though fome of them call it Medinat Tabu from Tapo, which an Arab could not pronounce. The principal place in this divifion was Cardama-ft'balt which is mentioned in the Puráns as a temple of confiderable note: the legend is, that Gupte'swara and his confort had long
been concealed in the mud of the Nîla near Gupta-ft'bán, or Coptos, but at length fprang from it and appeared at Cardama-ft'bali both wholly befineared with mud, whence they had alfo the titles of Cardame'swara and Cardaméswarí. We may obferve, that Gupta fignifies both guarded and concealed, and in either fenfe may be the origin of the word Aiguptos: as to Cardama, the canine letter is fo often omitted in the vulgar pronunciation of Sanforit words, that Cardam, or Cadam, feems to be the Cadmus of the Greeks; and we thall hereafter illuftrate this etymology with circumftances, which will fully confirm it.

Misra-st'ha'n is called alfo Mifra and Mifrena in the facred books of the Hindus; where it is faid, that the country was peopled by a mixed race, confifting of various tribes, who, though living for their convenience in the fame region, kept themfelves diftinct, and were perpetually difputing either on their boundaries, or, which is moft probable, on religious opinions: they feem to be the mingled people mentioned in Scripture. To appeafe their feuds, Brahmá himfelf defcended in the character of Iswara; whence Mifréfwara became one of his titles. The word Mijr, which the Arabs apply to Egypt and to its metropolis, feems clearly derived from the Sanfcrit; but, not knowing its origin, they ufe it for any large city, and give the appellation of Almifrán in the dual to Cüfa and Bafra: the fame word is allo found in the fenfe of a boundary or line of Separation. Of Mifr the dual and plural forms in Hebrew are Mifraim and Mifrim, and the fecond of them is often applied in fcripture to the people of Egypt. As to Mazor, or, more properly, Masúr, there is a difference of opinion among the tranflators of ISAIAH: (a) in the old Englifh verfion we find the paffage, in which the word occurs, thus rendered, "the brooks of defence thall be emptied and dried up;" but

$$
\text { (a) Chap. } 19 \text { v. 6, See II. Kings, 1.8, } 24 .
$$

Bifhop Lowt L , after fome commentators, changes the brooks of defence, into the canals of Egypt; and this is obvioully the meaning of the prophet; though the form of the word be more like the Arabian plural Mufir than any form purely Hebrew.

Stephanus of Byzantium fays, that Egypt was called Myara by the Pbenicians; but furely this is a miftake for Myfara: according to Suidas and Eusebius it had the name of Mefraia; but this, I conceive, fhould be written Mefraia from Mifreya, which may be grammatically deduced from the root Mifr. The name Cantaca défa was given to Mffra for a reafon fimilar to that of Acantbus, a town and territory abounding in thorny trees.

It was an opinion of the Egyption priefts, and of Herodotus allo, when he was in their country, that the valley of Egypt was formerly an arm of the fea, which extended as far as the Cataracts; whether this opinion be wellfounded, is not now the queftion; but a notion of the fame kind occurs in the Puránas, and the Brábmens account, in their way, for the alteration, which they fuppofe to have happened. Pramóda, they fay, was a king of Sanc"ba-dwozp Proper, and refided on the hore of the fea called Sanc'lódadbi: the country was chiefly peopled by Mlécb'bas, or fuch as fpeak barbaw roufly, and by favage Ráchbafas, who are believed to be evil demons; nor was a fingle Brábmen to be found in the kingdom, who could explain the Védas and inftruct mankind in their duties. This greatly afflicted the pious king; till he heard of a R步hi, or boly man, eminent in piety and in facred knowledge, who lived in the 'country of Barbaras and was named $\mathrm{PI}^{\prime} \mathrm{T}^{\prime} \mathrm{HI}$ ' or
 he was vifited by $P_{r a m o ́ d a ~ i n ~ p e r f o n, ~ a n d, ~ a f t e r ~ m a n y ~ i n t r e a t i e s, ~ p r e v a i l e d ~}^{\text {, }}$ on to accompany the king to Sancibadwipa; but, when he faw the incosxi-
gible wickednefs of its inhabitants, he was wholly in defpair of effecting any good in that country, and paffed the night without deep. Early in the morning he repaired to the fea-fhore, where, taking waterand Cusba-grafs in his hand, he was on the point of uttering an imprecation on SANC'Ho'daDHi : the God of the Ocean perceived his intent, and threw himfelf trembling at his feet, alking humbly what offence he had committed. "Thy " waters, anfwered the Saint, wafh a polluted region, into which the king " has conducted me, but in which I cannot exift : give me inftantly a purer " piece of land, on which I may refide and perform the duties of religion." In that inftant the fea of Sanc'ha retired for the fpace of a hundred yojanas, or 492 miles, and left the holy man in poffeffion of all the ground appearing on that dereliction: the king, on hearing of the miracle, was tranfported with joy, and caufed a fplendid palace to be built on an ifland in the territory newly acquired: it was called Pit'bi-ft'bán, becaufe Pí t'hi refided in it, having married the hundred daughters of Pramóda; and, on his beginning to read lectures on the Véda, he was in a chort time attended by numerous difciples. This fable, which had, probably, fome foundation in truth, is related in a book, entitled Vírwa-fára-pracáa, or a Declaration of wobat is moft excellent in the Univerfe.

Pit'hi-st'ha'n could not be very diftant from Cardama-fibali, or the city of Thebes, to which, according to the Brábmánda, the Sage's daughter, from him called Pait'hini', ufed to go almoft every day for the purpofe of worhipping $\mathrm{MaHa}^{\prime} \mathrm{de} \mathrm{e}^{\prime} \mathrm{va}$ : it feems, therefore, to be the Patbros of Scripture, named Patbures by the Greek interpreters, and Patburis by Pliny, from whofe context it appears to have food at no great diftance from Thebes; and it was, certainly, in Upper Egypto. It was probably the fame place, which Ptolemy calls Tathyris, either by mifake or in conformity to the pronun-
ciation of the Ethiopians, who generally fubftituted the letter $T$ for $P$, which they could not articulate : from the data in Proiemy it could not have been above $f x$ miles to the weft of Thebes, and was, therefore, in that large inland formed by an arm of the Nile, which branches out at Ermenth, and rejoins the main body of the river at the Mennonium. According to the old Egyotians, the fea had left all Upper Egypt from the Cataracts as far as Memphis; and the diftance between thofe two places is nearly that mentioned in the $P_{u-}$ ranas, or about a hundred yojans: the God of the Ocean, it feems, had attempted to regain the land, which he had been forced to relinquif ; but Mahadeva, (with a new title derived from Nabhas, or the jky, and IsWARA or lord) effectually ftopped his encroachments; and this was the origin of Nabbab-fl'ban, or Mempbis, which was the mot diftinguifed among the many confiderable places in Mijra, and which appears to have confifted of feveral detached parts; as: I. Ugra-fíbán, fo called from Ugra, the Uchoreus of the Greeks; 2. Nabbah, the Noph of Scripture ; 3. a part named Mifra; 4. Móbana-ft bán, which may, perhaps, be the prefent Mom bannan; and 5. Laya-fi'bán, or Laya-vat̀, vulgarly pronounced Layáti; the fuburb of Lete, or Letopolis.

Ródana-ftban, or the place of Weeping, is the ifland in the lake or Máriflà, or Maris, concerning which we have the following Indian fory in the Vifwafára-pracáa.

Petíi-s'uca, who had a power of feparating his foul from his body, voIuntarily afcended toward heaven; and his wife MA'ríshá, fuppofing hima finally departed, retired to a wildernefs, where fhe fat on a hillock, fhedding tears fo abundantly, that they formed a lake round it; which was afterwards named As'ru-tári"ba, or the boly place of tears: its waters were black, or very
dark azure, and the fame collour is afcribed by $\operatorname{Strabo}$ to thofe of Mceris. Her fon Méd hi, or Mérhi, Suca had alfo renounced the world, and, feating himfelf near her, performed the fame religious aufterities: their devotion was fo fervent and fo long continued, that the inferiour Gods began to apprehend a diminution of their own influence. At length Ma'risha', dying petivrata, or dutiful to ber lord, joined him among the Viflnu-láca, or inhabitants of Vishnu's heaven; and her fon, having folemnized the obfequies of them both, raifed a fumptuous temple, in which he placed a ftatue of $V_{\text {ISH- }}$ NU , at the feat of his weeping mother; whence it acquired the appellation of Ródana- $f$ 'bána. "They, who make ablutions in the lake of Afru-tirt"bas " fays the Hiadu.writer, are purified from their fins and exempt from world " ly affections, afcending after death to the heaven of Vishnu; and they, "s who workip the deity at Rodana-f'bin enjoy heavenly blifs, without being " fubject to any future tranfmigration." No lake in the world, except that of Maris, correfponds, both in name and in circumftances, with that of Afru-tirt'ba and the illand in the midft of it, which was alfo called Mérbi, or Mérbi-ft'ban from the name of the prince, who confecrated it: the two ftatues on it were faid by the Greeks to be thofe of Mcris and his queen; but they appear from the Purinas to have been thofe of Vishnu, or Osiris, and of MA Ri'shá, the mother of Mceris; unlefs the image of the God was confidered in fubftance as that of the departed king, who, in the language of the Hindu theologians, was wholly abforbed in the divine effence. Three lakes, in the countries adjacent to the Nile, have names in the Purins derived from aśru, or tears; firf, Sócáfru, or Tears of Sorrore; another name for Afrutirt'ba, or Maris; fecondly, Herfbáfru, or Tears of $\mathcal{F} y$; and, thirdly, - Anandafru, or Tears of an intoard pleafurable fenfation; to both which belong legendary narratives in the Puranas. One of the infernal rivers was named Afrumati, or the Tearful; but the firf of them was Vaitarani, where
a boatman had been ftationed to ferry over the fouls of mortals into the region of YAMA : the word vitarana, whence the name of the river is derived, alludes to the fare given for the paffage over it.
III. We muft now fpeak particularly of Sanc'ba-dwipa Proper, or the Ifland of Sbells, as the word literally fignifies; for Sanc'ha means a fea-fhell, and is generally applied to the large buccinum: the Red Sea, which abounds with fhells of extraordinary fize and beauty, was confidered as part of the Sanc'bábdbi, or Sanc' hodadbi; and the natives of the country before us wore large collars of fhells, according to Strabo, both for ornament and as amulets. In the Puránas, however, it is declaxed, that the dwoipa had the appellation of Sanc'ba, becaufe its inbabitants lived in 乃bells, or in caverns of rocks hollowed like fhells and with entrances like the mouths of them: others infift, that the mountains themfelves, in the hollows of which the people fought fhelter, were no more than immenfe heaps of fhells thrown on fhore by the waves and confolidated by time. The ftrange idea of an actual habitation in a fhell was not unknown to the Greeks, who reprefent young Nerites, and one of the two Cupids, living in fhells on the coaft of that very fea. From all circumftances collected it appears, that Sanc ba-dwipa, in a confined fenfe, was the Troglodytica of the ancients, and included the whole weftern. Shore of the Red Sea; but that, in an extenfive acceptation, it comprifed all Africa: the Troglodytes, or inbabitants of caves, are called in Scripture alfo $\mathrm{Su}-$ $k i m$, becaufe they dwelt in fucas, or dens; but it is probable, that the word fuca which means a den only in a fecondary fenfe, and fignifies alfo an arbour, a booth, or a tent, was originally taken, in the fenfe of a cave, from Sanciba; a name given by the firf inhabitants of the Troglodytica to the rude places of fhelter, which they found or contrived in the inountains, and which bore fome sefemblance to the mouths of large faells. The word Sanc'ha-dwípo has alfo
in fome of the Puránas a fenfe yet more limited, and is reftrained to the land inhabited by the fnake Sanc'ba-nága, which included the mountains of Hubáb, or the Serpent, and the Abyfinian kingdom of Tigrè: the fame region is, however, fometimes called Sanc'ba-vana, and is reported to be a wonderfully fine country, watered by noble rivers and ftreams, covered with forefts of the moft ufeful and beautiful trees, and a hundred yojans in length or 492 miles; a dimenfion, which correfponds exactly enough with a line drawn from the fouthern limit of Tigrè to the northern extremity of the Hubáb mountains. It lay between the Cálicá; or Cálí, and the fea; its principal river was the Sanc'banágà, now called Marreb; and its capital city near the fea-fhore, where the royall fnake refided, had the name of Cót imì; not far from which was a part of the mountain Dyutimán, or brilliant, fo called from the precious metals and gems, with which it abounded.

In the Dherma-Sáfra both Nágas and Garudás are named as races of ment defcended from ATRI, concerning whom we fhall prefently fpeak more at large; but, in the larguage of Mythology, the Nágas or Uragas are large Serpents, and the Garudás or Supernas, immenfe birds, which are either the Condors of M. Bubfon and.Vulture Griffons of Linnisus, called Rokbs by the Arabian fabulifts and by Marco Polo, or mere creatures of imagination, like the SÍmorg of the Perfjans, whom SADI defrribes as receiving his daily allowance on the mountain of Kaf: whatever be the truth, the legend of Sanc'ba-nága and Garadá is thus told in the ancient books of the Hindus.

The king of Serpents formerly reigned in Cbacra-giris a mountain very far to the eaftward; but his fubjects.were obliged by the power of GARUD $A$ to fupply that enormous bird with a fnake each day: their king at length refufed to give the daily provifion, and intercepted it himfelf when it was fent
by his ferpentine race. This enraged GARUD'A, who threatened to devout the fnakes and their king; nor would his menaces have been vain, if they had not all retired to Sanc'ba-dwíp, where they fettled in Sanc'ba-vana between the Cáiz and the fea, near the fation of Swaimi CA rtice' y a, God of Arms, where they are fuppofed to live fill unmolefted, becaufe GARUD A dares not approach the manfion of that more powerful divinity. "They, fays the "Indian writer, who perform yearly and daily rites in honour of SANC'HA"NA'GA, will acquire immenfe riches:" that royal ferpent is alfo called SANC'HA-MUC'HA, becaufe his mouth was like that of a mell, and the fame denomination is given to the rocks, on which he dwelt. The Mountains of Snakes are mentioned by the Nubian Geographer, and are to this day called Hubáb, which in Arabick means a frake in general according to JAumerr, and a particular Jpecies of ferpent according to Maidáni: the fame region was named Opbiufa by the Greeks, who fometimes extended that appellation to the whole African continent. The breath of Sanc'ba-nága is believed by the Hinduis to be a fiery poifonous wind, which burns and deftroys animals and vegetables to the diftance of a hundred yójans round the place of his refidence; and by this hypothefis they account for the dreadful effects of the famum, or hot envenomed wind, which blows from the mountains of Hubab through the whole extent of the Defert. Two Rijbis, or Saints, named Agasti and A'strca undertook to ftop fo tremendous an evil: the firft of them repaired for that purpofe to Sanc'ba-vana, where he took his abode at a place, thence called Agafi-blbuvana, near the fea-fhore and not from Cótimi; but the gentle means, to which he had recourfe with the royal fnake, proved ineffectual. $\mathcal{A}^{\prime} \mathrm{STICA}$, by harfher meafures, had more fuccefs; and made the fnake, fay the Brábmens, not only tractable, but even well-difpofed to all fuch, as refpectfully approached him: he even reduced the fize of the ferpent fo much as to carry him about in an earthen veffel; and crowds of people are now faid
*o worfhip him at the place of his refidence near the river Cát. This is, probably, the fnake Heredi fo famed throughout Egypt: the Mufelmans infift, that it is a Sbaikb of that name transformed into a fnake ; the Cbrifians, that it is Asmodeus mentioned in the book of Tobit, the Afbmugh-div of the Perfian romances; and the Hindus are equal to them in their fuperftitious notions. My learned friends at Cási inform me, that the facred fnake is at this day vifited by travelling Sannyájis; but I cannot affert this as a fact, having never feen any Hindu, who had travelled fo far: thofe, whom I have feen, had never gone beyond the Euphrates; but they affured me, "that they would have paffed that river, if they had not been deterred by reports of difturbances among the Arab chiefs to the weftward. The boldeft religious adventurers, among the Sannyafis, are thofe from the northweft of India; for no native of Bengal, or, indeed, of the countries eaft of the Ganges; would now attempt (at leaft I never heard of any, who had attempted) fuch perilous journeys. As to the belief of the Hindus, that 'Astica put an effectual ftop to the fiery breath of 'Sanc'ba-nága, or the Samúm, it appears from the relation of Mr. Bruce, that the fecond publick-fpirited faint had no more fuccefs than the firft.

We muft obferve, that naga, or motionlefs, is a Sanfcrit name for a mountain, and that nága, its regular derivative, fignifies both a mountain-fnake and a wild elepbant: accordingly we read of an clepbant-king in Sanc'ba, who reigned on the banks of the Mareb, thence called Sanc'ba-nágà; and, when Crishna had flain both him and his fubject elephants, their bones were heaped on the banks of the Tacazzè, which from that event had the name of Af'bimati.

The other parts of Sanc'ba-dwin Proper, adjacent to the fea, were inhaU u
bited by the fubjects of Sanc'ha'sura, whofe palace was a flell in the ocean; but they are faid to have refided in Jeells on or near the mountains of the African continent: they are reprefented as cannibals, and even as demons incarnate, roaming by night and plundering the flat country, from which they carried off men, women, and children, whom they devoured alive; that: is, perhaps, as raw flefh is now eaten in Abyfinia. From this account it thould feem, that the Sanc'báfuras lived in the caves of mountains along the coaft, while their king refided in a cavern of the fmall ifland. Suakem, where there ftill is a confiderable town, in the middle of a large bay: he there, probably, concealled his plunder, and thence was reported to dwell in the ocean. The name of that inand appears derived from Sukbim, the plural of Sukb in. Hebrew, and the Sanc'b of the Hindus: by the ancient Geographers it is calLed both Sukbce, and the Harbour of preferving Gods, from the prefervation, I Suppofe, of Sanc'ba-dwíp and its inhabitants by the divine affiftance of Crish NA; who, with an army of deities, attacked and defeated SANC'HA'SURA, purfuing him even through the fea, where he drew the monfter from his hell, and put him to death.

Besides thefe firft inhabitants of Sanc'ba-dwipa, who are defcribed by the Mythologifts as elepbants, demons, and fnakes, we find a race, called S banc'ba'yonas 2 who are the real Iroglodytes, or Sbangalas; for la is a regular termination of Sanforit adjectives, as Bhágala, fortunate; Sinbala, lion-like; and Bengala, which properly means belonging to the country of Benga: they were the defcendants of Atri before named, whofe hiftory, being clofely connected with that of the Sacred I/les in the wert, deferves peculiar attention. He sprang, fay the writers of the Puránas, from the mind of Brahma', who appointed him a Prajápati, or Lord of Creatures, commanding him to produce a numerous race, and intrufting him with the $V$ édas, which had exifted
eternally in the divine idea, that he might inftruct his pofterity in their civil and religious duties. Atri firft repaired to a weftern region, where he became the father of the lovely Tubina-raśmi, or with dewy beams: he thence paffed into the country watered by the river Sanc'ba-nágà, where proceeding to the Sanc'ba-muc'ba hills, he fat on the Swéta-giri, or White Mountains fixed in deep meditation on the author of his exiftence. His arrival was quickly known throughout the country; and the few inhabitants of it came to worfhip him, bringing even their wives and daughters, that they might bear children by fo holy a perfonage; but his days and nights being wholly devoted to contemplation and facred acts, his only time for dalliance was during the morning twilight : he became, however, the anceftor of a confiderable nation, who were diftributed, like other Hindus, into the facerdotal, military, commercial, and fervile claffes.

His firft born Sanc'hay yana had a fair complexion and great bodily itrength, but was irreligious, turbulent, and libidinous, eating forbidden flefh, and living in the caverns of rocks; nor were his brethren and their offspring better in the end than himfelf: thus the Jews, who have borrowed many Indian fables, which were current, I fuppofe, among their neighbours, infift in their Talmud, that AdAM begat none but demons, till he was 150 years old (a). The pious patriarch, deeply afficted by the vices of his children, expoftulated with them long in vain, and, feeing no remedy, contented himfelf with giving them the beft advice; teaching them how to make more habitable caves in the mountains, pallis, or arbours under trees, and ghófbas, or inclofures for their herds ; permitting them to eat what they pleafed; commanding them to dwell conftantly on the mountains affigned to them, and to
(a) Bruvin, p. 18.

$$
\mathrm{U} \mathrm{u}_{2}
$$

take particular care of the fpot, which their forefather had inhabited, calling it from his name Avri-ft'bonn. After this arrangement, he left them and went to the country near the Sindbu, or Indus, fettling on the Dévanica mountains; where he avoided the morsing twiligbt, which had before been unprofperous, and produced a race eminent in vitue; for whom, when they multiplied, he built the famous city of Nagara, emphatically fo called, and generally named Déva-nagara, which fiood near the fite of the modern Cábul.

Since the Swetta-giri, on which Atri-fiban is declared to have food, was at no great diftance from the river Sanc'la-nágá, it is; mont probably, the fame with the Amba-tzaada, or White Mountain, mentioned by Mr. Bruce; who fays, that it is the moft confiderable fettlement of the Sli angalas: it ftands almoft due north-weft from Dobarovea, and is nearer by one third to the Ma reb than to the Tacazzè. The pallis, or arbours, of the Sbangalas are fully deferibed by Mr. Bruce, in a manner entirely conformable to the defciiptions of them in the Purinas, except that they are not faid always to be covered with fkins: the Pallis of India live fill in fimilar arbours during the greateft part of the year. That the Sanc'béyanas were the predeceflors of theSbangallas, I have no doubt; though the former are fiid to have white complexions, and the latter to be black; for, not to infift, that the climate alone would in a long courfe of years effect a change of complexion, it is probable, that the race might be mixed, or that moft of the old and genuine Sanc'balas. might have been exterminatedifand Pinvy mentions a race of white Etbicpians, who lived to the wen of the Nile: (a) Though Atri-fi'bán be applied. in the Purans to the country alfo of the Sanc'báyanas, as well as to the ftation of Atri, yet the regular derivative from his name is Atréyà; and we

[^29]find accordingly a part of Etbiopia named 屈theria by the Greeks, who called its inhabitants /etherü; and STRABO confines this appellation to a particular tribe, who feem to be the Attiri of Ptolemy, and lived near the confluence of the Tacazzè and the Mareb: (a) they were A'tréyas or defcended from Atri; but the Greeks, as ufual, referred a foreign epithet to a word in their own language. In the Dionyfiacks of Nonnus we read of 'Aeisegeos Megónso which is tranflated Meroe with perpetual fummer; but, furely, the word can have no fuch meaning; and Meroe muft have been fo named, becaufe it was once the capital of Retberia. (b).

It appears from the Puráns, that the Sanc'báyanas, or old Sbansallas, were not deftitute of knowledge; and the Brábmens admit, that they poffeffed a. part at leaft of the Védas.
IV. The' hiftory of the Cutila-céfas, or men with curled bair, is dif guifed in the following legend. SAGARA, an ancient monarch, who gave his name to the Jágara, or ocean, was going to perform the Aśwamédha, or facrifice of a borfe; when INDRA defcended and fole the victim, which he conveyed to a place, near the mouth of the Gangà, where the fage Capila was intent on his religious aufterities: the God of the firmament there tied the horfe by the fide of the holy man, and retired unperceived by him. The monarch, mifing the confecrated horfe, difpatched his fixty thoufand fons, or defcendants, in fearch of him: they roved over the whole earth, and, finding him at laft near the manfion of CApita, accufed him of the facrilege, and began to treat him with violence; but a flame iffuedfrom the eyes of the faint, which confumed them all in an inftant. Their
(a) Strabo, B. 11. p. 82.
(b) Dionyf. B. 17. v. 396.
father, being apprized of their death, fent an army againf Capila, who ftood fixed to receive them; and, when they approached, unbound his jata, or long plaited bair, and, giving it a twif, ftruck the ground twice or thrice with it, cafting an oblique glance of contempt on his adverfaries: in that moment an army of men with curled bair fprang from the earth, attacked the legions of SAGAR, and defeated them. After their victory they returned to the Sage, afking who they were, and demanding a fit place of abode. Capila told them, that they were Fatápat, or produced by the fall of bis locks on the ground; that from the fide look; which be had caft on his enemies; their hair was cutila, or crifp; that they mould thence be called Cut ilas and Cutila-céfas; that they muft be yát'batat'byas, or live as they quere, when produced by him, that is, always prepared for juft war; that they muft repair to $S a n c^{\prime} b a-d w i z$, and form a fettlement, in which they would encounter many difficulties and be continually harraffed by bad neighbours; but that, when Crishna fhould overpower and deftroy Sanc'fa'sura, He would eftablim their empire, and fecure it from future moleftation. They accordingly travelled through the interior Cufba-dwípa, where the greateft part of them chofe to remain, and received afterwards a terrible overthrow from Paras'U-RA'mA: the others paffed into Sanc'ba-dwis, and fettled on the banks of the Cálz; but, having revolted againft De'vaNAHUSHA, they were almof wholly extirpated by that potent monarch.

Violent feuds had long fubfifted between the family of Gautama on one fide, and thofe of Viswa'mitra and Jamadagni on the other: the kings of CuJba-dwip witbin took the part of Gautama; and the Haibayas, a wery powerful nation in that country (whom I believe to have been Perfians) were inveterate againft Jamadagni, whom they killed after defeating his army. Among the confederates in Cufka-dwípa were the

Rómacas, or dreffed in bair-cloth; the Sacas, and a tribe of them called: Sacafénas; the Hindus of the Cfbatriya clafs, who then lived on the banks of the Chacflus, or Oxus; the Páraficas, a nation beyond the Nile; the Barbaras, or people of Nubia; the inhabitants of Cámböja; the Cirátas and Haritas, two tribes of the Pallis; and the Vavanas, or anceftors of the Greeks. Thefe allies entered India, and defeated the troops of Viswa'mitra in the country, called $\Upsilon_{u} u d b a-b b u m i_{2}$, or the Land of War, now $Y$ ebud, between the Indus and the Bebat.

Paras u-Ráma, the fon of Jamadagnt, but fuppofed afterwards to have been a portion of the divine effence in a human form, was enraged at the fuccefs of the confederates, and circulated a publick declaration, that $\mathrm{Na}_{\mathrm{A}} \mathrm{red}$ had urged him to extirpate them entirely; affuring him, that the people of Cuśba-dwépa, who dwelt in the hollows of mountains, were cravyádas, or carnivorous, and that their king Ckavya'da'dhipeti, or Cbief Ruler of Gannibals, had polluted both earth and reater, which were two of the eight forms of I'sA, with the mangled limbs and blood of the ftrangers, whom he and his abominable fubjects had cruelly devoured. After this proclamation, Paras'U-ráma invaded Cufba-dwíps, and attacked the army of Cravyáda'dhipeti, who ftepped from the ranks, and challenged him to fingle combat: they began with hurling rocks at each other; and Ra'ma was nearly crufhed under a mountain thrown by his adverfary, but, having difengaged himfelf, he darted huge ferpents, which enfolded the giant in an inextricable maze, and at length deftroyed him.. The blood of the monfter formcd the Lóbita-c'banda, and that of his army, the Lóbitoda, or river with bloody waters: it is, I believe, the Adonis of the ancients, now called Nabru Ibra'hi'm, the waters of which, at certain feafons of the year, have a fanguine tint. I fuppofe Cravyadajdhipati to be the Lycurgus

Edonos of the Greeks, who reigned in Palefine and in the country around Damafcus: his friend Caicéya, whom the Greeks called Orontes, tenewed the fight, and was alfo flain. Then came the king of the Cut ila-céfas, and Maha'sya'ma, ruler of the Syáma-muc'bas, and ufually refiding in Arvafibán, or Arabia; the former of whom I conceive to be Blemys; and the fecond Arabus, whom the Greek Mythologifts alfo named Orobandas and Oruandes: they fought a long time with valour, but were defeated; and, on their humiliating themfelves and imploring forgivenefs, were allowed to retire, with the remains of their army, to the banks of the Cali, where they fettled; while Parasu-ra'ma, having terminated the war in Cufbodwípa, returned to his own country, where he was deftined to meet with adventures yet more extraordinary.

This legend is told nearly in the fame manner by the poet Nonnus, a native of Egypt; who fays, that, after the defeat of Lycurgus, the Arabs yielded and offered facrifices to BAcchus; a title corrupted from BhagaVAT, or the preferving power, of which a ray or portion had become incarnate in the perfon of Parasu-rama: he relates, that "Blemys with curled "c bair, chief of the ruddy, or Erytbrean Indians, held up a bloodlefs olives6 branch with the fupplicating troops, and bowed a fervile knee to Dionysos, "who had flain his Indian fubjects; that the God, beholding him bent to "s the ground, took him by the hand and aifed him; but conveyed him, to ${ }^{6 s}$ gether with his many-tongued people, far from the dark Erythrean Indians, " (fince he abhorred the government and manners of Deriadeus) to the " fkirt of Arabia; that He, near the contiguous ocean, dwelt in the happy "r region and gave a name to the inhabitants of its towns; but that rapid * Blemys paffed onward to the mouth of the Nile with feven branches, s\% defined to be a contemporary ruler over the people of Ethiopia; that the
" low ground of Etherian Meroë received him as a chief, who fhould leave " his name to the Blemyes born in fubfequent ages." $(a)$.

The emigration of the Cutila-céfas from India to Egypt is mentioned likewife by Philostratus in his life of Apollonius. When that fingular man vifited the Brábmens, who lived on the hills, to the north of Sri-nagara, at a place now called Triloćci-náráyana near the banks of the Cédära-gangà, the Chief Brábmen, whom he calls Iarchas, gave him the following relation concerning the origin of the Etbiopians: "They refided, faid he, formerly in ** this country, under the duminion of a king, named Ganges; during " whofe reign the Gods took particular care of them, and the Earth produced " abundantly whatever was neceffary for their fubfiftence; but, having flain * their king, they were confidered by other Indians as defiled and abominable. " Then the feeds, which they committed to the earth, rotted ; their women " had conftant abortions; their cattle was emaciated; and, wherever they began " to build places of abode, the ground fank and their houfes fell: the fpirit " of the murdered king inceffantly haunted them, and would not be appeafed, " until the actual perpetrators of the murder had been buried alive; and even ${ }^{\text {ss }}$ then the earth forbad them to remain longer in this country. Their fove" reign, a fon of the river Ganges, was near ten cubits high, and the mort " majeftick perfonage, that ever appeared in the form of man: his father " had once very nearly overflowed all India, but he directed the courfe of the " waters toward the fea, and rendered them highly beneficial to the land; " the goddefs of which fupplied him, while he lived, with abundance, and "fully avenged his death." (b) The bafis of this tale is unqueftionably $I_{n-}$ dian, though it be clearly corrupted in fome particulars: no Brábmen was
(a) Dionyfiac. B. 17. ver. $3^{8} 5-397$.

W w
ever named Iarchas, which may be a corruption of Arfla, or Arc/ba, or, ponibly, of YASCA, the name of a fage, who wrote a gloflary for the Vedas; nor was the Ganges ever confidered as a male deity; but the fon of Ganga', or Ca'nge'ya, was a celebrated hero. According to the Hindu legends, when Capila had deftroyed the children of Sagara, and his army of Cutilacéfas had migrated to another drwipa, the Indian monarch was long inconfolable; but his great grandfon Bhagírat'ha conducted the prefent Ganges to the fpot, where the afhes of his kindred lay; and they were no fooner touched by the divine water, than the fixty thoufand princes fprang to life again : another fory is, that, when the Ganges and other great rivers were fwoln to fuch a degree, that the goddefs of Earth was apprehenfive of a general inundation, Bhagírat'ha (leaving; ower holy men to take care of inferiour rivers) led the Ganges, from him named Bbágirat'bi, to the ocean, and rendered her falutary to the earth, inftead of deftructive to it. Thefe tales are obvioufly the fame in fubftance with that told by Iarchas, but with fome variations and additional circumfances. Apolionius moft certainly had no knowledge of the Indian language; nor is it on the whole credible, that he was ever in India or Etbiopia, or even at Babylon: he nैever wrote an account of his travels; but the fophif Philostratus, who feems to have had a particular defign in writing the hiftory of his life, might have poffefled valuable materials, by the occafional ure of which he impofed more eafily on the publick. Some traveller might have converfed with a fet of ignorant Sannyáfis, who had, what moft of them now have, an imperfect knowledge of ancient legends concerning the Dévatás; and the defcription, which Philostratus gives, of the place in the hills, where the fuppofed Brábmens refided, correfponds exactly with a place called Triloci-náráyana in the Puráns, which has been defcribed to me from the information of Sannyáfis, who ignorantly call it Triyógi-náráyan; but for a particular account of it, I mu\&
refer to a geographical and hiftorical defrription of the Ganges and the countries adjacent to it, which I have nearly completed.

