We speak of events hundreds of thousands years old, nay, even millions — if man dates from the geological periods [99] — not of any of those events which happened during the few thousand years of the pre-historic margin allowed by timid and ever-cautious history. Yet there are men of science who are almost of our way of thinking. From the brave confession of the Abbe Brasseur de Bourbourg, who says that: — "Traditions, whose traces recur in Mexico, in Central America, in Peru, and in Bolivia, suggest the idea that man existed in these different countries at the time of the gigantic upheaval of the Andes, and that he has retained the memory of it" — down to the latest palaeontologists and anthropologists, the majority of scientific men is in favour of just such an antiquity. *Apropos* of Peru, has any satisfactory attempt been made to determine the ethnological affinities and characteristics of the race which reared those *Cyclopean* erections, the ruins of which display the relics of a great civilization? At Cuelap, for instance, such are found, consisting "of a wall of wrought stones, 3,600 feet long, 560 broad, and 150 feet high, constituting a solid mass with a level summit. On this mass was another, 600 feet long, 500 broad, and 150 feet high, making an aggregate height of 300 feet. In it were rooms and cells." (*Cf.*, the mass of evidence collected by Donnelly to prove the *Peruvian colony* an offshoot of the Atlanteans.) A most suggestive fact is the *startling resemblance between the architecture of these colossal buildings and that of the archaic European nations*. Mr. Fergusson regards the analogies between the ruins of "Inca" civilization and the Cyclopean remains of the Pelasgians in Italy and Greece as a coincidence "the most remarkable in the history of architecture." "It is difficult to resist the conclusion that there may be some relation between them." The "relation" is simply explained by the derivation of the stocks, who devised these erections, from a common centre in an Atlantic continent. The acceptance of the latter can alone assist us to approach a solution of this and similar problems in almost every branch of modern science.

Dr. Lartet, treating upon the subject, settles the question by declaring that: — "The truth, so long contested, of the co-existence of man with the great extinct species (*Elephas primigenius, Rhinoceros tichorhinus, Hyaena spelaea, Ursus spelaeus, etc., etc.*), appears to me to be henceforth unassailable and definitely conquered by science." (*"Cavernes de Perigord," p. 35.*)

It is shown elsewhere that such is also de Quatrefages' opinion. "Man has in all probability seen Miocene times [100] and consequently the entire Pliocene epoch," he says, and there are reasons for believing that "his traces will be found further back still, . . ." he adds (*"The Human Species," p. 152.*)

Egypt is far older than Europe as now traced on the map. Atlanto-Aryan tribes began to settle on it, when the British Islands [101] and France were not even in existence. It is well known that "the tongue of the AEgyptian Sea," or the Delta of lower Egypt, became firm land very gradually, and followed the highlands of Abyssinia; unlike the latter, which arose suddenly, comparatively speaking, it was very slowly formed, through long ages, from successive layers of sea slime and mud, deposited annually by the soil brought down by a large river, the present Nile. Yet even the Delta as a firm and fertile land, has been inhabited for more than 100,000 years. Later tribes, with still more Aryan blood in them than their predecessors, arrived from the East, and *conquered* it from a people whose very name is lost to posterity, except in Secret works. It is this natural barrier of slime, which sucked in slowly and surely every boat

that approached these inhospitable shores, that was, till within a few thousand of years B.C., the best safeguard of the later Egyptians, who had managed to reach it through Arabia, Abyssinia, and Nubia, led on by Manu Vina in the day of Visvamisra. (*See in "Isis Unveiled,"* vol. 1, p. 627, what Kulluka Bhatta says.)

So evident does the antiquity of man become with every day that even the Church is preparing an *honourable* surrender and retreat. The learned Abbe Fabre, professor at the Sorbonne, has categorically declared that pre-historic palaeontology and archaeology may, without any harm to the Scriptures, discover in the tertiary beds the traces of *pre-adamite* man as much as they like. "Since it disregards all creations *anterior to the last deluge* but one, (that which produced the diluvium, according to the Abbe), Bible revelation leaves us free to admit the existence of man in the grey diluvium, in Pliocene, and even Eocene strata. On the other hand, however, geologists *are not all agreed in regarding the men who inhabited the globe in these primitive ages as our ancestors.* [102]

The day when the Church will find that its only salvation lies in the *occult* interpretation of the Bible, may not be so far off as some imagine. Already many an abbe and ecclesiastic has become an ardent Kabalist, and as many appear publicly in the arena, breaking a lance with Theosophists and Occultists in support of the metaphysical interpretation of the Bible. But they commence, unfortunately for them, from the wrong end. They are advised, before they begin to speculate upon the *metaphysical* in their Scriptures, to study and master that which relates to the purely *physical* — *e.g.*, its geological and ethnological hints. For such allusions to the Septenary constitution of the Earth and Man, to the seven Rounds and Races, abound in the New as in the Old Testaments, and are as visible as the sun in the heavens to him who reads both symbolically. What do the laws in chapter xxiii., v. 15, of *Leviticus* apply to? What is the philosophy of reason for all such *hebdomadic* offerings and symbolical calculations as: "ye shall count . . . from the morrow after the Sabbath . . . that ye brought the sheaf of the wave offering; *seven Sabbaths shall be completed*" (15), "And ye shall offer with the bread seven lambs without blemish" (18), etc. etc. We shall be contradicted, no doubt, when we say that all these "wave" and "peace" offerings were in commemoration of the *Seven* "Sabbaths" of the mysteries, which Sabbaths are seven pralayas, between seven manvantaras, or what we call *Rounds* — for "Sabbath" is an elastic word, meaning a period of Rest of whatever nature, as explained elsewhere (Part II., "*Sections on the Septenary.*") And if this is not sufficiently conclusive, then we may turn to the verse which follows (16), and which adds, "even unto the morrow after the seventh Sabbath shall ye number fifty days" (forty-nine, 7 x 7, stages of activity, and forty-nine stages of *rest*, on the seven globes of the chain, and then comes the *rest* of Sabbath, the *fiftieth*); after which "ye shall offer a *new meat offering* unto the Lord," *i.e.*, ye shall make an offering of your flesh or "coats of skin," and, divesting yourselves of your bodies, ye shall remain pure spirits. This law of offering, degraded and materialized with ages, was an institution that dated from the earliest Atlanteans; it came to the Hebrews *via* the "Chaldees," who were the "wise men" of a *caste*, not of a nation, a community of great adepts come from their "Serpent-holes," and who had settled in Babylonia ages before. And if this interpretation from *Leviticus* (full of the disfigured laws of Manu) is found too far-fetched, then turn to *Revelation*. Whatever interpretation profane mystics may give to the famous Chapter xvii., with its riddle of the woman in purple and scarlet; whether Protestants nod at the Roman Catholics, when reading "MYSTERY, BABYLON THE GREAT, THE MOTHER OF HARLOTS AND ABOMINATIONS OF THE EARTH," or Roman Catholics glare at the Protestants, the Occultists pronounce, in their impartiality, that these words have applied from the first *to all and every exoteric* Churchianity, that which was the "ceremonial magic" of old, with its terrible effects, and is now the harmless (because distorted) farce of ritualistic worship. The "mystery" of the woman and of the beast, are the symbols of soul-killing Churchianity and of SUPERSTITION. "The beast that was, and is not, and yet is." "And here is the Mind which hath wisdom. The seven heads are seven mountains (seven continents and seven races) on which the woman sitteth," the symbol of all the exoteric, barbarous, idolatrous faiths which have covered that symbol "with the blood of the saints and the blood of the martyrs" who protested and do protest. "And there are *seven Kings* (seven races); five are fallen (our fifth race included), and one is (the fifth continues), and the other (the *sixth* and the *seventh* races) is not yet come. . . . And when he (the race "King") cometh, he must continue a short space" (v. 10). There are many such Apocalyptic allusions, but the student has to find them out for himself. These five Kings were mentioned before.

If the Bible combines with archaeology and geology to show that human civilization has passed through three more or less distinct stages, in Europe at least; and if man, both in America and Europe, as much as in Asia, dates from geological epochs — why should not the statements of the Secret Doctrine be taken into consideration? Is it more philosophical or logical and scientific too, to *disbelieve*, with Mr. Albert Gaudry, in Miocene man, while believing that the famous Thenay flints [103] "were carved by the *Dryopithecus monkey*"; or, with the Occultist, that the

anthropomorphous monkey came ages after man? For if it is once conceded, and even scientifically demonstrated, that “there was not in the middle of the Miocene epoch a single species of mammal identical with species now extant” (Albert Gaudry “*Les Enchainements du monde animal dans les temps géologiques*” p. 240); and that man was then just as he is now; only taller, and more athletic than we are, [104] — then where is the difficulty? That they could hardly be the descendants of monkeys, which are themselves not traced before the Miocene epoch, [105] is, on the other hand, testified to by several eminent naturalists.

“Thus, in the savage of quaternary ages who had to fight against the mammoth with stone weapons, we find all those craniological characters generally considered as the sign of great intellectual development” (*de Quatrefages*, “*The Human Species*”, p. 312.)

Unless man emerged spontaneously, endowed with all his intellect and wisdom, from his brainless catarrhine ancestor, he could not have acquired such brain within the limits of the Miocene period, if we are to believe the learned Abbe Bourgeois (*Vide infra*, footnote†).

As to the matter of giants, though the tallest man hitherto found in Europe among fossils is the “Mentone man” (6 ft. 8 in.), others may yet be excavated. Nilsson, quoted by Lubbock, states that “in a tomb of the neolithic age . . . a skeleton of extraordinary size was found in 1807,” and that it was attributed to a king of Scotland, Albus McGaldus.

And if in our own day we occasionally find men and women from 7 ft. to even 9 ft. and 11 ft. high, this only proves — on the law of atavism, or the reappearance of ancestral features of character — that there was a time when 9 ft. and 10 ft. was the average height of humanity, even in our latest Indo-European race.

But as the subject was sufficiently treated elsewhere, we may pass on to the Lemurians and the Atlanteans, and see what the old Greeks knew of these early races and what the moderns know now.

The great nation mentioned by the Egyptian priests, from which descended the forefathers of the Greeks of the age of Troy, and which, as averred, had been destroyed by the Atlantic race, was then, as we see, assuredly no race of Palaeolithic savages. Nevertheless, already in the days of Plato, with the exception of priests and Initiates, no one seems to have preserved any distinct recollection of the preceding races. The earliest Egyptians had been separated from the latest Atlanteans for ages upon ages; they were themselves descended from an *alien* race, and had settled in Egypt some 400,000 years before, [106] but their Initiates had preserved *all the records*. Even so late as the time of Herodotus, they had still in their possession the statues of 341 kings who had reigned over their little Atlanto-Aryan Sub-race (*Vide* about the latter “*Esoteric Buddhism*,” p. 66, Fifth Edition.) If one allows only twenty years as an average figure for the reign of each King, the duration of the Egyptian Empire has to be pushed back, from the day of Herodotus, about 17,000 years.

Bunsen allowed the great Pyramid an antiquity of 20,000 years. More modern archaeologists will not give it more than 5,000, or at the utmost 6,000 years; and generously concede to Thebes with its hundred gates, 7,000 years from the date of its foundation. And yet there are records which show Egyptian priests — Initiates — journeying in a North-Westerly direction, *by land*, *via* what became later the Straits of Gibraltar; turning North and travelling through the future Phoenician settlements of Southern Gaul; then still further North, until reaching Carnac (Morbihan) they turned to the West again and arrived, *still travelling by land*, on the North-Western promontory of the New Continent. [107]

What was the object of their long journey? And how far back must we place the date of such visits? The archaic records show the Initiates of the Second Sub-race of the Aryan family moving from one land to the other for the purpose of supervising the building of *menhirs* and dolmens, of colossal Zodiacs in stone, and places of sepulchre to serve as receptacles for the ashes of generations to come. When was it? The fact of their crossing from France to Great Britain *by land* may give an idea of the date when such a journey could have been performed on *terra firma*.

It was —

“When the level of the Baltic and of the North Sea was 400 feet higher than it is now; when the valley of the Somme was not hollowed to the depth it has now attained; when Sicily was joined to Africa, Barbary to Spain,” when “Carthage, the Pyramids of Egypt, the palaces of Uxmal and Palenque were not in existence, and the bold navigators of Tyre and Sidon, who at a later date were to undertake their perilous voyages along the coasts of Africa, were yet unborn. What we know with *certainty is that European man was contemporaneous with the extinct species of the quaternary epoch . . . that he witnessed the upheaval of the Alps [108] and the extension of the glaciers, in a word that he lived for thousands of years before the dawn of the remotest historical traditions It is even possible that man was the contemporary of extinct mammalia of species yet more ancient of the *Elephas meridionalis* of the sands of St. Prest . . . and the *Elephas antiquus*, assumed to be prior to the *elephas primigenius*, since their bones are found in company with carved flints in several English caves, associated with those of the *Rhinoceros hemitaechus* and even of the *Machairodus latidens*, which is of still earlier date M. E. Lartet is of opinion that there is nothing really impossible in the existence of man as early as the Tertiary period.” [109]*

If “there is nothing impossible” scientifically in the idea, and it may be admitted that man lived already as early as the Tertiary period, then it is just as well to remind the reader that Mr. Croll places the beginning of that period 2,500,000 years back (See Croll’s “*Climate and Time*”); but there was a time when he assigned to it 15,000,000 years.

And if all this may be said of *European man*, how great is the antiquity of the Lemuro-Atlantean and of the Atlanto-Aryan man? Every educated person who follows the progress of Science, knows how all vestiges of man during the Tertiary period are received. The calumnies that were poured on Desnoyers in 1863, when he made known to the Institute of France that he had made a discovery “in the undisturbed pliocene sands of St. Prest near Chartres, proving the co-existence of man and the *Elephas meridionalis*” — were equal to the occasion. The later discovery (in 1867) by the Abbe Bourgeois, that man lived in the Miocene epoch, and the reception it was given at the Pre-historic Congress held at Brussels in 1872, proves that the average man of Science will never see *but that which he wants to see.* [110]

The modern archeologist, though speculating *ad infinitum* upon the dolmens and their builders, knows, in fact, nothing of them or their origin. Yet, these weird, and often colossal monuments of unhewn stones — which consist generally of four or seven gigantic blocks placed together — are strewn over Asia, Europe, America, and Africa, in groups or rows. Stones of enormous size are found placed horizontally and variously upon two, three, four, and as in Poitou, upon six and seven blocks. People name them “devil’s altars,” druidic stones, and giant tombs. The stones of Carnac in the Morbihan, Brittany — nearly a mile in length and numbering 11,000 ranged in eleven rows — are twin sisters of those at Stonehenge. The Conical *menhir* of Loch-Maria-ker in Morbihan, measures twenty yards in length and nearly two yards across. The Menhir of Champ Dolent (near St. Malo) rises thirty feet above the ground, and is fifteen feet in depth below. Such dolmens and prehistoric monuments are met with in almost every latitude. They are found in the Mediterranean basin; in Denmark (among the local *tumuli* from twenty-seven to thirty-five feet in height); in Shetland, and in Sweden, where they are called *ganggriften* (or tombs with corridors); in Germany, where they are known as the giant tombs (Hunengraben); in Spain (see the dolmen of *Antiguera* near Malaga), and Africa; in Palestine and Algeria; in Sardinia (see the *Nuraghi* and *Sepolture dei giganti*, or tombs of giants); in Malabar, in India, where they are called the tombs of the *Daiyyas* (giants) and of the *Rakshasas*, the men-demons of *Lanka*; in Russia and Siberia, where they are known as the *Koorgan*; in Peru and Bolivia, where they are termed the *chulpas* or burial places, etc., etc., etc.

There is no country from which they are absent. Who built them? Why are they all connected with Serpents and Dragons, with Alligators and Crocodiles? Because remains of “palaeolithic man” were, it is thought, found in some of them, and because in the funeral mounds of America bodies of later races were discovered with the usual paraphernalia of bone necklaces, weapons, stone and copper urns, etc., hence they are declared ancient *tombs*. But surely the two famous mounds — one in the Mississippi valley and the other in Ohio — known respectively as “the Alligator Mound” and “the Great Serpent Mound,” were never meant for tombs [111] (*Vide infra*). Yet one is told authoritatively that the Mounds, and the Mound or Dolmen Builders, are all “Pelagic” in Europe, antecedent to the Incas, in America, yet of “not extremely distant times.” They are built by “no race of Dolmen Builders,” which *never existed* (opinion of De Mortillet, Bastian, and Westropp) save in the earlier archeological fancy. Finally Virchow’s opinion of the giant tombs of Germany is now accepted as an axiom: — “The tombs alone are gigantic, and not the bones they contain” — says that German biologist; and archaeology has but to bow and submit to the decision. [112]

That no gigantic skeletons have been hitherto found in the “tombs” is yet no reason to say there never were the remains of giants in them. *Cremation was universal* till a comparatively recent period — some 80, or 100,000 years ago. The real giants, moreover, were nearly all drowned with Atlantis. Nevertheless, the classics, as shown elsewhere, often speak of giant skeletons still excavated in their day. Besides this, human fossils may be counted on the fingers, as yet. No skeleton ever yet found is older than between 50, or 60,000 years, [113] and man’s size was reduced from 15 to 10 or 12 feet, ever since the third sub-race of the Aryan stock, which sub-race — born and developed in Europe and Asia Minor under new climates and conditions — had become European. Since then, as said, it has steadily been decreasing. It is truer therefore to say, that the tombs alone are archaic, and not necessarily the bodies of men occasionally found in them; and that those tombs, since they are gigantic, must have contained giants, [114] or rather the ashes of generations of giants.

Nor were all such cyclopean structures intended for sepulchres. It is with the so-called Druidical remains, such as Carnac in Brittany and Stonehenge in Great Britain, that the travelling Initiates above alluded to had to do. And these gigantic monuments are all symbolic records of the World’s history. They are *not* Druidical, but *universal*. Nor did the Druids build them, for they were only the heirs to the cyclopean lore left to them by generations of mighty builders and — “magicians,” both good and bad.

It will always be a subject of regret that history, rejecting *a priori* the actual existence of giants, has preserved us so little of the records of antiquity concerning them. Yet in nearly every mythology — which after all *is* ancient history — the giants play an important part. In the old Norse mythology, the giants, Skrymir and his brethren, against whom the sons of the gods fought, were potent factors in the histories of deities and men. The modern exegesis, that makes these giants to be the brethren of the dwarfs, and reduces the combats of the gods to the history of the development of the Aryan race, will only receive credence amongst the believers in the Aryan theory, as expounded by Max Muller. Granting that the Turanian races were typified by the dwarfs (Dwergar), and that a dark, round-headed, and dwarfish race was driven northward by the fair-faced Scandinavians, or AEsir, the gods being like unto men, there still exists neither in history nor any other scientific work any anthropological proof whatever of the existence in time or space of a race of giants. Yet that such exist, relatively and *de facto* side by side with dwarfs, Schweinfurth can testify. The *Nyam-Nyam* of Africa are regular dwarfs, while their next neighbours (several tribes of comparatively fair-complexioned Africans) are giants when confronted with the Nyam-Nyams, and very tall even among Europeans, for their women are all above 6 1/2 feet high. (*Vide* Schweinfurth’s latest works.)

In Cornwall and in ancient Britain the traditions of these giants are, on the other hand, excessively common; they are said to live even down to the time of King Arthur. All this shows that giants lived to a later date amongst the Celtic than among the Teutonic peoples.

If we turn to the New World, we have traditions of a race of giants at Tarija on the eastern slopes of the Andes and in Ecuador, who combated gods and men. These old beliefs, which term certain localities “*Los campos de los gigantes*” — “the fields of giants,” are always concomitant with the existence of pliocene mammalia and the occurrence of pliocene raised beaches. “All the giants are not under Mount Ossa,” and it would be poor anthropology indeed that would restrict the traditions of giants to Greek and Bible mythologies. Slavonian countries, Russia especially, teem with legends about the *bogaterey* (mighty giants) of old; and their folklore, most of which has served for the foundation of national histories, their oldest songs, and their most archaic traditions, speak of the giants of old. Thus we may safely reject the modern theory that would make of the Titans mere symbols standing for cosmic forces. They were real living men, whether twenty or only twelve feet high. Even the Homeric heroes, who, of course, belonged to a far more recent period in the history of the races, appear to have wielded weapons of a size and weight beyond the strength of the strongest men of modern times.

“Not twice ten men the mighty bulk could raise,
Such men as live in these degenerate days.”

If the fossil footprints from Carson, Indiana, U.S.A., are human, they indicate gigantic men. Of their genuineness there can remain no doubt. It is to be deplored that the modern and *scientific* evidence for gigantic men should rest on footprints alone. Over and over again, the skeletons of hypothetical giants have been identified with those of elephants and mastodons. But all such blunders before the days of geology, and even the traveller’s tales of Sir John

Mandeville, who says that *he saw giants 56 feet high*, in India, only show that belief in the existence of giants has never, at any time, died out of the thoughts of men.

That which is known and accepted is, that several races of gigantic men have existed and left distinct traces. In the journal of the Anthropological Institute (Vol. 1871, art. by Dr. C. Carter Blake) such a race is shown as having existed at Palmyra and possibly in Midian, exhibiting cranial forms quite different from those of the Jews. It is not improbable that another such race existed in Samaria, and that the mysterious people who built the stone circles in Galilee, hewed neolithic flints in the Jordan valley and preserved an ancient Semitic language quite distinct from the square Hebrew character — was of a very large stature. The English translations of the Bible can never be relied upon, even in their modern *revised* forms. They tell us of the *Nephilim* translating the word by “giants,” and further adding that they were “hairy” men, probably the large and powerful prototypes of the later satyrs so eloquently described by the patristic fancy; some of the Church Fathers assuring their admirers and followers that they had themselves seen these “Satyrs” — some alive, others pickled and preserved. The word “giants” being once adopted as a synonym of *Nephilim*, the commentators have since identified them with the sons of Anak. The filibusters who seized on the Promised Land, found a pre-existing population far exceeding their own in stature, and called it a race of giants. But the races of really gigantic men had disappeared ages before the birth of Moses. This tall people existed in Canaan, and even in Bashan, and may have had representatives in the Nabatheans of Midian. They were of far greater stature than the undersized Jews. Four thousand years ago their cranial conformation and large stature separated them from the children of Heber. Forty thousand years ago their ancestors may have been of still more gigantic size, and four hundred thousand years earlier *they must have been* in proportion to men in our days as the Brobdingnagians were to the Lilliputians. The Atlanteans of the middle period were called the Great Dragons, and the first symbol of their tribal deities, when the “gods” and the Divine Dynasties had forsaken them, was that of a giant Serpent.

The mystery veiling the origin and the religion of the Druids, is as great as that of their supposed fanes is to the modern Symbolist, but not to the initiated Occultists. Their priests were the descendants of the last Atlanteans, and what is known of them is sufficient to allow the inference that they were eastern priests akin to the Chaldeans and Indians, though little more. It may be inferred that they symbolized their deity as the Hindus do their Vishnu, as the Egyptians did their *Mystery God*, and as the builders of the Ohio Great-Serpent mound worshipped theirs — namely under the form of the “mighty Serpent,” the emblem of the eternal deity TIME (the Hindu Kala). Pliny called them the “Magi of the Gauls and Britons.” But they were more than that. The author of “*Indian Antiquities*” finds much affinity between the Druids and the Brahmins of India. Dr. Borlase points to a close analogy between them and the Magi of Persia [115]; others will see an identity between them and the Orphic priesthood of Thrace: simply because they were connected, in their esoteric teachings, with the universal Wisdom Religion, and thus presented affinities with the exoteric worship of all.

Like the Hindus, the Greeks and Romans (we speak of the Initiates), the Chaldees and the Egyptians, the Druids believed in the doctrine of a succession of worlds, as also in that of seven “creations” (of new continents) and transformations of the face of the earth, and in a seven-fold night and day for each earth or globe (See “*Esoteric Buddhism*”). Wherever the Serpent with the egg is found, there this tenet was surely present. Their *Dracontia* are a proof of it. This belief was so universal that, if we seek for it in the esotericism of various religions, we shall discover it in all. We shall find it among the Aryan Hindus and Mazdeans, the Greeks, the Latins, and even among the old Jews and early Christians, whose modern stocks hardly comprehend now that which they read in their Scriptures. See what Seneca says in *Epistle 9*, and *Quaest. Nat. III., c., ult.*: “The world being melted and having re-entered the bosom of Jupiter, this god continues for some time to remain absorbed in himself and *concealed*, wholly immersed in contemplation. After which a new world springs from him. . . . An innocent race of men and animals are produced anew . . . etc.” Then again when speaking of periodical mundane dissolution involving universal death, he (Seneca) says that “when the laws of nature shall be buried in ruin, and the last day of the world shall come, *the southern pole shall crush*, as it falls, all the regions of Africa, and the North pole shall overwhelm all the countries beneath its axis. *The affrighted sun shall be deprived of its light*; the palace of heaven falling to decay *shall produce at once both life and death*, and some kind of dissolution shall equally seize upon all deities, who thus shall return into their original chaos” (Quoted in “*Book of God*,” p. 160.)

One might imagine oneself reading the Puranic account by Parasara of the great Pralaya. It is nearly the same thing, idea for idea. Has Christianity nothing of the kind? It has, we say. Let the reader open any English Bible and read

chapter iii. of the *Second Epistle of Peter*, from verse iii. till the xivth, and he will find there the same ideas. . . . “There shall come in the last days scoffers . . . saying, ‘where is the promise of his coming? . . . Since the fathers fell asleep all things continue as they were from the beginning of creation.’ For, they are ignorant . . . that by the word of God the heavens were of old, and *the earth standing out of the water and in the water: whereby the world that then was, being overflowed with water*, perished. But the heavens and the earth *that are now*, are reserved unto the fire . . . wherein the heavens . . . shall be dissolved, and the elements shall melt with fervent heat . . . we nevertheless look for *new heavens and new earth, etc., etc.*” If the interpreters chose to see in this a reference to creation, the deluge, and the promised coming of Christ, when they will live in a new Jerusalem in heaven, this is no fault of “Peter.” What the writer of the Epistles meant was the destruction of this Fifth Race of ours by subterranean fires and inundations, and the appearance of new continents for the Sixth Root-Race. For the writers of these Epistles were all learned in symbology if not in the sciences.

It was mentioned elsewhere that the belief in the septenary constitution of our “chain” was the oldest tenet of the early Iranians, who got it from the first Zarathustra. It is time to prove it to those Parsis who have lost the key to the meaning of their Scriptures. In the Avesta the earth is considered septempartite and tripartite at one and the same time. This is regarded by Dr. Geiger, as an *incongruity*, for the following reasons, which he calls discrepancies: the Avesta speaks of the three-thirds of the earth because the Rig-Veda mentions “three earths.” . . . “Three strata or layers, one lying above the other, are said to be meant by this.” [116] But he is quite mistaken, as are all exoteric profane translators. The Avesta has not borrowed the idea from the *Rig-Veda*, but simply repeats the esoteric teaching. The “three strata or layers” do not refer to our globe alone, but to three layers of the globes of our terrestrial chain — two by two, on each plane, one on the descending, the other on the ascending arc. Thus, with reference to the six spheres or globes above our earth, the seventh and the fourth, it is *septempartite*, while with regard to the planes over our plane — it is *tripartite*. This meaning is carried out and corroborated by the text in the Avesta and Vendidad, and even by the speculations — a most laborious and unsatisfactory guess-work — of the translators and commentators. It thus follows that the division of the “earth,” or rather the earth’s chain, into seven *Karshvars* is not in contradiction with the three “zones,” if this word is read “planes.” As Geiger remarks, this septenary division is very old — the oldest of all — since the Gathas already speak of the “septempartite earth.” (*Bumi haptaiti, Yasna, xxxii., 3.*) For, “according to the Parsee Scriptures, the *seven Karshvars are to be considered as completely disconnected parts of the earth*,” which they surely are. For, “between them *there flows the Ocean*, so that it is impossible, as stated in several passages, to pass from one *Karshvar* to another.” [117] The “Ocean” is *space*, of course, for the latter was called “Waters of Space” before it was known as Ether. Moreover, the word *Karshvar* is consistently rendered by *Dwipa*, and especially *Qaniratha* by Jambudwipa (“Neriosengh, the translator of the Yasna.”) [118] But this fact is not taken into account by the Orientalists, and therefore we find even such a learned Zoroastrian and Parsi by birth as the translator of Dr. Geiger’s work passing unnoticed and without a word of comment sundry remarks of the former on the “incongruities” of this kind abounding in the Mazdean Scriptures. One of such “incongruities” and “coincidences” concerns the similarity of the Zoroastrian with the Indian tenet with regard to the seven *Dwipas* (islands, or continents, rather) as met with in the *Puranas*, namely: “The *Dwipas* form concentric rings, which, separated by the ocean, surround Jambu Dvipa, which is situated in the centre” (p. 130, vol. I.), and, “according to the Iranian view, the *Karshvar Qaniratha* is likewise situated in the centre of the rest . . . each of them (the other six *Karshvars*) is a peculiar individual space, and so they group themselves round (*above*) *Qaniratha*” (*ibid.* p. 131). Now *Qaniratha* is not, as believed by Geiger and his translator, “the country inhabited by the Iranian tribes,” and the other names do not mean “the adjacent territories of foreign nations in the North, South, West, and East” (p. 132), but our globe or Earth. For that which is meant by the sentence which follows the last quoted, namely, that “two *Vorubarshiti* and *Voruzarshiti* lie in the North; two, *Vidadhafshu* and *Tradadhafshu*, in the South; *Savahi* and *Arzahi* in the East and West,” is simply the very graphic and accurate description of the “chain” of our planet, the Earth, represented in the book of Dzyan (11) thus:

into one event which he located on one comparatively small island 3000 stadia long by 2000 wide; (or about 350 miles by 200, which is about the size of Ireland), whereas the priests spoke of Atlantis as a continent vast as “all Asia and Lybia” put together. But, however altered in its general aspect, Plato’s narrative bears the impress of truth upon it. [121] It was not he who invented it, at any rate, since Homer, who preceded him by many centuries, also speaks of the Atlantes (who are our Atlanteans) and of their island in his *Odyssey*. Therefore the tradition was older than the bard of Ulysses. The Atlantes and the Atlantides of mythology are based upon the Atlantes and the Atlantides of history. Both Sanchoniathon and Diodorus have preserved the histories of those heroes and heroines, however much these accounts may have become mixed up with the mythical element.

In our own day we witness the stupendous fact that such comparatively recent personages as Shakespeare and William Tell are all but denied, an attempt being made to show one to be a *nom de plume*, and the other a person who never existed. What wonder then, that the two powerful races — the Lemurians and the Atlanteans — have been merged into and identified, in time, with a few half mythical peoples, who all bore the same patronymic?

Herodotus speaks of the *Atlantes* — a people of Western Africa which gave its name to Mount Atlas; who were vegetarians, and “whose sleep was never disturbed by dreams”; and who, moreover, “daily cursed the sun at his rising and at his setting because his excessive heat scorched and tormented them.”

These statements are based upon moral and psychic facts and not on physiological disturbance. The story of Atlas (*Vide supra*) gives the key to it. If the Atlanteans never had their sleep disturbed by dreams, it is because that particular tradition is concerned with the earliest Atlanteans, whose physical frame and brain were not yet sufficiently consolidated, in the physiological sense, to permit the nervous centres to act during sleep. With regard to that other statement — namely, that they daily “cursed the Sun” — this again has nothing to do with the heat, but with the moral degeneration that grew with the race. It is explained in our Commentaries. “They (the sixth sub-race of the Atlanteans) used magic incantations even against the Sun” — failing in which, they cursed it. The sorcerers of Thessaly were credited with the power of calling down the moon, as Greek history assures us. The Atlanteans of the later period were renowned for their magic powers and wickedness, their ambition and defiance of the gods. Thence the same traditions taking form in the Bible about the antediluvian giants and the Tower of Babel, found also in the “Book of Enoch.”

Diodorus records another fact or two: the Atlanteans boasted of possessing the land in which all the gods had received their birth; as also of having had Uranus for their first King, he being also the first to teach them astronomy. Very little more than this has come down to us from Antiquity.

The myth of Atlas is an allegory easily understood. Atlas is the old continents of Lemuria and Atlantis, combined and personified in one symbol. The poets attribute to Atlas, as to Proteus, a superior wisdom and an universal knowledge, and especially *a thorough acquaintance with the depths of the ocean*: because both continents bore races instructed by *divine* masters, and because both were transferred to the bottom of the seas, where they now slumber until their next reappearance above the waters. Atlas is the son of an ocean nymph, and his daughter is Calypso — “the watery deep,” (*See Hesiod’s Theogony*, 507-509, and *Odyssey* 1, 51): Atlantis has been submerged beneath the waters of the ocean, and its progeny is now sleeping its eternal sleep on the ocean floors. The *Odyssey* makes of him the guardian and the “sustainer” of the huge pillars that separate the heavens from the earth (1, 52-53). He is their “supporter.” And as both Lemuria, destroyed by submarine fires, and Atlantis, submerged by the waves, perished in the ocean deeps, [122] Atlas is said to have been compelled to leave the surface of the earth, and join his brother Iapetos in the depths of Tartarus. Sir Theodore Martin is right in interpreting this allegory as meaning, Atlas “standing on the solid floor of the inferior hemisphere of the universe and thus carrying at the same time the *disc* of the earth and the celestial vault — the solid envelope of the superior hemisphere” . . . (*Memoires de l’Academie des Inscriptions*, p. 176). For Atlas is Atlantis which supports the new continents and their horizons on its “shoulders.”

Decharme, in his *Mythologie de la Grece Antique*, expresses a doubt as to the correctness of Pierron’s translation of the Homeric word [[*echei*]] by *sustinet*, as it is not possible to see “how Atlas can support or bear at once several pillars situated in various localities.” If Atlas were an individual it would be an awkward translation. But, as he personifies a continent in the west said to support heaven and earth at once (*AEschylus*, “*Prometheus Vincitus*,” 351, 429, *etc.*) — *i.e.*, the feet of the giant tread the earth while his shoulders support the celestial vault, an allusion to the

gigantic peaks of the Lemurian and Atlantean continents — the epithet “supporter” becomes very correct. The term “conservator” for the Greek word [[*echei*]], which Decharme, following Sir Theodore Martin, understands as meaning [[*phulassei*]] and [[*epimeleitai*]], does not render the same sense.

The conception was certainly due to the gigantic mountain chain running along the terrestrial border (or disc). These mountain peaks plunged their roots into the very bottom of the seas, while they raised their heads heavenward, their summits being lost in the clouds. The ancient continents had more mountains than valleys on them. Atlas, and the Teneriffe Peak, now two of the dwarfed relics of the two lost continents, were thrice as lofty during the day of Lemuria and twice as high in that of Atlantis. Thus, the Lybians called Mount Atlas “the pillar of Heaven,” according to Herodotus (*IV.*, 184), and Pindar qualified the later AEtna as “the celestial pillar” (*Pyth.* 1, 20; *Decharme*, 315). Atlas was an inaccessible island peak in the days of Lemuria, when the African continent had not yet been raised. It is the sole Western relic which survives, *independent*, of the continent on which the Third Race was born, developed and *fell*, [123] for Australia is now part of the Eastern continent. Proud Atlas, according to esoteric tradition, having sunk one third of its size into the waters, its two parts remained as an heirloom of Atlantis.

This again was known to the priests of Egypt and to Plato himself, the solemn oath of secrecy, which extended even to the mysteries of Neo-Platonism, alone preventing the whole truth from being told. [124] So secret was the knowledge of the last islands of Atlantis, indeed, — on account of the superhuman powers possessed by its inhabitants, the last direct descendants of the gods or divine Kings, as it was thought — that to divulge its whereabouts and existence was punished by death. Theopompus says as much in his ever-suspected *Meropis*, when he speaks of the Phoenicians as being the only navigators in the seas which wash the Western coast of Africa; and who did it with such mystery that very often they sunk their own vessels to make the too inquisitive foreigners lose all trace of them.

There are those Orientalists and historians — and they form the majority — who, while feeling quite unmoved at the rather crude language of the Bible, and some of the events narrated in it, show great disgust at the *immorality* in the pantheons of India and Greece. [125] We may be told that before them Euripides, Pindar, and even Plato, express the same; that they too felt irritated with the tales invented — “those miserable stories of the poets,” as Euripides expresses it ([[*haoidon hoide dustenoi logoi*]], *Hercules furens*, 1346, *Dindorf's Edition*).

But there may have been another reason for this, perhaps. To those who knew that there was more than one key to theogonic symbolism, it was a mistake to have expressed it in a language so crude and misleading. For if the educated and learned philosopher could discern the kernel of wisdom under the coarse rind of the fruit, and knew that the latter concealed the greatest laws and truths of psychic and physical nature, as well as the origin of all things — not so with the uninitiated profane. For him the dead letter was *religion*; the interpretation — sacrilege. And this dead letter could neither edify nor make him more perfect, seeing that such an example was given him by his gods. But to the philosopher — especially the Initiate — Hesiod's theogony is as *historical* as any history can be. Plato accepts it as such, and gives out as much of its truths as his pledges permitted him.

The fact that the Atlantes claimed Uranos for their first king, and that Plato commences his story of Atlantis by the division of the great continent by Neptune, the grandson of Uranos, shows that there were continents and kings before Atlantis. For Neptune, to whose lot that continent fell, finds on a small island only one human couple made of clay (*i.e.*, the first physical *human* man, whose origin began with the last sub-races of the Third Root-Race). It is their daughter Clito that the god marries, and it is his eldest son *Atlas* who receives for his part the mountain and the continent which was called by his name.

Now all the gods of Olympus, as well as those of the Hindu Pantheon and the Rishis, were the septiform personations (1) of the *noumena* of the intelligent Powers of nature; (2) of Cosmic Forces; (3) of celestial bodies; (4) of gods or Dhyān Chohans; (5) of psychic and spiritual powers; (6) of divine kings on earth (or the incarnations of the gods); and (7) of terrestrial heroes or men. The knowledge how to discern among these seven forms the one that is meant, belonged at all times to the Initiates, whose earliest predecessors had created this symbolical and allegorical system.

Thus while Uranos (or the host representing this celestial group) reigned and ruled over the Second Race and their (then) Continent; Kronos or Saturn governed the Lemurians; and Jupiter, Neptune [126] and others fought in the

allegory for Atlantis, which was the whole earth in the day of the Fourth Race. Poseidonis, or the (last) island of Atlantis “the third step of Idaspati” (or Vishnu) in the mystic language of the secret books — lasted till about 12,000 years ago. [127] The Atlantes of Diodorus were right in claiming that it was their country, the region surrounding Mount Atlas, where “the gods were born” — *i.e.*, “incarnated.” But it was after their fourth incarnation that they became, for the first time, human Kings and rulers.

Diodorus speaks of Uranos as the first king of Atlantis, confusing, either consciously or otherwise, the continents; but, as shown, Plato indirectly corrects the statement. The first astronomical teacher of men was Uranos, because he is one of the seven Dhyana Chohans of that second period or Race. Thus also in the second Manvantara (that of Swarochisha), among the seven sons of the Manu, the presiding gods or Rishis of that race, we find *Jyotis*, [128] the teacher of astronomy (Jyotisha), one of the names of Brahma. And thus also the Chinese revere *Tien* (or the sky, Ouranos), and name him as their first teacher of astronomy. Uranos gave birth to the Titans of the Third Race, and it is they who (personified by Saturn-Kronos) mutilated him. For as it is the Titans who *fell into generation*, when “creation *by will* was superseded by physical procreation,” they needed Uranos no more.

And here a short digression must be permitted and pardoned. In consequence of the last scholarly production of Mr. Gladstone in the *Nineteenth Century*, “The Greater Gods of Olympos,” the ideas of the general public about Greek Mythology have been still further perverted and biassed. Homer is credited with an inner thought, which is regarded by Mr. Gladstone as “the true key to the Homeric conception,” whereas this “key” was merely a *blind*. Poseidon “is indeed essentially of the earth earthy . . . strong and self-asserting, sensual and intensely jealous and vindictive,” — but this is because he symbolises the Spirit of the Fourth Root-Race, the ruler of the Seas, that race which lives above the surface of the seas ([[*limne*]], II. xxiv., 79), which is composed of the giants, the children of Eurymedon, the race which is the father of Polyphemus, the Titan and *one-eyed* Cyclops. Though Zeus reigns over the Fourth Race, it is Poseidon who rules, and who is the true key to the triad of the Kronid Brothers and to our *human* races. Poseidon and Nereus *are one*: the former the ruler or spirit of Atlantis before the beginning of its submersion, the latter, after. Neptune is the titanic strength of the *living* race; Nereus, its spirit reincarnated in the subsequent Fifth or Aryan Race: and this is what the great Greek scholar of England has not yet discovered, or even dimly perceived. And yet he makes many observations upon the “artfulness” of Homer, who never names Nereus, at whose designation we arrive . . . only through the patronymic of the Nereids!

Thus the tendency of even the most erudite Hellenists is to confine their speculations to the exoteric images of mythology and to lose sight of their inner meaning: and it is remarkably illustrated in the case of the Right Hon. W. E. Gladstone, as we have shown. While almost the most conspicuous figure of our age as a statesman, he is at the same time one of the most cultured scholars England has given birth to. Grecian literature has been the loving study of his life, and he has found time amid the bustle of public affairs to enrich contemporary literature with contributions to Greek scholarship which will make his name famous through coming generations. At the same time, as his sincere admirer, the present writer cannot but feel a deep regret that posterity, while acknowledging his profound erudition and splendid culture, will yet, in the greater light which *must* then shine upon the whole question of symbolism and mythology, judge that he has failed to grasp the spirit of the religious system which he has often criticised from the dogmatic Christian standpoint. In that future day it will be perceived that the esoteric key to the mysteries of the Christian as well as of the Grecian theogonies and Sciences, is the *Secret Doctrine* of the pre-historic nations, which, along with others, he has denied. It is that Doctrine alone which can trace the kinship of all human religious speculations or even so-called *Revelations*, and it is this teaching which infuses the Spirit of life into the lay figures on the Mounts of Meru, Olympus, Walhalla, or Sinai. If Mr. Gladstone were a younger man, his admirers might hope that his scholastic studies would be crowned by the discovery of this underlying truth. As it is, he but wastes the golden hours of his declining years in futile disputations with that giant free-thinker, Col. Ingersoll, each fighting with the weapons of exoteric temper, drawn from the arsenals of *ignorant* LITERALISM. These two great controversialists are equally blind to the true esoteric meaning of the texts which they hurl at each other’s head like iron bullets, while the world alone suffers by such controversies: since the one helps to strengthen the ranks of materialism, and the other those of blind Sectarianism and of the dead letter. And now we may return once more to our immediate subject.

Many a time Atlantis is spoken of under another name, one unknown to our commentators. The *power of names* is great, and was known since the first men were instructed by the *divine* masters. And as Solon had studied it, he translated the “Atlantean” names into names devised by himself. In connection with the continent of Atlantis, it is

desirable to bear in mind that the accounts which have come down to us from the old Greek writers contain a confusion of statements, some referring to the Great Continent and others to the last small island of Poseidonis. It has become customary to take them all as referring to the latter only, but that this is incorrect is evident from the incompatibility of the various statements as to the size, etc., of “Atlantis.”

Thus, in the *Timaeus* and *Critias*, Plato says, that the plain surrounding the city was itself surrounded by mountain chains. . . . And the plain was smooth and level, and of an oblong shape, lying north and south, three thousand stadia in one direction and two thousand in the other. . . . They surrounded the plain by an enormous canal or dike, 101 feet deep, 606 feet broad, and 1,250 miles in length.

Now in other places the entire size of the *island* of Poseidonis is given as about the same as that assigned here to the “*plain* around the city” alone. Obviously, one set of statements refers to the great continent, and the other to its last remnant — Plato’s island.

And, again, the standing army of Atlantis is given as upwards of a million men; its navy as 1,200 ships and 240,000 men. Such statements are quite inapplicable to a small island state, of about the size of Ireland!

The Greek allegories give to Atlas, or Atlantis, seven daughters (seven sub-races), whose respective names are Maia, Electra, Taygeta, Asterope, Merope, Alcyone, and Celaeno. This ethnologically, as they are credited with having married gods and with having become the mothers of famous heroes, the founders of many nations and cities. Astronomically, the Atlantides have become the seven Pleiades (?). In occult science the two are connected with the destinies of nations, those destinies being shaped by the past events of their early lives according to Karmic law.

Three great nations claimed in antiquity a direct descent from the kingdom of Saturn or Lemuria (confused already several thousands of years before our era with Atlantis): and these were the Egyptians, the Phoenicians (*vide* Sanchoniathon), and the old Greeks (*vide* Diodorus, after Plato). But the oldest civilized country of Asia — India — can be shown to claim the same descent likewise. Sub-races guided by Karmic law or destiny repeat unconsciously the first steps of their respective mother-races. As the comparatively fair Brahmins have come — when invading India with its dark-coloured Dravidians — from the North, so the Aryan Fifth Race must claim its origin from northern regions. The occult sciences show that the founders (the respective groups of the seven Prajapatis) of the Root Races have all been connected with the Pole Star. In the Commentary we find: —

“He who understands the age of Dhruva [129] who measures 9090 mortal years, will understand the times of the pralayas, the final destiny of nations, O Lanoo.”