The people named Cutila-céfas are held by fome Brábmens to be the fame with the Háfyasilas, or at leaft a branch of them; and fome fuppofe, that the Hafyasilas are the before-mentioned remnant of the Cutila-céfas, who firft fettled on the banks of the Nile, and, after their expulfion from Egypt by Déva-nahusha, were featered over the African deferts: the Gaituli, or, Gaityli, were of old the moft powerful nation in Africa, and I fhould fuppofe them ta be defcendants of the firft Cutilas or Cutils (for.fo they are frequently. called, efpecially in converfation) who fettled firft near the Cálí river, and were alfo named IFáfyasilas; but they muft have dwelt formerly in Bengal, if there be any hiftorical bafis for the legend of Capila, who was performing aits of religious aufterity at the mouth of the Ganges near old Ságar, or Gangá in the Sunderbans. They were black and had curled hair, like the Egyptians in the time of Herodotus; but at prefent there are no fuch negros in India, except in the Andaman illands, which are now faid to be peopled by cannibals, as they were, according to Ptolemy, at leaft eighteen hundred years ago: from Andaman the Greeks made Eudaimon, and conceived it to be the refidence of a good genius. It is certain, that very ancient ftatues of Gods in India have crifp hair and the features of negros: fome have caps, or tiaras, with curls depending over their forebeads, according to the precife meaning of the epithet Cutilalaca; others, indeed, feem to have their locks curled by art and braided above in a thick knot; but I have feen many idols, on which the woolly appearance of the hair was fo well reprefented as to preclude all doubt; and we may naturally fuppofe, that they were made by the Cutilla-c'fas, when they prevailed in this country. The Brábmens afcribe thofe idols to the Bauddbas, and nothing can hurt them more, than to fay that any of their W w 2
own Gods had the figure of Haba/bis, or negros; and even the hair of Budbнa himfelf, for whom they have no fmall degree of refpect, they confider as twifted in braids, like that of fome modern Sarnyá/s; but this will not account for the thick lips and flat nofes of thofe ancient images; nor can it reafonably be doubted, that a race ofnegros formerly had powerand pre-eminence in India. In feveral parts of India the mountaineers have fill fome refemblance to negros in their countenance and hair, which is curled and has a tendency to wool : it is vefy probable, that, by intermarriages with other outcafts, who have black complexions but ftraight hair, they have changed in a courfe of ages, like the Cutila-céfas, or old Egyptians; for the modern Copts are far from anfwering to the defription given by Herodotus, and their features differ confiderably from thofe of the mummies, and of ancient ftatues brought from Egypt, whence it appears, that their anceftors had large eyes with a long flit, projecting lips, and folded ears of a remarkable fize.
V. Of the Syama-muc'bas, who migrated from India, the origin is not yet perfectly known; but their faces were black, and their hair ftraight, like that of the Hindus, who dwell on the plains: they were, I believe, the fraigbi-baired Ethiops of the ancients; (a) and their king, furnamed MAHA'sya'ma, or the Great Black, was probably the king Arabus, mentioned by the Greek Mythologifts, who was contemporary with Ninus. They were much attached to the Cutila-céfas, whence we may infer, that the religious tenets of the two nations were nearly the fame. It is believed, that they were the firf inhabitants of Arva-fi'bán, or Arabia, but paffed thence into Africk and fetted on the banks of the Nilk: the part of Egypt, which lies to the eaft of that river, is by fome confidered as part of Arabia; and the peo-
(a) 'Ioútpizes. Herod. Polyhyma.
ple, who lived between the Mediterranean and Meroë, were by Juba faid to be Arabs.
VI. The firft origin of the Danavas, or Children of Danu, is as little known as that of the tribe laft mentioned; but they came into Egypt from the weft of India; and their leader was Beli, thence named DA'nayéndra, who lived at the time, when the Padma-mandira was erected on the banks of the Cumudvatí: the Dánavas, whom he governied, are frequently mentioned in the Puránas among the inhabitants of countries adjacent to the Cálí.

As to the Stri-rajya, or country governed by women, the Hindus affert, that the fovereign of it was always a Queen, and that all her officers, civil and military, were females, while the great body of the nation lived as in other countries; but they have not in this refpect carried the extravagance of fable to the fame pitch with the Greeks in their accounts of the Amazons: it is related in the Mallári Mábátmya, that, when Ra'vana was apprehenfive of being totally defeated, he fent his wives to diftant countries, where they might be fecure; that they firft fettled on the Indian peninfula near the fite of Srirangapattena, or Seringapatnam, but that, being difturbed in that ftation, part of them proceeded to the north of Dwáracà in Gujarát, and part into Sanc'lod-drespa, where they formed a government of women, whence their fettlement was called Strírájya. It was on the fea-fhore near the Cula mountains, extending about forty yojanas in length, and furrounded by low fwampy grounds, named Galabkimi in Sanforit and Daldal in the vulgar idiom : Strîrájya, therefore, muft be the country of Sabá, now AJab, which was governed by a celebrated Queen, and the land round which has to this day the name of Taltal. The Cula mountains are that range, which extends from Dobarowa, the Coloë of the ancient geographers, to the fource of the

Tacazzè, which Prolemy calls the marh of Coloé; a word, which I fuppofe to be derived from the Sanforit.
VII. Yavana is a regular participial form of the root $y u$, to mix; fo that yavana, like mifra, might have fignified no more than a mingled people: but, fince yóni, or the female nature, is alfo derived from the fame root, many Pandits infift, that the Yavanas were fo named from their obftinate affertion of a fuperiour influence in the female, over the linga, or male nature, in producing a perfect offspring. It may feem frange, that a queftion of mere phyfiology fhould have occafioned not only a vehement religious conteft, but even a bloody war; yet the fact appears to be hiftorically true, though the Hindu writers have dreffed it up, as ufual, in a veil of extravagant allegories and myfteries, which we fhould call obfcene, but which they. confider as awfully facred. They reprefent $\mathrm{NA}^{\prime}$ ráyana moving, as his name implies, on the waters, in the character of the frrf male, and the principle of all nature, which was wholly furrounded in the beginning by tamas, or darknefs, the Cbaos and primordial Night of the Greek Mythologifts, and, perhaps, the Thaumaz or Thamas of the ancient Egyptians: the Chaos is alfo called Pracriti, or crude Nature, and the male deity has the name of Purusha, from whom proceeded Sacti, or power, which, when it is afcribed to the earth, in contradiftinction to the waters, is denominated Adbára S'acti, or, the porver of containing or conceiving; but that power in its firft flate was rather a tendency or aptitude, and lay dormant or inert, until it was excited by the bija, or vivifying principle, of the plaftick I'swara. This power, or aptitude, of nature is reprefented under the fymbol of the yóni, or bbaga, while the animating principle is expreffed by the linga: both are united by the creative power, Brahma'; and the yóni has been called the navel of Vishnu, not identically, but nearly; for, though it is held in the Vécánta,
that the divine firit penetrates or pervades all nature, and though the Sacti be confidered as an emanation from that firit, yet the emanation is never wholly detached from its fource, and the penetration is never fo perfect as to become a total union or identity. In another point of view Brahmá correfponds with the Cbronos, or Time, of the Greek mythologifts; for through him generations pafṣ on fucceffively, ages and periods are by him put in motion, terminated, and renewed, while he dies and fiprings to birth alternately; his exiftence or energy continuing for a hundred of bis years, during which he produces and devours all beings of lefs longevity. Vishnu reprefents water, or the humid principle; and Iswara, fire, which recreates or deftroys, as it is differently applied: Prit'hivi', or earth, and Ravi, or the Sun, are feverally trimurits, or forms of the three great powers acting jointly and feparately, but with different natures and energies, and by their mutual action, excite and expand the rudiments of material fubftances. The word mirti, or form, is exactly fynonymous with eirorov, and, in a fecondary fenfe, means an image ; but in its primary acceptation, it denotes any Jbape or appearance affumed by a celeftial being: our vital fouls are, according to the Védanta, no more than images, or zidonk, of the fupreme Spirit, and Homer places the idol of Hercules in Elyfum with other deceafed heroes, though the God himfelf was at the fame time enjoying blifs in the heavenly manfions. Such a murti, fay the Hizdus, can by no means affect with any fenfation, either pleafing or painful, the being, from which it emaned; though it may give pleafure or pain to collateral emanations from the fame fource: hence they offer no facrifices to the fupreme Effence, of which our own fouls are images, but adore Him with filent meditation; while they make frequent bómas, or oblations; to fire, and perform acts of worfhip to the Sun, the fars, the Earth, and the powers of nature, which they confider as murtis, or images, the fame in kind with ourfelves, but tranfendently higher in degree. The Moon is alfo a great
object of their adoration; for, though they confider the Sun and Earth as the two grand agents in the fyftem of the univerfe, yet they know their reciprocal action to be greatly affected by the influence of the lunar orb according to their feveral afpects, and feem even to have an idea of attraction through the whole extent of nature. This fyftem was known to the ancient Egyptians; for, according to Diodorus (a), their Vulcan, or elemental fire, was the great and powerful deity, whofe influence contributed chiefly toward the generation and perfection of natural bodies; while the Ocean, by which they meant water in a collective fenfe, afforded the nutriment that was neceffarys and the Earth was the vafe, or capacious receptacle, in which this grand operation of nature was performed : hence Orpheus defcribed the Earth as the univerfal Mother; and this is the true meaning of the Sanfcrit word Ambá. Such is the fyftem of thofe Hindius, who admit an equal concurrence of the two principles; but the declared followers of Vishnu profefs very different opinions from thofe adopted by the votaries of Iswara : each feet alfo is fubdivided according to the degree of influence, which fome of them allow to be poffeffed by that principle, which on the whole they depreciate; but the pure IVaibnavas are in truth the fame with the Yonijas, of whom we fhall prefently give a more particular account.

This diverfity of opinion feems to have occafioned the general war, which is often mentioned in the Puranas, and was celebrated by the poets of the Weft, as the bafis of the Grecian Mythology : I mean that between the Gods, led by Jupiter, and the Giants, or Sons of the Earth; or, in other words, between the followers of Iswara and the Yónijas, or men produced, as they afferted, by Prit'hivi, a porver or form of Vishnu; for Nonnus exprefly
declares, (a) that the war in queftion arofe between the partizans of Jupiter and thofe, wobo acknowledged no other deities but Water and Earth: according to both Nonnus and the Hindu Mythologifts, it began in India, whence it was. fpread over the whole globe, and all mankind appear to have borne a part in it.

These religious and phyfiological contefts were difguifed, in Egypt and India, under a veil of the wildeft allegories and emblems. On the banks of the Nile, Osiris was torn in pieces; and on thofe of the Ganges, the limbs of his confort $\mathrm{I}^{\prime} \mathrm{si}^{\prime}$ or SAti' were fcattered over the world, giving names to the places, where they fell, and where they fill are fuperfitioufly worfhipped: in the book entitled Mabá cála Sànbitá, we find the Grecian ftory concerning the wanderings of Damater, and the lamentations of Bacchus; for Iswara, having been mutilated, through the imprecations of fome offended Munis, rambled over the whole earth, bewailing his misfortune; while I'si' wandered alfo through the world finging mournful ditties in a fate of diftraction. There is a legend in the Servarafa, of which the figurative meaning is more obvious. When SAtr', after the clofe of her exiftence as the daughter of Dacsha, fprang again to life in the character of Pa'rvatí, or Mountainborn, fhe was reunited in marriage to Maha'de'va: this divine pair had once a difpute on the comparative influence of the fexes in producing animated beings, and each refolved, by mutual agreement, to create apart a new race of men. The race produced by MAháde'va were very numerous, and devoted themfelves exclufively to the worhip of the male deity; but their intellects were dull, their bodies feeble, their limbs diftorted, and their complexions of many different hues: $\mathrm{PA}^{\prime} \mathrm{RVATr}$ had at the fame time created a
(a) Dionys. B. 34 . Y. 24 I ,
X x
multitude of human beings, who adored the female power only, and were all well-hhaped with fweet afpects and fine complexions. A furious conteft enfued between the two races, and the Lingajas were defeated in battle; but Mahádéva, enraged againft the Yónijas; would have deftroyed them with the fire of his eye, if $\mathrm{Pa}^{\prime}$ rvati had not interpofed and appeafed him; but he would fpare them only on condition, that they fhould infantly leave the country with a promife to fee it no more; and from the yoni, which they adored as the fole caufe of their exiftence, they were named Yavanas. It is faid, in another paffage, that, they frang from the Cow 'Savila'; but that cow was an incarnation of the goddefs I'si'; and here we find the Egyptian legend, adopted by the Greeks, of Io and Isis. After their expulfion: they fettled, according to the Puránas, partly on the borders of Varába-dwép, and partly in the two dwipas of Cusina, where they fupported themfelves by predatory excurfions and piracy, and ufed to conceal their booty in the long grafs of Cußa-dwíp reitbin; but PA'RvATÍ conftantly protected! them, and, after the fevere punifmment of their revolt againft Déva-namush, or Dionysus, gave them a fine country, where in a fhort time they became a moft flourining nation. Thofe Yavanas, who remained in the land of Cusha and on the banks of the Cáli, were perhaps the Hellenick Shepherds mentioned in Egyption hifory; and it is probable, that great part of thofe, who had revolted againft Dionysus, retired after their defeat into Greece: all the old founders of colonies in that country had come originally from Egypt; and even the Atbenians admitted, that their anceftors formerly refided in the diftricts round Saïs.

IT is evident, that the ftrange tale in the Servarafa was invented to eftablifh the opinion of the Yónyancitas, or votaries of $\mathrm{DE}^{\prime} \mathrm{vi}$, that the good hape, strength, and courage of animals depend on the fuperiour influence of
the female parent, whofe powers are only excited and put into action by the male aura; but the Lingáncitas maintain an oppofite doctrine, and the known fuperiority of mules begotten, by horfes over thofe, which are brought forth by mares, appears to confirm their opinion, which might alfo be fupported by many other examples from the animal and vegetable worlds. There is a fect of Hindus, by far the moft numerous of any, who, attempting to reconcile the two fyftems, tell us, in their allegorical ftyle, that $\mathrm{Pa}_{\mathrm{A}^{\prime}} \mathrm{VATI}^{\prime}$ and $\mathrm{MA}_{\mathrm{A}}$ HADE'VA found their concurrence effential to the perfection of their offspring, and that Vishinu, at the requeft of the goddefs, effected a reconciliation between them: hence the navel of Vishnu, by which they mean the os tince, is worhipped as one and the fame with the facred yoni. This emblem too was Egyption; and the myftery feems to have been folemnly typified, in the temple of Jupiter Ammon, by the vaft umbilicus made of ftone, and carried, by eighty men, in a boat, which reprefented the foffa navicularis: fuch I believe, was the myftical boat of Isis, which, according to Lactantius, was adored in Egypt (a) ; we are affured by TAcitus, that the Suevi, one of the oldeft and moft powerful of the German nations, worfhipped Isis in the form of a fhip; and the Cbaldeans infifted, that the Earth, which, in the Hindu fyftem, reprefents Pa'rvatí, was fhaped and hollowed like an im- $^{\prime}$ menfe boat. From Egypt the type was imported into Greece; and an umbilicus of white marble was kept at Delpbi in the fanctuary of the temple, where it was carefully wrapt up in cloth. (b) The myftical boat is called alfo by Greek Mythologifts the cup of the Sun, in which Hercules, they fay, traverfed the Ocean; and this Hercules, according to them, was the fon of Jupiter; but the Greeks, by whom the notion of an avatára, or dejcent of a God in a human form, had not been generally adopted, confidered thore as

[^30]the fons, whom the Hindus confider as incarnate rays or portions, of their feveral deities: now Jupiter was the Iswara of the Hindus and the Osiris: of the Eqyptians; and Hercules was an avatára of the fame divinity; who is figured, among the ruins of Luxorein, in a boat, which eighteen men bear on their fhoulders. The Indians commonly reprefent this myftery of their phyfiological religion by the emblem of a Nympboas, or Lotos, flooting like a boat on the boundlefs ocean; where the whole plant fignifies both the Earth and: the two principles of its fecundation : the germ is both Méru and the linga; thepetals and flaments are the mountains, which encircle Méru, and are alfo a type of the yoni ; the leaves of the calyx are the four vaft regions to the cardinal poinis of Mérus, and the leaves of the plant are the dwipas or inles, round the land of $\mathcal{F} a m b u$. Another of their emblems is called $\operatorname{Arg} g a$, which means a cup or difb, or any other veffel, in which fruit and flowens are offered to the. deities, and which ougbt always to be Rraped like a boat though we now fee arghas of many different forms oval, circular, or fquare; and hence it is that Iswara has the title of Argbande' ha, or the Lord of the boat-Joaped veffel. a rim round the argba reprefents the myfterious yóni, and the navel of Vishnu is commonly denoted by a convexity in the centre, while the contents of the veffel are fymbols of the linga. This argha, as a typeof the ádbára-sačit, or power of conception, excited and vivified by the linga, or Pballus, I cannot but fuppofe to be one and the fame with. the fhip Airgo, which was built, according to Orpheus, by Juno and Pallas, and according to Apollonius, by Pallas and Argus at the inftance of Juno ( $a$ ) : the word Yóni, as it is ufually pronounced, nearly. refembles the name of the principal Hetrujcan goddefs, and the Sanfcrit phrafe Argbanát to I'swara feerns accurately rendered by Plutarch,
(a) Orph, Argon. v. 66. Apoll. Rhod. B. 2. v. 1190.
when he afferts, that Osiris was Commander of the $\operatorname{Argo}(a)$. I cannot yet affirm, that the words p'bala, or fruit, and p'bulla, or a flower, have ever the fenfe of Pballus; but fruit and fiowers are the chief oblations in the argha, and trip'bala is a name fometimes given, efpecially in the weft of India, to the trifuta, or trident, of MAHA DE'vA: in an effay on the geographical antiquities of India I fhall fhow, that the Jupiteri Triphylius of the Pancbocan inlands was no other than Siva holding a trip'bala, who is reprefented alfo with three eyes to denote a triple energy, as Vishnu and Prithinivi are feverally typified by an equilateral triangle, (which likewife gives an idea of capacity) and conjointly, when their powers are fuppofed to be combined, by two fuch equal triangles interfecting each other.

The three fects, which have been mentioned, appear to have been diftinct alfo in Greece. i. According to Theodoret, Arnobius, and Clemens of Alexandria, the Yóni of the Hindus was the fole object of veneration in the myfteries of Eleufis: when the people of Syracife were facrificing to goddeffes, they offered cakes in a certain hape, called $\mu$ uinnor; and in fome temples, where the priefteffes were probably ventriloquifts, they fo far impofed on the credulous multitude, who came to adore the yóni, as to make them believe, that it fpoke and gave oracles. 2. The rites of the Pballus were fo well- $\dot{\text { snown }}$ among the Greeks, that a metre, confifting of three trochees only, derived its name from them: in the opinion of thofe, who compiled the Puranas, the Pballus was firft publickly wormipped, by the name of Báléfroara-linga, on the banks of the Cumudvatí, or Eupbrates; and the Feros, according to Rabbi Aeha, feem to have had fome fuch idea, as we may collect from their ftrange tale concerning the different earths, which formed the body of AdAm. (b)

[^31]3. The middie fect, however, which is now very prevalent in India, was generally diffufed over ancient Europe; and was introduced by the Pelargi, who were the fame, as we learn from Herodotus, with the Pelafgi: the very word Pelargos was probably derived from P'bala and Argha, thofe myfterious types, which the later mythologifts difguifed under the names of Pallas and $\mathrm{Argo}^{\text {; and this conjecture is confirmed by the rites of a deity, }}$ named Pelarga, who was worfhipped near Thebes in Beotia, and to whom, fays Pausanias, no victim was offered but a female recently covered and impregnated; a cruel facrifice, which the Indian law poffitively forbids, but which clearly fhows the character of the goddefs, to whom it was thought acceptable. We are told, that her parents were Potneus and Isthmias, or Bacchus and Ino, (for the Baccbantes were called alfo Potniades) by whom we cannot but underfand Osiris and Isis, or the Iswara and Isi' of the Hindus. The three words Ambà, Nábbi, and Argba feem to have caufed great confufion among the Greek Mythologifts, who even afcribed to the Earth all the fanciful fhapes of the Argha, which was intended at firf as a mere emblem: hence they reprefented it in the fhape of a boat, of a cup, or of a quoit with a bofs in the centre floping toward the circumference, where they placed the ocean; others defcribed it as a fquare or a parallelogram, (a) and Greece was fuppofed to lie on the fummit, with Delphi in the navel, or central part, of the whole; (b) as the Ceres, and even the firf Cbrifians, infified, that the true navel of the earth was Ferufalem; and as the Mufelmans hold Mecca to be the Mother of Cities and the náfi zemin, or Earth's navel. All thefe notions appear to have ariien from the worfhip, of which we have been treating: the yóni and nábbi, or navel, are together denominated anbà or mootber; but gradually the words ambà, nábbi, and argba have become fynonymous; and

[^32]as $\ddot{\alpha}_{\mu} \mu \ell_{n}$ and $u m b o$ feem to be derived from $A m b a ̀$, or the circular argba with a bofs like a target, fo ópgax (G) and umbilicus apparently fipring from the fame root, and even the word navel, though originally Gotbick, was the fame anciently with nábbi in Sanforit and naf in Perfan. The facred ancilia, one of which was revered as the Palladium of Rome, were probably types of a fimilar nature to the argba, and the fhields, which ufed to be fufpended in temples, were poffibly votive ambás. At Delpbi the myftick Ompbalos was continually celebrated in hymns as a facred pledge of divine favour, and the navel of the world: thus the myftick boat was held by fome of the firft emigrants from Afia to be their palladium, or pledge of fafety, and, as fuch, was carried by them in their various journeys; whence the poets feigned, that the Argo was borne over mountains on the fhoulders of the Argonauts. I know how differently thefe ancient emblems of the Hindus, the Lotos and mount Méru, the Argba, or facred veffel, and the name Argbanat'ba, would have been applied by Mr. Bryant; but I have examined both applications without prejudice, and adhere to my own as the more probable, becaufe it correfponds with the known rites and ceremonies of the Hirdus and, is confirmed by the oldeft records of their religion.

Such have been, according to the Purinas, the various emigtations from India to Cufbadroip; and hence part of Africa was called India by the Greeks: the Nile, fays Theophylact, flows through Lybia, Etbiopia, and India; (a) the people of Mauritania are faid by Strabo to have been Indians or Ifindus; (b) and Abyjinia was called middle India in the time of Marco Paolo. Where Ovid fpeaks of Andromeda, he afferts, that the came from India; but we hall fhow in another fection, that the feene of her adventures was the
(a) B. 7. C. $1 \%$
(a) B. 17. p. 828.
region adjacent to the Nile: the country between the Cafpian and the Euxine had the names both of India and Etbiopia; even Arachofia is called White India by Isinorus; and we have already mentioned the Yeliow Iidizo the Perfian, and the Yellow Indians of the Turkijh, geographers. The moot venerable emigrants from India were the rádavas: they were the blamelefs and pious Ethiopians, whom Homer mentions, and calls the remotepl of mmbind. Part of them, fay the old Hindu writers, remained in this country; and hence we read of two Etbiopian nations, the weftern and the oriental: fome of them lived far to the eaft, and they are the rádavas, who flayed in India; while others refided far to the weft, and they are the facred race, who fettled on the thores of the Atlantick. We are pofitively affured by Herodotus, that the oriental Ettbiopians were Indians; and hence we may infer, that India was known to the Greeks, in the age of Homer, by the name of eaftern Ethiopia: they could not then have known it by the appellation of India, becaufe that word, whatever may be its original meaning, was either framed or corrupted by the Perfians, with whom, as long as their monarchs remained fatisfied with their own territories, the Greeks had no fort of connection. They called it alfo the land of Pancbea, but knew fo little of it, that, when they heard of India, through their intercourfe with the Perfians, they fuppofed it to be quite a different country. In Perfian the word Hindu means both an Indian and any thing black, but whether, in the latter fenfe, it be ufed metaphorically, or was an adjective in the old language of Perfia, I am unable to afcerkain: it appears from the book of Esther, that India was known to the Hebreres in Perfia by the name of Hodu, which has fome refemblance to the word $Y a d u$, and may have been only a corruption of it. Hindu cannot regularly be derived, as an Englifb writer has fuggefted, from a Sanforit name of the Moon fince that name is INDU ; but it may be corrupted from Sinddu,
or the Indus, as a learned Brábmen has conjectured, for the hiffing letter is often changed into an afpirate; and the Greek name for that river feems to frengthen his conjecture. Be it as it may, the words Hindu and Hindufi'bán occur in no Sanforit book of great antiquity; but the epithet Haindava, in a derivative form, is ufed by the poet $\mathrm{CA}^{\prime} L I D A^{\prime}$ : the modern Brabmens, when they write or fpeak Sanforit, call themfelves Hindus; but they give the name of Cumára-c'banda to their country on both fides the Ganges, including part of the peninfula, and that of Nága-c'bandac to the diftricts bordering on the Indus.

Next to the emigration of the Yadavas, the mof celebrated was that of the Pális, or Páliputras; many of whofe fettlements were named Páliftbán, which the Greeks changed into Palaifine: a country fo called was on the banks of the Tigris, and another in Syria; the river Strymon had the epithct Palaiftinos; in Italy we find the Pelefini, and, at the mouth of the Po, a town called. Pbilifina; to which may be added the Pbilitince foffones, and the Palefince arence in Epirus. As the Greeks wrote Palai for Pali, they rendered the word Paliputra by Palaigonos, which alro means the offspuing of Pall; but they fometimes retained the Sanforit word for fon, and the town of Palaif - an to this day called Paliputra by the natives, ftood on the shore of the $K$ efpos: thefe difquifitions, however, would lead me too far; and I proceed to d ftrate the ancient intercourfe between Egypt and India by a faithful epi: of fome mythological and afcronomical fables which were common to both thofe countries.

## Section the Second.

OSIRIS, or, more properly, Ysiris, according to Hellanicus, was a.: name ufed in Egypt for the Supreme Being: (a) in Sanfcrit it fignifies Lord, and, in that fenfe, is applied by the Brabszens to each of their three principal. deities, or rather to each of the principal forms, in which they teach the people to adore Brahm, or the Great One; and, if it be appropriated in common fpeech to Mafáde'va, this proceeds from the zeal of his numerous votaries, who place him above their two other divinities. Brahma', Vishnu, and Maha'de'va, fay the Pauranics, were brothers; and the Egyptian Triad, or Osfris, Horus, and Typhon, were brought forth by the fame parent, though Horus was believed to have fprung from the myfterious embraces of Osiris and Isis before their birth; as the Vailnavas alfo imagine, that Hara, or MaHádéva, fprang myftically from his brother Heri, or Vishnu. In the Hindu Mythology Brahma' is reprefented of a red, Vishnu of a black, of dark azure, and HARA of a white, complexion; but in that of Egypt, we find Osiris black, Horus white, and Typhon red : the indifcriminate applicationjof the title Iswara has occafioned great confufion ins the accounts, which the Greeks have tranfmitted to us, of Esyptian My-- for the priefts of Egype were very referved on fubjects of religion, Grecian travellers had in general too little curiofity to inveftigate fuch 20. With fcrupulous exactnefs: fince Osirif, however, was painted black, we may prefume, that he was, VIS耳NU, who, on many oceafions, according to the Puránas, took Egypt under his fpecial protection. Crishna was Vismnu himfelf, according to the mort orthodox opinion; and it was He , Who vifited the countries adjacent to the Nile, deftroyed the tyrant SANc'Ha'-

[^33]SURA, introduced a more perfect mode of worfhip, cooled the conflagrations, which had repeatedly defolated thofe aduft regions, and eftablifhed the government of the Gutila-céfas, or genuine Egyptians, on a permanent bafis: thus Osiris, as we are told by Plutarch, taught the old Egyptians to make laws and to honour the Gods. The title Srí Bbagavat, importing profperity and dominion, is given peculiarly to Crishna, or the black deity, and the black Osirls had alfo the titles of Sirius, Seirius, and Baccbus. It is related, indeed, that Osiris, or Bacchus, imported from India the worfhip of two divine Bulls; and in this character, he was MAHA'DE'VA, whofe followers were precty numerous in Egypt; for'Hermapion, in his explanation of the hieroglyphicks on the Heliopoliton obelifk, calls Hor us, the Sùpreme Lord and the author of Time (a): now IsWARA, or Lord, and CA'LA, or Time, are among the diftinguifhed titles of Maháde'va; and obelifks or pillars, whatever be their fhape, are among his emblems. In the Vribad-baima, which appears to contain many curious legends concerning Esypt, it is exprefsly faid, that "Iswara with his confort Pa'rvati' defcended from heaven, and chofe "for his abode the land of Mifra in Sanc"ba-dwíp." We muft obferve, that the Egyptians feared and abhorred TYPHon, or MAHÁDÉVA in his character of the Deffroyer ; and the Hindus alfo dread him in that character, giving him the name of Bhairava, or Tremendous: the Egyptian fable of his attempt to break the Mundane Egg is applied to MAHA DE'vA in the little book Cbandi, which is chiefly extracted from the Márcandéya Purán. There is a ftriking refemblance between the legendary wars of the three principal Gods in Egypt and India: as Osiris gave battle to Typhon, who was defeated at length and even killed by Horus, fo Brahmà fought with Vishnu and gained ani advantage over him, but was overpowered by MAhádéva, who cut off one of his five heads; an allegory, of which cannot pretend to give the meaning.
(a) Ammian. Marcellin.

Plutarch afferts, that the priefts of Egypt called the Sun their Lord and King; and their three Gods refolve themfelves ultimately into Him alone: Osiris was the Sun; Horus was the Sun; and fo, I fuppofe, was Typhon, or the power of defruction by beat, though Plutarcii fays gravely, that fuch, as maintained that opinion, were not wortby to be beard. The cafe was nearly the fame in ancient India; but there is no fubject, on which the modern Brábmens are more referved; for, when they are clofely interrogated on the title of Déva, or God, which their mo\{ facred books give to the Sun, they avoid a direct anfwer, have recourfe to evafions, and often contradict one another and themfelves: they confefs, however, unanimoully, that the Sur is an emblem, or image, of their three great deities jointly and individually, that is, of Brahm, or the Supreme One, who alone exilts really and abfolutely, the three male divinities themfelves being only Máyà, or illufion. The body of the Sun they confider as Mayà; but, fince he is the moft glorious and active emblem of GOD, they refpect him as an object of high veneration. All this muft appear very myfterious; but it flows from the principal tenct of the Vedantis, that the only being, which has abfolute and real exiftence, is the divine fpirit, infinitely wife, infinitely benign, and infinitely powerfur, expanded through the univerfe, not merely as the foul of the rvorld, but as the provident ruler of it, fending forth rays or emanations from his own effence, which are the pure vital fouls of all animated creatures, whether moveable or inmorueable, that is (as.we fhould exprefs ourfelves) both animols and vegetables, and which he calls back to himfelf according to certain laws eftablifhed by his unlimited wifdom: though Brabma be neuter in the characier of the Moft High One, yet, in that of Supreme Ruler, He is named Parame'swaRA ; but through the infinite veneration, to which He is entitled, the Hindus meditate on Him with filent adoration, and offer prayers and facrifice only to the higher emanations from Him. In a mode incomprehenfible to inferiour
creatures, they are involved at firft in the gloom of Máyà, and fubject to various taints from attachment to worldly affections; but they can never be reunited to their fource, until they difpel the illufion by felf-denial, renunciation of the world, and intellectual abftractions, and until they remove the impurities, which they have contracted, by repentance, mortification, and fucceffive paffages through the forms of animals or vegetables according to their demerits : in fuch a reunion conffts their final beatitude, and to effect it by the beft poffible means is the object of their fupreme ruler; who, in order to reclaim the vicious, to punifh the incorrigible, to protect the oppreffed, to deftroy the oppreflor, to encoutage and reward the good, and to fhow all fpirits the path to their ultimate happinefs, has been pleafed, fay the Brabmens, to manifent himfelf in a variety of ways, from age to age, in all parts of the habitable world. When He acts immediately, without affuming a fhape, or fending forth a new emanation, as when a divine found is heard from the fky , that manifertation of himfelf is called $A^{\prime}$ cáfaváni; or an etbereal voice: when the voice proceeds from a metcor, or a flame, it is faid to be agniruif, or formed of fire; but an avatára is a defcent of the deity in the Chape of a mortal; and an avántara is a fimilar incarnation of an inferiour kind intended to anfwer fome purpofe of lefs moment. The fupreme being, and the celeftial emanations from him; are nirúcará, or bodilefs, in which ftate they muf be invifible to mortals; but, when they are pratyac/ha, or obvious to figbt, they become fácárá, or embodied, either in fhapes different from that of any mortal, and expreffive of the divine attributes, as Crishna revealed him to Arjun, or in a human form, which CRIsHNA ufually bore; and, in that mode of appearing, the deities are generally fuppofed to beborn of women, but without any carnal intercourfe. Thofe, who follow the Púrva Minánja, or philofophy of JasMINI, admit no fuch-incarnations of deities, but infift, that the Dévas were. mere mortals, whom the Supreme Being was pleafed to endue with qualities.
approaching to his own attributes'; and the Hindus in general perform acts of worhip to fome of their ancient monarchs and fages, who were deiged in confequence of their eminent virtues. After thefe introductory remarks we proceed to the feveral manifeftations's in Egypt and other countries adjacent to the Nile, of $\mathrm{De}^{\prime} \mathrm{vi}$ and the three principal Gods of the Hindus, as they are exprefly related in the Purános and other Sanfcrit books of antiquity.

De'vi', or the Goddefs, and Isi', or the fovereign Queen, is the Isis of Egypto and reprefents Nature in general, but in particular the Earth, which the Indians call PRit'hivi'; while water and bumidity of all kinds are fuppofed by the Hindus to proceed from Vishnu, as they were by the Egyptians to proceed from Osiris: this account of Isis wefind corroborated by Plutarch; and Servius afferts, that the very word Isis means Earth in the language of the Egyptians; but this I conceive to be an errour.
I. Ir is related in the Scanda, that, when the whole earth was coveređ with water, and Vishnu lay extended afleep in the bofom of Dévi, a lotos rofe from his navel, and its afcending flower foon reached the furface of the food; that Brahma fprang from that flower, and, looking round without feeing any creature on the boundlefs expanfe, imagined himfelf to be the firft born and entitled to rank above all future beings, yet refolved to inveftigate the deep, and to afcertain whether any being exifted in it, who could controvert his claim to pre-eminence. He glided, therefore, down the falk of the lotos, and, finding Vishnu afleep, afked loudly who he was: "I am ss the firft born," anfwered Vishnu waking; and, when BRammá" denied his primogeniture, they had an obftinate battle, till MAnÁdéva prefied between them in great wrath, faying: "It is I, who am truly the firft born; st but I will refign my pretenfions to either of you, who fhall be able to
st reach and behold the fummit of my head or the foles of my feet." BrarmA' inftantly afcended, but, having fatigued himfelf to no purpofe in the regions of immenfity, yet loth to abandon his claim, returned to MAhádéva, declaring that he had attaimed and feen the crown of his head, and calling, as his witnefs, the firf born Cow: for this union of pride and falfehood the angry God ordained, that no facred rites fhould be performed to Brahma', and that the mouth of the Cow fhould be: defiled and a caufe of defilement, as it is declared to be in the oldeft Indian laws. When Vishnu returned, he acknowledged, that he had not been able to fee the feet of MAHA"DE' va, who then told him, that he was really the firft born among the Gods, and fhould be raifed above all: it was after this, that MAHA DE'VA cut off the the fifth head of Brahmá, whofe pride, fays the writer of the Scanda Purán, occafioned his lofs of power and influence in the countries bordering on the river Cálí. Whether there wild fories on the wars of the three principal Gods mean only the religious wars between the feveral fectaries, or whether they have any more hidden meaning, it is evidefte from the Puranas, which reprefent Egypt as the theatre of action, that they are the original legends of the wars between Osiris, Horus, and Typhon; for Brahmá in his character of all-deftroying Time, correfponâs with Typhon; and MAHA'DE'va, in that of the productive principle, with Horus or Hara, who afumes each of his characeers on various occafions, either to reftore the powers, or to fubdue the opponents, of Vishnu, or active Nature, from whom his auxiliary fprings. In Egypt, fays Plutarch, certain facrifices were made even to Typhon, but only on particular days, and for the purpore of confoling him after his overthrow; as in India no worhip is paid to Brahma' cxcept on particular occalions, when certain offerings are made to him, but placed at fome - diftance from the perfon, who offers.them: the Greeks have confounded Txpion with Python, whofe biftory has no connection with the wars of

$$
376 \quad \text { ON EGYPT AND THE NYIT }
$$

the Gods, and who will appear, in the following fection, to be the PaIt" Hr " Nasx of the Hindus. The idea of MaHA'De'va with bis bead in the bighefs beaven, and bis feet in the loweft parts of the earth, is conformable to the language of the Oracle, in its anfwer to Nicocrates, king of Cyprus:

And the fame image is expreffed, word for word, at the beginning of the fouth Véda, where the deity is defcribed as Mabápurufba, or the Great Male.

In the fory of the war between Osiris and Typhon, mention is make by Plutarch of a fupendous Boar, in fearch of whom Typhon travelled, with a view, perhaps, to ftrengthen his own party by making an alliance with him: thus it is faid in the Faibnavágoma, that Croóra'sura was a demon, with the face of a Boar, who, neverthelefs, was continually reading the V'da, and performing fuch acts of devotion, that Vishnu appeared to him, on the banks of the Brabmaputra, promifing to grant any boon, that he could afk. Crórásura requefted, that no creature, then exifing in the three worlds, might have power to deprive him of life; and Vishnu granted his requeft: but the demon became fo infolent, that the Dévatás, whom he opprefied, were obliged to conceal themfelves, and he affumed the dominion of the world. Vishnu was then fitting on a bank of the Cáliz, greatly difquieted by the malignant ingratitude of the demon; and, his wrath being kindled, a fhape, which never before had exifed, fprang from his eyes: it was Maha de va, in his deftructive character, who dijpelled in a moment the anxiety of Vishnu, whence he acquired the furname of Chintamara. With flaming eyes, contracted brows, and his whole countenance diforted with anger, he rufhed foward Cro'ris SURA, feized him with fury, and carried him under his arm
in triumph over the whole earth, but at length caft him lifelefs on the ground, where he was transformed into a mountain fill called the Mountain of Cróra, or the Boar: the place, where Vishnu fat by the river Cäliz; has the name of Cbintábara- $f f^{\prime}$ baliz; and " all they, fays the author of the $A^{\prime}$ gama, who are " troubled with anxious thoughts, need only meditate on Chinta'hara and "their cares will be diffipated." The word Cbintá was, I imagine, pronounced Xanthus by the defcendants of Dardanása, or Dardanus, whocarried into their new fettlements not only the name, but fome obfcure notions relative to the power, of the deity Chintáhara: the diftrict of Troas, where they fettled, was called alfo Xontbè ; there was a town Xantbus in Lycia, and a nation of Xanthi, or Xantii, in Thrace; a river of Lycia had that name, and fo had another near Troy, in the waters of which grew a plant, fuppofed capable of dijpelling the cares and terrours, which both Greeks and Indians believed to be caufed by the prefence of fome invifible deity or evil fpirit. (a) The river Xantbus near Troy was vulgarly called Scamander, but its facred name, ufed in religious rites, was Xantbus; as moft rivers in India have different names, popular and holy. Xanthus, according to Homer, was a fon of Jupiter, or, in the language of Indian Mythology, an avaintara, or inferiour manifeftation, of Siva: others make him a fon of the great Tremilus (b), whom I fhould fuppofe to be Jupiter Temelius? or rather Tremelius, worfhipped at: Biennus in Crate; for the Tremili, or Tremylic, came originally from that inand. According to Stephanus of Byzantium, the native country of $\mathrm{X}_{\mathrm{ANth}}$ us was Egypt (c); and, on the fhores of the Atlantick, there were monfters fhaped like bulls, probably fea-cows, called Xantbari.. A poet, cited by Stephanus, under the word Tremile, fays, that Xanthus, fon of Jupiter, travelled with his brothers over the whole

[^34]world, and did a great deal of mijc.bief, that is, according to the Puránas, deftroyed the infolent $C_{r o ́ r} A^{\prime} \operatorname{sura}$, who was probably revered in the more weftern countries, where Varáhe's'wara once reigned according to the Hindus, and where they believe his pofterity fill to live in the fhape of white Varabas, or Boars: the legend of the wars between thofe Varábas and the Sarabhas, a fort of monfter with the face of a lion, and wings like a bird, fhall be explained in another effay on Varába-dwíp; and $I$ fhall only add in this place, that the war was reprefented, according to. Hesiod, on the fhield of Hercules. At prefent the place, where the temple of Ammon formerly food, has the name of Santariah, which may be derived from fome altar anciently dedicated to Chintáhara,
II. We are told in the Nárela Purán, that Su'rya, the regent of the Sun, had chofen a beautiful and well peopled country in Sanc'ba-dwi'p, for the purpofe of performing his devotions; but that he had no fooner begun, than the whole region was in flames, the waters dried up, and all its inhabitants deftroyed; fince which it has been denominated Barbara. The Dévatás, it is added, were in the greateft diftrefs, and Vishnu defcended with Bramima', to expofulate with the author of the conflagration: Su'ryA praifed and worhipped them, but lamented, that his devotion has not profpered, and promifed to repair the injuries done by his flames. " $I t$ is $I$, faid Vishnu, who " muft repair them; and, when I hall revifit this country, in the cha" 6 racter of Crishina, to deftroy the demon Sanc'hásura, the land fhall "s cool and be replenifhed with plants and animals; the race of Páli fhall " then fettle here, with the Cutila-céfas, the Yavanas, and other Mlécb'ba sf tribes,"

In the Uttara-cbaritra and other ancient books, we find many fories concerning Súrya, fome of which have a mixture of aftrological allegory. Once, it feems, he was performing acts of auftere devotion, in the character of Tapana, or the Inflamer, when his confort Prabha'; or Bright$n e f s$, unable to bear his intenfe heat, affumed the form of Сн'нА צ $\mathrm{A}^{\prime}$, or Shade, and was impregnated by him: after a period of a hundred years, when Gods and men, expecting a terrible offspring, were in the utmoft confternation, the was delivered of a male child, in a remote place, afterwards called Arki-fibain, or Saurift'bán, from Arci and Sauri, the patronymicks of Arca and Súrya. He was the genius of the planet, which the Latians called Saturn, and acquired among the Hindus the epithet of Sani, and Sanaischara, or low-moving. For twelve years, during his education at Arci-ft'bán, no rain fell; but a deftructive wind blew continually, and the air blazed with tremendous meteors: a dreadful famine enfued, and the Dévetás, together with the Daityas, implored the protection and advice of SU'RYA, who directed them to propitiate $S_{A N I}$ by performing religious rites to Vishnu near the Pippal tree, which is an emblem of Him; and affured them, that, in future ages, the malignant influence of the planet fhould prevail only during its paffage through four figns of the Ajavií bi, or Zodiack. The reign of Súrya in Barbara continued long, but he refigned his dominion to SANI, whofe government was tyrannical: all his pious and prudent fubjects fled to the hilly countries bordering on the river Nandá, while the irreligious and rafh perifhed in the deferts of burning fand, to which the baneful eyes of the tyrant reduced all the plains and meadows, on which he looked. His father, returning to vifit his ancient realm and feeing the defolation of the whole country, expelled $S_{A N I}$, and fent for another of his fons, named AURVA, who, being appointed fucceffor to his brother, purified the land, recalled the holy men from the hills, and made
-his fubjects happy in eafe and abundance, while he refided at Aurva-ft'bán, fo called from his name; but he returned afterwards to Vabniftban, the prefent Azarbaijain, or the Seat of Fire, in the interiour Cufba-dwipa, where he was performing his devotions on Trišringa, or the mountain with tbree peaks, at the time when his father fummoned him to the government of Barbara. Juit before that time he had given a dreadful proof of his power ${ }_{i}$ for Arama, the fon of a fon of Satyavrata, (and confequently the Aram of Scripture), was hunting in that country with his whole army, near a fpot, where Durva'sas, a cholerick faint and a fuppofed avantar of Mahádéva, was fitting rapt in deep meditation: Aram inadvertently fhot an arrow, which wourded the foot of Durva'sas, who no fooner opened his eyes, than Aurva frang from them, in the fhape of a flame, which confumed Aram and his party, together with all the animals and vegetables in Cubba-dwíp. It feems to me, that Aurva is Vulcan, or the God of Fire, who reigned, according to the Egypitian priefts, after the Sun, though fome have pretended, fays Diodorus, that he had exifted before that luminary; as the Hindus alledge, that Agni, or Fire, had exiftence in an elementary fate before the formation of the Sun, but could not be faid to have dominion, till its force was concentrated: in another character he is Orus the Elder, or Apollo, a name derived, I imagine, from a Sanfcrit word, implying a power of difpelling humidity. No doubt, the whole fyftem of Egyptian and Indian Mythology muft at firft view feem ftrangely inconfiftent; but, fince all the Gods refolve themfelves into -One, of whom they were no more than forms or appearances, it is not wonderful, that they fhould be confounded; efpecially as every emanation from the Supreme Spirit was believed to fend forth collateral emanations, which were blended with one another, fometimes recalled, fometimes continued or renewed, and varioufly reflected or refracted in all directions: another
fource of confufion is the infinite variety of legends, which were invented from time to time in Greece, Egypt, Italy, and India; and, when all the caufes of inconfiftency are confidered, we fhall no longer be furprifed to fee the fame appellations given to very: different deities, and the fame deities appearing under different appellations. To give an example in Saturn: the planet of that name is the Sani of India, who, fays Diodorus, was confidered by the Chaldeans as the moft powerful of the heavenly bodies next to the Sun ; but his influence was thought baneful, and incantations, with offerings of certain perfumes, were ufed to avert or to mitigate it. When the name is applied to Chronus, the Father of the Gods, it means CA'LA, or Time, a character both of MAHA"DE"VA and of Brahma'; but, when he is called Cronus, he feems to be the gigantick Crauncha of the Hindus; while the Saturn of Latium, and of the Golden Age, appears to be quite à different perfon, and his title was probably derived from SATYAVERNA, which implies an age of veracity and righteoufnefs. Brahma' with a red complexion is worfhipped, fay the Puranas, in the dwis of Pufbcara, which I fuppofe to be a maritime country at no great diftance from Egypt: he was there called the firft born of nature, Lord of the Univerfe, and Father of Deities: and, the Mythology of Puflacara having paffed into Greece, we find Cronus reprefented in thofe characters, but mild and beneficent to the human race, with fome features borrowed from the older fyftem, which prevailed on the banks of the Nile and the Ganges. I cannot help fufpecting, that the word Cála was the origin of Collus, or Coilus, as Ennius wrote it; and the Arian of the fainas, who was a form of Maha cála, might originally have been the fame with Uranus: as to Rhea, there can be no doubt, that fhe is the goddefs RI, whom the Hindus call the Mother of the Gods; but fome fay, that ace alfo produced malignant beings; and Pliny tells us, that
fhe was the mother of Typhon, who became fovereign of Egypt (a), but was depofed and expelled by Arveris or Horus; where we have precifely the flory of Sani and Aurva. We cannot but obferve, that the fucceffion of the Gods in Egypt, according to Manetho, is exactly in the fpirit of Hindu Mythology, and conformable, indeed, to the Puránas themfelves; and we may add, before we leave the planets, that, although Vrihaspeti, an ancient legiflator and philofopher, be commonly fuppofed to direct the motions of $\mathcal{F u p i t e r}$, which now bears his name, yet many of the Hindus'acknowledge, that Siva, or the God Jupiter, fhines in that planet, while the Sun is the peculiar fationof Vishinu, and Saturn is directed by Brahma'; whom, for that reafon, the Esyptians abhorred, not daring even to pronounce his true name, and abominating all animals with red hair, becaufe it was fisis colour.

There is fomething very remarkable in the number of years, during which Arca, and his fon, reigned on the banks of the Cáli. The Sun, according to the Brabmens, began his devotion immediately after the flood, and continued it a hundred years; Sani, they fay, was born a hundred years after his conception, and reigned a hundred years, or till the death of $A^{\prime}$ rA'm, who muft therefore have died about three hundred years after the deluge, and fifty years before his grandfather; but the Pauranics infift, that they were years of Brabmà: now one year of mortais is a day and night of the Gods, and 360 of our years is one of theirs; 12,000 of their years, or 432,0000 of ours, conflitute one of their ages, and 2000 fuch ages are Brahma's day and night, which muft be multiplied by 360 , to make crie of his years; fo that the Chronology of Egypt, according to the Brábmens, would be more ex-
(a) Lib. 2, Cap 25, \& C.
travagant than that of the Egyptions themfelves according to Manetho. The Talmud contains notions of divine days and years, founded on paffages in Scripture ill-underftood; the period of 12,000 years was Etrufcan, and that of 432000 , was formed in Cbaldea by repetitions of the faros; the Turdetani, an old and learned nation in Spain, had a long period nearly of the fame kind; but for particular inquiries into the ancient periods and the affinity between them, I muft refer to other Eflays, and proceed to the geography of Egypt, as it is illuftrated by the Indian legends.

The place, where the Sun is feigned to have performed his acts of religious aufterity, is named the fibán, or fation, of Arca, Súrya, and TApana: as it was on the limit between the dwipas of Cu/b and Sanc'ba, the Purans afcribed it indifferently to either of thofe countries. I believe it to be the Tabpankés of Scripture, called Tapbna or Taplonai, by the feventy Interpreters, and Dapbne in the Roman Itinerary, where it is placed fixteen miles from Pelufium: it is mentioned by Herodotus, under the name of Dapbne Pinfice, (a) and by Stephanus under that of Dapbne near Pelufum; but the moderns have corrupted the name into Safnas.

Sauri-stihan, where Sani was boin and educated, feems to have been the famed Beth Shemefh, or Heliopolis, which was built, fays Drodorus, by Aetis, in honour of his father the Sun (b): Aetrs firft taught Aftronomy in Egypt, and there was a college of aftronomers at Heliopolis, with an obfervatory and a temple of the Sun, the magnificence and celebrity of which might have occafioned the change of the ancient name into Súrya-ft bán, as it was tranflated by the Hebrezos and Greeks. It is faid by the Hindus, that SANr,

[^35]or $A_{R K I}$, built feveral places of worfip in the regions adjacent to the $C \hat{a} t{ }_{b}$; and we ftill find the town of Arkico near the Red Sea, which is not mentioned, indeed, by any of the Grecian geographers, but the headland contiguous to it is called by Ptolemy the promontory of Saturn. The genius of Saturn. is defcribed in the Purans as clad in a black mantle, with a dark turban loofely wrapped round his head; his afpect hideous and his brows knit with anger; a trident in one of his four hands, a cimiter in a fecond, and, in the two others, a bow and fhafts: the priefts of SATURN in Egypt, where his temples were always out of the towns, are faid by Epiphanius to have worn? a drefs nearly fimilar.

To conclude this head, we muffadd, that the fiban of Aurva is now called Arfu by the Copts (a); but, as Aurva correfponded with Orus, or: Apollo, the Greeks gave it the name of Apollonopolis.
III. The metamorphofis of Lunus into Luna was occafionally mentioned in the preceding fection; but the legend muit now be told more at: length. 'The God So'ma, or Chandra, was traverfing the earth with his favourite confort Róhiní; and, arriving at the fouthern mountain Sabyádri, they unwarily entered the foreit of Gauri, where fome men having furprifed Mabádéva carefling that goddefs, had been formerly punifhed by a change of their fex, and the foreft had retained a power of effecting the like change on all males, who thould enter it. CHANDRA, inftantly becoming a female, Was fo afflicted and afiamed, that the haftened for to the weft, fending Ro' HIwi'to her feat in the $0 k y$, and concealed herfelf in a mountain, afterwards named Sóma-giri, where the performed acts of the moft rigorous devotion.

[^36]Darknefs' then covered the world each night: the fruits of the earth were deftroyed, and the univerfe was in fuch difmay, that the Dévas, with Brabma' at their head, implored the affifance of MAHA'DÉVA, who no fooner placed Cbandrì on his :forehead, than the became a male again; and hence he acquired the title of Cbandiciséc'bara. This fable, has been explained to me by an ingenious Pandit : to the inhabitants of the countries' near the fource of the Cáli, the moon, being in the manfion of Róbiniz, or the Pleiads, feemed to vanifh behind the fouthern mountains: now, when the moon is in its oppofition to the Sun, it is the God Chandra, but, when in conjunetion with it, the gordefs ChANDR't, who was in that ftate feigned to have conceived the Pulindas mentioned in the former fection. The moon is believed by the LIindu naturalifts to have'a powerful influence on vegetation, efpecially on certainplants, and above all on the Sónalatá, or Moon-plant; butits powcr, they fay, is greateft at the furnimà ${ }_{x}$ or full, after which it gradually decays till, on the dark $\begin{aligned} & \text { itébj, or a amáváfà̀, it wholly vanifhes. This mode of interpretation }\end{aligned}$ may ferve as a clew for the intricate labyrinth of the Puranas, which contain all the hiftory, phyfiology, and fcience of the Indians and Egyptians difguifed under fimilar fables. We have already made remarks on the region and moun. tains of the Moon, which the Puránas place in the exterios Cufba-dwip, or the fouthern parts of $A f r i c a ;$ and we need only add, that the Pulindas confider the female Moon as a form of the celeftial I'sr, or Isis, which may feem to be incompatible with the mythological fyftem of India; but the Hindus have in truth an Isis with tbree forms, called Swar-dévi' in heaven, Bhu'-dévi' on earth, and $P A^{\prime} T A^{\prime} L A-D E^{\prime} V^{\prime}$ in the infernal regions. The confort of the terreftrial goddefs is named Bhú-DÉva, who refides on SUmÉru, and is a vicegerent on earth of the three principal deities: he feems to be the Bocis of the Greek Mythologitts, and the Budyas of Arrian; though the Greciars writers have generally confounded him with Buddia.

TV. When this earth was covered with waters, MAHACA LA, who floated on their furface, beheid a company of Afarafes, or-Nympos, and expreffed with fuch force his admiration of their beauty, that Manáea't, his confort, was greatly incenfed and fuddenly vanifhed: the God, fung with remorfe, went in fearch of her, and with hafty ftrides traverfed the earth, which then had rifen above the waters of the deluge, as they were dried up or fubfided; but the ground gave way under the preffure of his foot at every ftep, and the balance of the globe was nearly deftroyed. in this diftrefs he was feen by the relenting $\mathrm{CA}^{\prime}$ li' on the fite of Srirangapaitana; and confidering the injury, which the univerfe would fuftain by her concealment, the appeared in the character of RA'JARA'JE'SWARI, and in the form of a damfel more lovely than an Apfaras, on the banks of ariver fince named Cáli. There at length he faw and approached her in the character of RA'JARA JE"SWARA, and in the fhape of a beautiful youth: they were foon reconciled, and travelled together over the world, promoting the increafe of animals and vegetables, and inftructing mankind in agriculture and ufeful arts. At laft they returned to Cufha-dwip, and fettled at a place, which from them was named the St'bána of Rájaraj jéswara and Rájarájéswari, and which appears to be the Nyfa of Arabia, called Elim in Scripture, and El Tor by modern Geographers; but Al Túr belongs properly to the interior $d^{w}$ íp of Cufha: they refided long in that Station converfing familiarly with men, till the iniquities of later generations compelled them to difappear; and they have fince been worfhipped under the titles of IsAna, or Isa, and Isáni, or Isí.

Since the goddefs Isis made her firft appearance in Egypt, that country is called her nurfing mother in an infeription mentioned by Diodorus, and Said to have been found on a pillar in Arabia: the was reported by the

Egyptians to have been Quecn of that country, and is declared in the Puráns to have reigned over $C u / h a$-dw'p within, as her confort has the title, in the Arabian infcription, of King Osiris; conformably, in both inftances, to the characters, under which they appeared on the banks of the Nile. The place, where I'si was firt vifible, became of courfe an object of worfhip; but, as it is not particularly noticed by the Mythologits of the weft, we cannot precifely afcertain its fituation: it was probably one of the places in the Delta, each of which was denominated Iseum; and, I think, it was the Town of Isis near Sebennytus (a) now called Bba-beit, where the ruins of a magnificent temple, dedicated to Isis, are fill to be feen. As Ysiris came from the weftern peninfula of India, he was confidered in Egypt as a foreign divinity, and his temples were built out of the towns.
V. Bhava, the author of exiflence, and confort of Amba; the Magne Mater of the weftern Mythologifts, had refolved to fet mankind an example of performing religious aufterities, and chofe for that purpofe an Aranya, or uninbabited foreft, on the banks of the Nile; but Amba;, named alfo Bhava' nr and Uma', being uneafy at his abfence and gueffing the place of his retirement, affumed the character of Aranya-DE'vi', or Goddefs of the Foreft, and appeared fporting among the trees at a place called afterwards Cámavana, or the Wood of Defire, from the impreffion, which her appearance there made on the amorous deity : they retired into an Atavi, or impervious foreft, whence the goddefs acquired alfo the title of Atavi-dévi, and the fcene of their mutual careffes had the name of Bhavatavi-ft'bána, which is mentioned in the Vedas. The place of their fubfequent refidence near the Nile was denominated Crírávana, or the Grove of Dalliance; and
(a) Tab. Peutinger. Plin. Steph. Byzant.
that, where Bhava was interrupted in his devotions, was at firft called Bbavaftb'an, and feems to be the celebrated Bubafos, or, in the oblique cafe, Bubafon, peculiarly facred to Diana, the Goddefs of Woods: from Bbavátav̀̀, which was at fome diftance from the Nile in the midd of an impervious foref, the Greeks made Butoi in the oblique cafe, whence they formed Buto and Butuis; and tbere allo ftood a famous temple of Diana. The fifuation of Crírúvana cannot be fo eafily afcertzined; but it could not have been far from the two laft-mentioned places, and was probably in the Delta, where we find a moft diftinguified temple of Venus at Apbroditopolis, (a) now Atar-bekbi, which, according to Stephanus of Byzantium, was at no great diftance from Atribi: the goddefs had, indeed, laid afide the charater of Diana, when Bhava perceived her, and affumed that of Bhava'ni, or Venus. The three places of worfhip here mentioned were afterwards continually vifited by numerous pilgrims, whom the Brabmánda-puran, from which the whole fable is extracted, pronounces entitled to delight and happinefs both in this world and in the next.

Bhavéswara feems to be the Busiris of Egypt; for StraBO afferts poifively, that no Egyptian king bore that name, though altars, on which men were anciently facrificed, were dedicated to Busiris, and the human victims of the Hindus were offered to the confort of Bhavéswara. The Naramedba, or facrifice of a man, is allowed by fome ancient authorities; but, fince it is prohibited, under pain of the fevereft torture in the next' world, by the writers of the Brabma, of the $A d i$ tya-purán, and even of the Bbágavat itfelf, we cannot imagine, that any Bráb. men would now officiate at fo horrid a ceremony, though it is afferted by

[^37]fome, that the Pámaras, or Pariar nations, in different parts of India difegard the prohibition, and that the Carbaras, who were allowed by Paras u $\mathrm{Ra}^{\prime} \mathrm{ma}$ to fettle in the Cóncan, facrifice a man, in the courfe of every generation, to appeafe the wrath of Re'Nucá -déví.

Before we quit the fubject of Atavì, we muft add two legends from the Brábmánda, which clearly relate to Egypt. A juft and brave king, who reigned on the borders of Himálaya, or Imaus, travelled over the world to deftroy the robbers, who then infefted it ; and, as he ufually furprifed them by night, he was furnamed Nactamchara : to his fon Nis'áchara, whofe name had the fame fignification, he gave the kingdom of Barbara near the Golden Mountains above Syene; and Nis, $A^{\prime}$ chara followed at firft the example of his father, but at length grew fo infolent as to contend with Indra, and oppreffed both Dévas and Dánavas; who had recourfe to Atavì-be'vì and folicited her protection. The goddefs advifed them to lie for a time concealed in Swerga, by which we muft here undertand the mountains; and, when the tyrant rafhly attempted to drive her from the banks of the Nile, The attacked and flew him: the Dévas then returned finging her praifes; and on the fpot, where fhe fought with Nisáchara, they raifed a temple, probably a pyramid, which from her was called Ataví-mandira. Two towns in Egypt are fill known to the Copts by the names of Atfi, Atfifh, and Itfu; and to both of them the Greeks gave that of Apbroditopolis: the diftrict round the moft northerly of them is to this day named Ibrit, which M. D'Anvilue with good reafon thinks a corruption of Arhrodite; but Ataviz-niandir is Atf to the fouth of Alkabirab, not the Atf. or Itfu near Thebes, which alfo is mentioned in the Puranas and fuid to have food in the forefts of Tapars

Another title of the goduffs was AshTABA, which dhe derived from
the following adventure. Vijaya'swa, or victorious on borfeback, was a virtuous and powerful king of the country round the Ni/hadha mountains; but his firft minifter, having revolted from him, collected an army of Mléch'has in the hills of Gandba-mádan, whence he defcended in force, gave battle to his mafter, took him prifoner, and ufurped the dominion of his country. The royal captive, having found means to efcape, repaired to the banks of the Cali, and, fixing eight fharpiron fikes in a circle at equal diftances, placed himfelf in the centre, prepared for death, and refolved to perform the moft rigorous acts of devotion. Within that circle he remained a whole year, at the clofe of which the goddefs appeared to him, iffuing like a flame from the eight iron points; and, prefenting him with a weapon, called Afárá-mudgara, or a ftaff armed with eight fpikes fixed in an iron ball, the affured him, that all men, who fhould fee that faff in his hand, muft either fave themfelves by precipitate flight, or would fall dead and mangled on the ground. The king received the weapon with confidence, foon defeated the ufurper, and erected a pyramid in honour of the goddefs by the name of Ashtárá-devi': the writer of the Purána places it near the Cálı river in the woods of Tapas; and adds, that all fuch, as vifit it, will receive affiftance from the goddefs for a whole year. A/Jtan means eigbt, and the word ára properly fignifies the fpoke of a wobeel, yet is applied to any thing refembling it ; but, in the popular Indian dialects, a/bta is pronounced átt; and the appearance, which Strabo mentions, of the goddefs Aphrodite under the name of Attara, muft, I think, be the fame with that of Ashta'ra': the A/htaroth of the Hebreces, and the old Perfian word afárab, now written ̧itárab, (or a farr zeitb eight rays) are moft probably derived from the two Sanfcrit words. Though the place, where Vijaya'swa raifed his pyramid, or temple, was named A/btáráfíbán, yef, as the goddefs, to whom he infribed it, was no other than Atavi-
déri, it has retained among the Copts the appellation of Atfi or Atfu, and was called Aphroditopolis by the Greeks: it is below Akhmim on the weftern bank of the Nile.

JDI.: Among the legends concerning the transformations of $\mathrm{De}^{\prime} \mathrm{VI}$, or
 hiftory of the Indian Ca'stor and Pollux. In one of her forms, it feems, the appeared as Prabiná, or Light, and affumed the thape of Afwini, or a Mare, which is the firft of the lunar manfions : the Sun approached her in the form of a bon $f e$, and he no fooner had touched her noftrils with his, than the conceived the twins; who, after their birth, were called Afwinicumarau, or the two fons of Aswini'. Being left by their parents, who knew their deftiny, they were adopted by Brahma', who intrufted them to the care of his fon Dacsha; and, under that fage preceptor, they learned the whole Ayurveda, or fyftem of medicine: in their early age they travelled over the world performing wonderful cures on Gods and men; and they are generally painted on horfeback, in the forms of beautiful youths, armed with javelins. At firft they refided on the Cula mountains near Cols shis; but INDRA, whom they had inftructed in the fcience of healing, gave them a ftation in Egypt near the river Cáli, and their new abode was from them called "Afwi-ft'bán: as medicated baths were among their moft powerful remedies, we find near their feat a pool, named Abhimatada, or granting what is defired, and a place called Rúpa-yauvana-flbala, or the land of beauty and youth. According to fome authorities, one of them had the name of 'Aswin, and the other of CUMA'r, one of $\mathrm{NA}^{\prime}$ 'SATYA, the other of Dasra; but, by the better opinion, thofe appellations are to be ufed in the dual number and applied to them both: they are alfo called Aswana'sau, or Aswacana'sau, bccaufe their mother conceived them by her nofrils;
but they afe confidered as united fo intimately; that each feems either, and they are often held to be one individual deity. As twin-brothers, the two Dasras or Cumáras, are evidently the Diofoori of the Grceks; but, when reprefented as an individual, they feem to be Æsculapius, which my Pandit fuppores to be Asuriculaba, or Chief of the race of Afwi: that epithet might; indeed, be applied ta the Sun ; and /esculapius, according to fome of the weftern Mythologifts, was a form of the Sun himfelf. The adoption of the twins by Brahmá, whore favourite bird was the pheenicopteros, which the Europeans changed into a fwan, may have givers rife to the fable of Leda; but we cannot wonder at the many diverfities in the old Mythological fyftem, when we find in the Puranas themfelves very different genealogies of the fame divinity and very different accounts of the fame adventure.

- Ascuiapius, onselepius, was a fon of Apolyo, and his mother; according to the Pbenicians, was a Goddefs, that is, a form of De'vi': he too was abandoned by his parents, and educated by Autolaus, the fon of Arcas (a). The Afroiculapas, or Afclepiades, had extenfive fettlements in Theffaly (b), and, I believe, in Meffenia. The word Afwini feems to have given a name to the town of A/phynis, now Asfun, in upper Egypt.; for $A f$ wa, a borfe, is indubitably changed by the Perfians into A/b or $A f p$; but Afwi-fl'bán was probably the town of Abydus in the Thebais, and might have been fo named from Abbide, a contraction of Abhimatada; for Stra Bo inform us, that it was anciently a very large city, the fecond in Egype after Thebes, that it flood about feven miles and a half to the weft of the Nile ; that a celebrated temple of Osiris was near it, and a magnificent edi-

[^38]fice in it, called the palace of MEMnon; that it was famed alfo for a well, or pool of water, with winding fteps all round it, that the ftructure and workmanhip of the refervoir were very fingular, the fones ufed in it of an aftonifhing magnitude, and the fculpture on them excellent. (a) Herodotus infifts, that the names of the Dioscuri were unknown to the Egyptians; but, fince it is pofitively afferted in the Puranas, that they were venerated on the banks of the Nile, they mult have been revered, I prefume, in Egypt under other names: indeed, Harpocrates and Halitomenion, the twin-fons of Osiris and Isis, greatly refemble the Dioscuri of the Grecian Mythologifts.
VII. Before we enter upon the next legend, I muft premife, that ída, pronounced ira, is the root of a Sanfcrit verb fignifying praife, and fynonymous with ila, which oftener occurs in the Véda: the Rigvéda begins with the phrafe Agizmile, or I fing praife to Fire. Vishinu then had two warders of his ethereal palace, named Jaya and Vijaya, who carried the pride of office to fuch a length, that they infulted the feven Mabarßis, who had come, with SanAca at their head, to prefent their adorations; but the offended Rijsis pronounced an imprecation on the infolent warders, condemning them to be adbóyoni, or born below, and to pafs through three mortal forms before they could be re-admitted to the divine prefence: in confequence of this execration, they firft appeared on earth as HiranyA csha, or Golden-eyed; and Firantacisipu, or Clad in gold; fecondly, as Rávana and CumbhaCARNA, and, lafly, as Cansa and SISUPÁla.