Moreover there must have been a good reason why an Asiatic nation should locate its great progenitors and saints in the *Ursa Major*, a northern constellation. It is 70,000 YEARS, HOWEVER, SINCE THE POLE OF THE EARTH POINTED TO THE FURTHER END OF URSA MINOR’S TAIL; and many more thousand years since the seven Rishis could have been identified with the constellation of *Ursa Major*.

The Aryan race was born and developed in the far north, though after the sinking of the continent of Atlantis its tribes emigrated further south into Asia. Hence Prometheus is son of Asia, and Deukalion, his son, the Greek Noah — he who created men out of the stones of mother earth — is called a northern Scythe, by Lucian, and Prometheus is made the brother of Atlas and is tied down to Mount Caucasus amid the Snows. [130]

Greece had her *Hyperborean* as well as her *Southern* Apollo. Thus nearly all the gods of Egypt, Greece, and Phoenicia, as well as those of other Pantheons, are of a northern origin and originated in Lemuria, towards the close of the Third Race, after its full physical and physiological evolution had been completed. [131] All the “fables” of Greece were built on historical facts, if that history had only passed unadulterated by myths to posterity. The “one-eyed” Cyclopes, the giants fabled as the sons of *Coelus* and *Terra* — three in number, according to Hesiod — were the last three sub-races of the Lemurians, the “one-eye” referring to the Wisdom eye [132]; for the two front eyes were fully developed as physical organs only in the beginning of the Fourth Race. The allegory of Ulysses, whose companions were devoured while the king of Ithaca was saved by putting out with a fire-brand the eye of Polyphemus, is based upon the psycho-physiological atrophy of the “third” eye. Ulysses belongs to the cycle of the

heroes of the Fourth Race, and, though a “sage” in the sight of the latter, must have been a profligate in the opinion of the pastoral Cyclopes. [133] His adventure with the latter — a savage gigantic race, the antithesis of cultured civilization in the Odyssey — is an allegorical record of the gradual passage from the Cyclopean civilization of stone and colossal buildings to the more sensual and physical culture of the Atlanteans, which finally caused the last of the Third Race to lose their all-penetrating *spiritual* eye. That other allegory, which makes Apollo kill the Cyclops to avenge the death of his son Asclepius, does not refer to the three races represented by the three sons of Heaven and Earth, but to the Hyperborean Arimaspean Cyclopes, the last of the race endowed with the “Wisdom-eye.” The former have left relics of their buildings everywhere, in the south as much as in the north; the latter, were confined to the north solely. Thus Apollo — pre-eminently the god of the Seers, whose duty it is to punish desecration — killed them — his shafts representing human passions, fiery and lethal — and hid his shaft behind a mountain in the Hyperborean regions. (*Hygin. “Astron. Poetique,” Book ii. c. 15*). Cosmically and astronomically this Hyperborean god is the Sun personified, which during the course of the sidereal year (25,868 y.) changes the climates on the earth’s surface, making of tropical, frigid regions, and *vice versa*. Psychically and spiritually his significance is far more important. As Mr. Gladstone pertinently remarks in his “Greater Gods of Olympus,” “the qualities of Apollo (jointly with Athene) are impossible to be accounted for without repairing to sources, which lie beyond the limit of the traditions most commonly explored for the elucidation of the Greek mythology” (*Nineteenth Century*, July, 1887.)

The history of Latona (Leto), Apollo’s mother, is most pregnant in various meanings. Astronomically, Latona is the polar region and the night, giving birth to the Sun, Apollo, Phoebus, etc. She is born in the Hyperborean countries wherein all the inhabitants were priests of her son, celebrating his resurrection and descent to their country every nineteen years at the renewal of the lunar cycle (*Diod. Sic. II. 307*). Latona is the Hyperborean Continent, and its race — geologically. [134]

When the astronomical meaning cedes its place to the spiritual and divine — Apollo and Athene transforming themselves into the form of *birds*, the symbol and glyph of the higher divinities and angels — then the bright god assumes divine creative powers. Apollo becomes the personification of Seership, when he sends the astral double of Aeneas to the battle field (II. 431-53), and has the gift of appearing to his Seers without being visible to other persons present — (Iliad, xvii., 322-36) — a gift, however, shared by every high Adept.

The King of the Hyperboreans, was, therefore, the son of Boreas, the north-wind, and the High Priest of Apollo. The quarrel of Latona with Niobe (the Atlantean race) — the mother of seven sons and seven daughters personifying the seven sub-races of the Fourth Race and their seven branches (see Apollodorus for this number) — allegorizes the history of the two continents. The wrath of “the sons of god,” or of “Will and Yoga,” at seeing the steady degradation of the Atlanteans was great (See “*The Sons of God and the Sacred Island*”); and the destruction of the “children of Niobe” by the children of Latona — Apollo and Diana, the deities of light, wisdom and purity, or the Sun and Moon astronomically, whose influence causes changes in the earth’s axis, deluges and other cosmic cataclysms — is thus very clear. [135] The fable about the never-ceasing tears of Niobe, whose grief causes Zeus to change her into a fountain — Atlantis covered with water — is no less graphic as a symbol. Niobe, let it be remembered, is the daughter of one of the Pleiades (or Atlantides) the *grand-daughter* of Atlas therefore, (See “*Metamorphoses of Ovid*,” Book VI.), because she represents the last generations of the doomed continent.

A true remark, that of Bailly, which says that Atlantis had an enormous influence on antiquity. “If these names,” he adds, “are mere allegories, then all that those fables contain of truth comes from Atlantis; if the fable is a real tradition — however altered — then the whole of the ancient history is still in it.” (*Lettres sur l’Atlantide*, p. 137.)

So much so, that all ancient writings — prose and poetry — are full of the reminiscences of the Lemuro-Atlanteans, the first *physical* races, though the Third and the Fourth in number. Hesiod records the tradition about the men of the age of Bronze, whom Jupiter had made out of ash-wood and who had hearts harder than diamond. Clad in bronze from head to foot they passed their lives in fighting. Monstrous in size, endowed with a terrible strength, invincible arms and hands descended from their shoulders, says the poet (*Hesiod, in oper. and dieb. v. 143*). Such were the giants of the first physical races. The Iranians have a reference to the later Atlanteans in Yasna ix. 15. Tradition maintains that the “Sons of God,” or the great Initiates of the Sacred Island, took advantage of the Deluge, to rid the earth of all the Sorcerers among the Atlanteans. The said verse addresses Zoroaster as one of the “Sons of God.” — It

says: “Thou, O Zarathustra, didst make all demons (*i.e.*, Sorcerers), who before roamed the world in human forms, conceal themselves in the earth” (*i.e.*, helped them to get submerged).

The Lemurians, as also the early Atlanteans, were divided into two distinct classes — the “Sons of Night” or Darkness, and the “Sons of the Sun,” or Light. The old books tell us of terrible battles between the two, when the former, leaving their land of Darkness, from whence the Sun departed for long months, descended from their inhospitable regions and “tried to wrench the lord of light” from their better favoured brothers of the equatorial regions. We may be told that the ancients knew nothing of the long night of six months’ duration in the Polar regions. Even Herodotus, more learned than the rest, only mentions a people who *slept* for six months in the year, and remained awake the other half. Yet the Greeks knew well that there was a country in the north where the year was divided into a day and night of six months’ duration each, for Pliny says so in his Fourth Book, c. 12. They speak of the Cimmerians and of the Hyperboreans, and draw a distinction between the two. The former inhabited the *Palus Maeotis* (between 45° and 50° latitude). Plutarch explains that they were *but a small portion of a great nation* driven away by the Scythians, which nation stopped near Tanais, *having crossed Asia*. “These warlike multitudes lived formerly on the ocean shores, in dense forests, and *under a tenebrous sky*. There the pole is almost touching the head, there *long nights and days divide the year*” (*in Mario*). As to the Hyperboreans, these peoples, as expressed by Solinus Polyhistor (c. 16), “sow in the morning, reap at noon, gather their fruits in the evening, and store them during the night in their caves.”

Even the writers of the *Zohar* knew of the fact (as shown in iii., fol. 10a), as it is written: “In the Book of Hammannunah, the Old, we learn . . . there are some countries of the earth which are lightened, whilst others are in darkness; these have the day, when for the former it is night; and *there are countries in which* it is constantly day, or in which at least the night continues only some instants.” (Isaac Myer’s “*Qabbalah*,” p. 139).

The island of *Delos*, the *Asteria* of the Greek mythology, was never in Greece, a country which, in its day, was not yet in existence, not even in its molecular form. Several writers have shown that it represented a country or an island, far larger than the small dots of land which became Greece. Both Pliny and Diodorus Siculus place it in the Northern seas. One calls it *Basilea* or “royal” (*Vol. II., p. 225 of Diod.*); the other, Pliny, names it *Osericta* (*Book xxxvii, c. 2*), a word, according to Rudbeck (*Vol. I., p. 462-464*), having had “a significance in the northern languages, equivalent to the Island of the *divine* Kings or god-Kings,” or again the “royal island of the gods,” because the gods were born there, *i.e.*, the divine dynasties of the kings of Atlantis proceeded from that place. Let geographers and geologists seek for it among that group of islands discovered by Nordenskiöld on his *Vega* voyage in the arctic regions. [136] The secret books inform us that *the climate has changed in those regions more than once* since the first men inhabited those now almost inaccessible latitudes. They were a paradise before they became hell; the dark Hades of the Greeks and the cold realm of Shades where the Scandinavian Hel, the goddess-Queen of the country of the dead, “holds sway deep down in Helheim and Niflheim.” Yet, it was the birth-place of Apollo, who was the brightest of gods, in heaven — astronomically — as he was the most enlightened of the divine kings who ruled over the early nations, in his human meaning. The latter fact is borne out in the *Iliad IV., 239-62, vide* “The Greater gods” — wherein Apollo is said to have appeared four times in his own form (as the god of the four races) and six times in human form, *i.e.*, as connected with the divine Dynasties of the earlier unseparated Lemurians.

It is those early mysterious peoples, their countries (which have now become uninhabitable), as well as the name given to man both dead and alive, which have furnished an opportunity to the ignorant Church fathers for inventing a hell, which they have transformed into a burning instead of a freezing locality. [137]

It is, of course, evident that it is neither the Hyperboreans, nor the Cimmerians, the Arimaspes, nor even the Scyths — known to and communicating with the Greeks — who were our Atlanteans. But they were all the descendants of their last sub-races. The Pelasgians were certainly one of the root-races of future Greece, and were a remnant of a sub-race of Atlantis. Plato hints as much in speaking of the latter, whose name it is averred came from *pelagus*, the great sea. Noah’s Deluge is astronomical and allegorical, but it is not mythical, for the story is based upon the same archaic tradition of men — or rather of nations — which were saved during the cataclysms, in canoes, arks, and ships. No one would presume to say that the Chaldean Xisuthrus, the Hindu Vaivasvata, the Chinese Peirun — the “beloved of the gods,” who rescued him from the flood in a canoe — or the Swedish Belgamer, for whom the gods did the same in

the north, are all identical as a personage. But their legends have all sprung from the catastrophe which involved both the continent and the island of Atlantis.

The allegory about the antediluvian giants and their achievements in Sorcery is no myth. Biblical events *are* revealed indeed. But it is neither by the voice of God amid thunder and lightning on Mount Sinai, nor by a divine finger tracing the record on tablets of stone, but simply through tradition *via* pagan sources. It was not surely the Pentateuch that Diodorus was repeating when he wrote upon the Titans — the giants born of Heaven and Earth, or, rather, born of the Sons of God who took to themselves for wives the daughters of men who were fair. Nor was Pherecydes quoting from Genesis when giving details on those giants which are not to be found in the Jewish Scriptures. He says that the Hyperboreans were of the race of the Titans, which race descended from the earliest giants, and that it was that Hyperborean region which was the birth-place of the first giants. The Commentaries on the sacred books explain that the said region was the far north, the polar lands now, the pre-Lemurian earliest continent, embracing once upon a time the present Greenland, Spitzbergen, Sweden, Norway, etc.

But who were the *Nephilim* of Genesis vi. 4? There were Palaeolithic and Neolithic men in Palestine ages before the events recorded in the book of the Beginnings. The theological tradition identifies these Nephilim with hairy men or Satyrs, the latter being mythical in the Fifth Race and the former historical in both the Fourth and Fifth Races. We have stated elsewhere what the prototypes of these Satyrs were, and have spoken of the bestiality of the early and later Atlantean race. What is the meaning of Poseidon's amours under such a variety of *animal* forms? He became a dolphin to win Amphitrite; a horse, to seduce Ceres; a ram, to deceive Theophane, etc., etc. Poseidon is not only the personation of the Spirit and Race of Atlantis, but also of the vices of these giants. Gesenius and others devote an enormous space to the meaning of the word *Nephilim* and explain very little. But Esoteric records show these hairy creatures to be the last descendants of those Lemuro-Atlantean races, which begot children on female animals, of species now long extinct; thus producing *dumb* men, "monsters," as the Stanzas have it.

Now mythology, built upon Hesiod's Theogony, which is but a poetised record of actual traditions, or oral history, speaks of three giants, called Briareus, Kottos, and Gyges, living in a dark country where they were imprisoned by Kronos for their rebellion against him. All the three are endowed by myth with an hundred arms and fifty heads, the latter standing for races, the former for sub-races and tribes. Bearing in mind that in mythology every personage almost is a god or demi-god, and also a king or simple mortal in his second aspect; [138] and that both stand as symbols for lands, islands, powers of nature, elements, nations, races and sub-races, the esoteric Commentary will become comprehensible. It says that the three giants are three polar lands which have changed form several times, at each new cataclysm, or disappearance of one continent to make room for another. The whole globe is convulsed periodically; and has been so convulsed, since the appearance of the First Race, four times. Yet, though the whole face of the earth was transformed thereby each time, the conformation of the arctic and antarctic poles has but little altered. The polar lands unite and break off from each other into islands and peninsulas, yet remain ever the same. Therefore northern Asia is called the "eternal or perpetual land," and the Antarctic the "ever living" and "the concealed"; while the Mediterranean, Atlantic, Pacific and other regions disappear and reappear in turn, into and above the great waters.

From the first appearance of the great continent of Lemuria, the three polar giants had been imprisoned in their circle by Kronos. Their gaol is surrounded by a wall of bronze, and the exit is through gates fabricated by Poseidon (or Neptune, hence by the seas), which they cannot cross; and it is in that damp region, where eternal darkness reigns, that the three brothers languish. The Iliad (viii., 13) makes of it the Tartaros. When the gods and Titans rebelled in their turn against Zeus — the deity of the Fourth Race — the father of the gods bethought himself of the imprisoned giants in order to conquer the gods and Titans, and to precipitate the latter into Hades; or, in clearer words, to have Lemuria hurled amid thunder and lightning to the bottom of the seas, so as to make room for Atlantis, which was to be submerged and perish in its turn. [139] The geological upheaval and deluge of Thessaly was a repetition on a small scale of the great cataclysm; and, remaining impressed on the memory of the Greeks, was merged by them into, and confused with, the general fate of Atlantis. So, also, the war between the Rakshasas of Lanka and the Bharateans, the melee of the Atlanteans and Aryans in their supreme struggle, or the conflict between the Devs and Izeds (or Peris), became, ages later, the struggle of Titans, separated into two inimical camps, and still later the war between the angels of God and the angels of Satan. Historical facts became theological dogmas. Ambitious scholiasts, men of a small sub-race born but yesterday, and one of the latest issues of the Aryan stock, took upon themselves to overturn the

religious thought of the world, and succeeded. For nearly two thousand years they impressed thinking Humanity with the belief in the existence of Satan.

But as it is now the conviction of more than one Greek scholar — as it was that of Bailly and Voltaire — that Hesiod's theogony was based upon historical facts (*see Decharme's Mythol. de la Grece Antique*), it becomes easier for the occult teachings to find their way into the minds of thoughtful men, and therefore are these passages from mythology brought forward in our discussion upon modern learning in this *Addendum*.

Such symbolisms as are found in all the exoteric creeds, are so many landmarks of prehistoric truths. The sunny, happy land, the primitive cradle of the earliest human races, has become several times since then hyperborean and Saturnine [140]; thus showing the Golden Age and reign of Saturn from multiform aspects. It was many-sided in its character indeed — climatically, ethnologically and morally. For, the Third, Lemurian Race must be physiologically divided into the early androgynous and the later bi-sexual race; and the climate of its dwelling places and continents into that of an eternal spring and eternal winter, into life and death, purity and impurity. The Cycle of legends is ever being transformed on its journey by popular fancy. Yet it may be cleansed from the dross it has picked up on its way through many nations and through the countless minds which have added their own exuberant additions to the original facts. Leaving for a while the Greek interpretations we may seek for some more corroborations of the latter in the scientific and geological proofs.

VII. SCIENTIFIC AND GEOLOGICAL PROOFS OF THE EXISTENCE OF SEVERAL SUBMERGED CONTINENTS.

It may not be amiss — for the benefit of those who resolve the tradition of a lost Miocene Atlantis into an “antiquated myth,” to append a few scientific admissions on this point. Science, it is true, is largely indifferent to such questions. But there are Scientists ready to admit that, in any case, a cautious agnosticism as to geological problems concerning the remote past is far more philosophical than *a priori* denial, or even hasty generalizations on insufficient data.

Meanwhile two very interesting instances, that have been lately met with, may be pointed out as “confirming” certain passages in the letter of a Master, published in “Esoteric Buddhism.” The eminence of the authorities will not be questioned: —

<p>Extract from p. 61 of “Esoteric Buddhism.” No. 1. “The sinking of the Atlantis (the group of continents and islands) began during the Eocene period and it culminated in the Miocene, first in the <i>final disappearance of the largest, an event coincident with the elevation of the Alps</i>, and second in the sinking of the last of the fair islands mentioned by Plato.”</p>	<p>Extract from a Lecture by W. Pengelly, F.R.S., F.G.S. No. 1. “Was there, as some have believed, an Atlantis — a continent or Archipelago of large islands occupying the area of the North Atlantic? There is, perhaps, nothing unphilosophical in the hypothesis. For since, as geologists state, ‘<i>The Alps have acquired 4,000 and even in some places more than 10,000 feet of their present altitude since the commencement of the Eocene epoch</i>’ (Lyell’s Principles 2nd Ed. p. 256.) — a <i>post-Miocene depression might have carried the hypothetical Atlantis into almost abysmal depths.</i>”*</p>
<p>No. 2. “Lemuria cannot any more be confounded with the Atlantis continent than Europe with America. Both sank and were drowned with all their ‘gods’; yet, between the two catastrophes a short period of about some 700,000 years elapsed; Lemuria flourishing and ending her</p>	<p>No. 2. “It would be premature to say, because no evidence has yet been adduced, <i>that men may not have existed in the Eocene Age</i>, especially as it can be shown that <i>a race of men, the lowest we know of, co-exists with that remnant of the Eocene flora which still survives on the</i></p>

career just about that trifling lapse of time before the early *Eocene* Age, since its Race was the Third. Behold *the relics of that once great race in some of the flat-headed aborigines of your AUSTRALIA.*” (“Esoteric Buddhism,” p. 55.)

continent and islands of Australia.” (Extract from an article in “Popular Science Review,” Vol. V. p. 18, by Professor Seemann, Ph.D., F.L.S., P.A.S.). Haeckel, who fully accepts the reality of a former Lemuria, also regards the *Australians as direct descendants of the Lemurians.* “Persistent forms (of both his Lemurian stems,) are in all probability still surviving . . . Papuans and Hottentots . . . *Australians* . . . one division of the Malays.”

With regard to a former civilization, of which a *portion* of these degraded Australians are the last surviving offshoot, the opinion of Gerland is strongly suggestive. Commenting upon the religion and mythology of the tribes, he writes, “The statement that the Australian civilization (?) indicates a *higher grade*, is nowhere more clearly proved than here, where *everything resounds like the expiring voices of a previous and richer age.* The idea that the Australians have no religion or mythology is thoroughly false. But this religion is certainly *quite deteriorated.*” (Cited in Schmidt’s “*Doctrine of Descent of Darwinism,*” pp. 301-2.) As to his other statement, namely, that the Australians are a “division of the Malays” (*Vide* his ethnological theories in the “*Pedigree of Man*”), Haeckel is in error, if he classes the Australians with the rest. The Malays and Papuans are a *mixed* stock, resulting from the intermarriages of the low Atlantean sub-races with the Seventh sub-race of the Third Root-Race. Like the Hottentots, they are of indirect *Lemuro-Atlantean* descent. It is a most suggestive fact — to those concrete thinkers who demand a *physical* proof of Karma — that the lowest races of men are now rapidly dying out; a phenomenon largely due to an extraordinary sterility setting in among the women, from the time that they were first approached by the Europeans. A process of decimation is taking place all over the globe, among those races, whose “time is up” — among just those stocks, be it remarked, which esoteric philosophy regards as the senile representatives of lost archaic nations. It is inaccurate to maintain that the extinction of a lower race is *invariably* due to cruelties or abuses perpetrated by colonists. Change of diet, drunkenness, etc., etc., have done much; but those who rely on such data as offering an all-sufficient explanation of the crux, cannot meet the phalanx of facts now so closely arrayed. “Nothing,” says even the materialist Lefevre, “can save *those that have run their course.* . . . It would be necessary to extend their *destined cycle.* . . . *The peoples that have been most spared . . . Hawaiians or Maories, have been no less decimated than the tribes massacred or tainted by European intrusion.*” (“*Philosophy,*” p. 508.)

True; but is not the phenomenon here confirmed of the operation of CYCLIC LAW difficult to account for on materialist lines? Whence the “destined cycle” and the order here testified to? Why does this (Karmic) sterility attack and root out certain races at their “appointed hour”? The answer that it is due to a “mental disproportion” between the colonizing and aboriginal races is obviously evasive, since it does not explain the sudden “*checks to fertility*” which so frequently supervene. The dying out of the Hawaiians, for instance, is one of the most mysterious problems of the day. Ethnology will sooner or later have to recognize with Occultists that the true solution has to be sought for in a comprehension of the workings of Karma. As Lefevre remarks, “the time is drawing near when there will remain nothing but three great human types” (before the Sixth Root-Race dawns), the white (Aryan, Fifth Root-Race), the yellow, and the African negro — with their crossings (Atlanto-European divisions). Redskins, Eskimos, Papuans, Australians, Polynesians, etc., etc. — all are dying out. Those who realize that every Root-Race runs through a gamut of seven sub-races with seven branchlets, etc., will understand the “why.” The tide-wave of incarnating EGOS has rolled past them to harvest experience in more developed and less senile stocks; and their extinction is hence a Karmic necessity. Some extraordinary and *unexplained* statistics as to Race extinction are given in de Quatrefages’ “*Human Species,*” p. 428 *et seq.* No solution, except on the occult lines, is able to account for these.