In their firf appearance they were the twin-fons of CAS YAPA and DITI: before their birth, the body of their mother blazed like the fun, and the $D e$ -

watás, unable to bear its exceffive heat and light, retired to the banks of the Cáth, refolving to lie concealed, till fhe was delivered; but the term of her geftation was fo long, and her labour fo difficult, that they remained a thoufand years near the holy river employed in acts of devotion: At length Dévi' appeared to them in a new character, and had afterwards the title of I $I^{\prime} \mathrm{D}^{\prime} \mathrm{I} A$, or I'litá, becaufe fhe was prajed by the Gods in their hymns, when they implored her affiftance in the delivery of DITI: fhe granted their requef, and the two Daityas were born ; after which I'Litá-DE'Vi affured mankind, that any woman, who fhould fervently invoke her in a fimilar fituation, fhould have immediate relief, The Dévas erected a temple in the place, where fhe made herfelf vifible to them, and it was named the fíbán of I'ditá or I'lita' ; which was probably the town of Idithya or Ilithya in Upper Egypt; where facred rites were performed to Eilithya or Eleutho, the Lucina of the Latians, who affifted women in labour ; it food clofe to the Nile oppofite to Great Apollonopelis, and feems to be the Leucotbea of Piriny. This goddefs is now invoked in India by women in childbed, and a burnt offering of certain perfumes is appropriated to the occafion

VIII, WE read in the Mabad-limálaya-c'banda, that, after a deluge, from which very few of the human race were preferved, men became ignorant and brutal, without arts or fciences, and even without a regular language; that part of San'cba-dwis in particular was inhabited by various tribes, who were perpetually difputing; but that Iswara defcended among them, appeafed their animofities, and formed them into a community of citizens mixed without invidious diftinctions; whence the place, where he appeared, was denominated Mifrafy'ban; that he fent his confort VA'GE'SWARI', or the Goddefs of Speech, to inftruct the rifing generations in arts and language; for which purpofe fhe alfo vifited the dwith of Cusha. Now the
ancient city of Mrsra was Mempbis; and, when the feat of government was transferred to the oppofite fide of the river, the new city had likewife the name of $M_{i}^{r} i f$, which it fill retains; for Alkábirah, or the Conquerefs, vulgarly Cairo, is merely an Arabick epithet.

Vágíswara, or Vágísá commonly pronounced Bágíswar and Bágt's, means the Lord of Speech; but I have feen only one temple dedicated to a God with that title: it fands at Gangápur, formerly Debterea, near Banáres, and appears to be very ancient: the image of $\mathrm{VA}_{A^{\prime}} \mathrm{GI}^{\prime}$ SWARA, by the name of Siródéva, was brought from the weft by a grandfon of Ce'tu-misra defcended from Gautama, together with that of the God's confort and fifter, vulgarly named Bassari; but the Brábmens on the fpot informed me, that her true name was $\mathrm{BA}_{A^{\prime}} \mathrm{GI}^{\prime} \mathrm{swari}$. The precie meaning of Siródéva is not afcertained : if it be not a corraption of Srídéva, it means the God of the Head; 'but the generality of Bríbmens have a fingular diflike to the defcendants of Gavtam, and object to their modes of worfhip, which feem, indeed, not pur ly Iudza. The prieits of BA'GÍSWARA, for inftance, offer to his confure a lower mantle with a red fringe and an earthern pot fhaped like a coronet: to the Gol himfelf they prefent a vafe full of arak; and they even facrifice a hog to him, pouring its blood before the idol, and reforing the carcafe to its owner; a ceremony, which the Egyptians performed in honour of Bicchus Osiris, whom I fuppofe to be the fame deity, as I beliive the Baffiriles to have been fo named from Baffari. Several demigods (of whoan Cicero reckons five) (a) hat the name of Baccius ; and it is not improbable, that fome confution has been caufed ty the refemblance of names: thus Ba'criswa-
(a) De Nat. Dior.

B b b 2
ra was charged by the Greeks into Bacchus Osiris; and, when they introduced a foreign name with the termination of a cafe in their own tongue, they formed a nominative from it; hence from Bhagawa n alfo they firft made Bacchon, and afterwards Bacchos; and, partly from that ftrange careleffnefs conficuous in all their inquiries, parily from the referve of the Egyptian prieft, they melted the three divinities of Egypt and India into one, whom they mifcalled Osiris. We have already obferved, that Ysiris was the truer pronunciation of that name, according to Hellanicus; though Plutarch infift, that it fhould be Siris or Sirius: but Ysiris, or Iswara, feerns in general appropriated to the incarnations of Mahádéva, while:Siris or Sirius was applied to thofe of Vishnu.
IX. Wren the Pándavas, according to the Vrihad-baina, wandered over the world, they came to the banks of the Cáli river in Sanc'bà-diw'p, where they faw a three-eyed man firting with kingly flate, fürrounded by his people and by animals of all forts, whom he was inftructing in feveral arts according to their capacities: to his human fubjeets he was teaching agriculture, elocution, and writing: The defcendants of Pandu, having been kindly received by him, related their adventures at his requeft; and he told them in return, that, having quarrelled in the manfion of Brafmá with Dacsha his father in law, he was curfed by Menu, and doomed to take the form of a Mánava, or man, whence he was named on earth 'Amane'swara; that his faithful confort transformed herfelf into the river Cáñ, and purified his people, while he guided them with the faff of empire and: gave them inftruction, of which he had found them in great need. The place, where he refided, was called A'manéfwara-fthán, or the feat of A'man or A'mon, which can be no other than the Amonno of Scripture, tranlated Diofpolis by the Seventy interpreters; but it was Dio/polis
between the canals of the Delta, near the fea and the lake Manzali, for the Prophet $\mathrm{Nahum}^{(a)}$ defcribes it as a town fituated among rivers, with waters round about it, and the fea for its rampart; fo that it could not be either of the towns, named alfo Diofpolis, in Upper Egypt ; and the Hindu author fays exprefsly, that it lay to the north of Himádri.

Having before declared my opinion, that the Nopb of the three greater Prophets was derived from Nabbas, or the fky , and was properly called Nabba-ifroara-ft'bán, or Nabha-fi'hán, I have littile to add here: Hose a once calls it $\operatorname{Mopb}(b)$, and the Cbaldean paraphraft, Maphes; while Rabbi Kimehi afferts, that Mopb and Nopb were one and the fame town: the Seventy always render it Memphis, which the Copts and Arabs pronounce Menuf or Menf; and, though I am well aware, that fome travellers and men of learning deny the modern Menf to be on the fite of Memphis, yet, in the former fection, I have given my reafons for diffenting from them, and obferved, that Memphis occupied a vaft extent of ground along the Nile, confifting in fact of feveral towns or divifions, which had become contiguous by the acceffion of new buildings. Mi Hay not the words Noph and Menf have been taken from Nab̄ba and Mánava, fince Nabbómánava, as a title of Iswara, would fignify the celéftial man? The Egyptian priefts had nearly the fame ftory, which we find in the Pürans; for they related, that the ocean formerly reached to the fpot, where Memphis was built by king. Mines, Minas, or Minevas, who forced the fea back by altering the caurfe of the Nile, which, depofiting its mud in immenfe quantities, gradually formed the Delt̂a.

Diospolis, diftinguifhed by the epithet great, was a name of Theles,
(a) Ch. 3. v. 8.
(b) Ch. g. v. 6.
which vias alfo called the City of the Sun (a), from a celebrated temple dedicated to that luminary, which I fuppofe to be the Súryéfwara-ft lán of the old Hindu writers: the following legend concerning it is extracted from the Bbácara-mááátmya. The fon of So marája, named PushpliCE'TU, laving inherited the dominions of his father, neglected his publick duties, contemned the advice of his minifters, and abandoned himfif to voluptuoufnefs; till Bhíma, fon of Pámara, (or of an outcaf) defcended from the hills of Niladri, and laid fiege to his metropolis: the prince, unable to defend it, made his efcape, and retired to a wood on the banks of the Cäll. There, having bathed in the facred river, he performed penance for his former diffolute life, ftanding twelve days on one leg, without even tafting water, and with his eyes fixed on the Sun; the regent of which appeared to him in the character of Súryéswara, commanding him to declare what he moft defired. "Grant me mochac, or beatitude," faid Pushpa-cétu, proftrating himfelf before the deity; who bade him be patient, affured him that his offences were expiated, and promifed to deftroy his enemies with intenfe heat, but ordered hin to raife a temple, infrribed to Súryéswara, on the very fpot, where he then food, and declared, that he would efface the fins of all fuch pilgrims, as fhould vifit it with devotion: he alfo directed his votary, "who became, after his reftoration, a virtuous and fortunate monarch, to celebrate a yearly feflival in honour of Súrya on the feventh lunar day in the bright half of Mágba. We need only add, that Heliopolis in lower Egypt, though a literal tranflation of Surya-fibón, could not be the fame place, as it was not on the banks of the Nile.
X. One of the wildeft fictions, ever invented by Mythologifts, is told in
(a) Diod. Sic. Bo 2. C. Bo,
the Pádma and the Bhágavat; yet we find an Egyptian tale very fimilar to it. The wife of $\mathrm{CA}^{\prime}{ }^{\prime} \mathrm{s}^{\prime} \mathrm{YA}$, who had been the guru, or fpiritual guide, of Crishna, complained to the incarnate God, that the ocean had fwallowed up her children near the plain of Prabbáfa, or the weftern coaft of Gurjara, now called Gujarat; and fhe fupplicated him to recover them. Crishen hafeened to the fhore; and, being informed by the fea-god, that Sanc'ha'isura, or Pánchajanya, had carried away the children of his preceptor, he plunged into the waves, and foon arrived at Cuf/a-droip, where he inftructed the Cutila-céfas in the whole fyftem of religious and civil duties, cooled and embellifhed the peninfula, which he found fmoking from the various conflagrations which had happened to it, and placed the government of the country on a fecure and permanent bafis: he then difappeared; and, having difcovered the haunt of SANC'HA'sURA, engaged and new him, after a long conflict, during which the ocean was violently agitated and the land overflowred; but, not finding the Brábmen's children, he tore the monfter from his fhell, which he carried with him as a memorial of his victory and ufed afterwards in battle by way of a trumpet. As he was proceeding to Varába-dwíp, or Europe, he was met by Varuna, the chief God of the Waters, who affured him pofitively, that the children of $\mathrm{CA}^{\prime} \mathrm{s}^{\prime} \mathrm{YA}$ were not in his domains: the preferving power then defcended to Yamapuri, the infernal city, and, founding the fhell Páncbajanya, ftruck fuch terrour into YAMA, that he ran forth to make his proftrations, and reftored the children, with whom CrishNA returned to their mother.

Now it is related by Peutarch (a), that Garmathone, queen of Egypt, having loft her fon, prayed fervently to Isis, on whofe interceffion

[^39]Osiris defcended to the chades and reftored the prince to life ; in which fable Osiris appears to be Crishna, the black divinity: Garmatho, or Gare batho, was the name of a hilly diftrict bordering on the land of the Troglodytes, or Sanc'báfuras; and Etbiopio was in former ages called Egypt. The fiove in that country is mentioned by Cedrenus and faid to haye happened fifty years, ofter CECROPs, the firt king of Athens, had begun his reign: Abyfinia was laid wafte by a flood, according to the Chronicle of Axum, about r600 gears before, the birth of Christ ( $a$ ); and Cecrops, we are told, began to reign 1657 years before that epoch ; but it muft be confeffed, that the chronology of ancient Greece is extremely uncertain.
XI. Havine before alluded to the legends of Gupta and Cardama, we Inall here fet them down more at large, as they are told in the Puranas, entitled Brabmanda and Scanda, the fecond of which contains very valuable matter concerning Egypt and other countries in the weft. Súrya having directed both Gods and men to perform facred rites in honour of Vishnu, for the purpore of counteracting the baneful infuence of SANI, they all followed his directions, except MA'HADE VA, who thought fuch homage inconfiftent with his exalted character; yet he found it neceffary to lie for a time concealed and retired to Barbara in Sanc'ba-druis, where he remained feven years bidden in the mud, which covered the banks of the Cali: hence he acquired the, title of Guptéswara. The whole world felt the lofs of his vivifying power, which would long have been fufpended, if Mandapa, the fon of Cusin MAMDA, had not fled, to avoid the punifhment of his vices and crimes, into g Guba-draf; where he became a fincere penitent, and wholly devoted himfelf to the worfhip of MAHADE'VA, conftantly finging his praife and dancing in
(a) Bruces's Travels I. 398.

Sonour of him: the people, ignorant of his former diffolute life, took him for a holy man and loaded him with gifts, till he became a chief among the votaries of the concealed God, and at length formed a defign of reftoring him to light. With this view he paffed a whole night in Cardama-jt'ban, chanting hymns to the mighty power of deftruction and renovation, who, pleafed with his piety and his mufick, ftarted from the mud, whence he was named Cardaméswara, and appeared openly on earth; but, having afterwards met Sanaischara, who fcornfully exulted on his own power in compelling the Lord of three Worlds to conceal bimfelf in a fen, he was abaihed by the taunt, and afcended to his palace on the top of Cailáfa.

Guptéswara-sthan, abbreviated into Gupta, on the banks of the Nile, is the famed town Coptos, called Gupt or Gypt to this day, though the Arabs, as ufual, have fubftituted their káf for the true initial letter of that ancient word: I am even informed, that the land of Egypt is diftinguifhed in fome of the Puránas by the name of Gupta-fthbán; and I cannot doubt the information, though the original paffages have not yet been produced to me. Near Gupta was Cardamafi'bali, which I fuppofe to be Thebes, or part of it ; and Cadmus, whofe birthplace it was, I conceive to be Iswara, with the title Cardama; who invented the fyfem of letters, or at leaft arranged them as they appear in the Sanfcrit grammars : the Greeks indeed, confounded Cardaméswara with Cardama, father of Varuna, who lived on the weftern coafts of $A f a$; whence Cadmus is by fome called an Egyptian, and by others, a Pbenician; but it muft be allowed, that the writers of the Puránas alfo have caufed infinite confufion by telling the fame ftory in many different ways; and the two Cardamas, may, perhaps, be one and the fame perfonage.

$$
\mathrm{Ccc}
$$

"CaDmus was born, fays Diodomus, (a) at Tibebes in Egypt: he had " feveral fons, and a daughter named SEMELE, who became pregnant, and, * in the'ferventh month, brought forth an imperfece male child greatly refem"bling Osiris', whence the Greeks believed, that Osiris was the fon of "Cadmus and Semele:" Now lunnot help believing, that Osiris of Thebes was Iswara (pringing, after his concealment for feven years, from the mud (Cardama) of the river Sjámasà, which is a Pauranic name for the Nile: whatever mighthave been the grounds of fo frange legend, it probably gave rife to the popular Egyptian belief, that the human mace were produced from the mud of that river; fince the appearance of Cardaméswara revivified nature and replenifhed the earth with plants and animals.
XII. The next legend is yet ftranger, but not more abfurd than a fory, which we fhall find among the Egyptians, and, which in part refembles it. Mabádéva and Parvatí were playing with dice at the ancient game of Cbaturanga, when they difputed and parted in wrath; the goddefs retiring to the foreft of Gauri, and the god repairing to Cufbadwip: they feverally performed rigid acts of devotion to the Supreme Being; but the fires, which they kindled, blazed fo vehemently as to threaten a general conflagration. The Dévas in great alarm haftened to Brahma; who led them to MAHA"DE'VA, and fupplicated him to recall his confort; but the wrathful deity only anfwered, that fhe muft come by her own free choice: they accordingly difpatched GanGA', the river-goddefs, who prevailed on Párvati to return to him on condition that his love for her fhould be reftored. The celeftial mediators then employed $\mathrm{CA}^{\prime} \mathrm{MA}-\mathrm{DE} \mathrm{E}^{\prime} \mathrm{VA}$, who wounded Siva with one of his flowery arrows; but the angry divinity re-

[^40]duced him to afhes with a flame from his eye: PA RVATI foon after prerented herfelf before himin the form of a Ciráti, or daughter of a mountaineer, and, feeing him enamoured of her, refumed her own Shape. In the place, where they were reconciled, a.grove fprang up, which was named Cámavana; and the relenting god, in the chanácter of CÁ MéswARA, confoled the afflioted Reti, the widow of Ca'mia, by affuring her, that the fhould rejoin her hufband, when he flould be born againing the form of Pradyumna, fon of Crishnia, abd hould put Sambara to death. This favourable prediction was inc due time accomplifheds and Pradyumna having fprang to life, he was imtantly feizedibysthe demon 'Sambara, who placed him in a chent, which he threw into the ocean; but a large fifh, which bad fwallowed the cheft, was caught in a net, and carried to the palace of a tyrant, where the unfortunate RET had been compelled to do menial fervice: it was her lot to open the fifh, and, fee. ing an infant in the cheft, the nurfed him in privateinand educated him till he had fufficient ferength to deftroy the maligniant SAMB:ARA.Sq He had before confidered Rewi as his mother, butt, the minds of themiboth being irradiated, the prophefy of MAHADEEA was remembened and the god of Love was again united with the goddefs of Pleafure. Qnetof his names was Pushpadhanva, or with a fowenysboto; and he hadiojfon Visvam dhanva, from whom Vijayadhanva and Cirfiohanyandineally fprang; but the two laft, with whom the race ended, were furnamed CAUn apa for areafon, wheichy thall prefently be difclofed.

Visvadifanva, with his youthfyl companions, was hunting on the Mirts of Himá Lafa, where he faw a white elephant of an amazing fize with four tufks, who was difporting himfelf with his females; the prince imagined him to be Aira ${ }^{\text {V }}, A, T A$, the great elephant of $I_{N D R A, ~ a n d ~ o r d e r e d ~}^{\text {a }}$

$$
\mathrm{C} \text { cc } 2
$$

a circle to be formed round him; but the noble beaft broke through the toils, and the hunters purfued him from country to country, till they came to the burning fands of Barbara, where his courfe was fo much impeded, that he affumed his true fhape of a Rác/bafa, and began to bellow with the found of a large drum; called $d u n d u$, from which he had acquired the name of Dun dUbHi. The fon of CAMA, inftead of being difmayed, attacked the giant, and, after an obftinate combat, flew him ; but was aftonihhed on feeing a beautiful youth rife from the bleeding body, with the countenance and form of a Gandharva, or celeftial quirifter; who told him, before he vanifhed, that " he had been expelled for a time from the heavenly manfions, and, as a * punifhment for a great offence, had been condemned to pafs through a " mortal 今tate in the fhape of a giant, with a power to take other forms; Ge that his crime was expiated by death, but that the prince deferved, and ${ }^{45}$ would receive, chaftifement, for molefting an elephant, who was enjoy${ }^{44}$ ing innocent pleafures." The place, where the white elephant refumed the fhape of a Raćfhafa, was called Rác/bafa-fobán; and that, where he was killed, Dandubhi-mára- $\neq$ ’bán, or Rácfhafa-móc/bana, becaufe he there acquired moc/ha, or a releafe from his mortal body: it is declared in the Utiara-charitra, that a pilgrimage to thofe places, with the performance of certain holy rites, will ever fecure the pilgrims from the dread of giants and evil fpirits.

Cantaca, the younger brother of Dundubhi, meditated vengeance; and affuming the character of a Brábmen, procured an introduction to Visvadhanwa as a perfon eminently filled in the art of cookery he was accordingly appointed chief cook, and; a number of Brábmens having been invited to a folemn entertainment, he ftewed a cuñapa, or corpfe, (fome fay putria $f(\beta)$ and gave it in foupe to the guefts; who, difcovering the abominable af-
front, were enraged at the king, telling him, that he fhould live twelve years as a night-wanderer feeding on cunapas, and that Caunapa fhould be the furname of his defcendants :.fome add, that, as foon as this curfe was pronounced, the body of Visvadhanwa became feftering and ulcerous, and that his children inherited the loathfome difeafe.

We find clear traces of this wild ftory in Egypt; which from $\mathrm{CA}^{\circ}{ }^{\circ}$ ma was formerly named Chemia, and it is to this day known by the name of Chemi to the: few old Egyptian families, that remain: it has been conjectured, that the more modern Greeks formed the word Cbemia from this name of Egypt, whence they derived their firft knowledge of Cbemiftry. The god Caimis was the fame, according to Plutarch, with Orus the Elder, or one of the ancient Apollos; but he is defcribed as very young and beautiful, and his confort was named Rhytia; fo that he bears a frong refemblance to $\mathrm{Ca}^{\prime}$ ma, the hufband of Reti, or the Cupid of the Hindus: there were two gods named Cupid, fays 閸ian (a), the elder of whom was the fon of Lucina, and the lover, if not the hufband, of Venus : the younger was her fon. Now Smu or Typhon, fays Herodotus, wifhed to deftroy. Orus, whom Latona concealed in a grove of the illand Cbemmis, in a lake near: Butus; but Smu, or SAMBAR, found means to kill him, and left him in the waters, where Isis found him and reftored him to life ( $l$ ). Elian fays, that.the Sun, a form of Osiris, being difpleafed with Cupid, threw him into the ocean, and gave him a fhell for his abode: $\mathrm{S}_{\mathrm{MU}}$, we are toid, was at length defeated and killed by. Orus. We have faid, that $\mathrm{Ca}^{\prime}$ ma was born again in this lower world, or became : Adbóyóni, not as a punifhment for his offence, which that.word commonly implies, but as a mitigation of the

$$
\text { (a) B. } 14, \text { C. } 28 . \quad \text { (t) Diod. Sic. B. } 14 \text {. }
$$

chaftifement, which he had received from Iswara, and as a favour conferred on him in becoming a fon of VISHNE : this may, therefore, be the origin both of the name and the fory of ADONIS; and the yearly lamentations of the Syrian damfels may have taken rife from the ditties chanted by Retr, together with the Apfarafes, or nymphs, who had attended $\mathrm{CA}^{\prime}{ }^{\prime} \mathrm{ma}$, when he provoked the gysath of MAHA"DE'VA: one of the fweeteft meafures in Sanfcrit profody has the name of Reti vilápa, or the dirge of ReTi.

In the only remaining accounts of Egyptian Mythology, we find three kings of that country, named Camephis, which means in Coptick, according to Jablonski, the guardian divinity of Egypt (a): the hiftory of thofe kings is very obfcure; and whether they have any relation to the three defcendants of $\mathrm{CA}^{\prime} \mathrm{ma}_{\mathrm{A}}$, I cannot pretend to determine. The Caunapas appear to be the Nérues $\dot{y} \mu i v e o u$ fuppofed to have reigned in Egypt; for we learn from Synceluus (a), that the Esyptians had a ftrange tale concerning a dynafty of dead men; that is, according to the Hindus, of men afflicted with fome fphacelous diforder, and, moft probably, with Elephantiafis. The feat of Cunapa feems to have been Canobus, or Canopus, not far from Alexandria: that CAnopus died there of a loathfome difeafe was afferted by the Greek Mythologifts, according to the writer of the Great Etymological Dictionary under the word 'Exevecov; and he is generally reprefented in a black Shroud with a cap clofely fitted to his head, as if his drefs was intended to conceal fome offenfive malady; whence the potters of Canopus often made pitchers with covers in the form of a clofe cap. His tomb was to be feen at Helenium near the town, which bore his name; but that of his wife (who, according to Epiphanius, was named Cumenuthis) was in a place called Menuthis, at the
diftance of two fadia. There were two temples at Canopus; the more ancient infcribed to Hercules, which flood in the fuburbs (a), and the more modern, but of greater celebrity, raifed in honour of Serapis (b). Now there feems to be no fmall affinity between the characters of Dundiu and $A_{N}$ teus, of Visvadhanwa and Hercules: many heroes of antiquity (Cicero reckons up fax, and others, forty-three, fome of whom were peculiar to Egypt) had the title of Hercules; : and the Greeks, after their fafhion, afcribed to one themighty achievements of them all. Antaus was, like Dundhu, a favourite fervant of Osiris, who intrufted part of Egypt to his government; but, having in fome refpect mibbehaved, he was depofed, abfconded, and was hunted by Hercules through every corner of Africa: hence I conclude, that Dandbu-mára- $l$ t'bán was the town, called Anteu by the Eryptians, and Antceopolis by the Greeks, where a temple was raifed and facrifices made to Anteus, in hope of obtaining protection againft other demons and giants. Rácfluafa-fi'bán feems to be the Rbacotis of the Greeks, which Cedrenus calls in the oblique care Rbakbaften: it ftood on the fite of the prefent Alexandria, and muft in former ages have been a place of confiderable note; for Pliny tells us, that an old king of Egypt, named Mesphees, had erected two obelifks in it, and that fome older kings of that country had built forts there, with garrifons in them, againft the pirates who infefted the coaft (c). When Hercuies had put on the fatal robe, he was afflicted, like Visva~ DHANWA, with a loathfome and excruciating difeafe, through the vengeance of the dying Nessus: others relate (for the fame fable is often differently told by the Greeks) that Hercules was covered with gangrenous ulcers from the venom of the Lernean ferpent, and was cured in Pbenice at a place called Ake (the Acco of Scripture), by the juice of a plant, which abounds
(a) Herod. B. 2.
(b) Strab. B. 37.
(a) Lib. 36. Cap. 9 .
both in that fpot and on the banks of the Nile (a). The Greeks, who certainly migrated from Egypt, carried with them the old Egyptian and Indian legends, and endeavoured(not always with fuccefs) to appropriate a foreign fyftem to their new fettlements : all their heroes or demigods, named Heracies by them, and Hercules by the Latians (if not by the Æolians), were fons of Jupiter, who is reprefented in India both by Hera, or Siva, and by Heri or Vishnu; nor can I help fufpecting, that Hercules is the fame with Heracula, commonly pronounced Hercul, and fignifying the race of Hera or Heri. Thofe heroes are celebrated in the concluding book of the Mabábbarat, entitled Herivanfa; and Arrian fays, that the Surafeni, or people of Mat'burà, worhipped Hercules, by whom he muft have meant Crishma and his defcendants.

In the Canopean temple of Serapis, the fatue of the god was decorated with a Cerberus and a Dragon; whence the learned Alexandrians concluded, that he was the fame with Pluto: his image had been brought from Sinope by the command of one of the Ptolemies, before whofe time he was hardly known in Egypt. Serapis, I believe, is the fame with Yama or Pluto; and his name feems derived from the compound $A f r a p a$, implying thirft of blood: the Sun in Bbadra had the title of Yama, but the Egyptians gave that of Pluto, fays Porphyry, to the great luminary near the winter foltice (a). Yama, the regent of hell, has two dogs, according to the Puránas, one of them, named Cerbura and Sabala, or varied; the other Syáma, or black; the firft of whom is alfo called Trisiras, or with tbree beads, and has the additional epithets of Calmáfha, Cbitra, and Cirmira, all fignifying fained or footed: in Pliny the words

Cimmerium and Cerberion feem ufed as fynonymous (a) ; but, however that may be, the Cerbura of the Hindus is indubitably the Cerberus of the Greeks. The Dragon of Serapis I fuppofe to be the Séfhanága, which is defcribed as in the infernal regions by the author of the Bhagavat.

Having now clofed my remarks on the parallel divinities of Egypt and India, with references to the ancient geography of the countries adjacent to the Nile, i cannot end this fection more properly than with an account of the •ainas and the three principal deities of that fect ; but the fubject is dàt, becaufe the Brábinens, who abhor the followers of Jina, either know little of them, or are unwilling to make them the fubject of converfation: What they have deigned to communicate, I now offer to the fociety.

ToWARD the middle of the period, named Padmacalpa, there was fuch a want of rain for many fucceffive years, that the greatef part of mankind perthed, and Brahma himfelf was grieved by the diftrefs, which prevailed in the univerfe: Ripunjaya then reigned in the weft of Cufhadre"p, and, feeing his kingdom defolate, came to end his days at Cási. Here we may remark, that Cásís, or the Splendid, (a name retained by Ptolemy in the word Caffidia) is called Banares by the Moguls, who have tranfpofed two of the letters in its ancient epithet Váránesi; a name, in fome degree preferved alfo by the Grecks in the word Aornis on the Ganges; for, when old Cáfí, or Cafidia, was deftroyed by BHaGawan, according to the Pririnas, or by Bacchus, according to Dionysuus Periegetes, it was rebuilt at fome diftance from its former fite, near a place called Sivabar, and had the name of Váránasi, or Aornis, which we find alfo written

D d d

Avernus: the word Váránasì may be taken, as fome Brábmens have conjectured, from the names of two rivulets Varuna and Asi, between which the town ftands; but more lea ned grammarians deduce it from vara, or moft excellent, and anius, or water, whence come Varánasi, an epithet of Gangá, and Váránasi (formed by Pa'nini's rule) of the city raifed on her bank. To proceed: Brahmá offered Ripunjaya the dominion of the whole earth, with Caje for his metropolis, directing him to collect the fcattered remains of the human race, and to aid them in forming new fettlements; telling him, that his name fould thenceforth be DivódA'SA, or Servant of Heaven. The wife prince was unwilling to accept fo burdenfome an office, and propofed as the condition of his acceptance, that the glory, which he was to acquire, fhould be exclufively his own, and that no Dévatà fhould remain in his capital: Brahmá, not without reluctance, affented; and even MAHADE'VA, with his attendants, left their favourite abode at Cáf, and retired to the Mandara hills near the fource of the Ganges. The reign of Divodas began with acts of power, which alarmed the Gods; he depofed the Sun and Moon from their feats, and appointed other regents of them, making allo a new fort of fire: but the inhabitants of Cáf were happy under his virtuous government. The deities; however, were jealous; and Mahádéva, impatient to revifit his beloved city, prevailed on them to affume different fhapes, in order to feduce the king and his people. De'vi' tempted them, without fuccefs, in the forms of fixty four Yóginis, or female anachorets: the twelve $A^{\prime}$ dityas, or Suns, undertook to corrupt them; but, ahamed of their failure, remained in the boly town : next appeared Gane'sa, commiffioned by his father MAHA DE $V A$, in the garb of an aftronomer, attended by others of his profeffion, and affifted by thirty-fix Vaináyacis or Gánéfis, who were his female defcendants: and by their help he began to change the difpofition
of the people, and to prepare them for the coming of the three principal deities.

Visthnu came in the character of Jina, inveighing againft facrifices, prayers, pilgrimage, and the ceremonies prefcribed by the Véda, and afferting, that all true religion confifted in killing no creature that bad life: his confort Jayáde'vi' preached this new doctrine to her own fex; and the inhabitants of Cáfi were perplexed with doubts. He was followed by Mahádéva, in the form of Arhan or Mahiman, accompanied by his wife MAHA MA ${ }^{\prime}$ NYA', $^{\prime}$, with a multitude of male and female attendants: he fupported the tenets of Jina, alledging his own fuperiority over Brammá and Visind, and referring, for the truth of his allegation, to Jina himfelf, who fell proftrate before him ; and they travelled together over the world endeavouring to fpread their herefies. At length appeared Brahmá in the figure of Buddha, whofe confort was named Vijny'a : he confirmed the principles inculcated by his predeceffors, and, finding the people feduced, he began, in the capacity of a Brabbmen, to corrupt the mind of the king. Divo'da'sa liftened to him with complacency, loft his dominion, and gave way to Maha déva, who returned to his former place of refidence; but the depofed king, reflecting too late on his weaknefs, retired to the banks of the Gómatiे, where he built a fortrefs, and began to build a city on the fame plan with Cásíl: the ruins of both are fill to be feen near Cbanwoc about fourteen miles above the confluence of the Gumti with the Ganges and about twenty to the north of Banáres. It is added, that Mahádéva, having vainly contended with the numerous and obfinate followers of the new doctrine, refolved to exterminate them; and for that purpofe took the fhape of $S_{A N-}$ cara, furnamed $A$ cbárya, who explained the Védas to the people, deftroyed the temples of the Fainas, caufed their books to be burned, and maflacred D d d 2
all, who oppofed him. This tale, which has been extracted from a book, entitled Sancara-prádur-bbáva, was manifeflly invented, for the purpofe of aggrandizing Sancaráchárya, whofe expofition of the Upanibads and comment on the Védánta, with other excellent works, in profe and verfe, on the being and attributes of GOD, are ftill extant and feduloufly fudied by the Védánti fchool: his difciples confidered him as an incarnation of MAha'$D E^{\prime} V A$; but he tarnihed his brilliant character by fomenting the religious war, in which moft of the perfecuted Jainas were flain or expelled from thefe parts of India; very few of them now remaining in the Gmaretick provinces or in the weftern peninfula, and thofe few living in penury and ignorance, apparently very wretched, and extremely referved on all fubjects of religion. Thefe heterodox Indians are divided into three fects: the followers of Jina we find chiefly difperfed on the borders of Indic; thofe of Buddha, in Tibet and other vaft regions to the north and eaft of it; while thofe of Arman (who are faid to have been anciently the moft powerful of the three) now refide principally in Sirn and in other kingdoms of the eaftern peninfula. Arhan is reported to have left impreffions of his feet on rocks in very remote countries, as monuments of his very extenfive travels : the moft remarkable of them is in the ifland of Sinbal or Silan, and the Siamese revere it under the name of Prapút from the Sanforit word Prafáda; but the Brábmens infift, that it was made by the foot of RAvaNa. Another impreffion of a foot, about two cubits long, was to be feen, in the time of HerodoTus, on the banks of the river Tyras, now called the Dinefter: the people of that country were certainly Bouddhas, and their high prieft, who refided on Meunt Cocajon, at prefent named Casjon, was believed to be regenerate, exacly like the Lama of Tibet.
as to Jina, he is faid by his followers to have affumed twenty-four
rupas, or forms, at the fame time, for the purpofe of diffeminating his doctrine, but to have exifted really and wholly in all and each of thofe forms at once, though in places very remote : but thofe rúpas were of different orders, according to certain myfterious divifions of twenty-four, and the forms are confidered as more or lefs perfeet according to the greater or lefs perfection of the component numbers and the feveral compounds, the leading number being three, as an emblem of the Trimirti: again the twenty-four rúpas, multiplied by thofe numbers, which before were ufed as divifors, produce other forms; and thus they exhibit the appearances of JinA in all poffible varieties and permutations, comprifing in them the different productions of nature.