But we have digressed from our direct subject. Let us hear now what Professor Huxley has to say on the subject of former Atlantic and Pacific Continents.

He writes in “NATURE,” Nov. 4th, 1880: “There is nothing, so far as I am aware, in the biological or geological evidence at present accessible, to render untenable the hypothesis that *an area of the mid-Atlantic or Pacific sea-bed*

as big as Europe, should have been uplifted as high as Mont Blanc, and have subsided again, any time since the Palaeozoic epoch, if there were any grounds for entertaining it.”

That is to say, then, that there is nothing which can militate against *positive* evidence to the fact; nothing, therefore, against the geological postulates of the Esoteric Philosophy. Dr. Seemann assures us in the “Popular Science Review” (Vol. V., p. 18), article “*Australia and Europe formerly one Continent,*” [142] that: —

“The facts which botanists have accumulated for reconstructing these lost maps of the globe are rather comprehensive; and they have not been backward in demonstrating the former existence of large tracts of solid land in parts now occupied by the great oceans. The many striking points of contact between the present flora of the United States and Eastern Asia, induced them to assume that, during the present order of things, there existed a continental connection between South-Eastern Asia and Western America. The singular correspondence of the present flora of the Southern United States with that of the lignite flora of Europe induces them to believe that, *in the Miocene period, Europe and America were connected by a land passage, of which Iceland, Madeira, and the other Atlantic islands are remnants; that, in fact, the story of an Atlantis, which an Egyptian priest told to Solon, is not purely fictitious, but rests on a solid historical basis.* . . . Europe of the Eocene period received the plants which spread over mountains and plains, valleys and river-banks (from Asia generally), neither exclusively from the South nor from the East. The west also furnished additions, and if at that period these were rather meagre, they show, at all events, that the bridge was already building, which, at a late period, was to facilitate communication between the two continents in such a remarkable manner. At that time some plants of the Western Continent began to reach Europe by means of the *island of Atlantis*, then probably just rising (?) above the ocean.”

And in another number of the same review (Vol. I., p. 143) Mr. Duppa Crotch, M.A., F.L.S., in an article entitled “*The Norwegian Lemming and its Migrations,*” alludes to the same subject.

“Is it probable that land could have existed where now the broad Atlantic rolls? All tradition says so: old Egyptian records speak of Atlantis, as Strabo and others have told us. The Sahara itself is the sand of an ancient sea, and the shells which are found upon its surface prove that, no longer ago than the Miocene period, a sea rolled over what is now desert. The voyage of the ‘Challenger’ has proved the existence of *three long ridges* [143] *in the Atlantic Ocean,* [144] *one extending for more than three thousand miles,* and lateral spurs may, by connecting these ridges, account for *the marvellous similarity of the fauna of the Atlantic islands.* [145] . . . The submerged continent of LEMURIA, in what is now the Indian Ocean, *is considered to afford an explanation of many difficulties in the distribution of organic life,* and, I think, the existence of a MIOCENE ATLANTIS will be found to have a *strong elucidative bearing on subjects of greater interest* [Truly so!] than the migration of the lemming. At all events, if it can be shown that land existed in former ages where the North Atlantic now rolls, not only is a motive found for these apparently suicidal migrations, but also a strong collateral proof that what we call instincts are but the blind and sometimes even prejudicial inheritance of previously acquired experiences.”

(At certain periods, we learn, multitudes of these animals swim to sea and perish. Coming, as they do, from all parts of Norway, the powerful instinct which survives throughout ages as an inheritance from their progenitors impels them to seek a continent, once existing but now submerged beneath the ocean, and to court a watery grave.)

In an article containing a criticism of Mr. A. R. Wallace’s “Island Life” — a work devoted largely to the question of the distribution of animals, etc. — Mr. Starkie Gardiner writes (“Subsidence and Elevation,” Geological Magazine, June, 1881): —

“By a process of reasoning supported by a large array of facts of different kinds, he arrives at the conclusion that the distribution of life upon the land as we now see it, has been accomplished without the aid of important changes in the relative positions of continents and seas. Yet if we accept his views, we must believe that Asia and Africa, Madagascar and Africa, New Zealand and Australia, Europe and America, have been united at some period not remote geologically, and that seas to the depth of 1,000 fathoms have been bridged over; but we must treat as utterly gratuitous and entirely opposed to all the evidences at our command (!), the supposition that temperate Europe and temperate America, Australia, and South America, have ever been connected except by way of the Arctic or Antarctic circles and that lands now separated by seas of more than 1,000 fathoms depth have ever been united. Mr. Wallace, it

must be admitted, has succeeded in explaining the chief features of existing life-distribution, without bridging the Atlantic or Pacific, except towards the Poles, yet I cannot help thinking that some of the facts *might perhaps be more easily explained by admitting the former existence of the connection between the coast of Chile and Polynesia* [146] *and Great Britain and Florida*, shadowed by the submarine banks which stretch between them. Nothing is urged that renders the more direct connection impossible, and no *physical reason is advanced why the floor of the ocean should not be upheaved from any depth*. The route by which (according to the anti-Atlantean and Lemurian hypotheses of Wallace) the *floras* of South America and Australia are supposed to have mingled, is beset by almost insurmountable obstacles, and the apparently sudden arrival of a number of sub-tropical American plants in our Eocene flora, necessitates a connection more to the south than the present 1,000 fathom line . . . forces are unceasingly acting, and there is *no reason why an elevating force once set in action in the centre of an ocean should cease to act until a continent is formed*. They have acted and lifted out from the sea, in comparatively recent geological times, the loftiest mountains on earth. Mr. Wallace himself admits repeatedly that sea-beds have been elevated 1,000 fathoms and islands have risen up from the depths of 3,000 fathoms; and to suppose that the upheaving forces are limited in power, is, it seems to me, ‘utterly gratuitous and entirely opposed to all the evidences at our command.’ “

The “Father” of English Geology — Sir Charles Lyell — was an Uniformitarian in his views of continental formation. On page 492 of his “Antiquity of Man” we find him saying: —

“Professor Unger (Die versunkene Insel Atlantis) and Heer (Flora Tertiaria Helvetiae) have admitted on botanical grounds the *former existence of an Atlantic Continent during some part of the Tertiary Period*, as affording the only plausible explanation that can be imagined of the analogy between the Miocene flora of central Europe, and the existing flora of Eastern America. Professor Oliver, on the other hand, after showing how many of the American types found fossil in Europe are common to Japan, inclines to the theory, first advanced by Dr. Asa Gray, that the migration of species, to which the community of types in the Eastern States of North America, and the Miocene flora of Europe is due, took place when there was an overland communication from America to central Asia between the fiftieth and sixtieth parallels of latitude, or south of Behring Straits, following the direction of the Aleutian islands. By this course they *may* have made their way, at any epoch, Miocene, Pliocene, or Pleistocene, antecedently to the Glacial Epoch, to Amoorland, on the East coast of North Asia.”

The unnecessary difficulties and complications here incurred in order to avoid the hypothesis of an Atlantic Continent, are really too apparent to escape notice. *If the botanical evidences stood alone*, scepticism would be half legitimate; but in this case all branches of science converge to one point. Science has made blunders, and has exposed itself to greater errors than the admission of our two now invisible continents, would lay it open to. It has denied even the undeniable, from the days of the mathematician Laplace down to our own, and that only a few years ago. [147] We have Professor Huxley’s authority for saying that there is no *a priori* improbability whatever against possible evidences supporting the belief. (*Vide supra.*) But now that the POSITIVE EVIDENCE *is brought forward*, will that eminent scientist admit the corollary?

Touching on the problem in another place (“*Principles of Geology*,” pp. 12-13), Sir Charles Lyell tells us: “Respecting the cosmogony of the Egyptian priests, we gather much information from writers of the Grecian sects, who borrowed almost all their tenets from Egypt, and amongst others that of the former successive destruction and renovation of the world. (*Continental*, not cosmic, catastrophes.) We learn from Plutarch that this was the theme of one of the hymns of Orpheus, so celebrated in the fabulous ages of Greece. It was brought by him from the banks of the Nile; and we even find in his verses, as in the Indian systems, a definite period assigned for the duration of every successive World. The returns of great catastrophes were determined by the present period of the Magnus Annus, or great year — a cycle composed of the revolutions of the sun, moon, and planets, and terminating when these return together to the sign whence they were supposed at some remote epoch to set out. We learn particularly from the *Timaeus* of Plato that the Egyptians believed the world to be subject to occasional conflagrations and deluges. The sect of the Stoics adopted most fully the system of catastrophes destined at intervals to destroy the world. These, they taught, were of two kinds — the cataclysm, *or destruction by water*, and the *Ecpyrosis, or destruction by fire* (submarine volcanoes). From the Egyptians they derived the doctrine of the gradual debasement of man from a state of innocence” (nascent simplicity of the first sub-races of each Root-Race). “Towards the termination of each era the gods could no longer bear with the wickedness of man, and a shock of the elements, or a deluge, overwhelmed them;

(vide degeneracy into magical practices and gross animality of the Atlanteans) after which calamity, Astraea again descended on the earth to renew the golden age.” (Dawn of a new Root-Race.)

Astraea, the goddess of justice, is the last of the deities to forsake the earth, when the gods are said to abandon it and *be taken up into heaven by Jupiter again*. But, no sooner does Zeus carry away from earth Ganymedes (the object of *lust*, personified) than the father of the gods throws down Astraea back on the earth again, on which she *falls upon her head*. Astraea is *Virgo*, the constellation of the Zodiac. Astronomically it has a very plain significance, and one which gives the Key to the occult meaning. But it is inseparable from *Leo*, the sign that precedes it, and from the Pleiades and their sisters, the Hyades, of which Aldebaran is the brilliant leader. All of these are connected with the periodical renovations of the earth, with regard to its continents — even Ganymedes, who in astronomy is *Aquarius*. It was already shown that while the South Pole is the *pit* (or the infernal regions figuratively and cosmologically), the North Pole is geographically the first continent; while astronomically and metaphorically the celestial pole, with its pole star in *heaven*, is Meru, or the seat of Brahma, the throne of Jupiter, etc. For in the age when the gods forsook the earth and were said to ascend into heaven, the ecliptic had become parallel with the meridian, and part of the Zodiac appeared to descend from the north pole to the north horizon. Aldebaran was in conjunction then with the Sun, as it was 40,000 years ago, at the great festival in commemoration of that *Magnus Annus*, of which Plutarch was speaking. Since that year (40,000 years ago) there has been a retrograde motion of the equator, and about 31,000 years ago Aldebaran was in conjunction with the vernal equinoctial point. The part assigned to *Taurus*, even in Christian mysticism, is too well known to need repetition. The famous Orphic hymn on the great periodical cataclysm divulges the whole esotericism of the event. Pluto (in the pit) carries off Eurydice, bitten by the (polar) serpent. Then *Leo*, the *lion*, is vanquished. Now, when the Lion is *in the pit*, or below the south pole, then *Virgo*, as the next sign, follows him, and when her head, down to the waist, is *below* the South horizon — she is *inverted*. On the other hand, the Hyades are the rain or *Deluge* constellations; and *Aldebaran* (he who follows, or *succeeds* the daughters of Atlas, or the Pleiades) looks down from the eye of *Taurus*. It is from this point of the ecliptic that the calculations of the new cycle were commenced. The student has to remember also, that when Ganymedes (*Aquarius*) is raised to heaven (or above the horizon of the North Pole) *Virgo* or *Astraea*, who is *Venus-Lucifer*, descends head downwards below the horizon of the South Pole, or the pit; which *pit*, or the pole, is also the Great Dragon, or the Flood. Let the student exercise his intuition by placing these facts together; no more can be said.

“The connection,” comments Lyell, “between the doctrine of successive catastrophes and repeated deteriorations in the moral character of the human race, is more intimate and natural than might at first be imagined. For, in a rude state of society, all great calamities are regarded by the people as judgments of God on the wickedness of man. . . . In like manner in the account given to Solon by the Egyptian priests of the submersion of the island of Atlantis under the waters of the ocean, after repeated shocks of an earthquake, we find that *the event happened when Jupiter had seen the moral depravity of the inhabitants.*”

True; but was it not owing to the fact that all esoteric truths were given out to the public by the Initiates of the temples *under the guise of allegories*? “Jupiter,” is merely the personification of that immutable Cyclic Law, which arrests the downward tendency of each Root-Race, after attaining the zenith of its glory. [148] Unless we hold with Prof. John Fiske’s singularly dogmatic opinion [149] that *every* myth “is an explanation by the uncivilized mind, of some natural phenomenon; not an allegory, not an esoteric symbol, for the ingenuity is wasted (!!) which strives to detect in myths the remnants of a refined primeval science — but an explanation. Primitive men had no profound science to perpetuate by means of allegory [How does Mr. Fiske know?], nor were they such sorry pedants as to talk in riddles when plain language would serve their purpose.” We venture to say the language of the *Initiated* few was far more “plain,” and their science-philosophy far more comprehensive and satisfying alike to the physical and *spiritual* wants of man, than even the terminology and system respectively elaborated by Mr. Fiske’s Master — Herbert Spencer. What, however, is Sir Charles Lyell’s “explanation” of the “myth”? Certainly, he in no way countenances the idea of its “astronomical” origin, as asserted by some writers.

The two interpreters are entirely at variance with one another. Lyell’s solution is as follows. A disbeliever in cataclysmal changes, from the absence (?) of any reliable historical data on the point, as well as from a strong bias to the Uniformitarian conceptions of geologic changes, [150] he attempts to trace the Atlantis “tradition” to the following sources: —

- (1) Barbarous tribes connect catastrophes with an avenging God, who is assumed in this way to punish immoral races.
- (2) *Hence* the commencement of a new race is logically a virtuous one.
- (3) The primary source of the geologic basis of the tradition was Asia — a continent subject to violent earthquakes. Exaggerated accounts would thus be handed down the ages.
- (4) Egypt, being herself free from earthquakes, nevertheless based her not inconsiderable geologic knowledge on these cataclysmal traditions.

An ingenious “explanation,” as all such are. But proving a negative is proverbially a difficult task. Students of esoteric science, who know what the resources of the Egyptian priesthood really were, need no such laboured hypothesis. Moreover, while an imaginative theorist is always able to furnish a reasonable solution of problems which, in one branch of science, seem to necessitate the hypothesis of periodical cataclysmic changes on the surface of our planet, the impartial critic, who is not a specialist, will recognise the immense difficulty of explaining away the *cumulative* evidences, — namely, the archaeological, ethnological, geological, traditional, botanical, and even biological — in favour of former continents now submerged. When each science is fighting for its own hand, the cumulative force of the evidence in its collectivity is almost invariably lost sight of.

In the “*Theosophist*” (August, 1880), we wrote: “We have as evidences the most ancient traditions of various and wide-separated peoples — legends in India, in ancient Greece, Madagascar, Sumatra, Java, and all the principal isles of Polynesia, as well as the legends of both Americas. Among savages; and in the traditions of the richest literature in the world — the Sanskrit literature of India — there is an agreement in saying, that, ages ago, *there existed in the Pacific Ocean, a large Continent, which by a geological cataclysm was engulfed by the sea,* [151] (Lemuria). And it is our firm belief . . . that most, if not all, of the islands from the Malayan archipelago to Polynesia, are fragments of that once immense submerged Continent. Both Malacca and Polynesia, which lie at the two extremities of the ocean, and which, since the memory of man never had, and never could have any intercourse with, or even a knowledge of each other, have yet a tradition common to all the islands and islets, that their respective countries extended far, far into the Sea: that there were in the world but two immense continents, one inhabited by yellow, the other by dark men; and that the Ocean, by command of the gods, and to punish them for their incessant quarrelling, swallowed them up. Notwithstanding the geographical proof that New Zealand, the Sandwich and Easter Islands, are at a distance from each other of between 800 and 1,000 leagues, and that, according to every testimony, neither these nor any other intermediate islands, for instance, the Marquesan, Society, Fiji, Tahitian, Samoan, and other islands, could, since they became islands, ignorant as their people were of the compass, have communicated with each other before the arrival of Europeans; yet they one and all maintain that their respective countries extended far toward the West, on the Asian side. Moreover, with very small differences, they all speak dialects evidently of the same language; and understand each other with little difficulty; have the same religious beliefs and superstitions; and pretty much the same customs. And as few of the Polynesian islands were discovered earlier than a century ago, the Pacific Ocean itself being unknown to Europe till the days of Columbus, and as these islanders have never ceased repeating the same old traditions since the Europeans first set foot on their shores, it seems to us a logical inference that our theory is nearer to the truth than any other. “Chance would have to change its name and meaning, were all this due but to chance alone.”

“A great series of animal-geographical facts,” declares Professor Schmidt, writing in defence of the hypothesis of a former Lemuria, “is explicable only on the theory of the former existence of *a Southern Continent of which Australia is a remnant. . . .*” [the distribution of species] “points to the vanished land of the South where perhaps the *home of the progenitors of the Maki of Madagascar* may also be looked for.” [152]

Mr. A. R. Wallace, in his “Malay Archipelago,” arrives at the following conclusion after a review of the mass of evidence at hand: — “The inference that we must draw from these facts is undoubtedly that the whole of the islands eastwards beyond Borneo and Sumatra do essentially form part of *a former Australian or Pacific Continent . . .* This continent must have been broken up before the extreme south-eastern portion of Asia was raised above the waters of the ocean, for a great part of the land of Borneo and Java is known to be geologically of quite recent formation.”

According to Haeckel: — “Southern Asia itself was not the earliest cradle of the human race, but *Lemuria*, a continent that lay to the South of Asia, and sank later on beneath the surface of the Indian Ocean.” (“*Pedigree of Man*,” *Eng. Trans.* p. 73.) In one sense Haeckel is right as to Lemuria — the “cradle of the Human race.” That continent was the home of the first *physical* Human Stock — the later Third-Race Men. Previous to that epoch the Races were far less consolidated and physiologically quite different. (Haeckel makes Lemuria extend from *Sunda Island to Africa and Madagascar* and eastwards to *Upper India*.)

Professor Rutimeyer, the eminent Palaeontologist, asks: — “Need the conjecture that the almost exclusively graminivorous and insectivorous marsupials, sloths, armadilloes, ant-eaters and ostriches, once possessed an actual point of union in a *Southern Continent of which the present flora of Terra del Fuego and Australia must be the remains* — need this conjecture raise difficulties at a moment when from their fossil remains, Heer restores to sight the ancient forests of Smith’s Sound and Spitzbergen.” (Cited in Schmidt’s “*Doctrine of Descent and Darwinism*,” p. 237.)

Having now dealt generally with the broad scientific attitude on the two questions, it will, perhaps, conduce to an agreeable brevity, if we sum up the more striking isolated facts in favour of that fundamental contention of Esoteric Ethnologists — the reality of Atlantis. Lemuria is so widely accepted, that further pursuit of the subject is unnecessary. With regard, however, to the former, it is found that: —

(1) The Miocene flora of Europe have their most numerous and striking analogues in the flora of the United States. In the forests of Virginia and Florida are found the magnolias, tulip-trees, evergreen oaks, plane trees, etc., etc., etc., which correspond with European Tertiary flora term for term. How was the migration effected, if we exclude the theory of an Atlantic Continent bridging the ocean between America and Europe? The proposed “explanation” to the effect that the transition was by way of Asia and the Aleutian islands is a mere uncalled-for theory, obviously upset by the fact that a large number of these flora *only appear EAST of the Rocky Mountains*. This also negatives the idea of a trans-Pacific migration. They are now superseded by European continents and islands to the North.

(2) Skulls exhumed on the banks of the Danube and Rhine bear a striking similarity to those of the Caribs and Old Peruvians (Littre). Monuments have been exhumed in Central America, which bear representations of undoubted negro heads and faces. How are such facts to be accounted for except on the Atlantean hypothesis? What is now N. W. Africa was once connected with Atlantis by a network of islands, few of which now remain.

(3) According to Farrar (“*Families of Speech*”) the “isolated language” of the Basques has no affinities with the other languages [153] of Europe, but with “the aboriginal languages of the vast opposite continent (America) and those alone.” Professor Broca is also of the same opinion.

Palaeolithic European man of the Miocene and Pliocene times was a pure Atlantean, as we have previously stated. The Basques are, of course, of a much later date than this, but their affinities, as here shown, go far to prove the original extraction of their remote ancestors. The “mysterious” affinity between their tongue and that of the Dravidian races of India will be understood by those who have followed our outline of continental formations and shiftings.

(4) Stones have been found in the Canary Islands bearing sculptured symbols similar to those found on the shore of Lake Superior. Berthollet was induced by such evidence to postulate the unity of race of the early men of Canary Islands and America (Cf. Benjamin, the “*Atlantic Islands*,” p. 130.)

The Guanches of the Canary Islands were lineal descendants of the Atlanteans. This fact will account for the *great stature* evidenced by their old skeletons, as well as by those of their European congeners the Cro-Magnon Palaeolithic men.

(5) Any experienced mariner has but to navigate the fathomless ocean along the *Canary Islands* to ask himself the question when or how that group of volcanic and rocky little islands has been formed, surrounded on every side by that vast watery space. Such frequent questions led finally to the expedition of the famous Leopold von Buch, which took place in the first quarter of the present century. Some geologists maintained that the volcanic islands had been raised right from the bottom of the ocean, the depth of which in the immediate vicinity of the island varies from 6,000

to 18,000 feet. Others were inclined to see in these groups, including Madeira, the Azores, and the islands of Cape de Verdes — the remnants of a gigantic but submerged continent which had once united Africa with America. The latter men of science supported their hypothesis by a mass of evidence in its favour, drawn from ancient “myths.” Hoary “superstitions,” such as the fairy-like Atlantis of Plato, the *Garden of Hesperides*, Atlas supporting the world on his shoulders, all of them mythoi connected with the peak of Teneriffe, did not go far with sceptical Science. The identity of animal and vegetable species — showing either a previous connection between America and the remaining groups of the islands — (the hypothesis of their having been drifted from the New to the Old World by the waves was too absurd to stand long) — found more serious consideration. But it is only quite lately, and after Donnelly’s book had been published several years, that the theory has greater chances than ever of becoming an accepted fact. *Fossils found on the Eastern Coast of South America have now been proved to belong to the Jurassic formations, and are nearly identical with the Jurassic fossils of Western Europe and Northern Africa. The geological structure of both coasts is also almost identical;* the resemblance between the smaller marine animals dwelling in the more shallow waters of South America, the Western African, and the South European coasts, is also very great. All such facts are bound to bring naturalists to the conclusion that there has been, in distant pre-historic ages, a continent which extended from the coast of Venezuela, across the Atlantic Ocean, to the Canarese Islands and North Africa, and from Newfoundland nearly to the coast of France.

(6) The great resemblance between the Jurassic fossils of South America, North Africa, and Western Europe is a striking enough fact in itself, and admits of no explanation, unless the ocean is bridged with an Atlantis. But why, also, is there so *marked a similarity between the fauna* (animal life) *of the — now — isolated Atlantic islands?* Why did the specimens of *Brazilian fauna* dredged up by Sir C. Wyville Thompson resemble those of *Western Europe?* Why does a resemblance exist between many of the *West African* and *West Indian* animal groups? Again:

“When the animals and plants of the Old and New World are compared, one *cannot but be struck with their identity*; all, nearly all belong to the same genera, while many, even of the species, are common to both continents . . . indicating that they radiated *from a common centre*” (*Atlantis*), (“*Westminster Review*,” Jan., 1872).

The horse, according to Science, originated in America. At least, a large proportion of the once “missing links” connecting it with inferior forms have been exhumed from American strata. *How did the horse penetrate into Europe and Asia, if no land communication bridged the oceanic interspaces?* Or if it is asserted that the horse originated in the New World, how did such forms as the hipparion, etc., get into America in the first instance on the migration hypothesis?

Again “Buffon had . . . remarked in the *repetition of the African in the American fauna*, how, for example, the *lama* is a juvenescent and feeble *copy of the camel*, and how the *puma* of the New *represented the lion* of the Old World” (*Schmidt*, “*Doctrine of Descent and Darwinism*,” p. 223).

(7) The following quotation runs with No. (2), but its significance is such and the writer cited so authoritative, that it deserves a place to itself: —

“With regard to the *primitive dolichocephalae of America*, I entertain a hypothesis still more bold, namely, that they are *nearly related to the Guanches of the Canary Islands, and to the Atlantic populations of Africa*, the Moors, Tuaricks, Copts, which Latham comprises under the name of Egyptian-Atlantidae. We find *one and the same form of skull in the Canary Islands, in front of the African coast, and in the Carib islands, on the opposite coast which faces Africa*. The colour of the skin on both sides of the Atlantic is represented in these populations as being of a reddish-brown.” (Professor Retzius, “*Smithsonian Report*,” 1859, p. 266.)

If, then, Basques and Cro-Magnon Cave-Men are of the same race as the Canarese Guanches, it follows that the former are also allied to the aborigines of America. This is the conclusion which the independent investigations of Retzius, Virchow, and de Quatrefages necessitate. The *Atlantean affinities* of these three types become patent.

(8) The sea-soundings undertaken by H.M.S. “Challenger” and the “Dolphin,” have established the fact that a huge elevation some 3,000 *miles in length*, projecting upwards from the abysmal depths of the Atlantic, extends from a point near the British Islands southwards, curving round near Cape de Verde, and running in a south-easterly direction

along the West African Coast. This elevation averages some *9,000 feet in height*, and rises above the waves at the Azores, Ascension, and other places. In the ocean depths around the neighbourhood of the former the ribs of a former massive piece of land have been discovered (*vide* investigations of United States Ship “Dolphin” and others). “The inequalities, the *mountains and valleys* of its surface *could never have been produced in accordance with any known laws for the deposition of sediment, nor by submarine elevation*; but, on the contrary, must have been carved by agencies acting above the water-level.” — (*Scientific American*, July 28th, 1877). It is most probable that necks of land formerly existed knitting Atlantis to South America, somewhere above the mouth of the Amazon; to Africa near Cape de Verde, while a similar point of juncture with Spain is not unlikely, as contended for by Donnelly. (*Vide* his chart, “Atlantis,” p. 47, Eng. Ed., 1884, though he deals with only a fragment of the *real* continent.) Whether the latter existed or not, is of no consequence, as the fact that (what is now) N. W. Africa was — before the elevation of the Sahara and the rupture of the Gibraltar connection — an extension of Spain. Consequently no difficulty can be raised as to how the migration of the European fauna (etc.) took place.

Enough has now been said from the *purely scientific standpoint*, and it is needless, in view of the manner in which the subject has now been developed on the lines of *esoteric knowledge*, to swell the mass of testimony further. In conclusion, the words of one of the most intuitive writers of the day may be cited as admirably illustrative of the opinions of the occultist, who awaits in patience the dawn of the coming day: —

“We are but beginning to understand the past; one hundred years ago the world knew nothing of Pompeii or Herculaneum; nothing of the lingual tie that binds together the Indo-European nations; nothing of the significance of the vast volume of inscriptions upon the tombs and temples of Egypt; nothing of the meaning of the arrow-headed inscriptions of Babylon; nothing of the marvellous civilizations revealed in the remains of Yucatan, Mexico, and Peru. We are on the threshold. Scientific investigation is advancing with giant strides. Who shall say that one hundred years from now, the great museums of the world may not be adorned with gems, statues, arms, and implements from Atlantis, while the libraries of the world shall contain translations of its inscriptions, throwing new light upon all the past history of the human race, and all the great problems which now perplex the thinkers of to-day.” [154]

And now to conclude.

We have concerned ourself with the ancient records of the nations, with the doctrine of chronological and psychic cycles, of which these records are the tangible proof; and with many other subjects, which may, at first sight, seem out of place in this volume.

But they were necessary in truth. In dealing with the secret annals and traditions of so many nations, whose very origins have never been ascertained on more secure grounds than inferential suppositions, in giving out the beliefs and philosophy of more than *prehistoric* races, it is not quite as easy to deal with the subject matter as it would be if only the philosophy of one special race, and its evolution, were concerned. The Secret Doctrine is the common property of the countless millions of men born under various climates, in times with which History refuses to deal, and to which esoteric teachings assign dates incompatible with the theories of Geology and Anthropology. The birth and evolution of the Sacred Science of the Past are lost in the very night of Time; and that, even, which is historic — *i.e.*, that which is found scattered hither and thither throughout ancient classical literature — is, in almost every case, attributed by modern criticism to lack of observation in the ancient writers, or to superstition born out of the ignorance of antiquity. It is, therefore, impossible to treat this subject as one would the ordinary evolution of an art or science in some well-known historical nation. It is only by bringing before the reader an abundance of proofs all tending to show that in every age, under every condition of civilization and knowledge, the educated classes of every nation made themselves the more or less faithful echoes of one identical system and its fundamental traditions — that he can be made to see that so many streams of the same water must have had a common source from which they started. What was this source? If coming events are said to cast their shadows before, past events cannot fail to leave their impress behind them. It is, then, by those shadows of the hoary Past and their fantastic silhouettes on the external screen of every religion and philosophy, that we can, by checking them as we go along, and comparing them, trace out finally the body that produced them. There must be truth and fact in that which every people of antiquity accepted and made the foundation of its religions and its faith. Moreover, as Haliburton said, “Hear one side, and you will be in the dark; hear both sides, and all will be clear.” The public has hitherto had access to, and heard but one side — or rather the two one-sided views of two diametrically opposed classes of men, whose *prima facie* propositions or respective

premises differ widely, but whose final conclusions are the same — Science and Theology. And now our readers have an opportunity to hear the other — the defendants' — justification on and learn the nature of our arguments.

Were the public to be left to its old opinions: namely, on one side, that Occultism, Magic, the legends of old, etc., were all the outcome of ignorance and superstition; and on the other, that everything outside the orthodox groove was the work of the devil, what would be the result? In other words, had no theosophical and mystic literature obtained a hearing for the few last years, the present work would have had a poor chance of impartial consideration. It would have been proclaimed — and by many will still be so proclaimed — a fairy tale woven out of abstruse problems, poised in, and based on the air; built of soap bubbles, bursting at the slightest touch of serious reflection, with *no* foundation, as it would be alleged, to stand upon. Even “the ancient *superstitious* and *credulous* classics” have no word of reference to it in clear and unmistakable terms, and the symbols themselves fail to yield a hint at the existence of such a system. Such would be the verdict of all. But when it becomes undeniably proven that the claim of the modern Asiatic nations to a Secret Science and an esoteric history of the world, is based on fact; that, though hitherto unknown to the masses and a veiled mystery even to the learned, (because they never had the key to a right understanding of the abundant hints thrown out by the ancient classics), it is still no fairy tale, but an actuality — then the present work will become but the pioneer of many more such books. The statement that hitherto even the keys discovered by some great scholars have proved too rusty for use, and that they were but the silent witnesses that there do exist mysteries behind the veil which are unreachable without a new key — is borne out by too many proofs to be easily dismissed. An instance may be given as an illustration out of the history of Freemasonry.

In his “Franc-maçonnerie Occulte,” rightly or wrongly, Ragon, an illustrious and learned Belgian Mason, reproaches the English Masons with having *materialized* and dishonoured Masonry, once based upon the Ancient Mysteries, by adopting, owing to a mistaken notion of the origin of the craft, the name of *Free Masonry* and *Free Masons*. The mistake is due, he says, to those who connect Masonry *with the building* of Solomon’s Temple, deriving its origin from it. He derides the idea, and says: . . . “The *Franc Mason* (which is not *maçon libre*, or free masonry) knew well when adopting the title, that it was no question of *building a wall*, but that of *being initiated into the ancient Mysteries* veiled under the name of *Francmaçonnerie* (Freemasonry); that his work was only to be the continuation or the renovation of the ancient mysteries, and that he was to become a *mason* after the manner of *Apollo* or *Amphion*. And do not we know that the ancient *initiated* poets, when speaking of *the foundation of a city*, meant thereby the *establishment of a doctrine*? Thus *Neptune*, the god of reasoning, and *Apollo*, the god of the *hidden* things, presented themselves as masons before Laomedon, Priam’s father, to help him to build the city of Troy — that is to say, to establish the Trojan religion.” (*Maçonnerie Orthodoxe*, p. 44.)

Such *veiled* sentences with double meaning abound in ancient classical writers. Therefore, had an attempt been made to show that, *e.g.*, Laomedon was the founder of a branch of archaic mysteries in which the earth-bound material soul (the fourth principle), was personified in Menelaus’ faithless wife (the fair Helen), if Ragon had not come to corroborate what we asserted, we might be told that no classical author speaks of it, and that Homer shows Laomedon building a *city*, not an *esoteric worship* or MYSTERIES! And who are those left now, save a few *Initiates*, who understand the language and correct meaning of such symbolical terms?

But after having pointed to many a misconceived symbol bearing on our thesis, there still remains more than one difficulty to be overcome. Most important among several such obstacles is that of chronology. But this could hardly be helped.

Wedge in between theological chronology and that of the geologists, backed by all the materialistic Anthropologists who assign dates to man and nature which fit in with their own theories alone — what could the writer do except what is being done? Namely, since theology places the Deluge 2448 B.C., and the World’s Creation only 5890 years ago; and since the accurate researches by the methods of *exact* Science, have led the geologists and physicists to assign to the incrustated age of our Globe between 10 million and 1,000 million of years [155] (a *trifling* difference, verily!): and the Anthropologists to vary their divergence of opinion as to the appearance of man — between 25,000 and 500,000 of years — what can one who studies the Occult doctrine do, but come out and bravely present the esoteric calculations before the world?

But to do this, corroboration by even a few “historical” proofs was necessary, though all know the real value of the so-called “historical evidence.” For, whether man had appeared on earth 18,000 or 18,000,000 years ago, can make no difference to profane History, since it begins hardly a couple of thousand years before our era, and since, even then, it grapples hopelessly with the clash and din of contradictory and mutually-destroying opinions around it. Nevertheless, in view of the respect the average reader has been brought up in for exact science, even that short *Past* would remain meaningless, unless the esoteric teachings were corroborated and supported on the spot — *whenever possible* — by references to historical names of a so-called *historical* period. This is the only guide that can be given to the beginner before he is permitted to start among the (to him) unfamiliar windings of that dark labyrinth called the pre-historic ages. This necessity has been complied with. It is only hoped that the desire to do so, which has led the writer to be constantly bringing ancient and modern evidence as a corroboration of the Archaic and quite unhistoric Past, will not bring on her the accusation of having sorely jumbled up without order or method the various and widely-separated periods of history and tradition. But literary form and method had to be sacrificed to the greater clearness of the general exposition.

To accomplish the proposed task, the writer had to resort to the rather unusual means of dividing each volume or Book into three Parts; the first of which only is the consecutive, though very fragmentary, history of the Cosmogony and the Evolution of Man on this globe. But these two volumes had to serve as a PROLOGUE, and prepare the reader’s mind for those which shall now follow. In treating of Cosmogony and then of the Anthropogenesis of mankind, it was necessary to show that no religion, since the very earliest, has ever been entirely based on fiction, as none was the object of special revelation; and that it is dogma alone which has ever been killing primeval truth. Finally, that no human-born doctrine, no creed, however sanctified by custom and antiquity, can compare in sacredness with the religion of Nature. The Key of Wisdom that unlocks the massive gates leading to the arcana of the innermost sanctuaries can be found hidden in her bosom only: and that bosom is in the countries pointed to by the great seer of the past century Emanuel Swedenborg. There lies the heart of nature, that shrine whence issued the early races of primeval Humanity, and which is the cradle of *physical* man.

Thus far have proceeded the rough outlines of the beliefs and tenets of the archaic, earliest Races contained in their hitherto secret Scriptural records. But our explanations are by no means complete, nor do they pretend to give out the full text, or to have been read by the help of more than three or four keys out of the sevenfold bunch of esoteric interpretation, and even this has only been partially accomplished. The work is too gigantic for any one person to undertake, far more to accomplish. Our main concern was simply to prepare the soil. This, we trust we have done. These two volumes only constitute the work of a pioneer who has forced his way into the well-nigh impenetrable jungle of the virgin forests of the Land of the Occult. A commencement has been made to fell and uproot the deadly upas trees of superstition, prejudice, and conceited ignorance, so that these two volumes should form for the student a fitting prelude for Volumes III. and IV. Until the rubbish of the ages is cleared away from the minds of the Theosophists to whom these volumes are dedicated, it is impossible that the more practical teaching contained in the Third Volume should be understood. Consequently, it entirely depends upon the reception with which Volumes I. and II. will meet at the hands of Theosophists and Mystics, whether these last two volumes will ever be published, though they are *almost* completed.

Satyat Nasti paro dharmah.

THERE IS NO RELIGION HIGHER THAN TRUTH.

End of Vol. II.

Footnotes:

1. “*The Human Species*,” p. 111, by de Quatrefages. The respective developments of the human and Simian brains are referred to. “In the ape the temporo-spheroidal convolutions, which form the middle lobe, make their appearance and are completed before the anterior convolutions which form the frontal lobe. In man, the frontal convolutions are, on the contrary, the first to appear, and those of the middle lobe are formed later.” (*Ibid.*)

2. To this an editorial remark adds that an “F.J.B.,” in the *Athenaeum* — (No. 3069, Aug. 21, 1886, pp. 242-3) points out that naturalists have long recognised that there are “morphological” and “physiological” species. The former have their origin in men’s minds, the latter in a series of changes sufficient to affect the internal as well as the external organs of a group of allied individuals. The “physiological selection” of morphological species is a confusion of ideas; that of physiological species “a redundancy of terms.”

3. The “*principle of perfectibility*” of Nageli; von de Baer’s “*striving towards the purpose*”; Braun’s “*Divine breath as the inward impulse in the evolutionary history of Nature*”; Professor Owen’s “*tendency to perfectibility, etc.*,” are all veiled manifestations of the universal guiding FOHAT, rich with the Divine and Dhyana-Chohanian thought.

4. *Vide infra*, M. de Quatrefages’ *expose* of Haeckel, in § ii., “The Ancestors Mankind is offered by Science.”

5. Strictly speaking du Bois-Reymond is an *agnostic*, and not a materialist. He has protested most vehemently against the materialistic doctrine, which affirms mental phenomena to be merely the product of molecular motion. The most accurate *physiological* knowledge of the structure of the brain leaves us “nothing but matter in motion,” he asserts; “*we must go further, and admit the utterly incomprehensible nature of the psychical principle which it is impossible to regard as a mere outcome of material causes.*”

6. For explanation of the term *Kriyasakti*, see Com. 2 in Stanza 26.

7. “Pedigree of Man.” — “*The Proofs of Evolution,*” p. 273.

8. Author of “Modern Science and Modern Thought.”

9. *Vide* Part I. of this volume, page 183, Stanza VIII.

10. In this, as shown in Part I., Modern Science was again anticipated, far beyond its own speculations in this direction, by *Archaic Science*.

11. Theosophists will remember that, according to Occult teaching, Cyclic pralayas so-called are but *obscurations*, during which periods Nature, *i.e.*, everything visible and *invisible* on a resting planet — remains *in statu quo*. Nature rests and slumbers, no work of destruction going on on the globe even if no active work is done. All forms, as well as their astral types, remain as they were at the last moment of its activity. The “night” of a planet has hardly any twilight preceding it. It is caught like a huge mammoth by an avalanche, and remains slumbering and frozen till the next dawn of its new day — a very short one indeed in comparison to the “Day of Brahma.”

12. This will be pooh-poohed, because it will not be understood by our modern men of science; but every Occultist and theosophist will easily realize the process. There *can be no objective* form on Earth (nor in the Universe either), without its astral prototype being first formed in Space. From Phidias down to the humblest workman in the ceramic art — a sculptor has had to create first of all a model in his mind, then sketch it in one and two dimensional lines, and then only can he reproduce it in a three dimensional or objective figure. And if human mind is a living demonstration of such successive stages in the process of evolution — how can it be otherwise when NATURE’S MIND and creative powers are concerned?

13. It thus appears that in its anxiety to prove our noble descent from the catarrhine “baboon,” Haeckel’s school has pushed the times of pre-historic man millions of years back. (*See “Pedigree of Man,”* p. 273.) Occultists, render thanks to science for such corroboration of our claims!

14. This seems a poor compliment to pay Geology, which is not a speculative but as exact a science as astronomy — save, perhaps its too risky chronological speculations. It is mainly a “Descriptive” as opposed to an “Abstract” Science.

15. Such newly-coined words as “*perigenesis of plastids*,” “*plastidule Souls*” (!), and others less comely, invented by Haeckel, may be very learned and correct in so far as they may express very graphically the ideas in his own vivid

fancy. As a *fact*, however, they remain for his less imaginative colleagues painfully *caenogenetic* — to use his own terminology; *i.e.*, for *true Science* they are *spurious* speculations so long as they are derived from “empirical sources.” Therefore, when he seeks to prove that “the origin of man from other mammals, and most directly from the catarrhine ape, is a *deductive law* that follows necessarily from *the inductive law* of the theory of descent” (“*Anthropogeny*,” p. 392) — his no less learned foes (du Bois-Reymond — for one) have a right to see in this sentence a *mere jugglery of words*; a “*testimonium paupertatis* of natural science” — as he himself complains, calling them, in return, *ignoramus* (see “Pedigree of Man,” Notes).

16. The *mental barrier* between man and ape, characterized by Huxley as an “*enormous gap*, a distance *practically immeasurable*”! is, indeed, in itself conclusive. Certainly it constitutes a standing puzzle to the materialist, who relies on the frail reed of “natural selection.” The physiological differences between Man and the Apes are in reality — despite a curious community of certain features— equally striking. Says Dr. Schweinfurth, one of the most cautious and experienced of naturalists: —

“In modern times there are no animals in creation that have attracted more attention from the scientific student than the great quadrumana (the anthropoids), bearing such a striking resemblance to the human form as to have justified the epithet of anthropomorphic being conferred on them. . . . But *all investigation at present only leads human intelligence to a confession of its insufficiency*; and nowhere is caution more to be advocated, *nowhere is premature judgment more to be deprecated than in the attempt to bridge over the MYSTERIOUS CHASM which separates man and beast.*” “*Heart of Africa*” i., 520.

17. A ridiculous instance of evolutionist contradictions is afforded by Schmidt (“*Doctrine of Descent and Darwinism*,” on page 292). He says, “Man’s kinship with the apes is *not impugned* by the *bestial strength* of the teeth of the male orang or gorilla.” Mr. Darwin, on the contrary, endows this fabulous being with teeth used as weapons!

18. According even to a *fellow-thinker*, Professor Schmidt, Darwin has evolved “a certainly not flattering, and perhaps in *many points an incorrect*, portrait of our presumptive ancestors in the dawn of humanity.” (“*Doctrine of Descent and Darwinism*,” p. 284.)

19. Of course the Esoteric system of Fourth Round Evolution is much more complex than the paragraph and quotations referred to categorically assert. It is practically a *reversal* — both in embryological inference and succession in time of species — of the current Western conception.

20. According to Haeckel, there are also *cell-souls*; “an inorganic *molecular soul*” without, and a “plastidular soul with (or possessing) memory”. What are our esoteric teachings to this? The *divine and human* soul of the seven principles in man must, of course, pale and give away before such a stupendous revelation!

21. A valuable confession, this. Only it makes the attempt to trace the *descent of Consciousness* in man as well as of his physical body from *Bathybius Haeckelii* still more humorous and *empirical*, in the sense of Webster’s second definition.