Most of the Brábmens infift, that the Buddila, who perverted DivóDa'sa, was not the ninth incarnation of Vishnu, whofe name, fome fay, fhould be written Bauddha or Bo ddha; but, not to mention the Amar. cófb, the Mugdbabódh, and the Gítagóvinda, in all of which the ninth avatár is called Budpina, it is exprefsly declared in the Bbagavat, that Vishnu fhould appear ninthly in the form of "Buddha, fon of Jina, for " the purpofe of confounding the Daityas, at a place named Cícata, when " the Cali age fhould be completely begun:" on this paffage it is only remarked by Srídhara Swámi, the cclebrated commentator, that Jina and Ajina were two names of the fame perfon, and that Cícata was in the diftrict of Gayà; but the Pandits, who affifted in the Perfian tranllation of the Bhagavat, gave the following account of the ninth avatara. The Diityas had afked Indra, by what means they could attain the dominion of the world; and he had anfwered, that they could only attain it by facrifice, purification, and piety: they made preparations accordingly for a fulemn facrifice and a general ablution; but Vishnu, on the in-
terceffion of the Dévas, defcended in the fhape of a Sannyasi, named BUDDHA, with his hair braided in a knot on the crown of his head, wrapt in a fqualid mantle and with a broom in his hand. Buddha prefented himfelf to the Daityas, and was kindly, received by them; but, when they expreffed their furprife at his foul vefture and the fingular implement, which he carried, he told them, that it was cruel, and confequently impious, to deprive any creature of life; that, whatever might be faid in the Vedas, every facrifice of an animal was an abomination, and that purification itfelf was wicked, becaufe fome fmall infect might be killed in bathing or in warhing cloth; that he never bathed, and conftantly fwept the ground before him, left he hould tread on fome innocent reptile: he then expatiated on the inhumanity of giving pain to the playful and harmlefs kid, and reafoned with fuch eloquence, that the Daityas wept, and abandoned all thought of ablution and facrifice. As this Máyà, or illufive appearance, of Vishnu fruftrated the ambitious project of the Daityas, one of Buddha's titles is the fon of MA'yá : he is allonamed Sa'cyasinha, or the Lion of the race of Sácya, from whom he defcended; an appellation, which feems to intimate, that he was a conqueror or a warrior, as well as a philofopher. Whether Buddha was a face or a hero, the leader of a colony, or a whole colony perfonified, whether he was black or fair, whether his hair was curled or ftraight, if indeed he hid any hair (which a commentator or the Bhágavat denies), whether he appeared ten, or two hundred, or a thoufand, years after Crishea, it is very cerain, that he was not of the true Indian race: in all his images, and in the ftatues of Bauddhas, male and female, which are to be fein in many parts of thefe provinces and in both peninfulas, there is an appearance of fomething Egyptian or Ethiopian; and both in features and drefs, they differ widely
from the ancient Hindu figures of heroes and demigods. SÁcya has a refemblance in found to Sisac, and we find Chánac abbreviated from Chánacya; fo that Sisac and Sesonchosis may be corrupted from Sa $A^{\prime}$ cyasinha, with a tranfpofition of fome letters, which we know to be frequent in proper names, as in the word Banáres. Many of his flatues in India are Coloffil, nearly naked, and ufually reprefented fitting in a contemplative attitude; nor am I difinclined to believe, that the famed ftatue of Memnon in Egypt was erected in honour of Mairman, which has Mahimna' in one of its oblique cafes, and the Greeks could hardly have pronounced that word otherwife than Maimna or Memna: they certainly ufed Mai inftead of Mahà, for Hesychius exprefsly fays Mai, $\mu$ erd'. 'Tvoo'; and Mai fignifies great even in modern Coptich. We are told, that Mahiman, by his wife Maira'ma'nya', had a fon named Sarmana Cardama, who feems to be the Sammano Codom of the Bauddbas, unl fs thofe laft words be corrupted from Samanta Gótam, which are found in the Amarcófb among Buddan's names. Cardam, which properly means clay or mud, was the firf created man according to fome Indian legends; but the Puránas mention about feven or eight, who claimed the priority of creation ; and fome Hindus, defirous of reconciling the contradiction, but unwilling to admit that the fame fact is differently related, and the fame perfon differently named, infift that each was the firt man in his refpective country. Be this as it may, Cardama lived in Varuna-c'banda, fo called from his fon Varuna the god of ocean, where we fee the groundwork of the fable concerning Palemon, or Melicertus, grandfon of Cadmus: now that c.banda, or divifion, of $\mathcal{F a m b u}$-dwíp comprifed the modern Perfia, Syria, and Afia the Lefs; in which coun. tries we find many traces of Mahiman and his followers in the fupen. dous edifices, remarkable for their magnificence and folidity, which the

Greeks afcribed to the Cyclopes. The walls of Siffa, about fixteen miles in circumference, were built by the father of MEMNON ; the citadel was called Memionium, and the town, Memionia; the palace is reprefented by RLIAN as amazingly fumptuous, and STRABO compares its ancient walls, citadel, temples, and palace to thofe of Babylon; a noble high road through the country was attributed to MEMNON ; one tomb near Tloy was fuppofed to be his, and another in Syria; the Ethiopians, accordirg to DIODOR US of Sicily, claimed Memnois as thér countryman, and a nation in Ethiopia were Ayled Meminones; on the borders of that country and of Esypt food many old palaces, called Memonian; part of Thebes had the name of the Memnonium; and an afonifhing building at Abydus was denominated Mem. Non's palace : Strabo fays, that many fuppofed Ismandes to have been the fame with Memano and confequently they muft have thought the Labyrinth a Memionian ftructure (a) 。

Divo DA'sA, pronounced in the popular dialects DIODA ${ }^{\circ}$, reigned over fome weitern diffricts of Cufta-dwip witbin, which extended from the fhores of the Mediterranean to the banks of the Indus; and he became, we find, the firft mortal king of Varánes: he feems to have been the Hiercuies Diodas, mentioned by Eusebius, who flourihed in Pbenice, and, it is fuppofed, about 1524 years before our era; but, in my humble opinion, we cannot place any feliance on fuch chronological calculations; which always err on the fide of antiquity. The three fects of Jina, MAHIMAN, and Buddha, whatever may be the difference between them, are all named BAUDDHAS; and, as their chief law, in which, as the Brábmens affert, they make virtue and religion confint, is to preferve the lives of all animated beings, we cannot

[^41]but fuppofe, that the founder of their feef was Buddia, the ninth avatár, who, in the Aynipurán, has the epithet of Sacrippa, or Benevolent, and, in the Gitagóvinda, that of Sadaya-brǐdaya, or Tender-hearted: it is added by JAYADE'VA, that " he cenfured the whole Véda, becaufe it prefcribed " the immolation of cattle." This alone, we fee, has not deftroyed their veneration for him ; but they contend that atheiftical dogmas have been propagated by modern Bauddbas, who were either his difciples, or thofe of a younger BUDDHA, or fo named from buddbi, becaufe they admit no fupreme divinity, but intellett: they add, that even the old Fainas, or Fayanas, acknowled̉ged no God́s but Jya; or Earth, and Vishinu, or Water; as De, riades (perhaps Duryódhan) is introduced by Nonnus boafting, that Water and Earth were his onlyrdeities, and reviling his adverfaries for entertaining a different opinion (a); fo that the Indian war, defcribed in the Dio$n y f a c k s$, arofe probably from a religious quarrel. Either the old Bauddbas were the fame with the Cutila-céfas, or nearly allied to them; and we may furpect fome affinity between them and the Pális, becaufe the facred language of Siam, in which the laws of .the Bauddbas are compofed, is properly named Páli; but a complete account of Buddha will then only be given, when fome ftudious man fhall collect all that relates to him in the Sanfcrit books, particularly in the Váyu-purán, and fhall compare his authorities with the teftimonies, drawn from other fources by Kempfer, Giargi, Tachard, De La Loueere, and by fuch as have accefs to the literature of Cbina, Siam, and Yapan.

## SECTION THE THIRD.

WE come now to the demigods, heroes, and fages, who at different times vilited Egypt and Etbiopia, fome as vindiCive conquerors, and fome as inftructors in religion and morality.
I. Pe't'mína's, or Pi't'he'na's was a Rijpi, or holy man, who had long refided near mount Himálaya, but at length retired to the places of pilgrimage on the banks of the Cálz, defigning to end his days there in the difcharge of his religious duties: his virtues were fo tranfeendent, that the inhabitants of the countries bordering on that river, infifted on his becoming their fovereign, and his defcendants reigned over them to the thirteenth generation; but his immediate fucceffor was only his adopted fon. The following feries of fifteen kings may conftitute, perhaps, the dynafty, which, in the hiftory of Egypt, is callied the Cynick Circle:

| Pait'hinafi, | Crïtriménás, |
| :---: | :---: |
| Ifténás, | 10. Carmanyénás, |
| rajbténás, | Pit'bini, |
| 5. Cajbténás, | Pát'l bíni, |
| Jußténás, | Páttyamśuca, |
| Pufbténás, | Pét'hí-suca, |
| Sußténás, | 15 Méd'hí-śuca. |

EACr of thofe princes is believed to have built a place of worfhip, near which he ufually refided; but of the fifteen temples, or confecrated edifices, we can only afcertain the fituation of feven with any degree of accuracy.

The founder of the family was a pious and excellent prince, obferving in all refpects the ordinances of the $V$ éd $a$ : his name is to this day highly venerated by the Brábmens; many facerdotal families in India boaft of their defcent from him; and the laws of PAIt'Hinasi are fill extant, in an ancient ftyle and in modulated profe, among the many tracts, which collectively form the Dherma-Sáfra. It muft be obferved, that he was often called Pi'т'не'ríshi, or Pít'hershi ; and his place of refidence, Pit bé-rifbi-ft'ban ; but the fhort vowel $r \check{c}$ has the found of $r u \bar{u}$ in the weftern pronunciation, like the firft fyllable of Ricbard in fome Englifb counties: thus, in parts of India, amrita, or ambrofa, is pronounced amrüt; whence I conjecture, that the feat of Pitbé-rufbi was the Patbros of Scripture, called Pbatures by the Seventy, and Pbatori by Eusebius, which gave its appellation to the Pbaturitic nome of Pliny. Some imagine Pbaturis to have been Thebes or Diofpolis; but Pliny mentions them both as diftinct places, though, from his context, it appears that they could not be far afunder; and I fuppofe Pbaturis to be no other than the Tathyris of Ptolemy, which he places at no great diftance from the Memnonium, or weftern fuburb of Thebes; and, in the time of $\mathrm{P}_{\mathrm{TO}}$ LEMY, the nome of Pbaturis had been annexed to that of Diofpolis, fo that its capital city became of little importance : we took notice, in the firf fection, that the Etbiopians, who, from a defect in their articulation, fay TAulos inftead of Paulos, would have pronounced Tithoes for Pitboes, and Tatburis for Patburis.

Though we before gave fome account of the fabulous $\mathrm{RA}^{\prime}$ Hu and the Grahas, yet it may not be fuperfuous to relate their fory in this place at greater length. RA'HU was the fon of Casyapa and Diti, according to fome authorities; but others reprefent Sinhica' (perhaps, the Splinix) as his natural mother: he had four arms ; his lower parts ended in a tail

$$
\mathrm{E} \mathrm{e} \mathrm{e} 2
$$

like that of a dragon; and his afpect was grim and gloomy, like the darkne/s of the Chaos, whence he had alfo the name of Tamas. He was the alvifer of all mifchief amongthe Daityas, who had a regard for him; but among the Dévatás it was his chief delight to fow diffention; and, when the Gods had produced the amrit by churning the ocean, he difguifed himfelf like one of them, and received a portion of it; but, the Sun and Moon having difcovered his fraud, Vishnu fevered his head and two of his arms from the reft of his monftrous body. That part of the nectareous fluid, which he had time to fwallow, fecured his immortality: his trunk and dragon-like tail fell on the mountain of Malaya, where Mini, a Brábmen, carefully preferved them by the name of $\mathrm{CE}^{\prime} \mathrm{TU}$; and, as if a complete body had been formed from them, like a difmembered polype, he is even faid to have adopted Cétu as his own child. The head with twoarms fell on the fands of Barbara, where Pi't'héna's was then walking with Sinhicá, by fome called his wife: they carried the Daitya to their palace, and adopted him as their fon; whence he acquired the name of Pait"henasi. This extravagant fable is, no doubt, aftronomical;
 bead and tail of the dragon: it is added, that they appeafed Vishnu and obtained readmiffion to the firmament, but were no longer vifible from the earth, their enlightened fides being turned from it; that RA"ни frives, during eclipfes, to wreak vengeance on the Sun and Moon, who detected him; and that $C E^{\prime} T u$ often appears as a comet, a whirlwind, a fiery meteor, a waterfpout, or a column of fand. From Paithínás the Greeks appear to have made Pytbonos in their oblique cafe; but they feem to have confounded the ftories of Python and Typhon, uniting two diftinct perfons in one (a). Pait'hénasi, who reigned on the banks of the Cáli af-
ter Pit'hé nas his protector, I fuppofe to be Typhon, Typinaon or TyFH®US: he was an ufurper and a tyrant, oppreffing the Dératás, encouraging the Dityas, and fuffering the Védas to be neglected. Herodotus reprefents him, like Ráhu, as confantly endeavouring to deftroy Papollo and Diana (a); and the mythologifts add, that he was thunderftruck by Jupiter, and fell into the quickfands of the lake Sirbonis, called allo Sirbon and Sarbonis: now Swarbbánu, one of his names, fignifies Ligbt of Heaven, and, in that character, he anfwers to Lucifer. The fall of that rebellious angel is defcribed by IsAiah, who introduces him faying, that " he would exalt his throne above the ftars of God, and would fit on the " mount of the congregation in the fides of the North": the heavenly Méru of the Puránas, where the principal Dévas are fuppofed to be feated, is not only in the North, but has alfo the name of Sabba, or the congrega tion. Fifty fix comets are faid, in the Chintamani, to have fprung from $\mathrm{Ce}^{-}$тU ; and $\mathrm{RA}^{\prime} \mathrm{H}_{\mathrm{u}}$ had a numerous progeny of Gráhas, or crocodiles: we are told by Rlian, that Typhow affumed the form of a crocodile ( $b$ ); and $\mathrm{RA}^{\prime} \mathrm{H}_{\mathrm{H}}$ was often reprefented in the fhape of that animal, though he is generally defcribed as a dragon. The conftellation of the Dragon is by the Japanef: called the Crocodile; and the fixth year of the Tartarian cycle has the fame appellation : it is the very year, which the Tibetians name the year of Lightning, alluding to the dragon, who was ftricken by it (c). A real tyrant of Egypt was, probably, fuppofed to be RA'hu, or Typhon, in a human fhape; for we find, that he was actually expelled from that country together with his Grabas: I have not yet been able to procure a particular account of their expulfion. The fiban of RA'HU or PaithíNasi, named alfo Pait'hi, feems to have been the town of Pitbom on the
(a) B. 2. C. 156.
(b) On Animals, B. 10 C. 21 .
(c) Alghab. Tibet. p. 463 2:
borders of Egypt: the Seventy wrote it Peitho, and Herodotus calls it Patumos; but, the fecond cafe in Sanfcrit being generally affected in the weftern dialects, we find it written Pbithom by the old Latin interpreter, Fithom by Hieronymus, and Pethom in the Coptick tranflation. The Greek name of that city was Heroöpolis, or according to Strabo, Heroön; but we are informed by Sxephanus of Byzantium $(a)$, that, " when Ty. " PHON was fmitten by lightning, and blood (aïa) flowed from his 's wounds, the place, where he fell, was thence called Homus, though it " had likewife the name of Hero:" fo the fation of $\mathrm{RA}_{\mathrm{A}} \mathrm{HU}$ was on the fpot, where Pít'héna's and Singhicá found his bloody head rolling on the fands: and, if Singhicá, or the Woman like a Lione/s, be the Spbinx, the monftrous bead, which the Arabs call Abu'lbaul, or Fatber of Terrour, may have been intended for that of $\mathrm{RA}^{\prime} H \mathrm{H}$, and not, as it is commonly believed, for his mother. Though the people of Egypt abhorred Typhon, yet fear made them worlhip him; and in early times they offered him human victims: the Grecks fay, that he had a red complexion, and mention his expulfion from Egypt, but add a frange fory of his arrival in Palefine, and of his three fons. We muft not, however, confound Ra'hu $^{\prime}$ with Maha'déva', who, in his deftructive character was called alfo TYPHON; though it be difficult fometimes to diftinguifh them: feveral places in Egypt were dedicated to a divinity named Typhon; as the Typhaonian places between Tentyra and Coptos; and the tower of Melite, where daily facrifices were made to a dragon fo terrible, that no mortal durft look on him; the legends of the temple relating, that a man, who had once the temerity to enter the receffes of it, was fo terrified by the fight of the monfter, that he foon expired (b). Melite, I prefume, was in

[^42]that part of the Delta, which had been peopled by a colony from Miletus; and was, probably; the Milefian wall or fort near the fea-fhore, mentioned by Strabo.

The ufurper was fucceeded by ishténa's, the real fon of Pr'thénás, who had alfo a daughter named PAIT'HE'Ni'; and her ftory is related thus in the Brahmánda-purán. From her earlieft youth fhe was diftingufhed for piety, efpecially towards MAHADE'VA, on whom her heart was ever intent; and, at the great feftival, when all the nation reforted to Cardamaftbali, or Thebes, the princefs never failed to fing and dance before the image of Cardame'swara: the goddefs Iswari"was fo pleafed with her behaviour, that fhe made PAithe' n'i her Sac'bi, or female companion; and the damfel ufed to dance thrice a day in the mud before the gate of the temple, but with fuch lightnefs and addrefs as never to foil her mantle. She died a virgin, having devoted her life to the fervice of the god and his confort. The female patronymick PAIT'HE'Ni comes from Pit'à or Pit'héna, but from Pit'héna's the derivative form would be Parthénasi; and thence Nonnus calls her Peithifanassa, and deferibes her as a handmaid of Semele, the daughter of Cadmus, in which character the received Juno, (a) who was devifing the ruin of SEmele, and with that intent had affumed the form of a loquacious nurfe: this paffage in the Dionyfacks is very interefting, as it proves, in my opinoo, that the Semele and Cadmus of the Greeks were the fame with the Syamalà and Cardama of the Hindus.

The fourteenth prince of this dynafty was devoted from his infancy to the worfhip of I'swARA, on whom his mind was perpetually fixed, fo
(a) Dionyfiac. B. 8. vo 193.
that he became infenfible of all worldly affections, and indifferent both to the praife and cenfure of men: he ufed, therefore, to wander over the country, fometimes dwelling on hills and in woods, fometimes. in a bower, rarely in a houfe, and appearing like an idiot in the eyes of the vulgar, who, in ridicule of his idle talk and behaviour, called him Pét'bi-śuca, Panjarafuca, or Sála'-'fuca, meaning the parrot in a chef, a cage, or a boufe, which names he always retained. When he grew up, and fat on the throne, he governed his people equitably and wifely, refraining the vicious by his juft feverity, and inftructing the ignorant in morals and religion: by his wife Márishá $^{\prime}$ he had a fon called Méd ${ }^{\prime}$ hi-Suca, to whom at length he refigned his kingdom, and, by the favour of Iswara, became jivanmucta or releafed, even during life, from all encumbrances of matter; but the ftory of MA'rishá and his fon has been related in a preceding fection. Med'bi, or Mér'bi means a pillar, or a poft to wbich viclims are tied, or any Atraight pole perpendicularly fixed in the ground; and Pattyam, I believe, fignifies a crofs ftick, or a wooden bar placed horizontally; fo that Pattyamsuca might have meant the parrot on a perch; but why the thirteenth prince had that appellation, I am not yet informed: Suca is alfo a proper name; the fon of $\mathrm{VYA}^{-} \mathrm{SA}_{\mathrm{A}}$, and principal fpeaker in the Bbggavat, being called Suca-déva. Now many obelifks in Egypt were faid to have been raifed by a king named Suchis; (a) and the famous Labyrinth, to have been conAructed by king Petesuccus: (b)by Mérbiwe may ce:tainly underfand cither a pillar or an obelifk, or a flender and lofty tower, like the Menárahs of the Mufelmans, or even a high building in a pyramidal form. The Hindus affert, that each of the three Sucas had a particular edifice afcribed to him; and we can hardly doubt, that the fibấn of Péthi-suca was the
(a) Plin. L. 3 6. C. 8.
(6) Plin. L. 36. C. I3.

Labyrinth : if the three names of that prince have any allufion to the building, we may apply Sálá, or manfion, to the whole of it ; Panjara, or cage, to the lower ftory, and Pe't'bi, or cheft, to the various apartments under ground, where the chefts, or coffins, of the facred crocodiles, called Sukbus or Sukhis in old Egyptian, (a) and Soukb to this day in Coptick, were carefully depofited. Hesychius, indeed, fays, that Buti fignified a chet, or coffin, in Egyptian ; but that, perhaps, muft be underfood of the vulgar dialect : the modern Copts call a cheft be-ut, or, with their article, tabút; a word, which the Arabs have borrowed. When Pliny informs us, that Petesuccus was named alfo Tithoes, we muft either read Pithoes from $\mathrm{Pe}^{\prime \prime} \mathrm{T}^{\prime} \mathrm{Hi}$, or impute the change of the initial letter to the defective articulation of the Etbiopians, who frequently invaded Egypt. From the account, given by Herodotus, we may conjecture, that the coffins of the facred crocodiles, as they were called, contained in fact the bodies of thofe princes, whom both Egyptians and Hindus named Sucas, though fuc means a parrot in Sanfcrit, and a crocodile in the Copick dialect: the Sanfcrit words for a crocodile are Cumbbira and Nacra, to which fome expofitors of the Amarcófh add Avagraba and Grába; but, if the royal name was fymbolical and implied a peculiar ability to feize and hold, the fymbol might be taken from a bird of prey as well as fro $m$ the lizard-kind; cfpecially as a fect of Egyptians abhorred the crocodile, and would not have applied it as an emblem of any legal and refpectable power, which they would rather have expreffed by a hawk, or, fome diftinguifhed bird of that order: others, indeed, worfhipped crocodiles, and I am told, that the very legend before us, framed according to their notions, may be found in fome of the Puránas.

[^43]We find then three kings, named Sucas, or parrots, living in a boufe or $\%$ cage, or refting either on an uprigbt pole, or on one with a cro/s-bar: but who they were, it is not my prefent object, nor am I now able, to invefigate: I will only obferve, that befides the king of Egypt, whom Pliny calls Suchis, or Sochis, the father of the Ciuretes is named Sochus by a Greek lexicographer, and Socus by the author of the Dionyfacks; and that he was one of the Gabires or Cuvéras, who (or at leaft fome of whom.) inhabited in former ages; the countries adjacent to the Nile.

The ruins of that wonderful building, called the Labyrinth, are fill. to be feen, near the lake Mcris, at a place, which the Arabs have named the Kafr, or palace, of $K_{A} A^{\prime} U^{\prime} N$, whom they fuppofe to have been the richef of mortals; as the ruins of ME'dHI-sU' CA-fiban are in a dißrict, named the Belád, or country, of the fame perfonage : the place laft-mentioned is, moft probably, the labyrinth built, according to Damoteles in Pliny, by Motherudes, a name derived, I imagine, from Medhi-rushi. The town of Mcta-camfon mentioned by Ptolemy as oppofite to Pelcbis above Syene, feems to have had fome connection with Medbi-fica; for camfa and fuca were fynonymous in the old Eryptian: Herodotus at leaft informs us, that camfa meant a crocodile in that languages, and it appears related to timfáb in Arabick. Patyam (for fo the long compound is often abbreviated) feems to have been the labyrinth near Arfinoe, or Crocodilopolis, now Fayum, which word I fuppofe corsupted from Patyam, or Phatyam, as the Copts. would have pronounced it; and my Pandit inclines alfo to think, that the building might have been thus denominated from large pieces of ftone or timber projecting, like patyas, before the windows, in order to fupport the frames of a balcony, which, as a new invention, muft have attracted the notice of beholders. As to the lake of: Meris, I have already exhibited all, that I have yet found concerning it:
the ftupendous pyramid, faid to have been fix hundred feet high, in the midft of that lake, was raifed, we are told, by a king named Meris, Myris, Marros, Maindes, Mendes, and Imandes (a); a ftrong inftance of one name variouny corrupted ; and I have no doubt, that the original of all thofe yariations was Merhi or Medhi. Even to this day in India, the pillars or obelifks, often raifed in the middle of tanks, or pools, are called Mérbis; but let us proceed to another legend faithfully extracted from the Maká calpa, in which we fee, beyond a doubt, the affinity of Indian, Egyptian, and Grecian Mythology.
II. On the mountains of $Y$ wálämuc'ba in the interior Cufba-droip, reigned a virtuous and religious prince, named C'harvanáyanás, whofe fon CAPE'TANA's preferred arms and hunting, in which he was continually engaged, to the Rudy of the Yeda, and was fo frequently concerned in contefts and affrays with his neighbours, that his father, after many vain admonitions, banifhed him from his palace and his kingdom: the dauntlefs young exile retired to the deferts, and at length reached Móchéfa, believed to be Mecca, where, hungry and fatigued, he bathed in the Moc/ba-tirt'ba, or confecrated well, and paffed the night without fleep. Visvacséna, then fovereign of that country, had an only daughter Padmamuc'hi', or with a face like a lotos, who went to perform religious rites to MAHA ${ }^{\prime} \mathrm{DE}^{\prime} \mathrm{VA}$, God of the temple and the well; and there feeing the prince, fhe brought him refrefhment and heard his adventures: their interview ended in mutual love, and the old king, who denied her nothing, confented to their marriage, which was folemnized with the ceremony of Pánigraba, or taking bands; and the young pair lived many years happily in the palace of their father. It happened fome

[^44]$$
F f f_{2}
$$
time after, that the city was befieged by two kings of the Danavas with a numerous army ; but CAPE'YANA's entirely defeated them : the venerable monarch met his brave fon in law returning with conqueft, and, having refigned the throne to him, went to the banks of the Cálo, accompanied by his wife, and entered with her into the third order, called 广ánaprefiba, or that of bermits, in which they paffed the remainder of their lives, and, after death, obtained laya, or union with the fupreme fpirit; whence their fation was named Layafibán, or Layavati, and was vifited, for ages after, by fuch as hoped for beatitude. Capéyanas, or Capénas, (for he is differently named in the fame book) adhered fo ftrictly to juftice, and governed fo mildly, that he was refpected by his neighbours and beloved by his fubjects: yet he became a great conqueror, always protecting the weak, and punifhing their oppreffors. All the princes to the eaft of Móchéfa paid him tribute; but CA' LASE'NA, king. of the exterior $C_{z t} / b a-d z e z p$, having infolently refufed to become his tributary, he invaded Aby/finia, and, after a very long battle, at a place named Ranótfava, or the fefival of combat, wholly defeated CA'LASE'NA, whom he replaced on his throne, exacting only a regular acknowledgement of his dominion paramount: then, following the courfe of the Cail river, he came to Barbara, or the burning fands of Nubia, the king of which country was Gulma, one of the Tamóvanfas, or the fon of MA'NDyA, who was the fon of TAMAs, or Sani, by his wife Jarat há; but from Gulma he met with no refiftance, for the wife king laid his diadem at the feet of CAPE NAS who reftored it, and defired his company, as a friend, in his expedition to Mifra-fíbán. The fovereign of Mifra was at that time Ranasúra, who, difdaining fubmiffion, fent his fon RANADURMADA with a great force againft Capénas, and foon followed him at the head of a more powerful army : an obftinate battle was fought, at a place called afterwards Ghóra-fi'bán from the borror of the carnage; but Ranssura was killed and his troops entirely routed. The
conqueror placed the prince on the throne of Mijra, the capital of which was then callei Vifua-cirti-pura, or the City of Univerfal Fame; and, having carried immenfe treafures to Móchéfa, he dedicated them to the God of the temple, refolving to end his days in peaceful devotion: by Padmamuc'mi he had a daughter named Antarmada', and a fon, Bháléya$\mathrm{NA}^{\prime} \mathrm{s}$, to whom, after the example of ancient monarchs, he refigned his kingdom, when he grew old, and prepared himfelf for a better life.

BEFORE his death he was very defirous of performing the great facrifice of a horfe, called Afvamédba, but confiderable difficulties ufually attended that ceremony; for the confecrated horfe was to be fet at liberty for a certain time, and followed at a diftance by the owner, or his champion, who was ufually one of his near kinfmen; and, if any perfon fhould attempt to ftop it in its rambles, a battle muft inevitably enfue: befides, as the performer of a hundred $A /$ wamédbas became equal to the God of the firmament, Indra was perpetually on the watch, and generally carried off the facred animal by force or by fraud; though he could not prevent Beli from completing his hundredth facrifice; and that monarch put the fupremacy of the Dévas to proof, at the time, when the Padmá-mandira was built on the banks of the Cumudvati ; nor did he prevail againf RAginv, whofe combat with Indra himfelf is defcribed by Cálida's in a ftyle perfectly Homerick. The great age of CAPE'Nas obliged him to employ his fon in that perilous and delicate fervice; but Indra contrived to purloin the horfe, and Bháléyanás refolved never to fee his father or kingdom, unlefs he could recover the myttical victim: he wandered, therefore, through forefts and over deferts, till he come to the bank of the Ganges near Avaca-pura, or Alacá-furi, about twelve crós N. N. W. of Badari-nattb; and there, in the agonies of defpondence, he threw himfelf
on the ground wifhing for death; but GanGá, the river-goddefs, appeared to him, commanded him to retura home, and affured him, that he thould have a fon, whom the would adopt by the nameof GA'NGE' YANA's, who fhould overcome $\operatorname{Indra}$, and reftore the horfe to his grandfather. Her prediction was in due time accomplifhed; and the young hero defeated the army of Indra in a pitched battle near the river Cáli, whence he acquired the title of Virauja-jit, or vanquifher of Indra: the field of battle was thence named Samara-ftbán; and is alfo called Víráaya, becaufe the flower of heroes had $b=e n$ there lulled in the fleep of death. Bha'léyana's, having a very religious turn of mind, placed his fon on the throne, and, obferving, that his fifter Antarmada had the fame inclinations, retired with her to the foreft of Tapas in Upper Egypt; both intending to clofe their days in devout auferities and in meditation on the fupreme fpirit: $\mathrm{MA}_{A^{\prime}} \mathrm{Y}_{A^{\prime}}-D E^{\prime}$ vi', or the goddefs of worldly illufion, who refembles the Aphrodite Pandemos of the Grecks, and totally diff.rs from JNYínA-DÉVi, cr the goddefs of celiftial wifdom, attempted to difurb them, and to prevent them from reaping the fruit of their piety; but the was unable to prevail over the fervent devotion of the two royal anchorites. Her failure of fuccefs, however, gave her an unexpeceed advantage; for Antarmada became too much elated with internal pride, which her name implies; and, boating of her victory over $M_{A^{\prime}} Y A^{\prime}-D E^{\prime} V I^{\prime}$, fhe added, that the inhabitants of the three worlds would pay her homage, that fhe fhould be like Arundhati, the celebrated confort of Vasisht'ha, and that, after ler death, fhe fhould have a feat in the farry manfion: this vaunt provoked MA'YA'-dévi' to a phrenfy of rege; and the flew to Aurva, requefting him to fet on fire the forefts of Tapas; but Volshnu, in the fiare of a hollow conical mountain, furrounded the princefs, and faved Let from the flames; whence the place, where fhe ftood, was called the
$A^{2} b a ́ n$ of Cb'háditá, or the covered, and Periracfitia, or the guarded on all fids. The enraged goddefs then fent a furious tempeft but Vishnu, affuming the form of a large tree, fecured her with its trunk and branches at a place thence named Rachbitá-fihána: MA'צa-DE'vi'r however, feized her and caft her into a certain fea, which had afterwards the name of Amagna, becaufe Vishnu endued its waters with a power of fupporting: her on their furface; and they have ever fince retained that property, fo that notbing firks in them.