22. Those who take the opposite view and look upon the existence of the human soul, — “as a supernatural, a spiritual phenomenon, conditioned by forces altogether different from *ordinary physical forces*,” . . . “mock,” he thinks, “in consequence, all explanation that is simply scientific.” They have no right it seems, to assert that “psychology is, in part, or in whole, a spiritual science, not a physical one.” . . . The new discovery by Haeckel (one taught for thousands of years in all the Eastern religions, however), that the animals have souls, will, and sensation, hence soul-functions, leads him to make of psychology the science of the zoologists. The archaic teaching that the “Soul” (the animal and human souls, or Kama and *Manas*) “has its developmental history” — is claimed by Haeckel as his own discovery and innovation on an “untrodden (?) path”! He (Haeckel) will work out the comparative evolution of the soul in man and in other animals. . . . “The comparative morphology of the soul-organs, and the comparative physiology of the soul-functions, both founded on Evolution, thus become the psychological (really materialistic) problem of the scientific man.” (*Cell-souls and Soul-cells*, p. 137, “*Pedigree of Man.*”)

23. (See “*Transmigration of the Life Atoms*,” “*Five years of Theosophy*,” p. 533-539). The collective aggregation of these atoms forms thus the *Anima Mundi* of our Solar system, the *soul* of our little universe, each atom of which is of course a *soul*, a monad, a little universe endowed with consciousness, hence with *memory* (Vol. I., Part III., “*Gods, Monads and Atoms*.”)
24. In “*The Transmigration of the Life-Atoms*,” we say, to explain better a position which is but too often misunderstood: — “It is *omnipresent* . . . though (on this plane of manifestation) often in a dormant state — as in stone. The definition which states that when this indestructible force is disconnected with one set of atoms (*molecules ought to have been said*) it becomes immediately attracted by others, does not imply that it entirely abandons the first set (because the atoms themselves would then disappear), but only that it transfers its *vis viva*, or life power — the energy of motion, to another set. But because it manifests itself in the next set as what is called Kinetic energy, it does not follow that the first set is deprived of it altogether; for it is still in it, as potential energy or life latent,” etc., etc. Now what can Haeckel mean by his “not identical atoms but their peculiar motion and mode of aggregation,” if it is not the same *Kinetic* energy we have been explaining? He must have read Paracelsus and studied “*Five Years of Theosophy*,” without properly digesting the teachings, before evolving such theories.
25. This the way *primitive man* must have acted? We do not know of men, not even of savages, in our age, who are known to have imitated the apes who live side by side with them in the forests of America and the islands. We do know of large apes who, tamed and living in houses, will mimic men to the length of donning hats and coats. The writer had personally a chimpanzee who, without being taught, opened a newspaper and pretended to read in it. It is the descending generations, the children, who mimic their parents — not the reverse.
26. It is asked, whether it would change one iota of the scientific truth and fact contained in the above sentence if it were to read: “the ape is simply an instance of the biped type specialized for going on all fours, generally, and a smaller brain.” *Esoterically* speaking, this is the real truth, and not the reverse.
27. We cannot follow Mr. Laing here. When avowed Darwinists like Huxley point to “the *great gulf* which intervenes between the lowest ape and the highest man in *intellectual power*,” the “*enormous gulf* . . . between them,” the “*immeasurable and practically infinite divergence of the Human from the Simian stirps*” (*Man’s Place in Nature*, pp. 102-3); when even the physical basis of mind — the brain — so *vastly* exceeds in size that of the highest existing apes; when men like Wallace are forced to invoke the agency of extra-terrestrial intelligences in order to explain the rise of such a creature as the Pithecanthropus alalus, or speechless savage of Haeckel, to the level of the large-brained and *moral* man of to-day — it is idle to dismiss Evolutionist puzzles so lightly. If the *structural* evidence is so unconvincing and, taken as a whole, so hostile to Darwinism, the difficulties as to the “how” of the Evolution of the human *mind* by natural selection are tenfold greater.
28. A race which MM. de Quatrefages and Hamy regard as a branch of the *same stock* whence the *Canary Island Guanches* sprung — offshoots of the Atlanteans, in short.
29. Professor Owen believes that these muscles — the attollens, retrahens, and attrahens aurem — were actively functioning in men of the Stone Age. This may or may not be the case. The question falls under the ordinary “occult” explanation, and involves no postulate of an “animal progenitor” to solve it.
30. Quoted in the Review of the “*Introduction a l’Etude des Races Humaines*,” by de Quatrefages. We have not Mr. Huxley’s work at hand to quote from. Or to cite another good authority: — “We find one of the most man-like apes (gibbon), in the *tertiary period*, and this species is *still in the same low grade*, and *side by side* with it at the end of the Ice-period, man is found in the same high grade as to-day, the ape not having approximated more nearly to the man, and modern man not having become further removed from the ape than the first (fossil) man . . . these facts contradict a theory of constant progressive development.” (Pfaff.) When, according to Vogt, the average Australian brain = 99.35 cub. inches; that of the gorilla 30.51 cub. in., and that of the chimpanzee only 25.45, the *giant gap* to be bridged by the advocate of “Natural” Selection becomes apparent.

31. "At this period," writes Darwin, "the arteries run in arch-like branches, as if to carry the blood to branchiae which are not present in the higher vertebrata, though the slits on the side of the neck still remain, marking their former (?) position."

It is noteworthy that, though gill-clefts are absolutely useless to all but amphibia and fishes, etc., their appearance is regularly noted in the foetal development of vertebrates. Even children are occasionally born with an opening in the neck corresponding to one of the clefts.

32. Those who with Haeckel regard the gill-clefts with their attendant phenomena as illustrative of an active function in our amphibian and piscine ancestors (*Vide* his XII. and XIII. stages), ought to explain why the "*Vegetable with leaflets*" (Lefevre) represented in foetal growth, does not appear in his 22 stages through which the monera have passed in their ascent to Man. Haeckel does *not* postulate a *vegetable* ancestor. The embryological argument is thus a two-edged sword and here cuts its possessor.

33. "Physiology," Lefevre, p. 480.

34. We confess to not being able to see any good reasons for Mr. E. Clodd's certain statement in *Knowledge*. Speaking of the men of Neolithic times, "concerning whom Mr. Grant Allen has given . . . a vivid and accurate sketch," and who are "the direct ancestors of peoples of whom remnants yet lurk in out-of-the-way corners of Europe, where they have been squeezed or stranded," he adds to this: "but the men of Palaeolithic times can be identified with no existing races; they were savages of a more degraded type than any extant; tall, yet barely erect, with short legs and twisted knees, with prognathous, that is, projecting ape-like jaws, and small brains. Whence they come we cannot tell, and their 'grave knoweth no man to this day.' "

Besides the possibility that there may be men who *know* whence they came and how they perished — it is not true to say that the Palaeolithic men, or their fossils, are all found with "small brains." The oldest skull of all those hitherto found, the "Neanderthal skull," is of average capacity, and Mr. Huxley was compelled to confess that it was no real approximation whatever to that of the "missing link." There are aboriginal tribes in India whose brains are far smaller and nearer to that of the ape than any hitherto found among the skulls of Palaeolithic man.

35. The *actual* time required for such a theoretical transformation is necessarily enormous. "If," says Professor Pfaff, "in the hundreds of thousands of years which you (the Evolutionists) accept between the rise of palaeolithic man and our own day, a greater distance of man from the brute is not demonstrable, (*the most ancient man was just as far removed from the brute as the now living man*), what reasonable ground can be advanced for believing that man has been developed from the brute, and has receded further from it by infinitely small gradations." . . . "*The longer the interval of time placed between our times and the so-called palaeolithic men, the more ominous and destructive for the theory of the gradual development of man from the animal kingdom is the result stated.*" Huxley states ("Man's Place in Nature," p. 159) that the *most liberal* estimates for the antiquity of Man *must be still further* extended.

36. The baselessness of this assertion, as well as that of many other exaggerations of the imaginative Mr. Grant Allen, was ably exposed by the eminent anatomist, Professor R. Owen, in "Longman's Magazine," No. 1. Must it be repeated, moreover, that the Cro-Magnon Palaeolithic type is superior to a very large number of existing races?

37. It thus stands to reason that science would never dream of a *pre*-tertiary man, and that de Quatrefages' *secondary* man makes every Academician and "F.R.S." faint with horror because, TO PRESERVE THE APE-THEORY, SCIENCE MUST MAKE MAN POST-SECONDARY. This is just what de Quatrefages has twitted the Darwinists with, adding, that on the whole there were more scientific reasons to trace the ape from man than man from the anthropoid. With this exception science has not one single valid argument to offer against the antiquity of man. But in this case modern Evolution demands far more than the fifteen million years of Croll for the Tertiary period, for two very simple but good reasons: (a) No anthropoid ape has been found before the Miocene period: (b) man's flint relics have been traced to the Pliocene and their presence *suspected*, if not accepted by all, in the Miocene strata. Again, where is the "missing link" in such case? And how could even a Palaeolithic Savage, a "Man of Canstadt," evolve into *thinking* men from the brute Dryopithecus of the Miocene *in so short a time*. One sees now the reason why Darwin rejected the theory that only 60,000,000 years had elapsed since the Cambrian period. "He judges from the small amount of organic changes

since the glacial epoch, and adds that the previous 140 million years can hardly be considered as sufficient for the development of the varied forms of life which certainly existed toward the close of the Cambrian period.” (Ch. Gould.)

38. Let us remember in this connection the esoteric teaching which tells us of Man having had in the Third Round a GIGANTIC APE-LIKE FORM on the astral plane. And similarly at the close of the Third Race in this Round. Thus it accounts for the *human* features of the apes, especially of the later anthropoids — apart from the fact that these latter preserve by *Heredity* a resemblance to their Atlanto-Lemurian sires.

39. It may here be remarked that those Darwinians, who with Mr. Grant Allen, place our “hairy arboreal” ancestors so far back as the *Eocene Age*, are landed in rather an awkward dilemma. No fossil anthropoid ape — much less the fabulous common ancestor assigned to Man and the Pithecoïd — appears in Eocene strata. The first presentment of an anthropoid ape is Miocene.

40. Ed. Lartet, “Nouvelles Recherches sur la co-existence de l’homme et des Grands Mammites Fossils de la dernière période Géologique.” *Annales des Soc. Nat.*, t. XV., p. 256.

41. From a Report of the “Hibbert Lectures, 1887. Lectures on the Origin and Growth of Religion, and Illustrated by the Religion of the Ancient Babylonians.” By A. H. Sayce. (London: Williams and Norgate.)

46. “World-Life,” p. 180.

47. “World-Life,” pp. 367-8.

48. “Climate and Time.”

49. Quoted in Mr. Ch. Gould’s “Mythical Monsters,” p. 84.

50. According to Bischof, 1,004,177 years — according to Chevandier’s calculations 672,788 years — were required for the so-called coal formation. “The *tertiary* strata, about 1,000 feet in thickness, required for their development about 350,000 years.” See “Force and Matter,” Buchner, J. F. Collingwood’s edition.

51. “Man’s Place in Nature,” p. 102, *note*.

52. “100,000,000 of years is probably amply sufficient for all the requirements of Geology,” says the text. In France, some *savants* do not find it nearly “sufficient.” Le Couturier claims for the same 350 million years; Buffon was satisfied with 34 millions — but there are those in the more modern schools who will not be content under 500 million years.

53. We are taught that the highest Dhyān Chohans, or Planetary Spirits (beyond the cognizance of the law of analogy), are in ignorance of what lies beyond the visible planetary systems, since their essence cannot assimilate itself to that of worlds beyond our solar system. When they reach a higher stage of evolution these other universes will be open to them; meanwhile they have complete knowledge of all the worlds within and beneath the limits of our solar system.

54. Since no single atom in the entire Kosmos is without life and consciousness, how much more than its mighty globes? — though they remain sealed books to us men who can hardly enter even into the consciousness of the forms of life nearest us?

We do not know *ourselves*, then how can we, if we have never been trained to it and initiated, fancy that we can penetrate the consciousness of the smallest of the animals around us?

55. This relates to the *Logos* of every Cosmogony. The *unknown* Light — with which he is said to be co-eternal and coeval — is reflected in the “First-Born,” the *Protogonos*; and the Demiurgos or the Universal Mind directs his Divine Thought into the Chaos that under the fashioning of minor gods will be divided into the seven oceans — *Sapta samudras*. It is Purusha, Ahura Mazda, Osiris, etc., and finally the gnostic Christos, who is in the Kabala, *Hokhmah* or Wisdom the “Word.”

56. The *form* of *Tikkun* or the *Protogonos*, the “first-born,” *i.e.*, the universal form and idea, had not yet been mirrored in *Chaos*.

57. The “Heavenly man” is Adam Kadmon — the synthesis of the Sephiroth, as “Manu Swayambhuva” is the synthesis of the Prajapatis.

58. Bereshith Rabba, Parsha IX.

59. This refers to the *three Rounds* that preceded our *fourth* Round.

60. This sentence contains a dual sense and a profound mystery in the occult sciences the secret of which *if*, and *when*, known — confers tremendous powers on the Adept to *change his visible form*.

61. *Idra Suta*, Zohar, iii. 136, c. “A sinking down from their status” — is plain; from active worlds they have fallen into a temporary obscuration — they rest, and hence are entirely changed.

62. In that learned and witty work, “God and his Book,” by the redoubtable “Saladin” of Agnostic repute, the amusing calculation that, if Christ had ascended with the rapidity of a cannon ball, he would not have reached even Sirius yet, reminds one vividly of the past. It raises, perhaps, a not ill-founded suspicion that even our age of scientific enlightenment may be as grossly absurd in its materialistic negations, as the men of the middle ages were absurd and materialistic in their religious affirmations.

63. *Knowledge*, March 31, 1882.

64. And who yet, in another work, “*La Prehistorique Antiquite de l’Homme*,” some twenty years ago, generously allowed only 230,000 years to our mankind. Since we learn now that he places man “in the mid-Miocene period,” we must say that the much respected Professor of Prehistoric Anthropology (in Paris) is somewhat contradictory and inconsistent, if not *naif* in his views.

65. The root and basic idea of the origin and transformation of species — the *heredity* (of acquired faculties) seems to have found lately very serious opponents in Germany. Du Bois-Reymond and Dr. Pfluger, the physiologists, besides other men of science as eminent as any, find insuperable difficulties and even impossibilities in the doctrine.

66. *History of Creation*, p. 20.

67. The same names are retained as those given by science, to make the parallels clearer. Our terms are quite different.

68. Let the student remember that the Doctrine teaches that there are seven degrees of *Devas* or “Progenitors,” or seven classes, from the most perfect to the less exalted.

69. It may be said that we are inconsistent in not introducing into this table a *Primary-Age Man*. The parallelism of Races and geological periods here adopted, is, so far as the origin of 1st and 2nd are concerned, purely tentative, no direct information being available. Having previously discussed the question of a possible Race in the *Carboniferous Age*, it is needless to renew the debate.

70. During the *interim* from one Round to another, the globe and everything on it remains *in statu quo*. Remember, Vegetation began in its ethereal form before what is called the Primordial, running through the Primary, and condensing in it, and reaching its full physical life in the Secondary.

71. Geologists tell us that “in the secondary epoch, the only mammals which have been (hitherto) discovered in *Europe* are the fossil remains of a small marsupial or pouch-bearer.” (*Knowledge*, March 31, 1882, p 464.) Surely the marsupial or didelphis (the only surviving animal of the family of those who were on earth during the presence on it of androgyne man) cannot be the only animal that was then on earth? Its presence speaks loudly for that of other (though unknown) mammals, besides the monotremes and marsupials, and thus shows the appellation of “mammalian age” given only to the Tertiary period to be misleading and erroneous; as it allows one to infer that there were no mammals, but reptiles, birds, amphibians, and fishes alone in the Mesozoic times — the Secondary.

72. These *Placentalia* of the third sub-class are divided, it appears, into Villiplacentalia (placenta composed of many separate scattered tufts), the Zonoplacentalia (girdle-shaped placenta), and the discoplacentalia (or discoid). Haeckel sees in the Marsupialia *Didelphia*, one of the connecting links *genealogically* between man and the Moneron!!

73. Those who feel inclined to sneer at that doctrine of Esoteric Ethnology, which pre-supposes the existence of Man in the *Secondary Age*, will do well to note the fact that one of the most distinguished anthropologists of the day, M. de Quatrefages, seriously argues in that direction. He writes: “There is nothing impossible in the supposition that he (Man) may have appeared on the globe *with the first representatives of the type to which he belongs in virtue of his organism.*” This statement approximates most closely to our fundamental assertion that man preceded the other mammalia.

Professor Lefevre admits that the “labours of Boucher de Perthes, Lartet, Christy, Bourgeois, Desnoyers, Broca, de Mortillet, Hamy, Gaudry, Capellini, and a hundred others, have overcome all doubts and clearly established the progressive development of the human organism and industries from the *Miocene epoch of the Tertiary age.*” (“Philosophy,” p. 499, chapter on Organic Evolution.) Why does he reject the possibility of a Secondary-Age man? Simply because he is involved in the meshes of the Darwinian Anthropology!! “The origin of man is bound up with that of the higher mammals;” he appeared “only with the *last* types of his class”!! This is not argument, but dogmatism. *Theory* can never excommunicate *fact*! Must everything give place to the mere working-hypotheses of Western Evolutionists? Surely not.

74. This inclusion of the First Race in the Secondary is necessarily only a provisional working-hypothesis — the actual chronology of the First, Second, and Early Third Races being closely veiled by the Initiates. For all that can be said on the subject, the First Root-Race may have been Pre-Secondary, as is, indeed, taught. (*Vide supra.*)

75. The above parallels stand good only if Professor Croll’s earlier calculations are adopted, namely, of 15,000,000 years since the beginning of the Eocene period (see Charles Gould’s “Mythical Monsters,” p. 84), not those in his “Climate and Time,” which allow only 2 1/2 million years’, or at the utmost three million years’ duration to the Tertiary age. This, however, would make the whole duration of the incrustated age of the world only 131,600,000 years according to Professor Winchell, whereas in the Esoteric doctrine, sedimentation began in *this Round* approximately over 320 million years ago. Yet his calculations do not clash much with ours with regard to the epochs of glacial periods in the Tertiary age, which is called in our Esoteric books the age of the “Pigmies.” With regard to the 320 millions of years assigned to sedimentation, it must be noted that even a greater time elapsed during the preparation of this globe for the Fourth Round *previous to stratification.*

76. Though we apply the term “truly human,” only to the Fourth Atlantean Root-Race, yet the Third Race is almost human in its latest portion, since it is during its fifth sub-race that mankind *separated* sexually, and that the *first man*

was born according to the now normal process. This “first man” answers in the Bible (*Genesis*) to Enos or Henoah, son of Seth (ch. iv.).

77. Geology records the former existence of a universal ocean, sheets of marine sediments uniformly present everywhere testifying to it; but, it is not even the epoch referred to in the allegory of Vaivasvata Manu. The latter is a *Deva-Man* (or Manu) saving in an ark (the *female* principle) the germs of humanity, and also the seven Rishis — who stand here as the symbols for the seven human principles — of which allegory we have spoken elsewhere. The “Universal Deluge” is the watery abyss of the Primordial Principle of Berosus. (*See Stanzas from 2 to 8 in Part I.*) How, if Croll allowed fifteen million years to have elapsed since the Eocene period (which we state on the authority of a Geologist, Mr. Ch. Gould) only 60 millions are assigned by him “since the beginning of the Cambrian period, in the *Primordial Age*” — passes comprehension. The Secondary strata are twice the thickness of the Tertiary, and Geology thus shows the Secondary age alone to be of twice the length of the Tertiary. Shall we then accept only 15 million years for both the Primary and the Primordial? No wonder Darwin rejected the calculation.

78. We hope that we have furnished all the Scientific data for it elsewhere.

79. It is conceded by Geology to be “beyond doubt that a considerable period must have supervened after the departure of Palaeolithic man and before the arrival of his Neolithic successor.” (See James Geikie’s “Prehistoric Europe,” and Ch. Gould’s “Mythical Monsters,” p. 98).

80. Resembling in a manner the *pile-villages* of Northern Borneo.

81. “The *most clever sculptor of modern times* would probably not succeed very much better, if his graver were a splinter of flint and stone and bone were the materials to be engraved”!! (Prof. Boyd Dawkins’ “Cave-Hunting,” p. 344.) It is needless after such a concession to further insist on Huxley’s, Schmidt’s, Laing’s, and others’ statements to the effect that Palaeolithic man cannot be considered to lead us back in any way to a pithecoïd human race; thus demolishing the fantasies of many superficial evolutionists. The relic of artistic merit here *re-appearing* in the Chipped-Stone-Age men, is traceable to their *Atlantean* ancestry. Neolithic man was a fore-runner of the great *Aryan* invasion, and immigrated from quite another quarter — Asia, and in a measure Northern Africa. (The tribes peopling the latter towards the North-West, were certainly of an Atlantean origin — dating back hundreds of thousands of years before the Neolithic Period in Europe, — but they had so diverged from the parent type as to present no longer any marked characteristic peculiar to it.) As to the contrast between Neolithic and Palaeolithic Man, it is a *remarkable fact that, as Carl Vogt remarks, the former was a cannibal, the much earlier man of the Mammoth era not.* Human manners and customs do not seem to improve with time, then? Not in this instance at any rate.

82. On the data furnished by modern science, physiology, and natural selection, and without resorting to any miraculous creation, two negro human specimens of the lowest intelligence — say idiots born dumb — might by breeding produce a dumb *Pastrana* species, which would start a new modified race, and thus produce in the course of geological time the regular anthropoid ape.

83. “Force and Matter,” by Dr. Louis Buchner, translated and edited by J. Frederick Collingwood, F.R.S., F.G.S., 1864.

84. In such a case Palaeolithic man must have been endowed in his day with thrice Herculean force and magic invulnerability, or else the lion was as weak as a lamb at that period, for both to share the same dwelling. We may as well be asked to believe next that it is that lion or hyaena which has engraved the deer on the antler, as be told that this bit of workmanship was done by a savage of such a kind.

85. More than twenty specimens of fossil monkeys have been found in one locality alone, in Miocene strata (Pikermi, near Athens). If man was not then, the period is too short for him to have been *transformed* — stretch it as you may. And if he was, and if no monkey is found earlier, what follows?

86. “*Antiquity of Man*,” p. 530.

87. And how much more “enormous” if we reverse the subjects and say during the monkey’s development from the Third Race Man.

88. The Darwinian theory has been so strained, that even Huxley was forced at one time to deprecate its occasional degeneration into “fanaticism.” Oscar Schmidt presents a good instance of a thinker who unconsciously exaggerates the worth of an hypothesis. He admits (“The Doctrine of Descent and Darwinism,” p. 158), that “natural selection” “is in some cases . . . *inadequate*, . . . in others . . . not requisite, as the solution of the formation of species is found in other natural conditions.” He also asserts the “*intermediate grades are . . . wanting*, which would entitle us to infer with certainty the direct transition from uniplacental to placentals” (p. 271); that “we are referred *entirely to conjecture and inference* for the origin of the mammals” (p. 268); and the repeated failures of the framers of “*hypothetical pedigrees*,” more especially of Haeckel. Nevertheless he asserts on p. 194, that “what we have gained by the Doctrine of Descent based on the theory of selection is the KNOWLEDGE of the connection of organisms as ‘consanguineous beings.’ ” Knowledge in the face of the above-cited concessions, is, then, the synonym for conjecture and theory only?

89. Bear in mind, please, that though the animals — mammalians included — have all been evolved after and partially *from* man’s cast-off tissues, still, as a far lower being, the mammalian animal became placentals and separated far earlier than man.

90. Scientists now admit that Europe enjoyed in the Miocene times a warm, in the Pliocene or later *Tertiary*, a temperate climate. Littré’s contention as to the balmy spring of the *Quaternary* — to which deposits M. de Perthes’ discoveries of flint implements are traceable (since when the Somme has worn down its valley many scores of feet) — must be accepted with much reservation. The Somme-valley relics are *post-glacial*, and possibly point to the immigration of savages during one of the more temperate periods intervening between *minor* ages of Ice.

91. “Whence they (the old cave-men) came, we *cannot tell*” (Grant Allen).

“*The palaeolithic hunters of the Somme Valley did not originate in that inhospitable climate, but moved into Europe from some more genial region* — (Dr. Southall “*Epoch of the Mammoth*” p. 315).

92. The *pure* Atlantean stocks — of which the tall quaternary cave-men were, in part, the direct descendants — immigrated into Europe long prior to the Glacial Period; in fact as far back as the Pliocene and Miocene times in the *Tertiary*. *The worked Miocene flints of Thenay, and the traces of Pliocene man discovered by Professor Capellini in Italy, are witnesses to the fact*. These colonists were portions of the once glorious race, whose cycle from the *Eocene* downwards had been running down the scale.