The fouth and lif machination was the moft dangerous and malig nant: $\mathrm{D}_{\mathrm{L}}{ }^{\prime} \mathrm{V} \mathrm{I}^{\prime}$ carried $\mathrm{Antarmada}^{\prime}$ to the fea-fhore and chained her to a rock, that fhe might be devoured by a Griba, or fea-monfler ; but Vish$N U$, ever vigilant to preferve her, animated a young hero, named $P_{A} A^{\prime} R-$ SicA, who flew the monter, and releafed the intended victim, at a place named, from her deliverance, Uddbára-ft'hán. He conducted her to his own country, and married her at a place, called Pánigraba, becaufe he there took ber by the band in the nuptial ceremony: they paffed through life happily, and, after death, were both feated among the ftars, together with Capénas and Padmamuc'hí, who had alfo the patronymick of Cásyapí. Among the immediate defcendants of Párasica and Antarmadá, we find $\mathrm{VA}^{\prime}$ rasica and Rasica, wha reigned fucceffively, Timica and Bháluca, who travelled, as merchants, into diftant countries, and Bha'luca'yani, who feems to have been the laft of the race.

The pedigree of Capénas has been carefully preferved; and many Brábmens are proud of their defcent from him:

A twenty-third prince, named Cansala yanas, is added in fome genealogical tables.

This is manifefly the fame fory with that of Cepheus and Cassiopea, Perseus and Andromeda. The firt name was written Capheus or Caphyeus by the Aicadians (a), and is clearly taken from Capéya, the termination nás being frequently rejected: fome affert, that he left no male iffue; and Apollodorus only fays, that he had a daughter, named Sterope, the fame, I prefume, with Andromeda. The wife of CaPéya was either def́cended herfelf from Casyapa, or was named Ca"SYAPI after her marriage with a prince of that lineage. PA'rasica is declared in the Puránas to have been fo called, becaufe he came from para, or beyond, that is from beyond the river Call, or from the weft of it; fince it appears from the context, that he travelled from weft to eaft: the countries on this fide of the Nile, with refpect to
(a) Paufan, Arcad.

India, have thence been denominated Arva-l'bán, or, as the Perfans write it, Arabiftain; while thofe nations, who were feated on the other fide of it, were called Párasícáb, and hence came the Pharusü, or Per $\int$ ee, of Lybia, who are faid by Pliny to have been of Perfan origin, or defcended from Perseus, the chief fcene of whofe achievements was all the country from the weftern bank of the Nile to the ocean; but I do not believe, that the word Párasíciab has any relation to the Perfans, who in Sanfcrit are called Párasáh, or inhabitants of Parafa, and fometimes Párafavab, which may be derived from Parasu, or Párafuáh from their excellent borfes. I muft not omit, that Arva-fiban, or Arabia, is by fome derived from Arvan, which fignifies a fine horfe, the final letter being omitted in compofition: Arvan is alfo the name of an ancient fage, believed to be a fon of Brahmá。

In order to prove, by every fpecies of evidence, the identity of the Grecian and Indian fables, I one night requefted my Pandit, who is a learned Aftronomer, to fhow me among the ftars the conftellation of Antarma dá; and he intantly pointed to Andromeda, which I had taken care not to Show him firt as an afterifm, with which I was acquainted: he afterwards brought me a very rare, and wonderfully curious, book in Sanjerit, with a diftinct chapter on the Upanac/batras, or conftellations out of the Zodiack, and with delineations of Capéya, of Ca'syapi' feated, with a lotos-flower in her hand, of Antarmadá chained with the Fifh near her, and of Párasíca holding the bead of a monfer, whicb he bad Jain in battle, dropping blood, with fnakes inflead of bair, according to the explanation given in the book; but let us return to the geography of the Puránas.

We mentioned, in the firft fection, the two Jwálamuc'bis, near one of which the father of Cape'yana's refided: the Fwálámuc'bi, now Corcùr, which was alfo named Anáyáfá-dévi-ft̀hán, was at no great diftance from the Tigris, and feems as we intimated before, to be the $\tau$ üs 'Aveies 'Iegov of Strabo(a): I fuppofe it to be the original $U r$ of the Cbaldeans; original I fay, becaufe there were feveral places of that name, both in Syria and Cbaldea, where fuperftitious honours were paid to fire, either natural or artificial. The epithet great is applied in fome Puránas to this Fwálámuc'hì, and in others to that near Baku; to this, perhaps by way of eminence in fanctity, and to that, becaufe its flames were more extended and fiercer. Laya-ftbán, or Layavati, where Visvacséna clofed his days near the Cáli, we have alfo mentioned in a preceding lecion; and it was, probably, the Lete of Josephus (b), or fome place very near it: Stephanus of Byzantium calls it Letopolis, or Latopolis, and fays, that it was a fuburb of Mempbis near the pyramids (c). Ghóra-fibán is yet unlnown: $\mathfrak{k i}$ could not have been very far from Vifwa-cirri-pura; but univerfal fame is applicable to fo many cities of Egypt, that we camnot appropriate it to any one of them. Of Tapas and Tapóvana we have already fpoken; and Cb'bádiťá, or Perirachlitá, muf have been in thofe forefts of Thebais: the tree of Racßitá was, poffibly, the Holy Sycomore mentioned by Pliny, "fifty-four miles above Syene on the banks of the Nile (d). The fea of Amagna was, moft probably, the Afphaltite lake, the waters of which had, and, fome affert, have to this day, fo buoyant a quality, that nothing could fink in them: Maundrel takes particular notice of $t$ is wonderful property. That lake was not far from Uddbára-ft'bân, or Joppe, where Andromeda was chained to a rock: Pliny fays, that the place of her confine-
(a) B. $17 \cdot$ P. 738.
(b) B. 2.
(c) Bo $17^{\circ}$
(d) Plino L. G. C. 290
ment and deliverance was fhown there in his time ; (a) and the Sanfcrit word Kämpa, which the Arabs pronounce Yáfab and Europeans call Foppa, means deliverance from imminent danger. On the Egyptian fhore, oppofite to Joppa, was a place called the Watch-tower of Perseus: by Graha, a crocodile or a fhark, we may underftand alfo one of $\mathrm{RA}^{\prime} \mathrm{H}^{\prime}$ 's defcendants, among whom the females were the Graiai, or Grace, of the weftern mythogifts. Pánigraba was, I fuppofe, the town of Panopolis, which could have no relation to the God Pan; for Herodotus, who had been there, informs us, that it was called both Panopolis and Cbemmis, that the inhabitants of it paid divine honours to Perseus, and boafted that he was born in it; but had Pan, of whom that hiftorian frequently fpeaks, been the tutelary god of the town, he would certainly have mentioned that fact: in the acts of the council of Ephefus, we find that Sabinus was Panis Epifcopus, as if one name of the town had been Pani or Panis; and it might have been anciently named Páni-grüba, the manfion or place of the hand, that is of wedlock, which the Greeks would of courfe tranflate Panopolis; as we find Rája-grǐba rendered Rája-maball in the fame fenfe. On the banks of the Niger was another town of that name, called Panagra by Ptolemy; and, to the north of it, we fee Timica; Rufikibar, Rufuccurum, and Ruficade, which have a great affinity with Timica and Rasica, before mentioned as defcended from Perseus: both Raficbár and Rafic-gber are Indian appellations of places; the firf meaning the enclofed ground or orchard, and the fecond, (which is a corruption from the Sanfcrit) the boule, of Rafica. Great confufion has arifen in the geography of India from the refemblance in found of gher, a houfe, gerh, a fortrefs, and the fecond fyllable of nagar, a town; thus Crifhna-nagar is pronounced Ki/bna-
(a) L. 5-C. 13, and 31. See alfo Fofephus, Strabo, Mela.

G g g 2
gber, and Ram-nagar, Ramna-gber, both very erroneoufly; fo Bifnagar was probably $V_{i} / h n u=n a g a r$, or Vifva-nagar: we muft beware of this, and the like, confufion, when we examine the many names of places in Lybia and other parts of Africa, which are either pure Sonfcrit, or in fuch of the dialects as are fpoken in the welt of India.

Let us conclude this article with obferving, that the great extent of Cape"ya's empire appears from the Greek Mythologifs and cther ancient writers; for the moft confiderable part of Africa was called Cephenia from his full name Capéyanas; the Perfans from him were ftyled Cephenes; and a diftrict in the fouth of Armenia was denominated Cephene; a paffage alfo in Pliny thows, that his dominion included Etbiopia, Syria, and the intermediate countries: "Etbiopia, fays he, was worn nut by the wars of "s the Egyptians, alternately ruling and ferving; it was famed, however, ${ }^{46}$ and powerful even till the Trojan wars in the reign of Memnon; and " that, in the time of king Cepheus, it had command over Syria, and on "6 our coaft ${ }_{2}$ is evident from the fables of Andromeda."
III. The following legend is taken from the Makácalpa, and is there faid exprefsly to be an Egyptian ftory. An ancient king, who was named Chaturáyana, becaufe he was a perfect mafter of the four Védas, to which name Vatsa was ufually prefixed, becaufe he was defcended from Vatsa, a celebrated fage, paffed a hundred years in a dark cavern of Crijhna-giri, or the Black Mountain, on the banks of the Cáli, performing the moft rigorous acts of devotion : at length Vishnu, furnamed GuHA'SAYA, or dwelling in caves, appeared to him, and promifed him, all that he defired, male iffue; adding, that his fon thould be named Tamóvatsa, in allufion to the darkne $\int S_{\text {s }}$ in which his father had fo long prac-
tifed religious aufterities. Tamóvatsa became a warlike and ambitious, but wife and devout, prince: he performed auftere acts of humiliation to Vishnu, with a defire of enlarging his empire; and the God granted his boon. Having heard, that Mifra-fthán was governed by Nirmaryáda (a name, which may poffibly be the origin of Nimrod), who was powerful and unjuft, he went with his chofen troops into that country, and, without a declaration of war, began to adminifter juftice among the people and to give them a fpecimen of a gaod king: he even treated with difdain an expoftulatory meffage from Nirmaryáda, who marched againft him with a formidable army, but was killed in a battle, which lafted twelve days, and in which Tamóvatsa fought like a fecond Parasu Ráma. The conqueror placed himfelf on the throne of $M i f r a$, and governed the kingdom with perfect equity: his fon Ba'hyavatsa devoted himfelf to religion and dwelt in a foreft; having refigned his dominion to his fon Rucmavatsa, who tenderly loved his people, and fo highly improved his country, that from his juft revenues he amaffed an incredible treafure. His wealth was fo great, that he raifed tbree mountains, called Rucmadri, Rajatádri, and Retnádri, or the mountain of gold, of flver, and of gems: the author fays mountains; but it appears from the context that they were fabricks, like mountains, and probably in a pyramidal form.

Tamóvatsa feems to be the Timaus of Manetho, who fays, according to Mr. Bryant's tranlation, that " they once had a king, called "Timaus, in whofe reign there came on a fudden into their country a large " body of obfcure people, who with great boldnefs invaded the land, took it " without oppofition, and behaved very barbarounly, flaying the men, and " enflaving their wives and children." the Hindus, indeed, fay, that the invaders were headed by Tamóvatsa, who behaved with juftice to the na-
tives, but almoft wholly deftroyed the king's army, as the fon of Jamadagni nearly extirpated the military clafs; but the fragments of Manetho, although they contain curious matter, are not free from the fufpicion of errours and tranfpofitions. The feat of Tamóvatsa, called Tamóvata-fi'bán, feems to be the town of Thmuis, now Tmaie, in the diftrict of Tbmuites: in later times it appears to have communicated its name to the Pbatmetick branch, and thence to Tamiatbis, the prefent Damiata. We before afcertained the fituation of Crij/bna-giri; and, as to the three fupendous edifices, called mountains from their fize and form, there can be little or no doubt, that they were the three great Pyramids near Mifra-jrban, or Memphis; which, according to the Puránas and to Pliny, were built from a motive of oftentation, but, according to Aristotie, were monuments of tyranny: Rucmavatsa was no tyrant to his own people, whom be cherifoed, fays the Mabácalpá, as if they had been bis own cbildren; but he might have compelled the native Egyptians to work, for the fake of keeping them employed and fubduing their fpirit. It is no wonder, that authors differ as to the founders of thofe vaft buildings; for the peopite of Egypt, fays Herodotus, held their memory in fuch deteftation, that they would not even pronounce their names: they told him, however, that they were built by a herdfman, whom he calls Philitius, and who was a Ieader of the Pális or Bbils mentioned in our firft fection. The pyramids might have চeen called mountains of gold, filver, and precious ficnes, in the hyperbolical fyle of the Eaft; but I rather fuppofe, that the firf was faid to be of gold, becaufe it was coated with yellow marble ; the fecond of fiver, becaufe it had a coating of white marble ; and the third of jezvels, becaufe it excelled the others in magnificence, being coated with a beautiful fpotted marble of a fine grain, and fufceptible of an exquifite polif (a). The Brábmens never underfood, that any pyramid in Mijra-

[^45]ft'bala, or Egypt, was intended as a repofitory for the dead; and no fuch idea. is conveyed by the Mabácalpa, where feveral other pyramids are exprefly mentioned as places of worhip. There are pyramids now at Benáres, but on a fmall fcale, with fubterzanean paffages under them, which are faid to extend many miles: when the doors, which clofe them, are opened, we perceive only dark holes, which do not feem of great extent, and pilgrims no longer refort to them through fear of mephitick air or noxious reptiles. The narrow paffage, leading to the great pyramid in Egypt, was defigned to render the holy apartment lefs acceffible, and to infpire the votaries with more awe: the caves of the oracle at Delphi, of Trophonius, and of Nero-Grange in Ireland, had narrow paflages:anfwering the purpofe of thofe in Egypt and India; nor is it unreafonable: to fuppofe, that the fabulous relations concerning the the grot of the Sibyl in Italy, and the purgatory of St. Patrick, were derived from a fimilar practice and motive, which feem to have prevailed over the whole Pagan world, and are often alluded to in Scripture. M. MailLet has endeavoured to fhow, in a moft elaborate work, that the founder of the great pyramid lay entombed in it, and that its entrance was afterwards clofed; but it appears, that the builder of it was not buried there; and it was certainly opened in the times of Herodotus and Plinis. On my defcribing the great Egyptian pyramid to feveral very learned Brälmens, they declared it at once to have been a temple; and one of them afked, if it had not a communication under ground with the river $C a(l)$ : when I anfwered, that fuch a paffage was mentioned as having exifted, and that a well was at this day to be feen, they unanimoully agreed, that it was a place appropriated to the worhip of PADMA'-DE'VI', and that the fuppofed tomb was a trough, which, on certain feftivals, her priefts ufed to fill with the facred water and lotos-flowers. What Pliny fays of the Labyrinth is applicable alfo to the Pyramid: fome infifted, that it was the palace of a certain king; fome, that
it had been the tomb of MœRIS; and others, that it was built for the purpofe of holy rites; a diverfity of opinion among the Greeks, which thows how little we can rely on them; and, in truth, their pride made them in general very carelefs and fuperficial inquirers into the antiquities and literature of other nations.
IV. A fingular ftory, told in the Uttara-charitra, feems connected with the people, whom, from their principal city, we call Romans. It is related, that a fage, named $A^{\prime}$ lavála refided on the verge of Himádri, and fpent his time in cultivating orchards and gardens; his name or title implying a fmall canal or trench, ufually dug round trees, for the purpofe of watering them. He bad an only fon, whofe name, in the patronymick form, was
 amorous and roving difpofition; and, having left the houfe of his father, in company with fome youths like himfelf, he travelled as far as the city of Rómacà, which is defcribed as agreeably fituated and almoft impregnably ftrong. The country, in which it food, was inhabited by Mlécl'bas, or men who fpeak a barbarous dialect, and their king had a lovely daughter, who, happening to meet $A^{\prime}$ lava'lif, found means to difcourfe with him: the young pair were foon mutually enamoured, and they had frequent interviews in a fecret grove or garden; till the princefs became pregnant, and, her damfels having betrayed her to the king, he gave orders for the immediate execution of A'lava'li; but fhe had fufficient power to effect his efcape from the kingdom. He returned home ; but, his comrades having long deferted him, and informed his father of his intercourfe with the daughter of a Mécb'ba, the irritated fage refufed to admit him into his manfion: he wandered, therefore, from country to country, till he arrived in Barbara, where he fuffered extreme pain from the burning fands; and having reached the banks of the

Crïbnà, he performed a rigorous penance for many years, during which he barely fupported life with water and dry leaves. At length MaHádéva appeared to him, affured him that his offence was forgiven, and gave him leave, on his humble requert, to fix his abode on the banks of the holy river Cáli, reftoring him to his loft facerdotal clafs, and promifing an increafe of virtue and divine irradiation. From the character, in which the God revealed : himfelf, he was afterwards named Aghahe'sa, or Lord of bim, woho forfakes fin; and the ftation of Álaváli was called Agbabéfa-fiböni, or Agbabéfam.

Now we find the outline of a fimilar tale in the ancient Roman hiftory: and one would think that the Hindu writers wifhed to fupply what was deficient in it. The old deities of Rome were chiefly rural, fuch as the Fauris, the Sylvans, and others who prefided over orchards and gardens, like the fage A'lavála: the Sanfcrit word ála, which is lengthened to álavála; when the trench is carried quite round the tree, feems to be the root of dirad, a vi-
 dener or hufbandman. We read of Vertumna with child by Apollo, the daughter of Faunus by Hercules, and thofe of Numitor and Tar. chetius by fome unknown Gods, or at leaft in a fupernatural manner; which may be the fame ftory differently told: the king of the Mlécb'bas would, no doubt, have faved the honour of his family by pretending that his daughter had received the careffes of a rural divinity.

The origin of Rome is very uncertain; but it appears to have' been at firft a place of worthip raifed by the Pelafgi under the command of aleader, who, like many others, was named Hercules: by erecting other edifices round it, they made it the capital of their new weftern fettlements; and it Hhh
became fo ftrong a city, that the Greeks called it Rbomè, or power itfelf; bur Rómaca, which all the Hindus place very far in the weft, was thus denominated, according to them, from Róma, or wool, becaufe its inhabitants wore mantles of woollen cloth; as the Greeks gave the epithet isvoxaivms, from linen vefture, to the people of Egypt and to thofe eaftern nations, with whom they were acquainted. Pliny fays, that the primitive name of Rome was fudioufly concealed by the Romans (a) ; but Augustine informs us, that it was Febris: probably that word fhould be written Pbaberis. About two generations before the Trojan war, the Pelafgi began to lofe their influence in the weft, and Rome gradually dwindled into a place of little or no confequence; but the old temple remained in it : according to the rules of grammatical deriwation, it is more probable, that Romulus was thus named, becaufe he was found, when an infant, near the fite of old Rome, than that new Rome; which he rebuilt and reftored to power, fhould have been fo called from Romueus. A certain Romanus, believed to be a fon of Ulysses, is by fome fuppofed to have built Rome, with as little reafon as Romulus; if, indeed, they were not the fame perfonage: Romanus, perhaps, was the king Latinus, whom Hesiod mentions as very porverful; but, whether he was the foreign prince, whofe daughter infpired A'laváli with love, I cannot pretend to decide; however, thefe inquiries relate to the droip of Varaba; and the fcope of our work leads us back to that of Cusha.

IT is reafonable to believe, that Agbabéfam was the celebrated and ancient city of Axum in the vicinity of the little Crifhná, or the Aftaboras of: our old geographers, now called Tacazzè; which according to Mr. BEUC E, is the largeft river in Aby $\sqrt{2} n i a$ next to the Abay or Nile $(b)$ : it is alfo held
(a) L. 3. C. 5.
(3) Vol. 3. P. 157.613.
facred, and the natives call it Tenufb Abay or Little Nile; a very ancient appellation; for Strabo gives the name of Tenefis to the country bordering on that river (a). Hence, perhaps, the ancients miftook this river for the Wile, to which they erroneoully applied the name Siris; for the true Siris appears to be the Little Crifhná. The Agowes, who live toward the heads of the Nile and the Tacazzè, may have derived their name from Aghaba; and we fird the race of Alavaly fettled as well in the ifles of the Red Sea near the Aby/finian coaft, as in the country adjacent to Agbabéfam: 'thore ines were called Alieu and Alalece; and, in the diftricts about the Tacazzè, were the Elei or E'cii, furnamed Rbizopbagi, who dwett on the banks of the Aftapus and the Aftaboras; in which denominations of iflands and tribes we may trace the radical word $A^{\prime} l a$ or A'lavála.

The fmaller Crühnà was fo denominated, either becaufe its waters were black, or becaufe it had ifs origin from an achievement of Crishna; and its name Aft bimati, was given on an occafion, which has been already mentioned, but which may here be related at large from the Brábmánda. When Crishna vifited Sanciba-dwíp and had deftroyed the demon, who infefted that delightful country, he paffed along the bank of a river and was charmed with a delicious odour, which its waters diffufed in their courfe: he was eager to view the fource of fo fragrant a fream, but was informed by the natives, that it flowed from the temples of an elephant, immenfely large, milk-white and beautifully formed, that he governed a numerous race of elephants, and that the odoriferous fluid, which exuded from his temples in the feafon of love, had formed the river, which, from his name, was called Sanc'hanágà; that the Dévas, or inferior gods, and
(a) B. 16. p. 77 .

Hhh 2
the Apfirases, or nymphs, bathed and fported in its waters, impaffioned and intoxicated with the liquid perfume. The Hindu poets frequently allude to the fragrant juice which oozes at certain feafons from fmall ducts. in the temples of the male elephant, and is ufful in relieving him from the redundant moifure, with which he is then oppreffed; and they even defcribe the bees as allured by the fcent, and miftaking it for that of the fwecteft flowers; but, though Arrian mentions this curious fact, no modern naturalift, I believe, has taken notice of it. Crishna was more defirous than before of feeing fo wonderful a phenomenon, and formed a defign of poffeffing the elephant himfelf; but Sanc'hanága led againft him a vaft army of elephants, and attacked him with fuch fury, that the; incarnate God fpent feven days in fubduing the affailants, and feven morein attempting to feize therr leader, whom at laft he was obliged to kill with a froke of his Chacra: the head of the huge beaft had no fooner fallen on. the ground, where it lay like a mountain, than a beautiful Yacha, or Genius, fprang from the body, who proftrated himfelf before Crispla, informing him, that he was Vijayaverdhana, who had once offended Mahádéva and been condemned by him to pafs through a mortal form, that he was fupremely bleffed in owing his deliverance to fo mighty a God, and would inftantly, with his permiffion, return to his appeafed mafler. The victor affented, and left the field of battle; where, from the bones of the flain elephants, rofe a lake, thence named Alt bitaraga, from which flowed the river Af' $h i m a t i$, whoie hallowed waters, adds the author of the Purána, remove fin and worldly affections: aft $h i$, a bone, pronounced ofthi in fome provinces, is clearly the Grech ofecov, and its derivative aflibimat becomes afikimen in the firf cafe mafculine; whence the river is by fome old geographers called Aifamenos; for the names of rivers, which are feminine for the moft part in Sanfcrit, are generally mafculine in the weftern languages.

We find it named alfo Afaboras and Aftabaras; for Afthivare means the moft excellent bone, or ivory; and the Adiabaree, who lived, fays Pyiny, on its banks, took their name, perhaps, from the river, the word afthi being pronounced áti and ádi in fomo vulgar dialects; as the Sanfcrit word bafi, an elephant, is corrupted into húti: Mareb, or Sanc'hánágà, was anciently named Aftofabas, or Aflufobas, poffibly from Hafifrava, or flozeing from an eleppant, in allufion to the legend before related; and one would have thought Hafimati or Hafiminn, a more rational appellation for the Tacazzès. fince there are in fact many elephants in the country, which it waters. We muft beware of confounding SANC'HANA'GA, or the Elephant of Sanc'hadroip, with SANC'HA-NA'GA, or the Sbell-Serpent, of whom we have already given a fufficient account, and concerning whom we have nothing to add, except that the people of the mountains, now called Hubabb, have legendary traditions of a Snake, who formerly reigned over them; and conquered the kingdom of Sire.,

V, Concerning the river Nandí, or the Nile of Abyfinia, we meet with the following tales in the Padnacóba, or Treafure of Lotos-flowers. A king, named Apyáyana, funding himfelf declining very low in thel vale of years, refigned his throne to Aps mVatsAu his fon, find repaired with his wife SARMADA' to the hermitage of a renawned and holy Bráhe, men, whofe name was Mrica or Mricu, intending to confult him on the mode of entering into the third Aframa, or order; called vanapreftha: they found only the fon of the fage, named Márca, or Márcava, who gave them full infructions, and accompanied them to the hilly parts of the country, where he advifed them to refide. When they arrived at their deftined retreat, the Devas, pleafed with their piety, fcattered flowers on them like rain, whence the mountains were called Pufhpavarfia, according
to the derivation of the Mythologifts; but Puhppavar/ham, which is the name of the country round them, may fignify no more than the region of flowers: the Gods were not fatisfied with a fhower of bloffoms, and when the firft ceremonies were performed at Pufpa-verfha fiban, they rained alfo tears of joy, which being mingled with thofe of the royal pair and the pious hermit, formed the river Nandà, whole waters haftened to join the Cú$\mathfrak{l i}$, and their united freams fell at length into the Sanc ${ }^{\circ} b a b d b i$, or fea of $S a n c^{\prime}-$ ha. The goddefs, who prefided over the Nandá, paffed near the manfion of afage, named SA'NTAPANA, a child of SANTAPANA, or the Sun, who ran with delight to meet her and conducted her near his hermitage, where Dévatás and Rißis were affembled to pay her divine honours: they attended her to the place of her confluence with the great Crifhnà, near which was afterwards built Santabana-ftbán, and there the fage fixed a linga, or emblem of SA'NTAPANA-SIVA, to which proftrations muft be made, after prefcribed ablution in the hallowed waters, by all fuch as defire a feat in the manfions of Swerga.
$\therefore$ The mountains and country of Pufhpavarjpa feem to be thofe round the lake Dembea, which immediately after the rains, fays Mr. Bruce, look, from the bloffoms of the Wanzey, as if they were covered with white linen or new fallen fnow. Diodorus calls them Pfeuaras in the oblique cafe; and Strabo, Pfebcoos; the lake itfelf being alfo named P/eboa, or P Pebo, from the Sanfcrit word pufnpa. By one of the old Hindu writers, the river Nandá is placed between Barbara and Cufba-dwip; by another, in Sunc'ha$d w_{i} p$ itfelf; but this is eafily reconciled, for, according to the more ancient divifion of the earth, the exterior $d$ wip of CusHa was confidered as, a part of Sanc'ba-dwip; though, in the new divifion, it is juf the reverfe: all agree, that the Nandá runs, in great part of its courfe, from fouth to
north; and hence many Brábmens draw'a conclufion, which by no means follows, that the Cáli, which it joins, muft flow from weft to eaft. Sän-tapana-filan, I conceive to have ftood at the prayiga or triveniz, that is, at the confluence of the fmaller Crifhná with the united waters of the Nan$d \dot{a}$ and the Cáliz and I fuppofe it to have been the Apollinis oppidum of Rliny, (a) or the capital of the Adiabarce, called alfo Megabari, whom I have already mentioned: for SA'NTAPANA was an avatár, or incarnate form, of the Sun, and the country round his aframa, or hermitage, is known to this day by the name of Kuara, which means the Sun, aecording to Mr. Bruce, and which is no other than the Sanfcrit word Cwára, or going round the earth: the Nandé, I prefume, or. Nile of Aby/finia, was alfo named the river of Sántapana, whence the Greeks firt made Aftapun in the oblique cafe, and thence, as ufual formed the nominative Aftapus. According to the Puránas, the Nandáa and Little Crī̧bná unite, before they fall into the Cáli; and Ptolemy alfo fuppofes that they join near the fouthern border of Meroe, and then are divided; one branch flowing eaftward, and another weftward into the main body of the Nile: that inquifitive geogragher acknowledges himfelf indebted for much ufeful information to many learned Indians, whom he knew at Alexandria, and thofe Hindus were probably acquainted with the Puránas; but Eratosthenes was better informed than Ptolemy with refpect to the rivers in queftion; and the miftake of the Hindu authors may have axifen from a fact; mentioned by Mr . Bruce, that, during the rains, the floods divide themfelves, part running weftward into the Nile,- part eaftward into the Tacazze. It fhould not be omitted, that the country of the fage $\mathrm{Mricu}_{\text {and }}$ his fon $\mathrm{MA}_{A^{\prime} \text { rcava, feems }}$ to be that of the Macrobü, now inhabited by the Gonguas, Gubas, and Sbangallas; the Greeks, according to their cuftom, having changed Marcabain-
to Macrobios, or long-lived; though that country, fays the Abyffinian traveller, is one of the moft unhealthy on earth : indeed, if MA RCANDE Ya, the fon of Mricandu, be the fame perfon with $\mathrm{Ma}^{\prime}$ rcava, he was truly Macrobios, and one of the nine long-lived Sages of the Puráns.
VI. The next legend is taken from the Mabâcalpa; and we introduce it here as illuftrative of that, which has been related in the fecond fection, concerning the two Indian Gods of Medicine, to whom fome places in Egypt were confecrated.