93. The artistic skill displayed by the old cave-men renders the hypothesis which regards them as approximations to the “*pithecanthropus alalus*” — that very mythical Haeckelian monster — an absurdity requiring no Huxley or Schmidt to expose it. We see in their skill in engraving a “*gleam of Atlantean culture atavistically re-appearing*.” It will be remembered that Donnelly regards modern European as a *renaissance* of Atlantean civilization. (“*Atlantis*,” pp. 237-264.)

94. *Lettres sur l’Atlantide*.

95. *Histoire de l’Astronomie Ancienne*, p. 25, *et seq.*

96. This conjecture is but a half-guess. There were such “deluges of barbarians” in the Fifth Race. With regard to the Fourth, it was a *bond fide* deluge of water which swept it away. Neither Voltaire nor Bailly, however, knew anything of the Secret Doctrine of the East.

97. For a full discussion of the relations between the *old* Greeks and Romans, and the Atlantean colonists, cf. “Five Years of Theosophy.”

98. The story about Atlantis and all the traditions thereon were told, as all know, by Plato in his "*Timaeus and Critias*." Plato, when a child, had it from his grand-sire Critias, aged ninety, who in his youth had been told of it by Solon, his father Dropidas' friend — Solon, one of the *Grecian Seven Sages*. No more reliable source could be found, we believe.

99. Haeckel's "Man-ape" of the *Miocene* period is the dream of a monomaniac, which de Quatrefages (see his "*Human Species*," pp. 105-113) has cleverly disposed of. It is not clear why the world should accept the lucubrations of a psychophobic materialist, (to accept whose theory necessitates the acceptance *on faith* of various animals unknown to Science or Nature — like the Sozura, for instance, that amphibian which has never existed anywhere outside Haeckel's imagination), rather than the traditions of antiquity.

100. The ingenious author of "Atlantis, the Ante-diluvian World," in discussing the origin of various Grecian and Roman institutions, expresses his conviction that "the roots of the institutions of to-day reach back to the *Miocene Age*." Ay, and further yet, as already stated.

101. As we know them, however. For not only does Geology prove that the British islands have been *four times submerged and re-elevated*, but that the straits between them and Europe were dry land at a remote former epoch.

102. "*Les origines de la terre et de l'homme*," p. 454. To this, Professor N. Joly, of Toulouse, who quotes the Abbe in his "*Man before Metals*," expresses the hope that M. Fabre will permit him "to differ from him on this last point," p. 186. So do the Occultists; for though they claim a vast difference in the physiology and outward appearance of the five races so far evolved, still they maintain that the present human species has descended from one and the same primitive stock, evolved from the "divine men" — our common ancestors and progenitors.

103. "The flints of Thenay bear unmistakable trace of the work of human hands." (*G. de Mortillet*, "*Promenades au Musee de St. Germain*," p. 76.)

104. Speaking of the reindeer hunters of Perigord, Joly says of them that "they were of *great height*, athletic, with a strongly built skeleton . . ." etc. ("*Man before Metals*," p. 353).

105. "On the shores of the lake of Beauce," says the Abbe Bourgeois, "man lived in the midst of a fauna which completely disappeared (*Aceratherium, Tapir, Mastodon*). *With the fluvial sands of Orleanais came the anthropomorphous monkey* (pliopithecus antiquus); therefore, later than man." (*See Comptes Rendus of the "Prehistoric Congress" of 1867 at Paris.*)

106. "In making soundings in the stony soil of the Nile Valley two baked bricks were discovered, one at the depth of 20, the other at 25 yards. If we estimate the thickness of the annual deposit formed by the river at 8 inches per century (more careful calculations have shown no more than from three to five per century), we must assign to the first of these bricks 12,000 years, and to the second 14,000 years. By means of analogous calculations, Burmeister supposes 72,000 years to have elapsed since the first appearance of man on the soil of Egypt, and Draper attributes to the European man, who witnessed the last glacial epoch, an antiquity of more than 250,000 years." ("*Man before Metals*," p. 183.) Egyptian Zodiacs show more than 75,000 years of observation! (*See further.*) Note well also that Burmeister speaks only of the Delta population.

107. Or on what are now the British Islands, which were not yet detached from the main continent in those days. "The ancient inhabitant of Picardy could pass into Great Britain without crossing the Channel. The British Isles were united to Gaul by an isthmus which has since been submerged." ("*Man before Metals*," p. 184.)

108. He witnessed and remembered it too, as "the final disappearance of the largest continent of Atlantis was an event coincident with the elevation of the Alps," a master writes (*See Esoteric Buddhism* p. 70). *Pari passu*, as one portion of the dry land of our hemisphere disappeared, some land of the new continent emerged from the seas. It is on this colossal cataclysm, which lasted during a period of 150,000 years, that traditions of all the "Deluges" are built, the Jews building their version on an event which took place later in "Poseidonis."

109. The Antiquity of the Human Race in “Men before Metals,” by M. Joly, Professor at the Science Faculty of Toulouse, p. 184.

110. The scientific “jury” disagreed, as usual; while de Quatrefages, de Mortillet, Worsaae, Engelhardt, Waldemar, Schmidt, Capellini, Hamy, and Cartailhac, saw upon the flints the traces of human handiwork, Steenstrup, Virchow and Desor refused to do so. Still the majority, if we except some English Scientists, are for Bourgeois.

111. We take the following description from a scientific work. “The first of these animals (the alligator) designed with considerable skill, is no less than 250 ft. long. . . . The interior is formed of a heap of stones, over which the form has been moulded in fine stiff clay. The great serpent is represented with open mouth, in the act of swallowing an egg of which the diameter is 100 ft. in the thickest part; the body of the animal is wound in graceful curves and the tail is rolled into a spiral. The entire length of the animal is 1,100 ft. This work is unique . . . and there is nothing on the old continent which offers any analogy to it.” Except its symbolism, however, of the Serpent — the cycle of Time — swallowing Kosmos, the egg.

112. It might be better, perhaps, for FACT had we more *Specialists* in Science and fewer “authorities” on universal questions. One never heard that Humboldt gave authoritative and final decisions in the matter of *polypi*, or the nature of an excrescence.

113. 57,000 years is the date assigned by Dr. Dowler to the remains of the human skeleton, found buried beneath four ancient forests at New Orleans on the banks of the Mississippi river.

114. Murray says of the Mediterranean barbarians that they marvelled at the prowess of the *Atlanteans*. “Their *physical strength was extraordinary* (witness indeed their cyclopean buildings), the earth shaking sometimes under their tread. Whatever they did, was done speedily. . . . They *were wise* and communicated their wisdom to men” (*Mythology* p. 4).

115. But the Magi of Persia were never Persians — not even Chaldeans. They came from a far-off land, the Orientalists being of opinion that the said land was Media. This may be so, but from what part of Media? To this we receive no answer.

116. p. 129, “Civilization of the Eastern Iranians in Ancient Times.”

117. *Cf.*, e.g., Vol. I., 4, of the Pablavi Translation; Bdh. xxi., 2-3.

118. Footnote by Darab Dastur Peshotan Sanjana, B.A., the translator of Dr. Wilhelm Geiger’s work on the “Civilization of the Eastern Iranians.”

119. Dr. Kenealy quotes, in his “Book of God,” Vallancey, who says “I had not been a week landed in Ireland from Gibraltar, where I had studied Hebrew and Chaldaic under Jews of various countries, when I heard a peasant girl say to a boor standing by her “*Teach an Maddin Nag*” (Behold the morning star), pointing to the planet Venus, the *Maddena Nag* of the Chaldeans.”

120. There was a time when the whole world, the totality of mankind, had one religion, and when they were of “one lip.” “All the religions of the Earth were at first One and emanated from *one* centre,” says Faber very truly.

121. Plato’s veracity has been so unwarrantably impeached by even such friendly critics as Professor Jowett, when the “story of Atlantis” is discussed, that it seems well to cite the testimony of a specialist on the subject. It is sufficient to place mere literary cavillers in a very ridiculous position: —

“If our knowledge of Atlantis was more thorough, it would no doubt appear that in every instance wherein the people of Europe accord with the people of America, they were both in accord with the people of Atlantis. . . . It will be seen that *in every case where Plato gives us information in this respect as to Atlantis, we find this agreement to exist*. It existed in *architecture, sculpture, navigation, engraving, writing, an established priesthood, the mode of worship,*

agriculture, and the *construction of roads and canals*; and it is reasonable to suppose that the same correspondence extended down to all the minor details.” (Donnelly, “Atlantis,” p. 194.)

122. Christians ought not to object to this doctrine of the periodical destruction of continents by fire and water; for St. Peter speaks of the earth “standing *out of the water*, and *in the water*, which earth, being *overflowed*, *perished*, but is now reserved unto fire”; (See also the “*Lives of Alchemistical Philosophers*,” p. 4, London, 1815).

123. This does not mean that Atlas is the locality where it fell, for this took place in Northern and Central Asia; but that Atlas formed part of the continent.

124. Had not Diocletian burned the esoteric works of the Egyptians in 296, together with their books on alchemy — “[*peri chumeias kai chrusou*]”; Caesar 700,000 rolls at Alexandria, and Leo Isaurus 300,000 at Constantinople (*viii*th cent.); and the Mahomedans all they could lay their sacrilegious hands on — the world might know to-day more of Atlantis than it does. For Alchemy had its birth-place in Atlantis during the Fourth Race, and had only its *renaissance* in Egypt.

125. Professor Max Muller’s Lectures — “on the Philosophy of Mythology” — are before us. We read his citations of Herakleitos (460 B.C.), declaring that Homer deserved “to be ejected from public assemblies and flogged;” and of Xenophanes “holding Homer and Hesiod responsible for the popular superstitions of Greece. . . .” and for ascribing “to the gods whatever is disgraceful and scandalous among men . . . unlawful acts, such as theft, adultery, and fraud.” Finally the Oxford Professor quotes from Professor Jowett’s translation of Plato, where the latter tells Adaimantos (Republic) that “the young man (in the State) should not be told that in committing the worst of crimes, he is far from doing anything outrageous, and that he may chastise his father (as Zeus did with Kronos) . . . in any manner that he likes, and in this will only be following the example of the first and greatest of the gods. . . . In my opinion, these stories are *not fit to be repeated*.” To this Dr. Max Muller observes that “the Greek religion was clearly a national and *traditional* religion, and, as such, it shared both the advantages and disadvantages of *this form of religious belief*”; while the Christian religion is “an *historical* and, to a great extent, an individual religion, and it possesses the advantage of an authorised codex and of a settled system of faith” (p. 349). So much the worse if it is “historical,” for surely Lot’s incident with his daughters would only gain, were it “allegorical.”

126. Neptune or Poseidon is the Hindu Idaspati, identical with Narayana (the mover on the waters) or Vishnu, and like this Hindu god he is shown crossing the whole horizon *in three* steps. Idaspati means also “the master of the waters.”

127. Bailly’s assertion that the 9,000 years mentioned by the Egyptian priests do not represent “solar years” is groundless. Bailly knew nothing of geology and its calculations; otherwise he would have spoken differently.

128. See *Matsya Purana*, which places him among the seven Prajapatis of the period.

129. The equivalent of this name is given in the original.

130. Deukalion is said to have brought the worship of Adonis and Osiris into Phoenicia. Now the worship is that of the Sun, lost and found again in its astronomical significance. It is only at the Pole where the Sun dies out for such a length of time as six months, for in latitude 68° it remains *dead* only for forty days, as in the festival of Osiris. The two worships were born in the north of Lemuria, or on that continent of which Asia was a kind of broken prolongation, and which stretched up to the Polar regions. This is well shown by de Gebelin’s “*Allegories d’Orient*,” p. 246, and by Bailly; though neither Hercules nor Osiris are *solar myths*, save in one of their seven aspects.

131. The Hyperboreans, now regarded as mythical, were described (*Herod*, IV., 33-35; *Pausanias*, 1, 31, 2; V., 7, 8; *ad X.*, 5, 7, 8) as the beloved priests and servants of the gods, and of Apollo chiefly.

132. The Cyclopes are not the only “one-eyed” representatives in tradition. The Arimaspes were a Scythian people, and were also credited with but one eye. (*Geographie ancienne*, Vol. II, p. 321.) It is they whom Apollo destroyed with his shafts. (See *supra*.)

133. Ulysses was wrecked on the isle of AEaea, where Circe changed all his companions into pigs for *their voluptuousness*; and after that he was thrown into Ogygia, the island of Calypso, where for some seven years he lived with the nymph in illicit connection (*Odyssey and elsewhere*). Now Calypso was a daughter of Atlas (*Odys. Book XII.*), and all the traditional ancient versions, when speaking of the Isle of Ogygia, say that it was very distant from Greece, and right in the middle of the ocean: thus identifying it with Atlantis.

134. To make a difference between Lemuria and Atlantis, the ancient writers referred to the latter as the northern or Hyperborean Atlantis, and to the former as the southern. Thus Apollodorus says (*Mythology, Book II.*): “The golden apples carried away by Hercules are not, as some think, in Lybia; they are in the Hyperborean Atlantis.” The Greeks naturalised all the gods they borrowed and made Hellenes of them, and the moderns helped them. Thus also the mythologists have tried to make of Eridan the river Po, in Italy. In the myth of Phaeton it is said that at his death his sisters dropped hot tears which fell into Eridan and were changed into amber! Now amber is found only in the northern seas, in the Baltic. Phaeton, meeting with his death while carrying heat to the frozen stars of the boreal regions, awakening at the Pole the Dragon made rigid by cold, and being hurled down into the Eridan, is an allegory referring directly to the changes of climate in those distant times when, from a frigid zone, the polar lands had become a country with a moderate and warm climate. The usurper of the functions of the sun, Phaeton, being hurled into the Eridan by Jupiter’s thunderbolt, is an allusion to the second change that took place in those regions when, once more, the land where “the magnolia blossomed” became the desolate forbidding land of the farthest north and eternal ices. This allegory covers then the events of two *pralayas*; and if well understood ought to be a demonstration of the enormous antiquity of the human races.

135. So occult and mystic is one of the aspects of Latona that she is made to reappear even in *Revelation (xii.)* as the woman clothed with the Sun (Apollo) and the Moon (Diana) under her feet, who being with child “cries, travailing in birth, pained to be delivered.” A great red Dragon, etc., stands before the woman ready to devour the child. She brings forth the man child who was to rule all nations with a rod of iron, and who was caught unto the throne of God (the Sun). The woman fled to the wilderness still pursued by the Dragon, who flees again, and casts out of his mouth water as a flood, when the earth helped the woman and swallowed the flood; and the Dragon went to make war with the remnant of her seed who keep the commandment of God, etc. (*See xii., 1, 17.*) Anyone, who reads the allegory of Latona pursued by the revenge of jealous Juno, will recognise the identity of the two versions. Juno sends Python, the Dragon, to persecute and destroy Latona and devour her babe. The latter is Apollo, the Sun, for “the man-child, who was to rule all nations with a rod of iron” of *Revelation*, is surely not the meek “Son of God,” Jesus, but the physical Sun, “who rules all nations”; the Dragon being the North Pole, gradually chasing the early Lemurians from the lands which became more and more Hyperborean and unfit to be inhabited by those who were fast developing into physical men, for they now had to deal with the climatic variations. The Dragon will not allow Latona “to bring forth” — (the Sun to appear). “She is driven from heaven, and finds no place where she can bring forth,” until Neptune (the ocean), moved with pity, makes immovable the floating isle of Delos (the nymph Asteria, hitherto hiding from Jupiter under the waves of the ocean) on which Latona finds refuge and where the bright god [*Delios*] is born, the god, who no sooner appears than he kills Python, the cold and frost of the Arctic region, in whose deadly coils all life becomes extinct. In other words, Latona-Lemuria is transformed into Niobe-Atlantis, over which her son Apollo, or the Sun, reigns — with an iron rod, truly, since Herodotus makes the Atlantes *curse* his too great heat. This allegory is reproduced in its other mystic meaning (another of the seven keys) in the chapter just cited of the *Apocalypse*. Latona became a powerful goddess indeed, and saw her son receive worship (solar worship) in almost every fane of antiquity. In his occult aspect Apollo is patron of Number 7. He is born on the seventh of the month, and the swans of Myorica swim seven times around Delos singing that event; he is given seven chords to his Lyre — the seven rays of the sun and the seven forces of nature. But this only in the astronomical meaning, whereas the above is purely geological.

136. These islands were “found strewn with fossils of horses, sheep, oxen, etc., among gigantic bones of elephants, mammoths, rhinoceroses,” etc. If there was no man on earth at that period “how came horses and sheep to be found in company with the huge antediluvians?” asks a master in a letter. (*“Esoteric Buddhism,” 67*). The reply is given above in the text.

137. A good proof that all the gods, and religious beliefs, and myths have come from the north, which was also the cradle of *physical* man, lies in several suggestive words which have originated and remain to this day among the northern tribes in their primeval significance; but although there was a time when all the nations were “of one lip,”

these words have received a different meaning with the Greeks and Latins. One such word is *Mann*, *Man*, a living being, and *Manes*, dead men. The Laplanders call their corpses to this day *manee*, (*Voyage de Renard en Laponie* 1., 184). Mannus is the ancestor of the German race; the Hindu *Manu*, the thinking being, from *man*; the Egyptian *Menes*; and *Minos*, the King of Crete, judge of the infernal regions after his death — all proceed from the same root or word.

138. Thus, for instance, Gyges is a hundred-armed and fifty-headed monster, a demi-god in one case, and a Lydian, the successor of Candaules, king of the country, in another version. The same is found in the Indian Pantheon, where Rishis and the Sons of Brahma are reborn as mortals.

139. The continents perish in turn by *fire* and *water*: either through earthquakes and volcanic eruptions, or by sinking and the great displacement of waters. Our continents have to perish owing to the former cataclysmal process. The incessant earthquakes of this and the past years may be a warning.

140. Denis, the geographer, tells us that the great sea North of Asia was called glacial, or *Saturnine* (v. 35). Orpheus (v. 1077) and Pliny (*Book IV.*, c. 16) corroborate the statement by showing that it is its giant inhabitants who gave it the name. And the Secret Doctrine explains both assertions by telling us that all the continents were formed from North to South; and that as the sudden change of climate dwarfed the race that had been born on it, arresting its growth, so, several degrees southward, various conditions had always produced the tallest men in every new humanity, or race. We see it to this day. The tallest men now found are those in Northern countries, while the smallest are Southern Asiatics, Hindus, Chinamen, Japanese, etc. Compare the tall Sikhs and Punjabees, the Afghans, Norwegians, Russians, Northern Germans, Scotchmen, and the English, with the inhabitants of central India and the average European on the continent. Thus also the giants of Atlantis, and hence the Titans of Hesiod, are all Northerners.

141. Having already given several instances of the vagaries of Science, it is delightful to find such *agreement* in this particular case. Read in connection with the scientific admission (cited elsewhere) of the geologists' ignorance of even the approximate duration of periods, the following passage is highly instructive: "We are not yet able to assign an *approximate* date for the most recent epoch at which our Northern Hemisphere was covered with glaciers. According to Mr. Wallace, this epoch *may* have occurred *seventy thousand years* ago, while others would assign to it an antiquity of at least *two hundred thousand* years, and there are yet others who urge strong arguments on behalf of the opinion that a *million of years* is barely enough to have produced the changes which have taken place since that event." (Fiske, "*Cosmic Philosophy*," Vol. II., p. 304). Prof. Lefevre, again, gives us as *his* estimate 100,000 years. Clearly, then, if modern Science is unable to estimate the date of so comparatively recent an era as the Glacial Epoch, it can hardly impeach the Esoteric Chronology of Race-Periods and Geological Ages.

142. Undoubtedly a fact and a confirmation of the esoteric conception of the Lemuria which originally not only embraced great areas in the Indian and Pacific oceans, but projected round South Africa into the North Atlantic. Its Atlantic portion subsequently became the geological basis of the future home of the Fourth Race Atlanteans.

143. Cf. the published reports of the "Challenger" expedition; also Donnelly's "Atlantis," p. 468 and pp. 46-56, chap. "*The Testimony of the Sea*."

144. Even the cautious Lefevre speaks of the existence of *Tertiary* men on "upheaved lands, islands and continents then flourishing, but since submerged beneath the waters," and elsewhere introduces a "*possible Atlantis*" to explain ethnological facts. Cf. his "*Philosophy*," *Eng. Ed.*, pp. 478 and 504. Mr. Donnelly remarks with rare intuition that "modern civilization is *Atlantean* . . . the '*inventive*' faculty of the present age is taking up the delegated work of Creation where Atlantis left it thousands of years ago" (Atlantis, p. 133). He also refers the origin of culture to the *Miocene* times. It is, however, to be sought for in the teachings given to the *Third Race*-men by their Divine Rulers — at a vastly earlier period.

145. An equally "curious" similarity is traced between some of the West Indian and West African fauna.

146. The Pacific portion of the giant Lemurian Continent christened by Dr. Carter Blake, the anthropologist, “Pacificus.”

147. When Howard read, before the Royal Society of London, a paper on the first serious researches that were made on the aerolites, the Geneva naturalist Pictet, who was present, communicated, on his return to Paris, the facts reported to the French Academy of Sciences. But he was forthwith interrupted by Laplace, the great astronomer, who cried: “Stop! we have had enough of such *fables*, and know all about them,” thus making Pictet feel very small. Globular-shaped lightnings or thunderbolts have been admitted by Science only since Arago demonstrated their existence, says de Rochat (“*Forces non-definies*,” p. 4): “Every one remembers Dr. Bouilland’s misadventure at the Academy of Medicine when he had declared Edison’s phonograph ‘*a trick of ventriloquism!*’ ”

148. The Cyclic Law of Race-Evolution is most unwelcome to scientists. It is sufficient to mention the fact of “primeval civilization” to excite the frenzy of Darwinians; it being obvious that the further culture and science is pushed back, the more precarious becomes the basis of the ape-ancestor theory. But as Jacolliot says: — “Whatever there may be in these traditions (submerged continents, etc.), and whatever may have been the place where a civilization more ancient than that of Rome, of Greece, of Egypt, and of India, was developed, *it is certain that this civilization did exist*, and it is highly important for Science to recover its traces, however feeble and fugitive they be.” (*Histoire des Vierges; les peuples et les continents disparus*, p. 15.) Donnelly has proved the fact from the clearest premises, but the Evolutionists will not listen. A *Miocene* civilization upsets the “universal stone-age” theory, and that of a *continuous* ascent of man from animalism! And yet Egypt, at least, runs counter to current hypotheses. There is no stone-age visible there, but a more glorious culture is apparent, the further back we are enabled to carry our retrospect. (Verb. Sap.)

149. “Myths and Myth-Makers,” p. 21.