A most pious and venerable Sage, named Rishícéśs, being very far advanced in years, had refolved to vifit, before he died, all the famed places of pilgrimage ; and, having performed his refolution, he bathed at laft in the facred water of the Cát, where he obferved fome fifhes engaged in amorous play, and reflecting on their numerous progeny, which would fport like them in the fream, he lamented the improbability of his leaving any children: but, fince he might poffibly be a father, even at his great age, he went immediately fo the king of that country, Hirđnyaverna, who had fifty daughters, and demanded one of thern in marriage. So ftrange a demand gave the prince great uneafinefs; yet he was unwilling to incur the difpleafure of a faint, whore imprecations he dreaded: he, therefore, invoked Heri, or Vishnu, to infpie him with a wife anfwer, and told the hoary philofopher, that he fhould marry any one of his daughters, who of her own accord fhould fix on him as her bridegroom. The fage, rather difconcerted, left the palace; but, calling to mind the two fons of Aswini', he haftened to their terreftrial abode, and requefted, that they would beftow on him both youth and beauty: they immediately conducted him to Abbimatada, which we fuppofe to be Abydus in Upper Egypt; and, when he had bathed in the pool of Rupayau-
vana, he was reftored to the flower of his age with the graces and charms of Cámadéva. On his return to the palace, he entered thei fecret apartments, called antalpura, where the fifty princeffes were affembled; and they: were all fo tranfported with the vifion of more than human beauty, that they fell into an ecfafy, whence the place was afterwards named Móba-jatbon or Móbana, and is, poffibly, the fame with Mobannan: they no fooner had recovered from their trance, than each of them exclaimed, that the would be bis bride; and, their altercation having brought Hiranyuverna into their apartment, he terminated the conteft by giving them all in marriage to Rismo CE'SA, whò became the father of a hundred fons'; and, when he fucceeded. to the throne, built the city of Suc baverddbana; framed vimanas or celeftial felf-moving cars, in which be vifited the Gods, and made gardens abounding in delights, which fivalled the bowers of INDRA; but, having gratified the defire, which he formed at Matfyafangama, or tnie place, where the fifb
 and returned in his former shape to the banks of the $\dot{C} \dot{a} h$, where therlofed his days in devotion.
VII. A very communicative Panait having told me a fhort ftory, which belongs to the fubject of this fection, it feems proper to mention it, though I do not know, from what Puran it is taken. AAUNATR1, the fifth in defcent from ATRI before named, was performing rellggous rites on the Déváníca mountains near the fite of the modern Cábul, when a hero, whofe näme was TULYं, defired his firitual advice; informing him, that he had juft completed the conqueft of Barbiara; fubdued the Syamanuc'bas, who lived to the eaft of the river Cáli, and?overcome the Sant'báyanas, but that fo great an effufion of blood, for the fake of dominion and fame, thad ftained his foul with a finful impurity, which he was defirous of expiating:
the Sage accordingly prefcribed a fit penance, which the conqueror pere formed in the interior Cuba-dwip. A certain Thoules or Taules is mentioned in Egyptian hifory as a fon of $\mathrm{O}_{\mathrm{R}}$ Us the Shepherd.
VIII. In the firft part of this effay, we intimated an opinion, that Ugra-fibain was á part of Mempbis, and that Ugra, whom the Hindus make a king of Dwáracià in Gujjarāa-dés or Gujarút, was thés Uchoreus, or Ogdous, of the Greeks; nor is it impoffible, that Vexoris, who is reprefented as areat conqueror, was the fame perfon with Ughoreus. The ftory of Ugra, or Ugraséna, we fiad in a book, entitled Amaréswara-sangraba-tantra; from which the following paffage is verbally tranflated: " Ugraseina, chief of kings, was a bright ornament of the Yedava race; " and, having taken Grishna for his affociate, he became fovereign of all " the Dwípas; the Dévas, the Yacsbas, and the Rácsbasass; paid him tri" bute ragain and again; having entered Gusbo-drois, and vanquifhed its "princes elater with pride, the monarch raifed an image of Iswara on ss the banks of the river Cáli, whence the God was famed by the title of " Ugréswara, and the place was called Ugra-fibana."
IX. The foldowing legend from the Utrgrestanda is, manifefty connected with theyoldef hiftory and mythology in the world or Ind R A! king of Méru, havinging a Daityà of the facerdotal clafs, was obliged:to retire from the world, in order to perform the penance ordained for the crime of Brabmabaty, or the murder of a Brabmen : his dominions were foon in the greateft; diforder, and the rebel Daityas, oppreffed the Dévas, who applied for affiftance to Namusma, a prince of diftinguifhed virtues, whom they unanimoufly elected kingiof their heayenty manfions, with the title of De Vanamunita. His firf object was to reduce the Daityas and the
fovereigns of all the dwips, whor had flaken off their allegidnce; for which purpofe he raifed an immenfel army, and marched through the interior. Cushaidư解, or Irun and Arafia, through the exterior dwo of Cusin ag or Eibropia; threugh Sancba-dwis or Egypt, through Varába-dwíh or Europe, through Cbandratwit, and through the ceuntries now called Siberia and Cbira: when he in waded Epypt; he overthrew the combined forces of the Cutilat-césus and Syáma-mucituibwithofortcribleia carnage, that the Cáli (a word, which means alfor therfomaleflevon reri) was reported to have fwallowed up the natives of Eidypl, whole bodies were thrown into her fream. During his travels he buplt many places of worfhip, and gave each of them: the title of Devanábujban: the proncipal rivers of the countries, though; which he paffed, were alfo diftinguilhed by his name; NAHUSHA beting an appellation of the Nile, of the Cbachu or $O_{\text {xius }}$ of the Varathe or Ifter, and of feveral others. He returned through India to Méru, but unhappily fell in love with SAchil or Pulomajá, the confort of Indra, who fecretly refolved on perfect fidelity to her lord, and, by the advice of VRIhaspati, regent of the planet Fubiter and preceptor of the Dévas, promifed Nahusha to favour his addreffes, if he would vifit her in a dolà, or palanquin, carried on the fhoulder's of the holieft Brábmans: he hag fufficient influence to procure a fet of reverend bearers; but fuch was the flownefs of their motion, and fo great was his eagernefs to fee his beloved, that he faid with impatience to the chief of them Serpe, Serpe, which has precifely the fame fenfe in Sanforit and in Latin; and the fage, Tittle ufed to fuch an imperative, anfwered, "be thy felf a ferpent." Such wis' the power of divine learning, that the imprecation was no fooner pronounced, than the king fell on the earth in the fhape of that large ferpent, which is called Ajagara in Sanforit, and Boa by Naturalifts: in that fate of humiliation he found his way to the Black Mountains, and glided in fearch of
prey along the banks of the Cálı; but, having once attempted ta fwallow a. Bráhmen deeply learned in the Védas, he felt a fcorching flame in his throat, and was obliged to difgorge the fage alive, by contact with whom his own intellects, which had been obfcured by his fall, became irradiated; and he remembered with penitence his crime and its punimment. He ceafed from that day to devour human creatures, and, having recovered his articulation together with his underftanding, he wandered through the regions adjacent to the Nile, in fearch of fome holy Bráhmen, who could predict the termination of his deferved mifery: with this view he put many artful queftions to all, whom he met, and at length received information, that he would be reftored to his priftine flape by the fons of $P_{A N D}$. He had no refource, therefore, but patience, and again traverfed the world, vifiting all the temples and places of pilgrimage, which he had named from himfelf in his more fortunate expedition: at lat he came to the fnowy mountains of Himálaya, where he waited with refignation for the arrival of the $P_{\text {and }}{ }^{\prime}$ davas, whofe adventures are the fubject of Vyasa's great Epick Poem.

This fable of Déva-nahusia, who is always called Deonaush in the popular dialects, is clearly the fame in part with that of Dionysus, whether it allude to any fingle perfonage, or to a whole colony; and we fee in it the origin of the Grecian fiction, that Dionysus was Cewed up in the Méros, or thigb, of Jupiter; for Méru, on which Deva-nahusha refided for a time, was the feat of INPRA, or Zeus Ombrios: by the way, we muf not confound the celeftial Méru with a mountain of the fame appellation near Cábul, which the natives, according to the late Mr, Forster, fill call Mer-cob, and the Hindus, who confider it as a fplinter of the heavenly mountain, and fuppofe, that the Gods occafionally defcend
on it, have named Méru-fringa. Names are often fo ftrangely corrupted, that we fufpect Deo-naush to be alfo the Scytbianmonarch, called TAnaus by Justin (a), and Taunasis by Jornandes, who conquered A/ia, travelled into Egypt, and gave his name to the river otherwife called Iaxartes: we have already mentioned Nous as a Greek name of the Nile, and the Danube or Ifter was known alfo by that of Danufius or Tanais (b); in which points the Puranas coincide with Horus Apollo, Eustathius, and Strabo.
X. The author of the Visua-pracás gives an account of an extraordinary perfonage, named Dardánása, who was lineally defcended from the great Jamadagns: his father Abhayána's lived on the banks of the river Vitafta, where he conftantly performed acts of devotion, explained the Védas to a multitude of pupils, and was chofen by Chitrarat'ha, who though a Vaifya, reigned in that country, as his guru, or fpiritual guide. Young Dardánása had free accefs to the fecret apartments of the palace, where the daughter of the king became enamoured of him, and eloped with him through fear of detection, carrying away all the jewels and other wealth, that the could collect: the lovers travelled from hill to hill and from foreft to foreft, until they reached the banks of the Cáli, where their property fefured them a happy retreat. Pramóda, a virtuous and learned Brähmen of that country, had a beautiful daughter, named PrAmada', whom DarDA'NA'SA, with the affent of the princefs, took by the band, that is married according to the rites prefcribed in the Véda; and his amiable qualities gained him fo many adherents, that he, was at length chofen fovereign of the whole region, which he governed with mildnefs and wifdom. His anceftry and pofterity are thus arranged:
(a) Lib. 1. Cajp. 1- and Lib. 2. Cap. ${ }_{3} 6$.

The river, here named Vitafa, and vulgarly Gelam, is the Hydafpes of the Greeks: a nation, who lived on its banks, are called Dardaneis, by Dion y srus (a) ; and the Grecian Dardanus was probably the fame with Dardána'sa, who travelled into Egypt with many affociates. We find a race of Trojans in Eqypt; a mountain, called anciently Troicus, and now Tora, fronted Memplis; and at the foot of it was a place actually named Troja, near the Nile, fuppofed to have been an old fettlement of Trojans, who had fied from the forces of Menelaus; but Ctesias, who is rather: blameable for credulity than for want of veracity, and moft of whofe fables are to be found in the Puráns, was of a different opinion; for he afierted, according to DIODORUS of Sicily, that Troja in Egypt was built by Trojans, who had come from Afyria under the famed SEMizamis (b), named SAMIR AMM' by the ancient Hindu writers; and this account is confirmed by Herodotus, who fays, that a race of Dardanians were fettled on the banks of the river Gyndes near the Tigris $(c)$, where, I imagine, DARDA NA SA and his affociates firft eftablifhed themfelves after their departure from India(d).

EUSTATHIUS, in his commont on the Pertegefis, diftinguifhes the Dardaneis from the Dardanoi, making the firre an Indan, and the feconda Irojan, race (a); but it feems probable, that both races had a domfhoin origin: when Homer gives the "Thojants the title of Meropians, he alludes to their eaftern origin from the borders of Meruf the very hane of king Merops being no other than MÉKupa, or foveregn of that motntainons region. (t rif bodist

XHf We conse now to a perfon of a different character; not a prince or a hero, but a bard, whofelife is thus defcribed in the Fisuasara. On the banks of the Cali dwelt a Brabmen, whofe hame was Lee in yanas; a fage rigoroufly devout, fkilled in the learning of the $V \dot{V} d d s$, and firmly attached to the worfhip of Heri; but, having no male iffue, he was long difconfolate, and made certain oblations to the God, which proved acceptable; fo that his wife Sancriti became pfegfant, after the had tafted part of the charu, or cake of rice, which had been offered: in due time The was delivered of beautiful boy, whom the Brábmens, convened at the jâtacarma, or ceremony on his birth, unanimoully agreed to name HeRIDATTA, or given by the divinity. When the sanscá ra, er inftitution of a Bráhmen, was completed by his inveftiture with the facerdotal ftring, and the term of his Audenthip in the Féda was paft, his parents urged him to enter into the fecond order, or that of a married man; but he ran into the woods, and paffed immediately into the fourtb order, diflaiming all worldly connexions and wholly devoting himfelf to Vrshnu :' he continually practifed the samádliyóga, or union with the deity by oontemplation; fixing

Eufath. on Dionys. V. 1i, 38
his mind fo intenfely on GoD, that his vital foul feemed concentrated in: the Brabmatrandhra or pineal gland while his animal faculties were fuff pended, but his body fill uncorrupted, till the reflux of the fpiats put them again in motion; a flate, in which the Hindus affert, that fome rog is have remained for years and the fanciful gadations of which areminutely defcribed in the roga-sástra, and even delineated, in the figures/called Shatcbacra, under the emblems of lotos-flowers with different numbers of petals, according to the fuppofed fations of the foul in dher mytical af cent. From this habit of merging all his vital fpirits in the idea of the fupreme being, Heridat A was named LiNA'su; a name, which the people repeated wirh enthufiafm; and he became the guru, or fpiritual director, of the whole nation: he then rambled over the earth, finging and dancing, like a man jna phrenfy; but he fang no hymins, except thofe which himfelf had compofed; and hence it came, that all older hymins were neglected, while thofe of LinA' su alone were committed to inemory from his lips, and acquired univerfal celebrity. Other particulars of his life are mentioned in the Puranas, where fragments of his poetry are, mont probably, cited: I have no doubt; that he was the fame perfon with the Linus of the Greeks; and, if his hymns can be recovered, they will be curious at leaf, if not infructive. HiNA'su was the eighth in defcent from the fage BHARADMA I A, whom fome call the fon VRiHaspati, or the regent of Fupiter; he is faid to Gave married at an advanced age, by the fecial command of Heriend five of his defcendants ase named in the following pedigree:

XII. The tale of Lubdhaca relates both to the morals and aftrona; my of the Hindus, and is conftantly recited by the Brabmens on the nigbt of Siva, which falls on the fourteenth of Mágha or of P'halgun, according as the month begins from the oppofition or from the conjunction.

Lubdiaca was defcended from the race of Palli, and governcd, all the tribes of Cirátas: he was violent end cruel, addicted paffionately to the pleafures of the chafe, killing innocent beafts without pity and eating their flefh without remorfe. On the faurteenth lunar day of the dark half of P'balgun, he had found no game in the foreft; and at funfet; faint with hunger, he roved along the banks of the Crishná, nill earnenly looking for fome animal whom he might fhoot : at the beginning of night he afcended a Bilva-tree, which is confecrated to Mafádéva, whofe emblem had been fixed under it near a fpring of water; and, with a hope of difcerning fome beaft through the brenches, he tore off the leaves; which dropped on the linga, fprinkling it with deiv; fo that he performed facred rites to the God, without intending any act of religion. In the firt watch of the night a large male antelope came to the fpring; and LUBDHACA, hearing the found which he made in drinking, fixed his arrow, and took aim at the place, whence the noife proceeded; when the animal, being endued by Siva with fpeech and intellect, told him, that he had made an affignation with a beloved female, and requefted him to wait with patience till the next day, on which he promifed to return: the mighty hunter was fofK k k
tened, and, though nearly famifhed, permitted the antelope to depart, having firft exacted an oath, that he would perform his engagement. A female antelope, one of his conforts, came in the fecond watch to drink at the fpring; who was in like manner allowed to efcape, on her folemn promife, that fhe would return, when the had committed her helplefs young to the care of a fifter; and thus, in the third and fourth watches, two other females were releafed for a time on pretences nearly fimilar, and on fimilar promifes. So many afts of tender benevolence in fo trying a fituation, and the rites to MAHA DE'VA, which accompanied them from watch to watch, though with a different intention, were pleafing to the God, who enlightened the mind of Lubdhaca, and raifed in him ferious thoughts on the cruelty of flaying the innocent for the gratification of his appetite: at early dawn he returned to his manfion, and, having told his family the adventure of the night, anked whether, if he fhould kill the antelopes, they would participate his guilt, but they difclaimed any fhare in it, and infifted, that, although it was his duty to provide them with fuftenance, the punifhment of fin muft fall on him folely. The faithful and amiable beaft at that moment approached him, with his three conforts and all his little ones, defiring to be the firf victim; but Lubdhaca exclaimed, that he would never hurt his friend and his guide to the path of happinefs, applauded them for their frict obfervance of their promifes, and bade them return to the woods, into which he intimated a defign of following them as a hermit : his words: were fo fooner uttered, than a celeftial car defcended with a meffenger from SivA, by whofe order the royal convert and the whole family of antelopes were foon wafted, with radiant and incorruptible bodies, to the farry regions, fanned by heavenly nymphs, as they rofe, and fhaded by genii, who held umbrellas, while a chorus of ethereal fongfters chanted the praifes of tendernefs to living creatures and
a rigorous adherence to truth. Lubdmacta was appointed regent of Sirius, which is called the joga ftar; his body is chiefly in our Greater Dog, and his arrow feems to extend from $\beta$ in that afterifm to $x$ in the knee of $O_{r i o n, ~}^{\text {r }}$ the three ftars in whofe neck are the lunar manfion Mrigafiras, or the bead of the male antelope, who is reprefented looking round at the archer; the tbree flars in the belt are the females, and thofe in the fword, their young prozeny; Mahádéva, that he might be near his favourites, placed himfelf, it is faid, in the next lunar manfion $A^{\prime} r d r a ̀$, his bead being the bright far in the fhoulder of Orion, and his body including thofe in the arm with feveral fmaller fars in the galaxy. The fon of Lubdhaca fucceeded him on earth, and his lineal defcendants yet reign, fays the author of the Purín, on the delightful banks of the Crijhná.

This legend proves a very material fact, that the Pallis and Cirátas were originally the fame people; it feems to indicate a reformation in fome of the religious tenets and habits of the nations bordering on the Crifhná; and the whole appears connected with the famous Egyplian period regulated by the heliacal rifing of Sirius: the river here mentioned I fuppofe to be the fmaller Crifloná, or the Siris of the ancients, fo named, as well as the province of Siré, from the word Seir, which means a $\operatorname{dog}$, fays Mr. Bruce, in the language of that country. The conftellations of Orion and the two Dogs point at a fimilar ftory differently told; but the name of Lubdhaca feems changed by the Greeks into Labdacus; for fince, like the ancient Indians, they applied to their new fettlements the hiftory and fables of thcir primitive country, they reprefent LABDACUS as the grandion of Cadmus, the fon of Polydorus, (for fo they were pleafed to difguife the name) and the father of Laius: now Cadmus, as we have fhown, was Cardaméswara, or Mahádéva, and Polydorus, or Polydoo Kkk 2
tus, was Pallidatta, the gift of the national god Palli or Nairrit. As to Labdacus, he died in the flower of his age, or difappeared, fay the Hindus, and was tranflated into heaven; but, during his minority, the reins of government were held by Lycus, a fon of Nycteus, or Nac-tun-chara: he was fucceeded by Laius, which, like Páli, meansa berdfman or Jhefberd; for nciu, $\lambda$ ciu, and $\lambda$ eiv, fignify herds and flccks; and thus we find a certain Laius, who had a fon Bucolion, and a grandfon Phialus, both which names have a reference to pafiure, for the Shepherds were called by the Grecks Ayenciot, and Agelaia was fynonymous with Pallas. The fon of Laius was Cedipus, with whofe dreadful misfortune, as we intimated in the firf fection, the Hindus are not unacquainted, though they mention his undefigned inceft in a different manner, and fay, that Yógabrashtá, whom they defcribe as a flagitious woman, entered into the fervice of fome cowherds, after the miferable death of her fon Mahásúra, or the Great Hero, by Linásu, the fon of Lubdhaca, who was defcended from Palli: the whole fory feems to have been Egypo tian, though transferred by the Greeks to Thebes in their own country.
XIII. The saft piece of hifory, mixed with an aftrological fable, which I think it ufeful to add, becaufe it relates to Barbara, is the legend of $D_{A S^{\prime}} A-$ rat'ha, of the monarch, zobofe car bad borne bim to ten regions, or to the eigbi points; the zenith, and the nadir: it is told bcth in the Bbawifhya Purán and the Brábmánda. He was defcended from Súrya, or $\mathrm{He}^{\prime} \mathrm{LI}$, which is a rame of the Sun in Greek and in Sanfirit: one of his anceftors, the great RAOHU; had conquered the feven divipas, or the whole earth, and Vishnu became incarnate in the peffon of his fon RAMACHANDRA. It happened in the reign of DASARATHA, that SANI, having juft left the lunar manfion Crititica, of the Pleiads, was entering the Hyads, which the Hindus call

Robiciz, and that paffage of SATURN is diftinguifhed by the appellation of Sacata-bbeda, or the Jection of the wain: an univerfal drought having reduced the country to the deepeft diftrefs, and a total depopulation of it being apprethended, the king fummoned all his aftrologers and philofophers, who afcribed it folely to the unfortunate paffage of the malignant planet; and Vasish t'нa added, that, unlefs the monarch himfelf would attack SANI, as he ftrongly advifed, neither Indra nor Brahmá himfelf could prevent the continuance of the drought for twelve years. Dasaratha that inftant afcended his miraculous car of pure gold, and placed himfelf at the entrance of Robiniz, blazing like his progenitor the Sun, and drawing his bow, armed with the tremendous árrow Sañbáráffra, which attracts all things with irrefiftible violence: SANI, the flow-moving cbild of SưRYA, dreffed in a blue robe, crowned with a diadem, baving four arms, bolding a bow, a Spiked weapon, and a cimeter, (thus he is defrribed in one verfe) difcerned his formidable opponent from the laft degree of Crïtticà, and rapidly defcended into the land of Barbara, which burft into a flame, while he concealed himfelf far under ground. The hero followed him; and his legions, marching to his affiftance, perifhed in the burning fands; but $S_{A^{\prime} N I}$ was attracted by the magnetick power of the Sañbáráftra, and, after a vehement conflict, was overpowered by DASArat'ha, who compelled him to promife, that he never more would attempt to pafs through the wain of Róbinit: the victor then returned to his palace, and the regent of the planet went to Sani-flbán in Barbara, while the ground, on which he had fought, affumed a red hue. The Hindu aftrologers fay, that SANi has hitherto performed his promife, but that, in four or five years, he will approach fo nearly to Róbinì, that great mifchief may be feared from fo noxious a planet, who has nothing in this age to apprehend from a hero in a felf-moving car with an irrefiftible weapon: they add, that ManGGLA, or Mars, the child of Prit'hivi', has alfo been prevented from
traverfing the waggon of Róbiniz, but that Vrinaspati, Sucra, and Budна, or Fupiter, Venus, and Mercury, pars it freely and innocently, while it is the conftant path of Sóma, or the Moon, of whom the beautiful Róbinì, or Aldeberán, is the favourite confort.

The hifory of Dasarat'h being immediately connected with that of Ramachandra, and confequently of the firft colonies, who fettled in India, it may properly conclude this third fection, which has been confined to the demigods and fages, who diftinguifhed themfelves in the countries bordering on the Nile of Ethiopia; and, whatever may be thought of fome etymological conjectures, which I have generally confirmed by facts and circumftances, it has been proved, I truft, by pofitive evidence, that the ancient Indians were acquainted with thofe countries, with the courfe of that celebrated river, and with Mijra, or Egypt.

## REMARKS

## On the preceding Essay

## By the President.

SINCE I am perfuaded, gentlemen, that the learned Eflay on Egypt and the Nile, which you have juft attentively heard, has afforded you equal delight with that, which I have myfelf received from it, I cannot refrain from endeavouring to increafe your fatisfaction, by confeffing openly, that I have at length abandoned the greateft part of that natural diffruft and incredulity, which had taken poffeffion of my mind, before I had examined the fources, from which our excellent affociate Lieutenant Wilford has drawn fo great a variety of new and interefting opinions. Having lately read again and again, both alone and with a Pandit, the numerous original paffages in the Puránas and other Sanfcrit books, which the writer of the differtation adduces in fupport of his affertions, I am happy in bearing teftimony to his perfect good faith and general accuracy both in his extracts and in the tranflations of them; nor fhould I decline the trouble of annexing literal verfions of them all, if our third volume were not already filled with a fufficient ftore of curious, and (my own part being excepted) of valuable, papers: there are two, however, of Mr. Wilford's extracts from the Puránas, which deferve a verbal tranflation; and I, therefore, exhibit them word for word, with a full conviction of their genuineners and antiquity.

The firt of them is a little poem, in the form of the hymns afcribed to Orpheus, in praife of the Nílá, which all the Brábmens allow to be a facred river in $C u / b a-d w i p$, and which we may confidently pronounce to be the Nile: it is taken from the Scanda-purán, and fuppofed to be the compofition well acquainted:

1. "Cátr, Crijbná, likewife Níl $A^{\prime}$; "Syamá, Cáláa, and Afitáalfo; Anja"c nábbá and 'Syámalá; Mécbacà too and Pávanì;
2. "Agbabá and Mooc/badí-thefe twelve profperous names of the Cäli"c $c a$, in whatever receptacle of water
3. "A man fhall repeat at the time of bathing, he fhall gain the fruit ". of an ablution in the Cáli. No ftream on earth is equal to the river Cán " as a giver of increafe to virtue.
4. "He, who has bathed in her fream is wholly releafed from the mur"c der of a Brábmen and every other crime: they, who have been offenders "a in the higheft degree, are purified by ber, and confequently they, who " have committed rather inferior fins.
5. They, who have arrived on the bank of the river Cali, are indubi"s tably releafed from fin; and even by a fight of the river Cali, an affem-- blage of crimes is quite effaced;
6. "But to declare the fruit gained by bathing in her voaters, is impoffi"c ble even for Brahma'. Thefe delightful and exquifite names whatever " men
\%. Shall repeat, even they are confidered as duly bathed in the river "Cáli: constantly therefore, muft they be repeated with all polible attention."

Here I muf obferve, that the couplets of the Veda, which our learned friend has quoted at the beginning of his Effay, are in a fimilar ftrain to thofe of Visvámitra; nor have I a doubt of their authenticity, becaufe the fifth line is clearly in a very ancient dialect, and the original ends in the manner of the Hindu Scripture, with a repetition of the two laft words; but, either we muft reject a redundant fyllable in the concluding verfe, (though fuch a redundance often occurs in the $V^{\prime} d a$ ) or we muft give a different verfion of it. The line is

## Sitájıtafumáyógát param yáti nanivertatè,

which may thus be rendered: "By whofe union of white and dark azure es waters, a mortal, wobo bathes in them, attains the Moft High, from wobfe "prefence he returns not to this terrefirial manfion."

Of the fecond paffage, from the Padma-purán, the following tranflation is minutely exact:

1. "To Satyavarman, that fovereign of the whole earth, were born " three fons; the eldeft, Sherma; then, C'harma; and, thirdly, Jya'peti es by name:
2. "They were all men of good morals, excellent in virtue and virtuous * deeds, fkilled in the ufe of weapons to ftrike with or to be thrown; brave so men, eager for victory in battle.
3. "But Satyavarman, being continually delighted with devout me"ditation, and feeing his fons fit for dominion, laid upon them the burden of * government,

L 11
4. "Wbilf He remained honouring and fatisfying the Gods, and priefts, ${ }^{\text {se }}$ and kine. One day by the act of deftiny, the king, having drunk mead,
5. Became fenfelefs and lay afleep naked: then was he feen by C'har${ }^{6} 6 \mathrm{MA}$, and by him were his two brothers called,
6. "To robom be faid: What now has befallen?" In what fate is this "our fire? By thofe two was he hidden with clothes, and called to his fen" fes again and again.
7. " Having recovered his intellect, and perfectly knowing what had " paffed, he curfed C'marma, faying: Thou thalt be the fervant of fer" vants:
8. "And, fince thou waft a laugher in their prefence, from laughter fhalt: at thou acquire a name. Then he gave to Sherma the wide domain on the "fouth of the fnowy mountain,
9. "And to Jya' peti he gave all on the north of the fnowy mountain; se but He, by the power of religious contemplation, attained fupreme blifs."

Now you will probably think, that even the concifenefs and fimplicity of this narrative are excelled by the Mofaick relation of the fame adventure; but, whatever may be our opinion of the old Indian ftyle, this extract moft clearly proves, that the Satyavrata, or Satyavarman, of the Purans was the fame perfonage (as it has been afferted in a former publication) with the Noan of Scripture, and we confequently fix the utmoft limit of Hindu Chronology; nor can it be with reafon inferred from the identity of the ftories,
that the divine legiflator borrowed any part of his work from the Egyetians; he was deeply verfed, no doubt, in all their learning, fuch as it was; but he wrote what he knew to be truth itfelf, independently of their tales, in which truth was blended with fables; and their age was not fo remote from the days of the Patriarch, but that every occurrence in his life might naturally have been preferved by traditions from father to fon.

We may now be affured, that the old Hindus had a knowledge of Misr and of the Nile; that the legends of Cepheus and Cassiopeia (to felect one example out of many) were the fame with thofe of Cape ya and Cásyapi'; that Perseus and Andromeda were no other than Párasica and Antarmada'; and that lord Bacon, whom, with all his faults (and grievous faults they were), we may jufly call the great architect of the temple of knoovedge, concluded rightly, that the Mythology of the Greeks, which their oldeft writers do not pretend to have invented, was no more than a ligbt air, which had pafed from a more ancient people into the futes of the Grecians, and which they modulated into fuch defcants as beft fuited their fancies and the flate of their new fettlements; but we muft ever attend to the diftinction between evidence and conjecture; and I am not yet fully fatisfied with many parts of Mr. Wilford's Effay, which are founded on fo uncertain a bafis as corjectural Etymology; though I readily admit, that his etymologies are always ingenious, often plaufible, and may hereafter, perhaps, be confirmed by hiftorical proof. Let me conclude thefe remarks with applying to Him the words of the memorable writer, whom I have juft named, and with exprefling an opinion, in which I have no doubt of your concurrence, " That, with perfevering induftry, and with fcrupulous attention to genea" logies, monuments, infcriptions, names and titles, derivations of words, " traditions and archives, fragments of hiftory, and fcattered paffages from

* rare books on very different fubjects, he has preferved a venerable tablet " from the ßiproreck of time; a work, operofe and painful to the author, but * extremely delightful to his readers, and highly deferving their grateful ac. so knowledgements. ${ }^{3 ?}$.

## XIV.

## A DESCRIPTION of the PLANT BUTEA,

By Dr. Roxburgho

I. $\square$ HE Maduga of the Gentoos, and Plafo of the Hortus Malabaricus, * is a middle fized, or rather a large, tree not very common on the lowlands of this coaft, but much more fo upamongft the mountains: it cafts its leaves during the cold feafon, they come out again with the flowers about the months of March and April, and the reed is ripe in June or July.

TRUNK irregular, generally a little crooked, covered with afh-coloured, fpongy, thick, flightly fcabrous bark, the middle frata of which contain a red juice hereafter to be mentioned.

BRANCHEs very irregularly bent in various directions; young fhoots downy.

Leaves alternate, fpreading, threed, from eight to fixteen inches long. Leaflets emarginated, or rounded at the apex, leathery; above fhining and preity fmooth, below nightly hoary, entire: the pair are obliquely oval from four to feven inches long, and from three to four and a half broad, the exterior one inverfe hearted, or, in other words, tranfverfely oval, and confiderably larger than the lateral.
Common Petiole round, when young, downy, the length of the leaflets.
Stipules of the Petiole fmall, recurved, downy.
of the Leaflets awled.

## A DESCRIPTIONOF

RACEME terminal, axillary, and, from tuberofities over the naked woody branchlets, ftanding in every direction, rigid, covered with a foft greenifh purple down.

Fzowers Papilionaceous, pendulous, pedicelled, fafcicled, large, their ground of a beautiful deep red, fhaded with orange and filver coloured down. which gives them a moft elegant appearance.

Pedicels round, about an inch long, articulated near the apex, and covered with the fame greenifh velvetlike down.

Bracts, one below the infertion of each pedicel, lanced, falling, two fimilae but fmaller, preffing on the Calyx, falling alfo.

Calyx: Perianth belled, leathery, two lipped, upper lip large, fcarce emarginated; under three toothed, covered with the fame dark green down, that the raceme and pedicels are covered with, withering.

## COROL:

Banner reflected, egged, pointed, very little longer than the wings. Wings afcending, lanced, the length of the keel. Keel below two parted, afcending, large, mooned, the length of the wings and banner.

Stamens: filaments one and nine, afcending in a regular femicircle, about as long as the corol.
Anthers equal, linear, erect.

Pistil: Germ fhort, thick, pedicelled, lanced, downy. Style afcending, a little larger than the filaments. Stigma finall, glandulous.

Pericarp, legume pedicelled, large, pendulous, all, but the apex where the feed is lodged, leafy, downy, about fix inches long by two broad, never opening of itfelf.

SEED one, lodged at the point of the legume, oval, much comprefied, frnooth, brown, from an inch and a quarter to an inch and a half long and about one broad. ...

From natural fiffures', and wounds made in the bark of this tree, during the hot feafon, there iffues a moft beautiful red juice, which foon hardens into a ruby-coloured brittle aftringent gum : but it foon lofes its beautiful colour, if expofed to the air: to preferve the colour, it muft be gathered as foon as it becomes hard, and kept clofely corked up in a bottle.

This gum, held in a flame of a candle, fwells and burns away flowly, without finell or the leaft flame, into a coal, and then into fine light white afhes: held in the mouth it foon diffolves; it taftes ftrongly, but fimply, aftringent; heat does not foften it, but rather renders it more brittle; pure water diffolves it perfectly: the folution is of a deep red colour ; it is in a great meafure foluble in fpirits, but this folution is paler, and a little turbid, the watery folution alfo becomes turbid when fpirit is added, and the fpirituous more clear by the addition of water; diluted vitriolic acid renders both folutions turbid, mild caustic vegetable alkali changes the colour of the watery folution to a
clear deep fiery red *: the fpirituous it alfo deepens, but in a lefs degree: Sat Martis changes the watery folution into a good durable ink.

These are, I think, proofs, that a very fmall proportion of refin is prefent in this fubfance: in this it differs effentially from the gum refin called Kino, or Gummi subrum oftringens, which the Edinburgb college has taken into their materia medica (I have ufed the recent gum in making my experiments, which may make fome difference) but as this can be moft perfeetly diffolved in watry menftrua, it may prove of ufe, where a fpirituous folution of the former (being the moft complete) cannot be fo properly adminiftered, confequently it may prove a valuable acquifition alfo.

Infusions of the howers, either frefh or dried, dyed cotton cloth, previounly impregnated with a folution of alum, or alum and tartar, of a moft beautiful bright yellow, which was more or lefs deep according to the ftrength of the infufion: a little alkali added to the infufion changes it to a deep reddih orange ; it then dyed unprepared cotton cloth of the fame colour, which the leaft acid changes to a yellow or lemon: thefe beautiful colours I have not been able to render perfectly permanent.

Amongst numberlefs experiments, I expreffed a quantity of the juice of the frefh flowers, which was diluted with alum water, and rendered perfectly clear by depuration: it was then evaporated by the heat of the fun, into a foft extract; this proves a brighter water colour than any gamboge I have met with; it is one year fince I firft ufed it, and it remains bright.

[^46]Infusions of the dried flowers yielded me an extract very little, if any thing, inferior to this laft mentioned; they yield alfo a very fine durable yellow lake and all thefe in a very large proportion.

The Lac infects are frequently found on the fmall branches and the petioles of the leaves of this tree: whether the natural juices of its bark contribute to improve the colour of their red colouring matter, I cannot fay: it would require a fet of experiments accurately made on fpecimens of lac gathered from the various trees it is found on, at the fame time and as nearly as poffible from the fame place, to determine this point.

I do not find, that the natives make any ufe of the gum or flowers, although they promife to be valuable, the former as a medicine, and the latter as a pigment and dying drug.
II. Butea Superba*, Tiga Maduga of the Genfoos, is a very large twining fhrub, a native of the mountains. Flowering time, the beginning of the hot feafon.

Rоот findle-form, very large.
Stem twining, as thick as, or thicker than, a man's leg, woody, very long, running over large trees. Bark, afh coloured, pretty fmooth.

Branches like the ftem, but fmall, and with a fmoother bark.
Leaves alternate, threed, remote, very large.

- Su named by Dr. Roxburgh.

Mmm

Leaflets, downy, in other refpeets as in Butea Frondofa, but greatly larger : the exterior one is generally about twenty inches long, and broad in proportion, the lateral fomewhat lefs.