150. Violent minor cataclysms and colossal earthquakes are recorded in the annals of most nations — if not of all. Elevation and subsidence of continents is always in progress. The whole coast of South America has been raised up 10 to 15 feet and settled down again in an hour. Huxley has shown that the British islands have been four times depressed beneath the ocean and subsequently raised again and peopled. The Alps, Himalayas and Cordilleras were all the result of depositions drifted on to sea-bottoms and upheaved by Titanic forces to their present elevation. The Sahara was the basin of a *Miocene* sea. Within the last five or six thousand years the shores of Sweden, Denmark and Norway have risen from 200 to 600 feet; in Scotland there are raised beaches with outlying stacks and skerries *surmounting* the shore now eroded by the hungry wave. The North of Europe is still rising from the sea and South America presents the phenomenon of raised beaches of over 1,000 miles in length, now at a height varying from 100 to 1,300 feet above the sea-level. On the other hand, the coast of Greenland is sinking fast, so much so that the Greenlander will not build by the shore. All these phenomena are certain. *Why may not a gradual change have given place to a violent cataclysm in remote epochs?* — such cataclysms occurring on a *minor scale* even now (*e.g.*, the case of Sunda island with 80,000 Malays).

151. For the opinions of Jacolliot, after long travels through the Polynesian Islands and his proofs of a former great geological cataclysm in the Pacific Ocean, see his “*Histoire des Vierges: Peuples et Continents disparus*,” p. 308.

152. “*Doctrine of Descent and Darwinism*,” p. 236. (Cf. also his lengthy arguments on the subject, pp. 231-7.)

153. For further facts as to the *isolation* of the Basques in Europe and their ethnological relations, cf. Joly, “*Man before Metals*,” p. 316. B. Davis is disposed to concede, from an examination of the skulls of the *Guanches of the Canary Islands and modern Basques*, that both belong to a race proper to *those ancient islands, of which the Canaries are the remains!!* This is a step in advance indeed. De Quatrefages and Hamy also both assign the Cro-Magnon men of South France and the Guanches to *one type* — a proposition which involves a certain corollary which both these writers may not care to father.

154. Donnelly, “*Atlantis; the Ante-Diluvian World*,” p. 480.

155. *Vide* Sir W. Thomson and Mr. Huxley.

INTRODUCTION

Over one hundred years ago, in 1888, H. P. Blavatsky published her *Secret Doctrine*. Indeed it *was* an event, for these volumes disclose a description, inner and outer, of the structure and operations of the cosmos and the origin and evolutionary destiny of the kingdoms of nature. Much of its content would have been considered esoteric in former eras, part of the mystery teaching of the ancient schools of both East and West.

This wisdom has been known and taught in every age, in myth and legend, symbol and glyph, and comes down to us from out of the darkness of prehistory. Its substance or truth is also embodied in the various branches of learning, ancient and modern -- religion, philosophy, science, literature, and art. Hence HPB, having stated certain principles, was able to illustrate, by referring to the world's literature, that what she was bringing forward has been part of the thought-life of all previous ages. This is no accident: every age has had its wise men, philosophers, artists, poets, who have speculated on cosmic and human life and described it in such a fashion that the universality of the secret doctrine or perennial philosophy may be seen on every hand by those who have the eyes to see it.

The Secret Doctrine is the most widely disseminated theosophical source book. Because of its encyclopedic range, indexing the *SD* has proved a complex and challenging task. My original instructions were: "Start by making your own index. Don't try to coalesce or combine the existing indices." Over the course of a number of years this phase of the project was completed. We then consulted an unpublished index to the *SD* compiled by Dr. Gertrude W. van Pelt - a longtime student with a penetrating and intuitive mind -- and numerous valuable entries were gleaned. The indices prepared by Boris de Zirkoff and the United Lodge of Theosophists were also consulted, and further useful entries included.

Our entries are designed to be as straightforward and informative as possible, considering the wide range of subjects covered. Most subentries lead off with key words which are alphabetically arranged. In the course of compiling the index, it became apparent that many of the foreign terms used so widely by HPB are no longer spelled as they were by the scholars of her time. To aid the reader we have listed all foreign terms and proper nouns as they are given by HPB, while adding modern spelling in brackets or -- when alphabetizing requires -- referring the reader to the modern spellings under which the terms are indexed. Exceptions to listing the modern spelling are Tibetan and some Egyptian terms, as well as other foreign words when there is doubt about transliteration. In subentries modern spelling is generally used, but underdots are omitted. To facilitate recognition and pronunciation of Sanskrit words, the TUP conventions are*:

c is transliterated as *ch*
r is transliterated as *ri*
ch is transliterated as *chh*
s is transliterated as *sh*

For the convenience of the reader, many main headings, especially of foreign terms, are followed by definitions. Cited books whose titles are not given in the *SD*, are placed in brackets under the author. Also included are a list of abbreviations and an appendix of foreign phrases with translation.

A major guideline followed is that an index is *not* an interpretation. Its purpose is to point the reader to the essential material found in the book. If, for example, the word Lemuria is given, such entries are placed under that heading. The third root-race is often termed Lemurian; but where third root-race is given by HPB and not Lemuria, these references are under Root-Race-Third. In order to bring together all such similar entries or supplemental material, we have put "*See also*" after the main headings followed by one or more items. One may also consult terms in the subentries for additional references.

Many individuals have been involved in this project, and each and all have my hearty thanks and gratitude. Allow me to say in closing that I perceive the years spent on this task to have been a rare and inestimable privilege. It is still an ongoing enterprise, for I am sure that future students will revise, enlarge, clarify, and make more accurate the work already done, so that in time the index may become an increasingly useful tool for those following the ageless path of wisdom that HPB so magnificently sets forth.

INDEX - APPENDIX OF FOREIGN PHRASES

In this alphabetical listing of the foreign language quotations and phrases found in *The Secret Doctrine*, each entry is followed by the page(s) where it appears in the *SD* and a language designation in parentheses. An English translation is then given, followed when applicable by the source of the foreign phrase. Where the Greek or other foreign words in the *SD* are in obvious error, corrections have been made. Words and phrases not included in this appendix may be found either in the Index or in foreign language dictionaries.

Achath-Ruach-Elohim-Chiim ['Aath ruh 'elohim hayyim] I 130n (Heb) "One, the spirit of the living god(s)" (Westcott trans.) or "First, the spirit of the god(s) of the living" (Stenring trans.) --*Sepher Yetzirah* I.9 & nn.

Actio in distans I 487, 488, 491, etc. (Lat) "Action over (at) a distance."

Addit Cedrenus (Salem I.3): Stella Martis ab Egyptiis vocatur Ertosi (plantare, generare). Significat autem hoc omnis generis procreationem et vivificationem, omnisque substantiae et materiae naturam et vim ordinantem atque procreantem II 143-4n (Lat) "Cedrenus says (Salmasius I.c): The planet Mars was called by the Egyptians Ertosi (to plant, generate). This implies the creating and generating of everything, the creating and determining of the nature and powers of all substance and matter."

agathai kai kakai dunameis II 497, 515 (Gk) "Good and evil forces."

'Ahiye asher ahiye ['Ehyeh 'asher 'ehyeh] II 539 (Heb) "I am that I am."

An lumen sit corpus, nec non? I 483 (Lat) "Is light a body, or is it not?"

Antimimon Pneumatos II 604, 604-5n (Gk) "Modeled after the spirit."

aoidon hoide dustenoi logoi II 764 (Gk) "Those miserable stories of the poets." -- Euripides, *Hercules Mad* 1.1346

aprepes an eie theoi II 159 (Gk) "Still less becoming for a god." -- Aristotle, *De Mundo* (On the Cosmos) 6.398b.7

Au spectacle de tant de grandeur oppose a celui de tant de misere, l'esprit qui se met a observer ce vaste ensemble, se represente je ne sais quelle grande divinite qu'une divinite, plus grande et plus pressante encore, aurait comme brisee et mise en pieces en dispersant les debris dans tout l'Univers II 554-5n (Fr) "At the sight of such immensity on the one hand, and so much misery on the other, the spirit which undertakes to study this great whole envisions who knows what great divinity *that a still vaster and more exacting divinity* had shattered, broken to pieces, and scattered the fragments throughout the whole universe." -- de Montlosier, *Mysteres de la vie humaine* 1.2.126, 1829 ed., Paris

autournein [autourgein] hapanta II 159 (Gk) "To execute everything himself." -- Aristotle, *De Mundo* 6.398b.5

B'raisheeth barah elohim ath hash ama yem v'ath haa'retz [B're'shith bara' 'elohim 'eth hash-shamayim v'eth ha'arets] I 374 (Heb) "In the beginning God created the heaven and the earth." (*Gen* 1:1, King James version); alternatively, "In a host the gods (elohim) formed themselves into the heavens and the earth" (G. de Purucker, *Fundamentals of the Esoteric Philosophy*, 2nd ed., pp. 98-9).

Cadebat ut fulgar II 230 (Lat) "Fell like lightning."

Casta fove [fave] Lucina: tuus iam regnat Apollo I 401 (Lat) "Pure Lucina, be gracious: thine own Apollo now is king." -- Virgil, *Eclogues* 4.10

Ce qui manque a tous les deux, c'est l'intuition du mystique I 496 (Fr) "What both lack is the intuition of the mystic."

Certus sum, scio quod credidi II 451 (Lat) "I am certain, I know what I have believed."

chrusophaes Hermes II 28 (Gk) "Golden-colored Hermes."

Cogito ergo sum II 242 (Lat) "I think, therefore I am." -- Descartes, *Principes* . . . 1.7

Credat Judaeus Apella II 451 (Lat) "Apella the Jew may believe that . . ." -- Horace, *Satires* 1.5.100

De minimis non curat lex I viii (Lat) "The law does not concern itself with trifles."

Deliciae humani generis I 604 (Lat) "Delightful human creations."

Demon est Deus inversus I 411 (Lat) "The Devil is God inverted."

Deorsum fluens II 230 (Lat) "Flowing downwards."

Deus enim et circulus est II 552 (Lat) "And certainly Deity is circular." -- Pherecydes' hymn to Jupiter.

Deus non fecit mortem II 422 (Lat) "God did not make death." -- *Wisdom of Solomon* or *Sapientiae* (Apocrypha) 1:13

Dieu est devenu une hypothese inutile I 498 (Fr) "God has become a useless hypothesis." -- Laplace

Diva triformis, tergemina, triceps I 387 (Lat) "Goddess three-formed, threefold at birth, three-headed."

engus gar nuktos te kai ematos eisi keleuthoi II 7 (Gk) "for the outgoings of the night and of the day are close together." -- Homer, *Odyssey* 10.86

Eis Zets [Zeus] Sarapi II 474 (Gk) "Sarapis is the one Zeus"; see King, *Gnostics & Their Remains*, pp. 326-7

en ouraniois semeiois I 652 (Gk) "In signs from heaven." -- Xenophon, *Cyropaedia* 8.7.3

E pur se [si] muove! II 451 (It) "But it does move!" -- Galileo

Hermeneuein de to oion ton kosmon I 360 (Gk) "And the egg represents (symbolizes, interprets) the cosmos." -- Porphyry

Etoi men protista chaos genet' I 425n (Gk) "Chaos of all things was the first generated." -- Hesiod, *Theogony*, line 116

Ex connexione autem ejus spiritus prodidit [prodiit] Mot I 451 (Lat) "Out of the union with that spirit has proceeded Mot."

Ex oriente lux II 42 (Lat) "Out of the East, light."

Facies totius Universi, quamvis infinitis modis variet, manet tamen semper eadem II 1 (Lat) "The face of the whole universe, though it varies in infinite modes, yet remains always the same." -- Spinoza, *Correspondence of Spinoza*, Letter 64

Genitum, non factum I 399 (Lat) "Born, not made."

Il est impossible de decouvrir le moindre trait de ressemblance entre les parties du ciel et les figures que les astronomes y ontarbitrairement tracees, et de l'autre cote, le hasard est impossible I 652 (Fr) "It is impossible to find the least trace of similarity between the segments of sky and the figures astronomers have *arbitrarily* assigned to them, while, on the other hand, *chance is impossible*." -- C. F. Dupuis, "Zodiaque," *Origine de tous les cultes*

Il fallait eviter de paraitre autoriser le dogme du double principe en faisant de ce Satan createur une puissance reelle, et pour expliquer le mal originel, on profere contre Manes l'hypothese d'une permission de l'unique tout Puissant II 509 (Fr) "It was necessary to avoid seeming to sanction the dogma of a dual principle by making this creative Satan into an actual power and, in order to explain the origin of evil, the theory of a divine authorization given by the Almighty One was adduced in opposition to Mani." -- Jules Baissac, *Satan ou le Diable . . .*, p. 9

Il manque quelque chose aux geologues pour faire la geologie de la Lune, c'est d'etre astronomes. A la verite il manque aussi quelque chose aux astronomes pour aborder avec fruit cette etude, c'est d'etre geologues I 496 (Fr) "The geologists are lacking what is needed to study the geology of the moon, and that is: they are not

astronomers. Truly what astronomers lack for a fruitful pursuit of this study is to be geologists." -- Herve E. Faye (in Winchell, *World Life*, p. 379)

Il n'est plus possible aujourd'hui, de soutenir comme Newton, que les corps celestes se meuvent au milieu du vide immense des espaces. . . . Parmi les consequences de la theorie du vide etablie par ce grand homme, il ne reste plus debout que le mot 'attraction,' et nous verrons le jour ou ce dernier mot disparaitra du vocabulaire scientifique I 494n (Fr) "Today it is no longer possible to maintain, as Newton did, that the heavenly bodies move in EMPTY space. . . . Among the consequences of the *theory of vacuum established* by that great man, all that remains unrefuted is *the word 'attraction'* and we expect to see the day when that last word will disappear from the vocabulary of science." -- C. H. Le Couturier, *Panorama des mondes* . . . , pp. 47, 53

In adversum flumen I 169 (Lat) "Against the current."

In pluribus unum I 461 (Lat) "In many, one" or "one in many."

IO Ioh, Aegyptiis Lunam significat neque habent illi in communi sermonis usu, aliud nomen quo Lunam, designent praeter IO II 463 (Lat) "*IO, Ioh*, to the Egyptians signifies the MOON. They don't have in their everyday language any other word with which to denote the Moon except IO." -- P. E. Jablonsky, *Pantheon aegyptiorum*, 2.3.1.6, 1752 ed.

Judaea gens, radix stultorum II 358 (Lat) "The Jewish people, a root of foolishness." -- Rutilius Namatianus, *De Reditu Suo*, bk. I, lines 383, 389

Kallista polu parthenon I 395 (Gk) "Loveliest by far of the maidens." -- Euripides, *Hippolytos*, line 66

Koion te, Kroion te melan [megan], Phorkun te krataion, / Kai Kronon, Okeanon d', Huperioa [Huperion] te, Iapetonte II 143 (Gk) "Coeus, the great Croeus, the strong Phorcys, / Also Cronos [Saturn], Ocean, Hyperion, and Iapetus." -- Cf. Proclus, *On the Timaeus of Plato*, 2.5.324 (Thomas Taylor trans.)

Lateras coctiles I 357 (Lat) "Burned tiles (tablets of clay)."

Le Jour de "Viens a nous" . . . c'est le jour ou Osiris a dit au Soleil: Viens! Je le vois rencontrant le Soleil dans l'Amenti I 134n (Fr) "The Day 'Be With Us' . . . that is the day when Osiris said to the Sun: Come! I see him meeting the Sun in Amenti." -- Paul Pierret, *Le livre des morts* (The Book of the Dead) 17.61

Leontoid ophiomorphos II 481 (Lat & Gk) "The lion-like serpent."

Liquor Amnii II 188 (Lat) "Amniotic fluid."

Malum in se I 413 (Lat) "Evil in itself."

megaloi dunatoi II 363 (Gk) "Great and powerful."

Menses in quinos dies descriperunt [denos descriperunt] dies II 620 (Lat) "They have divided the months into periods of fifteen days." -- Quintus Curtius, *History of Alexander* 8.9.35-6

Monstra quaedam de genere giganteo. II 375 (Lat) "Monsters that gave birth to giants."

Natura Elementorum obtinet revelationem Dei I 125n (Lat) "The nature of the elements contained the revelation of God." -- Clement of Alexandria, *Stromata (Miscellanies)* 5.6, 2nd para.

Natura naturans I 412 (Lat) "nature begetting" (nature as a creative principle).

Natura non facit saltum II 287, 696 (Lat) "Nature makes no leaps."

Ni fallat fatum, Scoti quocumque locatum / Invenient lapidem, regnasse tenentur ibidem II 342 (Lat) "Unless the oracle fails, wherever the Scots find / This stone placed, they will hold sway." -- J. de Cambry, *Monuments Celtiques*, p. 107 (1805 ed.)

Nous [estin] ho diakosmonte kai panton aitios I 451 (Gk) "An ordering and disposing mind, which was the cause of all things." -- Plato, *Phaedo* 97c

Oh, ma pensee, que s'ensuit il? car je desire grandement ce propos. Pimandre dict, ceci est un mystere cele, jusques a ce jour d'hui. Car nature, soit mestant avec l'home, a produit le miracle tres merveilleux, aiant celluy qui ie t'ay dict, la nature de l'harmonie des sept du pere, et de l'esprit. Nature ne s'arresta pas la, mais incontinent a produit sept homes, selon les natures des sept gouverneurs en puissance des deux sexes et esleuez. . . . La generation de ces sept s'est donnee en ceste maniere . . . II 491n (Fr) "Oh, my thought, what is it pursuing? For I greatly desire to know. Pymander says, this is a sealed mystery until today. For nature, in man has produced a marvelous miracle, having that which I have told you, a nature in harmony with the seven of the father, and of spirit. *Nature did not stop there*, but unsatisfied, produced and reared *seven men*, according to the natures of the seven governors with power of the two sexes. . . . The generation of these *seven* happened in this wise . . ." -- The Divine Pymander 1.16; see also Walter Scott, *Hermetica* 1:123

Oi d'en Aiguptoi [Hoi d'oun Aiguptioi] muthologousi kata ten Isidos helikian gegonenai tinas polusomatous II 344n (Gk) "Furthermore, the Egyptians relate in their myths that in the time of Isis there were certain creatures of many bodies [who are called by the Greeks giants]". -- Diodorus Siculus, *Bibliotheka* 1.26.6

Omnis enim per se divom natura necesse est [necessest] / inmortalis aevo summa cum pace fruatur I 7n (Lat) "For the very nature of divinity must necessarily / enjoy immortal life in the deepest peace." -- Lucretius, *De Rerum Natura* 2.646-7

Pareshu [yah] guhyeshu, vrateshu II 622n (Skt) "remote and secret realms." -- *Rig-Veda* 10.114.2, 3.54.5

Pater (omnipotens) AETHER I 10n, 331, 488n (Lat) "Omnipotent Father Aether."

Peri apoches empsuchon I 425 (Gk) "*On Abstinence from Animal Food*" (a work by Porphyry; in Latin, *De Abstergentia*).

Peri [ton proton] archon I 425 (Gk) "*On First Principles*" (a work by Damascius).

Peri chumeias argurou kai chrusou II 763n (Gk) "Concerning the mingling of silver and gold."

pneumata ton stoicheion I 395 (Gk) "Spirit of the elements."

Princeps aeris hujus [principem potestatis aeris hujus] II 485, 515 (Lat) "Prince [of the power] of the air" -- *Ephesians* 2:2.

protogonon diphue trigonon Bakcheion Anakta / Agrion arreton kruphion dikerota dimorphon I 335 (Gk) "O firstborn, dual in nature, thrice begotten, Bacchic king / Rural, ineffable, cryptic, two-horned, two-formed." -- "To Bacchus," *Mystical Hymns of Orpheus*, Hymn 30

Qui circumambulat terram II 485, 515 (Lat) "who circles the earth."

Qui fruges excantassent [excantasset] segetem pellicentes incantando I 469 (Lat) "Who draws away by incantations the fruits of one field to another." -- Servius Maurus Honoratus on Virgil's *Eclogues* 8.99

Satis eloquentiae, sapientiae parvum I 349 (Lat) "Eloquence enough, too little wisdom." -- Sallust, *Cataline* V

Semelen tremousi daimones I 400 (Gk) "Semele made the spirits tremble."

Senior occultatus est et absconditus; Microprosopus manifestus est, et non manifestus I 214-15 (Lat) "The Ancient One is hidden and concealed; the Microprosopus is manifested, and is not manifested." -- Rosenroth, *Kabbala Denudata, Liber Mysteriorum* (Siphra' di Tseniutha, "Book of Concealed Mystery"); see Mathers, *Kabbalah Unveiled*, p. 91 (4.1)

Sicanus deificavit Aretiam, et nominavit eam lingua Janigena Horchiam II 144 (Lat) "Sicanus deified Aretia and named her Horchia of the lineage of Janus."

Solaris luminis particeps II 28 (Lat) "Participating in solar light."

Spiritualia nequitiae [in] coelestibus I 331n (Lat) "Spiritual wickedness in heavenly regions." -- *Ephesians* 6:12

Spiritus intus alit, totamque infusa per artus, / Mens agitat molem, et magno se corpore miscet I 451n, II 594 (Lat) "A spirit within sustains, and mind, pervading its members, / Sways the whole mass and mingles with its mighty frame." -- Virgil, *Aeneid* 6.726-7

Taurus Draconem genuit, et Taurum Draco II 133 (Lat) "A bull has begotten a dragon, and a dragon a bull" (see A. Wilder, "The Primeval Race Double-Sexed," *Theosophist* (4:112-14, Feb 1883).

Tibi sunt Malchut [Malkuth] et Geburah [Geburah] et Chessed [Hesedh] per Aeonas II 562 (Lat) "For thine is the Kingdom, the Justice, and the Mercy throughout the Aeons."

Totum corpus circumagimur II 552 (Lat) "All bodies move in a circle."

Tum virgam capit, hac animas ille evocat Orco [pallentis] II 28 (Lat) "Then he takes his wand; with this he calls pale ghosts from Orcus." -- Virgil, *Aeneid* 4.242

Tu vestis solem et te sol vestit I 393 (Lat) "You clothe the Sun and the Sun clothes you."

Unum intra alterum, et alterum super alterum II 25 (Lat) "[Three Heads have been formed] one within the other, and the other above the other" -- *The Lesser Holy Assembly (Idra Zuta Qadisha)* 2.59 (Mathers, *Kabbalah Unveiled*, p. 265)

Verbum sat sapienti I 349 (Lat) "A word to the wise is sufficient."

Vinculum substantiale I 631 (Lat) "Substantial bond."

Virgo pariet I 399 (Lat) "Virgin brings forth."

Vis viva I 670 (Lat) "Living force."

Vox populi Vox Dei II 298 (Lat) "The voice of the people is the voice of God."