Racemes as in the former, but much larger.

Flowers alfo the fame, only much larger and more numerou:

Calyx divided as the other, but the divifions longer and much more pointed.

Corol the fame.

Legumes and Seed as in the former, but rather larger.

When this fpecies is in full flower, I do not think the vegetable world offers a more gaudy fhow: the flowers are incomparably beautiful, very large and very numerous; the colours are fo exceedingly vivid, that my beft painter has not been able, with his utmoft fkill, to come any thing like near their brightnefs.

From fiffures, 8tc. in the bark, the fame fort of ruby-coloured aftringent gum exudes: the flowers alfo yield the fame beautiful yellow dye and pigment.

[^47]
## XV.

## On the MANUFACTURE of INDIGO at AMBORE.

By Lieutenanit Colonel Claude Martin.

IPRESENT the Society with a fhort defcription of the procefs obferved in the culture and manufacture of Indigo in this part of India. The Ambore diftrict is comprifed within a range of furrounding hills of a moderate height: the river Pallar, declining from its apparent foutherly direction, enters this diftrict about three miles from the eaftward, wafhes the Ambore Pettah, a fmall neat village, diftant three miles to the fouthward of the fort of that name, fituated in a beautiful valley; the fkirts of the hills covered with the Palmeira and Date trees, from the produce of which a confiderable quantity of coarfe fugar is made; this tract is fertilized by numerous rills of water conducted from the river along the margin of the heights and throughout the intermediate extent : this element being conveyed in thefe artificial canals (three feet deep), affording a pure and cryftal current of excellent water for the fupply of the Rice fields, Tobacco, Mango, and Cocoanut, plantations; the higheft fituated lands affording Indigo, apparently without any artificial watering, and attaining maturity at this feafon notwithftanding the intenfeneif of the heat, the thermometer under cover of a tent rifing to 100 , and out of it to 120 ; the plant affording even in the dryeft fpots good foliage, although more luxuriant in moifter fituations. I am juft returned from examining the manufacture of this article. Firft the plant is boiled in earthen pots of about eighteen inches diameter, difpofed on the ground in excavated ranges from twenty to thirty feet long, and one broad, according to the number ufed.

When the boiling procefs has extracted all the colouring matter afcertainable by the colour exhibited, the extract is immediately poured into an adjoining fmall jar fixed in the ground for its reception, and is thence laded in fmall pots into larger jars difpofed on adjoining higher ground, being firft filtered through a cloth; the jar when three-fourths full is agitated with a fplit bamboo extended into a circle, of a diameter from thirteen to twenty inches, the hoop twifted with a fort of coarfe ftraw, with which the manufacturer proceeds to beat or agitate the extract, until a granulation of the fecula takes place, the operation continuing nearly for the fpace of three-fourths of an hour; a precipitant compofed of red earth and water, in the quantity of four quart bottles; is poured into the jar, which after mixture is allowed to ftand the whole night, and in the morning the fuperincumbent fluid is drawn off through three or four apertures practifed in the fide of the jar in a vertical direction, the loweft reaching to within five inches of the bottom, fufficient to retain the fecula which is carried to the houfes and dried in bags.

This is the whole of the proceis recurred to in this part, which, I think, if adopted in Bengal, might in no fmall degree fuperfede the neceffity of raifing great and expenfive buildings, in a word, fave the expenditure of fo much money in dead foock, before they can make any Indigo in the European method, to which I have to add, that Indigo thus obtained poffeffes a very fine quality.

As I think thefe obfervations may be ufeful to the manufacturers in Bengals, I could wihb to fee them printed in the Tranfactions of the Afatic Society.

> Ambore, 2d April, 1791.

## Extract of a Treatife on the Manufacture of Indigo.

## By Mr. De Cossigny.

THIS experiment (the Indian procefs) infallibly fhows, that Indigo " may be produced by different methods, and how much it is to " be regretted that the European artifts fhould remain conftantly wedded to " their metbod or routine, without having yet made the neceflary inquiries to" wards attaining perfection. Many travellers on the coaft of Coromandel " having been fruck with the apparent fimplicity of the means ufed by the "Indians in preparing Indigo, from having feen their artifts employed in the " open air with only earthen jars, and from not having duly examined and " weighed the extent of the detail of their procefs, apprehend that it is ef" fccted by eafier means than with the large vats of maforry and the machi" nery employed by Europeans: but they have been greatly miftaken, the " whole appearing a delufive conclufion from the following obfervation, viz. " that one man can, in the European method of manufacture, bring to iffue " one vat containing fifty bundles of plant, which, according to their nature " and quality, may afford from ten to thirty pounds of Indigo; whereas, by " the Indian procefs, one employed during the fame time would probably on" ly produce one pound of Indigo: the European method is therefore the " moft fimple, as well as every art where machinery is ufed inftead of ma" nual labour."

## DISCOURSE THE NINTH.

ON THE ORIGIN AND FAMILIES OF NATIONS.

## DELIVERED 23 FERRUARY, I

## By the President.

YOU have attended, gentlemen, with fo much indulgence to my difcourfes on the five A/atick nations, and on the various tribes efiablifhed along their feveral borders or interfperfed over their mountains, that I cannot but flatter myfelf with an affurance of being heard with equal attention, while I trace to one centre the three great families, from which thofe nations appear to have proceeded, and then hazard a few conjectures on the different courfes, which they may be fuppofed to have taken toward the countries, in which we find them fettled at the dawn of all genuine hiftory.

Let us begin with a fhort review of the propofitions, to which we have gradually been led, and feparate fuch as are morally certain, from fuch as ae only probable: that the firft race of Perfans and Indians, to whom we may add the Romans and Greeks, the Goths, and the old Eoyptians or Ethiops, originally fpoke the fame language and profeffed the fane popular faith, is capable, in my humble opinion, of inconteftable proof; that the Jeros and Arabs, the A/fyrians, or fecond Perfian race, the people who

Ipoke Syriack, and a numerous tribe of Aby/inians, ufed one primitive dialect wholly difinct from the idiom juft mentioned, is, I believe, undifputed, and, I am fure, indifputable; but that the fetlers in China and Japan had a common origin wih the Hindus, is no more than highly probable; and, that all the Tartars, as they are inaccurately called, were primarily of a third feparate branch, totally differing from the two others in language, manners, end features, may indeed be plaufibly conjeftured, but cannot, for the reafons alledged in a former effay, be perfpicuoufly fhown, and for the prefent theiefore muft be merely affumed. Could thefe facts be verified by the beft attainable evidence, it would not, I prefume, be doubted, that the whole earth was pcopled by a vari ty of floors from the Indian, Arabian, and Tartarian branches, or by fuch intermixeures of them, as, in a couife of ages, might naturally have happened.

Now I admit without hefitation the aphorifm of Linneus, that " in "t the beginning God cre.ted ne pair only of every living fpecies, which " has a diverfity of fex;" but, fince that inconparable naturalift argucs principally from the wonderful diffufion of vegetables, and from an hypothefis, that the water on this glube has been continualiy fulfiding, I venture to produce a fhorter and clofer argument in fupport of his doetrine. That Nature, of which fimplicity appsars a diftinguifhing attibute, does notbing in vain, is a maxim in philofophy; and agrinft thofe, who deny maxims, we cannot difpute; but it is vain and fuperfluous to do ky many means what may be done by fewer, and this is another axiom received into courts of judicature from the fchools of philofophers: we muft not, therefore, fays our great Newton, admit more caufes of natural things, than thafe, which are true, and fifficiently account for natural phenomena; but it is true, that one pair at leaf of every living fpecies munt at finf have been created; and
that one human pair was fufficient for the population of our globe in a period of no confiderable length, (on the very moderate fuppofition of lawyers and political arithmeticians, that every pair of anceftors left on an average two children, and each of them two more) is evident from the rapid increafe of numbers in geometrical progreffion, fo well known to thofe, who have ever taken the trouble to fum a feries of as many terms, as they fappofe gencrations of men in two or three thoufand years. It follows, that the author of nature (for all nature proclaims its divine author) created but one pair of our fpecies; yet, had it not been (among othér reafons) for the devaftations, which hiftory has recorded, of water and fire, wars, famine, and peftilence, this earth would not now have had room for its multiplied inhabitants. If the human race then be, as we may confidently affume, of one natural fpecies, they muft all have proceeded from one pair ; and if perfect juftice be, as it is moft indubitably, an effential attribute of GOD, that pair muft have been gifted with fufficlent wifdom and ftrength to be virtuous, and, as far as their nature admitted, happy, but intrufted with freedom of will to be vicious and confequently degraded: whatever might be their option, they muft people in time the region where they firft were eftablifhed, and their numerous defcendants muft neceffarily feek new countries; as inclination might prompt, or accident lead; them; they would of courfe migrate in feparate families and clans, which, forgetting by degrees the language of their common progenitor, would form new dialects to convey new ideas, both fimple and complex; natural affection would unite them at firft, and a fenfe of reciprocal utility, the great and only cement of focial union in the abfence of public honour and juftice, for which in evil times it is a general fubftitute, would combine them at length in communities more or lefs regular ; laws would be propofed by a part of each community, but eqacted by the whole ; and go-
ve:nments would be varioully arranged for the happinefs or mifery of the governed, according to their own virtue and wifdom, or depravity and folly ; fo that, in lefs than three thoufand years, the world would exhibit the fame appearances, which we may actually obferve on it in the age of the great Arabian impoftor.
$O_{N}$ that part of it, to which our united refearches are generally confined, we fee five races of men peculiarly diftinguifhed, in the time of Muhammed, for their multitude and extent of dominion; but we have reduced them to tbree, becaufe we can difcover no more, that effentially differ in language, religion, manners, and other known characterifticks : now thofe three races, how varioully foever they may at prefent be difperfed and intermixed, muft (if the preceding conclufions be juftly drawn) have migrated originally from a central country, to find which is the problem propofed for folution. Suppofe it folved; and give any arbitrary name to that centre: let it, if you pleafe, be Irah. The three primitive languages, therefore, muft at firft have been concentrated in Iran, and there only in fact we fee traces of them in the earlieft hiftorical age ; but, for the fake of greater precifion, conceive the whole empire of Iran with all its mountains and valleys, plains and rivers, to be every way infinitely diminifhed; the firft winding courfes, therefore, of all the nations proceeding from it by land and nearly at the fame time, will be little right lines, but without interfections, becaufe thofe courfes could not have thwarted and croffed one another: if then you confider the feats of all the migrating nations as points in a furrounding figure, you will perceive, that the feveral rays, diverging from Iran, may be drawn to them without any interfection; but this will not happen, if you affume as a centre Arabia, or Esypt; India, Tartary, or Cbina: it follows, that Iran, or Perfia (I contend for the aneaning, not the name) was the central country, which we fought.

This mode of reafoning I have adopted, not from any affectation (as you will do me the juftice to believe) of a fcientifick diction, but for the fake of concifenefs and variety, and from a wih to avoid repetitions; the fubftance of my argument having been detailed in a different form at the clofe of another difcourfe; nor does the argument in any form rife to demonftration, which the queftion by no means admits : it amounts, however, to fuch a proof, grounded on written evidence and credible teftimony, as all mankind hold fufficient for decifions affecting property, freedom, and life.

Thus then have we proved, that the inhabitants of $A / i a$, and confequently, as it might be proved, of the whole earth, fprang from three branches of one ftem: and that thofe branches have fhot into their prefent ftate of luxuriance in a period comparatively fhort, is apparent from a fact univerfally acknowledged, that we find no certain monument, or even probable tradition, of nations planted, empires and ftates raifed, laws enacted, cities built, navigation improved, commerce encouraged, arts invented, or letters contrived, ${ }^{\text {a }}$ above twelve or at moft fifteen or fixteen centuries before the birth of Christ, and from another fact, which cannot be controverted, that feven hundred or a thoufand years would have been fully adequate to the fuppofed propagation, diffufion, and eftablifhment of the human race.

The moft ancient hiftory of that race, and the oldeft compofition pefhaps in the world, is a work in Hebrew, which we may fuppofe at firt, for the fake of our argument, to have no higher authority than any other work of equal antiquity, that the refearches of the curious had accidentally brought to light: it is afcribed to Musah; for fo he writes his own name, which, after the Greeks and Romans, we have changed into Moses; and, though it was manifefly his object to give an hiftorical account of a fingle family, he $\mathrm{Nnn}_{2}$
has introduced it with a fhort view of the primitive world, and his introduction has been divided, perhaps improperly, into eleven chapters. After defcribing with awful fublimity the creation of this univerfe, he afferts, that one pair of every animal fpecies was called from nothing into exiftence; that the human pair were ftrong enough to be happy, but free to be miferable; that, from delufion and temerity, they difobeyed their fupreme benefactor, whofe goodnefs could not pardon them confiftently with his juftice ; and that they received a punifhment adequate to their difobedience, but foftened by a myfterious promife to be accomplifhed in their defcendants. We cannot but believe, on the fuppofition juft made of a hiftory uninfpired, that thefe facts were delivered by tradition from the firft pair, and related by Moses in a figurative ftyle; not in that fort of allegory, which rhetoricians defcribe as a mere affemblage of metaphors, but in the fymbolical mode of writing adopted by eaftern fages, to embellih and dignify hiftorical truth; and, if this were a time for fuch illuftrations, we might produce the fame account of the creation and the fall, expreffed by fymbols very nearly fimilar, from the $P u$ ránas themfelves, and even from the Véda, which appears to ftand next in antiquity to the five books of Moses.

The fketch of antediluvian hiftory, in which we find many dark paffages, is followed by the narrative of a deluge, which deftroyed the whole race of man, except four pairs ; an hiftorical fact admitted as true by every nation, to whofe literature we have accefs, and particularly by the ancient Hindus, who have allotted an entire Purána to the detail of that event, which they relate, as ufual, in fymbols or allegories. I concur moft heartily with thofe, who infift, that, in proportion as any fact mentioned in hiftory feems repugnant to the courfe of nature, or, in one word, miraculous, the ftronger evidence is required to induce a rational belief of it; but we hear without incre-
dulity, that cities have been overwhelmed by eruptions from burning mountains, territories laid wafte by hurricanes, and whole iflands depopulated by earthquakes: if then we look at the firmament frinkled with innumerable ftars; if we conclude by a fair analogy, that every ftar is a fun, attracting, like ours, a fyftem of inhabited planets; and if our ardent fancy, foaring hand in hand with found reafon, waft us beyond the vifible fphere into regions of immenfity, difclofing other celeftial expanfes and other fyftems of funs and worlds on all fides without number or end, we cannot but confider the fubmerfion of our little fpheroid as an infinitely lefs event in refpect of the immeafurable univerfe, than the deftruction of a city or an ifle in refpect of this habitable globe. Let a general flood, however, be fuppofed improbable in proportion to the magnitude of fo ruinous an event, yet the concurrent evidences of it are completely adequate to the fuppofed improbability; but, as we cannot here expatiate on thofe proofs, we proceed to the fourth important fact recorded in the Mofaick hiftory; I mean the firft propagation and early difperfion of mankind in Separate families to feparate places of refidence.

Three fons of the juft and virtuous man, whofe lineage was preferved from the general inundation, travelled, we are told, as they began to multiply, in three large divifions varioully fubdivided: the children of Yáret feem, from the traces of Sklavonian names, and the mention of their being enlarged, to have fpread themfelves far and wide, and to have produced the race, which, for want of a correct appellation, we call Tartarian; the colonies, formed by the fons of $\mathrm{H}_{\mathrm{AM}}$ and SHEM, appear to have been nearly fimultaneous; and, among thofe of the latter branch, we find fo many names inconteftably preferved at this hour in Arabia, that we cannot hefitate in pronouncing them the fame people, whom hitherto we have denominated Arabs;
while the former branch, the moft powerful and adventurous of whom were the progeny of Cush, Misr, and Rama, (names remaining unchanged in Sanfcrit, and highly revered by the Hindus) were, in all probability, the race, which I called Indian, and to which we may now give any other name, that may feem more proper and comprehenfive.

The general introduction to the $\mathcal{F e w i f h}$ hiftory clofes with a very concife and obfcure account of a prefumptuous and mad attempt, by a particular colony, to build a fplendid city and raife a fabrick of immenfe height, independently of the divine aid, and, it fhould feem, in defiance of the divine power ; a project, which was baffled by means appearing at firft view inadequate to the purpofe, but ending in violent diffenfion among the projectors and in the ultimate feparation of them : this event alfo feems to be recorded by the ancient Hindus in two of their Puránas; and it will be proved, I truft, on fome future occafion, that the lion burfing from a pillat to deftroy a blafpheming giant, and the dzoarf, who beguiled and held in derifon the magnificent Beli, are one and the fame fory related in a fymbolical fyle.

Now thefe primeval events are defcribed as having happened between the Oxus and Euphrates, the mountains of Caucajus and the borders of India, that is, within the limits of Iran; for, though moft of the Mofaick names have been confiderably altered, yet numbers of them remain unchanged: we fill find Harránin Mefopotamia, and travellers appear unanimous in fixing the fite of ancient Babel.

Thus, on the preceding fuppofition, that the firf eleven chapters of the book, which it is thought proper to call Genefs, are merely a preface to the oldeft civil hiftory now extant, we fee the truth of them confirmed by ante-
cedent reafoning, and by evidence in part highly probable, and in part certain ; but the connexion of the Mofaick hiftory with that of the Gofpel by a chain of fublime predictions unqueftionably ancient, and apparently fulfilled, muft induce us to think the Hebrew narrative more than human in its origin, and confequently true in every fubftantial part of it, though poffibly expreffed in figurative language ; as many learned and pious mon have believed, and as the moft pious may believe without injury, and perhaps with advantage, to the caufe of revealed religion. If Moses then was endued with fupernatural knowledge, it is no longer probable on!y, but abfolutely certain, that the whole race of man proceeded from Iran, as from a centre, whence they migrated at firft in three great colonies ; and that thofe three branches grew from a common ftock, which had been miraculoufly preferved in a general convulfion and inundation of this globe.

Having arrived by a different path at the fame conclufion with Mr. Bryant as to one of thofe families, the moft ingenious and enterprizing of the three, but arrogant, cruel, and idolatrous, which we both conclude to be various fhoots from the Hamian or Amonian branch, I fhall add but little to my former obfervations on his profound and agreeable work, which I have thrice perufed with increafed attention and pleafure, though not with perfect acquiefcence in the other lefs important parts of his plaufible fyftem. The fum of his argument feems reducible to three heads. Firft ; " if the deluge really happened at the time recorded by Moses, " thofe nations, whofe monuments are preferved or whofe writings are - acceffible, muft have retained memorials of an event fo ftupendous and * comparatively forecent ; but in fact they have retained fuch memorials:" this reafoning feems juft, and the fact is true beyond controverfy; Secondly; "thofe memorials were expreffed by the race of HAM, before the ufe
es of letters, in rude fculpture or painting, and moftly in fymbolical figures " of the ark: the eight perfons concealed in it, and the birds, which firft " were difniffed from it: this fact is prabable, but, I think, not fufficiently " afcertained." Thirdly; "all ancient Mythology (except what was purely "S Sabian) had its primary fource in thofe various fymbols mifunderfood; fo " that ancient Mythology ftands now in the place of fymbolical. fculpture. *6 or painting, and muft be explained on the fame principles, on which we " fhould begin to decypher the originals, if they now exifted :" this part of the fyftem is, in my opinion, carreid too far; nor can I perfuade myfelf, (to give one inftance out of many) that the beautiful allegory of Cupid and Psyche had the remoteft allufion to the deluge, or that Hymen fignified. the veil, which covered the patriarch and his family. Thefe propofitions, however, are fupported with great ingenuity and folid erudition; but, unprofitably for the argument, and unfortunately, perhaps, for the fame of the work itfelf, recourfe is had to etymological conjecture, than which no mode of reafoning is in general weaker or more delufive. He, who profeffes to derive the words of any one language from thofe of another, muft expofe himfelf to the danger of perpetual errours, unlefs he be perfectly acquainted with both; yet my refpectable friend, though eminently fkilled inthe idioms of Greece and Rome, has no fort of acquaintance with any Afiutich dialect, except Hebrew; and he has confequently made miftakes, which every learner of Arabick and Perfian muft inftantly detect. Among fifty radical words (ma, taph, and ram being included) eighteen are purely of Ara= bian origin, twelve merely Indian, and feventeen both Sanfcrit and Arabick, but in fenfes totally different; while treo are Greek only, and one Egyptian, or barbarous: if it be urged, that thofe radicals (which ought furely to have concluded, inftead of preceding, an aralytical inquiry) are precious traces of the primitive language, from which all others were derived; or to which at
leaft they were fubfequent, I can only declare my belief, that the language of NоАн is lof irretrievably, and affure you, that, after a diligent fearch, I cannnot find a fingle word ured in common by the Arabian, Indian, and Tartar families, before the intermixture of dialects occafioned by Mobainmedan conquefts. There are, indeed, very obvious traces of the Hamian language, and fome hundreds of words might be produced, which were formerly ufed promifcuoufly by moft nations of that race; but I beg leave, as a philologer, to enter my proteft againft conjettural etymology in hiftorical refearchcs, and principally againft the licentioufnefs of etymologifts in tranfpofing and inferting letters, in fubftituting at pleafure any confonant for another of the fante order, and in totally difregarding the vowels: for fuch permuttions few radical words would be more convenient than Cus or Cush, fince, dentals being changed for dentals, and palatials for palatials, it inftantly becomes coot, goofe, and, by tranfpofition. duck, all water-birds, and evidently fymbolical; it next is the goat worfhipped in Egypt, and, by a metathefis, the dog adored as an emblem of Sirius, or, more obvioully, a cal, not the domeftick animal, but a fort of fhip, and the Catos, or great.fea-fifh, of the Dorians. It will hardly be imagined, that I mean by this irony to infult an author, whom I reípect and efteem; but soo confideration fhould induce me to affift by my filence in the diffufion of errour ; and I contend, that almoft any word or nation might be derived from any other, if fuch licences, as I am oppofing, were permitted in etymological hiftories: when we find, indeed, the fame words, letter for letter, and in a fenfe precifely the fame, in different"languages, we can fcarce hefitate in allowing them a common origin; and, not to depart from the example before us, when we fee Cush or Cus (for the Sanfcrit name alf, is varioully pronounced) among the fons of Brahma; that is, among the progenitors of the Hindus, and at the head of an ancient pedigree preferved
in the Ramayan: when we meet with his name again in the family of RAMA; when we know, that the name is venerated in the higheft degree, and given to a facred grafs, defcribed as a Poa by Koenig, which is ufed with a thoufand ceremonies in the oblations to fire, ordained by Menu to form the facrificial zone of the Brabmans, and folemnly declared in the Véda to have fprung up foon after the deluge, whence the Pauránicks confider it as the briflly hair of the boar which fupported the globe; when we add, that one of the feven: dwipas, or great peninfulas of this earth, has the fame appellation, we can hardly doubt, that the Cush of Moses and VA' imic $^{\prime}$ was the fame perfonage and an anceftor of the Inaian raze.

From the tefimonies adduced in the fix laft annual difcourfes, and from the additional proofs laid before you, or rather opened, on the prefent oc* cafion, it feems to follow, that the only human family atter the flood eftablifhed themfelves in the northern parts of Iran; that, as they multiplied, they were divided into three diftinet branches, each retaining little at firf, and lofing the whole by degrees, of their common primary language, but agreeing feverally on new expreffions for new ideas : that the branch of $Y_{A^{\prime}}$ eet was enlarged in many fcattered fhoots over the north of Europe and Afia, diffufing. themfelves as far as the weftern and' eaftern feas, and, at length in the infancy of navigation, beyond them both; that they cultivated no liberal arts, and had no ufe of letters, but formedia variety of dias lects ${ }_{2}$, as their tribes were variounly ramified; that, fecondly, the children of Ham, who founded in Iran itfelf the monarchy of the firt Chaldeans, invented letters, obferved and named the luminaries of the firmament, calo culated the known Indian period of four bundred and thirty two thoufank years, or an bundred and twenty repetitions of the faros, and contrived the old fy ftem of Mythology, partly allegorical, and pastly grounded on idula
prous veneration for their fages and lawgivers; that they were difperfed at various intervals and in various colonies over land and ocean; that the tribes of Misr, Cush, and Rama fettled in Africk and India; while fome of them, having improved the art of failing, paffed from Egypt, Pbenice, and Pbrygia, into Italy and Greece, which they found thinly peopled by former emigrants, of whom they fupplanted fome tribes, and united them. felves with others; whilf a fwarm from the fame hive moved by a northerly courfe into Scandinavia, and another, by the head of the Oxus, and through the paffes of Imaus, into Cafhgbar and Eighúr, Khatá, and Khoten, as far as the territories of Cbin and T'ancút, where letters have been ufed and arts immemorially cultivated; nor is it unreafonable to believe, that fome of them found their way from the eaftern ifles into Mexico and Peru, where traces were difcovered of rude literature and Mythology analogous to thofe of Egypt and India ; that, thirdly, the old Claldean empire being overthrown by the A/fyrians under CAYúmers, other migrations took place efpecially into India, "while the reft of Suem's progeny, fome of whom had before fettled on the Red Sea, peopled the whole Arabian peninfula, preffing clofe on the nations of Syria and Phenice; that, laftly, from all the three families were detached many bold adventurers of an are dent fpirit and a roving difpofition, who difdained fubordination and wandered in feparate clans, till they fettled in diftant ifles or in deferts and mountainous regions; that, on the whole, fome colonies might have migrated before the death of their venerable progenitor, but that ftates and empires could fcarce have affumed a regular form, till fifteen or fixteen hundred years before the Cbriftian epoch, and that, for the firft thoufand years of that period, we have no hiftory unmixed with fable, except that of the turbulent and variable, but eminently diftinguifhed, nation defcende ed from Abraham.

My defign, gentlemen, of tracing the origin and progrefs of the five prine cipal-nations, who have peopled $A / a$, and of whom there were confiderable remains in their feveral countries at the time of MUTAMMED's birth, is now. accomplifhed; fuccinctly, from the nature of thefe effays; imperfectly, fromthe darknefs of the fubject and the fcantinefs of my materials, but clearly and comprehenfively enough to form a bafis for fubfequent refearches: you have feen, as diftinctly as I am able to how, who thofe nations originally were, whence and woben they moved toward their final ftations; and, in my future annual difcourfes, I propofe to enlarge on the particular advantages to our country and to mankind, which may refult from our fedulous and united inquiries into the hiftory, fcience, and arts, of thefe Afiatick regions, efpecially of the Britifb dominions in India, which we may confider as the centre (not of the human race, but) of our common exertions to promote its true interefts; and we chall: concur, I truft, in cpinion, that the race of man, to advance whofe manly. happinefs is our duty and will of courfe be our endeavour, cannot long be happy without virtue, nor actively virtuous without freedom ${ }_{8}$ nor fecurely free without rational knowledge。

[^0]:    - I fulpect the word to be Namah, or falutation and reverence. Jo

[^1]:    "The places in the meridian fine between the golden moxme and Laxcá, are Vatfa, Gulma, Cánckb,
    

[^2]:    * Properly Scdáfiva.

[^3]:    * Properly Mahárágiras. $\quad$ Properly Nerinadá.

[^4]:    * In the year ${ }^{1756}$, the Danifb E. I. Company erected on one of thefe iflands a houfe to ferve 2 s a a Factory, bat on their failure in the year 1758 it was evacuated. On the re eftablifhment of the Company in 1768, another houfe was built on Soury Inand, which was in 1775, in like manner, ordered to be evacuated as ufelefs to the Company's interefts.; three or four European miffionaries, with a view of making profelytes, remained behind and have continued there ever fince, but without effecting even the converfion of a fingle perfon ; they collect, however, cocoanut oil, fhells, and other natural curiofities, which they fend annually to their brethren at $\mathcal{T}$ ranquebar.

    An exact plan of thofe Inands may be feen in the Neptune Oriental.

    + Tricur being the fiattef of thofe Iflands is divided amongit the inhabitants of the other two, where they have their plantations of Cocoanut and Areca Trees; thefe laft being very abundant all over the iflands.
    $\ddagger$ Nidos bos, rupibus oceani orientalis affxos, parant birundines marini, domefficis multo majores, ex bolothuzizis mari innatantibus materiam decerpentes. KoempF. Aman,-p. 833.

[^5]:    * It is a cuftom among them to compref ${ }_{3}$ with their hands the occiput of the new boin child, in order to render it flat; as, according to their ideas, this kind of fhape conftitutes a mark of beauty, and is univerfally efteemed fuch by them: by this method, alfo, they fay that the hair remains clofe to the head as nature intended it , and the upper fore teeth very prominent out of the mouth.
    + A traveller called Keoping, a Swede, whowent to the Eaft Indies on board a Dutcb fhip in the year 1647 which anchored off the Nicobar Inands, relates that they difcovered men with tails, like thofe of cats, and which they moved in the fame manner. That having fent a boat on fhore with five men, who did not return at night, as expected, the day following a larger boat was fent, well manned in queft of their companions, who, it was fuppofed, had been devoured by the favages, their bones having been found trewed on the fhore, the boat taken to pieces, and the iron of it carried away".

[^6]:    The account of this voyage was reprinted at Starkbolm, by Silvivm in.the year in43.-Linneus feems to have been too credulous, in believing this man's Atory, for in all my examinations, I could difcover no fort of projection whatever on the os Cocoggis of either fex. What has given rife to this fuppofed tail, may have been the fripe of cloth hanging down from their poferiors; which when viewed at a diftance, mighe probably have been mittaken for a tail.

[^7]:    * "In their current tranfactions, the inhabitants of the peninfula employ a mode of computation, which, though not unknown in other parts of the world, is confined to thefe [the fouthern] people amongit

[^8]:    * Correct an error in Vol. II. p. 233 in the note on the Hindu cycle of fixty: for degree read figno

[^9]:    *From Vol. II. page 232,

[^10]:    * There numbers, is $\times 4$ and 3750 are in the fame ratio as thole unfed in the foregoing example from che Fyautifatva: the two rules therefore are the fame, with an inconfiderable difference in the cheep.

    Dd 2

[^11]:    * Becaufe the beginning of Dhani/be!'bà is weft of the end of Mágb only $6^{\circ} 40^{\circ}$, at which diftance from the fun, Fupiter would not rife heliacally, orbe feen difengaged from his rays; but, the lunar Magh might extend to near the end of the folar Pbáguno. Should the moon, however, change very foon after the fun's entrance of the Hizdu fign Capricoon, coincident with Mágh; then, neither the flar nor the lunar month of that name would agree with the terms of the propction; which is an inflance of an imperfect aftronemy.

[^12]:    * " Le nouvel ann chez les Indiens a Guzerat, que ceux de Bombay fuivent auff, vient du mois Kartig, mais a Sciudi on le celebre au mois Afar." Tom, 2, po 21.

[^13]:    * Inftances in Jupiter's mean motion. A'ryabhatta gave the revolutions as 364224 in 4320000 folar years. BHa'scar in his Sirómani 364226455 in 4320000000 folar years. The Súrya Siddhanta 364220 in 4320000 folar years; which latter, by the bija introduced fince, are reduced to 364312 in the fame period.
    + But it is not thence to be inferred, that the Hiridus did not exift as a nation, or that they made no obfervations of the heavens as long ago as $4^{8} 90$ years : all that is here meant, is, that the obfervation afcribed to them by M. BaIlly does not neceffarily follow from any thing that is known of their aftronomy; but on the contrary, from the nature of the fubject it appears, that the Caliyug was, like the Julian Period,

[^14]:    Neither le Gentil, nor Bailey, had any other authority for placing the origin of the Hindia zodiack in longitude $106^{\circ}$, at the beginning of the cali yug, than refults from a computation of the preceffion for 3500 years, nt the end of which expired term of the cali $y u g$, it coincided with the equinox: it is certain, that the Bräbmens in this part of India fuppofe, as their aftronomy implies, a fimilar coincidence together with a conjunction of the planets in the fame point by their mean inotions when the cali yug began; and fince in the prefent amount of the preceflion, and confequently in the origin of the zodiack, as well as in many other particulars, the Brabmens of Irivalore agree with thofe of Bengal, it is not at all probable, that thev fhould have different fyfems. But M. Ba1t, y thinks the Indian zodiack has had two origins; one of them as I defcribe it, the other, as he computes it for the beginning of the cali yug: -it may indeed have had many origins, although there feems at prefent but one to be found ; for it is not in the leaft inconfiftent with the principles of the Hindu aftronomy to fappofe, that, if ever an alceration took place in the mode of beginning the ycar, fome alteration was at the fame time $m$ ide in the origin of the zodiack likewife. The origin of the Cbinefi zodiack is defcribed to be in a part of the heavens oppofite to that of the Hindus; for Spica diftinguifhes their conftellation Kit, which is the firlt of their twenty-eight lanar manfions'; and fince it is agreed, that both fyltems were origin lly the fame, a confiderable alteration, with refpect to the origin of the zodiack, muft neceffarily have happened in one of them.

[^15]:    * Thefe are of the fame form and fize nearly as the Pbands, but much florter in proportion.

[^16]:    * The ancient name of the proyicce was Tripure, or with three townzs, which has been corrupsed inte Tipra of Tisara.
